The de facto government now claims that the bands are dispersed, and, according to the papers this morning, the de facto government of Mexico has demanded that our Army and our troops shall come out of Mexico. They claim that they are now ready to take care of the situation. Yet they are no more able to do it now than they were one, two, or three years ago.

Many say that we are not prepared to maintain the Monroe doctrine. The Monroe doctrine is not international law, but it is engrained in the spirit and ideals of this Republic. While the early basis for it has disappeared the people of the country would not consent to its abandonment. The President, however, practically repudiated it in his message of December 7, 1915, but because of the necessity of the cause which he now espouses with so much zeal he considers its maintenance supremely important. The basis of the Monroe doctrine is the safety of this country and its institutions. It was asserted in behalf of our self-interest and because of our self-interest, but the President said in his message of December 7, 1915:

> There was a time in the early days of our own great Nation and of the Republic fighting their way to independence in Central and South America when the Government of the United States looked upon itself as in some sort the guardian of the Republics to the south of her as against any encroachments or efforts at political control from the other side of the water * * *. But it was always difficult to maintain such a rôle without offense to the pride of the peoples whose freedom of action we sought to protect, and without provoking serious misconceptions of our motives, and every thoughtful man of affairs must welcome the altered circumstances of the new day in whose light we now stand, when there is no claim of guardianship or thought of wards, but instead a full and honorable association as of partners between ourselves and our neighbors in the interests of all America, North and South. * * * We still mean always to make a common cause of national independence and of political liberty in America. But that purpose is now better understood so far as it concerns ourselves. It is known not to be a selfish purpose.

He now wants us to become a great brother to the South American countries, not in our interest but in their interest, for their protection. We want the good will of the South American countries; we want them to maintain such a government as they may desire, and while our people would not consent to any action by any power looking to territorial aggression on this continent that would endanger our safety, I doubt if they would assume the rôle of a big brother to the supposedly independent nations of South America, and especially without any assistance from them. Must we go to the expense of a great Navy and a large Army, not for our protection but for their defense, without their maintaining any navy or army to cooperate with us? But even if we are to do this, no nation in many, many years has threatened any South American country, and no nation threatens any now, and there is no suggestion of any danger in this respect. At any rate one of the most effective steps to prepare for such an eventuality would be to induce each nation of South America to acquire a battleship or two to be used for the common defense of all.

We have a statement made by the chancellor of Germany regarding their intentions, and Germany is pointed to as a country that is likely to attack these South American countries. We have a right to assume, when the chancellor of a great country like Germany makes a statement like this, that he expresses the views of his Government. He said:

> The latest offspring of the calumniating campaign directed against us is a report that we, after the end of this war, shall rush against the American continent and that we shall attempt to conquer Canada.
>
> IS A SILLY CHARGE.
>
> This is the silliest of all the imputations invented against us. Equally silly are the reports that we contemplate the acquisition of any territory on American soil, as in Brazil, or in any American country whatsoever.

Many say, "Leave the whole matter to the military and naval experts." Some say, "You don't know anything about what we need in a military and naval sense." Others say, "We don't know what is needed and you are not an expert." Some say, "Consult the experts and follow their advice." It was surprising to me how many men of wide business experience and how many lawyers said, "Leave this matter entirely to the military experts." I need only call to the attention of these good citizens the assinine and puerile opinion of the expert, Admiral Benson, who denounced the Puget Sound Navy Yard location as unsuitable for a great navy yard, and the equally assinine and puerile opinion of the military expert, Col. Glenn, that a million and a half men could be landed on our shores within 60 days. Experts are all right in their place, but they seldom agree among themselves. There never was a case in court where experts were used that did not have one expert saying one thing and another expert saying just the opposite. That is true as to the military experts, as I will show directly. But what do experts do? They do not pass upon the facts or the policies. They give their opinions upon an assumed state of facts or upon established or agreed upon policies. There are two parts of this preparedness problem. One is, What is our danger? Against what country must we prepare? What force are we likely to face? Must we prepare for offense or defense?

Having determined these things, there is then to be determined, How shall we meet these things and what force is necessary to do what we want done?

The first proposition is not one for the experts; the latter is what can very properly be left to experts.

The Congress is the proper body to determine the first, the military experts should largely control on the other. The military experts are unfitted by their study and learning to determine what the policies should be. Their opinion on such questions is no better than that of anyone else, and in fact not so good. These are matters within the common knowledge of any citizen in the country, and it was upon these things that I asked the views of my constituents. I would have more confidence in the ultimate aggregate judgment of the people of the country upon these questions than in the judgment of all the experts in the United States. If we are to continue a republic, if we are to continue a representative democracy, these questions must be determined by the people.

No man who wants to build a house goes to an architect and says, "Build me a house." He first determines what kind of house he wants, how many rooms he needs, and about what the cost is to be. He tells the architect these things, and then says, "Prepare plans and specifications to do what I want done." I wanted a house remodeled. I called in an architect. If I had said to him, "I want my house remodeled," and then gone about my business, could he have known what I wanted? Would he have known what to do? No. He would have immediately said, "What do you want done?" He would have thought I was foolish if I said, "Why, you are an expert. You are an architect and you ought to know what to do." He would have said, "Well, you tell me what you want done and I will tell you how to do it." That is what we have to do now. This is my responsibility as a part of the legislative body. It is a responsibility I can not shirk if I wanted to shirk it. I believe I am more competent to determine these things than the expert, but I am not infallible. I wanted the views of my constituents on these questions. I did not want their views on preparedness, but I wanted their views as to the basis upon which a system of preparedness should be built.

That there is a policy to be determined before a definite plan is entered upon is also the opinion of the experts. In a statement of a proper military policy for the United States prepared by the War College Division, General Staff Corps, March, 1915, it is said:

> 4. Coordinate relationship of statesman and soldier: In our country public opinion estimates the situation, statecraft shapes the policy, while the duty of the executing falls upon the military and naval departments. * * * In order that the American people can intelligently decide on a doctrine of preparedness which should constitute the military policy of the United States, and that Congress and the Executive may be able to carry out their decision, information concerning the military strength of other great nations and ships available for transport purposes must be clearly set forth. The work of the statesman and of the soldier and sailor are therefore coordinate; where the first leaves off the other takes hold.

Secretary of War Garrison stated the situation this way:

> Before the question can be taken up of the wise solution of the problem we must first determine exactly what the problem is that we are seeking to solve. There is a disposition on the part of some to assume that we are facing a crisis and must immediately set about meeting it. Their disposition is to ask that all those measures should be taken which would tend to the immediate preparation of this country for immediate warfare. If their assumption is correct, then, of course, their conclusion is correct also. The personnel and matériel needed for military purposes should be immediately mobilized. Every nerve should be strained and every resource drawn upon and nothing overlooked necessary to preserve and defend us. Nothing would be proper in this view short of immediate measures vesting the full authority in the executive departments to proceed regardless of cost and of other considerations.

This is one kind of preparedness. This suggests an adequate preparedness under certain conditions. Is this the kind of preparedness that we should have now? The Secretary says:

> This, however, in my judgment, is not the proper view to take nor the proper procedure to be followed.

Some say that this war was unexpected; that no one had any idea that such a contest could come on, and that it should be a warning to us to be prepared and should convince us that we are not too far from the danger of conflict. The unthinking may accept this as true. Those who comprehend the conditions existing in Europe know that it is not true. This war is the inevitable result of the so-called "preparedness" system and of the treaties existing among the different nations. Those nations were like men standing facing each other with cocked revolvers in their hands. The shooting of one would involve all, and that this shooting would begin before any disarmament was absolutely certain.

The Russian Minister of Foreign Affairs said, three months before the war began, that if any one country mobilized war would be inevitable. Russia was the first to begin mobilizing when trouble threatened between Austria and Servia. Germany was bound to Austria by treaty, and when Russia mobilized Germany felt she was compelled to mobilize. France was bound by treaty to Russia, and when Germany threatened an attack upon Russia, France had to mobilize and Germany had to mobilize against France. England was bound to France by treaty and she had to begin to mobilize.

We need fear no sudden attack, but we should avoid any such entangling alliances.

Mr. President, I believe the President was right in 1914 when he said:

> The country has been misinformed. We have not been negligent of national defense. This is assuredly the opportunity for which a people and a Government like ours were raised up, the opportunity not only to speak but actually to embody and exemplify the counsels of peace and amity and the lasting concord which is based on justice and fair and generous dealing.

He was right at Columbus on December 11, 1915, when he said:

> For America now may make peaceful conquest of the world, and I say that with all the greater confidence, gentlemen, because I believe, and hope the belief does not spring merely from the hope, that when the present great conflict in Europe is over the world is going to wear a different aspect.
>
> I do not believe that there is going to be any patched-up peace. I believe that thoughtful men of every country and of every sort will insist that when we get peace again we shall have guarantees that it will remain and that the instrumentalities of justice will be exalted above the instrumentalities of force.

He was right when he said at New York this spring:

> Nobody seriously supposes generally that the United States need to fear an invasion of its own territory.

We should give no occasion for statements like this, by Lord Roseberry, of England:

> I know nothing more disheartening than the announcement recently made that the United States, the one great country left in the world free from the hideous, bloody burden of war, is about to embark on the building of a huge armada. It means that the burden will continue upon the other nations and be increased exactly in proportion to the fleet of the United States.

Before adopting a general military or naval system requiring many years for its development it would be much wiser to make such immediate preparation as may be necessary to meet any sudden or probable danger, and when peace comes abroad to survey the whole situation carefully and then adopt such a policy as may be deemed wisest for our protection and the country's welfare consistent with the world's condition. This course does not seem wise to those having charge of legislation. The committees having special charge of this legislation do not agree to this course and have submitted their views in this bill. They do not think there is any immediate emergency and probable danger to be met in the near future. The system proposed is not a radical one. It has been most carefully considered by those who are more expert than I and just as patriotic. They have not been carried away by the clamor or the fear of the extremists of either side of the preparedness controversy.

This is intended as a permanent system, and is probably as good as any that could be prepared at this time, although I would rather have it under consideration under normal conditions, taking everything into account then. I think probably we could then frame a policy that would even be better than this. It seems to me that we go at this wrong, and that the suggestion of the Senator from Nevada [Mr. NEWLANDS] is a very wise one with reference to this subject. We are framing this military bill without taking into any account whatever, it seems to me, what we are going to do in the Navy. In the Navy they are going to frame their bill without taking into account in any way what has been done in a military sense. The two ought to be coordinated in some way, and there ought to be some national body or council, whatever you may call it, that will be at the head of both the Army and the Navy, and coordinate our different lines of defense.

In my judgment, if we would take the extra increases that are made in this military bill and put those increases into additions to the Navy in the construction of submarines, in the construction of torpedo boats, in the construction of fast cruisers and scout cruisers and possibly battleship cruisers, and in naval personnel and well-developed navy yards, we would get more for our money and more in the way of defense and security than we can possibly get out of this proposition. But that course will not be followed. I believe it would be much wiser and much more economical.

This is intended as a permanent system and is probably as good as any we would prepare, even in normal times. If conditions at the close of the war warrant its modification, this can and will be done.

My recollection of one of the provisions of the bill is that only one-fifth of the men provided for the increase of the Regular Army

shall be enlisted each year. After this bill is in force for a year we will have increased our Army only about fifteen or twenty thousand men, and if when conditions are normal we think it wise not to go on and increase it to the 180,000 provided we can very easily change it. So, while I think this is wholly inadequate to meet any emergency, I do not think it is extreme for peace conditions, and especially not extreme now in view of the conditions in Mexico—and that I think is likely to develop much more seriously—and I can vote for this bill without any serious compunction because of this situation.

The situation in Mexico warrants a greater immediate increase in our military forces than will come about under this bill. There is great doubt even whether the increase provided in this bill can be secured.

It was stated on the floor here the other day that we have gotten only two or three thousand men under the increase we provided for of 20,000 men. The other day when we were asked to increase the Army by 20,000 men there was not a dissenting vote. Mr. President, failure to make proper provision for any danger that may be threatening us can not be laid to Congress. Whenever the President says to us that the danger is imminent and that he needs a certain force and certain help he will get it without any discussion, debate, or division in this body or in either body of Congress.

Everybody, Mr. President, is for such preparedness as may be necessary to insure the safety of the United States and promote the welfare of our people. If danger should threaten before this bill would make provision to meet it, a call from the President will be responded to without any delay. If the President, with all the expert advice of the Army and Navy at his command and with the secret information that no one else can have, says to us that an emergency threatens which requires a large force of men to meet, he will be given authority to call them out immediately and without division in Congress. If the time should come when he thinks special preparation should be made to insure peace at the close of the war, all he has to do is to let Congress know the need. If certain danger should threaten and appear to be probable, the only adequate way to meet it would be to call for volunteers and begin to train and equip them at once. There will be no trouble in getting men to respond for such duty. Men may not tie themselves up for six or seven years to come out during their vacations and drill for a month or two to prepare for some fancied danger. I do not believe they will. Men will volunteer, however, if danger threatens and their services are needed.

No men are more reluctant to join the Army when there is no apparent demand for it than the American, and no one will respond more quickly and cheerfully to the call of danger than he. No one can be converted more quickly into an efficient soldier than the American citizen. He is brave, intelligent, self-reliant, and, though independent, recognizes the importance of obedience; and although it may take years to make an efficient soldier out of citizens of other countries, Americans, with the intensive training given in the face of danger, can be converted into efficient soldiers within a very short time.

I believe the people and the country are to be congratulated that Congress has not been swept off its feet by the demands which have been expressed through the press and by the fears and alarms sounded by the President of the United States, but has responded more nearly to the sober judgment of the American people and to the maturer judgment of the President uttered without the influence of the cheering multitudes.

Mr. President, I can not believe that the statement made by the chairman of the committee the other day, and made in the utmost good faith, that we have not asserted our demands and rights because we are not prepared is correct. If that is correct, the President of the United States has neglected his duty in not calling upon us for the proper forces to assert our demands. If that statement is correct, the President should tell us at once what he needs. No matter what the cost may be, the Congress will provide him a force that will enable us to support and maintain all just, honorable, and proper demands. But I do not believe that is the case. I do not believe that the President has neglected his duty in that respect. I do not believe that he has failed to assert the rights of this Government because he did not have the military or the naval force behind him, because he knows he has the whole Nation behind him and all its power and all its wealth. I regret, however, that if the fears he has expressed and the alarms he has sounded elsewhere are well founded and justified, he has not asked us to make adequate and immediate preparation to meet or prevent such dangers and leave to normal conditions the preparation of a system suited to normal and peace conditions. He does not sound these alarms here, however. He doesn't tell us that danger is imminent or that he needs any force to meet any emergency, and we have a right to assume that there is no imminent danger and that there is no need of an emergency force.

APPENDIX.

SEATTLE, *January 13, 1916.*

Hon. WESLEY L. JONES,
United States Senate, Washington, D. C.

MY DEAR SENATOR: I have been requested to write you my views upon the subject of preparedness, and will do so by replying to the questions attached. For convenience of reference, I have numbered these questions from 1 to 9, inclusive.

1. I do not think we need a larger standing army than we now have for purely peace purposes and domestic duties.

2. I do not think any of the European countries now involved in war will want to go to war with us in the near future unless war with them should be provoked by some of the violations of the rights of neutral countries that have been occurring since the European war begun.

3. I doubt that any of the European countries "will desire" to go immediately, or very soon, into war with us.

4. I hope there will be several years of general peace after the present war closes, but whether there will or not is something I think very difficult for anyone at present to foretell.

5. I do not think an increase of 40,000 men in our present Standing Army would enable us to make an effective defense if attacked by a strong power.

6. I do not feel that I am qualified to pass an opinion upon the subject as to how large a standing army we should have. Generally speaking, I am not in favor of a large standing army.

7. I do not think trouble is likely to come soon, at least, I hope not; but I am strongly of the opinion that we should begin at once to put this country in condition to protect itself in case trouble should occur between us and any strong foreign power.

8. I do not think it would be wise for us to wait until the close of the war in order to determine what we are going to do to put our country in shape to protect itself in case of trouble.

9. I think it would be a wise thing for us to do, to construct first-class highways along our coast lines, as well as from coast to coast.

In my judgment Congress should pass a law that will require that a part of the education of young men of this country will be military training. I think we should begin at once to provide military training in all our public high schools and colleges, so as to insure that within a few years we will have in this country a large number of citizens who are thoroughly trained in military drills and who know how to march, camp, and shoot. By this method we will within a few years have a large number of young and well-drilled men in this country, who can be called upon in cases of emergency. The Government should provide and equip arsenals at various points through the country where guns and accouterments may be kept to equip these men should they be called into action. The guns and equipment could be used in times of peace in drilling the young men in Army maneuvers and camp life. I think such an education would be of great benefit to the young men, and the young men would be of great benefit and protection to this country in case of need.

Yours, very truly,

———— ————.

SEATTLE, WASH., *January 28, 1916.*

Hon. WESLEY L. JONES,
United States Senate, Washington, D. C.

DEAR SIR: Your circular letter of the 13th received, and in reply will say that if you are really sincere in your efforts toward acquiring knowledge on the attitude of the people of Washington on the subject of preparedness it will only be necessary to read the comments of the leading papers of the State, as they cover the ground very fully.

As far as I am personally concerned, I am for a Navy second to none in the world, a coast defense which will protect all vulnerable points likely to be subject to attack by an invading army. A Regular Army of at least 750,000 men, with adequate provisions for training anyone who would care to serve during the summer maneuvers. Or better yet, I am for the program of preparedness as outlined by both the Army and Navy experts.

As far as my personal observation can reach, all of the persons with whom I have conversed on the subject hold the same opinion. They also believe that any patriot who has the love of his country at heart is for the utmost preparedness, and most of them question the possibility of anyone possessing that love and yet having to seek views on the subject.

History has proven, and all of the naval experts of the country have testified to the fact, that it is not impossible nor foolish for a first-class nation to transport a large body of troops across the ocean and lay waste the richer portions of this country. What facts can you advance which will controvert these facts and opinions?

Either you are misinformed or else the testimony of all naval men is false when you state that the Navy of the United States is second in the world. It was at one time, but has been slipping rapidly of late, and expert testimony now shows it to be a poor fourth. The only available testimony controverting my statement is that of the Secretary of the Navy, and his opinion is obtained from his fertile brain, and not from facts.

Another important item in the preparedness program is the immediate beginning of an auxiliary Navy. This should be given especial and immediate attention.

All of the above is advanced not only as a personal opinion but as one which seems widespread. The temper of the people as a whole is for immediate action, and they will not stand for temporizing nor for any dilatory methods on the part of Congress. And the preparedness program must be one which is approved by experts who know their business, and not by civilian bureau heads.

Finally, I will say that I trust the latent love of country which every every true American must possess will take such hold of you so that you will not waste precious moments in attempting to discover a sentiment which is actually forcing itself upon you, but that you will raise your voice for true preparedness, which means an increase in every branch of the Army and Navy, and that you will not let the call of politics cause you to delay this program for one moment.

Thanking you for your attention, I beg to remain,

Yours, very truly,

———— ————

SEATTLE, WASH., *January 28, 1916.*

Hon. WESLEY L. JONES,
United States Senate, Washington, D. C.

DEAR SIR: Yours of the 22d received. You say that you would be "glad to hear from me on the subject of 'preparedness.'" I thought that the preamble at the head of the letter that I sent you gave a very lucid idea of what "kind of preparedness" we wanted.

Boiling it all down, we want to be prepared to repulse an attack from the most powerful nation on earth, and then if a smaller one comes along we will be all right and no harm done that we are some better prepared than we need to have been for the little fellow.

I have read your circular that you are sending over the State, and do not agree at all with your views in regard to what might happen at the close of the European war. You appear to think that Great Britain would under no circumstances attack us. Personally I do not think she would, but she might, and this Nation can not afford to take chances. Again, suppose that Germany should win the war. With her greatly strengthened fleet and army and wealth, as we are situated now, she would take all of our important seaports in three months. When was the United States best prepared for war? At the close of the Rebellion. Would not other nations be the same? The first two years of the Rebellion there was no army on either side. There were simply two mobs. Now we have a hundred times the strength in men, money, and developed resources, but the Union Army as disbanded armed with our present equipment could conquer our land forces to-day.

Your views as expressed in your circular are all right as far as they go. However, on the last of the circular you say, "I believe that this will amply and safely take care of the situation till the close of this war and then we can determine what further preparations are needed." I believe that you are all wrong in this view. In my judgment if we are attacked it will be within three months after the war closes.

They would not be accommodating enough to wait a few years for us to prepare. The winner will then be the most powerful nation on earth, with unlimited means and resources, and why should they not reach out and grasp so easily such a prize as we would be? Don't think for a moment that any feeling of friendship or justice would be considered at all in the matter. It would be done as it always has been done, and the sword would be supreme.

Respectfully, yours, ——— ———.

—

CHEHALIS, WASH., *January 12, 1916.*

Senator W. L. JONES,
Washington, D. C.

DEAR SENATOR: This is the first time in all the years since 1898, when you ran your first (seemingly hopeless) race for Congress, that I have been impelled to "take my pen in hand" and write you an objection to your course as a public officer. With few exceptions, I have favored the ideas you have advanced and the work you have done in the House and Senate, and it is with sincere regret that I am compelled to differ with you in the course you have apparently determined to pursue in the matter of preparedness by this country to resist possible foreign invasion and to stand for our rights in every part of the world.

In reply to your published letter, I take the liberty of answering your nine questions:

1. No.
2. There is danger that they will. We are not on good terms with Germany and Austria. If they win, it is reasonable to suppose that they will find ground to pick a quarrel with this great, rich, unprepared country. We have not been as firm in all cases with the allies as we should have been. If the administration finally talks "real sassy" to them and they win, there is grave danger that they will find cause to make us trouble.
3. Covered by 2, and the further reason that this is a very rich country, from which billions of war indemnity could be levied by merely taking our big seacoast cities.
4. Yes.
5. No.
6. Yes.
7. We should prepare promptly by rapidly strengthening our Navy, by building up our coast defenses, by a large increase of the Army, by establishing ammunition manufacturing plants in the interior, by laying up large supplies of ammunition and military equipment that can not be rapidly gathered.
8. I can not assume, I regret to say, that early trouble is not probable, and do not believe it wise to wait until trouble comes.
9. It would be wise to establish and maintain good roads and railroads along our coast lines, but these would be useless to us if we did not have the Army ready to move rapidly to the point where the landing of a foreign enemy was threatened.

It is very pleasant to think that if we conduct ourselves in a neutral way none of the foreign nations will want to get into trouble with us. I notice some distinguished citizens of this country think that in order to be neutral we should not allow munitions and supplies to be furnished the allies, while others are as positive that to forbid the furnishing of war materials to either side would be a distinctly unneutral act. The path of the neutral is not a bed of roses.

Our troubles will not necessarily come from things of our own doing. Many European countries, for instance, have grievances against Mexico which, in the opinion of the warring world, would justify military expeditions against that country. Shall we permit such expeditions? If not, how will we help ourselves without an adequate Army and Navy and advance preparation? And will not the fact that we have the force large in numbers, trained and equipped for any emergency, tend greatly to discourage military operations by European countries against the smaller countries of this hemisphere?

We can not always bluff and bluster successfully, and we are only in a position to-day to back down ignominiously if any first-class power should at the close of the war choose to call us to account for fancied wrongs. Let us try to conduct ourselves so no country will have any just cause for trouble with us, but let us be on the safe side by being decently prepared.

Our people have been fed with the idea that we can gather together a mighty Volunteer Army in a limited time and hurl back the world from our shores. In a way this was true when every citizen was a backwoodsman who knew how to use a rifle, but even in the time of Gen. Washington it was a very disheartening thing to the American leaders to put their untrained men against trained soldiers from Europe, and to-day it would be suicidal. Wars are won now with big guns. We have not enough of the big guns, and probably not one citizen in ten thousand knows how to handle such guns.

As a permanent national policy, I think we should require military training from all able-bodied young men. A certain proportion of men might serve a year in the Regular Army, with the privilege of discharge at the end of that time, but subject to recall in case of war. Others could serve their time in the National Guard, in the proposed "continental" army, or in cadet corps in the schools. In other words, we should not only have a big Navy of the highest class, an efficient Army of 500,000 to 1,000,000 men, coast defenses, arsenals, and military stores in the interior, far away from the coast, but we should have millions of men ready trained for war if war ever comes to us.

You may call this "excited over preparedness," but I assure you it has long been my sentiment, and the suddenness and violence of the European war only add to my conviction, that while we have been wonderfully fortunate in being placed between the two big oceans, so far away from the great powers, we may not always be as fortunate as we have been in the past, and our safe course will be to prepare to protect ourselves.

Respectfully, ——— ———.

—

MONTESANO, WASH., *January 10, 1916.*

Hon. WESLEY L. JONES, M. C.,
Washington, D. C.

MY DEAR SENATOR: For the past week I have been thinking over the context of your open letter to the people of the State, re national preparedness for the defense of our country in case it is attacked by a foreign power or powers, and while not attempting to answer your questions, already answered by you, I deem it my duty as a citizen of our great Republic and as a friend and admirer of yours to accept your invitation and write you my views thereon.

Before giving you my opinion of the matter, I venture to say that you have already received hundreds of letters protesting against preparedness, for all of us abhor war and desire to do nothing that will in any way aid such a disaster to befall us. Many consider that any preparation is unnecessary, as no possible contingency could ever arise which would cause a nation of such enlightened and peace-loving and war-abhorring a people to allow themselves to become embroiled in such a relic of barbarism. You will hear from many of these.

On the other hand, there will be many who think we should prepare and keep prepared for the defense of our sovereignty and integrity as a nation who will not write you for the reason they consider thousands will be on hand to urge Congress to provide for an adequate defense in all particulars. Thus does the average business man neglect his duty as a citizen and content himself with letting well enough alone as long as everything is moving along smoothly.

No matter how great our efforts may be to justly and impartially preserve our neutrality during this great European struggle, the war passions and Governments of some of the nations involved will cause them to be hostile to this Government at the close of hostilities; in fact, even now there are many in each of the principal nations involved who resent in various particulars the policy we are pursuing. The victor will say it won in spite of the attitude of the United States and the loser will attribute its loss to our policy.

Why should this country be signaled out over any other for blame? Because we are the greatest of the nations not engaged in the war, and it is from us principally that those involved are purchasing supplies. The spirit of envy, particularly as to our wealth and prosperity, resultant from the war, is likely to engender hatred against us, at least to an extent such as to affect the friendship of all the warring nations toward us.

It may be, after the conclusion of the war, all the great nations involved will be so depleted as to men and money that they would hesitate about picking a quarrel with us, for some time at least. All the more reason why we should be prepared for defense. One would desist jumping upon a man whom he knew was armed with a pistol. But if we are not prepared there will be those who will look upon this as a land of plenty, which, if conquered, would fill their depleted coffers to overflowing. Other nations would be as slow as we are at this time to break their neutrality in such a contingency, even though possibly sympathizing with us.

The Monroe doctrine is something that from now on, more than ever, may involve us in a mighty war. In my opinion it has fulfilled its purpose and for it should be substituted a Pan American doctrine, whereby all the Republics of North and South America agree to stand by each other in the event of an attack on any by a foreign foe. This has been suggested by Mr. John Barrett, director general of the Pan American Union. An alliance between nations is the cheapest kind of preparedness, materially lessening the burden on each. Without such an alliance where would either France, Russia, or England have been to-day? It might be said that if any one of them had not been a party to such an alliance it would not to-day be involved. Maybe so, but our Nation is already and has been for years upholding the Monroe doctrine, and this without any reciprocal agreement. Well enough as to the past, but now it is time to substitute something else.

In times of peace many are ready to censure and kill any talk or policy of preparation for defense, bringing arguments against it of the enormous cost, and of the impossibility (improbability) of an attack upon us. This is the same policy which 90 per cent of our population follows through life, for very few constantly keep before them the advisability of laying up for a rainy day. We have spent hundreds of millions in digging a canal across the Isthmus of Panama, through which the ships of all nations will pass, which may in itself cause disputes. We must be prepared to protect this investment—if not by fortifications and a Navy and aeroplanes and an Army, then by an agreement with the principal powers to resist any attack against it. Even then it should be well protected to guard against possible emergencies. We have a rich country in Alaska, with many miles of coast line and fine, deep harbors. It could be easily taken, and we should be in a position to protect it. Even the United States proper are far from being invulnerable—for instance our own great State could easily be taken and devastated, and once in the possession of an enemy it would cost millions to ever get it back. Not even a mine or a fortification on either Grays or Willapa Harbors, for instance, and millions of dollars invested, all of which would be destroyed if we were to become involved in a great war.

For my part, I believe money spent in preparedness for defense is more likely to keep us out of war than anything else. I believe in time of peace we should prepare not for war but for defense against attack. Too late after we become involved! Then millions are spent every day, and thousands of lives are lost. "An ounce of precaution is worth a pound of cure." How our Congress would be criticized if we were to be embroiled in a war and found ourselves unprepared! In preparing for defense we do not invite attack, for, located as we are

and with no desire of conquest and further possessions of territory, we can mind our own business and be prepared to protect it.

For years the word "statesman" has been much less used than that of "politician." I believe there is now the opportunity of a lifetime to develop a few statesmen, and you are in a position to do and are capable of doing a great service to your country. I would say this session of Congress should further a policy of preparation without regard to political affiliations, and should also immediately take action to enter a pan-American union by the adoption with the other nations of America of a pan-American doctrine to take the place of the Monroe doctrine. Why could you not be known as the father of the act as far as this country is concerned, thus bringing lasting credit to the great State you have the honor to represent?

Were we living in an ideal Christian world, preparation would be unnecessary, but until the world grows better, or until we have an international court to settle finally all disputes, with an international police force to back it up, we should keep prepared, at the same time hastening the day when preparation shall be unnecessary.

With my very best wishes, I remain,

Sincerely, your friend, ——— ———.

—

SEATTLE, WASH., *January 10, 1916.*

Senator WESLEY L. JONES,
Washington, D. C.

DEAR SIR: I never had the pleasure of meeting you, although I have lived in the State of Washington for several years.

I understand that you are opposed to a policy increasing the Army and Navy and general preparedness of the country for war or peace, as the case may be, and being a citizen and taxpayer of the State I am interested to a greater or less extent in regard to your stand upon these matters.

I wish to say further that I was a Volunteer in the Spanish-American War, being a member of Company G, Third Nebraska Volunteers, and while I have no first-hand knowledge of actual battle conditions, I certainly have of the mobilizing and training of volunteers to meet the war conditions. You will, no doubt, remember the amount of sickness among the men who enlisted and the number of deaths resulting. It would have, in my opinion, been a much smaller per cent had these men received a certain amount of instruction and training before they were sent to the various camps at which the various corps were mobilized.

Then again, the department was not prepared to mobilize, transport, and equip the amount of men called and who responded to the call, and there is no question in my mind but what if Spain had been a first-class power the story they now tell of this war would have been entirely different.

It was my opinion after my enlistment and discharge from the Volunteers, and has been my opinion ever since, that the deaths of most of the men in Chickamauga, Jacksonville, and various camps at which the men were mobilized and the regiments assigned to the various corps were directly chargeable to the neglect of the Members of Congress, who were representing the people, to see that a proper policy had not been pursued in the Army department in particular.

It is a shame to call volunteers to the colors who do not understand the first principles of taking care of themselves in camp or under field conditions and put them into battle without any training. While the regiment in which I was enlisted, and the corps to which that regiment was assigned, were not called upon to enter battle, there is no question in my mind but what the men can thank their lucky stars that they were not called upon to do so. I do not say this out of regard for the hazard a man would naturally take upon the battle field, but out of consideration for the fact that the regiments as a whole were not properly officered, and the men and the officers could not go through the drills upon the parade ground and execute the maneuvers properly; that if these men had been put upon the battle line the officers would not have known how to give the commands, and the men, if the commands were given properly, would not have known how to execute them. The men and the officers both undoubtedly would have been perfectly willing to do all they could, but they would simply have been at the mercy of the enemy. I realized this at the time, and as I grow older I am more impressed with the fact that it was this country's good fortune that it entered a war with no stronger power than Spain, for undoubtedly the result would have been entirely different. We were unprepared with ammunition, supplies, and everything necessary for the soldier. The private soldier was willing enough, but he had no idea of what he was required to do or how to take care of himself. I am against war if it can possibly be avoided with honor, but if it can not be avoided, we certainly must fight, and it does not make any difference how remote the contingency may be, we should be prepared to meet it and not make a useless sacrifice of lives if it does come.

I for one am certainly in favor of preparedness both in the Army and the Navy, and that a sufficient fighting force be maintained upon land and sea so that in the event we are forced to enter a war we can enter one with at least some degree of safety so far as the personnel of the Army and the Navy are concerned. It is a shame to call for volunteers who do not know the first principles to enlist to defend their country *and be unable to* supply them with the necessary transportation facilities, arms, ammunition, food supplies, and the knowledge necessary to properly take care of themselves in camp or in the field, and there is no question but what any first-class foreign nation could land a force upon our shores as easily as we landed forces in Cuba.

I hope the time will never come when we will need to use either the Army or the Navy to repel a foe, but we certainly should be prepared to meet and repel any foe just as long as there is any other country remaining under arms or maintaining a fighting force.

I am writing this letter, taking it for granted that you would like to know the stand of the citizens of the State of Washington upon this question, and while I for one do not take off my hat and shout every time the American flag is displayed, I certainly am in favor of the country being prepared to repel a foe from any quarter and enforcing the rights of American citizens the world over.

Yours, very truly, ——— ———.

—

PENDLETON, OREG., *January 16, 1916.*

Senator W. L. JONES,
Washington, D. C.

MY DEAR SENATOR: I have noted your request in the press for expressions of opinion upon the subject of "preparedness," and as a citizen of Washington beg to submit the following:

1. Our present standing army answers all requirements during peace times. There has been no domestic emergency during the past 25 years or more that has not been promptly met. Why add a further burden by increasing the number of Regular troops?

A large standing army unquestionably exerts a home influence adverse to the amicable settlement of national differences through diplomatic channels. This, I believe, is greater than the coercive influence upon the opposing side, and to the extent of this difference is a menace rather than a protection.

2. The European war has reached a stage rendering certain—at least, the partial exhaustion—before its close, of all of the powers engaged in it. In the first place, the people of Europe have, even now, had quite enough of war and would gladly stop it if the great property losses already incurred could be even partially shouldered upon the other fellow; and, more important still, if there was assurance that a lasting instead of a temporary peace would follow. No; none of the European countries, belligerent or neutral, will want to go to war with us so long as the present struggle is within memory of the mass of the inhabitants. Not unless we ourselves are the aggressors, and in that case unpreparedness should be our deserts.

3. If the war were to end in the immediate future, the nations engaged would find themselves in a condition requiring many years—20 to 40 or more—to regain the position in property and financial resources which they had at the opening of hostilities. Moreover, they will want even better preparation for any aggressive war in the future than they have ever had before. Preparation by us now against European nations would be premature and a waste. Japan is our only menace, and her successful aggression could not extend beyond the Philippines. Our possession of these islands for many reasons would better end as soon as possible. And as a gratuitous suggestion I would propose that all of the territory on the south of us to the Panama Canal Zone should be acquired as soon as the same can be done by any peaceful means.

4. The contention that six months or a year is required to transform civilians into soldiers I believe greatly overdrawn. After two or three months' strenuous instruction and drill by competent officers, Americans, I venture to say, will put up a pretty good fight. Competent officers—that is the essential thing. Increase the output of the military schools not for pursuits of war, but combine military with a business or professional training. Every State institution should include military drill and tactics as a compulsory part of all its courses of study. The ablest men of the country are college trained, and this is the source upon which to depend for officers in time of need. If necessary, put a premium upon a military diploma and in this way aid many otherwise unable to obtain a college education.

Forty thousand additional soldiers would be hopelessly inadequate for defense if we should be attacked by a strong power, hence, after all, our safety would depend upon the civilian soldier. Two hundred and fifty thousand or 500,000 would be better than 40,000, but even then if serious trouble comes we must scramble for the next two or three million men who will constitute our real protection.

5. Preparation on rather a liberal scale in machinery and factory facilities, in naval craft of all kinds, aeroplanes, artillery, machine guns, small arms, munitions, etc., I would regard as wise. We should keep abreast of the times in such matters, notwithstanding the inevitable loss resulting from obsolescence. If we are prepared in these respects we can, I believe, muster the men and complete a program of defense in a few months—not five years—or rapidly enough to protect ourselves from serious invasion.

6. A system of interstate highways along our coast lines—and I would say along our other national boundary lines also—suitable for mobilization, is worthy of enthusiastic support. The present war has proven the very great usefulness of the motor vehicle for all short-distance war transportation, wherever the roads would permit. These interstate roads should therefore be designed and constructed for the special use of such vehicles and, as I believe, for their exclusive use. An exclusive motor road can be built at comparatively moderate cost, which will double loads and again double speeds of heavy tonnage haul. And more important still, a roadway of this kind, with the restriction named, will be really permanent—that is, good for a hundred years or more, as against a life of from 10 to 25 years of the so-called permanent roads for general traffic of the present day. I profess to be an expert in road matters, and trust you will call upon me at any time I can serve you.

The roads which you propose will be as useful in peace as they are necessary in war. I do not believe you could render a greater service to the country at large than to open the way for the construction of the interstate highways which you propose.

In connection with preparedness, it should be remembered that financial strength plays quite as important a part in national warfare as does any other factor, or, possibly, all others combined; hence any policy which will draw heavily upon the country's resources—such as the maintenance of a large standing army—either through its credit or by taxation, should be avoided in times of peace. The conservation of our financial strength is preparation both consistent and economical.

You have very properly invited attention to the disposition to rush into some scheme or plan of increasing our military power, regardless of cost and without means of forecasting what will be the greatly changed conditions which the present war will impose. We would much better concentrate our efforts upon a preparation for the commercial contest or activity which will surely and closely follow the cessation of hostilities.

Very sincerely, ——— ———.

—

SEATTLE, *January 5, 1916.*

Hon. W. L. JONES,
United States Senate, Washington, D. C.

DEAR SIR: Respecting your request for expressions of opinion on the matter of preparedness, I desire to submit the following:

It is well, it is true, for nations as well as individuals to be prepared for ordinary contingencies and emergencies, but the greatest care should be taken and many things taken into consideration.

It is a well-known fact that when a youngster arms himself and starts out he begins to feel his importance and begins first daring some one, and then insults, and the first thing he knows he is on the warpath and kills some one. Grown-up people are the same way, and nations are made up of grown-up people.

Again, as it was with Goliath, so it is with nations: When one nation suddenly begins warlike preparations others begin to wonder why and begin to reason that it may be for the purpose of attack and offensiveness, and they also begin; and then a struggle is on for which can be the best prepared when the storm breaks, as break they consider it must. One has but to study the present situation in Europe to realize what this means.

The one great thing I fear in this mad scramble for preparedness is that we may by our own actions precipitate trouble with other

nations. This is the great danger, and one that should not be lost sight of, regardless of politics. Politics should be left entirely out of this matter and as little criticism made as possible for this again often brings trouble, and that uselessly.

But, after all, we want to be able to protect our rights under any and all circumstances; but there should be a limit to the expenditures of money and men in the preparation.

I note that some men and papers, even in our own city, seem to have lost all sight of economy, the possibility of precipitating trouble ourselves, or of anything except that we must have the greatest Army and Navy on the earth. That very same disposition is largely responsible for the present conditions in the warring nations. Again I would say let us be careful.

With best wishes for your success and the security of our beloved Nation,

I am, very truly,

———— ————.

—

W. L. JONES, United States Senator,
Washington, D. C.

DEAR SIR: In response to your invitation which I read in the Everett Herald, I take pleasure in expressing my views on preparedness. In answer to your questions, I would say:

1. The Army at present is large enough.
2. I do not think they will, as the people will want to settle down to their industrial and agricultural pursuits. Furthermore, it is my impression that soon after the present controversy ceases there will be a number of changes in the political and economic situation; that debts now being incurred will be repudiated, as the people will not assume the burden. You know the number of people who have contributed financially are only a small minority, and when the vast majority meet and compare notes they will say they have paid enough already. For lives lost there can be no recompense. Of course, indemnity or pensions may meet financial needs, but they can not fill the vacant places at the table.
3. I do not think so.
4. As to aggressive war, yes; but internal, no.
5. We would need 40,000 officers.
6. I am against any increase in the military organization, as it would be used as a bully. You see the result in Europe, and if the debts are repudiated over there you see what an incentive there would be to use the fighting force.
7. Your answer suits me.
8. I agree with you.
9. Highways are always useful and an asset to the world, and the building of same should be commenced as early as possible. Of course, that sinister gentleman who has always been in the offing of the river and harbor bill will have to be hobbled. You will find him not more than 500 miles from the border, whichever way you look.
10. I think you are mistaken in regard to the excitement. Of course, there are a few who are honest in their fright, but you could appease their fears with a few sentences. They read articles sent out by the National Security League and others, then in time start the ball rolling themselves, often enlarging on same. I have read Mr. TAVENNER'S articles as to who compose the National Security League. While I have respect for their movement, to me it is very selfish and pernicious. It would be better for the people to give them outright the profit they expect in the next 10 years than undertake the program they suggest. The commercial interest is the crux around which all must merge, and it will have to be met with logic and justice. If we are to carry on international relations, we can not put up tariff barriers that are prohibitive, for the other fellow can retaliate. There is where I am sure the military organization would be used, if we had such.

Thanking you for inviting the public to express its views, I am,

Yours, truly,

———— ————.

—

MABTON, WASH., *January 6, 1916.*

HON. WESLEY C. JONES,
Washington, D. C.

HONORABLE SIR: I have read with much interest your questions and answers on the preparedness issue. I am very much gratified at your method and evident desire to be a real representative of the people. The belief is held by a considerable number of our politicians that the people are competent to select men to represent them in legislation but are not competent to advise or direct in that matter. Your desire to get an expression of the people on this, in my opinion, the paramount question before the people to-day convinces me that you consider it as one of vital interest to their future welfare. We have been spending enormous sums for military affairs for a number of years—as much as most any of the European countries—yet our advocates of so-called preparedness tell us we are utterly unprepared to meet any nation of any consequence. If I remember aright, a few short years ago when our ex-President Roosevelt occupied the chair our fleet made a trip around the world. This feat was heralded far and wide and we were told what splendid fighting machines they were and what crack shots, and I used to get somewhat puffed up when I read these descriptions in the big dailies; and I thought if anyone bumps Uncle they will get a surprise. Since that time we have been continuing to spend enormous sums for the Navy, but our advocates of so-called preparedness tell us we are helpless. The important question is, Why are we not prepared? Evidently there has been gross inefficiency and mismanagement in our military affairs. In other words, we have come far from getting a dollar's worth of preparedness for a dollar spent.

If the deficiency between what we get and what we pay for was brought together, there would be no need to bond the country or levy additional taxes on the people, and yet we would be amply able to defend ourselves against any probable crisis. The ominous part of the campaign to educate the people to the militaristic viewpoint is the fact that they are saying so little about the waste and inefficiency in our present military affairs.

It has been stated upon reliable authority that President Wilson's program will mean a profit of $250,000,000 to certain interests. Is it any wonder they are enthusiastic for it. Wall Street patriotism is measured by dollars and cents, and we are suspicious of their campaign to educate the people. Some great man, I have forgotten whom, said "Patriotism is the last refuge of scoundrels." The aim, as I understand it, is to build up a large Army and Navy permanently.

Every citizen should consider well before embarking on a militaristic career such as we have seen exemplified in Europe. President Wilson's plan is estimated to cost $1,000,000,000. It will cost more. Some are advocating a much larger expenditure. It costs us about two hundred and fifty million to maintain what we have now. What is it going to cost to create and maintain what our advocates of so-called preparedness want? I can not understand why some people should be so terror stricken for fear of this country being attacked. The leading nations are going to be rather exhausted when this war is over. Is it probable, after they fight to the point of exhaustion, they will all shake hands and say now let us all whip Uncle Sam? I do not think so. They will not be the best of friends for some time after the war. Is it not probable some of the nations are going to look with suspicion on our vast increase in military affairs? We remember England's answer when Germany built one battleship was for England to build two.

The argument that a powerful military organization makes for peace is without foundation. The papers have quoted Emperor William as saying he kept the peace of Europe for 40 years. In view of recent occurrences, does anyone say his vast military organization kept the peace? There can be no disguising the fact that the proposal of a large Army and Navy is a threat against some one. The people may not be informed of the real danger, if such exists, but I concur in your view if such danger does exist we should prepare at once, as the proposal to spread it over a period of years looks like we were going into militarism permanently.

I can say I heartily approve of your views and will use my influence in supporting you in that respect.

Thanking you very much for your interest and desire to ascertain the wishes of your constituents, I am,

Yours, very respectfully,

———— ————.

HON. WESLEY L. JONES,
Washington, D. C.:

We, the undersigned voters of Yakima County, indorse the above communication and heartily concur in your views on preparedness.

———— ————,
(And many others).

Mr. STONE. Mr. President, I understand the pending amendment is that offered by the junior Senator from Alabama [Mr. UNDERWOOD]. I will say just a word about that preliminary to what I have in mind to say. This amendment proposes to have the Board of Engineers for Rivers and Harbors make an investigation——

Mr. UNDERWOOD. No; I will say to the Senator from Missouri that I submitted an amendment to the bill seeking to have an investigation of the nitric question, a copy of which the Senator has in his hand; but yesterday afternoon I offered an amendment to the amendment of the Senator from South Carolina [Mr. SMITH], and that is the amendment pending.

Mr. STONE. Then I shall not make the observations I had in mind to make on the amendment I hold in my hand. I called for the amendment of the Senator from Alabama, and this is what was brought me. But since it has been changed I will pass that by for the present. I shall take opportunity to examine the amendment as it now stands when it comes before the Senate for action; I can not stop to examine it now.

Mr. President, the truth is that for some weeks my time has been so occupied with other matters that I have not been able to devote that careful attention to the Army bills before the Congress that should be given them to enable one to satisfactorily discuss their various particular provisions. Therefore, it is not my purpose at this time to discuss either the Senate bill or the House bill in a critical way. I wish merely to express briefly some general observations on the subject of preparedness—preparedness in more ways than one. On that subject, as I see it, there are at least three kinds of preparedness immediately pressing upon our consideration, namely, military preparedness, Navy preparedness, and maritime commercial preparedness—and, in my opinion, the least of these three is military preparedness. I do not wish especially to disparage the idea of military preparedness, for I think that is very important up to a certain degree, but beyond that degree I regard it as being of infinitely less importance than either of the other two forms of preparedness to which I refer.

On the subject of military preparedness I wish to say this as expressive of my views: I think it of the highest importance that ample means should be provided for training men in all things requisite for an intelligent and competent command of organized military forces. We ought to have a large number of young men trained every year in military science, and by that I mean trained in everything connected with organized military service. Especially ought we to have a large number of strong, selected men trained as engineers and in the command of the artillery. The experiences of the European war demonstrate the value of trained engineers in developing and executing the work necessary both for defense and offense in a period of war as war is now conducted, and we have only to read the accounts of the great battles of this war to appreciate the importance of the artillery arm of the service. Perhaps next to this should rank a well-trained and adequate force in military aeronautics. After these, and relatively of great importance, is an adequate force of officers trained in all the other lines of service. I regard special training in all lines as of high and urgent importance, although some lines of service are doubtless of more importance than others. Along all these lines I am profoundly solicitous that everything possible should be done. As to the best way of promoting this training work I speak

with hesitancy and would gladly defer to the judgment of men who have given the subject greater thought and who are therefore better qualified than I to develop the work. I speak only of its importance. I have a notion that it would be a wise plan to educate and train as many young men at West Point as could be sent to that school within the limits of its capacity. Those who go to West Point presumably go to make service in the Army a life career. If any go to this national school with any other purpose, I would regard them as unfit. But, aside from West Point, the Government should have other means of educating young men along substantially the same lines of instruction and training followed at West Point. I have been inclined to favor the notion of establishing at least two Government schools, one in the Middle West and one nearer the Pacific coast, where young men could be educated by the Government, having substantially the same curriculum as that at West Point. Those attending these schools would not go with the expectation of making service in the Army a life career. The plan would be merely to educate and train them, and at the close of their school work they would go into civil life in the same way that boys educated at our universities go into civil life, with this exception: That, having been educated by the Government, they should become a sort of national reserve force and rest under an obligation to respond to the call of the Government for active service. In this way the Government would send out every year many hundreds of young men trained and well equipped for command and under obligations to obey the call of the Government. Perhaps some other and better plan for training young men on military lines can be devised, but I am strong in the belief that some plan of this general nature should be adopted, and adopted now.

Mr. President, what I have so far said concerns the training of men for service as officers. I turn now to say a few words about military preparedness in other ways. I confess that I am not favorably impressed with the idea of a big standing army, or of any kind of big, expensive National Military Establishment. I have no objection to a comparatively small increase in the Regular Army—say, up to 140,000 or even 150,000 men, all told. I can not bring myself to favor this continental-army scheme embraced in the pending bill. I dislike to say this, because the bill has been presented and is so earnestly advocated by Senators I hold in such high esteem as I do the chairman and other members of the Military Committee. But the proposal is absolutely contrary to my judgment. Aside from the possible effect of this proposed organization on the National Guard, aside from the confusion it is said would result from having too many different kinds of organizations, aside from all other objections I have heard to it, it seems to me that if we should establish such a reserve force as a part of the Federal Military Establishment the importance and status of the militia would not only be so changed and diminished as to make it a negligible quantity but, more to the point, in a short while this reserve force would, I fear, be in some way almost certainly merged into the Regular Army. This continental-army scheme would be the first step in that direction. It would not be long until the Regular Army would be augmented by the addition of the reserves, possibly with other reserves to follow in their place. The pressure toward that end would be constant and intense. I am opposed to that, or to any step leading to that, because I regard this manufactured clamor for a large standing army to be utterly without reason. It would result in imposing a very heavy and useless tax burden on the people. It would be of immediate benefit to a few perhaps—that is, to those who would supply the Government with the vast accumulation of things needed for such an army. Moreover, it would put an argument in the mouths of people who might favor particular measures of revenue legislation—high-tariff legislation, for example—as a means of raising the money necessary to meet the enormous increases in our public burdens. We have no need for a great standing army. This proposal would be a reversal of the traditional policy of the Republic. What need, indeed, have we for a great standing army, or for any kind of great permanent Military Establishment? A lot of people have sought to excite us with the foolish apprehension that at the close of the European war this country will be in danger of attack by some of the powers now involved in that conflict. To my thinking such a suggestion is hardly entitled to respectful consideration. Every one of these warring nations will come out of that conflict staggering on the brink of bankruptcy and economic ruin. It is the acme of foolishness to speak of any of these nations undertaking to send an invading army into the United States. I refuse to be frightened by such nonsense. Still there are things we ought to do, and do with liberal hand at once. The United States should put itself in position to supply on the shortest possible notice the very best equipment in arms and ammunition to the Regular Army, to the militia, and to a volunteer army.

If a real danger of invasion should arise—a contingency very remote—and the President and Congress should call for a defensive force, we could marshal millions of men, if necessary, within a brief period of time. With 150,000 Regulars, or even 100,000 Regulars, backed by approximately the 250,000 members of the National Guard and many thousands of other men with more or less military training, all or most of whom would instantly respond to the Nation's call, we would be able at the outstart to meet any force that might undertake to invade our soil. With this organized force already at our command, or at least available, we could begin almost immediately to support them by volunteers, if only we should have the means of properly arming and equipping them. Hence I believe that the Government itself should at once put itself in position to make sure of its ability to supply an army of any size with the very best arms and munitions known and in use among the nations of the world, and in all manner of improvements we should keep fully abreast of the world. The Government must be prepared to make the best guns, both artillery and small arms, and the best possible munitions promptly and to any extent. In line with this thought I have been greatly impressed with the argument made by the Senator from Alabama [Mr. UNDERWOOD] for a Government power plant for powder making. For all kinds of preparedness along these lines I am willing to go to any reasonable length, but beyond that I halt. I shall vote to perfect a bill as nearly in accord with this general policy as possible.

Mr. President, as to naval preparedness and coast defenses I am ready and willing to go to a much greater length. I want to defend our coasts with the most formidable and effective weapons known of men. I am willing to organize coast batteries—stationary or movable or both—according to the matured plans of those upon whose judgment we must depend. Not for the love of it, but because of the necessity of it under world conditions as they exist now and have existed for a long time, I have been, and am, an ardent advocate of a large Navy. Always with the greatest favor I have looked upon, and still with favor look upon, any well-considered movement to increase our naval strength sufficiently to make it not only a safe arm for defense, but strong enough to go upon the seas, offensively, if need be, to protect American interests anywhere in the world. That is one kind of preparedness I am ready to go a long ways to promote and to perfect, and I shall stand for that policy as long as there is need for it.

Mr. President, of late a great deal has been said about militarism in Germany and navalism in Great Britain. I want to talk about that. I think it pertinent and proper at this juncture to direct the attention of the Senate to some phases of this subject which I regard as of special moment to this country. I look with the utmost disapprobation, amounting almost to abhorrence, upon both German militarism and English navalism. I couple them because they are two things of the same kind. For a great nation like Germany, which has made itself conspicuous in so many lines of human advancement, to persist in standing committed to its policy of militarism—which I consider as a blot upon its supreme example of national progress—is something that chills my heart and puts a shadow on my admiration of the achievements of that great Empire. The same feeling of repulsion moves me when I reflect upon what England, the proud home of my ancestors, has done and is doing so persistently in promoting what the world calls navalism. I can not escape the conviction that in these respects both have been guilty, equally guilty, of offense against the peace and well-being of mankind. Not long ago there was what might be called a world movement for disarmament. Germany stood in the way of military disarmament and England stood in the way of naval disarmament. Let me be somewhat more accurate; the movement to which I refer was not to bring about complete army or navy disarmament, but only partial disarmament. In other words, that the military policy of Germany and the naval policy of Great Britain, including likewise the military and naval policies of all nations, should lead toward lessening instead of increasing their armaments, so as to put all of them upon a peace footing. The movement was to promote world peace, as against the prevailing policies, which tended to provoke world war. Blocking the path of this forward movement, Germany stood immovable for her military program and England stood immovable for her naval program. These two great European nations pointed at each other and each sought to justify or excuse its policy because of the attitude of the other. And so nothing was accomplished. Germany went on increasing her military establishment, and incidentally her naval establishment, while England went on increasing her naval establish-

ment. As a matter of public policy, both national and international, I have looked upon these great military and naval programs with positive abhorrence. But, Mr. President, as a Senator and citizen of the United States, I must view these German and British programs from two viewpoints—first, from their several national standpoints, and secondly, from the standpoint of the particular interests of the United States. However I may regard the German military program, it is something in which we are only distantly interested. As an American citizen, my interest in the military program of Germany is different from the interest I would have in that program if I were a citizen of France or the subject of some other contiguous European country.

If I lived in France I would feel differently about the military policy of Germany than I now feel about it as a citizen of the United States. The reasons for this are so manifest that they need only to be adverted to. France could not disarm while Germany was arming. What a wonderful and glorious thing it would have been, and what a blessing to the people of all these lands, if all had scattered their martial organizations into their multiplied industrial pursuits and honestly sought to live in amity and peace with each other. But Germany would not disarm on the land unless England would disarm on the sea. And England would not disarm on the sea unless Germany would disarm on the land. As a consequence all Europe has been for years one vast field of activity in military and naval preparation for war. Still I say that the people of the United States, considering the circumstances of their environment, are less concerned about the military programs of European nations than about their naval programs. We are separated by thousands of miles of sea from European armies, and there are other considerations that minimize the possibility of danger to us from that source. But the seas that wash the shores of Europe also wash the shores of the United States. The Atlantic Ocean is a common field, so to speak, for exploitation by both Europe and the United States. Therefore, I hold that we are directly and infinitely more concerned about the war navies of Europe than about the armies of Europe. A European power sufficiently strong to be supreme on the seas is of greater possible danger to our welfare, whether in times of war or peace, than any mere military power, however formidable, thousands of miles away. The navy of Great Britain is to-day the most potential force opposing Germany—more potential indeed than all her armies. If we could be assured of a permanent peace with all these great powers, we could then well afford to regard their military and naval policies more from an academic standpoint; we would have no direct interest in them. But contemplating the possibility of war, and likewise contemplating the possible influence of these several establishments on our industrial life at home and abroad, it seems to me that we would have greater reason to dread a world dominance by a single power over the seas, which are the world's highways of commerce, than we would have to dread a mere military establishment of any country far away, however stupendous. While I look upon miliatry supremacy of any particular European power with the greatest aversion, we of America would have no particular reason to dread it; but a supreme dominance of the seas by any single power on earth is something which comes immediately home to us.

I have said this because I want to have this thought impressed upon the Congress, the administration, and the country. If ever we are attacked and threatened with serious danger from abroad, it will not be from an invading army but from some naval power so superior to our own as to make us helpless and our condition pitiful. Therefore, until the world agrees to a substantial disarmament on both land and sea—especially on the sea—I shall insist with all the earnestness of which I am capable that this Nation—so powerful and yet so weak, so opulent and yet so poor—shall utilize its great resources in developing a plan of preparedness that will secure protection to our people at home and make the honor of our Nation safe beyond peradventure anywhere in the world.

Mr. WARREN. Mr. President, may I ask the Senator a question?

Mr. STONE. Certainly.

Mr. WARREN. Does the Senator consider that our relations with Mexico are entirely satisfactory, and that if unpleasant occurrences should follow we have a sufficient enlisted Army at present to properly care for the citizens of our own country and our citizens now in that country?

Mr. STONE. Mr. President, of course our relations with Mexico are not satisfactory. They never can be satisfactory until a stable and orderly government is established there. Does the Senator question me to provoke me to discuss what we ought to do in Mexico?

Mr. WARREN. Not at all. I simply wished to know if the Senator believes we have a sufficient force at hand to carry out what may be the exigencies and demands upon us with relation to conditions in the Republic which adjoins us on the south, and I asked the question in good faith.

Mr. STONE. In answer to that I would say that within a very brief time we could get even more men than we would need for any emergency that might arise in that direction. The difficulty with us would be just what I was talking about a moment ago—the difficulty of supplying our troops with what they would need to prosecute a war.

Mr. WARREN. Does not the Senator believe that so far as supplies are concerned we are now far ahead of the number of men that are under command in the Army? I agree with the Senator that we ought to have very large and increased supplies of arms, armament, and explosives; but the Senator must know that we are a long way ahead of the troops now under command with the necessary arms and accouterments for them.

Mr. STONE. Mr. President, the Senator from Wyoming is so much better advised about military affairs than I, he knows so much more than I about the actual force at our command and our means of supplying them in case of emergency with the things needed to prosecute a war, that I should very readily accept any statement he might make. If it be true that we now have the means necessary to arm and equip an adequate force to meet such an emergency as the Senator presupposes might arise, and which all of us hope may not arise, then, of course, we are ready for that particular emergency; but in any event, if we are to be precipitated into this emergency, we can not depend upon this bill to help us out. It would come too late.

Mr. WARREN. We have not material enough; but, as I said before, we can arm many more men than we have under enlistment. This armament is worth nothing except in the hands of men, and it ought to be to a great extent in the hands of experienced men.

Mr. STONE. That is what I said and say.

Mr. WARREN. We do not want to take men from the plow fields and the factories and shove them into the midst of war against a nation that has been continually in war, and has educated soldiers, without some preparation on the part of our men.

Mr. STONE. Mr. President, I do not want to get into a discussion about Mexico at this time.

Mr. WARREN. I do not, either.

Mr. STONE. But I have a suspicion that a farmer boy or factory boy from Nebraska, Michigan, or Wyoming, with proper equipment, would make a very capable antagonist for anything he would likely meet on the other side of the Rio Grande.

Mr. WARREN. A most excellent one; but still better if he had had a couple of months' or more training.

Mr. STONE. He would get that in a very short time; but I do not care to proceed further on that line.

Mr. President, I shall take only a few moments more of the Senate's time.

I wish now to speak briefly of another kind of preparedness which in importance I consider the equivalent and the counterpart of naval preparedness. I refer to the merchant marine. We talk of spending something like four hundred millions on military preparedness within the next four years. To my thinking that would be wild extravagance, without any possible corresponding public benefit; on the contrary, it would result in a positive public evil. With half that sum we could put a merchant marine afloat that would make our producers and shippers of all kinds independent of the world. There is scarcely a possible danger of any European power or powers invading the United States with an army. That is not the kind of war we need to fear or to prepare against. I do not know, nor do you, what the outcome of this struggle in Europe will be. We know this, however, that if the Germanic powers are crushed Great Britain, commercially speaking, would under present conditions absolutely dominate the seas more than ever before. With her great navy and her great merchant marine she would be practically omnipotent. Those of you who have kept track of the British orders in council, of the declared policies of the board of trade, and the commercial conferences being held even in the midst of war between the entente allies, under the leadership of Great Britain, should pause to inquire where our manufacturers, merchants, and producers would find themselves if Great Britain, coming forth a victor from the war, the most dominant power in Europe and supreme on the sea, should undertake to recoup her war losses and rebuild her shattered fortunes by taking control of the world's commerce in her own interest. We would find ourselves almost entirely, or chiefly, at least, dependent upon British ships for transportation. On the other hand, should

the Germanic powers come forth as victors our situation would be relatively the same—perhaps not quite so bad, but nearly so. If in the end there should be a drawn battle and the antagonists should make a peace leaving them in a relative way as they were at the beginning of the war, would it not follow that there would be a sufficient mutuality of interests to press them into some large measure of accord in dealing with commercial questions so as to recuperate and rebuild at the expense of neutral nations, and especially of the United States? This is the kind of preparedness we must deal with at once unless we are blind and fatuous. As soon as we are through with the Army bill and through with the Navy bill, which I hope will be pressed with the greatest energy to the speediest conclusion, I want to see the ship bill—the merchant-marine measures—brought to the front and kept there until some great policy of commercial preparedness is definitely entered upon.

Mr. President, I have spoken thus in the hope of impressing upon the Senate the supreme importance of the great work of preparedness we still have before us, and to stimulate the Congress to press forward with the task. If these suggestions are in accord with your view, Senators, as I believe they are, at least in the main, then ought we not to arrange our program accordingly and carry it forward with all the energy we can put into the work? Time is fast slipping by, and already we can feel the summer's breath.

Mr. CHAMBERLAIN. Mr. President, I did not intend to say anything on this subject at this time; but in view of one statement the Senator has made, I feel that I ought to have go in the RECORD one or two facts in connection with the Senator's discussion.

I am not at variance with the Senator as to a large standing army. I am, and have always been, opposed to a large standing army. I have repeated that more than once, and in advocating a reorganization of the Military Establishment I have never at any time insisted upon a large standing army, and the pending bill does not provide for one. But the Senator lays stress upon the so-called continental army, which he says he opposes. Mr. President, this measure does not carry the continental-army scheme. It is true that it provides for a volunteer army, but it utilizes a statute that is already in force, and which was passed by the Congress of the United States in 1914. An examination of the continental-army scheme, as submitted by the distinguished ex-Secretary of War, Mr. Garrison, will disclose very quickly that the plan now proposed and contained in this bill is not the continental-army scheme by any manner of means.

I am not going to analyze the two plans, but I do want to call the attention of the Senator to the fact that he differs radically from the President of the United States and the Committee on Military Affairs on this subject of a volunteer army. Notwithstanding the fact that no political dicussion ever entered into its consideration, notwithstanding the fact that at no time were the policies of any President discussed, the pending bill conforms more nearly to the wishes of the President of the United States than does the Senator in his discussion of the Military Establishment. I am just going to call attention to two utterances of the President on the subject, to show that the committee has pretty nearly followed the suggestions of the President as to our needs.

It is true that the Senator from Missouri is more nearly in accord with the President of the United States as to the size of the standing army. The Senator says that he favors something like 140,000 men. The President of the United States said substantially the same thing; but the Senator opposes a system which the President very strenuously advocated on two occasions—first in his message to Congress, December 7 last, and second in his New York speech to the Railway Business Association in New York, January 27, 1916—on both of which occasions he urged the organization of volunteer forces for the purpose of meeting any contingency that might hereafter arise. To both these I want to call the attention of the Senate.

Mr. STONE. Mr. President, if my friend will permit me, he discussed the attitude of the President. What was the difference of opinion that arose between the President and Secretary Garrison?

Mr. CHAMBERLAIN. I think, though I do not know certainly, that possibly the question of a continental army had something to do with it; but we have not followed the continental army scheme. I differed from Mr. Garrison in reference to that, and I have so stated publicly on more than one occasion; but our committee followed really the suggestion of the President——

Mr. WARREN. May I ask the Senator from Oregon if he does not think there was a very wide difference between the Executive and the ex-Secretary of War over the Philippine measure?

Mr. CHAMBERLAIN. Yes; that, I believe, was one serious question; but I assumed that the Senator wanted to know more particularly about the Army reorganization.

Mr. STONE. Oh, to be sure.

Mr. CHAMBERLAIN. The President, in his message to Congress on the 7th of December, 1915, after discussing the militia of the country and the rôle they must play, said:

It is with these ideals in mind that the plans of the Department of War for more adequate national defense were conceived which will be laid before you, and which I urge you to sanction and put into effect as soon as they can be properly scrutinized and discussed. They seem to me the essential first steps, and they seem to me for the present sufficient.

Then he states what he thinks ought to be done in reference to increasing the Regular Establishment. After that he says:

By way of making the country ready to assert some part of its real power promptly and upon a larger scale, should occasion arise, the plan also contemplates supplementing the Army by a force of 400,000 disciplined citizens, raised in increments of 133,000 a year throughout a period of three years.

There the committee differed from the President. The committee has undertaken to provide, not for such a large volunteer force as the President suggested, but only 261,000, raised in increments and covering a period of four years; so that the committee did not go so far as the President suggested. Now says the President in his message:

This it is proposed to do by a process of enlistment under which the serviceable men of the country would be asked to bind themselves to serve with the colors for purposes of training for short periods throughout three years, and to come to the colors at call at any time throughout an additional "furlough" period of three years. This force of 400,000 men would be provided with personal accoutrements as fast as enlisted and their equipment for the field made ready to be supplied at any time.

I call the attention of the Senator to this because our bill has followed the suggestions of the President.

They would be assembled for training at stated intervals at convenient places in association with suitable units of the Regular Army. Their period of annual training would not necessarily exceed two months in the year.

It would depend upon the patriotic feeling of the younger men of the country whether they responded to such a call to service or not. It would depend upon the patriotic spirit of the employers of the country whether they made it possible for the younger men in their employ to respond under favorable conditions or not. I, for one, do not doubt the patriotic devotion either of our young men or of those who give them employment—those for whose benefit and protection they would in fact enlist. I would look forward to the success of such an experiment with entire confidence.

At least so much by way of preparation for defense seems to me to be absolutely imperative now. We can not do less.

The committee went into this question fully, and some members of the committee discussed it with young men of different walks in life, hoping that we might elicit from these people what the disposition of men was.

In his address on the 27th day of January, 1916, delivered in New York at the seventh annual dinner of the Railway Business Association at the Waldorf-Astoria, the President said what I am about to read amongst other things, in discussing this very subject; and I am sorry to see the distinguished Senator from Missouri differing from the views of the President, because, without intending to follow out any particular policy, our committee is more nearly in accord with the administration than is the Senator from Missouri.

Mr. STONE. I did not say I was undertaking to voice the attitude of the administration.

Mr. CHAMBERLAIN. No; I rather thought the Senator was against the administration, and the Senator is not usually at variance with the administration.

Mr. STONE. I am not.

Mr. CHAMBERLAIN. That was what surprised me here.

Mr. SMITH of Michigan. The Senator from Missouri is very independent.

Mr. CHAMBERLAIN. Yes; I am not criticizing the Senator on that account. I think it is pretty good Democratic doctrine to stand together if we have to hang separately.

In discussing this matter, the President said:

But, gentlemen, you can not create such a system overnight—

That is, a body of troops sufficient to handle a difficult situation—

You can not create such a system rapidly. It has got to be built up, and I hope it will be built up, by slow and effective stages; and there is much to be done in the meantime. We must see to it that a sufficient body of citizens is given the kind of training which will make them efficient now if called into the field in case of necessity. It is discreditable to this country, gentlemen, for this is a country full of intelligent men, that we should have exhibited to the world the example we have sometimes exhibited to it, of stupid and brutal waste of force. Think of asking men who can be easily trained to come into the field—crude, ignorant, inexperienced, and merely furnishing the stuff for camp fever and the bullets of the enemy.

That is what this committee has attempted to do; not to establish a large volunteer force that can be used for invasion or any other offensive purpose, but to place young men in this country in a position where they will not be led to the slaughter if an emergency for defense ever comes—young men, taken from every walk of life, fitted and prepared not only to avoid the fevers of camp life, understanding sanitary rules and regulations, but young men who know how to handle a gun.

The sanitary experience of our Army in the Spanish-American War was merely an indictment of America's indifference to the manifest lessons of experience in the matter of ordinary, careful preparation. We have got the men to waste, but God forbid that we should waste them. Men who go as efficient instruments of national honor into the field afford a very handsome spectacle indeed. Men who go in crude and ignorant boys only indict those in authority for stupidity and neglect. So it seems to me that it is our manifest duty to have a proper citizen reserve.

Mr. President, to show you that the President did not have in mind the National Guard in reference to this matter, he differentiates between the National Guard and the Volunteers of which he speaks. The very next paragraph is devoted to the National Guard plan. He does not overlook it. He advocated doing more for the National Guard than has heretofore been done, just exactly what the committee does in this bill, so as to make it a more effective and more dependable force. The President says:

I am not forgetting our National Guard. I have had the privilege of being governor of one of our great States, and there I was brought into association with what I am glad to believe is one of the most efficient portions of the National Guard of the Nation. I learned to admire the men, to respect the officers, and to believe in the National Guard; and I believe that it is the duty of Congress to do very much more for the National Guard than it has ever done heretofore. I believe that that great arm of our national defense should be built up and encouraged to the utmost; but, you know, gentlemen, that under the Constitution of the United States the National Guard is under the direction of more than twoscore States; that it is not permitted to the National Government directly to have a voice in its development and organization; and that only upon occasion of actual invasion has the President of the United States the right to ask those men to leave their respective States. I, for my part, am afraid, though some gentlemen differ with me, that there is no way in which that force can be made a direct resource as a national reserve under national authority.

Now, notice:

What we need is a body of men trained in association with units of the Army, a body of men organized under the immediate direction of the national authority, a body of men subject to the immediate call to arms of the national authority, and yet men not put into the ranks of the Regular Army.

That is exactly what we have proposed in this bill; and going further in regard to this provision with reference to volunteers in connection with the act of 1914:

Men—

Says the President—

left to their tasks of civil life, men supplied with equipment and training, but not drawn away from the peaceful pursuits which have made America great and must keep her great. I am not a partisan of any one plan. I have had too much experience to think that it is right to say that the plan that I propose is the only plan that will work, because I have a shrewd suspicion that there may be other plans that will work. What I am after, and what every American ought to insist upon, is a body of at least half a million trained citizens who will serve under conditions of danger as an immediately available national reserve.

That is exactly what this committee has done, only we have not gone as far as the President advised. We have only gone to the extent of creating these reserve units to be trained in connection with the Regular Army to the extent of 265,000 men.

I felt it my duty to say this because I do not want the Senate to get that continental-idea scheme mixed with the plan embodied in the pending bill.

Mr. GALLINGER. Mr. President, I listened with a great deal of interest to the speech of the distinguished Senator from Missouri [Mr. STONE], who always entertains and usually instructs the Senate when he speaks. I am in very earnest accord with him in the naval program that he outlines, but I go beyond him in the military program that he suggested.

What particularly attracted my attention was the zeal the Senator from Missouri displayed in reference to the rehabilitation of the American merchant marine. Mr. President, I am not going to discuss that subject at any considerable length to-day. The time will come in the near future, as the Senator predicts, when we will have that subject directly before us, when we come to consider a bill which has that end in view.

What I want to say now—and I shall take but a few minutes in saying it—is that the Republican Party has not been indifferent to the necessity for the rehabilitation of the American merchant marine, and the attitude of the Democratic Party in the past on that subject is well understood. Some of us who have been here a long time remember with a great deal of interest the efforts which the late Senator from Maine, Mr. Frye, made along that line. We remember the fate that befell the bill that that great Senator advocated with so much zeal and so much earnestness and so much ability. The Republican Party represented in this body and in the other House as a whole were in sympathy with the efforts that Senator Frye made along that line, and the Democratic Party were a unit against it. It is true that a few Republicans in both Houses of Congress joined with the Democratic Party in defeating those efforts.

Later on a commission, known as the Merchant Marine Commission, was authorized by Congress in the year 1904, consisting of five Members of this body and five Members of the other House. That commission made an exhaustive inquiry covering the entire country. When they returned to Washington they framed a bill which I had the honor of presenting to the Senate. The Republican Members of this body practically as a whole were in favor of that bill. It was debated at great length. That was 11 years ago. The bill passed the Senate, but, because of the fact that a few Republicans in the other House joined with the Democrats, the bill failed to become a law.

Subsequent bills were offered and were debated and voted upon. One bill which, in my opinion and in the opinion of my associates on this side of the Chamber, would have done very much to restore the American flag to the high seas was filibustered to death in this Chamber, and the Senator from Missouri was a very active participant in the work of defeating that bill.

Mr. President, there are different opinions on this subject. That we have needed a merchant marine goes without the saying. I never have attempted to enter the realm of prophecy, but I said in a debate in this body on a certain occasion that if the great maritime nations of the world should ever engage in a war between themselves this country would be absolutely at their mercy so far as transportation was concerned. That suggestion has come true to the letter.

On that same occasion I said that if the United States was engaged in a war with a single great maritime country of the world we would be at the mercy of foreign countries for transportation on the high seas, and if that event ever occurs we will be in just as deplorable a condition as we are at the present time.

Mr. President, I think I speak for my political associates in this Chamber when I say that we are just as anxious to have the American merchant marine rehabilitated now as we were in the days of Senator Frye 20 years ago or in the efforts that were made by Republican Senators and Republican Members of the House of Representatives covering the period from that time to the present hour. There have been differences of opinion, and likely there will be differences of opinion in the future on the subject. The Democratic Party has taken the position that no help shall be given to the maritime interests of this country in its unequal contest with the other great maritime countries of the world; that operating ships at a much higher cost than England and Germany and France and Japan, subsidized as their ships have been for a great many years, unaided and alone we shall engage in a contest to put our flag again upon the seas of the world, while the Republican Party has insisted, in season and out of season, that the Government should render aid that would equalize conditions.

Our Democratic friends, who have strenuously opposed any governmental aid to the shipping interests of the country, have now come to the conclusion that not only must the Government go into the manufacture of armor plate and of fertilizers, but that we must also go into the businesses of shipbuilding and ship operation. Some of us do not agree with that proposition. While the Democratic Party had a right to oppose the proposition of subsidizing our American shipping or giving a subvention in the shape of an appropriation to aid in carrying our mails to foreign countries, we have a much better right to oppose the proposition that they presented to us last year and which in some modified form is to be presented to us again, inasmuch as it involves the broad and indefensible proposition of Government ownership.

I do not know, Mr. President, what the fate of the bill the Senator from Missouri alludes to will be; but for one I express it as my opinion that if this great Government of ours desires to establish a merchant marine and again put our flag upon American ships, where it will be seen in every port of the known world, it is the duty of the Government to render that great interest some substantial aid, as other nations are rendering substantial aid to their shipping.

Mr. President, this is all I care to say to-day. I am unwilling that the Senator from Missouri should at this late hour stand in this body and advertise to the world the fact that it is necessary now for the Democratic Party to do something toward rehabilitating the American merchant marine, when they have

stood as a solid phalanx against every effort that the Republican Party has made looking to that end during a period covering at least 20 years. It is too late for the Democratic Party to become the champions of legislation such as they have bitterly opposed whenever it has been advocated by the Republican Party. The country will not be deceived on the subject.

Mr. WILLIAMS. Mr. President, the other day while speaking I mentioned the fact that I proposed at the proper time to offer an amendment so that it would be pending, to be voted upon at the proper time. I now offer it, and ask that it be read for the information of the Senate.

The VICE PRESIDENT. The proposed amendment will be read.

The SECRETARY. On page 161, in the proviso agreed to and following the word "only," in line 2, strike out the word "thirty" and insert in lieu thereof the word "ninety," so that the proviso will read:

Provided, That without the consent of Congress such volunteer forces shall not be called for field service for more than a total period exceeding 90 days in any one year.

Mr. WILLIAMS. For the information of the Senate, I will only say that a Senate amendment was adopted, you remember, saying that this volunteer force should not be called out for a period exceeding 30 days in any one year. I have offered to strike out "thirty" and insert "ninety," so as to give three months' instead of one month's training to these men.

Mr. HUGHES. Mr. President, I was interested in the statement made by the Senator from New Hampshire [Mr. GALLINGER], in reference to the responsibility the party of which I am a member will have to take in connection with the present condition of the American merchant marine. I can not for the life of me see how he can escape the fact that for 16 years his party was in absolute control and charge of this Government in both bodies of Congress and the President of the United States, and yet it was unable to work out a satisfactory method of rehabilitating the American merchant marine.

Mr. GALLINGER. Will the Senator yield for a question?

Mr. HUGHES. Certainly.

Mr. GALLINGER. I will ask the Senator if I did not state accurately the historical fact when I said the Democratic Party were unanimously opposed to the legislation and were aided by a few Republicans? Is not that the reason why the legislation failed?

Mr. HUGHES. The Democratic Party was unanimously opposed to enabling a certain interest to plunge its hands into the Treasury of the United States, which it has always seemed to me is the only method the Senator from New Hampshire has been able to see for the restoration of the American merchant marine.

Mr. GALLINGER. May I ask the Senator another question?

Mr. HUGHES. Certainly.

Mr. GALLINGER. That sounds familiar; but did any member of the Democratic Party in either House during those 20 years offer a bill on that subject?

Mr. HUGHES. Dozens have been offered on the subject—bills to permit Americans to purchase ships abroad and to bring them in duty free, and bills to permit shipping materials to be brought in free. I can state to the Senator a long list of bills, all of which met with the almost united opposition of the Republican Party in this body. But I can come down to a later period.

Mr. WILLIAMS. To the Alexander amendment to the Panama Canal bill.

Mr. HUGHES. The Senator is as familiar with those things as I am. I do not know what his object was in asking the question. Of course, he knows that this subject has been a controversial subject between the two parties. But both parties, I believe, sincerely desire to restore the American merchant marine to the sea. The Democratic Party believes it ought to be restored without enabling those gentlemen to get connected with the United States Treasury on the false plea that they are seeking that connection in order to pay a high rate of wages to the seamen whom they employ.

Mr. GALLINGER. May I ask the Senator another question?

Mr. HUGHES. Certainly.

Mr. GALLINGER. Did not the bill that was advocated by the Democratic Party in the last Congress, and which is to be reintroduced in this Congress, connect itself with the Public Treasury to the tune of $30,000,000?

Mr. HUGHES. Yes; for the benefit of the public and the Government itself. Of course the Senator knows that absolutely there is no analogy between what I said and the statement he makes. The proposition was to have the Government operate the ships for the benefit of the people.

But I want to call the attention of the Senator to another material matter in this controversy which I think he will have no difficulty in recollecting. A year or so ago an effort was made to enable ships flying the American flag and having foreign registry to participate in coastwise commerce; that, in my judgment, would have been the greatest measure of relief, the most substantial progress which could possibly be made in the way of restoring the American flag to the ocean.

Mr. GALLINGER. May I ask the Senator another question?

Mr. HUGHES. Certainly.

Mr. GALLINGER. Does the Senator seriously think that allowing foreign ships to invade our coastwise commerce would have done anything for overseas trade?

Mr. HUGHES. Yes, I seriously think so; and I have it on the opinion of one of the biggest men in the coastwise traffic, who said that but for the idiotic laws which are now on the statute books—and they were left on the statute books by the Republican Party, the party to which the Senator belongs—men like him who are in the coastwise trade would also be in the overseas trade and operating ships under the American flag.

I do not suppose the average American citizen knows that the navigation laws are of such a character that an American ship flying the American flag can not go from one port to another port in the United States. I can not see how Senators can seriously wonder at the fact that the American flag is not upon the seven seas in view of that fact; and when the effort was made to change that legislation, to amend a shipping bill which was pending before this body, so that American ships, under the American flag, owned by American citizens, and operating in the overseas trade should have the right to go from port to port in the United States, the Senator was responsible, in my opinion, for the opposition which brought about the defeat of that conference report.

Mr. GALLINGER. May I be permitted to ask the Senator another question?

Mr. HUGHES. Certainly.

Mr. GALLINGER. Would we not have to abandon all American ships in the coastwise trade if we should allow foreign ships to invade that trade and displace American ships?

Mr. HUGHES. We wanted to permit American ships to go into the coastwise trade and the Senator would not agree to that proposition. The Senator stands for the proposition that an American ship, under the American flag, owned by American citizens, can not go from port to port in the United States, and it is idle to shed crocodile tears over the disappearance of the American flag from the seven seas so long as those navigation laws are permitted to remain upon the books.

Mr. GALLINGER. The Senator alludes to the navigation laws, and charges the responsibility for certain laws upon the Republican Party. I assume that the Senator from New Jersey is ignorant of the fact that the law to which he alludes was placed on the statute book in the year 1793, 63 years before the Republican Party was born.

Mr. BORAH. Mr. President, I have no intention of engaging in the discussion of the subject that is now immediately before the Senate, to wit, the building of a merchant marine, but I wish to put in a few moments in the discussion of a subject which ought to be before the Senate more directly, and that is the Army bill proper.

I think the Senate is very generally of the opinion that the committee which reported the bill had a very difficult task upon its hands. Even those who may differ as to the details of the bill recognize the splendid effort which the committee has made, and also the progress which it has made in bringing order out of chaos with reference to this program of preparation.

It devolved upon the committee to formulate a program for which there was practically no precedent in this country, because it was in a large measure initiating a new policy. The fact, therefore, that it has brought a bill forward which meets with opposition and evokes differences of opinion is not at all surprising. It was almost inevitable. I am of the opinion if the committee had not felt that as a practical question of legislation it would be compelled to reckon with politics, it would have left out of the bill some things which are now in it.

Mr. President, I regret that the naval bill did not come to this body and receive consideration here prior to the time when we should address our attention to the Army. I believe if we could have had the naval program we would have had a saner and more wholesome view of the entire program of preparation than we get by beginning at this end of the controversy.

Instead of beginning with the last line of defense we ought to have begun with the first line of defense in the making of our program.

It is well understood, of course, that the Navy is the first line of defense, but it is not generally recognized as being what, in

my judgment, it is, in a practical way, very largely the last line of defense. I do not mean to say, of course, that if the first line of defense should break down or prove inadequate and insufficient there should be no second and third line of defense. What I mean to suggest is that, with our first line of defense what it should be, there would be only the remotest chance of ever needing the second and third line of defense. Viewing our situation as a whole, our geographic situation, and the physical conditions which obtain, the Navy will always be not only the first line but in a very large measure the last line of defense of this country. I am exceedingly glad that it is so, because no form of militarism menacing free institutions or free government has ever arisen from a large navy. The American people have some hereditary prejudices against a large standing army, and wisely so. If we make our Navy what it should be, there will be no necessity for a large standing army. We should have begun with the Navy, strengthened it, and made it efficient, and built our Army program in the light of what we should do for the Navy.

Mr. President, what is the condition of the first line of defense, and what are we proposing to do with reference to it, and what are we doing here? I am calling attention to this now because I think we ought to keep before us real preparation and divert our attention for a time from so much political preparation. We have, I understand, 21 battleships, 15 of which only have a full complement of officers and men. We have some 22 or 23 destroyers, some 17 aeroplanes corralled somewhere in Florida, no submarines in commission or in condition for service, no airships, no fit cruisers. These practically constitute our first line of defense.

Now, look at the geography of this country and the physical conditions which obtain and reflect for a moment upon the situation if we were attacked. The attack would necessarily come through the instrumentality of some naval power. There will be no invasion until our coast cities are hammered down through some foreign navy. It must necessarily come from some Government that is pretty well equipped as a naval power. What have we to defend? We have upon the Atlantic that long line of seacoast stretching for hundreds of miles, with vast cities and incalculable wealth at the water's edge. We have the Panama Canal. We have the long line of the Pacific coast, with its large cities and its great wealth at the water's edge. Not only does the Navy constitute our first line of defense, but unless it is sufficient and efficient as a defense any power having a reasonably strong Navy could inflict injury upon us incalculable in the loss of property and of life without landing a single soldier upon our shores or placing themselves in a position where we could use a soldier in defense. The work which we are doing here under this bill might never be effective for defense against such injuries, as it would be almost impossible to calculate. And while this work is not to be wholly neglected, it should follow the perfecting of the work which would be needed first and most.

Therefore it seems to me if we could have done it it would have been well for us to have strengthened sufficiently and efficiently to the full satisfaction of the judgment of the American people this first line of defense before taking up the second proposition. I am a believer in a strong, efficient Navy. I am not a believer in a large standing army. I am especially opposed to this thing of incurring great burdens in the way of expense as we are doing in this bill under the guise of preparation when there is no real substantial preparation as to those features of the bill at all. When all things are considered the burdens which must be legitimately laid and necessarily incurred, the taxes which must be raised, it stops only on this side of a crime to impose upon the people great obligations which are wholly unnecessary and wholly fallacious as real preparation.

That brings me to this proposition. I voted, Mr. President, a few days ago to retain section 56 in the bill which provides for what is called the Volunteer Army. I did so because of the manner in which the issue was framed, to wit, practically a controversy between the National Guard and the Volunteer Army. If the controversy remains in that condition I shall unhesitatingly continue to support the Volunteer Army, section 56, in preference to the National Guard. I think it far the better of the two propositions.

But I want to take time now to say that it would be extremely wise, it would be economical, it would be better defense if we should take the amount which we are putting into the Volunteer Army and the tremendous amount which we are putting into the National Guard and attach that amount to any naval program which would come to the Senate. We are putting into these propositions practically $100,000,000 a year. In my humble judgment it will never be less, and it will continue to be greater; but, say, it is $75,000,000 a year, in the next 10 years that will amount to some $750,000,000, which would give us in and of itself a most complete and efficient naval protection for the Pacific coast where, my friends, we will need it first if there is any real menace nestling anywhere against this Government. If perchance the naval program should come to the Senate fully adequate, which I doubt, then let us save this $75,000,000 a year to the taxpayers.

I call your attention to the fact that while we are discussing and considering the proposition of expending this large sum of money for these two purposes there is not a battleship anywhere upon the Pacific coast for its protection. This long line of seacoast, with its great cities and its great wealth, is an invitation to any nation which might feel disposed to attack us. It is practically without any defense whatever at this hour, and we are proposing to do that which, in my judgment, will greatly handicap and greatly embarrass us in getting that real defense which we need. If we spend money so lavishly upon these political features of the bill the real defense program in which there is no politics will be curtailed proportionately.

What possible advantage, what possible benefit, would either one of these forces, the Volunteer Army and the National Guard, be after the first line of defense was broken through upon the Pacific coast? The battleships of some foreign power could remain sufficiently far away to be out of the reach of the aggressive action of the Volunteer Army or the National Guard and still do incalculable injury to the property and the people of the United States.

Mr. President, Great Britain has had in the last 250 years five great wars, and they have been determined, not through her land forces or the land forces of her allies, but through and by the strength of her navy. When Great Britain has relied upon her navy and not upon the land contest she has invariably won. Whenever she has been lured to the proposition of relying upon land forces rather than upon naval forces she has lost.

The first great contest was that of 1701 to 1713, known as the War of the Spanish Succession. It is true that there were great land battles fought during that time. Nevertheless it was the slow, sapping, undermining, wasting, exhausting power of the English Navy which finally settled the great conflict and determined once and for all the supremacy of England upon the sea. While other nations could succeed upon land they could not succeed against that power which cut off the supply from other nations, which destroyed their commerce, which spread want and hunger among the enemy, and which kept prosperity and protection at home, which exhausted the means of support of other powers, but which fully protected its own.

England learned from that hour, and with one single exception has adhered to the program, that her strength lay not in armies or land forces, but in her navy, and it is a lesson which the United States may well learn not only for its safety and its protection, but for the benefit of its free institutions.

The second great contest was that of 1756 to 1763, in which Frederick the Great first rose to power in Europe. We study the history of that war and credit its success largely to the genius of Frederick the Great; but the final determination of the war rested at last upon the power of the English nation through its navy to protect her allies, to furnish subsidies, to exhaust the resources of the other nation, and to protect the resources of itself and its allies.

The third war was the one in which England was lured away from her reliance upon the navy and undertook to settle her difficulties principally by land, and in just so far as England undertook to settle her difficulties by land she lost. The greatest sacrifice that a nation ever made, the 13 American colonies, were the result of England sheering away for a time from her naval power and relying upon her land forces for conquest. France in this instance made her influence felt mostly upon the sea.

The next great war was that from 1793 to 1813, the contest between France upon one side and England upon the other, which finally merged into the Napoleonic wars. The first seven years of that great contest was one unbroken story of disaster to the English land forces and those of her allies. Everywhere upon land she was defeated. Lord Rosebery has said the year 1797 was the darkest year that ever confronted an English ministry. But, notwithstanding the fact that there was Eylau and Marengo and Austerlitz and other great battles which had been lost by England and her allies, there was the great naval power of England, still master of the sea and thereby master of the situation. Out there upon the sea cutting off the resources of the other nations, draining them of their strength, was the force which the genius of Napoleon could not successfully com-

bat. One writer upon the subject declared that that 20-years' contest was finally determined by those ships which through long, weary months were fighting the storms of the Bay of Biscay and resting off Toulon, where Nelson spent the last two years of his suffering life and upon which the grand army of Napoleon never looked. Napoleon declared at St. Helena it was within his power to accomplish everything he set out to accomplish except the destruction of the English navy, and that without the destruction of the English navy it was impossible for him ultimately and finally to succeed.

So, Mr. President, let us reflect upon this history and make the Navy of this country not only the first line of defense, but regard it for all practical purposes largely the last line of defense. If I had my way about it, Mr. President, I would strengthen to full adequacy and completeness the American Navy. I would make it so powerful that there could be no reasonable doubt, in the minds of those who are capable of judging, as to its efficiency in taking care of this country in case of threatened danger. Then I would provide for a reasonable standing army, such as is provided for in this bill, which I think a very reasonable one.

After that I would cut out the politics of this situation—the portion of the bill which represents 95 per cent of appropriations and 5 per cent of preparation. I would take out the Volunteer Army and the National Guard, and take those millions of dollars and either reserve them and save them to the American people, or I would put them in the first line of defense, where there could be no question about their furnishing a return to those who must pay the bill in the form of taxes.

Then I would take any step that is practicable for the training of the young men of this country; I would go into the schools and colleges and universities and give them that military training which would remain with them through life. Lord Roberts said that a young man trained for 6 months during his college days, during his educational days, would carry with him through life more military capacity than an adult called from business life with a training of 18 months or 2 years. That is the educational period; it is the time when training is imbedded in the young man and becomes a part of him. Teach him how to shoot, how to ride a horse, how to use a gun, how to conduct himself. It is not only well in case we have trouble with another country, but it is well for him in every walk of life. It fits him for that kind of preparation which is second only to the preparation for national defense. It gives him health and sturdiness for the ordeals of the battle of life, in his profession and business. Instead of undertaking to build up what, in my judgment, will prove inefficient in the hour of peril, and at a great cost, I would put effort into the training of the young men in the colleges and schools of the country. We could not at this time make such training compulsory, but we could nevertheless make it so that practically all young men would voluntarily take the work and be glad to do so.

Then, sir, if the hour of danger comes, if there is a real peril, I would enforce compulsory service, the only kind of service that a democracy ought ever to rely upon. A democratic form of government ought to be not only self-governing, but it ought to be self-protecting and self-defending; it ought not only be one which has the capacity to administer its laws according to their making by those who are governed by them, but it ought to be a country which is defended by those who enjoy its political advantages and its protection.

Under a democratic form of government, a republican form of government, service in the defense of the country should go hand in hand with the privileges and the opportunities which are enjoyed in such a country. It is idle, perfectly idle, to talk about defending a republic by hired soldiers; it is idle, perfectly idle, to assume that we shall ever build up in this country anything like a defense in real peril by paying men for that purpose. The real defense, when it is needed, will be made by those who have been trained, if we attend to our duty and make the proper provision, in the colleges and schools and universities of the country, and it should come under such conditions that the rich and the poor, the great and the small, will stand upon precisely the same level in service to their country. Universal military training, with the knowledge that in case of war every able-bodied man will have to serve, is not only sound for defense but it is the surest and safest preventive of war. If the people understand that any war that comes must be fought by all who enjoy citizenship, they will guard vigilantly against all unjust wars.

Mr. President, I do not know how the contest will finally come upon section 56. As between section 56 and the provision for the National Guard, I have no doubt as to the preference of section 56; but I should like to see that part of this bill taken out in its entirety, with both of the appropriations eliminated; and, if you will, expend that amount of money either upon the Navy or upon some intelligent program to educate the young men in the colleges of the United States; or, if not needed for this, then relieve the taxpayers of these expenditures.

Mr. OWEN and Mr. NELSON addressed the Chair.

The VICE PRESIDENT. The Senator from Oklahoma.

Mr. OWEN. Mr. President, can I yield to the Senator from Minnesota for any purpose?

Mr. NELSON. I wanted to speak for about 10 or 15 minutes; that is all.

Mr. OWEN. Mr. President, the pending amendment of the Senator from Alabama [Mr. UNDERWOOD] contains two proposals, the first authorizing the Secretary of War to acquire patents, which is already, by necessary implication, involved in the amendment of the Senator from South Carolina [Mr. SMITH] in the authority to the Secretary of War to erect, construct, and operate, which could not be done without controlling the processes which are necessary. The only thing in the amendment of the Senator from Alabama which is new is the right, in case these plants are not needed for making nitric acid for powder, to lease them for the making of nitric acid for agricultural fertilizers.

I am opposed to having the Government of the United States expend $15,000,000 for the erection of nitric-acid plants and then, after the Government has manned these plants, has put them into operation, with a large force of experts charged with the duty of making nitric acid, to have those men dismissed and to lease the plants to private persons. I object to it because I think it would lead to private companies seeking to take advantage of the Government and obtain these plants. I think it would subject the Government to the continued solicitation and the active manipulation of those who may desire to take over this property after the Government had expended many millions of dollars therefor. For that reason I do not find myself able to support the proposed amendment to the amendment offered by the Senator from Alabama.

The amendment of the Senator from South Carolina to erect these plants I am glad to support.

The economic advantages are very great. The Government of the United States can obtain money at 2 per cent. The water powers of this country are gigantic; they are going to waste; they are very largely serving no useful purpose. Instead of having the painful and expensive labor of men engaged in the onerous work of the world, so far as the labor of falling water can be substituted, it is a wise economic policy to have that done.

I should like to see this bill greatly enlarged, but I shall not ask that it may be done, because I do not think it would be a practicable request at this time.

There is certainly political propriety in the proposed amendment of the Senator from South Carolina. This Government has been compelled in the past to pay $1 a pound for powder. The Secretary of the Navy is now manufacturing powder at approximately a cost of 25 cents a pound, and that, too, under conditions where the Government has to pay a high cost for nitric acid.

The Senator from Georgia [Mr. HARDWICK] protests against this policy on the ground that it is not good Democratic doctrine. The fundamental Democratic doctrine of America finds itself recorded in the 48 State constitutions in the broad declaration of the right of the people to exercise the full powers of self-government for the protection and promotion of their interests and happiness. That is the meaning of Democratic doctrine. It is the right of the people to govern themselves for their own welfare and not be governed by a monarchy, by an aristocracy, or by a plutocracy .

Thomas Jefferson's declaration of "Equal rights to all and special privileges to none" is a just doctrine, when fairly and justly interpreted; but, Mr. President, it is not a denial of this wise doctrine when we spend large amounts of money to control the boll weevil in the South. According to the doctrine of the Senator from Georgia [Mr. HARDWICK] we would have no right to spend a single dollar in the control of the boll weevil, because it is a special appropriation for a special purpose and for a special class of people. I think his doctrine is not sound; I think we have a perfect right to expend money for the control of the boll weevil. Such an expenditure relates not only to the farmers who are in Georgia and in the other Southern States, but it relates to the furnishing of the cotton fiber to the mills of New England and to the mills of the world, for that matter; it relates to the economic furnishing of the raw materials for giving clothing to the whole world, including all of our own people, because there is not a citizen of the United States who does not wear cotton in some form.

But, Mr. President, the activities of the United States are not confined to appropriations for controlling the boll weevil and other destructive insects as the San Jose scale, the Texas tick, and gispy moth. We have the agricultural extension act, under which instruction is being given all over this country, including almost every county in the whole country, by demonstration farmers. That is a wise and just expenditure of public money.

Mr. HARDWICK. Mr. President, will the Senator yield?

Mr. OWEN. I yield to the Senator; yes.

Mr. HARDWICK. Does not the Senator find himself able to draw some distinction between that sort of educational and experimental work and the proposal to go into a business enterprise?

Mr. OWEN. There are distinctions which may be drawn, but the principle which underlies those governmental activities and the expenditure of public money for the general good in the two cases is identical.

Mr. HARDWICK. The Senator regards the Government's educational activities as identical in principle with it engaging in a private business enterprise?

Mr. OWEN. The Senator chooses to call this a "private business enterprise," when it relates to the manufacture of nitric acid for the use of the public, but would say that it is not a private enterprise when the Government is instructing private individuals throughout the country how to raise plants.

Mr. HARDWICK. Of course, if the Senator will modify his proposition and confine it to public purposes, none of the objections that I raise to this proposition could be justly urged against it.

Mr. OWEN. Mr. President, when you establish the agricultural extension system in this country, you benefit private individuals primarily, but secondarily you benefit the whole of this country by enlarging the food supply and enlarging the raw-material supply of the country—the very best form of preparation, if you please; and when you make nitrates, when you make fertilizers, if you choose to go that far—and I would not say that it would be judicious to go that far—but when you make nitric acid out of the air by the power of falling water, which costs nothing except the primary plant, and furnish nitrates to enrich our soil—according to one of the estimates placed before me by one of the experts, the water power of Niagara would make 3,000,000 bushels of wheat a day more for the agriculture of this country if it were properly applied—is it a matter of no public consequence? Is that merely a private concern? Shall we view it as narrow class legislation, or shall we deal with it as a broad matter of internal development of the highest importance to this Nation as a Nation?

Why, Mr. President, the governmental activities under our modern construction of what is the Government's duty, have extended already to a very large field, which more than furnishes all the precedents which are necessary for the establishment of this nitric-acid plant. Why, we are running railroads and steamship lines and factories and farms; we are building a railroad in Alaska for the purpose of bringing out fuel from that great storehouse; we are operating a railroad across Panama to furnish convenient means of transportation across the Isthmus for the commerce of our own people and of all the world, at one-fifth the cost to passengers which was charged by previous private owners.

Mr. HARDWICK. Mr. President, will the Senator yield again?

Mr. OWEN. I yield; certainly.

Mr. HARDWICK. When we embarked on the enterprise to which the Senator last referred, to wit, the railroad enterprise in Panama, it was advocated by Democrats in both Houses of Congress on the theory that it was necessary for the Government to use it for the transportation of its own supplies and for the prosecution of its own business. So far, of course, as the instance is concerned to which the Senator first referred, to wit, the Alaskan Railroad project, the Senator undertakes to justify a still further excursion into this sort of enterprise by a project that he, and other Senators who felt as he did, voted for and Senators who did not feel as he did voted against.

Mr. OWEN. I shall hope to see the Senator himself progress later on. This country is progressing. I call attention to the fact that we have spent $400,000,000 to make an interoceanic waterway in Panama. Is that to be condemned because some ships will find it more convenient and cheaper than to go through the dangerous Straits of Magellan? Oh, yes, we built it, and private persons will benefit by it; but it is a national enterprise of vast importance to this people—of vast importance to our own protection—doubling, as it does, the power of our Navy and giving more convenient access for our commerce, and thus benefiting our people broadly. Shall we say that we shall not develop the harbors and rivers because spending millions of dollars in New York Harbor will benefit New York and make property on Fifth Avenue more valuable? Oh, I think not.

Mr. HARDWICK. Mr. President, if the Senator will pardon me, of course the Senator may put up as many men of straw as he likes. It is a very useful and never a harmful occupation.

Mr. OWEN. I am calling attention to the various precedents where public money has been spent upon a local matter and benefiting private persons but justified because of its public service and because of its public benefit.

Now, I will refer to the Post Office Department, as the Senator from Alabama [Mr. BANKHEAD], chairman of the Senate Post Office Committee, is conveniently near and seems to be a willing witness. In connection with the Post Office Department—you can refer to it as socialism if you please. The term "socialism" has been one of reproach; but I want to say to the Senator from Georgia that the doctrine which finds its lodgment in the minds of the people of the world of having the powers of the people combined and used in their own service is a wise one and is justified in common sense and on sound principles of government, and no man need be frightened by having the Post Office Department charged with being socialistic, nor the public schools as socialistic, if you please, nor the paving of streets as socialistic. They are all socialistic in one sense—they involve the use of the combined powers of the people for the common benefit of all the people—but here is a case where we take nitrogen out of the air, of which there is an endless supply, through the use of water power, which is also in endless supply, because the water powers of this country can hardly be measured. We talk about the water power of Muscle Shoals. Yes; it is valuable, magnificent, splendid; but it is a trifle by the side of the water powers that flow in endless procession down the mountain sides of this country, which have not been used, but which are waiting as a treasury from which to feed the people of this Nation.

The Senator from Georgia says if you give this service to the farmer, will you not be obliged to give cheap food to all sorts of men? He says:

> If we are going to manufacture cheap fertilizers for the farmer, why not manufacture cheap clothes, cheap shoes, cheap food?

Why, Mr. President, when you take nitric acid out of the air you furnish the basis of all those things; you furnish cheap food, you furnish cheap clothes, and you furnish cheap shoes, because I remind Senators that the use of water power is not confined to nitric acid alone; it can run a shoe factory after it has fertilized the ground and raised the cattle from which the shoes can be made. The values are without end.

The Government of the United States has been long enough the victim of its own inactivity in being compelled to pay prohibitive prices on the things the Government and the people require, and it is high time that the people of the United States should use their combined powers in the public interest for the public welfare; and I want to say that, in my judgment, it is good, sound Democratic doctrine.

Mr. HARDWICK. Will the Senator yield for just one more interruption, and then I will not bother him any more?

Mr. OWEN. I yield.

Mr. HARDWICK. Does the Senator believe that the Government can prosecute the business enterprises of the various kinds he suggests as successfully, as cheaply, and as economically as private capital can and does? And does not the Senator believe that all the experiments which we have with Government ownership and Government participation in business so far have shown that the Government can not do these things as cheaply and can not do them as adequately as private capital does, and that the employees of the Government combine always to get higher wages and shorter hours, and all that sort of thing?

Mr. OWEN. If the Senator has asked his question, I will be glad to answer it.

Mr. HARDWICK. I have amplified it a little, so that the Senator could see all the items I had in mind.

Mr. OWEN. I am in entire accord with the Senator in the idea that individual initiative ought to be encouraged in this country; that individual initiative ought not to be suppressed in this country; but, perfectly consistent with that, I also favor the Government of the United States laying its strong hand upon the water powers of this country and not giving them away to those who have monopolized them and those who can refuse credit to men who desire to make use of the water powers and put them into operation.

I understand something about the organization of the financial forces which are controlling the water powers of this country, and I think it is high time the Government of the United States puts its hand upon these water powers and took a position where they shall not be appropriated for private profit

alone. The Government can and does run its enterprises better and cheaper by far than the average individual, and, I am glad to say, pays better salaries and gives better hours.

I am in favor of going further than has been proposed in this bill. We talk about preparedness. Mr. President, the power of the German people depends upon the efficiency of those people, developed under the guidance of their Government. In Germany the powers of government go very far in utilizing for the people the powers which properly belong to them. They go so far that I recall that in Munich they even have a municipal slaughterhouse, where a small operator can go with a single steer and have that animal killed at cost, put in cold storage, the waste part being bought by the Government, and credit given for it, and that butcher can take that carcass from the cold storage and peddle it out after it has been certified by the city authorities. Will you say that that is socialism? It is using the powers of the people of the city of Munich to give an opportunity to the farmers who raise their cattle to find a competitive market among the butchers who peddle the carcass after it has been killed, and in that way the farmer who raises the cattle is benefited by a competitive market, which we have not properly had in this country, as every man appreciates who knows how we have had affairs administered through the great corporations known collectively as the Beef Trust.

More than that, it promotes the individuality of the butchers, and they are not converted merely into distributive clerks for a gigantic corporation. You talk about individuality! That system promotes the individual development of the farmer and of the butcher; and, more than that, because it gives a competitive market in the selling of beef, it gives cheap food to every citizen, and promotes his right as an individual to live and enjoy the fruits of his own labor. I am in favor of individual initiative, but I do not propose to apologize for being in favor of using the powers of this Government for the purpose of promoting the general welfare; on the contrary, I glory in it. It is true democracy. Even the Senator from New Hampshire [Mr. GALLINGER], who is so ardent an advocate of a ship subsidy, I take it is not unwilling to furnish to private individuals benefits from the governmental Treasury in order to excite their activities. I do not go quite that far. The Senator from New Hampshire goes somewhat further in that direction than I feel willing to go. I should prefer to have the Government own its own ships, and, when it takes money from the Public Treasury, do it for the benefit of the whole people rather than for the benefit of special shipowners, even of the poverty-stricken international mercantile marine, that this year, I believe, will make about one hundred millions of profit.

Mr. President, I merely want to express my approval of the amendment offered by the Senator from South Carolina [Mr. SMITH], and to say that I believe that it is a wise and just amendment, and will serve a most useful purpose in this country, and that I hope it will meet the approval of the Senate.

Mr. TILLMAN. Mr. President, since I have been in the Senate I have always noticed that lawyers here enjoy nothing so much as they do the discussion of the constitutionality of a proposed bill. They love to ventilate their knowledge of the law in that way, their supposed knowledge, rather, because many of them lose sight of great principles and split hairs so infinitesimally fine that common sense takes wings and flies away in disgust. I have never seen any proposed legislation or amendment to a bill which has a clearer and more legitimate claim to be constitutional than the Smith amendment.

Article I, section 8, of the Constitution says:

> The Congress shall have the power to provide for the common defense and general welfare of the United States.

Therefore, if the manufacture of nitrogen to be used in making explosives for the common defense is not legitimate, lawful, and constitutional, what can be constitutional? When the substance needed for common defense—the identical article, mind you, nitrogen—can also be used by the farmers to increase their crops, it is clearly for the general welfare. Is there a Senator here or any number of Senators who will contend that the welfare of the farmers is not to be considered here at all? Are we to legislate alone for manufacturers and all other classes except those who till the soil? I am surprised—amazed, almost—to hear sensible men quibble and split hairs about the constitutionality of this amendment and the power of Congress to enact it.

We need the nitrogen to make explosives for the common defense. It is proposed to appropriate the money necessary to obtain it from the atmosphere in order to be relieved of the danger of being cut off from Chile, our present source of supply. If there be no objection to providing for the common defense—and it is proposed to spend the money to get the nitrogen for that purpose—in God's name, why should there be any objection to utilizing the same power, the same machinery, the same skilled labor already provided by the Government for the common defense, for the purpose of manufacturing this very same article to benefit the farmers and increase their crops?

Everyone knows that most of the taxes, primarily and fundamentally, are produced by the labor of those who till the soil. To my mind, then, it is not only legitimate but also very patriotic and statesmanlike to produce the nitrogen needed by the impoverished fields to grow food crops, cotton, wheat, oats, corn, and vegetables. To my mind, it is too plain, simple, and clear to be discussed. I think Senators ought to be ashamed of themselves to raise the question of the constitutionality of this amendment.

In case of war with a first-class power the United States Government would need a huge amount of nitrogen—Germany at war is said to be consuming 600,000 tons per year—while in time of peace our governmental needs would be very small. To prepare adequately for war we shall have to build a plant of large capacity, and how anyone can honestly say that we would not have the constitutional right to dispose of excess production in time of peace is more than I can see. We would—for war purposes, which is admittedly constitutional—have a plant and trained men already on the ground, and if we can incidentally benefit a large class of people by its means it is not common sense to say the Constitution forbids us to do it. To say it does is to say that those who made the Constitution were fools or knaves, and if this amendment becomes a law and is thrown out by the Supreme Court on the ground of unconstitutionality I would be tempted to repeat what I once said in a lecture about the fourteenth and fifteenth amendments: "To hell with any such Constitution." If the fundamental purpose of a law is constitutional, all its incidents are likewise constitutional. If the main object is joined in wedlock with the Constitution, the children of the union certainly can not be bastards.

The Senator from Georgia yesterday placed in the RECORD a communication from a constituent, which shows the relative value of nitrogen obtained from cottonseed meal—our only supply in the South now—and that obtained from cyanamide. The Senator from Iowa drove the question home and clenched it to the satisfaction of any reasonable man when he asked if we had the constitutional power to distribute garden and field seed, why we have not the power to furnish fertilizers for those seed, especially when the Government is already making it for other purposes, and has a surplus which it does not need for explosives.

No one who has agricultural constituents will be willing to deny that the distribution of seed of all kinds is entirely constitutional and legitimate. If we can give the farmers seed, as the Senator from Iowa says, why are we not able and why have we not a right and the power to sell them the fertilizers with which to grow their crops, especially if we can make it and not have to buy it as we do the seeds?

The plea here for private enterprise to be allowed to compete is all very well for those whose constituents have made millions out of it; but the Armor Trust has shown such remorseless greed and moral dishonesty in dealing with the Government, I think the champions of that policy are estopped from arguing any further for it to continue. If one will stop a moment and think: The United States does not own a dollar and does not get a dollar except by taxation; and in the long run the taxpayers have to pay for all these things.

The policy of one of the parties of this country is to select a few favorites and legislate in favor of that class only, and levy tribute on all the balance of the people.

If the junior Senator from Georgia votes against this amendment, I hope he will explain to his farmer constituents next time he runs for the Senate just why he thought it right and the best policy to do it. I particularize him—and apologize for doing so—because he has been so persistent and insistent that the Government should not embark in enterprises of this sort. The Democratic idea is, of course, that individual effort is the best for a free country; but we will do well in this country if we imitate German efficiency as far as it may be right to do so—only taking care that we do not carry it too far.

If I could speak to those same farmer constituents as I once did, I would undertake to beat any man who runs for reelection, who has farmer constituents, who votes against this amendment. I believe I could do it without any trouble, for all the farmers are not such fools as they are considered by some people. I sincerely hope those of you who are objecting to the farmers getting cheap fertilizers will explain to your constituents who work in the fields why you do this thing in Washington.

Mr. NELSON. Mr. President, I simply desire to occupy the time of the Senate for a few moments.

One or two days before we took a vote on section 56 of the Army bill I received a small shower of telegrams from officers of the National Guard. It seemed rather strange that officers of the National Guard in Minnesota should send me these telegrams, some 15 in all. They were pretty much in this language:

Vote to strike out section 56 of Chamberlain bill and support Lee and Cummins amendments.

After I got these telegrams I demurred somewhat to them, and through the public press of Minnesota I expressed the opinion that the officers of the National Guard were going outside of the pale of their duties and were trying to hamstring this Army bill, which the Committee on Military Affairs of the Senate had prepared with such skill. I was somewhat curious to know where all this inspiration came from. I finally found the source of all this activity on the part of the National Guard. It seems that they have a National Guard Association, covering the whole country, and this association has been very active. I have in my hands a letter, written by the acting chairman of that association to the adjutant general of the State, that I desire to read for the information of the Senate:

In the absence of Gen. Foster I have been acting as chairman of the executive committee of the National Guard Association, and as such wired you a few minutes since as follows:

"Telegraph yourself and have your Senators wired by as many as possible to vote to strike out section 56 of Chamberlain bill and support Lee and Cummins amendments."

That is exactly the form of the telegrams that I got.

(Signed) W. F. SADLER, Jr.,
Acting Chairman.

I read the following from Mr. Sadler's letter:

Section 56 provides for a volunteer army, which is the continental army under another name, and is even more dangerous to the guard than Garrison's scheme.

Senators LEE and CUMMINS have offered certain amendments at our request, and all are important. They number about 40, and some change a word or two, yet are important to us.

Please do everything that lies within your power to help eliminate section 56.

This is a copy of the order that went out from the acting chairman of this National Guard Association. At the head of it the adjutant general, who sends out this letter to the officers of the guard, says:

I am in receipt of the following letter.

Then he quotes it as I have read it; and then, at the foot of it, he says:

Take notice and govern yourself accordingly. Fred B. Wood, The Adjutant General.

So that, Senators, when I said the other day this was an unusual case of lobbying, I have demonstrated it by this, and that it comes from the headquarters of this National Guard Association.

I am proud to say, Mr. President, that when the good people of Minnesota and the National Guard found out how this situation was, every paper in the State sustained the position I took; and I got this telegram from the First Regiment of our National Guard:

MINNEAPOLIS, MINN., *April 5, 1916.*

Senator KNUTE NELSON,
Washington, D. C.:

The majority of the line officers First Infantry, Minnesota National Guard have the utmost confidence in your judgment and ask you to support section 56 without amendments. Lobby in Washington does not represent wishes majority of Guard. Larger the trained force the better for the country. The more Federal control of Guard the better and more dependable for reserve force. Letter and signatures follow.

There were so many signers to this telegram that for reasons of economy they sent their signatures in a separate letter. There were 29 officers of this regiment who sent me this telegram; and the people of Minnesota with one accord, through their public press, deprecate this action of these officers of the National Guard, inspired from these national headquarters.

In this connection, I ask that the 15 telegrams which I received—they are all short, and take but little space—may be incorporated in the RECORD as a part of my remarks.

The VICE PRESIDENT. Without objection, it will be so ordered.

The telegrams are as follows:

MINNEAPOLIS, MINN., *April 3, 1916.*

Senator KNUTE NELSON,
Washington, D. C.:

Your effort will be appreciated, to vote against section 56 of the Chamberlain bill, also that you will support the Lee-Cummins amendments.

CLARENCE BROWN.

MINNEAPOLIS, MINN., *April 3, 1916.*

Senator KNUTE NELSON,
Washington, D. C.:

I hope that you will vote to strike out section 56 of the Chamberlain bill; also that you will support the Lee-Cummins amendments.

PAUL SIDAL.

—

MINNEAPOLIS, MINN., *April 3, 1916.*

Senator KNUTE NELSON,
Washington, D. C.:

We trust that you will vote against section 56 of Chamberlain bill. We also trust that you will give your support to Lee-Cummins amendments.

OFFICERS FIRST INFANTRY.

—

MINNEAPOLIS, MINN., *April 3, 1916.*

Senator KNUTE NELSON,
Washington, D. C.:

I trust that you will vote to strike out section 56 of Chamberlain bill. Would appreciate your supporting Lee-Cummins amendments.

S. SOLVERSON.

—

DULUTH, MINN., *April 3, 1916.*

Hon. KNUTE NELSON,
Washington, D. C.:

Trust that you consider advisable strike out section 56 of Chamberlain bill and support Lee and Cummins amendments.

R. M. WEAVER.

—

DULUTH, MINN., *April 3, 1916.*

Senator KNUTE NELSON,
Washington, D. C.:

Please vote to strike out section 56 of Chamberlain bill and kindly support the Lee and Cummins amendments.

WALTER O. FLODIN,
Captain, Commanding Company C, M. N. G.

—

DULUTH, MINN., *April 3, 1916.*

Hon. KNUTE NELSON,
Washington, D. C.:

Respectfully urge that you vote to strike out section 56 of the Chamberlain bill and support the Lee and Cummins amendments.

H. V. EVA.

—

DULUTH, MINN., *April 3, 1916.*

Hon. KNUTE NELSON,
Washington, D. C.:

National Guard officers are in favor of Lee and Cummins amendments to the Chamberlain bill and opposed to section 56. Trust you will vote to carry out above.

Col. F. E. RESCHE.

—

MINNEAPOLIS, MINN., *April 3, 1916.*

Senator KNUTE NELSON,
Washington, D. C.:

I would appreciate your voting against section 56 of Chamberlain bill. Would also appreciate it very much if you will give your support in the Lee-Cummins amendments.

COLE D. LUCE.

—

AUSTIN, MINN., *April 5, 1916.*

Hon. KNUTE NELSON,
United States Senate, Washington, D. C.:

You are requested and urged to use all honorable means to eliminate section 56, Chamberlain bill, and support Lee and Cummins amendments. It is the almost universal opinion here that the Guard is the only practicable organization for defense, and the continental army scheme by whatever name is useless unless coupled with compulsory service.

A. W. WRIGHT.

—

AUSTIN, MINN., *April 5, 1916.*

Senator KNUTE NELSON,
Washington, D. C.:

Protect National Guard with Lee and Cummins amendments to Chamberlain bill; strike out 56.

J. N. NICHOLSEN.

—

ST. PAUL, MINN., *April 5, 1916.*

Senator KNUTE NELSON,
Washington, D. C.:

Continental army plan embodied in pending bill found impracticable by all States. Can you not support motion to strike out this section and favor Lee-Cummins amendments?

GEO. C. LAMBERT.

—

MANKATO, MINN., *April 5, 1916.*

Hon. KNUTE NELSON,
Washington, D. C.:

Vote to strike out section 56 of Chamberlain bill and support Lee and Cummins amendment.

A. O. SCOTT.
H. M. HAUCH.
C. B. SPICER.

—

ST. PAUL, MINN., *April 5, 1916.*

Senator KNUTE NELSON,
Washington, D. C.:

According to columns of to-night's dispatch from Washington the Minnesota National Guard and the undersigned were criticized rather severely by you for our opposition to section 56, Chamberlain bill. We believe in the volunteer army as provided by the act of April 25, 1914, but we do believe that the National Guard could not exist as an efficient unit if section 56 became a law. One would most seriously affect the other.

WOOD, *Adjutant General.*

ST. PAUL, MINN., *April 5, 1916.*

Hon. KNUTE NELSON,
Washington, D. C.:

According to the columns of to-night's dispatch from Washington the National Guard officers were criticized severely by you for our opposition to section 56, Chamberlain bill. We do not oppose the volunteer army as provided by act of April 25, 1914, but we do not believe that the National Guard can exist if section 56 became a law, and either that section or the National Guard legislation should be defeated.

T. H. THARALSON,
Adjutant General, North Dakota.

Mr. NELSON. Mr. President, in addition to this, I want to say that I am in favor of the Volunteer Army, because there are a lot of good young men in the country who neither want to enlist in the Regular Army nor care about the National Guard. Army life in time of peace, as those know who know anything about it, is a monotonous, dreary, lonesome life. It is mostly drilling and standing guard—hardly anything else. There is a little of what we call, in the Army, police work, keeping the camps in order. Outside of that it is a dreary and monotonous life. The result is that, as a rule, when times are prosperous and good in the country, in time of peace, young men of spirit and energy do not like to enlist in the Regular Army. They are ready at all times to fight for the country in case of emergency, but they do not like to go into the Army and lead the dreary, monotonous life of a soldier in the Regular Army in time of peace. That is why, I know, there are hundreds of young men in this country who would gladly enlist in this Volunteer Army, but who have no desire in time of peace to go either into the Regular Army or into the National Guard.

As evidence of this I wish to quote from a letter from a young man—he is not so very young, either—who belongs to what we call the Sons of Veterans. I suppose you have the same organization among my Confederate comrades, as I will call them, in the South. You have Sons of Veterans, as we have in the North, Sons of Veterans of the Grand Army. I have a letter from one who is at the head of a camp of Sons of Veterans, and in it he says:

The military department of the Sons of Veterans is known as the Sons of Veterans Reserve, and on September 1 last showed a strength of 55,407 officers and men, with Brig. Gen. Edwin M. Ames as our chief of staff—

And so forth.

Here is what I call your attention to:

I have had 22 years of military training, all in the Sons of Veterans, and, like the majority of my men, could not be induced to join the Regular Army or the National Guard. I refused a commission in the latter less than a year ago.

There, Mr. President, you have good evidence that we have a lot of young men who are willing to enlist in the volunteer army, and are willing to spend from 60 to 90 days annually in drilling for three or four years, and remain in the ranks subject to be called out immediately. The officers are to be appointed by the President, and in that way we will get a lot of superior officers.

What I have seen of the State militia is this: While they may become efficient in marching and in drilling, while they dress up and make a good appearance on dress parade, and all that, yet that is only a small part of soldiering. You do not make soldiers in that way. Did any of you ever see an army after they had been out on a red-hot campaign for three or six months? Did you ever see such a body of armed men? You do not find them with plumed caps; you do not find them with shining boots nor with white gloves on. You find them with all kinds of headdresses and all kinds of coats, and you find mud on their pants and mud on their jackets, and all that. Yet they are hardened—hardened by actual service and training in camp—and they have become efficient soldiers. While these amateur soldiers of the National Guard make an elegant appearance on dress parade and are good at presidential inaugurals and other functions, yet when it comes to hard service it takes a good deal more than that to make real good soldiers of them. By putting them in the volunteer army we will get a better class of officers. The officers of the National Guard, as a rule, I think in most States—in all, as far as I know—are appointed by the governors of those States. It is largely a matter of political favor, largely a matter of "hail fellow well met."

I had an experience with our National Guard in Minnesota that I can never forget. When I became governor the officers formed a little pool among themselves and wanted me to appoint a certain young man adjutant general. He was an elegant man. I think his coat was cut in the last fashion; I think he wore an elegant suit, used kid gloves on most important occasions, and had a supply of evening-dress suits. He was a social fellow in the club, drank his Apollinaris with brandy in it, smoked cigarettes, and was a jovial fellow, but he had no other qualifications. The guard was very insistent that I must appoint that man as my adjutant general.

It was in those troublous days, Mr. President, under Cleveland's last administration, in 1893–94. I knew we were likely to have trouble of some kind. Strikes were in the air. We had the great Chicago strike that President Cleveland stamped out; we had sympathetic strikes over the country, and we had local strikes in Minnesota in the iron mines. I wanted a good man, and I finally discovered an old German who had been through the Civil War, and had commanded a company in one of our Minnesota regiments, who had a most excellent record. He was an old German, a fine old fellow. I discovered him, and I appointed him as my adjutant general; and you ought to have heard what those fine officers of the guard had to say. "Why, you could not expect anything better from a Norwegian governor than to appoint an old beer-drinking Dutchman as adjutant general." [Laughter.]

I appointed old Gen. Muhlberg. He was a stout, heavy, rather phlegmatic old German. He looked like a beer drinker, and yet he was one of the most temperate men I ever knew. As I told the Senate the other day, he rendered me a great service when he went out in the iron mines and suppressed a strike there without hurting anybody, not even a child.

Mr. President, that gave me a little experience with the National Guard. I want to say further that while I have criticized the officers of those days, ultimately, after old Muhlberg had served for about a year as my adjutant general and the guard had learned to know him and what kind of a man he was, they came to the conclusion that he was the best and most reliable adjutant general they had ever had in the National Guard. He was a real soldier and wanted to make the members of the National Guard real soldiers.

Mr. SMITH of Georgia. Mr. President——

The VICE PRESIDENT. Does the Senator from Minnesota yield to the Senator from Georgia?

Mr. NELSON. I do.

Mr. SMITH of Georgia. Does not that indicate that the National Guard would be pleased to have good officers, and that if they have not it is the fault of their bad governors?

Mr. NELSON. Oh, no. Their former condition was bad, but it improved, because the old adjutant general put good service into their heads.

Mr. President, perhaps I have wearied the patience of the Senate; perhaps I have been a little too garrulous. They say that old people are apt to fall into that rut, and perhaps I am not immune from it any more than other old people. Yet I desire to say in conclusion that I feel that among the young men of the country there is a field to be occupied that ought to be occupied by our Volunteer Army. There are a lot of young men who can not bear the monotony and drudgery and tameness of life in the Regular Army in time of peace. There are a lot of them who look upon the National Guard with disfavor, because they think it is a kind of an amateur arrangement, who would be willing to enlist in the Volunteer Army. Why should we not make use of that kind of men, and why should we not have a Volunteer Army as a supplement to our Regular Army?

Mr. SMITH of Georgia. Mr. President, I desire especially to give my reasons, or some of them, for supporting the amendment of the Senator from South Carolina [Mr. SMITH], and also the amendment of the Senator from Alabama [Mr. UNDERWOOD] to that amendment. Before doing so—as when we reach the discussion of this bill in the Senate we will be limited to five minutes each—I do not think it inappropriate to make a few observations with reference to the continental army and the National Guard.

The Senator from Minnesota [Mr. NELSON] has questioned any great usefulness on the part of the National Guard. He has pointed out defects in the organization, and has questioned their real value if called upon for active work. Mr. President, if with organized companies, if with regularly enlisted membership, if with meetings once a week, maintaining their organizations, and continuing constantly to drill, they are of but little effect as soldiers, what will be the value of a party of gentlemen who go out for 30 days in the summer to meet at an encampment, drill a little, and go home, without further drill or organization?

I am opposed to section 56 because I do not believe we develop any soldiers from it. I do not really feel perfectly satisfied with the National Guard; but I know that a 30-day encampment for men in no organization, connected with no companies, unofficered when they disband, utterly disorganized when they go home, certainly offers poorer prospect for national defense than the National Guard.

And what is the amount that we are to expend for 30 days a year on this continental army? Over $20,000,000 the first year, reaching over $40,000,000 the third or fourth year, and to con-

tinue permanently at $27,000,000 a year; and that, too, on an estimate of only 30 days' encampment each year. The Senator from Mississippi [Mr. WILLIAMS] suggests that the encampment should last 90 days each year. I do not know how much more that is to cost. Ninety days' drill sounds more promising, but if it is to cost three times as much, then I think it would be a waste. I take it for granted that it would not cost three times as much, for a considerable part of the fixed charge to which I have already referred would consist in the equipment and the guns, and the increased expense for keeping them 90 days instead of 30 days would probably be not more than 50 per cent of the original cost charge for 30 days. But how many men have you who can go out for 90 days in the summer and drill? How large will it be, then? It will simply dwindle away. The entire scheme is impracticable.

It is not that I am opposed to having their military encampments. Let them have them. The House bill provides for military encampments each year to cost about $2,000,000. I do not object to that, but I do object to the provision of section 56, under which we are to spend from twenty-four to forty odd million dollars a year, and that, in my judgment, for practically nothing of defensive value. Vastly better spend that money in the schools of this country, training the boys between 15 and 17, so that the whole boy population of our country will go from school with efficient training to be called when the time comes for service. Depend upon our Regular Army and the regular reserves of the Regular Army for a first line maintained in times of peace, with a reserve of at least 300,000 that we could call out, and, then, if we have real war, call the people of the entire country with the boys trained enough speedily to make soldiers. That is my opposition to section 56. I think it is simply a waste of money with no substance to it.

NITROGEN PLANT.

Mr. President, I desire to speak upon the amendment which is before the Senate providing for the manufacture of nitric acid. I do not think the bill would meet the demands for national defense if it carries no provision looking toward the manufacture of nitric acid within the limits of our own country. It is conceded that the progress of science in war has practically dispensed with the old charcoal powders. In the Civil War those were practically all the powders that were used. Had the present system existed, had the character of guns and the character of powders that are now being used been known and in use during the Civil War the Southern States, when cut off from the ocean and from the saltpeter of Chile, could not have lasted 60 days. The old-fashioned powders can not stop an army using the modern scientific guns with the powders made largely from nitric acid. An enemy can be destroyed before they are within shooting distance of an opposing enemy.

It is conceded that we have not within the limits of the United States any manufactory that can produce nitric acid to supply the needs of our country in case of war; that we must rely upon the saltpeter from Chile. It is conceded that Germany, which had accumulated what was supposed to be a very large supply of saltpeter before the war began, exhausted it within three months, and only the great chemical skill and the readiness to use that skill which existed in Germany, coupled with a certain amount of preparation through the existence of plants ready to extract nitrogen from the air, made it possible for Germany to meet the demands for this necessary commodity in the conduct of the war.

Now, Mr. President, with any really great power, with any serious war, our access to Chile would be undoubtedly jeopardized. It is absolutely essential to any intelligent preparation for war that we should take steps without delay to produce as much nitric acid in this country as Germany is using year by year in her present war. I earnestly hope that no such war will ever confront us. I earnestly hope we will never need it; but if we do need it we can not wait for it, and if we are prepared to furnish it it will help us to avoid needing it.

Nitrogen, nitric acid, and the products of nitric acid are also factors of vast importance in various lines of manufacture. Their value for the increase of foodstuffs and raw material from the soil used in manufactures can not be overestimated. I do not dwell upon the amount now used. We ought to use in times of peace many times the quantity of nitrate of sodium which is now used.

The three great fertilizers are nitrate of sodium or nitrogen, phosphorus, and potash. The average grain product of this country can be doubled by the amount of nitrate of sodium that the average soil would readily absorb, with an enormous profit to the farmer, if this valuable fertilizer was produced in a reasonably economic mode.

So if we go to the expense of developing a nitrogen plant that would meet the needs of our country in times of war, it is not a wasted investment in times of peace. It is an investment that should readily bear the interest on the cost of the investment, and contribute in times of peace to a great increase of the food supply and the raw material used for manufacture in our various industries.

Mr. President, how can an air-nitrogen plant be constructed in the United States if we do nothing? No private enterprise can move until we move. To extract nitrogen from the air there are now two well-established processes—the arc process and the cyanamide process. The arc process requires much more water power than the cyanamide process. The smallest water power for either of these processes that can economically produce nitric acid is 100,000 horsepower, low water. What private company can to-day secure such a power? Private enterprise is confronted with an inability to make an air-nitrogen development on account of Government control of the water. If the stream is a navigable stream, it requires the action of Congress. If the stream is located in the West upon public lands, still action by Congress is required. Private enterprise can not move until we move.

Mr. President, for us to pass this bill on to the House without some steps in some way to provide for the manufacture of nitric acid is to provide for our men and to develop the soldiers when we know we have not provided a way to furnish the men with the instruments necessary to defend themselves as soldiers.

I do not expect to vote for an air nitrogen measure that entirely suits me. I may be wrong in what I would prefer, but I am going to vote for a measure that I have the opportunity to vote for which more nearly meets my views than any other. I will vote for such amendments as are offered that will make the measure meet more nearly my views, and finally I will vote for the very best measure upon this line that I can get an opportunity to help pass.

I believe it to be the duty of the Government to select a number of water powers in different parts of the country and to withdraw them for its own use. This is provided for in the amendment of the Senator from South Carolina. I would have one east of the Mississippi and reasonably far from the ocean and the border. I would have one across the Mississippi. I would have two in the East if we could find them. If we could have one midway between the Mississippi and the Atlantic, two or three hundred miles from the Canadian line, I would be glad to see one located there, and one about equally inland farther south. At any rate we should have one, and two if we can find places for them, in the great populated portions of our country. I would have one or two, if we could find places for them, in the West. I do not think we could follow a wiser course than to have four or five such powers selected and appropriated by the Government for this purpose.

My own preference then would be to see the Government spend the necessary money for the dams and the development of the water on streams owned by the Government. I would not object to the Government at one place putting up the machinery to produce nitric acid. I would prefer that the Government should not operate plants except when necessary to produce the thing which the Government itself would need.

In the operation for war my preference is that the Government should produce the things to be used, but in time of peace I would prefer to see private enterprise handle the plant to produce the commodities that go into general commerce, and I shall vote for the amendment of the Senator from Alabama, because it permits the officers of the Government to utilize the plant, at least to such an extent as it is not needed to produce the real military supplies required by the Government, by leasing it in times of peace for private operation. In any event, I shall vote for a bill to allow the Government to secure not more than five of these powers.

The amendment prepared by the Senator from Alabama and offered to the amendment of the Senator from South Carolina, which the Senator from South Carolina stated that he accepted, I suppose is now a part of the bill. It provides for the immediate appropriation of a million dollars and a subsequent plan of expenditure of $30,000,000 more. I do not believe $15,000,000 will equip a plant, and I favor the bill more cordially with the provision for $30,000,000.

Why should we not vote for it? Some are afraid that it is too great an encroachment upon private enterprise, that it is socialistic in its tendency. This does not indicate that it is unconstitutional in any sense. I am in no way disturbed about that. My preference for individual operation is that my observation has been that, as a rule, individual enterprise operates a business more successfully than the Government can do it, and it is with me not a question of principle, but a question of business. I would prefer that the Government should engage in no business enterprise where private capital can handle it

or private citizens can handle it, because, as a rule, the enterprise will be better handled in private hands.

Again, I do not believe that it is desirable that the Government should in any case compete with private enterprise unless there is an essential reason for it. Opportunity for private operation develops the individuality of our citizens. It is not a constitutional question so far as I see it; it is a matter of public policy.

Mr. President, I have said that the Government should act for the reason that the rivers and the streams which must furnish the opportunity of this development are in the control of the Government and private citizens can not obtain them. I would have the Government act because I think it desirable that the Government should own, with the opportunity for operation if it sees fit, a number of these plants. I would have the Government act because I desire to see the Government develop at least one plant and perhaps build a power for several.

Mr. NELSON. May I ask the Senator a question?

Mr. SMITH of Georgia. Certainly.

Mr. NELSON. Does not the Senator from Georgia believe that if we succeed in passing these two water-power bills, one relating to water powers on the public lands and the other, the Shields bill, relating to water powers on navigable streams, that private enterprise will take hold of the plants? Could we not make it a condition in the grant to build these water powers that the lessees should manufacture nitrates for the use of the Government at reasonable prices?

Mr. SMITH of Georgia. I must divide the Senator's question into two propositions in order to answer it. We could make it a condition, undoubtedly, but making such a condition, whether anyone would develop the plant would be a question of serious doubt. I wish to be sure that a plant will be developed. I do not think we can afford to take a chance of not having a plant which can produce nitric acid.

Mr. OWEN. Mr. President, I desire to suggest to the Senator from Georgia that the United States can get money at 2 per cent, and that private parties can not have any such advantage.

Mr. SMITH of Georgia. Mr. President, the United States certainly can float its bonds at 3 per cent. I believe the United States Government would act wisely in developing five water powers by the issue of bonds on a 3 per cent basis, and then use one of those water powers for its own manufacture, and perhaps lease the other four to be used, the lessee paying at least the interest on the bonds, and thus making sure the development. I am willing, however, to take no chance of there being no development at all. I do not think we can afford to leave our Government in that position. I do not think we can afford to go to the people and say, "We have increased your Army; we have increased your Navy; and with full knowledge of the fact that neither the Army nor the Navy can compete with the armies and navies of the world to-day without an ample supply of nitric acid, we have left our country where we may be without such a supply."

Mr. President, I go one step further. After we have withdrawn the four or five power plants that the Government will use, and, in addition to the development certainly of one by the Government, I would be glad to see made a part of this bill a provision embodying the leading features of the bill introduced by the Senator from Delaware [Mr. SAULSBURY], which was prepared by the attorneys of the Du Pont Powder Co. That does not frighten me at all. I am so utterly unrelated to the Du Pont Powder Co. that I am entirely above reproach or suspicion when I say that if that company or any other company is willing to take a water power and develop a great nitrogen plant, I want to see it do it; not, however, to the exclusion of the National Government and not giving the company the preference as to the water power.

I think the people ought to have special water powers for this use, and they should be withdrawn and kept, and one, at least, be developed by the National Government; but if, over and beyond that, a dozen companies wanted water powers to develop nitrogen plants, I should favor their getting the streams, nitrogen being a commodity which, produced in large quantities and made cheap, will contribute so much to the welfare of all the people of the country by the enormous increase of products from the soil, not simply the farmers—although I want to say, even in the presence of my colleague [Mr. HARDWICK], that whatever develops the farms of this country comes as a blessing to all the people of the country. I have given a good deal of my time to studying farm problems and I have indulged in the hope that I might, as a legislator, contribute something to the development of the farm, not simply in the interests of the farmer, not, as my colleague seems to think those of us who feel earnestly upon this subject, with the desire of "farming the farmer," but as a broad proposition of national statesmanship, believing, as I do, that the real prosperity of the entire country must come primarily from the substantial development and progress in the cultivation of the soil of this country.

Mr. President, I took the bill introduced by the Senator from Delaware; I cut out parts of it and changed some other parts. I have not yet made up my mind whether I shall offer it as an amendment. If the amendment of the Senator from South Carolina [Mr. SMITH] is adopted, and we are assured that the Government is to take hold of this proposition, and that we will certainly have one nitrogen plant, then I shall feel a good deal inclined to offer this additional section, which, under the supervision of the Secretary of War and of the Secretary of the Interior, would give a chance to any private company that desired to develop nitrogen plants.

I do not believe that half a dozen nitrogen plants, with a hundred thousand horsepower each, would produce more nitrogen, if produced economically and at reasonable prices, than the farms of this country could absorb, greatly to the benefit of the country.

The Senator from Rhode Island [Mr. LIPPITT] called attention to the fact that the letter of Mr. Cushman stated that only 25 per cent of the nitrogen was consumed by agriculture. I think that was his statement. The letter of Mr. Cushman states that only 25 per cent of the saltpeter brought from Chile is used to produce nitrogen for farming purposes. A vast amount of nitrogen is produced in other ways, not of a character out of which nitric acid could be produced; but in cottonseed meal, and a system of cultivating the soil by the use of legumes, the use of cowpeas and red-top clovers, and in many other ways, nitrogen is absorbed and utilized in agriculture, the quantity used and the quantity needed being far in excess of that which could be produced from all the saltpeter we obtain from Chile.

Mr. President, I will not read this amendment, but I shall send it to the Secretary's desk and ask that it be placed in the RECORD to-morrow after my remarks. I do not commit myself to introduce it, but I am seriously thinking about doing so, and I should be glad if any who are interested in the matter would read the amendment, my conviction being that we must prepare this bill to encourage the production of all air nitrogen that can be made in a Government plant and in all the plants private capital will construct. Even then the farmers of our land can and will consume the product if the manufacture is economical and the price of sale to the farmer reasonably low.

The VICE PRESIDENT. In the absence of objection, the request of the Senator from Georgia will be complied with.

The matter referred to is as follows:

AMENDMENT TO H. R. 12766.

Add the following, to be known as section 121, to the pending bill:

"SEC. 121. That in order to provide for the construction and operation of works for the production of nitric acid, the Secretary of War is authorized to grant permits for the construction of dams, storage and diversion works, or other structures for creation of hydroelectric power in or across any of the navigable waters of the United States or in or across any of the streams upon public lands, upon terms and conditions not inconsistent with the rights and obligations hereinafter set forth.

"That all such permits shall provide (a) that the grantee shall construct works to be operated by such hydroelectric power for the fixation of nitrogen for the manufacture of nitric acid, such works to have an initial capacity to be fixed by the Secretary of War, upon the recommendation and approval of said board of engineers, and to be built according to plans approved by said board of engineers and the Secretary of War; (b) that at all times, upon request of the Secretary of War, the grantee shall deliver to the United States for military or naval purposes all or any part of the output of nitric acid at a price which shall include such profit as the Secretary of War shall determine to be reasonable, and his determination of the reasonableness of such profit shall be final; and for this object the Secretary may direct the works to be operated to such extent of their capacity as he deems necessary for the purposes of the United States; (c) all such dams, storage or diversion works, or other hydroelectric structures shall be of such design and capacity for present or future use as the Secretary of War shall approve, and after approval of the plans no deviation therefrom shall be made without the approval of the Secretary of War; (d) that such permit shall not be assignable without the written consent of the Secretary of War, except as security for bonds issued by the grantee to raise funds for the construction of such works; (e) that such permits shall not apply to any of the sites the withdrawal of which is provided for in section 120.

"That all such permits shall be for the terms of 50 years and may be renewed for like periods, and if not renewed at the end of any period shall continue in force until the property is taken over and paid for by the United States, as hereinafter provided for. In case of any violation of the conditions specified in said permit, and such violation shall continue for 90 days after notice from the Secretary of War to cure such default, such permit may be revoked by decree of a United States court. At the end of any period the United States shall have the right to take over all said works and hydroelectric plant upon payment of the then value of the actual improvements, not including therein the value of any rights granted hereunder.

"That the grantee named in any such permit is authorized to erect, maintain, and operate the hydroelectric plant and works aforesaid which are hereby declared to be necessary for the purposes of the national defense, and may use or divert such waters as may be necessary for the operation of said hydroelectric plant. Such grantee may occupy

any public lands necessary for the hydroelectric plant and works aforesaid, and their appurtenances upon approval of the selection by the Secretary of War and Secretary of the Interior, and may take and use any lands or other property necessary for said hydroelectric plant by exercise of the right of eminent domain in the district court of the United States where said property is located under the laws of the State where such property is located, and in the absence of such laws then under the laws of the United States for the condemnation of property for navigation purposes.

"That all such works shall be constructed under the supervision of an engineer officer of the United States Army designated for that purpose and shall be completed within the time specified in the permit by the Secretary of War unless the same is extended by him for good cause. Any power developed and not needed for the operation of the nitric-acid works aforesaid, and any capacity of said nitric-acid works not requisitioned by order of the Secretary of War, may be employed by the grantee in any way he may elect, but subject, however, at all times to the right of the United States to requisition the same for use in the production of nitric acid for military or naval purposes whenever so requested by the Secretary of War. If the Secretary of War deems it advisable in order to promote the economical operation of the nitric-acid plant or to accomplish the objects of this act, he may include in such permit authority for the grantee to use or divert any additional amount of water for which the grantee has or shall secure rights under the laws of the State or States where such use or diversion occurs, the additional power developed may be used by the grantee as provided in this section: *Provided, however,* That the cost to the consumer of any power not used by the grantee and sold for general domestic consumption shall be subject to State regulation as to price and service by the duly constituted authority of the State in which such power is consumed. If the United States shall take over the plant and hydroelectric works as hereinbefore provided for, the grantee shall be paid the value of the actual improvements and the value of all property dependent for its usefulness upon being operated in connection with the property taken over.

"That whenever the streams sought to be used under the provisions of this section are located upon public lands the Secretary of the Interior shall act with the Secretary of War in the exercise of the authority and performance of the duties herein placed upon the Secretary of War."

Mr. SMITH of Georgia. I will only add that if, in this connection, while the subject of national defense is before us, we can provide for the development of nitrogen plants in the United States, whether we use them for war or in peace, we will have accomplished a great service.

The VICE PRESIDENT. The question is on the amendment of the Senator from Alabama [Mr. UNDERWOOD] to the amendment of the Senator from South Carolina [Mr. SMITH].

Mr. CHAMBERLAIN. Mr. President, I think, in order to get a vote on this amendment to-night, we will have to call for a quorum, but some of the Senators have suggested that they would rather not have a vote until the morning, and I therefore, Mr. President——

Mr. NEWLANDS. Mr. President, I have an amendment to offer to the pending bill, which I ask may be printed in the RECORD.

The VICE PRESIDENT. Without objection, it is so ordered.

The proposed amendment is as follows:

Amendment intended to be proposed by Mr. NEWLANDS to the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States, viz:

Insert as a substitute for section 29 the following:

"SEC. 29. That as soon after January 1, 1917, as may be possible, every male citizen of the United States between the ages of 18 and 23, inclusive, resident therein, and every resident who shall have declared his intention of becoming a citizen shall be required to report his age, name, address, occupation, and number of parents living, said report to be rendered to officers indicated by public announcement within and for various districts hereafter to be established by the War Department for the purposes of this enactment. And unless he shall have entered into the military service of the United States he shall continue to render such reports every six months until he shall have passed the age of 23. Persons thus reporting shall be required to present themselves at an indicated office, where they shall be examined with a view to determining whether or not any of them fall within the exemptions to military service set forth in section —. Those not exempted shall be listed in separate groups of such number that, one person being taken from each such group, the total estimated number of enlistments required for the year will be supplied. As soon as each such group shall have been listed in any office established for the purposes of this enactment, notification shall then be given to its members that within 10 days after the receipt of such notification one of them shall be chosen for service in the Regular Army. If within the said 10 days there shall be no agreement made among the members of such group resulting in the offer of services by one of them, then the proper officers shall choose by lot one such person, who shall at once take the oath of enlistment and be placed in the regular active Military Establishment of the United States. The period of enlistment shall be for not more than three years and not less than one year of active service and for five years of service in the Regular Reserve Army. The President alone, if Congress should not otherwise determine, may himself establish a shorter period than three years for active service of enlisted men, or he may establish different classes of enlisted men serving different periods in the Regular Active Army: *Provided,* That each person volunteering under the provisions of this act shall, in addition to the usual oath as now provided by law, make oath in the following terms: 'I hereby solemnly swear that I have not been influenced in volunteering to enlist in the United States Army by any offer, solicitation, representation, or suggestion of pecuniary or other advantage, direct or indirect, that may now or in the future accrue to me from any private person or persons or corporations flowing from, or in any way connected with, or in consideration of, my offer of enlistment in the United States Army': *Provided further,* That every person not drawn or volunteering from the groups to be listed under the provisions of this enactment shall make the following oath: 'I hereby solemnly swear that I have not made or caused or suggested to be made by another or others, any offer, promise, or suggestion to any person liable now, or who may in future be liable to service in the United States Army under existing statutes, of any advantage, pecuniary or social, direct or indirect, and offered promises or suggested in consideration for, or in any way connected with, the offer of any such person to enlist in the United States Army': *Provided further,* That the penalty for making false statements in the oaths hereinabove required to be taken, when such false statements shall have been established according to the rules of procedure in the civil courts of the United States, shall be a fine of not less than $1,000 and not more than $5,000, or imprisonment for not less than six months and not more than three years: *Provided further,* That offenses under this section in respect to the said oaths shall be tried in the civil courts of the United States, even though the person charged shall then be in the military service of the United States: *Provided further,* That the Secretary of War may, in his discretion, furlough or permit permanent transfer under regulations which he may establish of enlisted men from the active service to the Regular Army Reserve: *Provided further,* That the following persons shall be exempt from the provisions of this act so long as the condition or status on which exemption is based continues: (a) Those who may be reported by the prescribed medical authorities as being physically unfit for any naval or military service whatever; (b) members of the permanent military or naval forces of the United States; (c) school-teachers who have duly qualified and are employed at a school of military or naval instruction or other prescribed course, as instructors of officers of the citizen cadet corps; (d) persons employed in the police or prison service of the United States, or of the several States, and of the several cities thereof; (e) those morally unfit; (f) mariners actually employed in the sea service of the United States, or of any of the States, or of any citizen or merchant within the United States; (g) those excused by the President in the interests of the public service by reason of employment therein; (h) temporary exemption for periods not exceeding one year, and renewable from time to time, will be granted to persons whose compulsory attendance at the prescribed training would impose great hardships, either by reason of excessive distance or other cause: *Provided,* That the district commandant of each training district shall have the power to issue permanent and temporary certificates of exemption for the above-mention causes: *Provided further,* That in cases where a permanent or temporary certificate of exemption is denied by the district commandant, an appeal may be taken to the United States district court or judge thereof nearest the permanent office of the district commandant: *Provided further,* That in all cases where an exemption is applied for the burden of proof of the existence of cause for exemption shall be on the applicant, and in all cases of appeal from a denial of such permanent or temporary exemption the burden of proving the exemption shall rest on the person claiming the same."

Add at the end of section 30 the following proviso:

"*Provided,* That in all enlistments hereinafter accomplished under the provisions of this act three years shall be counted as an enlistment period in computing continuous-service pay."

Strike out, after the semicolon in line 11, page 137, the following words: "fourth, from candidates from civil life between the ages of twenty-one and twenty-seven years," and substitute the following words: "fourth, from candidates from the officers of the National Guard; fifth, from candidates from officers of the volunteer force created by this act; sixth, from civil life: *Provided, however,* That in the three cases last named no persons shall be selected under the age of twenty-one and over the age of twenty-seven years."

Add at the end of the bill the following:

"SEC. —. That the maximum number of cadets which may be maintained at any one time at the United States Military Academy at West Point is fixed at 1,000; and this number shall be taken, as nearly as practicable, from the various States in the same proportions which the populations of those States bear to the total population of the United States.

"Vacancies in the number of cadets authorized by law to be maintained at the Military Academy at West Point shall be filled in the following order: First, from noncommissioned officers of the Regular Army; second, from among the students at military colleges at which a Regular Army officer may be stationed as instructor; third, from the general civil body: *Provided,* That in making selections from the last two named sources the list of those permitted to stand for the entrance examinations to the West Point Military Academy shall be made up by the Secretary of War from names submitted to him by the governors, Senators, or Representatives in Congress of the respective States; and that as nearly as practicable the number of vacancies thus filled from each State shall be such that with the number of vacancies filled by promotions of noncommissioned officers originally resident in such State its full quotum as defined in this section shall be maintained: *Provided,* That the age of admission at West Point shall remain as now fixed by law: *Provided further,* That the Secretary of War may fix examinations which if passed shall entitle the successful candidate to enter the third class at West Point, thus rendering it possible for him to complete his course in three years instead of four years; this provision, however, not to apply to any candidates except those from noncommissioned officers of the Regular Army and from military schools as herein defined."

Mr. NEWLANDS. Mr. President, I wish to say in connection with the amendment that its purpose is to attempt to build the Army from the bottom up, and to make all the lower commissions in the Army and the cadet appointments to West Point the rewards of actual service in the ranks and to secure by this method and a modified form of universal service the best youth of the country for our Army.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the House had passed the following bill and joint resolution:

S. 1424. An act incorporating the American Academy of Arts and Letters; and

S. J. Res. 24. Joint resolution authorizing the Librarian of Congress to return to Williamsburg Lodge No. 6, Ancient Free and Accepted Masons, of Virginia, the original manuscript of the record of the proceedings of said lodge.

The message also announced that the House had passed a bill (H. R. 8351) to accept a deed of gift or conveyance from the Lincoln Farm Association, a corporation, to the United States of America, of land near the town of Hodgenville, county of Larue, State of Kentucky, embracing the homestead of Abraham Lincoln and the log cabin in which he was born, together with the memorial hall inclosing the same; and further, to accept an assignment or transfer of an endowment fund of $50,000 in relation thereto, in which it requested the concurrence of the Senate.

PETITIONS AND MEMORIALS.

Mr. JONES presented petitions of sundry citizens of Washington, praying for national prohibition, which were referred to the Committee on the Judiciary.

He also presented a memorial of sundry citizens of Vancouver, Wash., remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which was ordered to lie on the table.

Mr. LODGE presented memorial of the Chinese-American Citizens' Association, of Boston, Mass., remonstrating against certain provisions in the immigration bill relating to Chinese, which was ordered to lie on the table.

He also presented a memorial of sundry citizens of Petersham, Mass., remonstrating against any change being made in the parcel-post law, which was referred to the Committee on Post Offices and Post Roads.

He also presented a petition of the Department of Health of the State of Massachusetts, praying for an appropriation for the establishment of a Federal leprosarium, which was ordered to lie on the table.

He also presented petitions of sundry citizens of Boston, Pittsfield, Chelsea, Saugus, and Lowell, all in the State of Massachusetts, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. OLIVER presented a memorial of Local Grange, Patrons of Husbandry, of Allentown, Pa., remonstrating against any discrimination being made in favor of sugar as against other agricultural products, etc., which was referred to the Committee on Finance.

Mr. BURLEIGH presented petitions of sundry citizens of Maine, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. GALLINGER presented petitions of the Christian Endeavor Society of the Congregational Church of Peterboro, and of the congregations of the First Congregational Church and the Advent Christian Church of Rochester, all in the State of New Hampshire, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. NORRIS presented petitions of sundry citizens of Nebraska, praying for the enactment of legislation to grant pensions to employees of the Postal Service, which were referred to the Committee on Post Offices and Post Roads.

He also presented a petition of sundry citizens of Ansley, Nebr., praying for national prohibition, which was referred to the Committee on the Judiciary.

He also presented a memorial of sundry citizens of Beaver City, Nebr., remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which was ordered to lie on the table.

He also presented memorials of sundry citizens of Nebraska, remonstrating against an increase in armaments, which were ordered to lie on the table.

Mr. POINDEXTER presented a petition of the German-American Central Verein of Spokane, Wash., praying that provision be made for the shipment of milk to babies in Germany, Austria-Hungary, and Poland, which was referred to the Committee on Foreign Relations.

He also presented petitions of Foothill Grange, No. 559, Patrons of Husbandry, of Hillyard, and Local Grange No. 588, Patrons of Husbandry, of Marblemount, in the State of Washington, praying for Government ownership of telephone and telegraph systems, which were referred to the Committee on Post Offices and Post Roads.

He also presented memorials of sundry citizens of the State of Washington, remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which were ordered to lie on the table.

He also presented petitions of sundry citizens of the State of Washington, for national prohibition, which were referred to the Committee on the Judiciary.

Mr. HUGHES presented petitions of sundry citizens of New Jersey, praying for national prohibition, which were referred to the Committee on the Judiciary.

He also presented a petition of sundry citizens of Flemington, N. J., praying for the adoption of an amendment to the Constitution to prohibit polygamy, which was referred to the Committee on the Judiciary.

Mr. WADSWORTH presented a petition of sundry citizens of Schenectady, N. Y., praying for national prohibition, which was referred to the Committee on the Judiciary.

He also presented memorials of sundry citizens of New York, remonstrating against any change being made in the postal laws, which were referred to the Committee on Post Offices and Post Roads.

He also presented a petition of sundry citizens of Jamestown, N. Y., praying for the enactment of legislation to close the barber shops in the District of Columbia on Sunday, which was ordered to lie on the table.

He also presented memorials of sundry citizens of New York, remonstrating against appropriations being made for sectarian purposes, which were ordered to lie on the table.

REPORTS OF COMMITTEES.

Mr. OLIVER, from the Committee on Commerce, to which were referred the following bills, reported them each with amendments and submitted reports thereon:

A bill (S. 5053) authorizing abutting owners upon Crum River, a navigable stream, where the same empties into the Delaware River, to straighten, widen, and deepen the same, and substituting such straightened course and channel for the present channel thereof, and abandoning and vacating a portion of the present channel (Rept. No. 349); and

A bill (S. 5244) authorizing the Secretary of Commerce to exchange lands belonging to the United States at the mouth of Crum River, Pa., for other lands adjacent thereto, for the purpose of removing thereto the Schooner Ledge Range Front Light, so that it may be on the range of the channel of the Delaware River, and further authorizing the Secretary of Commerce to remove said range light from its present location to the property acquired by the exchange (Rept. No. 350).

Mr. GORE, from the Committee on Agriculture and Forestry, to which was referred the bill (S. 2379) for the establishment of a fish-cultural station in the State of Montana, near the city of Hamilton, and appropriating money therefor, asked to be discharged from its further consideration and that it be referred to the Committee on Fisheries, which was agreed to.

He also, from the same committee, to which was referred the bill (H. R. 4724) authorizing the Department of Commerce to make original investigation and research concerning forms and processes of manufacture, and for other purposes, asked to be discharged from its further consideration and that it be referred to the Committee on Manufactures, which was agreed to.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. CHAMBERLAIN (for Mr. CHILTON):

A bill (S. 5518) granting an increase of pension to William J. Grimm (with accompanying papers); to the Committee on Pensions.

By Mr. BURLEIGH:

A bill (S. 5519) for the relief of William Wentworth; to the Committee on Military Affairs.

By Mr. REED:

A bill (S. 5520) to acquire, by purchase, condemnation, or otherwise, additional land for the post office at Columbia, Mo.; to the Committee on Public Buildings and Grounds.

By Mr. POINDEXTER:

A bill (S. 5521) authorizing the Secretary of War to make donation of condemned cannon and cannon balls to the United Spanish War Veterans, Camp No. 10, Walla Walla, Wash., to be placed in cemetery plat; to the Committee on Military Affairs.

By Mr. BANKHEAD:

A bill (S. 5522) granting a pension to Alfred W. Perry; to the Committee on Pensions.

By Mr. WALSH:

A bill (S. 5523) to make April 13 of each and every year a public holiday in the District of Columbia, to be known as Jefferson Day; to the Committee on the District of Columbia.

By Mr. HUGHES:

A bill (S. 5524) for the relief of John McKeon; to the Committee on Military Affairs.

By Mr. SMITH of Maryland:

A bill (S. 5525) to provide for the abandonment of Piney Branch Road between Allison Street and Buchanan Street NW., in the District of Columbia; to the Committee on the District of Columbia; and

A bill (S. 5526) granting a pension to Lillie B. Le Compte; to the Committee on Pensions.

AMENDMENTS TO APPROPRIATION BILLS.

Mr. BRYAN submitted two amendments intended to be proposed by him to the river and harbor appropriation bill (H. R. 12193), which were referred to the Committee on Commerce and ordered to be printed.

Mr. OLIVER submitted an amendment authorizing the Postmaster General to contract for the tube service now in operation for the new term of 10 years from July 1, 1916, etc., intended to be proposed by him to the Post Office appropriation bill (H. R. 10484), which was referred to the Committee on Post Offices and Post Roads and ordered to be printed.

NATIONAL DEFENSE.

Mr. GORE submitted an amendment intended to be proposed by him to the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States, which was ordered to lie on the table and be printed, and to be printed in the RECORD as follows:

Amendment intended to be proposed by Mr. GORE to the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States, viz, strike out section 56 and substitute the following:

"SEC. 56. That whenever any school board or other legal authority in control of any high school, or other secondary school, having a bona fide enrollment of not less than 50 male students over the age of 16 years, shall employ in connection with such school an instructor qualified in the judgment of the Secretary of War to impart military instruction and training, and shall obligate such instructor to impart such instruction and training in accordance with rules and regulations to be prescribed by the Secretary of War, and when such board shall file with the Secretary of War an application, in such form as he may prescribe, declaring the desire to take advantage of the benefits of this section, and further declaring that the foregoing requirements have been complied with, and that other requirements will be complied with, the Secretary of War is thereupon authorized to enter into such arrangements with said board and instructor in connection with such military instruction and training as may be deemed in the public interest: *Provided*, That he may at any time terminate such agreement, and the Secretary of War is further authorized to deliver to said instructor as custodian rifles for the use of the students taking such instruction, together with a limited supply of ammunition, and to pay said instructor a part of his stipulated annual salary, not to exceed 40 per cent thereof, and to prescribe such rules and regulations as may be necessary to carry into effect the provisions of this section."

OSAGE OIL-LAND LEASES.

Mr. OWEN submitted the following concurrent resolution (S. Con. Res. 21), which was read and referred to the Committee on Indian Affairs:

Resolved by the Senate (the House of Representatives concurring), That pending investigation by the Committees on Indian Affairs of the Senate and House of Representatives the Secretary of the Interior be, and he is hereby, requested to refrain for a period of one year from the passage of this resolution from making any disposition by lease or sale of such quarter-section units of the lands on the Osage Reservation in the State of Oklahoma, as have been developed by oil operators, either under leases or subleases, and are now producing oil, except such units as are now held by lessees who have accepted the terms of the resolution of the Osage Council of June 17, 1915, for leases to be made direct to them, and to permit said developed lands thus withheld from lease after the expiration of the term of the existing oil lease to continue to be operated by the present oil operators, who are now in possession of and operating the same, at a royalty to be determined by the Secretary of the Interior, with the approval of the President of the United States, all royalties to be paid into the Treasury of the United States to the credit of the Osage Nation of Indians.

That the Committee on Indian Affairs of the Senate and House of Representatives through a subcommittee of six members, consisting of three members of the Committee on Indian Affairs of the Senate and three members of the Committee on Indian Affairs of the House of Representatives, the three members of the Senate Indian Affairs Committee to be chosen by the Senate committee and the three members of the House Indian Affairs Committee to be chosen by the House committee, be, and it hereby is, authorized and directed to fully investigate the subject of the leasing of said lands and the methods of controlling and marketing the oil production of the Osage Reservation in Oklahoma, and all affairs connected therewith, and that the said committee be empowered to send for persons and papers and to subpœna witnesses, to administer oaths, and to sit during the sessions of the Senate and House of Representatives and during vacation; and said committee shall make full and complete report, together with its recommendation to the Senate and House of Representatives, within one year from the passage of this resolution. The necessary expenses of said investigation shall be paid in equal parts out of the contingent funds of the Senate and House of Representatives: *Provided*, That if the committee hereby created shall not make its report and recommendations within one year from the passage of this resolution, then the Secretary of the Interior shall proceed with the sale of the leases as if this resolution had never been submitted.

GOOD ROADS.

Mr. BANKHEAD. Mr. President, I give notice that immediately upon the conclusion of the consideration of House bill 12766, under the unanimous-consent agreement, I shall move to make House bill 7617, to improve the highways and post roads of the country, the unfinished business of the Senate.

EXECUTIVE SESSION.

Mr. CHAMBERLAIN. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After 5 minutes spent in executive session the doors were reopened and (at 5 o'clock and 41 minutes p. m.) the Senate adjourned until to-morrow, Friday, April 14, 1916, at 12 o'clock meridian.

NOMINATIONS.

Executive nominations received by the Senate April 13 (legislative day of April 12), 1916.

SENIOR SURGEON IN PUBLIC HEALTH SERVICE.

Surg. Louis L. Williams to be senior surgeon in the Public Health Service, to rank as such from March 22, 1916, in place of Senior Surg. Duncan A. Carmichael, who was placed on waiting orders November 25, 1915.

PROMOTIONS IN THE NAVY.

Commander George R. Marvell to be a captain in the Navy from the 8th day of December, 1915.

Lieut. Commander Edward McCauley, jr., to be a commander in the Navy from the 8th day of December, 1915.

Lieut. Robert Henderson to be a lieutenant commander in the Navy from the 17th day of January, 1916.

Lieut. Edward C. S. Parker to be a lieutenant commander in the Navy, vice Lieut. Commander Arthur B. Keating, United States Navy, declared a deserter from the naval service from August 6, 1914 (subject to the examinations required by law).

Pharmacist Carl B. Furnell to be a chief pharmacist in the Navy from the 26th day of February, 1916.

John A. Nelson to be a lieutenant (junior grade) in the Navy from the 6th day of December, 1913, to correct the date from which he takes rank as previously confirmed.

Alfred J. Toulon to be a passed assistant surgeon in the Navy from the 29th day of May, 1911, to correct the date from which he takes rank as previously confirmed.

POSTMASTERS.

GEORGIA.

Stephen B. Pace to be postmaster at Carrollton, Ga., in place of W. F. Brown, resigned.

IOWA.

Sylva E. E. Thompson to be postmaster at Roland, Iowa, in place of Osmond O. Stole, deceased.

INDIANA.

E. E. Stull to be postmaster at North Liberty, Ind., in place of Charles F. Keck. Incumbent's commission expires May 10, 1916.

MICHIGAN.

Samuel Folz to be postmaster at Kalamazoo, Mich., in place of H. B. Coleman. Incumbent's commission expired December 20, 1915.

Harold Murphy to be postmaster at Harbor Beach, Mich., in place of B. F. Browne. Incumbent's commission expires April 15, 1916.

MONTANA.

John Dunn to be postmaster at Red Lodge, Mont., in place of W. R. Crockett. Incumbent's commision expires May 10, 1916.

Maurice J. Keenan, to be postmaster at Hobson, Mont., in place of Thomas Hanlon, resigned.

NEW JERSEY.

J. H. Barcklow to be postmaster at Moorestown, N. J., in place of M. B. Comfort. Incumbent's commission expired April 3, 1916.

NORTH DAKOTA.

John B. Wagner to be postmaster at Lidgerwood, N. Dak., in place of Matthew Lynch. Incumbent's commission expired April 11, 1916.

PENNSYLVANIA.

George W. Lutz to be postmaster at Ambler, Pa., in place of J. A. Buchanan. Incumbent's commission expired April 5, 1916.

Daniel A. McGough to be postmaster at Ebensburg, Pa., in place of H. A. Englehart, deceased.

VERMONT.

Martha G. Kibby to be postmaster at Randolph Center, Vt., in place of Martha L. Gilbert (name changed by marriage).

CONFIRMATIONS.

Executive nominations confirmed by the Senate April 13 (legislative day of April 12), 1916.

APPOINTMENTS IN THE ARMY.

CORPS OF ENGINEERS.

Probational Second Lieut. Oscar Otto Kuentz to be second lieutenant in the Corps of Engineers.

PORTO RICO REGIMENT OF INFANTRY.

Manuel Font, of Porto Rico, to be second lieutenant.

PROMOTIONS IN THE ARMY.

CORPS OF ENGINEERS.

Lieut. Col. Mason M. Patrick to be colonel.
Maj. Meriwether L. Walker to be lieutenant colonel.
Capt. Max C. Tyler to be major.
First Lieut. Albert H. Acher to be captain.

CHAPLAINS.

To be chaplains with the rank of captain after seven years' service.

Chaplain William R. Scott.
Chaplain Franz J. Feinler.

FIELD ARTILLERY ARM.

Second Lieut. Jacob L. Devers to be first lieutenant.

CAVALRY ARM.

Second Lieut. Elkin L. Franklin to be first lieutenant.

PORTO RICO REGIMENT OF INFANTRY.

First Lieut. Henry C. Rexach to be captain.
First Lieut. Pedro J. Parra to be captain.
Second Lieut. Leopoldo Mercader to be first lieutenant.
Second Lieut. Urbino Nadal to be first lieutenant.

PROMOTIONS AND APPOINTMENTS IN THE NAVY.

Lieut. (Junior Grade) George McC. Courts to be a lieutenant.

The following-named citizens to be assistant surgeons in the Medical Reserve Corps:

Lockhart D. Arbuckle.
Ogden D. King.
John J. Loughlin.

Asst. Paymaster Harry W. Rusk, jr., to be a passed assistant paymaster.

The following-named assistant paymasters to be passed assistant paymasters:

William E. Moorman.
Harry T. Sandlin.
Stanley M. Mathes.
Delos P. Heath.

The following-named assistant naval constructors to be naval constructors:

James O. Gawne.
Alva B. Court.

The following-named boatswains to be chief boatswains:

Meade H. Eldridge.
Bernhard Schumacher.
Edward Crouch.
Otto J. W. Haltnorth.
Daniel Dowling.

The following-named gunners to be chief gunners:

Charles W. A. Campbell.
Lawrence Wittmann.

Machinist Newton R. George to be a chief machinist.

POSTMASTERS.

ALABAMA.

S. A. Borom, Hurtsboro.

CALIFORNIA.

E. R. Rhymes, Sanitarium.
J. C. White, Arbuckle.

ILLINOIS.

G. E. Combs, Villa Grove.
James W. Donaldson, Livingston.
James L. Mishler, Pearl City.
William G. Wack, Mansfield.

INDIANA.

John M. Wickizer, Argos.

KANSAS.

R. W. Moorhead, Sabetha.

LOUISIANA.

Merrill D. Harris, Crichton.

MISSOURI.

Thomas J. Juden, Cape Girardeau.

MONTANA.

K. O. Slette, Culbertson.

NEBRASKA.

J. R. Durrie, Laurel.

NEW JERSEY.

Harrison Hollinger, Port Norris.
William L. Scheuerman, Basking Ridge.

NORTH CAROLINA.

J. H. Ball, Elkin.

OKLAHOMA.

Earl E. Le Crone, Forgan.

OREGON.

W. A. Heylman, Estacada.
Fitzhugh G. Lee, Junction City.
Jared W. Moore, Redmond.
Katie B. Veatch, Cottage Grove.
James A. Watkins, Philomath.

TENNESSEE.

Charles C. Berry, Dyer.
James C. Walker, Monterey.

TEXAS.

George W. Locke, Groveton.

VIRGINIA.

A. Sidney Francis, Boykins.
Bayard Mackey, Rosslyn.

WASHINGTON.

Herbert J. Nunan, Oak Harbor.

WEST VIRGINIA.

C. L. Perkins, Gassaway.

WISCONSIN.

John Cremer, Cashton.
Carl J. Cunningham, Chippewa Falls.
William Hughes, Pardeeville.
J. L. Palmer, Pittsville.
Ira B. Pierce, Monticello.
A. W. Stiles, River Falls.
Joseph H. Sullivan, Spooner.
Margaret Sullivan, Hurley.
Joseph L. O'Neil, Gays Mills.
Thomas D. Smith, Fairchild.

WYOMING.

Ethel A. Berry, Guernsey.

REJECTION.

Executive nomination rejected by the Senate April 13 (legislative day of April 12), 1916.

REGISTER OF LAND OFFICE.

Ross G. Moore, of Broken Bow, Nebr.

HOUSE OF REPRESENTATIVES.

THURSDAY, *April 13, 1916.*

The House met at 11 o'clock a. m.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

We lift up our hearts in gratitude to Thee, our Father in heaven, for the natural yearning in the heart of man for civil, political, and religious liberty; for the brave men of every age who struggled for those inherent rights which culminated in the Government of the United States of America; for the long lists of the brave and the true who have woven their characters into the warp and woof of our Republic, whose names stand on the pages of our history as beacon lights for those who would conserve our God-given rights. To-day our hearts turn in love and gratitude to Thee for the life, work, and far-flung influence of Thomas Jefferson. "The hand that traced the charter of independence is, indeed, motionless; the eloquent lips that sustained it are hushed; but the lofty spirits that conceived, resolved, and maintained it, these can not perish."

Cold in the dust the perished heart may lie,
But that which warmed it once can never die.

So Jefferson lives, not only in the heart of every true American but in the heart of every lover of liberty round the world. We thank Thee for his life, his deeds, and imperishable character. May we strive to live his thoughts, his deeds, his virtues, in the spirit of Him who died that we might know Thee, worship Thee, and do unto others as we would be done by. Amen.

The Journal of the proceedings of yesterday was read and approved.

ORDER OF BUSINESS TO-MORROW.

Mr. RUSSELL of Missouri rose.

The SPEAKER. For what purpose does the gentleman rise?

Mr. RUSSELL of Missouri. I wanted to submit a request for unanimous consent.

The SPEAKER. The gentleman will state it.

Mr. RUSSELL of Missouri. To-morrow, under the rules, will be pension day, but in order to try to facilitate other more important public business I ask unanimous consent that the House take a recess to-morrow evening at 5.30 o'clock until 8 o'clock, and that bills on the two Pension Committees and conference reports from either of those committees be considered, and that the House adjourn not later than 11 o'clock.

The SPEAKER. The gentleman from Missouri asks unanimous consent that to-morrow at 5,30 o'clock p. m. the House stand in recess until 8 o'clock, when there shall be a night session of three hours, not to extend beyond 11 o'clock, to consider bills of a private character from the two Committees on Pensions and conference reports from those committees. Is there objection?

Mr. MANN. Reserving the right to object, Mr. Speaker, what conference reports are there pending?

Mr. RUSSELL of Missouri. One from each committee, as I understand, but I have not examined the calendar this morning.

Mr. MANN. I wish the gentleman would make his request that to-morrow at 5 o'clock we proceed with the consideration of bills on the Private Calendar reported from those two committees and conference reports.

Mr. RUSSELL of Missouri. And not have a night session?

Mr. MANN. Yes; and not have a night session.

Mr. LEVER. That would be entirely agreeable to me.

Mr. RUSSELL of Missouri. This is entirely agreeable to me, as it seems to be to the chairman of the Committee on Agriculture [Mr. LEVER].

The SPEAKER. The gentleman from Missouri modifies his request so that at 5 o'clock to-morrow the House shall take up pension bills of a private character and conference reports on the same subject. Is there objection?

There was no objection.

SPEAKER PRO TEMPORE FOR SUNDAY, APRIL 16, 1916.

The SPEAKER. The Chair designates Mr. NEELY, of West Virginia, to preside on Sunday at the memorial exercises respecting the late Mr. BROWN, of West Virginia.

EXTENSION OF REMARKS.

Mr. KETTNER. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by inserting a speech delivered by Secretary Lane at the Panama-California Exposition while he was representing the President of the United States.

The SPEAKER. The gentleman from California [Mr. KETTNER] asks unanimous consent to extend his remarks in the RECORD by printing the speech of Secretary Lane at the Panama-California Exposition, when he was acting in lieu of the President. Is there objection?

There was no objection.

Mr. DAVIS of Texas. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD touching the refund of the cotton tax and the bill introduced by Mr. TILLMAN, of Arkansas, to make that a kind of trust fund to pension the old Confederate soldiers.

The SPEAKER. The gentleman from Texas asks unanimous consent to extend his remarks in the RECORD on the subject of the cotton tax and the bill introduced by the gentleman from Arkansas [Mr. TILLMAN] to make the proceeds a trust fund for the purpose of pensioning the old Confederate soldiers. Is there objection?

Mr. BARNHART. Mr. Speaker, reserving the right to object, I want to inquire if these are the gentleman's own remarks? It is not the insertion of an article by somebody else?

Mr. DAVIS of Texas. Yes; except that it contains a letter from Senator SHEPPARD.

The SPEAKER. Is there objection?

There was no objection.

Mr. JOHNSON of Washington rose.

The SPEAKER. For what purpose does the gentleman from Washington rise?

Mr. JOHNSON of Washington. This being Jefferson's birthday, I desire to ask unanimous consent to place in the RECORD a short statement by Thomas Jefferson.

The SPEAKER. The gentleman from Washington asks unanimous consent to extend his remarks in the RECORD by printing a part of a statement by Thomas Jefferson.

Mr. SLAYDEN. Part of it or the whole of it?

SEVERAL MEMBERS. Print it all.

Mr. BARNHART. Why not all of it?

Mr. MANN. It will be news to you.

Mr. BARNHART. It may be news to me, and it may not; but notwithstanding that, I have a right to inquire why it should be part of a statement and not the full statement.

The SPEAKER. The Chair understands that it is a short statement.

Mr. JOHNSON of Washington. The statement is this:

Were we directed from Washington when to sow and when to reap we should soon want bread.

Mr. BARNHART. I have no objection to that part.

Mr. JOHNSON of Washington. Now, I ask unanimous consent to add another paragraph.

The SPEAKER. The gentleman asks unanimous consent to add another paragraph. Is there objection?

There was no objection.

Mr. JOHNSON of Washington. Mr. Speaker, when Thomas Jefferson declared that were the people directed from Washington when to sow and when to reap they should soon want bread, and when he said also—

That government is best which governs least.

He never dreamed that on his birthday in 1916 there would be in power in the United States an administration more centralized than the most ardent Hamiltonian of old could have desired. The people see now one-man power, backed up by great Federal commissions and ever-increasing autocratic bureaus. They hear no more of well-balanced Cabinet meetings. Jeffersonian Democracy is but a hollow name. The people are told when to sow and when to reap and what profits to make by a Government which under Democracy has become more centralized than ever—more expensive than ever—with revenue cut off at the customhouses and collected by a miserable system of "horse-fly" stamp taxation. Oh, shades of Jefferson!

AMERICAN ACADEMY OF ARTS AND LETTERS.

The SPEAKER. The unfinished business is the bill (S. 1424) incorporating the American Academy of Arts and Letters. When the House adjourned last evening the question was on the adoption of the amendment offered by the gentleman from Alabama [Mr. HUDDLESTON].

Mr. HARRISON. Mr. Speaker, I make a point of order that that is not the unfinished business of the House. I shall occupy the attention of the Chair only a moment. I realize that the Chair on two occasions before, in answer to parliamentary inquiries, has held that on the day following Calendar Wednesday, where the previous question had been ordered on the amendments and the bill to its final passage, that made the bill the unfinished business, to take up immediately after the approval of the Journal the following day. But, as I gather from an investigation of the precedents, the only time the question was directly passed upon was some two years ago when it came before the Speaker on a point of order made by the gentleman from Tennessee [Mr. GARRETT] to the omnibus pension bill, when on a Saturday following the Friday when the bill was up for consideration, and the previous question had been ordered on the amendments and the bill to its final passage, the Chair overruled the point of order made by the gentleman from Tennessee [Mr. GARRETT] and held that the bill was the unfinished business on the following day. Now, I have no quarrel with any of those decisions; but merely for the purpose of obtaining a ruling of the Chair on the question directly I have made the point of order. There is this change, if it can be interpreted as a change, since the last ruling of the Chair: We have adopted a rule affecting Calendar Wednesday since the ruling of the Chair was made. That rule may not be construed as having any bearing on this question. Personally I doubt that it has, because the ruling of the Chair before was that the bill did not go over as unfinished business on the following Calendar Wednesday, but that it went over as unfinished business on the next legislative day.

The rule recently adopted with reference to Calendar Wednesday provided that we could not utilize more than two Wednesdays in the consideration of a bill unless the previous question was ordered and the time extended by a two-thirds vote of the Members of the House. When the Chair ruled in answer to the inquiry of the gentleman from Illinois [Mr. MANN] on two previous occasions that the matter came up as the unfinished business on the Thursday following Calendar Wednesday it was then in order under the rules of the House to consider a bill on any number of Wednesdays until it was finally disposed of by the House. It was not confined to two Calendar Wednesdays. The Chair will recall that many bills have been considered in this House under the former Calendar Wednesday

rules almost for an entire session of Congress, and when the Chair ruled on the point of order affecting the status of the pension bill as unfinished business after the previous question had been ordered on the amendments and the bill to its final passage on a Friday, the day on which, under the rules, pension bills could be considered, it was a rule of the House—and it is still the rule of the House—that when we have a pension bill up for consideration, if not concluded on one Friday it goes over to another Friday, and the same bill may be considered throughout the session of Congress. The same rule applies to District day and claims day.

The SPEAKER. No; not after the previous question has been ordered.

Mr. HARRISON. Certainly not after the previous question has been ordered; but if the consideration of the bill was not finished, and the previous question was not ordered, the consideration of the bill could in that event be continued indefinitely. Now, in view of the fact that the new rule adopted by the House affecting Calendar Wednesday limits the consideration of a bill to two Wednesdays, unless the previous question is ordered, or by a two-thirds vote the consideration is continued, the point of order that I make is to get a ruling of the Chair on the question whether or not since the adoption of that rule this matter as unfinished business goes over to next Wednesday or can be considered to-day.

Mr. FOSTER. Mr. Speaker, when this rule was presented to the House for its adoption it was said:

We provide that at the end of the second Calendar Wednesday, unless the previous question has been ordered, the committee shall lose the right to consider another bill until all the committees have been called again in their turn, unless the House by a two-thirds vote decides to take up for further consideration upon the next succeeding Calendar Wednesday the bill which was under consideration.

So I think there was no question in the Committee on Rules that it was the intention of the committee to leave it as it was with reference to the effect of the previous question. I do not think the rule had any effect upon that at all. The whole debate was along that line.

Mr. MANN. Mr. Speaker, under the new rule the House is not limited to the consideration of a bill on two Calendar Wednesdays.

Mr. HARRISON. It is unless two-thirds of the membership vote to the contrary.

Mr. MANN. Oh, yes.

Mr. HARRISON. Or unless the previous question is ordered.

Mr. MANN. Yes; but that does not change the status of anything, except that it requires a two-thirds vote. A majority at any time can refuse to consider a bill at all on Calendar Wednesday. The only distinction that the rule makes is that now it requires a motion and a two-thirds vote. I can not see why it has any effect whatever upon the question as to whether, the previous question being ordered, the matter comes up the next day. I can recall no case—although there may be one, where, when the previous question has been ordered, which means that the House shall vote at once upon the proposition—which holds anything except that it comes up automatically as the unfinished business.

[Mr. HOWARD addressed the House. See Appendix.]

Mr. LEVER. Mr. Speaker, the RECORD shows, on page 5918, the following:

Mr. LEVER. I ask unanimous consent, Mr. Speaker, that general debate on this bill be limited to eight hours, four hours to be controlled by myself and four hours by the gentleman from Iowa [Mr. HAUGEN].

Then some discussion took place, and finally I submitted another request, which the Speaker stated for me, and which will be found on page 5918 of the RECORD:

The SPEAKER. That when the House adjourns to-morrow it adjourn to meet on Thursday at 11 o'clock a. m., and that the gentleman from South Carolina [Mr. LEVER] control half the time and the gentleman from Iowa [Mr. HAUGEN] control the other half. Is there objection?

The SPEAKER. That reduces itself at last to a unanimous consent to meet at 11 o'clock, and of course that is subject to all of the rules of the House.

Mr. MANN. And in addition to that, Mr. Speaker, there was a request submitted that general debate on the Agricultural bill should cease with the adjournment to-night. I objected to that because I said that no one knows what will be up on Thursday.

The SPEAKER. All of these agreements are made subject to the general rules and practice of the House. A Member might rise to a question of personal privilege which might take the entire day, and no Speaker would be justified in ruling that out.

As far as this other matter is concerned, it has been held, and properly I think, that where the previous question is ordered on a bill on Wednesday it is unfinished business on the next legislative day, whatever it happens to be. The office of the previous question is to put an end to the debate. Members get tired and they want to stop speech making. That is exactly what the previous question is. The House deliberately by a large majority yesterday adopted the previous question.

As far as the change in the rules is concerned, the gentleman from Illinois [Mr. FOSTER] is exactly right about it. The rule says:

Provided, That not more than two hours of general debate shall be permitted on any measure called up on Calendar Wednesday, and all debate must be confined to the subject matter of the bill, the time to be equally divided between those for and against the bill: *Provided further*, That whenever any committee shall have occupied two Wednesdays it shall not be in order, unless the House by a two-thirds vote shall otherwise determine, to consider any unfinished business previously called up by such committee, unless the previous question had been ordered thereon, upon any succeeding Wednesday until the other committees have been called in their turn under this rule.

That does not change the rule as to the previous question. The reason that the change in the rule was adopted was that while Calendar Wednesday was established with the very best intentions in the world, either purposely or accidentally, it came to be a sort of hindrance to business rather than for the promotion of business. So, after a good deal of private conference between gentlemen who are interested in matters of this sort, the Committee on Rules brought in the rule limiting general debate on any bill on Calendar Wednesday to two hours, and confining it to the subject matter of the bill. The point of order is overruled, and the Clerk will report the bill by title.

The Clerk read as follows:

A bill (H. R. 4678) incorporating the American Academy of Arts and Letters.

The SPEAKER. The Clerk will report the pending amendment.

The Clerk read as follows:

Page 1, line 3, after the word "assembled," strike out all the remainder of said paragraph down to and including the word "Letters," on line 3 of page 3, being all the remainder of section 1 of the bill, and insert in lieu thereof the following: "That the American Academy of Arts and Letters is hereby incorporated; that the governor of each of the States of the United States shall be authorized to appoint one member on a board of control of said corporation, and his successor and successors."

The SPEAKER. The question is on the Huddleston amendment.

The question was taken; and on a division (demanded by Mr. HUDDLESTON) there were 27 ayes and 83 noes.

So the amendment was rejected.

The SPEAKER. The question now is on the third reading of the Senate bill.

The bill was ordered to be read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The question was being taken when Mr. BARNHART demanded the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 211, nays 96, answered "present" 8, not voting 118, as follows:

YEAS—211.

Mr. EDWARDS. Mr. Speaker, I am paired, but I desire the RECORD to show that I am present.

The name of Mr. EDWARDS was called, and he answered "Present."

Mr. HUMPHREY of Washington. Mr. Speaker, I am paired with the gentleman from Indiana, Mr. MORRISON. I voted "yea." I desire to change my vote and answer "present."

The name of Mr. HUMPHREY of Washington was called, and he answered "Present."

The result of the vote was announced as above recorded.

On motion of Mr. SLAYDEN, a motion to reconsider the vote by which the bill was passed was laid on the table.

AGRICULTURAL APPROPRIATION BILL.

Mr. LEVER. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 12717, the Agricultural appropriation bill.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the Agricultural appropriation bill, with Mr. HAMLIN in the chair.

Mr. HAUGEN. Mr. Chairman, I yield 20 minutes to the gentleman from Iowa [Mr. TOWNER].

Mr. TOWNER. Mr. Chairman, William Peters Hepburn was born in Columbiana County, Ohio, November 4, 1833. He died at Clarinda, his Iowa home, February 7, 1916. It is the custom of the House of Representatives to set aside a special day for memorial services in honor of those who die while yet they are our associates. I am not justified in asking that this be done in honor of Col. Hepburn, who was not a Member of Congress at the time of his death. Yet, in view of the fact that for 22 years he was a Member of this House, that for 12 years he was chairman of the Interstate and Foreign Commerce Committee, and that his name is associated with much of the most important legislation of recent years, I believe I am justified in asking that the House for a brief period shall lay aside its business to consider with me the life and public service of this really great leader and statesman.

EARLY LIFE.

Mr. Hepburn's father died before he was born. His mother was a strong and capable woman, whose Christian character and resolute virtues were impressed on her son in double measure during his childhood and youth. When he was 8 years old the family moved to Iowa and settled on a farm near Iowa City. He attended the public schools and early developed a quenchless thirst for knowledge. An invaluable part of his education was the four years he spent as an assistant in a printing office. Mr. Hepburn early determined upon the law as his profession, and his reading and thinking were continually influenced by that ambition. He began his study of the law in an office in Iowa City, and when an opportunity offered went to Chicago, where he finished his studies, and was admitted to the bar in 1854, before he had attained his majority.

In 1855 Mr. Hepburn was married to Melvina A. Morseman, who survives him. Their married life of over 60 years was beautiful in its mutual devotion and constancy. The bride of

his youth was to him through all those years the constant object of his thought and care, with a respect and confidence more sacred and profound in silvered age than even in the springtide of their earlier years. Mrs. Hepburn was throughout all the long period of their married life the confidant, adviser, and efficient helper of her husband. In his campaigns, at Washington, and in the multiplied activities of his public career she was his constant companion and assistant. Never was the unity, the harmony, and the purity of the American home more beautifully exemplified than in the home life of Mr. Hepburn and his wife.

AS A LAWYER.

It is needless to say that Mr. Hepburn was a poor boy. He earned his education and made his way unaided almost from childhood. When he returned from Chicago, after his admission to the bar, he was compelled to accept a place as assistant in the office of the clerk of the district court. Soon he was able to move to Marshalltown, where he began his career as a lawyer. He was elected county attorney of Marshall County, then clerk of the House of Representatives of Iowa, then district attorney of the eleventh judicial district, comprising several counties. This position he resigned in 1861 to enlist in the Army.

After the war he established a new home at Clarinda, which remained his Iowa residence until his death. There he resumed the practice of law. He soon rose to distinction in the practice of his profession and was recognized as one of the leading lawyers of the State. He had a remarkable power of analysis, and seemed to know infallibly the strong and weak points of a case. He had that rare power of graphic presentation which held the attention of court and jury and made his powerful and convincing appeal irresistible. As an advocate Mr. Hepburn held a high place among the greatest lawyers of his time.

AS A SOLDIER.

When the Civil War broke out Mr. Hepburn resigned his position as district attorney. Securing a horse, he rode from Marshalltown to Iowa City, and obtained from Gov. Kirkwood authority to raise a company. This he did and was elected its captain. His company was enrolled as Company B, Second Iowa Cavalry. Capt. Hepburn was soon promoted to the rank of major and placed in command of the second battalion of his regiment. In that position he greatly distinguished himself at the Battle of Corinth. In the same year he was placed on the staff of Gen. Sheridan, and later upon that of Gen. Rosecrans, serving with him during all the time Rosecrans was in command of the Army of the Cumberland.

Afterwards he received a commission as lieutenant colonel and was placed in command of the second brigade, Cavalry division, of the Sixteenth Army Corps. His regiment was mustered out at the expiration of his term of enlistment, but he reenlisted and remained in command of a provisional Cavalry regiment until the close of the war.

Col. Hepburn was justly proud of his army record and remained the steadfast friend of his soldier comrades all his life. While in Congress he was always an advocate of liberal pensions, and was considered the special champion of the veterans on the floor of the House. His denunciations of those who sought to belittle or discredit the service and sacrifice of the "boys in blue" are still remembered for their bitterness and power.

IN PUBLIC LIFE.

It was inevitable that one so richly endowed should soon seek and find a place in public life; and so it was that after a few years of active practice of his profession, following his return from the South, he actively entered politics. He became a candidate for Congress in 1880, contesting for the nomination against the incumbent from his district, Col. Sapp, of Council Bluffs. The contest was a memorable one. The convention balloted for three days without result, and then took a recess of four days. Balloting was then resumed, and after two days more of struggle Col. Hepburn was nominated on the three hundred and eighty-fifth ballot. He was elected and served in the Forty-seventh, Forty-eighth, and Forty-ninth Congresses. He was then defeated by Maj. Anderson, who was succeeded for two terms by Hon. James P. Flick. Col. Hepburn was then reelected to the Fifty-third and to each succeeding Congress up to and including the Sixtieth.

He was thirteen times the nominee of his party, in most instances with little or no opposition.

In Congress Col. Hepburn's career was brilliant and distinguished. Wisely he held aloof from active participation until he was thoroughly at home and familiar with the practice and procedure of the House. He grew steadily in power and influence until he became a distinguished figure, with a place among the half dozen leaders of the House. As a debater he was not surpassed, if, indeed, he was equaled, on either side. He had a superb equipment, a commanding presence, a resonant and pleasing voice, an extensive and unique vocabulary. He was thoroughly at home, fearless, and stimulated with the joy of conflict. Members now in the House recall the thrilling encounters in which he took part as among the red-letter days of the House.

But it was not only as a debater that Col. Hepburn excelled. He was a constructive statesman. He served as chairman of that great committee, the Interstate and Foreign Commerce Committee, during the years when some of the most important and benificent legislation of modern times was enacted. He served all through both the McKinley and Roosevelt administrations. Especially during the stormy years when Roosevelt was pressing his reform legislation, Col. Hepburn was his able and efficient helper in the House. President Roosevelt declared the Fifty-ninth Congress would be memorable in history because of its constructive legislation. Of the five great acts on which that statement was based, four came from Col. Hepburn's committee, and of three of them—the Hepburn rate law, the pure-food act, and the public health act—Col. Hepburn was himself the author. He introduced the Nicaragua canal bill, which was the precursor of the Panama Canal act. He also introduced bills, which became laws, providing for safety appliances for railroads, for the Marine Hospital Service, and other legislation of similar character.

Col. Hepburn was regarded as a conservative. He acquired that reputation because of his tenacious adherence to his settled beliefs. But he was independent in thought, and a real reformer in action. He was the first "insurgent" against the old rules of the House. At the commencement of each Congress Col. Hepburn made a fight against the rules giving the Speaker what he regarded as dangerous powers. Afterwards enough joined him to repeal the old rules, until now the Speaker is shorn of excessive power. Col. Hepburn years ago began fighting each river and harbor bill because of its "pork-barrel" provisions. Members still recall how he ridiculed appropriations for the improvement of creeks and inlets that had no place on the map, and how he convulsed the House describing the difficulties with which an appropriation would try to catch up with the devious wanderings and bewildering changes in the course of the Missouri.

AN HEROIC FIGURE.

Col. Hepburn was a heroic figure. He belonged to a heroic age. He came to Iowa while it was yet a Territory, five years before it became a State. He knew and became a part of the pioneer life of the West. The pioneer has been more than any other the true, distinctive type of American manhood. In the pioneer were combined all those forces which subjugated a continent. Prof. Bryce truly said, "The West is the most American part of America." The westerner is the impelling, aggressive, dominating element in the development of our national life.

Graduating from such a school as this in his early manhood, Col. Hepburn entered upon the heroic age of American history, the Civil War period. Men grew larger in that atmosphere. Provincialism died in the contemplation of the danger of losing and the blessing of keeping a united Nation. The Union, one and indivisible, enlarged the American vision to continental proportions. To the westerner this idea had an especial appeal. From his outlook of boundless prairies, with their limitless vistas, he could comprehend more easily than others the value of a great Nation. And so it was not strange that Iowa, with a population of but 600,000, should send 80,000 volunteers to the defense of the Union. This was one-half her entire adult male population. It was 70 per cent of those subject to military duty. It constitutes a record of heroism and devotion unequaled even in our own proud history.

Col. Hepburn was a typical representative of that period, stalwart, heroic, titanic. There was nothing little about him, either physically or mentally. He was intolerant of the narrow view. He had no patience with the meannesses of life. He could not abide that attitude of mind which has no outlook higher than personal advantage. He was subject to easy disparagement because he was contemptuous of criticism. He suffered defeat rather than subject himself to the humiliation of an explanation. He had none of the arts of the demagogue. If men supported him, it was because of his sterling worth, and not because of any servile appeal or pretended favor. He would not

> Crook the pregnant hinges of the knee.
> Where thrift may follow fawning.

To his party, to his country, to his own convictions he was ever loyal, not passively but devotedly, heroically, passionately loyal. He was a soldier; but he was not a mercenary, he was a volunteer. He was a fighter; but he was not a duelist, he

was a champion. He was typical of his age. As such he will linger in our memory, an heroic figure, pioneer, soldier, statesman. [Applause.]

Mr. HAUGEN. Mr. Chairman, I yield 10 minutes to the gentleman from Massachusetts [Mr. GILLETT].

Mr. GILLETT. Mr. Chairman, about a year ago I discussed here the attitude of the President toward the merit system as disclosed by the Executive orders which he had issued waiving the regular requirements of the civil-service rules in individual cases and making appointments to office in disregard of those requirements. It has always been recognized that the President should have this power to set aside the regular rules and requirements of the civil service, because there might occasionally arise emergencies when special services were required which the regular routine of the civil-service rules would not secure, but the spirit of the civil-service law demands that these exceptions shall be made only when the interest of the Government requires it, and that they shall not be made for the purpose of promoting personal or political favoritism.

President Wilson, both before his election and since, has frequently proclaimed that he was a sincere advocate of the merit system. It seemed to me his conduct in the first two years of his office was greatly at variance with his professions. I have recently been to the Civil Service Commission and looked up his record for the past year, and regret to say that it but confirms the impression created by the previous two years. As the civil-service rules become more and more established as part of our system of Government, and as they become more and more understood and respected by the voters as the best defense against political favoritism, one would naturally expect that the exceptions created by Executive order would steadily diminish. That there will occasionally be cases where a President, with the purest and best motives, might think it wise to except individuals from the regular method of entrance to the service, I readily admit.

President Roosevelt inaugurated the custom that when any one requested him to waive the civil-service requirement in order to give a person an appointment the matter should be referred to the Civil Service Commission, and they should report upon the wisdom of the action. That, it seems to me, was a very sensible and disinterested innovation. The Civil Service Commission in such a case would be expected to sit as a judicial body, uninfluenced by political or partisan views, and making its conclusions simply for the good of the service, and it seems to me the report of that commission ought to be conclusive to a President who wished to act for the country at large and not for his own personal or political gain. And it seems to me the genuineness of a President's devotion to the merit system could be very well measured by his acceptance or rejection of the recommendations of the commission in such cases.

Last year I discussed this subject in the House. I found then that in the first two years of his administration President Wilson had authorized 137 personal appointments by Executive orders which waived the requirements of the civil service. In all except 18 of those 137 he first requested the judgment of the Civil Service Commission. When he or any other President authorizes an appointment without submitting the question to the commission, I assume that he does it because he has made up his mind to make that appointment, thinks the Civil Service Commission would not approve it, and so prefers to do it against their unexpressed rather than against their recorded opposition.

Subtracting those 18, it leaves 119 cases which President Wilson submitted to the Civil Service Commission. Of those 119, 41 were approved by the Civil Service Commission, and of those cases I have no criticism. While the judgment of the commission has not always agreed with mine, yet I give them credit for honest and impartial investigation and decision, although they owe their positions to the present President, who did not follow the example of his Republican predecessors, but for the first time allowed partisanship to determine his appointments, removing two of the members whom he found in office. All through the administrations of President Roosevelt and President Taft the board consisted of two Democrats and one Republican. As soon as President Wilson came into power he removed the Republican and appointed a Progressive, recommended by the Progressive Senator who was his most faithful supporter in the Senate, so that the board has been constituted ever since of two Democrats and one Progressive. The law forbids that all three shall belong to the same political party.

I compared last year the number of the Executive orders issued by President Wilson during the first two years of his administration with the Executive orders made by President Taft during the same period of his administration, and found that there were 77 exceptions by President Taft as against the 137 by President Wilson. President Wilson appointed 18 without referring them to the commission at all. President Taft appointed 11. I assume that all those were cases where both Presidents knew that the commission would not approve their action, and I think they all deserve criticism and were flagrant departures from the principles of the merit system. Of the 119 cases which President Wilson referred to the Civil Service Commission 41 were approved by them. Of President Taft's 66, 65 were approved by the Civil Service Commission. Against those appointments I have no criticism. President Wilson appointed 78 men against the judgment of the Civil Service Commission, while President Taft only appointed 1 against their recommendation, so the relative figures are 78 to 1. Perhaps that measures fairly their relative faithfulness to the merit system.

Now, in the past year, from February 25, 1915, when my investigation last year ended, to April 1, I find President Wilson has authorized 104 appointments without regard to the civil-service rules. Of those, 20 were appointed without at all requesting the judgment of the Civil Service Commission. I assume that those were not referred because the President knew that the Civil Service Commission would disapprove the appointments. Indeed, in 6 of those 20 cases the Civil Service Commission had already disapproved exactly similar requests, so that their position was known. Therefore, in those 20 cases he was acting in intentional opposition to the judgment of the commission.

Of the remaining 84 cases, 22 were approved by the Civil Service Commission, and while my opinion did not always coincide with that of the commission, yet against those appointments I make no criticism. I believe the commission intended to be impartial and fair, and I accept their conclusion as correct.

In the other 62 cases the Civil Service Commission, the President's own board, advised against the appointments; and yet, notwithstanding such objection, the President made the appointments. So the record for this year stands 22 appointments made with the approval of the commission, 20 made without any reference to the commission, and 62 made against the advice of the commission, so that in the case of 104 persons for whose appointment to office the civil-service rules were abrogated, only 22 of them were made with the concurrence of the commission, and all the rest may fairly be assumed to have been made from motives of political or personal favoritism. It does not seem to me that is a record which is creditable to any man who claims to be a supporter of the merit system.

I looked up the record of the corresponding year in the Taft administration, to make the comparison as I did last year, and I find there were 56 cases in which the civil-service rules were waived. Of those, 38 were approved by the commission and 17 were made against the recommendations of the commission, and only 1 was made without reference to the commission. So the comparison is as follows: President Taft made 56 exceptions, 38 with the approval of the commission and 18 against the opinion of the commission. President Wilson made 104 appointments, 22 with the approval of the commission and 82 against the opinion of the commission. President Taft yielded to the politicians and abandoned civil-service principles in one-third of the cases. President Wilson was faithless to his civil-service professions in four-fifths of the cases and abided by the recommendaton of his commission in only one-fifth of the cases.

It would seem to me that the wisest as well as the easiest course for a President would be to abide unchangeably by the advice of the commission. When a politician came to him seeking to have the civil-service rules waived, so that he could be appointed to a classified office, the President might easily say: "You can submit your case to the Civil Service Commission, and if you can get them to approve it I will be glad to give you the place, but I will not do it without their approval." But apparently the political exigencies of this administration have not allowed that course to be followed, and the President has 82 times disregarded the opinion of his own commission.

The commission in their report give a very brief statement of the reasons given for the action in each case, and in many of them you can read between the lines and appreciate how preposterous it was that the rules should be waived in order that the services of these men might be secured.

For instance, the Postmaster General wished to have two unclassified laborers admitted to the classified service although they were not eligible, and so at the request of the Postmaster General the President waived the requirements of the rules, because the Postmaster General stated—

That these men were highly desirable, entirely trustworthy, and had rendered excellent service, having been directly connected with the office of the Postmaster General since the beginning of the present administration.

The fact that the Postmaster General had brought in with him two good men and had kept them in direct connection with his office was apparently sufficient reason to have the rules of the civil-service law set aside so that his proteges might get permanent appointments. It is needless to say that the Civil Service Commission was not convinced by this statement and did not approve the appointments.

In another case a lady was authorized to be appointed in the Immigration Service without reference to the civil-service rules, and there the Secretary stated that this lady "had peculiar qualifications, and it was deemed advisable to have a woman of high character and sympathetic initiative." If "sympthetic initiative" is to become one of the feminine qualifications for appointment to office, the civil-service examinations ought to be radically changed. In this case, too, the Civil Service Commission, of course, did not recommend the appointment.

In another case in the Post Office Department the statement was that the "postmaster is personally acquainted with the gentleman and feels that he is mentally and physically capable of performing with satisfaction and efficiency the duties." I can think of no case where a person who wanted to give a man an appointment would not make that general statement, but the President, against the advice of the commission, seemed to think that was sufficient reason to justify the setting aside of the rules.

In another case a man had been in the Railway Mail Service for 20 years, beginning in 1882, when he resigned with a "fair record." He was reappointed to the Railway Mail Service. He can no longer be a young man, for it is 34 years since he first entered the Railway Mail Service, which is supposed above all others to need young men; but he was a son of Gen. Houston, a Texas hero, and so he was permitted to be reappointed, and to my surprise the Civil Service Commission offered no objection to the recommendation of the Postmaster General. I appreciate and sympathize with the warm regard Texans have for the memory of Gen. Houston, but I do not think that is sufficient reason for them to load his son in his old age upon a branch of the national service where young men are particularly needed.

In another case a man was appointed law clerk in the office of the Solicitor of the Treasury, upon the statement of the Attorney General that "the relationship existing between the solicitor and the man holding this position is quite confidential; that the duties of the office require a man of considerable experience as a lawyer," and so forth. The President was prudent enough in this case not even to venture to ask the opinion of the Civil Service Commission.

Then a lady was appointed in the Bureau of Foreign and Domestic Commerce because the Acting Secretary vouched for "her unusual efficiency and ability as a stenographer and typewriter and the exceptional aptitude she has shown." If the head of a bureau can get every young lady he wishes by simply saying that she has unusual efficiency and ability as a stenographer and typewriter and exceptional aptitude for the work he wishes her to perform, the civil-service laws might as well be repealed at once.

It seems to me that the cases show a deplorable laxity and easy willingness to oblige applicants, an introduction of favoritism and personal influence which the civil-service laws and rules were intended to prevent and which is inconsistent with the professions of a believer in the civil-service principles.

I remember that during President Roosevelt's administration the gentleman from Virginia [Mr. HAY] criticized him severely for issuing some of these Executive orders allowing personal appointments without regard to the civil-service rules. That was before he had inaugurated the custom of referring such cases to the Civil Service Commission for report. Perhaps Mr. HAY's criticism showed the need of some such impartial tribunal, and so was the indirect cause of that innovation. If so, it had a more valuable result than most congressional speeches. At that time it was difficult to judge fairly what exceptions had been made for the good of the service and what exceptions were made from personal or political favoritism. Now the judgment of the Civil Service Commission supplies for us a standard. Mr. HAY, criticizing President Roosevelt, said:

> Whenever he suspends a rule of the civil service he violates principles which he himself has enunciated.

I am not as severe a critic as Mr. HAY, because I recognize that some exceptions may be desirable for the good of the service, and so are no violations of civil-service principles. But when President Wilson suspends the rules against the advice of his own Civil Service Commission it seems to me Mr. HAY's criticism is exactly applicable. The President has at different times declared himself in favor of the merit system. Even at the moment when he signed the bill which dealt the severest blow to the civil-service law it has ever received since it was enacted he said, as if conscious that his act needed some explanation and exculpation:

> My warm advocacy and support both of the principle and the bona fide practice of civil-service reform is known to the whole country.

And yet, despite this public advertisement of his convictions, he continues year after year to authorize appointments which can not get the approval even of the Civil Service Commission which he himself selected. In his first two years the commission acquiesced in 41 of the 137 exceptions which he made—less than a third. This year, out of 104 exceptions which he has authorized, the commission has only approved 22—about one-fifth. At this rate of progress, what can the spoilsman not expect during the next six months, when the pressure of the campaign becomes even more acute? And what has become of his "warm advocacy and support both of the principle and the bona fide practice of civil-service reform"?

According to the standard set up by the gentleman from Virginia [Mr. HAY], the present honored chairman of the Committee on Military Affairs, "Whenever he suspends a rule of the civil service he violates principles which he himself has enunciated." That has been done 104 times during the past year, and in 82 of those cases he acted in direct defiance of the opinion of the Civil Service Commission. In my judgment, that is not "bona fide practice of civil-service reform."

I sincerely regret that the year's record is so bad. When the President assumed office I had full confidence that the merit system would be upheld and promoted. I have no doubt now that the President at heart approves it. I can only conclude that the men and influences by which he is surrounded are stronger than his convictions, and that he yields his predilections to party and personal pressure. But as long as four-fifths of his appointments are made directly against the advice of the Civil Service Commission I do not see how he can expect or receive the approval or support of civil-service reformers. [Applause.]

Mr. KAHN. Mr. Chairman, will the gentleman yield?

Mr. GILLETT. For a question.

Mr. KAHN. Is it not a fact that President Wilson was at one time the president of the National Civil Service Reform League?

Mr. GILLETT. No. He was vice president of that league and resigned it when he was nominated; but he resigned, saying that it did not at all indicate any lack of enthusiasm for the cause, and he has frequently asserted that in spite of his conduct in the cases I have enumerated.

Mr. LEVER. Mr. Chairman, I yield now to the gentleman from Texas [Mr. SMITH].

Mr. SMITH of Texas. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. LEVER. I now yield to the gentleman from Pennsylvania [Mr. BAILEY].

Mr. BAILEY. Mr. Chairman, I make the same request.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. HAUGEN. Mr. Chairman, I yield to the gentleman from Wisconsin [Mr. ESCH].

Mr. ESCH. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. LEVER. Mr. Chairman, I now yield 30 minutes to the gentleman from Nebraska [Mr. STEPHENS].

Mr. STEPHENS of Nebraska. Mr. Chairman and gentlemen of the committee, I purpose to devote the time allotted to me to a discussion of markets, especially as related to the live-stock industry. I have prepared a few charts or had them prepared by the department for the purpose of illustrating in concrete form the precarious condition of the live-stock industry in the United States at the present time. This great Committee on Agriculture has taken a very important step toward solving this problem, and I congratulate it and its worthy chairman, Mr. LEVER, on the splendid progress so far made.

Some three years ago this bill carried for the first time an appropriation for the establishment of a Bureau of Markets, and in my judgment it was the most important step in the development of agriculture since the department was organized. We have been devoting ourselves exclusively to an effort to make two blades of grass grow where only one grew before, paying no attention whatever to the finding of a market for that extra blade of grass. We now propose to find where to market the products we raise economically and profitably.

Mr. MADDEN. Mr. Chairman, will the gentleman yield for a question?

Mr. STEPHENS of Nebraska. Certainly.

Mr. MADDEN. I am curious to know what the gentleman's opinion is as to what the duties of such a bureau would be; whether they would sell cattle or hogs or sheep or agricultural products, or whether they would simply accumulate information for selling and buying of them.

Mr. STEPHENS of Nebraska. My idea is that this bureau will ascertain what the trouble is and offer suggestions as to how to remedy it. We do not know exactly what the trouble is; that is, people generally do not know what the trouble is. Some of us think we know.

Mr. MADDEN. Well the gentleman yield for one more question?

Mr. STEPHENS of Nebraska. Certainly.

Mr. MADDEN. Some time since there was the creation of what was known as the Federal Trades Commission, and that commission was to have the power to remedy all the evils that human flesh is heir to, in the business world, at least. Now, has not it the power, or would the bureau suggested by the gentleman have a greater power?

Mr. STEPHENS of Nebraska. Well, I think it has the power to do many things, and it no doubt will exercise that power when it is thoroughly organized, in dealing with unfair trade conditions; but this bureau of markets is designed to locate the producer's trouble and suggest how he can keep out of bankruptcy.

The live-stock industry, including the industries based upon it, is greatest of all the great industries in the United States. About $14,000,000,000 is invested in it, and these charts show the live-stock supply has decreased enormously during the last 15 years, which indicates most clearly that the trouble lies at the markets. Good markets will increase the live-stock supply; poor markets will decrease the supply. That is a fundamental law. Then the question is what is the matter with our markets? The per capita meat supply of the United States was about 35 per cent less in 1915 than in the year 1900. In other words, if each person had 100 pounds of meat in 1900, he would have only 65 pounds in 1915. This is certainly an astounding situation and deserves the most careful consideration.

Mr. FESS, Mr. MADDEN, and Mr. REAVIS rose.

The CHAIRMAN. To whom does the gentleman yield?

Mr. STEPHENS of Nebraska. I yield to the gentleman from Ohio [Mr. FESS].

Mr. FESS. In other words, the increase in cattle raising has not kept pace with the increase of our population?

Mr. STEPHENS of Nebraska. That is correct.

Mr. FESS. Did the gentleman expect it to do so?

Mr. STEPHENS of Nebraska. Certainly; there is no reason on earth why it should not, and I purpose in my remarks to show why it has not increased in proportion to the population.

Mr. BAILEY. Will the gentleman yield?

Mr. STEPHENS of Nebraska. I will.

Mr. BAILEY. Does not the gentleman think that the increase of the price of farm lands might have a good deal to do with the decrease of the production of meat and cattle?

Mr. STEPHENS of Nebraska. It should have no effect in decreasing the supply of cattle, but it would naturally make cattle raising more expensive. But the demand for meat is constantly going up and the supply of meat going down. If the price of beef cattle went up as the expense of production went up, the supply would naturally follow and there would be no shortage of cattle. The packers, however, have kept the price level so low that feeders in great numbers have quit the business. Not only has the price level been kept too low, but it has fluctuated violently, making the feeding business exceedingly hazardous. The price of land ought to have nothing to do with the supply of cattle if there were a free competitive market for the sale of the cattle, which, I regret to say, does not exist.

Mr. REAVIS. Will the gentleman yield?

Mr. STEPHENS of Nebraska. I will.

Mr. REAVIS. Does the gentleman from Nebraska mean to leave the impression that there is an increase in cattle raising now over what it was 10 years ago?

Mr. STEPHENS of Nebraska. No, indeed. Here is another chart that shows the condition of the live-stock industry. This chart shows the population of the United States in 1900 to be about 75,000,000. While our population has increased to over 100,000,000 in 1915, the cattle, hog, and sheep supply has not kept pace with the growth in population. Hogs have increased only slightly, while sheep and cattle have decreased more than 20,000,000 head, thus greatly reducing the per capita supply of meat in 1915 as compared with 1900. As stated before, the reduction in sheep and cattle amounts approximately to a loss in the per capita supply of 35 per cent. These are alarming figures.

Mr. MADDEN. Will the gentleman yield?

Mr. STEPHENS of Nebraska. I yield to the gentleman.

Mr. MADDEN. Does the gentleman think that the laws which encourage the raising of live stock in other countries and admitting it free into the United States, has anything to do with the reduction in the number of cattle and hogs and sheep raised in the United States?

Mr. STEPHENS of Nebraska. Not in the least, because at the present time and during the last two years we have had very little importation of live stock, and during that time the price of fat cattle on the market has been so low that cattle feeders have suffered the greatest losses in the history of the industry.

Mr. SMITH of Michigan. Will the gentleman yield?

Mr. STEPHENS of Nebraska. I yield.

Mr. SMITH of Michigan. I was interested in your illustration on the map, and in your explanation where you stated that it showed the relative value of the different industries in the United States, while in the heading it reads, "Per cent of distribution." What I should like to know is whether that shows the amount of distribution or the relative value of the product mentioned in the chart?

Mr. STEPHENS of Nebraska. This chart was prepared by the Census Bureau, and I assume it refers to the amount invested in these different industries.

Mr. BORLAND. I want to ask the gentleman whether his line on the chart, representing the gross number of cattle in this country for these different years, includes all kinds of cattle, beef cattle as well as dairy cattle?

Mr. STEPHENS of Nebraska. All kinds; yes, sir.

Mr. BORLAND. The gentleman is aware, of course, that there has been an increase, a slight one, and not comparable with the increase in population, but a slight increase, in the amount of dairy stock in this country, so that the relative diminution in the supply of beef cattle is much greater than the aggregate would show?

Mr. STEPHENS of Nebraska. Yes; that is correct.

Mr. BORLAND. In other words, the increase in dairy cattle has kept the supply of cattle from going down as rapidly as it would have gone down?

Mr. STEPHENS of Nebraska. I think the gentleman is correct.

If I may proceed now for a few moments without interruption——

Mr. FESS. One other question. Is this estimated on the number of cattle or is it the value?

Mr. STEPHENS of Nebraska. On the number.

The live-stock industry falls naturally into two divisions, namely, production and distribution. On the one hand we have the growers and feeders who raise the cattle and finish them for the market, and on the other hand we have the distributors consisting of the packers and their vast machinery of distributing the finished product through the various channels of trade to the consumers. On the one hand we have millions of producers scattered over a vast territory, isolated and practically unorganized, and on the other hand we have the great central markets to which the live stock from every section is shipped, owned largely and controlled absolutely by four or five great meat-packing concerns. The producers, unorganized, need help from the National Government; the packers, perfectly organized, need to be controlled by the National Government.

Let us examine the situation briefly. Take a map of the United States and for the purpose of illustration draw a vertical line from the north boundary to the south boundary through the city of Chicago. Label the territory to the west of this vertical line the cattle country and the territory to the east of it the consumers' country. Then draw lines out from the central market at Chicago to St. Paul, Sioux City, Omaha, Kansas City, and St. Louis, the secondary cattle markets. From these secondary markets extend these lines out into the cattle ranges of the West beyond the corn belt, and we have a map showing graphically how the cattle flow along these lines to the secondary and central market at Chicago. The lines showing the connection of this vast cattle country with the central market at Chicago do not mean that every animal passes through Chicago before the finished products gets to the consumer, but it does mean that practically every animal that moves in the interstate trade from any of these secondary cattle markets to the consumer has the price fixed upon it, indirectly if not directly, by the big four packers in Chicago. So for all practical purposes the map shows the cattle of all this great western country passing through the needle's eye, the stockyards in Chicago, to the consumers of the country, labeled and priced by four

packers. In passing through this central market the producer surrenders title to his live stock—sells it to the packer at the packer's own price, because there are practically no other bidders for it. The packers dress the product and prepare it for the consumers and the lines radiating out from Chicago eastward show how perfectly they distribute it. Their control of the price on the great bulk of the meat fixes the price on all of it, practically speaking. The very fact that this enormous volume of business is controlled by this market composed of not to exceed four or five men is, in my judgment, a most dangerous menace to the American people, because it places in the hands of these men absolute control of prices, with the result that they are destroying the cattle industry of the country.

WHAT IS THE LIVE-STOCK MARKET?

Let us look at this great central market at Chicago and see what it is. The cattle market consists of stockyards, terminal railroads, packing houses, banks and cattle loan companies, rendering plants, market papers, and many other interests, practically all of which are owned or controlled by four packers, usually referred to as the "Big Four"—Swift, Armour, Cudahy, and Morris. Each week during the cattle season tens of thousands of cattle arrive at this market, to say nothing of other tens of thousands that arrive at the secondary markets, which are simply branches of the Chicago market, because the same packers own the stockyards and packing plants and buy the great bulk of the cattle at each one of these markets.

The bulk of these cattle that arrive during the week arrive on Monday and Wednesday in such large numbers that the yards are congested, the railroads are congested, the commission men are on the run, and everybody is so hurried that there is no opportunity for very much dickering between the seller and the buyer. The producer who has cattle on the market is so harassed in getting them unloaded and into the yards, feeding and watering them, that he feels a sense of relief when a buyer comes along and gives him a bid of any kind. Of course it would make no difference how long he stayed there and dickered with the buyer of the packers, for he would get no more for them, because there is no one else to buy them. But the very fact that these cattle are crowded on the market on two days of the week in such numbers affords the packer an excuse for lowering the price. They can always say that the market is glutted, and that it is perfectly natural for an oversupply to cause a slump in the market. But the scarcity of beef cattle shows that there is not, nor never has been during the last 15 years, an oversupply of cattle on the market.

THE GROWERS AND FEEDERS.

As opposed to these packers we have the unorganized efforts of the growers and feeders to secure a price for their cattle that will enable them to stay in the business. The growers are not so distressed as are the feeders. The growers sell in a market where they have thousands of competitive buyers, but the feeders are compelled to sell in a market where they practically have but one buyer, because no one who has any understanding of the method at all believes that the packers compete with each other. But even if they would compete, the fact that the feeder has only four channels through which he can sell his stock shows how limited is the competition. The growers are principally located in the range country; they keep the cattle on the range until they have had their growth, when the feeder in the corn belt must take them and finish them for market. There are few ranges that have grass sufficiently nutritive to produce good beef. Therefore the majority of these cattle are thin when they arrive at the market, and must be put in the feed yards of the corn belt and be fed corn and hay for several months before they are fit for choice beef.

In the fall of the year, when the grass fails on the range, the mature cattle in countless numbers are shipped to the various stock markets, where the feeders gather by the thousands in person or through their commission men to buy them and take them back to their feed lots on the farms. This competition among the feeders is sufficient to furnish the growers a very satisfactory market. Keep in mind the distinction between the grower and the feeder. The grower must sell his cattle when they have matured, because after maturity they begin to deteriorate in value, so when the grower unloads his cattle in the stockyards at the various markets the feeders are there to buy them, and they are immediately loaded on the train and shipped back into the corn belt, where they are fed for varying lengths of time, from two to six months, according to the condition of the cattle and the amount of feed available.

A feeder is a farmer as a rule, and he must have cattle to consume the rough feed on his farm and his corn crop and for the fertilizer required to keep up his farm. Even if a farmer could sell his grain always at a fair price, he would still need to keep cattle to make farming profitable. So the feeder often buys these cattle at a price so high that it will be a bare chance if the operation will prove profitable. This is due to the competition among the feeders. They need the cattle. After his cattle are fat the feeder loads them on the train and sends them to his nearest market. When he gets there he finds that the market is off—it most always is—and he begins to figure out what he can do to protect himself.

He finds that the offer made by the packers is so low his losses are going to be heavy on his year's feeding. If he is an experienced feeder, however, he knows that he can not load these cattle on the train and pay a water-logged freight rate back to his feed yards and continue to feed them for a higher market, because he knows the expense of the operation would wipe out all of the possible increase that he might make should he strike a higher price level when he got them back to the market after paying another freight rate. If he happens to be on the Omaha market, for example, and was dissatisfied with the price offered, he might contemplate shipping them to Kansas City, Sioux City, St. Louis, or Chicago, but if he has a knowledge of the situation he will know that will not do him any good, because he will meet with the same buyers in all of these markets that he has met in Omaha.

But if he happens not to know these facts and still refuses to take the offer made to him in Omaha for his stock, and decides to load and ship them to the Chicago market, he will find when he gets there that the offer that is made to him is less than the offer he had at Omaha. If he were able to get into the facts surrounding the situation, he would also find that the Omaha buyer had wired the Chicago buyer that a disgruntled feeder with a string of cattle was coming and to look out for him, and to teach him a lesson that he would not soon forget by paying him a price that would deal him a staggering loss. The facts have been well proven that this is literally what happens to a feeder who attempts to escape from the market which he first reaches.

WHERE GROWERS AND FEEDERS ARE TO BLAME.

There are many other phases of the feeder situation that are exceedingly interesting and harassing. For example, in the good old days before the lure of the big markets was established the feeder bought his stock directly from the grower on the range as he should do now, but since the big markets have been established it is almost impossible to buy cattle on the range successfully, due to the disorganized condition of the feeders and growers and the misinformation that is being constantly distributed among them as to market conditions. The feeder now is compelled to go to the cattle market at Chicago, Sioux City, Omaha, Kansas City, or St. Joe, and other points for his thin cattle, which have been shipped directly to these markets by the growers. The feeder buys these cattle and in many instances ships them back to his feed yards over the same road over which they came.

I purposely traced some 3-year-old steers, fed in my home county, to see what had actually taken place in their transit from the range to the packer, and this is their life story: They were born on the range near North Platte, Nebr., some 300 miles west of Omaha. When they were 1 year old the grower found himself short of pasture, and he shipped them over the Union Pacific Railroad to the Omaha market. There a farmer bought them who lived near Kearney and shipped them back again some 250 miles over the same railroad to his pasture, where he kept them till they were 3 years old. He then shipped them over the same railroad again to Omaha, making the third trip over that road paying a high freight rate on a highly watered capitalization. At Omaha they were again sold, this time to a feeder at Central City, Nebr., on the same road, about 130 miles west of Omaha, who shipped them back the fourth time over the same road to the feed yards at Central City. After feeding them six months they were shipped over the same railroad again to the market at Omaha, where they were sold to the packers, dressed, and distributed to the people.

These cattle paid five freight bills to the Union Pacific Railroad before the packers got them. After the packers got them they paid another, as dressed meat, making six all told. They also paid five commission charges at the stock yards in Omaha. They paid yardage and feeding and handling five times on that market, and up to the time that they went to slaughter the feeder and the grower had to divide this expense between themselves. This life history of that particular bunch of cattle shows a greater expense perhaps than the average, but it is safe to say that the average 3-year-old fat steer passes over the railroad three times before he reaches the packer, which is conclusive proof that some sort of a system of marketing should be adopted that would cut out these unnecessary bills of expense. But the most discouraging thing is that after the

feeder has taken upon himself all the great expense burden that these cattle carry up to the time they leave his feed yards, and has added another big bill for feed and has shipped them to the packer for slaughter, he is confronted with a hopeless market where he receives practically only one bid for his stock. Of course, two or three packers may bid on his stuff, but anyone who is fit to go about without a guardian knows that these bids are not competitive.

It is beyond the bounds of reason to believe that these four packers, who buy the bulk of the cattle that arrive at any and all of these markets, are going to bid against one another and thereby run the price up when it is much simpler and easier for them to divide up the shipments among themselves according to their respective capacities for handling them and paying exactly what they please for them. If there is anyone so gullible in the face of the evidence that is available on this subject as to believe that there is competition in the fat stock markets, he had better go into the feeding business and prove it.

THE METHOD OF THE PACKERS.

Several years ago the packers formed a National Packers' Association, which contemplated taking over the whole industry in one gigantic trust, but the courts dissolved the association. It is easy enough for the court to do that sort of a thing, but it is quite another thing to prevent the members of that association, after they have been dissolved, from working in perfect harmony. That is exactly what the Big Four do now. They do just as they please. They work as one man. Each packer has his head buyer, and these head buyers find no difficulty in meeting often and understanding one another perfectly, because they all office in practically the same buildings.

The stockyards are owned by the packers. The banks and cattle loan companies that loan money to the feeders are owned by the packers. The market papers which quote the prices are owned by the packers. They also own the rendering plants, and, for all practical purposes, they own the commission men. The commission men are absolutely dependent upon the packers. They are supposed to represent the feeders and growers, but, in view of the fact that they only have four buyers to whom to sell the cattle of their customers, it is evident that these buyers could neglect to make them an offer for their stock should they not be responsive to their suggestions. And if they can't get offers for their stock their country customers will quit them. So it necessarily follows that the commission men are helpless in the hands of the packers. The packers own the yards and therefore collect all of the charges for handling the cattle as they come in; collect high prices for the feed they use; make the feeders dependent upon the banks they own if they want to borrow money; make the market papers quote whatever prices they desire quoted for the purpose of influencing the movement of stock; take the dead cattle for practically nothing to their rendering plants; and, in fact, collect their toll off of every movement made by the feeder in the sale of his cattle to them. Not only do the packers own the yards, the terminal railroads, and other things referred to above, but they own all of the sites suitable for the location of packing plants, thus discouraging, if not making impossible, any new competition in the form of new packing houses. They control the situation so perfectly, and the industry is so splendidly organized, that competition has not only ceased to exist but is well-night impossible until the whole system of marketing is revolutionized.

Mr. MADDEN. Mr. Chairman, will the gentleman yield there for a question?

Mr. STEPHENS of Nebraska. Yes.

Mr. MADDEN. Is there anything to prevent anybody else buying these cattle except the four packers?

Mr. STEPHENS of Nebraska. Yes; there is.

Mr. MADDEN. What is it?

Mr. STEPHENS of Nebraska. Independent buyers have been driven out of the market as a result of the conditions I have just described. In the old days there were independent buyers scattered all over the East. They would go to Chicago, Kansas City, Omaha, St. Louis, and other markets and buy whole trainloads of cattle and ship them to Buffalo and New York and other cities, and there slaughter them, independent of these Chicago packers. But now those buyers have practically all disappeared, and if there is any shipping of cattle East at all to amount to anything it is done by the packers themselves or through their allied agencies.

Mr. MADDEN. Mr. Chairman, will the gentleman yield to me for another question?

Mr. STEPHENS of Nebraska. Yes.

Mr. MADDEN. Does the gentleman believe that if he went into any of these cattle markets and offered a better price he would not get the cattle?

Mr. STEPHENS of Nebraska. Of course, I would get the cattle, but what would I do with them after I got them?

Mr. MADDEN. Anybody could do it.

Mr. STEPHENS of Nebraska. Yes; anybody could do it; but suppose you or anybody else would go to Chicago and buy a string of cattle. What would you do with them?

Mr. MADDEN. Sell them.

Mr. STEPHENS of Nebraska. Whom would you sell them to? There is only one outfit in this country competent and prepared to handle the cattle, and that outfit consists of the four big packers. All other effective competition has disappeared, bought out or driven out. These packers are competent to do the business efficiently, and if we could only get the producers organized as well we would make the packers pay a living price for the cattle they slaughter.

In my opinion, legal action under the antitrust laws will get us nowhere, but a competing organization on the producers' side will, with the result that the cattle supply will go up and the people will get cheaper meat. No law can ever prevent these four packers from having an understanding on prices. If Swift pays 7 cents for steers, no law can prevent Armour, Morris, and Cudahy from paying the same.

Mr. MADDEN. There is not anything in the law to prevent anybody else from buying them, is there?

Mr. STEPHENS of Nebraska. Well, I will explain to the gentleman that these stockyards are owned by the packers themselves. They own the buildings; they own the entire equipment of every kind and character. They own the terminal railroads. I am speaking approximately. There are, of course, slight, trivial exceptions; but I am speaking of the rule. These are the things that enable them to fix the price, the things that control the product. That is what I am talking about, and not the incidents that have no influence on the market. Of course there is no law against it, nor is there a law against throwing money away.

Mr. MADDEN. Will the gentleman allow me to make a short statement there?

Mr. STEPHENS of Nebraska. Well, I do not want the gentleman to take all of my allotted time.

Mr. MADDEN. I do not want to embarrass the gentleman.

Mr. STEPHENS of Nebraska. The gentleman does not embarrass me in the slightest degree.

Mr. MADDEN. I want to say, as to the Chicago Stock Yards, that they are not owned by the packers.

Mr. STEPHENS of Nebraska. Oh, the gentleman is mistaken. A gentleman who does not know anything more about the cattle markets than that had better never venture into the stockyards. He is certain to be skinned if he does, because they know exactly how to do it there. [Laughter.] I do not mean to be disrespectful to the gentleman. The Union Stock Yards are owned by the packers, and the records show the fact. They own also the Union Stock Yards in Omaha, in Kansas City, in all the centers where they pack beef. They own the stockyards, the buildings, the equipment, the banks, and everything. There is nothing around the market they do not own that is worth owning. That is the club they have used to throttle competition. Besides that advantage, they do handle business economically, which makes competition with them most difficult. The packing business is the most efficiently managed of all our industries; but they are ruining the live-stock growers, and something must be done to break their strangle hold.

Mr. FESS. Mr. Chairman, will the gentleman yield?

Mr. STEPHENS of Nebraska. Yes.

Mr. FESS. Throughout Ohio, and also in Pennsylvania, there are a great many cattle feeders who go to Chicago and elsewhere to buy cattle that are not fat and bring them by the carload into Ohio and Pennsylvania, and then feed them and ship them as corn-fed cattle. I have a good many people in my own immediate vicinity who do that. I would like to know how general that is.

Mr. STEPHENS of Nebraska. It is general, and they are the people who suffer more than the growers, and I will show you how they suffer more than the growers. Those growers are scattered all over the country, and, as I stated before, they are unorganized, and they ship their thin cattle to the secondary markets, into these stockyards owned by the packers, and they are sold there by the commission men. One of them is the distinguished gentleman from Iowa [Mr. STEELE], who operates at Sioux City. The commission men sell those thin cattle back to people in the corn belt, whom the gentleman from Ohio has referred to now. In selling those cattle to the corn-belt farmers there are thousands of feeders competing for those cattle grown on the range, and the result is that the cattle grown on the range sell at a better price and at a more living price to the grower, because of this larger field of competition that is met with at

the central markets. Now, contrast that with what happens to the feeder after he has carried corn to cattle all winter in both sunshine and rain, mud and snow, and fattened those cattle and sent them to the central markets. When he gets there he has but four men to sell them to, and they have previously agreed on the price they will pay. Those feeders are like lambs led to the slaughter. Their doom is fixed in advance.

Mr. SLOAN. Mr. Chairman, will the gentleman yield?

Mr. STEPHENS of Nebraska. Yes; I yield to my colleague.

Mr. SLOAN. My colleague, in answer to the question submitted by the gentleman from Illinois [Mr. MADDEN], stated, if I understood him correctly, that there were not any cattle imported in this country very recently.

Mr. STEPHENS of Nebraska. During the last year, very few.

Mr. SLOAN. During the last two or three or four years?

Mr. STEPHENS of Nebraska. Yes.

Mr. SLOAN. Now, I want to submit some figures. During the four years prior to October 3, 1915——

Mr. BORLAND. Why does the gentleman go back that far? Every cattleman knows very well that when the troubles first broke out in Mexico there was a large importation of cattle from that country during the early stages of the revolution, and the figures which the gentleman is going to read, for four years, cover that rather extraordinary importation from Mexico, which has now practically ceased.

Mr. SLOAN. During the last two years, then, if the gentleman has no objection to that.

Mr. STEPHENS of Nebraska. No; I am glad to have the gentleman state the facts.

Mr. SLOAN. During the last two years the importations of cattle into the United States were 1,321,293 head.

Mr. STEPHENS of Nebraska. And during the last year there was a decrease in importations of cattle of 193,687 head, and a decrease in fresh beef of 108,353,305 pounds.

Mr. SLOAN. The recent importations have been less.

Mr. STEPHENS of Nebraska. Notwithstanding the fact that importations of cattle fell off enormously, and our exports of meat increased, amounting to the equivalent of 560,000 head in this last year, these packers have paid 40 cents a hundred less for native steers than they did in 1914. If they had paid according to the decreased supply of cattle in the country, they should have paid, perhaps, a dollar a hundred more for the cattle that they bought this last year than for the cattle which they purchased in 1914.

The importation of cattle from Canada and Mexico was a great blessing to our producers, for they turned our grass that was going to waste into money. They consumed our corn and paid railroad freight, and furnished employment for thousands of our people. The gentlemen must appreciate that every head of live stock crossing the boundary into the United States left a trail of gold in every step of progress toward the consumers of meat. The pastures were comparatively empty and the cattle were needed, as I have shown, not by the hundred thousand, but by the millions to make up our live stock shortage. Our producers needed them and their passage through our pastures and feed lots, over railroads and through the packers was a profitable transaction.

Mr. LA FOLLETTE. Will the gentleman yield?

Mr. STEPHENS of Nebraska. I yield to the gentleman from Washington.

Mr. LA FOLLETTE. In fixing the prices of meat in this country, has the gentleman taken into consideration the fact that the packers whom he speaks of as being centered in Chicago are conducting the large packing establishments in South America—in Uruguay and Argentina—and, while they are not shipping cattle up here, they are shipping millions of tons of dressed beef?

Mr. STEPHENS of Nebraska. I will say to the gentleman that it is true that these very efficient packers to whom I have referred now control the South American cattle market. They are absolutely in control of it, just as they are in this country; and anybody, of course, knows that if they control the meat supply here, and the price of it, they are not going to ship any meat into this country that will in any way reduce the price of the product which they have to sell here. They are going to seek other markets as much as possible to get rid of the South American supply.

Mr. LA FOLLETTE. I was in South America this last summer, and I went down on a 12,000-ton ship that carried frozen beef continually between South American and North American ports; and I do know that I came back on the same vessel and that it was loaded to its full capacity with refrigerated beef for this country.

Mr. STEPHENS of Nebraska. I have no doubt of that. I agree with the gentleman entirely. There have been a few pounds per capita shipped in; but the fact that a few cargoes of meat a year comes in does not mean that the price goes down as a result of these shipments into this country. What reason would these packers have for lowering the price of beef in this country simply because they imported some from South America? The proposition is absurd. The packers are not fools. They do not have to lower the price. Who can make them do it?

Mr. LA FOLLETTE. One more question.

Mr. STEPHENS of Nebraska. I yield to the gentleman.

Mr. LA FOLLETTE. If we still had a protective tariff on the meat imported into this country, would not that prohibit them from shipping it in here, or at least make these packers contribute to the support of the Government to that extent?

Mr. STEPHENS of Nebraska. It would not have a particle of effect, except to reduce our meat supply, unless the tariff kept out importations. In the first place they would not bring this beef here unless there was a local condition where they could use it to advantage. They do not bring it here for the purpose of lowering the price. That idea is repugnant to their plans. They control both meat supply and price. They are going to sell it at the price at which they see fit to sell it. Who can stop them? They have the meat and the means of getting more right along—all there is to get.

Mr. LA FOLLETTE again rose.

Mr. STEPHENS of Nebraska. I can not yield to the gentleman further. I shall not have time to finish my remarks if I do. I would like to yield, but I want to finish my remarks on this subject. Now, I want to show what the growers are up against in the matter of the absolute lack of competition at the live-stock markets of the country.

The CHAIRMAN (Mr. MONTAGUE). The time of the gentleman has expired.

Mr. LEVER. I yield five minutes more time to the gentleman from Nebraska.

PROOF OF THE LACK OF COMPETITION.

Mr. STEPHENS of Nebraska. Now, why should there be a decrease in the supply of beef cattle when we have the greatest cattle country in the world? We have the best grass, water, and environment for the growing of cattle to be found anywhere on the face of the earth. And yet in the face of all this the cattle supply has fallen off 14,000,000 head in the last eight years. That in itself is proof that the producers of beef cattle have become so discouraged in that industry that they have gradually gone out of the business.

For example, some 25 years ago Swift & Co., one of the Big Four packers, concluded to try their hand at beef feeding, and erected two feeding plants in my district in eastern Nebraska. This concern operated these plants for several years during the days when there was considerable competition among packers. During those years a feeder could make money more than half of the time, but after the packers began to organize and a better understanding was created among them they found that it was much easier to make money skinning the producers than it was feeding cattle, so they went out of the cattle-feeding business and specialized in the art of skinning cattle feeders. As absolute proof of the fact that there is no competition among the packers in the fat-cattle market I wish to cite the experience of Kent & Burke, one of the largest cattle-feeding firms in my district.

Mr. KENT is the distinguished Member in this House from California, and Mr. Burke, his business associate, is the practical man who operates the cattle-feeding plant in my district. They have operated this plant for many years and are among the most practical men engaged in the industry. They have abundant cheap capital, splendid facilities, and a perfect knowledge of the business. I would say, if there is anyone in the United States who is competent to buy and feed cattle for the market, Mr. Burke is the man. This concern feeds from three to four thousand beef steers and a similar number of hogs each year, and markets them throughout a period of six months each year. Mr. Burke testified, before the bureau of markets hearing in Chicago, that in marketing these three or four thousand head of cattle over the period of six months each year he had not only never sold a car, but never had received a bid outside of the four big packers during the last 10 years. Think of an experience like that. Shipping to the large markets 200 to 300 cars of fat steers every year for 10 years and having never received in those 10 years a single bid from a single buyer outside of this group of four packers. This in itself is proof of the fact that there is no such thing as competition in the fat-cattle market. As a proof that there is no profit in the cattle business Mr. Burke opens the books of his company to show exactly what the profit and loss has been for every year during the last 14 years. Some years they have made money, and

other years they have lost, and when the total was made up it showed for that period a net gain of $31,616 or $2,250 a year on an investment approximately of three-quarters of a million dollars, or less than one-third of one per cent.

Kent & Burke's experience is exceptional in that they have not been driven into bankruptcy. They have survived a long list of feeding corporations that have been put to sleep by the packers. Some 25 years ago there were scores of large cattle feeders scattered throughout my district, but practically all of these big corporations have been driven into bankruptcy or out of the business. The Standard Cattle Co. was a large cattle-feeding corporation in my home county, at Ames, Nebr., 25 years ago. I recall the time when it stall-fed 3,000 steers under one roof in the largest cattle barn in the United States. This company owned thousands of acres of range land in western Nebraska where it grew the cattle, and when brought to maturity they were brought down into the corn belt in my district and finished for market in the company's feeding plant at Ames. This company went out of business 10 or 12 years ago.

This is the common experience of all business corporations that were formed in an early day for the purpose of finishing cattle for the market. Practically the only people engaged in the industry of feeding cattle now are farmers, and it is only through dire necessity of marketing soft corn and using up the roughage on the farm that the average farmer will venture to buy feeding cattle at the cattle markets even for that purpose. I know of a half dozen men in one locality in my district who lost $30,000 on a few cars that each one of them fed for the market two years ago. It often happens that a farmer who ventures into the feeding business on rather a large scale loses his farm on a single season's feeding. In fact, it is the most hazardous business known to our people. The feeder hasn't a chance in the long run to come out even, let alone coming out ahead. As Mr. Burke stated in his testimony before the Bureau of Markets hearings, it is just as safe to gamble on the board of trade as to go into the cattle-feeding business. There is no chance of ultimate success in either.

The Chicago market for live stock practically fixes the market for the whole United States, just exactly as the wheat market at Liverpool practically fixes the price of wheat in every country of the world. Every day as the market for wheat at Liverpool goes up or down the Liverpool price is reflected in the quotations in every wheat market in the world. Therefore, when you examine the facts back of the Chicago market and find that there are only four or five great buyers, who act in perfect accord in buying live stock for all practical purposes, it resolves itself into one company or one man fixing the price of all the live stock in the United States that is marketed at any central market. Of course, local conditions may influence prices slightly, but the general rule prevails that all of the cattle markets of the country take their cue from the Chicago market.

The whole picture of the live-stock industry of the United States is shown very clearly in this large map, which shows the lines of movement of cattle from the range and the farms ultimately merging into the big markets. I have shown how those markets are absolutely controlled by four or five packers. There is practically no one else to sell to when these cattle get to the markets. The packers have no competition whatever. The feeder can either take the price the packers offer him or ship his cattle home. To ship them home would bring him just as much ruin as to let the packer take them at a sacrifice. This is a lamentable condition, and it is resulting in driving out of business thousands of farmers and a constant decrease in the supply of cattle. What the end may be no one can foresee.

THE BUREAU OF MARKETS.

The Department of Agriculture has been empowered by Congress to establish a Bureau of Markets. It has done so, and it has now been in operation some two or three years. The results that it has obtained so far in the matter of securing information on this subject will be far-reaching and beneficial. We are hoping that its investigations will show us a way to improve the conditions now existing. The packers are not so much to blame for what they have done, because they have done no more than any other class of men would have done under similar circumstances. They have one of the most efficient business organizations know. Their economic efficiency is unsurpassed. Their methods of distribution are most excellent. In fact, taking it all in all the packing industry is marvelously efficient and deserves the appreciation of the whole country. But this does not mean that it ought to be permitted to destroy the cattle industry and thereby destroy itself by taking more out of the traffic than it will bear. How to remedy the situation is the question. The Bureau of Markets may show the way, but pending their findings I have a suggestion of my own as to the remedy.

THE REMEDY.

First. I would compel the packing companies to withdraw absolutely from ownership in the stockyards, stockyard banks, cattle loan companies, market papers, and other kindred organizations outside and distinct from the packing business. I would compel the packers to stick strictly to the slaughtering business. The result of that policy would be to set the stockyards free. It would enable other companies and the people generally to set up little plants or big ones around the stockyards, where they would be able to compete with the packers in buying stock that is shipped to the markets. This would broaden the market greatly and would remove the influence of the packers over the commission men, banks, and market papers. It will help the situation, but may not furnish sufficient relief.

Second. I would organize the live-stock feeders and growers for the purpose of marketing their stuff through selling agents. This selling agent could be installed at the markets wherever there are packing industries located for the purpose of selling the finished product of the feeders to those who desire to contract for it.

Third. I would have the Government establish grades for cattle, just as it is now establishing grades for cotton and grain.

When these three things are done the following results will come to pass all to the interest of the grower, producer, and the consumer. It will enable beef producers to sell their cattle through the agent of their association at the central market to the packers or anyone else who wishes to buy them before the cattle are ever shipped out of the feed yards on the farm. The greatest disaster that can befall the producer is in shipping his cattle by the tens of thousands to central markets, where he must take the price that is offered him, and take it mighty quick, too, because every minute is piling up expense. The cattle are there and must be sold. But if these cattle were in the feed yards on the farm the agent representing the owner of them would have an opportunity to dicker with the packer or buyer as to the price, and if the packer or buyer would not pay a price that would enable the owner to make a profit on them he would continue to feed them for a few weeks more while the packer was coming to time. But as long as he fires his cattle pell-mell into the central market, without any regard to what he is going to get for them, just so long will he be on the verge of bankruptcy. These cattle can not be sold in the central market without first being sent there unless the Government can establish grades by which they can be sold, and the Government is the only medium through which such grades can be established. If these three things can be done by the enactment of required legislation, I believe that the tendency of the cattle supply will be turned the other way and made to keep pace with the growth of our population.

Some of the live-stock men who have suffered greatly from lower price levels each time an effort is made to correct the abuses of the packing industry through an investigation or prosecution feel that these suggested remedies are too drastic and revolutionary; that such steps would invite opposition from the whole stock-market crowd, including the commission men, who are their friends, and so forth. They are undoubtedly correct as to the suggestions being revolutionary, but the case requires drastic action if a cure is to be effected. If anyone thinks this job of taking the market out of the hands of the packers is going to be a sort of a pink-tea affair, he had better go to the rear with the women and children. It is going to be a real contest. Soft soap and molasses are not going to capture these markets. May get flies that way; but packers are not flies. I would be sorry to have the commission men get hurt in this fight; but while they are our friends, we must remember they are still nestling in the arms of the packers, who control the markets. We might include in our program a rescue party for the commission men before the big fight gets under way. Until the markets are free and live stock is sold by grade before it leaves the farm, there can be little hope for the live-stock industry or those who engage in it.

The American National Live Stock Association make some suggestions which these very practical men believe, if carried into effect, will go a long way toward relieving the present difficult situation, and suggest the following definite remedies:

(1) A more even distribution of receipts on five days of the week. This would prevent delays at terminals and enable the business to be transacted at less expense.

(2) A weekly publication by the Government of data as to the meat supply on hand.

(3) The establishment of public abattoirs in connection with public stockyards.

(4) Slaughterers to relinquish, so far as possible, their interest in and control of stockyards and other instrumentalities involved in the marketing of live stock.

(5) Commission houses not to serve as both seller and buyer of the same stock, and to sell direct to country purchasers.

(6) Federal and State supervision of the methods and practices at the central markets.

(7) A greater cooperation toward the end of securing unrestricted competition.

ANTITRUST PROSECUTIONS INEFFECTIVE.

Legal prosecution of the packers under the antitrust laws, in my judgment, would be of no avail save to waste a lot of money and harass both the packers and the producers. The solution appears to me to be along the lines of complete organization of the producers of live stock so the producers can control the sale of their own stuff. It will then be a case of diamond cutting diamond when two perfect organizations meet, where the packers will be entitled to all they get. But now the way the packers ravage the producers is like taking candy from babies. The courts have tried to help the producers, but each boost has been a kick. The courts are unwieldy and can not adjust business relations effectively. The prosecution and dissolution of the Standard Oil and Tobacco Trusts are examples of the incompetency of the courts to deal with the trouble. The Bureau of Markets should devise ways and means of leading the producers to cooperate so as to eliminate waste and control the sale of their products. The general welfare of the people as a whole demands that this problem be solved, and I have faith in the ability of the Bureau of Markets to bring about the desired results. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. STEPHENS of Nebraska. I ask unanimous consent to extend my remarks, and to include a statement made by the American National Live Stock Association in regard to this industry.

The CHAIRMAN (Mr. MONTAGUE). Is there objection to the request of the gentleman from Nebraska?

There was no objection.

Mr. HAUGEN. I yield 10 minutes to the gentleman from Nebraska [Mr. REAVIS].

Mr. REAVIS. Mr. Chairman, I had not intended to participate in the general debate on this bill, but had desired to offer certain observations regarding specific sections when they were reached. The splendid and luminous address regarding the live-stock industry just delivered by the gentleman from Nebraska [Mr. STEPHENS] has created a desire on my part to supplement his argument, and I therefore ask permission to speak a few minutes at this time.

I am not unmindful of the fact that the Underwood tariff law has opened our markets to the cattle of the world and that the American farmer is to-day competing with Canada, South America, Australia, and Mexico. That such competition has not been more ruinous than it has may be attributed to the European war and the consequent fact that most of Europe is consuming and not producing meat animals.

When the great nations of Europe shall cease writhing in blood and return to normal conditions we may expect under existing tariff laws South America, Canada, Australia, and eventually Mexico to again ship their products to the American market in free and open competition with American products. The disaster that will follow such a condition is too apparent to require comment.

I have no desire, however, to discuss the political aspect of the cattle industry at this time. I prefer to offer some purely domestic causes which contribute to the somewhat anomalous condition of the cattle feeder, suffering great losses in his business, while receiving high prices for his product. I have listened with great impatience to statements which pretend to disclose the great riches being accumulated by the farmer. I wish it were true. The great difficulty suffered by those who bewail the high cost of farm and food products, and because thereof assert that the farmers of the West are reaping more than their share of the financial harvest, is that they know nothing of which they speak.

We are prosperous, I am glad to tell you, but for every dollar we have received we have paid out 100 cents of labor. Every dollar you have paid us, somewhat grudgingly and resentfully it would seem if we believe what we hear, has been paid for those things which sustain and make life happier. There are no human tears on our money; nor is the stain of blood upon the wealth of the West.

We are prosperous, I am glad to say, but we could be more prosperous and sell our products for less money to the ultimate consumer if some modern method of marketing our product were devised and if legislation could be enacted that would prevent the four great packing concerns from further exploiting both the producer and the ultimate consumer.

I have had some experience in the cattle business, and therefore know something regarding it. I know that the present method of marketing cattle is in the interest of the four great packing firms and the numerous middle men who handle the product between the farmer and the consumer. Let me give you an incident illustrating this fact.

Two years ago I purchased two loads of yearlings on the Kansas City market. They had been raised on a farm in southern Kansas. Their owner had shipped them from Kansas to Kansas City and paid the freight on them. He put them in the stockyards at Kansas City and paid the yardage charges; he employed a commission firm to sell them for him, and paid the commission charges; a commission firm purchased them for me, and I paid its charges; I shipped them to my feed lots in Nebraska, and paid the freight; I shipped them back to Kansas City as fat cattle several months later, and paid the freight; I put them in the stockyards, and paid the yardage charges; I placed them in the hands of a commission company for sale, and paid the commission charges; the buyer for Armour, who was, of course, paid a salary for such service, purchased them for his employer; Armour butchered and dressed the cattle and sold them at a profit; they were shipped as dressed beef back to my home city, and the freight back to Nebraska was paid; the market at my home sold some of the steak to me at a profit. Thirteen middlemen made a profit out of my beefsteak between the producer and the ultimate consumer.

One can not imagine a more antiquated method of marketing a product than is disclosed by the foregoing illustration.

Mr. FESS. Mr. Chairman, will the gentleman yield?

Mr. REAVIS. Yes.

Mr. FESS. And the gentleman omitted the item that when he had the cattle he fed them corn that was raised on a farm that would sell for $150 an acre.

Mr. REAVIS. Yes; I did omit that item, but I did it because no profit accrued to the owner of the farm; the profit went to the packers, railroads, and middlemen.

Permit me to offer another incident that came under my immediate observation. A farmer in Richardson County, Nebr., had a carload of good-quality shorthorn calves. He drove them 11 miles to a railroad town and shipped them to South Omaha to sell. He paid the freight to South Omaha; he put them in the stockyards and paid the yardage charges; he employed a commission firm to sell them, and paid the commission charges; another commission firm purchased them for a customer, and earned and received its charges; the purchaser shipped the calves to his home and paid the freight; and when the transaction was entirely complete it was found that the two farmers lived within a quarter of a mile of one another, and that the exchange could have been effected by driving the calves across a country road, and the profits of five middlemen could have been saved.

The live-stock market of North and South America is controlled by four firms. Never a bid upon cattle can be obtained in South Omaha, St. Joseph, Kansas City, St. Louis, Sioux City, or Fort Worth until the representatives of these four packers in Chicago wire instructions. There is practically no local market any more. The farmers of the West are compelled to sell to these packers, because there is no other purchaser for their product.

Shameful manipulation of prices has been the inevitable result. I have known fat cattle to drop a dollar a hundredweight overnight.

The result has been severe loss to the cattle feeder, discouragement, fear, and sometimes utter ruin. I have known farmers who have toiled from the first flush of dawn until dark all through the blistering heat of the summer raising their crop. I have known them to wade in the snow and mud of their feed lots all through the winter feeding their crop to cattle and hogs and then sell them at the price arbitrarily fixed by the Packers' Trust, only to find the result of their year's labor absorbed by packers and middlemen and themselves still in debt to their local banker who had been carrying them through the year.

It is easy to anticipate the result of all this. Empty cattle sheds, grassland plowed up and planted to grain, soil fertility reduced, the production of cattle falling off 12 per cent from 1900 to 1916, while the population was increasing 25 per cent, the ultimate consumer paying vastly more for his food, the farmer making either a loss or a greatly reduced profit, the four packers declaring dividends and resisting investigation.

This bill provides for a bureau of markets. Let the first duty of that bureau be to investigate the packers and report the facts

to Congress, and then let Congress be courageous enough and patriotic enough to act at once on such facts. I think I know the facts now and am ready to act, but I want the information that vitally and intimately concerns every farmer in the West and every poor man of the East who has hungry mouths to feed made general to the Members of this body that we may act intelligently and justly.

Among other remedies, which I must state briefly, would be cooperation and closer relations among the farmers. Let those who have stock and feeder cattle to sell dispose of them at home through public or private sale. By so doing the many middlemen are eliminated and the producer can sell for less money and receive a larger net profit, and the cattle feeder may put his feeders in the lot at less cost. Another means that would aid is the construction and operation of independent packing concerns. There is one in Cedar Rapids, Iowa, and I have two in my district, one at Nebraska City and another at Lincoln. They are splendidly managed and, I am informed, profitable. I wish that every county in my district had such a plant, and I believe that capital would seek such investment if ample legal protection was insured against the assault and manipulation of the Packers' Trust.

In conclusion permit me to express my firm conviction that if we would change our present method of marketing, if we could bring about closer cooperation among the farmers, if we could have numerous independent packing companies, and if we could have rigid laws, conscientiously enforced against the packers, the producer would make a fair profit out of his toil and investment, and the ultimate consumer would purchase his food products for less than he pays to-day. [Applause.]

Mr. HAUGEN. Mr. Chairman, I yield 30 minutes to the gentleman from Illinois [Mr. KING].

Mr. KING. Mr. Chairman, it is said that the germ of the foot-and-mouth disease is so minute as to be invisible even with the highest powers of the microscope and to be able to pass through the finest porcelain filter without even a suggestion of the difficulty attendant upon the efforts of a rich man to pass through the eye of a needle. It has never been isolated. Its identity has never been established. It dwells in the ultramicroscopic world in the incognito of its minuteness. And yet this unknown organism—this "causative agent," as named by Dr. Mohler—in its destructive journeyings in the years 1914 and 1915 nearly caused a riot and the shedding of blood in the State of Illinois.

Never before has a large law-abiding community been brought under the control and domination of that style of government known in foreign lands as a bureaucracy. True, it may have been frequently under the benign influence of bulletins, but never had they witnessed before the suspension of all local laws of self-government, the right to appeal to their courts abridged, and the invasion of their homes by the armed stranger of a government far removed and inaccessible.

This is one of the first illustrations of how the people are gradually losing their self-government, so dearly contended for by the forefathers, by transferring their rights and liberties to commissions and bureaus, to whom, in their wisdom, the Constitution and laws of the United States are but scraps of paper when they are sought to be invoked against their rules, regulations, and interpretations.

Secretary Houston says that the foot-and-mouth disease was introduced from a foreign country. Whether it was brought to this country in a hypodermic syringe for the purpose of interfering with the meat supply; or by Belgian refugees working in the peppermint marshes of Michigan; or carried in the pack of a Russian emigrant from Vilna; or imported from Japan in japonica, or in buffalo hides from Hankow, China, or cowhides from South America into a tannery and tracked from thence to a pigpen by suspected employees of a near-by tannery in a nocturnal quest for chicken; or whether it may have arrived in a shipment of Argentine corn; or whether the act of a farmer in ordering a pair of German-made gloves of the mail-order house of Montgomery, Ward & Co., and carelessly throwing the wrapper of the same into the hog lot—either of which causes might be sufficient to cause some biased person to intimate that its introduction was the direct result of the Underwood tariff law—nevertheless it is a fact that the "causative agent" of the disease and the disease itself appeared the first week of August, 1914, on the farm of Willard E. Hoadley, living about 2 miles west of Niles, Mich., and it is with this that we have to do.

HOW IT SPREAD.

It spread from Hoadley's pigs to his cows; from his place to Mr. Unruh's, a mile distant, carried, perhaps, by pigeons; and in order to make it certain Mr. Unruh took occasion to go over to Mr. Hoadley's, and carted it back on his boots. Dr. Graham treated Hoadley's cows on August 23, 1914, and pronounced it stomatitis, and Dr. Clemo treated Unruh's cows, but did not know what was the matter with them. Mr. Unruh drove his cattle up and down the road to pasture for about two weeks, thereby giving the germ a first-class opportunity to escape and scatter which it, no doubt, took advantage of, and did not hesitate to attach itself to every foot and every vehicle passing that way, and from whence it might reach more distant parts of the vicinity. On the third visit Dr. Clemo found a big red cow stiff and sore and hardly able to move, with a moist condition between her digits, and he, seemingly to add to the preliminary scattering process, backed her out of the barn and walked her all around the yard, because, as he said, the more she walked the better she got, on all her steps meanwhile giving off a million or so of the destructive agents. In order to render further preliminary assistance to the "causative agent" to escape, citizen Hoadley killed one of his cows and found the meat infected. And then came Dr. Dunphy, the Michigan State veterinarian, and Dr. Fess, of the United States Bureau of Animal Industry, who bears the honor of having been made a martyred goat for the bureau by reason of his failure to promptly diagnose the disease—and who, by the way, is no connection of the distinguished Member of this House of that name—and all together they visit the various farms in the community, none of them knowing what they were about or what the disease was, although told by an old German, who had seen it in Germany, that it was the foot-and-mouth disease, while Dr. Fess persisted in calling it lip-and-leg ulceration, and thus further scattering and disseminating the disease. And all this occurred in the latter part of August, 1914, the disease up to that time having been prevalent near Niles for nearly three weeks, with no attempt to place a quarantine. Mr. Doster's cattle, across the road from Mr. Unruh, then took the disease. And thereupon the four creameries in that locality began their efforts in the dissemination of the disease by buying milk from infected herds and after separating it returning the skimmed milk back to the farmer to be fed to the pigs, and in this way aided in spreading the disease to the farm of Mr. Tichnor and others.

If Dr. Fess had known the disease, or had Dr. Dunphy not had an automobile accident at about this time which laid him up for several weeks, the history of the outbreak in 1914 might have been considerably shorter. And then Mr. Ballard, another farmer, added his mite in spreading the disease by delivering milk from infected herds to the dining cars on the Michigan Central Railroad; and so this festering place continued from the first week in August to the 15th day of October—more than two months—to waft to the four winds of heaven its vicious bacilli before a quarantine was established.

But before this day, to wit, on October 5, 1914, the foot-and-mouth excursion for Chicago started on its journey. Big Four car 84185, loaded down with "causative agents," and carrying 60 hogs, 6 cattle, and 3 calves, 14 of which were suspected of foot-and-mouth infection, made its trip over the Michigan Central Railway from Niles to the Union Stock Yards at Chicago, followed on October 8, 1914, by a St. Louis & San Francisco car, No. 46900, and carrying 54 sheep, 28 hogs, and 3 cattle, among which were 6 suspected hogs from near the Buchanan Creamery, near Niles, and 5 suspected hogs from an adjoining farm.

It would seem that the disease in its flight moved by instinct; that once in the Chicago Stock Yards and past the eye of the inspector its subtle ramifications from there could not be easily arrested.

At about the time of the arrival of these hogs in the stockyards there was a purchase made of some hogs by the Chicago Serum Co., a concern engaged in making hog-cholera serum, and whose plant adjoined that of the Western Packing Co., which were afterwards killed and their blood used in making hog-cholera serum. Dr. Brown, an employee of this concern, discovered while these hogs were on the shackling hooks being bled that one of them had very sore feet. Nothing was said by the Government inspectors. It was the causative agent of the foot-and-mouth disease. Suffice it to say that it was included in the hog-cholera serum manufactured by this concern and carefully preserved for a new and destructive excursion to be made in 1915, as it evidently seemed desirous to make sure of the destruction of any ruminant or swine which might escape its ravages in 1914, and all of which furnishes a basis for another chapter.

This germ safely lodged in the Union Stock Yards of Chicago after its trip from Niles persistently escaped the work of the inspectors, inasmuch as it is a known fact that these inspectors never go into the pens to examine the feet of animals. In fact, these inspectors have been known to swear that there was no foot-and-mouth disease in these stockyards during the month of

October, 1914, and this in the face of these shipments of animals from Niles.

They simply were being paid for something they pretended to but did not know. Dr. Tiedebohl, then a State inspector, and interested in the Chicago Serum Co., did not see any foot-and-mouth disease in the stockyards in that month of October, although, as a matter of fact, he had been to Niles, Mich., on October 19 and had seen it there, and furthermore had had an intimation in the words sent out by Dr. Houck from Niles notifying all stock owners. He detected none from Niles, and he did not see the sore pig feet that went into his serum factory, but he says he found a case in the dairy-show herd then exhibiting in Chicago within the stockyards' inclosure.

These stockyards then became the center for the general distribution of the foot-and-mouth disease in the United States from the time when Big Four car No. 84185 arrived in the stockyards from Niles, Mich., laden with the foot-and-mouth disease some time before the 15th of October, 1914, until the quarantine was there established. The causative agent held high carnival there while sending out his various excursions.

As late as the 2d or 3d of November, while the cattle were "smacking" in their pens, the stockyards were open to the public, who were coming and going, and furnishing numerous methods of exit for the disease.

From October 15, 1914, to November 1, 1914, 450 carloads of cattle were shipped out of the Chicago Stock Yards. These cattle were feeders purchased by cattlemen in the stockyards and shipped to their homes, most of them developing the disease on arriving at their destinations. Shipments of foot-and-mouth laden cattle during this period, and even after the prize dairy cattle exhibiting then within the stockyards, had been held up "for observation," being suspected of having the disease, on October 27 went out to Ohio, Pennsylvania, Illinois, and Montana.

Mr. Clarence Tanner came into Chicago from his farm at Sugar Grove, Ill., and bought 20 head of feeders on October 28 at the stockyards. These yards, knowing that they had the foot-and-mouth disease at this time, disinfected a car and shipped them to him on the 30th over the Chicago, Burlington & Quincy Railroad. He received his cattle on his farm on the 31st of October, and in 10 days his cattle were alive with the disease. He was not warned, and knew nothing of it. To assist in disseminating the disease, a crowd of inspectors drove an automobile into his cattle yard among the herd. They carefully disinfected themselves, but rode away with a million germs on their auto tires, scattering them broadcast at the rate of 40 miles an hour.

Mr. CHIPERFIELD. Mr. Chairman, will the gentleman yield?

Mr. KING. Yes.

Mr. CHIPERFIELD. Is it not a fact that in the section of the country where the gentleman and I both reside inspectors not only left farms infected with this disease without fumigating or disinfecting themselves, but traveled to farms, infected as they were, went into barnyards and infected them, and in every way in their power, as the gentleman has stated, sought to further disseminate the disease? Does the gentleman treat of that?

Mr. KING. I do; and what the gentleman has stated is the absolute fact.

Mr. CHIPERFIELD. May I ask a further question?

Mr. KING. Yes.

Mr. CHIPERFIELD. Is it not true that when the farmers protested that they were spreading the disease, and that if they did not discontinue it it would be impossible and useless to continue the quarantine; that these same inspectors brutally and vigorously told these farmers who were protesting against the germs being brought on their farms that they would take them to prison, that they would arrest them and prosecute them even for making a protest even against the august individuals who came to their farms?

Mr. KING. That is the absolute fact, and if I have the time I intend to touch upon that.

Mr. SLOAN. Mr. Chairman, will the gentleman yield?

Mr. KING. Yes.

Mr. SLOAN. Who were these offending inspectors? Were they inspectors from the Federal Government or from the imperial State of Illinois?

Mr. KING. Some of each; and there were also some that did not belong to either class.

Mr. CHIPERFIELD. I would like to suggest that while ours are bad, the Federal inspectors are infinitely worse.

Mr. KING. That is also the truth.

Mr. SMITH of Michigan. Mr. Chairman, will the gentleman yield?

Mr. KING. I prefer not to yield at this time.

Mr. SLOAN. Oh, I think Michigan ought to be defended.

Mr. KING. I will ask the gentleman to withhold until I have concluded.

Mr. FESS. Mr. Chairman, will the gentleman yield?

Mr. KING. Oh, I ought to say that this man is no relation of the distinguished gentleman from Ohio.

Mr. FESS. I was just wanting to know who he is.

Mr. COX. Mr. Chairman, will the gentleman yield for a question?

Mr. KING. Yes.

Mr. COX. Have any of these inefficient inspectors been dismissed, or are they still in the employ of the Government?

Mr. KING. I think that Dr. Fess, as I said, was made the goat and was dismissed, and I think the man who inspected the hog-cholera serum in the stockyards and failed to find the presence of the foot-and-mouth disease was also dismissed.

Mr. COX. Only two of them?

Mr. KING. That is all I know of.

Mr. Daberman, of Kanesville, near Aurora, on October 27, was permitted to purchase a carload of cattle in these same stockyards all decorated with the same germ. The disease appeared in a short space of time, and many persons were allowed to pass through and visit the herds, thus permitting a further sowing of the ominous bug.

And then, on October 27, Mr. Ray Bastian, at Big Rock, was permitted, after infection of the car, to ship a carload of diseased cattle to his farm, and, apparently having a special grudge at Big Rock, Mr. William Myers was also given a carload of disease to disseminate through that part of Illinois in conjunction with those of Mr. Bastian.

Another carload of cattle with the disease reached Rock County, Wis., on November 4, 1914.

It has been charged, and is undenied, that 9,000 head of cattle, more or less, infected with the foot-and-mouth disease were shipped in open cars from Peoria, Ill., to Chicago on or about November 9, 1914, and sold to the Nelson Morris Packing Co., who killed them, or at least a large part of them, and in the shape of dressed beef sold some to the consumer in the regular course of business, and this was done when the good Dr. Melvin says:

> That the infection exists in the blood of diseased animals, and if the same are killed and shipped it would become a serious danger, as the foot-and-mouth disease frequently attacks the human being.

And so through the instrumentality of the pigeons, the birds, the shortsightedness of the people, the auto tires, the inspectors, the creameries, and the stockyards, aided by the ignorance or perhaps inexperience on the part of those whose duty it was to know better, the disease passed from animal to animal, from yard to yard, from farm to farm, from county to county, from State to State, like a conflagration before a breeze, it enveloped in hopeless despair the live-stock industry in nearly all the great States of the Middle West.

IN ITS WAKE.

This illusive germ in its ravages attacks most easily cattle, sheep, and goats. Horses, dogs, cats, and even poultry may occasionally become infected with the disease. It strikes the animal with a chill, followed by fever. Temperature rises as high as 106° F. Blisters appear upon the mucous membranes of the mouth. Lesions appear upon the feet, at the coronet, and between the digits. The udder blisters. Appetite disappears. Cohesive ropy saliva hangs from the mouth, while the animal opens and shuts it with a smacking sound. The feet being sore, the animal lies down a good deal and develops bedsores. In case the disease attacks the internal organs before it appears externally paralysis may quickly ensue or paralysis of the throat may cause the creature to choke to death. Ten to twenty days in mild cases to three months in malignant cases is required for the disappearance of the disease. While the mortality is low, ranging from 3 per cent in mild cases to 30 or 40 per cent in malignant cases, the other sources of loss are great. There is a great loss of flesh and a lessening or cessation of milk secretions. Abscesses form in the udder, rendering the cow valueless for milk production. The inflammation of the feet may cause the horn to drop from the toes, producing great lameness and lasting injury. I am, of course, taking my information from various publications of the United States Bureau of Animal Industry.

With the appearance of the disease the quiet farm becomes the center of excitement. Strangers appear with rubber caps and boots and with their pans and their formalin. The trenches, only a few degrees less horrible than those in Europe, 7 feet wide, 7 feet deep, allowing space 2 feet wide for adult cattle, and leaving room between for the hogs and sheep, are dug, and into the same go the "dumb, driven cattle," accompanied by their

smaller friends. The Texas ranger and his rifle puts a rapid end to each—millions of dollars of animal life goes out and, with the slashing of the skins covered with unslaked lime, disappears.

In its wake not only follows havoc to the live-stock industry, but the derangement of the economic life of the community caused by its appearance is most demoralizing. No one who has not seen the effect of a quarantine against this disease on the business life of the locality in which it is established can for a moment realize the enormous upturning of its business and the stagnation of its industry. It presents a striking example of the importance of the farmer and stock raiser to the Nation. He is a real producer of wealth. Stop the raising and shipping of live stock for 30 days and you have started such a change in the economic condition of the people which is only resembled in the physical world by a landscape below and under which has just rolled the destructive tremors of the earthquake.

You might just as well take from the stock-raising community its money as to deprive it of the use of its cattle and its swine, which are among the largest producers of money in the country. The establishment of a quarantine in a county not only affects the owner of the diseased stock but also the owner of all healthy stock in such county. I have seen healthy hogs and cattle held at a railroad station for 30 days which were ready for shipment, during which time they had to be fed and while the price on the market went steadily down, to the great loss of the owner. The merchant in the locality is unable to get his due until the shipper has disposed of his stock, and, therefore, is unable to meet his own obligations. The county banker who has advanced the money for the shipper to enable him to feed his cattle, and to farmers who have hogs for sale but are unable to move them, finds himself, when shipments are not allowed, with thousands of dollars due him from the men who expected to dispose of their stock; and hence the money is not returned to the banker to be again used by the fellow who wants to husk and move his corn. It raises a serious condition in the banks of the country, and necessarily affects the entire community. Not only does such a quarantine interefere with the movement of live stock, but also with such commodities as hay, straw, hides, and farm products. The whole business of marketing, transporting, feeding, and slaughtering is interrupted and deranged, and losses of this character reach enormous proportions.

THE COST.

The total number of herds slaughtered in the United States since the outbreak began to the date of the committee's report accompanying the Agricultural bill (H. R. 12717), dated March 4, 1916, is 3,479, containing 172,593 animals, of which 76,497 were cattle, 86,443 swine, 9,511 sheep, 133 goats, and 9 deer. The department's share of the appraisal of these animals, on a 50 per cent basis, was $2,897,442.06, while the 50 per cent of the appraised value of the property destroyed was $75,497.98, and 50 per cent of the cost of burial and disinfection was $348,770.62, making a total of $4,444,241. Now, add an equal amount which the States are paying as their 50 per cent of the loss, and we have a grand total of $8,888,482; and adding to this an equal amount, as estimated by Dr. O. E. Dyson, State veterinarian of Illinois, for losses sustained by live-stock owners occasioned by quarantine regulations, and we have the grand, staggering total of $17,776,984.

And, Mr. Chairman, the first outbreak of the foot-and-mouth disease in 1914 cost the State of Illinois alone the sum of $1,404,287.62. The second outbreak caused by the foot-and-mouth germ being present in hog-cholera serum introduced at the Chicago stock yards by the failure of the Government inspectors to notice the pink sore feet of the pigs shipped from Niles, Mich., cost the State of Illinois the sum of $298,436.84, making a total to date to the State of Illinois of $1,569,296.15, the details of which loss is shown by a statement prepared by the Hon. Clayton C. Pervier, a very able State senator of Illinois, which statement I am now reading from and concerning which I will ask the unanimous consent of the House to extend the same in the RECORD as a part of my remarks.

The total cost of the foot-and-mouth disease in the fifteenth congressional district which I have the honor to represent was $170,781.01, a more detailed statement of which I will ask the unanimous consent of the House to extend in the RECORD as a part of my remarks.

Mr. Chairman, it is conceded by all authorities that the broadcast dissemination of the foot-and-mouth disease in the year 1914, and particularly in the State of Illinois, was due to the Union Stock Yards of Chicago. The governor of the State of Illinois in a letter addressed to all the Illinois Representatives in Congress, dated March 31, 1915, so states. Dr. O. E. Dyson, State veterinarian of Illinois, in his sworn statement before Senator KENYON'S subcommittee investigating the epidemic in Chicago, in December, 1915, says that if these yards had been quarantined at the time they began to disinfect the cars in October, 1914, and no shipments had been permitted, Illinois would have been saved the outbreak of that disease within her borders in that year. Dr. A. D. Melvin, Chief of the United States Bureau of Animal Industry, and his able assistant, Dr. John R. Mohler, issued a joint bulletin, which was presented before the eighteenth annual meeting of the United States Live Stock Sanitary Association at Chicago on February 16, 1915, in which they say:

> From this point (Union Stock Yards, Chicago) infection was carried by various shipments of live stock, especially the class of cattle known as stockers and feeders from the Chicago stock yards to various parts of the country—North, East, South, and West.

The foot-and-mouth disease was in the Union Stock Yards at Chicago as early as October 15, 1914. No quarantine was established there until November 1, 1914. During this period, from October 15 to November 1, 1914, 450 cars of cattle were shipped out from this distributing center, out of which developed 69 cases of the disease and was the means of scattering the disease in the States, which I have before mentioned, and into 37 counties in Illinois and on 765 farms, representing about 784 owners in that State.

The Government is engaged through various bureaus in preaching "efficiency" to the people. It wants "efficiency" in poultry raising, "efficiency" in the care of the baby, "efficiency" in the keeping of books by the country merchant, and for years it has dinged into the ears of the stockmen and farmers "efficiency" in the care of stock, so that very naturally they are earnestly inquiring to-day where was the boasted "efficiency" on the part of the Government inspectors in the stockyards in Chicago for the long period of two weeks in the latter half of October, 1915, when they failed to discover the foot-and-mouth disease, under their very noses—hogs dressed and in the shackling hooks with sore, pink feet; hogs limping about the yards; cattle so infected that 500 of them were "smacking" in the pens before the quarantine was established, with no effort made to go into the pens to examine the feet of the animals, and the disease, according to the statement of one witness, so apparent at that time that a "regular duffer" could have discovered it. Is it any wonder that the farmers and stock raisers are astounded at the course of their paid teachers of "efficiency"? Has this insistency in preaching efficiency simply turned out to be just another case of the doctor refusing his own medicine, the tailor wearing "hand-me-down" clothes, the bar tender refusing his own whisky, the barber neglecting the benefits of his own hair restorer? No wonder the spell is breaking and their eyes are opening to the fact that instead of perfection teaching the deficient it may possibly be a case of the inefficient leading the efficient.

The Government as early as September 2, 1914, sent one of its efficient assistant inspectors from Detroit, a Dr. Fess, to the vicinity of Niles, Mich., where the foot-and-mouth disease had prevailed in a most pronounced form from the early part of August, who after a most efficient examination pronounced the malady not foot-and-mouth disease but stomatitis and lip and leg ulceration, and which diagnosis was during all the months of August and September in that year considered correct, for which efficiency the people of this country have paid, as I have before said, nearly $18,000,000, and thereby proven again the worth of Pope's advice when he said:

> A little learning is a dangerous thing;
> Drink deep, or taste not the Pierian spring:
> Their shallow draughts intoxicate the brain,
> And drinking largely sobers us again.

[Applause.]

Eliminating for the moment the fact that Dr. Fess did not quaff the invigorating waters of Pieria on the subject of this particular ailment of ruminants and swine, and admitting the Government's right to excuse this fearful neglect from early August to the middle of October, by the simple means of turning Dr. Fess himself into that popular ruminant known as "the goat," what shall we say in expiation of the greater crime against the live-stock interests of the country permitted by the Department of Agriculture when it failed to act at once and efficiently in checking the spread of the plague when it was finally and positively identified as the foot-and-mouth disease at Niles on or about October 15, 1914?

Instead of saying "Whither goest thou?" it said "Whither come ye?" Its origin became important but its future was neglected. The question whether it was brought from Japan or Argentina or rode here on the boots of a Russian peasant became the predominant factor for examination and its possible excursion from Niles to the Chicago Stock Yards seemed to be of minor consideration.

On the 15th of October Mr. Neal, the chief inspector of the United States Bureau of Animal Industry at Chicago, was in-

formed that the foot-and-mouth disease had broken out at Niles, Mich., and Dr. Bennett, of the same bureau, was about this time on his way to Niles and stated that from the information he had on hand the foot-and-mouth disease existed at Niles.

As one witness puts it, they began "treating the disease at the spigot rather than at the bunghole"—by refusing to take note of the point of infection and dissemination—the Chicago Stock Yards. As I have pointed out before, the disease proceeded directly from Niles to these stockyards. Even then it could have been checked by quarantining these yards. Numerous loads of swine with this disease came from the Niles locality to these stockyards, and yet no effort was made to quarantine these yards from October 15 to November 1, 1914.

That the inspectors in the Chicago yards well knew that the disease was in those yards is firmly proven by the fact that in shipping out stockers and feeders during that period from October 15 to November 1, 1914, they were disinfecting the cars in which shipments were made, and Dr. Bennett had ordered shavings with liquid disinfectants put on them placed in the passageways of the dairy show prior to the date of its opening about October 21, 1914, and prior to the date this herd became infected from the yards. If there was no disease in the herds, why this precaution? The truth is the department must have known by its trace of shipments, which should have been made, if they were not, from Niles, that the disease was in these yards, yet there was no effort made to close the yards until November 1, and in the meantime inspectors and veterinarians were roaming the farms over in an attempt to check the disease on the farms while it was radiating in all its fury from the stockyards. This is the question the farmers are asking: Why was there no effort made to quarantine the Chicago Stock Yards until November 1, 1914?

THE PACKERS RULE THE LIVE-STOCK WORLD.

And now, Mr. Chairman, let it be understood that my remarks to-day are based upon the sworn testimony of witnesses, of whose veracity no question has been raised, in the hearings before the Committee on Agriculture and Forestry of the United States Senate of the Sixty-third Congress, third session, on Senate bill No. 6689, and before the subcommittee of this committee of the Sixty-fourth Congress pursuant to Senate resolution No. 39. These are no idle statements, but backed by the sworn evidence plainly stated in the printed copies of these hearings which are beside me upon the table so that he who runs may easily read.

Never before has there been a better illustration of helpless people firmly held within the clutch of a great controlling interest than the manner in which the farmer and the stock raiser were gagged, bound, and shackled by the packing interests during the great foot-and-mouth plague of the year 1914. Never before, until this disease serving as a means of illuminating the dark avenues of its devious ways and throwing the spot light upon its questionable methods, has the sinister and powerful control of the farmer's hogs, the farmer's cattle, and the farmer's pocketbook by the baronial packers of Chicago been better illustrated.

And, Mr. Chairman, this power did not accrue in one night. It did not suddenly start like the Johnstown flood but has flowed on and broadened through a generation like a mighty and placid river. An innocent-looking organization, known as the United States Live Stock Sanitary Association, pursues the "even tenor of its way" with an office furnished without cost to it by one of the largest packing firms in Chicago.

One, Ferguson, acts in a sort of a dual capacity. As Dr. Jekyll, he is the "helpful" secretary and treasurer of the association, and as Mr. Hyde, he is the "scientific expert" of the packing concern which so generously furnishes the offices for the association. According to Ferguson, it is a most harmless concern, not exactly religious, of course, but nevertheless benign in putting up "pointers" to "our farmer friends," as he says.

Ferguson says it is a voluntary organization of Federal and State officials and any other persons interested in "live-stock, sanitary-control" work in the United States and Canada. It now includes about 400 of these men—bureau officials, State officials, and private citizens, the Bureau of Animal Industry, such men as Dr. Melvin and Dr. Mohler. Dr. O. E. Dyson, State veterinarian of Illinois, is president. Dr. J. I. Gibson, State veterinarian of Iowa, was the president in 1915, and Dr. S. H. Ward, State veterinarian of Wisconsin, was the president in 1914. The majority of all State veterinarians are members of this helpful association; some transportation and traffic managers of railroads are members. A nominal sum of $1 annual dues is charged each member. All the leading members of the Bureau of Animal Industry are members. The membership has an annual meeting at which "scientific questions" are discussed. Its executive and advisory committees act "when there are any questions of emergency or general interest," but Ferguson does not state the subjects discussed at the meetings of these controlling committees. He did not disclose their names. Mr. Ferguson describes the functions of these committees by saying that—

> when recommendations are under consideration for presentation to the governors of States or to the Secretary of Agriculture at Washington and those matters are considered of such grave interest that the executive committee alone does not care to handle them, then this advisory committee comes in in joint session, and together they thrash out memorials or general resolutions to go before the properly constituted authorities of the country, State and Federal.

In other words, this association lobbies the bureaus and the bureaus lobby Congress.

This association discusses matters with officials, such as the foot-and-mouth disease. Mr. Ferguson promised the subcommittee that he would produce copies of the memorials presented to various officials on the foot-and-mouth disease, but did not do so—at least, they are not in the printed report of the hearings.

Ferguson discussed these matters with the Bureau of Animal Industry personally. What he discussed as Dr. Jekyll is not disclosed in the evidence, but he was a very busy man as Mr. Hyde, "the scientific expert" for the packers. As such he "lined up" different live-stock interests—did live-stock work in connection with his packing house; devoted his time to emergency quarantine; looked after the management of live stock during the foot-and-mouth epidemic. He took up the question of the foot-and-mouth disease directly with the bureau. He also discussed the same with the State veterinarians. He made recommendations to the Bureau of Animal Industry as to their regulations. He succeeded in convincing the bureau that $300 a day which was being paid by the packers for disinfecting cars for free area was a needless expense to the packers and they discontinued it.

The work of Ferguson, as he says, is dual. Now you see it used for his packer and now for his association. He is in close touch with all veterinarians. The position of "scientific expert" was especially created for him. The true situation seems to be that Ferguson is the association and the association is Ferguson and Ferguson is the ego of the packing corpus.

This very weak and bankrupt association, according to Mr. Ferguson, with an income of only $1 per year, reluctantly contributed by 400 members, nevertheless has been the means of placing laws upon the statute books of 23 States of this Union, and all this has been done when it is a notorious fact that $400 would not furnish pocket change for one ordinary lobbyist for a week.

Not only, according to Ferguson, is he in close contact with the Bureau of Animal Industry, but he is also in close contact with the State veterinarians, who, in turn, are in close contact with every veterinarian in his own State. The packers are, of course, in close contact with the packer who employs Mr. Ferguson, and Mr. Ferguson is in close contact with his packer; the high officials of the United States Bureau of Animal Industry, according to Ferguson, are in close contact with Ferguson, as are the State veterinarians, and the Bureau of Animal Industry officers are in close contact with the inspectors in the Union Stockyards and in the field, and the State veterinarian is in close contact with their assistant veterinarians and other veterinarians, and therefore they seem to be all gathered together in the arms of the tender and motherly influence of the United States Live Stock Sanitary Association, which is guarded at all times in its existence by its advisory boards in times of great distress.

The pleasant associations among the membership at its annual banquets, vaudeville entertainments, and cabaret performances are no doubt productive of the highest order of brotherly love amongst the members of the association.

No veterinarian, it is said, comes away from its scientific meeting and cabaret entertainment, called by Ferguson as "a sort of get-together affair," without a greater love for his association as his alma mater and a fading remembrance of the farmer and the stockman and a more exalted view of the downtrodden, submerged, and unfortunate packer. The effect produced by a Gary dinner is but a tantalization compared with the effect produced by one of Ferguson's great cabaret shows.

For some reason, Mr. Chairman, it will be observed that our State veterinarians never reach their exalted positions from the ranks of the faithful and underpaid veterinarians in active practice among the farmers and stockmen of the country and who see from their viewpoint and who have been schooled to believe the raising and not the slaughtering of animals is the noblest work of man; but rather from the Stock Yard University of training, where the historical grandeur of the ancient and honorable packing business is taught as a superior study and the baronial

right of purchasing packer is instilled in the minds of the student as one more important and necessary to be sustained at all times than that of any alleged claim to justice on the part of that great vassalage of producers and sellers known as the farmer and stockman.

The physical prowess of a Sandow is demonstrated by the weights he is able to lift. The power of the Union Stock Yards' interests, whether operating directly or through the gentle medium of the United States Live Stock Sanitary Association, is measured by what it has done and is able to do.

It is apparent from the evidence at hand that whenever the discussions of scientific subjects and the giving of entertainments were not only to awake in the breast of the veterinarian a sufficient love for the packing interests a species of chastisement is administered in the threat to deprive him of his license. There is sufficient evidence in the hearings to at least raise the presumption in the minds of an ordinary man that this method of punishment is actually used in unruly cases. You can imagine, Mr. Chairman, the commotion which might be created among the lawyers or the doctors if some one was able to say to them, "If you do not do so and so, I will have your license revoked." If through moral suasion or otherwise, hard working and underpaid veterinarians can be lashed into worshiping the packers' point of view of the live-stock business, how then can he be expected to give to the producers and the shippers a fair and impartial trial?

Should any veterinarian become contrary and render a decision in a given case opposite to that held by the associated powers joined in friendly union by a membership in the United States Live Stock Sanitary Association, woe unto him! Let him dare say, "It is not," when he should have said as instructed, "It is," and he may begin to look for his immediate execution. This plan has a tendency to promote a quiet harmony of the Carranza type, when he said, "If they do not agree with us we will execute them."

This method of control is well illustrated in the case of Dr. A. M. Henderson, a veterinarian of good standing in Aurora, Ill. He, like Thomas, doubted. He questioned the diagnosis of the Federal authorities in the case of a herd at the Girls' Home at Geneva, Ill., which they had pronounced foot-and-mouth disease. His disagreement was in the nature of "lese majesty," and so interpreted in the light of what happened afterwards. After the quarantine was lifted, he examined a carload of hogs shipped from Hinckley, Ill., to Chicago. He gave a certificate that they were all right, but when they reached Chicago, he received a wire stating that they would not be received. The hogs were shipped back to Hinckley and examined by another veterinarian and reshipped to Chicago and accepted. Dr. Henderson learned, so he states, that Dr. Bennett, in charge of the United States Bureau of Animal Industry at Chicago, had given orders that no shipments which Dr. Henderson certified to were to be accepted. He had sinned. Later Dr. Henderson was the defendant in numerous and vexatious lawsuits brought by farmers who had shipped stock under his certificate, but had the same refused, and who had been damaged by shrinkage and a fall in the market prices.

After the quarantine was established it was rigid, but not so rigid as to exclude Nelson Morris & Co., one of the associated interests, from shipping in open cars from Peoria a vast herd of cattle estimated at from 2,000 to 9,000, 900 of which were suffering from foot-and-mouth disease, and from killing them and selling them for meat, thus endangering not only the territory through which they passed but man as well. No farmer or stock raiser outside of the stockyard interests could have accomplished such a feat.

Again, enters the element known as "hog-cholera serum factories," which are located, most of them at least, near the stockyards, and which buy their hogs from those yards which are shipped in from all over the country instead of being carefully raised for such a delicate purpose under sanitary conditions.

Whether or not these manufacturers of serum hold any interests in the community enterprise, I could not ascertain, but it is clearly established by the sworn testimony of reliable witnesses that Dr. Bennett, who was the United States Bureau of Animal Industry representative at the time that the quarantine was established in the stockyards against the foot-and-mouth disease in 1914, was financially interested in a serum factory known as the United States Serum Co., at Woodruff, Wis., and with him was interested Mr. A. G. Leonard, president of the Union Stock Yards & Transfer Co., and ten to one a member of the United States Live Stock Sanitary Association, and perchance a member of its executive board. Dr. T. C. Tiedebohl, who is sometimes in the employ of the stockyards and sometimes in the employ of the State, was, with Mr. Leonard, interested in the Chicago Serum Co. And while all this was so existing Mr. Peters, the manager of the Chicago Serum Co., had a pamphlet printed which he was going to send out to the farmers saying that his company would not use any more serum from the Chicago Stock Yards, but would draw all of it from its Kansas City or Sioux City plants. The Federal inspector, Dr. H. D. Shearin, at this point interposed and held up the distribution of the pamphlet, and would not let it be sent out—why? Because it would in any way injure the farmer or stock raiser? Oh, no; but because the pamphlet would attract undue attention to the fact that the foot-and-mouth germ could be found in hog-cholera serum. He thought it would harm the serum industry, which he seemed to think it was his duty to protect rather than the producers of live stock. He was perfectly willing to let the foot-and-mouth germ go forth on its damaging way in hog-cholera serum just so his friends, Dr. Bennett, his superior, Mr. Leonard, president as aforesaid, and Dr. Tiedebohl, his associate, were not financially hurt, and altogether good friends and jolly good fellow members of the United States National Live Stock Sanitary Association.

Although a quarantine may be established at once and without notice upon any farmer or stockman, yet a special privilege has been exacted by the stockyards' interests and granted by the Bureau of Animal Industry that no quarantine can be placed upon the stockyards except by giving a certain written notice. This was the reason given by the bureau why a quarantine was placed upon the National Dairy Show exhibiting within the stockyards many days before it was placed against the stockyards, which, as a matter of fact, were then and at that time shipping feeders and stockers out into the country and scattering the plague broadcast over the land. The farmers are asking, "Who is it that has such power that they are able to initiate such a special rule pertaining in favor of one class of citizens and not in favor of another?" This is merely a species of favoritism which a bureau can show to its friends, but against which the producers, when it becomes generally known, will rise against in great numbers. Such kinds of favoritism is one of the characteristic fates of the bureaucracies growing up in this country, and concerning which the people, when once aroused, will not tolerate.

If we excuse the Government for not, through its agents, discovering the foot-and-mouth disease in Michigan during its ravages in August, September, and the first half of October, 1914, if we magnanimously forgive it for, through its paid agents at Chicago, permitting it to ravage unbound in the stockyards from October 15 to October 27 and until the hogs were painfully limping in the drives and the cattle were "smacking" in the pens and the railroads delivering the disease north, south, east, and west, how, then, after such indulgence, can it ask that it be shrived of all culpability in its act while locking up the dairy herd on October 27 which had been infected in the yards, of permitting the stockyards for three days beyond October 27 to disseminate the destructive germ? What influence was brought to bear? What arguments were made? What pleas were offered? The producers who lost the stock and the people who paid the bill are demanding to know what powerful influences could induce the Government to so forget its duty. Was Dr. Bennett, in charge, so seared with indifference and so interested in his serum business that promptness was no longer in his curriculum? Was Ferguson there with his everlasting "representations" and "close contact"? Did he call his advisory and executive committee together in this emergency? Was a "scientific discussion" had by his benign association? Were the losses that might accrue to the stockyards by being placed in quarantine vividly rehearsed in his "memorials"? And were the awful losses to the producers and to the people who pay the bill, amounting to nearly $18,000,000, forgotten? The Secretary of Agriculture entirely ignores and passes over these three days in his last report.

Chief Melvin, nor anyone for him, has never explained it. But the Nation still demands to know. Farmers and stockmen are organizing to know. Congress wants to know and will know. Banquo's ghost never arose more frequently nor more persistently than this question as to what sinister or benign influence was used on this occasion.

But, Mr. Chairman, these evidences of the fearful power exercised by this community of interests which are concerned in the killing end, rather than the producing end, of the live-stock industry are merely incidental compared with maintenance during the plague and some time afterwards of what is known as a quarantine area or quarantine alley.

Of all schemes devised for separating a man from his money in a scientific manner without his knowledge, "quarantine alley" takes the highest rank. Robin Hood and Capt. Kidd were good in their line, but their victims usually knew that the job was done and that they had been robbed. The South Sea

Bubble and the Credit Mobilier were thought to be good separators by our ancestors in their day. Poor souls, in inventive life they had never seen the airship and the wireless, and so, in higher business relations, while they may have contemplated and imagined the common trust, they never dreamed of "quarantine alley."

During the epidemic the Union Stock Yards maintained two separate sections in their yards for receiving stock. One was known as the "free section," or alley, and the other as "quarantine section," or alley.

This did not mean that shipments of stock free from the disease upon arriving were placed in "free alley" nor that affected or suspected stock was placed in "quarantine alley." Not at all. It was so arranged that all stock coming from any area of the country not under quarantine went into "free alley" and any stock arriving from any restricted area from which shipments were permitted for immediate slaughter only went into "quarantine alley."

To illustrate, Henry and Knox Counties, in Illinois, adjoin each other on the north and south. A suspected case of foot-and-mouth disease in the extreme southeast corner of Henry County, near the Knox County line, resulted in the whole of Henry County being placed in restricted area, while Knox County remained free. If two animals exactly alike, one from Henry County and one from Knox County, arrive at Chicago at the yards, the one from Henry County went into "quarantine alley" and the one from Knox County into "free alley," but the animal from Henry County, through no fault of his own, is sold for less than the one from Knox County by from 10 to 20 per cent. It will be readily seen, therefore, that the person who fixes the limits of the quarantine has power to reduce the price to the producer of live stock from 10 to 20 per cent within such restricted area. The Henry County animal and the Knox County all reach the same destination—the refrigerator of the packer. One is as good as the other, and, as usual, no reduction is made to the consumer. And now, Mr. Chairman, the larger the restricted area the greater the number of cattle reaching quarantine alley, and the greater the profit to the packer, because the cattle from this section sell, when dressed, for as much as those from "free alley."

In the hearing at Chicago in December, 1915, Mr. Leonard, the president of the Union Stock Yards & Transfer Co., was asked by Senator KENYON:

> If 100 head of cattle were shipped, we will say, from a county of Iowa that was free and not quarantined, and a hundred from a county that was quarantined and that had been inspected and were all right and they came to Chicago and those from the free county went into one place and those from a quarantine county into another place, and those from the quarantine county sold from a dollar to a dollar and a half less than those from a free area, who got the profit?

And Mr. Leonard answered, "I don't know; I did not." But Mr. Leonard knew that the shipper did not get it and he knew that the consumer did not get it, and he was too much of a gentleman to even intimate that any member of the United States Sanitary Association got it. And, Mr. Chairman, as $22,000,000 worth of cattle went into quarantine alley at a reduced price of from 10 to 20 per cent, if we can not guess who got it you can easily figure what the amount was.

It is a very peculiar thing that nearly every person connected with the establishment or the enforcement of quarantines during the foot-and-mouth disease outbreaks of 1914 and 1915 thoroughly believed in the largest possible restrictive areas. None of them believed in less than a county restriction. I would not accuse those charged with the responsibility of fixing and enforcing quarantines of willfully increasing their size unnecessarily merely for the purpose of enlarging the number of animals which crowded quarantine alley to the enormous amount of $22,000,000 worth at a reduction of from 10 to 20 per cent to the packer, but this is exactly what they did, perhaps unconsciously. Perhaps again, unconsciously, of course, the desire instilled by alma mater, the United States Live Stock Sanitary Association, that the packer should outshine in their memories the producer did not smoulder at this time. I hope that Ferguson held no scientific discussions on this subject, nor came in close contact with the administrative officials with his resolutions and his memorials.

ERADICATION.

In a special bulletin issued by the United States Bureau of Animal Industry dated October 25, 1915, three methods of eradication of the foot-and-mouth disease are referred to, to wit:

First. Vaccination.

Second. Quarantine without slaughter.

Third. Quarantine with slaughter of all infected or exposed animals.

As to the first method, the bureau states that no vaccine has been found which is of value or will produce a permanent immunity in foot-and-mouth disease. As a layman, I must, of course, accept the word of this bureau on this subject, and while some claim has been put forth in a serum made by Dr. Leoffler, the discoverer of diphtheria serum, I must take the word of Dr. John R. Mohler, of the United States Bureau of Animal Industry, and one of the greatest authorities on the subject, who stated to me that no serum of value had been effected in foot-and-mouth disease.

As to the second method of eradication, to wit, quarantine without slaughter, the bureau seems to be absolutely opposed, more upon the ground of expense than that of efficacy. They are rather tender upon the subject of the wonderful cure of the magnificent dairy herd exhibited at Chicago in October, 1914, at the time of the belated discovery of the foot-and-mouth disease there by the Government inspectors. This herd, without question, became infected through the introduction of the disease from Michigan, as I have before pointed out. The pens in which we confined the lame and "smacking" cattle in the Union Stock Yards were within about two blocks from the dairy herd which we housed in the stockyards. The disease appeared in the dairy herd October 21, 1914. The first animal of that herd affected was removed at once to the hospital, and on November 2 as many as 30 from the exhibition place were removed to the hospital. Dr. Hughes was placed in charge of the dairy herd. He proceeded to make a general clean-up in the building and stalls. The disease progressed so that on November 8 there were 41 cases; on the 9th, 37 cases; on the 10th, 63 cases; on the 11th, 44 cases; on the 12th, 65 cases; on the 13th, 82 cases; on the 14th, 68 cases; on the 15th, 101 new cases in a single day; on the 16th, 48 cases; on the 17th, 21; on the 18th, 8; on the 19th, 18; on the 20th, 8; on the 21st, 4; on the 22d, no new cases; and on the 24th, 1 new case. That made about 603 animals that had been taken down by that time. The others came down in twos and threes, and dragged along until December. And, Mr. Chairman, think of it, not one of this great herd died! All the cattle were saved! Dr. Hughes stopped the usual practice of Government veterinarians of spreading the disease by "mouthing," which means going from animal to animal, examining the mouths, getting their hands in and seizing the tongue and dragging it out from the mouth, thus scattering the disease by artificial means. The closest possible quarantine was maintained really by the exhibitors themselves. This was maintained at the stockyards for a little over two months, and then the herd was removed to Hawthorne Race Track.

Exhibitors as well as the authorities were determined that no disease should get away, and it did not. There were 40 herds in the big show. The space in which the cattle were confined was not an ideal place. The number of cubic feet of area was insufficient and the ventilation abominable. In the words of Dr. Hughes, "You could not coop up animals under more favorable circumstances in order to spread the disease," and this in spite of disinfectants. In reply to the claim that a successful quarantine could not be maintained on an ordinary farm, as claimed by the bureau, the following question and answer at the Chicago hearing is significant:

> Dr. DYSON. How would that compare [condition of the inclosure in which the dairy herd was confined] with the ordinary barn throughout the country as regards sanitary conditions?
>
> Dr. HUGHES. I would take my chances with the ordinary barn by long odds, as compared with that place.

Without going into further details of this successful termination of quarantine without slaughter, Mr. Chairman, suffice it to say that this great herd has been returned to the various parts of the Nation from whence it assembled absolutely cured, in most excellent condition, and ready with a couple of weeks of preparation to again enter the show ring.

Mrs. Scott Durand, of Waukegan, had a magnificent herd of Guernseys. They became infected with the foot-and-mouth disease. After battling through the courts many months and keeping them in strict quarantine, her 63 beautiful imported cattle were killed by the authorities, and, according to Mrs. Durand's undisputed sworn evidence, when they had entirely recovered from the disease; and there seems to be considerable proof in her statement that they were cured at the time they were killed, in view of the fact that the killers dragged them, after being shot, for a quarter of a mile across the pasture, leaving a streak of blood, which up to this day has not been disinfected, and piled them up in a pile, where they remained for 24 hours before burial, for the birds and the rabbits and the squirrels to track over. Had they been infected with the foot-and-mouth germ they would have put them underground without delay.

But the most remarkable cure, and the one which seems to refute all technical opinions that immediate slaughter is the only remedy, is the fact that the cattle of Mr. Unruh, the second

man whose herd was affected in 1914, testified on May 18, 1915, at Niles, Mich., that his 23 head of cattle, which had the foot-and-mouth disease in August, 1914, had entirely recovered so that one could not tell they had ever had the disease.

The third method of eradication, to wit, quarantine with slaughter of all infected or exposed animals, is the one which has been adopted by the bureau, and they have clung to it so persistently that anything looking toward any other method of eradication has been entirely eliminated from its policy. In its bulletin issued October 5, 1915, this department says:

There remains, then, but one effective method—that of slaughter—which is the method now in common use in all countries which have so far successfully coped with this disease.

Yet in the face of this statement Prof. Loeffler not long before his death took the position that killing and slaughtering of animals will not dispose of the disease. That the mere burying of the animals may not kill the germ is, in a way, sustained by the bureau's contention in the case of blackleg—that the carcasses should be buried and not burned is the only way of killing the blackleg germ—a fact which may some time be demonstrated should the foot-and-mouth disease again break out in the Union Stock Yards in Chicago, where 900 hogs and 450 cattle in 1914 were killed and buried in the stockyards.

And, in contradiction of the bureau's contention of the efficacy of the third method, there stares us in the face the fact that both Dr. Melvin and Dr. Mohler admit that quarantine and slaughter has been resorted to in England for 50 years, and that the disease still exists there, an outbreak occurring at the very time when Dr. Mohler was addressing the United States Live Stock Sanitary Association at Chicago on February 16, 1915, as then stated by him.

So obsessed has this department become with the idea of slaughter—State departments and veterinarians following—that it is the firm belief of thousands of level-headed farmers and stockmen in Illinois, as developed in the hearings, that a species of terrorism has been inaugurated and resorted to in its favor, before which all must bow who sanction any effort to combat or eradicate this disease in any other way.

Against the efforts of the exhibitors at the dairy show to save their herds the greatest antagonism on the part of the State and Federal Governments seemed to exist. From this testimony it appears that some of the witnesses are of the opinion that the department did not want it demonstrated to the world that cattle could survive the foot-and-mouth disease, after the department had proceeded so far upon its policy of slaughter and had progressed in its propagation to such a terrifying extent. It would not do, so these witnesses seemed to think, for the Government to admit any possible error, any possible excuse, for anyone to say that over $17,000,000 had been spent for slaughter when some of it might have been spent successfully for cure. Mr. Marsh, of Waterloo, Iowa, goes so far as to say that the Federal veterinarians would have "rejoiced" if a single instance could have been found by "their sharpshooters, on every hand scrutinizing everything," where the disease had been communicated by the dairy herd, so that they would have had an excuse for killing them. The department was of the opinion that they should be killed and wanted to do it. One witness was bold enough to say that the motive for killing her cattle was because "they wanted to bury the evidence underground that cattle could go through the foot-and-mouth disease successfully." Another witness, Col. George Fabyan, a merchant and farmer of Geneva, Ill., referring, evidently, to the above case, said:

There was a woman up at Libertyville that did everything she was asked to do in the way of quarantine, and her cattle were well; that is, they had been brought under the same management and in the same way as the cattle at Hawthorne. The State was crazy to kill them. The influence was right here in Chicago that was pressing. I read in the Chicago papers something about this pressure brought to bear to kill them. Finally the injunction was dissolved, and in the meantime the cattle had recovered. There was a second injunction secured pending the time for the Government, the State, and the owner to appoint a committee of three veterinarians to go and see whether they had recovered or not and in the same condition as the cattle which had been at Hawthorne. The cattle had apparently recovered. * * * I do know the sheriff then went down there with a posse, took that woman, manhandled her, put her in the house, afraid some one would come and catch them at it, and went down and shot those cattle as they stood in the barn.

This species of terrorism inaugurated and carried on by the bureau is well stated in the testimony of Mrs. Durand, which in brief tells the story how inspectors Jennison, Caspar, and Holt for the Government came to her place and told her dreadful stories—that the hoofs would all fall off, that they would rot off, and that it was a good thing that the little hogs were going to be killed, for in a week they would all be on their backs screaming with pain—the hogs which Mrs. Durand says never had the foot-and-mouth disease. They told her, which was not the facts, that cattle at the dairy show had died and that an Arizona man took his cattle home and they died from the disease. She states that 26 men came to her place with revolvers and took her foreman and herself and locked them up and kept them prisoners. At this time the cattle were never so beautiful and never so well. They were having beautiful calves and were in their full milk. She states that she was getting as much butter fat as she was in August. The whole situation surrounding this species of terrorism and the determination of the bureau to carry out the third method of eradication, irrespective of the consequences, is well illustrated in the words of Inspector Caspar to Mrs. Durand, when he viciously said to her, "We'll get your cattle yet, Mrs. Durand, and don't you forget it." So has the great spirit "quarantine with slaughter," the slogan of the third method, so permeated the Government and State veterinarians, even unto the menial who handles the rifle.

THE RETURN OF THE PLAGUE IN 1915.

On August 8, 1915, the foot-and-mouth disease again broke out among 119 hogs and 4 cattle at Wheeling, Cook County, Ill., and on the 12th of that month, on Mr. Pryden's farm near Galva, Henry County, Ill., and at various other points in that State. Secretary Houston, in his annual report for 1915, at page 20, concerning this outbreak says:

It seems certain that this infection was produced by contaminated hog-cholera serum prepared in Chicago in October, 1914, at an establishment where the disease had not been known to exist at any time.

The first half of the above sentence is straightforward truth, but the latter half, while technically correct, is evasive and not the whole truth. True, the disease was not known to have existed at the "establishment" itself, but it was well known that the stock yards within which this plant, known as the Chicago Serum Co., was located was reeking with the disease, and that the hogs from which the blood was drawn had been exposed to that disease, even though the inspectors had in October failed to notice the lesions on the feet of the hogs which hung on the shackling hooks in this establishment. Even though the disease was not known by the department to be in these yards until its quarantine thereof on November 1, 1914, nevertheless its own quarantine on that date should have been sufficient notice to it that possibly hog-cholera serum made from hogs exposed to the foot-and-mouth disease in October, 1914, within these yards might become contaminated.

The department disinfected freight cars leaving the yards, and disinfected and quarantined the yards themselves, and quarantined the plant and the employees of the plant—which quarantine remained as late as February 16, 1915, according to a representative of the department speaking before the National Live Stock Sanitary Association on that date. Yet in the face of the foregoing facts the serum company was allowed to preserve its contaminated serum until the following summer as a nucleus of a new outbreak. True it is that certain tests were made upon some animals before releasing the serum, but in view of the fact that it was well known to the department as a matter of history that the outbreaks of 1902, 1903, and 1908 of this disease were closely associated with vaccinated cattle, and that the vaccine contained a Japanese strain imported for the purpose of improving its standard and which contained foot-and-mouth infection, and that, while one-half of 1 per cent of carbolic acid was mixed with the serum as a preservative, and which Dr. Dorset, an employee of the department, claimed would kill the germ of foot-and-mouth disease and which acid may have partially but not wholly destroyed the germ and the further fact that the department knew as a scientific fact that the virus possibly, instead of being disseminated throughout the entire mass of the serum, might have become "agglutinated," a fact which they knew had happened with the germs of other diseases, it would seem to the ordinarily prudent man that the department, in the light of all of this information which it had at hand, should have taken no chances in releasing the few dollars' worth of contaminated hog-cholera serum infected with the foot-and-mouth germ, which act resulted in a loss in Illinois alone in the year 1915 of nearly $300,000.

AREA OF QUARANTINE.

Much testimony has been given in the recent investigations and hearings relative to just what unit of area should be adopted in establishing a quarantine in the foot-and-mouth disease epidemics. The department through many of its assistants seemed to be thoroughly imbued with the idea that the county should be the unit. Dr. Benke and Dr. Houck agree with each other in the contention that the county should always be the unit of quarantine, on the theory that the people can be better "governed" in this manner. Dr. Bailey, a well-posted veterinarian of Orion, Ill., and Mr. R. G. Nevill, a successful stockman of Orion, Ill., and others testifying in these hearings claim that what is known as the "close-farm quarantine" is best and the only practical method. Many favor a 5-mile radius. Mr. Gregory, editor of the Prairie Farmer, thinks that on ac-

count of the economic conditions and losses surrounding an epidemic of the foot-and-mouth disease, that the quarantine should be cut down to a radius of from 5 to 10 miles. He states the case well from the view of the farmer and the stockman, and indeed for the true interest of the live-stock interests of the country, when in substance he says:

It is my opinion from the investigations that I have made, and it is the very general opinion among farmers who have been in any of these *quarantine sections*, that the quarantines include very much more territory than was necessary and that they were left in much longer than was necessary; that if the idea of cutting the economic losses down as much as possible had been considered the quarantines would have been handled very much differently. For instance, an outbreak in one of our counties—most of the time the county system has been generally followed, and that has been the system recommended and insisted upon by the Bureau of Animal Industry—some of our counties are 30 miles across; one case would occur in the corner of a county and the entire county would be quarantined. In some of our live-stock counties that would imply the holding up of a million dollars' worth of stock, a great deal of which would be ready for market, and a good deal of that stock being 25 or 30 miles from the disease. * * *

Those quarantines, I believe, were of an entirely unnecessary extent. I do not believe there is any logical defense for the county system of quarantines. There is no logical defense for a quarantine that quarantines a man 30 miles from an infected herd simply because he is within the county boundaries, while a man across the line 7 miles away is free. There is no logic to that. In publishing our paper I have endeavored to explain these things to our readers as far as possible, but I could not explain a thing like that; in talking personally to the farmers I could not explain it—there is no explanation. Those unfair quarantine regulations, in my judgment, have done more to create antagonism to the entire work of eradicating the disease than any other one thing. If the quarantine had been on a logical basis, the radius basis, so that a farmer could understand why that quarantine was established, they would have cooperated much more readily with the bureau and with the State officials than they did. The thing has caused a tremendous loss, and I have never been able to get an adequate explanation of the reason for it.

Mr. Chairman, I have already endeavored to point out the fact that the greater the quarantine area the greater the benefit to the packer and the corresponding injury and loss to the stock raiser; but independently of that feature the great loss to those whose animals are not infected but are within a quarantine area so that it is impossible to ship without loss, and to whom remains nothing but to await the approach of the plague, demand our attention and the immediate reduction of the quarantine area and the smallest territory consistent with safety. The recently modified policy of the bureau in handling the matter by townships seems to me not far from a fair compromise and contains the feature of the easy government of the people during such epidemics, for the reason that the township line is known by everyone in the community.

THE BASIS OF SETTLEMENT.

The whole system of settlement for animals which have been infected or exposed to the foot-and-mouth disease should be overhauled from start to finish. Heretofore the policy has been to pay nothing above the meat value of the animal. Suggestions of paying the paltry sum of $100 for priceless breeding cattle have been made. The Chief of the Bureau of Animal Industry says that the values for breeding purposes are never taken into consideration in these settlements. On this subject the National Association of Record Associations, the membership of which is made up of 150,000 members, have recently passed a resolution, one paragraph of which clearly expresses the views of the stock raisers and farmers on this phase of the matter of settlements, which is as follows:

Resolved, That the National Society of Record Associations demands Federal and State legislation which will allow appraisers to value pure-bred stock at its reasonable breeding value, without arbitrary limitation when slaughtered on account of the foot-and-mouth disease. We commend as a model for such legislation the New York statute, which provides that in the event that either party to the appraisement is dissatisfied appeal may be taken to the proper court without delaying slaughter where the value of the property to the citizen taken for the public use is finally fixed in accordance with the rule of law and court practice.

And, Mr. Chairman, I respectfully direct attention to the evidence of Mr. Wilbur W. Marsh, a farmer of Waterloo, Iowa, on this subject, taken in the last investigation at Chicago, of which I make a free quotation. He says, in substance:

Take the Gill herd of cattle that was killed in New Jersey. They were owned by a gentleman kind and courteous in every way. He consented to have that herd of cattle killed and received pay for them at about $250 apiece. While the loss was great to Mr. Gill, I think the loss to the people of America could not possibly be estimated. It was a loss to humanity. The herd was absolutely priceless, viewing them from an economic standpoint—their ability to raise the blood of the ordinary cow on the farm when they are crossed with the strain. Mr. Gill was the originator of the so-called Glenwood strain of Jersey cattle. At one time I bought two head of cattle of that strain. One of them turned out to be the greatest 3-year-old cow in the history of the world, a Glenwood cow. She made 910 pounds of butter fat as a 4-year-old and she made 862 pounds of fat as a 3-year-old. I bought another cow, that same strain of blood, at the same time, that made 778 pounds of fat. I bought one cow of Mr. Gill personally, and she made 846 pounds of fat on test under the supervision of the Iowa Agricultural College.

Mr. Marsh, after deprecating the slaughter of such cattle, goes on to state, referring to the dairy-show cattle which were exhibited at Chicago in October, 1914, substantially as follows:

I would like to put into the record if I may something that is clear evidence of the hostility of the Veterinary Board of the Bureau of Animal Industry, and that is the appraisement of the cattle. In those herds of cattle there were many animals that had, under the supervision of the agricultural colleges of the State from which they came, made official records. The veterinarians in the Bureau of Animal Industry absolutely refused to look at the official records furnished by the agricultural colleges which are a part of the records of every registry association in arriving at the value of this stuff. To my mind it was perfectly clear that there was a determination to punish us for having the temerity to go up against this bureaucracy, by attempting to save our cattle. None of these cattle were killed. They placed a value on this priceless stuff of less than $100 apiece. I personally saw Dr. Mohler. We stood at his desk and said to him "It is very important, when the appraisement of these cattle is made, that there should not be any question about it, and we want to ask you, in picking out these people, to choose men of national reputation, men about whose judgment there can be no possible quibble or question." We made that specific request to him. When the committee was appointed, while I have been in the animal husbandry business for five years, I did not know any of them and had never heard of them.

It therefore seems to me, Mr. Chairman, that the dairyman and the breeder who can not replace his herd should be compensated for the true value of the same, and in case an agreement can not be reached between the owner of the stock and the Government, that he should not be forced into the position of having to take an arbitrary amount or nothing, but he should have the right, the same as any other citizen in free America, to appeal to the courts for redress. This is the New York plan, and at the proper time, when this bill is considered section by section, I shall offer an amendment to that effect. [Applause.]

WHAT THE STATE OF ILLINOIS PAYS FOR THE FOOT-AND-MOUTH DISEASE.

Special session No. 2 of the forty-ninth general assembly completed its work Wednesday evening, January 26, 1916, with the exception of final adjournment. The only business of importance pending was the concurrence of the senate in the house amendments to the Senate bills relating to the foot-and-mouth disease.

The senate was in session three or four days the previous week, but unable to consider the amendments for lack of necessary two-thirds vote required to pass emergency measures. Efforts were made to bring in enough absent senators to make a quorum, but without success. Most of the absentees were kept away by illness in their families and several of those present went home ill.

When the Senate met on the 26th the roll call showed 37 present—3 more than the required number. All of the house amendments were then adopted without opposition. Senate bill No. 7, as amended and passed, provides for the payment of all losses and expenses in connection with the suppression of the last outbreak of foot-and-mouth disease, which began about the 1st of August, 1915, and continued until January, 1916.

An analysis of the bill shows that during this period there were 8,459 animals slaughtered by the State authorities in an effort to eradicate the disease. There were in this number 2,310 cattle, 5,478 swine, 642 sheep, 20 goats, and 9 deer. The total appraised value of these animals was $245,706.34, of which the State paid one-half, or $122,854.17. There were 136 claimants paid for losses sustained, in sums ranging from $13.75 for 2 pigs up to $12,247.25 for 108 cattle and 647 swine on one farm.

The counties where the disease prevailed and the number of herds slaughtered are as follows: Bureau, 2; Cook, 2; Dupage, 2; Fulton, 4; Lake, 12; La Salle, 13; Livingston, 1; McDonough, 93; Stark, 9.

The amount paid for property destroyed and damaged in the process of disinfecting the farms was $4,356.48, of which the State paid $2,178.24. This amount is distributed by the bill to 213 persons, in sums ranging from 57 cents to $108.50.

The cost of cleaning up the yards and disinfecting premises was $4,494.12, of which the State paid $2,247.06. The cost of digging trenches and burying the slaughtered animals was $5,249.86, of which the State paid $2,624.93. The cost of lime and disinfectants was $7,269.82, of which the State paid $3,634.91.

The assistant State veterinarians are allowed by law for their services $8 per day and expenses for each day actually engaged in State work. There were 113 veterinarians employed in the suppression of this disease, and their total compensation amounted to $31,460.22, all of which is paid by the State. The items in the bill show that 2 of them received more than $2,000 each, 7 received more than $1,000 each, and 104 received sums ranging from 56 cents to $900.

The following recapitulation shows the cost of this outbreak (No. 2) to the State and to the United States Government and the total cost:

Live stock slaughtered	$122,853.17
Property destroyed	2,178.24
Labor, disinfecting	2,247.06
Burying	2,624.93
Lime and disinfectants	3,634.91
Assistant State veterinarians	31,460.22
Paid by State	164,998.53
Paid by United States	133,538.31
Cost of outbreak	298,436.84

Reference to the appropriations made last spring at the regular session shows that the first outbreak of foot-and-mouth disease cost this State $1,404,287.62, which, added to the amount just appropriated for the second outbreak, makes a total cost of $1,569,296.15 expended in fighting this disease practically within one year from the first outbreak. The United States Government has expended in the same time, in pay-

ment of 50 per cent of the claims, $1,315,709.75. This amount added to what the State has paid makes the total cost of combating the foot-and-mouth disease within the State of Illinois amount to $2,885,055.90 since the first outbreak a little over a year ago.

Senate bill No. 6, appropriating $200,000 for an emergency fund to be used only in case of another outbreak, was cut down by a house amendment to $100,000, and the amendment was approved by the senate. This will leave but half as much as was appropirated last spring for the same purpose.

Mr. HAUGEN. Mr. Chairman, I yield five minutes to the gentleman from Michigan [Mr. SMITH.]

Mr. SMITH of Michigan. Mr. Chairman and gentlemen of the committee, I have been very much interested in the discussion of the live-stock industry as I listened to the speakers this afternoon, and I want to thank the chairman, who has yielded me a few minutes, and to apologize to the Members whose time I am now occupying for the purpose of asking one particular question. The gentleman says he practiced law in order to pay for the feed consumed by the cattle on his place. I have been wondering whether or not all the fault was with the packers in reference to the losses suffered by the farmers. Now, the packers have got a lot to answer for, in my mind, and for anything that has been said against them I am not here to uphold if it is improper, but the question I have in mind and which has often occurred to me is, how you gentlemen from the West, you cattle feeders, can fatten cattle and put them upon the market and sell them at the prices they bring when we can not do it in the East? Now, the gentleman from Illinois, who has just preceded me, said something about the foot-and-mouth disease and spoke about how it originated at Niles, Mich. I thought he put particular emphasis upon the word "Michigan." Now, I have not been altogether satisfied but what that disease came from Illinois. Nobody says it had not or did not. Now, Niles is not in my district, but it is in Michigan and very close to the stock-

yards in Illinois. The foot-and-mouth disease is very contagious. It is hard to control. It is the experience of all countries that to eradicate it the herd must be destroyed. I want to compliment the Chief of the Bureau of Animal Industry of this Government for the strenuous efforts he has put forth in stamping it out and upon his success. The value of the live-stock industry to the farmers of this country is incalculable. But that is not the question I wanted to propound.

I want to ask these gentlemen here from the West who feed cattle and have made it their business whether or not you can put more than 5 pounds of meat upon a graded steer with one bushel of shelled corn? If that is true, how are you to get the pay for your corn by feeding it to cattle? That is what I want to ask any man here who has fed cattle, when you are paying for that bushel of corn at 75 cents and only get 5 pounds of meat out of it worth 7 cents a pound. How can we expect cheap meat from the farmer? The farmer when he goes to town to make purchases, must pay just what they ask him, and when he sells his product he must sell for just what they will give him. This rule is not confined to the stockyards. Now, if anybody knows how you are going to make anything out of this feeding of cattle for the price that is paid for them and you buy your corn, then you will solve the question that has been uppermost in my mind. The gentleman from Nebraska says in his State 53 out of 56 cattle feeders lost money last year feeding cattle, and the other 3 did not make anything to speak of, and I give the solution.

Please do not misunderstand me. I think a farmer should raise enough cattle to graze off his pasture land and to eat up his roughage. But, as stated, I am unable to see how a farmer, feeder, or anyone else can pay 75 cents a bushel for corn to produce 5 pounds of beef and sell it at 6, 7, or 8 cents a pound without losing money. Many feeders, understanding this, now fatten their cattle on grass.

Now, we are talking about distribution; we are talking about the farmer's market, and we are talking also about transportation. I tell you that farming is the most scientific business that this Congress has to deal with. You are dealing with the elements; you are dealing with all kinds of destructive insects, with the markets, with labor, and the home. You have got to be engineers; you have got to be scientific experts all along the line. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. SMITH of Michigan. Gentlemen, I thank you.

Mr. LEVER. Mr. Chairman, I yield 20 minutes to the gentleman from Ohio [Mr. OVERMYER], a member of the committee.

Mr. OVERMYER. Mr. Chairman, on the wall of the landing in the grand marble stairway in the Congressional Library yonder, the most beautiful building of its kind in the world, there is inserted a 15-foot mosaic panel in which is outlined, in blocks of gold, a colossal figure of Minerva, the Goddess of Wisdom. In her right hand she holds a spear, and in her left an unfolded scroll upon which is inscribed a list of the sciences, arts, and letters, and the first name that appears thereon is the word "Agriculture." [Applause.]

Gibbon said, "Agriculture is the foundation of commerce." It is that and more. It is the foundation, too, of everything else, and is the most honorable business in the world. The farmers of this country are the real producers of wealth, and the industry of agriculture is the structure upon which rests the whole fabric of commerce, of business, of society, and even of life itself. Show me a country where agriculture is fostered and encouraged, and I will show you a country that is rich and powerful.

A few years ago it was thought that the industry of agriculture was of minor importance in the United States, but last year it contributed in commercial value to the products of this country more than $10,000,000,000. This is more than was contributed by any other industry in raw material and finished product. Of course, manufacturers are ahead in the value of their finished product, but they convert raw material into finished products while the farmer produces a finished product. No one works it over for him. There are in this country nearly six and one-half million farms, averaging 138 acres to the farm, and each of these farms has an average of 75 acres of improved land. The value of our agricultural exports last year was nearly one and one-half billions of dollars, an increase of 32 per cent over those of the preceding year.

This valuable and stupendous industry, upon which depends the wealth of our Nation, is beginning to be appreciated by State and National legislators, resulting in increased appropriations for agricultural purposes. The leading agricultural States of the Union now have bureaus sustained by State appropriations covering pruning and other demonstrative work that has resulted in the saving of thousands of vineyards and orchards throughout the country; bee culture and inspection; better facilities for handling the infectious and contagious diseases of live stock; State farms for the production of hog-cholera serum; farmers' institutes in all the counties of the State; the issuing of farmers' bulletins bringing to the farmer practical education affecting his business; and the teaching of agriculture in the public schools. The Federal Government, too, has come to realize the value of agriculture as an industry, and this has resulted in more liberal appropriations to foster and encourage the work.

One of the best laws ever enacted was the bill passed by the last Congress known as the Lever Agricultural Extension Act, which provides for additional appropriations each year for dissemination of knowledge among the agricultural people that can not be gained in any other way. Under its provisions, men are sent out to do demonstrative work, to give information that can not be secured through our farm papers and magazines or farmers' institutes. This work consists largely in the giving of practical demonstrations of the information given in such publications and institutes.

My observation has been that these demonstrations are watched with much greater interest by the young folks on the farm than by their parents. A farmer who has been conducting his farm according to custom for many years is reluctant to adopt the policies advocated by the college-graduate farmer. For this reason I feel satisfied that the money being expended in the dissemination of general knowledge concerning agriculture in our public schools and otherwise will bring its largest returns in the years that are to come; and I am quite well satisfied that in the absence of such teaching and training the problem of how to feed our people will be the greatest problem confronting the descendants of your children and mine.

Where is the man who will contend that farming and orcharding can be done now as it was 50 years ago? Then they planted their crops regardless, and harvested them. Then peach and apple trees grew by the wayside, and fruit could be had on every hand. What happens to the orchard of to-day if spraying is not done scientifically? The same thing that will happen to our farms before many years if they are not farmed scientifically. To-day almost every wind that blows brings some new pest or insect, which, if not checked promptly, will eat its way through our gardens and orchards and vineyards and leave a path of ruin and destruction in its wake. Each year pests heretofore unknown in this country are imported from some foreign land and rapidly gain a foothold here. Soil from which crops are continually taken without the proper use of fertilizers will eventually lose its fertility. These two causes—the destruction of fruit trees and plants by pests and insects and the wearing out of the soil where the proper methods of restoration are not employed—make the problem of the farmer of to-day and to-morrow a serious one.

It is a remarkable fact that many of the older States of the Union are to-day producing less of many of the necessaries of life than they did 20 and even 50 years ago. One of the causes contributing to this condition is the stupendous increase of our city population over our country population and the consequent increase in consumption over production. In my own State of Ohio in 1850 there were five times as many people living in the country as there were living in towns. To-day considerably more than one-half of the total population of the State lives in towns. What does this means? It means that while the total population of the State of Ohio in the last 50 years has increased about 100 per cent, the population of our towns and villages has increased about 700 per cent. It means that the number of consumers has increased in the State of Ohio at a stupendous rate and the number of producers has decreased at a corresponding rate.

Mr. FESS. Mr. Chairman, will the gentleman yield?

Mr. OVERMYER. I will.

Mr. FESS. I think four or five counties in my district show a decrease in the total population, which would indicate that only counties having the largest cities are increasing. That is the case with Clark, Springfield, and the others are decreasing. What is the meaning of this?

Mr. OVERMYER. The general total is taken from the census figures, which show the percentages which I have quoted.

Mr. FESS. Going to the cities from the rural sections?

Mr. OVERMYER. Yes. The causes operating to this end are varied. Social conditions, the prospect of better wages, and other causes have contributed to this condition; but many worthy movements to-day have as their object the making of farm life more attractive and remunerative, and I hope this migratory movement may be checked.

Continuing my former statement, I will say that instead of 80 men living on the farm and producing and 20 living in town

and consuming there are now 60 living in town and consuming and only 40 in the country producing. In 1820, 83 per cent of the total population of the United States was engaged in agricultural pursuits; in 1910 only 32.4 per cent were so engaged, although these figures do not necessarily mean the total decline of our agricultural population. There are still 30,000,000 people in our country engaged in agricultural pursuits, and with the aid of modern farm machinery they are producing products far in excess of our needs for national consumption, yielding a surplus amounting to billions.

But the point I desire to make is that the causes now operating against agriculture—the destruction of crops by blight and insect pests and the steady migration from the farm to town—will eventually result in a serious situation unless we are alert to the needs of the times. There is a way to destroy insect pests and blight, a way to restore fertility to worn-out soil, a way to produce twice as much of the necessaries of life as we are now producing, and it is our duty and it is the constant aim of the United States Department of Agriculture to find that way and to prevent the depletion of our agricultural population and agricultural products below the point of our national requirements.

At this critical juncture in the world's affairs, when wealth and resource as well as human life are being wasted as never before, it is well that we should look about us and take an inventory of our stock and our resources, and when we do this we find ourselves the most favored nation of all the world. This country is estimated to be worth about two hundred and twenty billions in money. This is as much as the total wealth of the British and German Empires together, and in the eight years from 1904 to 1912 the increase in our national wealth equaled the total accumulated wealth of the German Empire. Last year our domestic trade amounted to five hundred and seven billions, or a little over half a trillion. About 1885 this country's wealth was just about one-fourth of what it is to-day, and we are justified in assuming, therefore, that the day is not far distant when the national wealth of the United States will be a trillion, and a new word will become a common parlance when reference is made to our country's riches.

Mr. FESS. Will the gentleman yield?

Mr. OVERMYER. Yes.

Mr. FESS. I am not sure whether we get the gentleman's figures. Does the gentleman mean that the transfer of domestic trade amounted to five hundred and seven billion?

Mr. OVERMYER. Yes. However, the same articles may have been valued several times in making this estimate. I might say in that connection to the gentleman from Ohio that the report of the bureau discloses that they have no way of securing accurate statistics on what the domestic trade in itself amounted to. But, of course, in making this estimate it must be remembered that in domestic trade the same article may be valued over and over as it moves through the channels of domestic commerce.

Mr. FESS. I was afraid some one would take it from your statement that our wealth was $507,000,000,000.

Mr. OVERMYER. Our wealth is estimated at $220,000,000,000, and the domestic trade, which might mean the same article was valued several times in several transactions, was estimated at $507,000,000,000.

Mr. QUIN. I thought our national wealth was $187,000,000,000 in 1913, according to the reports.

Mr. OVERMYER. Yes; but we are in 1916 now. That is an estimate based upon the report of the Department of Commerce.

A trillion dollars is a million million of dollars, and if the same ratio of increase enjoyed in the last few years continues for a few years more our Nation will reach this stupendous sum; and no single industry has contributed so much, and is still continuing to contribute so much, to these figures as the industry of agriculture. In soil this country is supreme; the farm is first and fundamental. Other industries are of less importance, for if anywhere life is being sustained by mining, manufacture, or commerce, somebody elsewhere must be producing food and raw materials for clothing.

Mr. FESS. Will my colleague yield?

Mr. OVERMYER. Yes.

Mr. FESS. The soil is supreme, as your statement said. Why do we not produce as much per acre as the German people?

Mr. OVERMYER. I will reach that later, but it is because we do not apply the intensive methods of farming that they have been employing for a great number of years.

Mr. LEVER. My colleague, who is on the committee, and who is such a valuable member of it, will agree, I think, that the system of marketing also is not so well developed?

Mr. OVERMYER. And the system of distribution, as was so well explained to-day by the gentleman from Nebraska [Mr. STEPHENS].

We raise more wheat than any nation on earth and one-sixth more than our nearest rival, Russia; we produce three-fourths of all the corn raised in the world; we raise two-thirds of the world's cotton; we turn out as much steel in a year as Great Britain and France combined; we supply 60 per cent of the world's supply of copper; we produce 32 per cent of the world's lead and zinc. And in the foregoing estimate of the Nation's wealth at $220,000,000,000 that treasure land, Alaska, was not included; neither was Porto Rico, Hawaii, or the Philippines. Alaska, which is as large as France and Germany combined, has hardly begun to yield up its riches.

Mr. QUIN. What per cent does the producer of the raw material get out of what we produce?

Mr. OVERMYER. I am not taking that up at this time, but I think statistics show about 35 per cent. I would rather not be interrupted now until I complete my statements, because I have not much time remaining.

Away back in the eighteenth century an English parson by the name of Malthus figured out that a majority of mankind must always be poor; that population, in spite of poverty, disease, and death, would increase so fast that the earth could not produce food for it. For a long time his theory was accepted as true, for he had the figures to prove it—population increasing in geometrical ratio, food increasing in arithmetical ratio; the result, billions of people with nothing to eat but themselves. But a recent bulletin of the Department of Agriculture discloses that there are in this country more than a billion acres of tillable land, of which only one-fourth is now in crops. On that one-fourth we are producing only one-half of what it could be made to produce. The United States alone could produce food for one-half the population of the globe. There is no limit to the productiveness of this country; the only limit is in human intelligence. We have the land and we have the brains, and the only thing we need to do is to direct the energies of our people into the proper channels of activity.

We have here an area twice as large as the area of continental Europe. We have more acres of tillable land than all of Europe, Russia included. We have forests and mines, rivers and harbors; in fact, we have here every resource necessary for our maintenance as individuals and as a Nation. But we are only beginning to learn one of the secrets of power long ago discovered by a certain European country, which at this moment makes her apparently invincible to a multitude of foes. I refer to Germany. Has Germany been farming in a haphazard manner? Has Germany been wasting her resources? Is she forever taking off without putting back into her soil its life-producing properties? If she had, she would not now be able to fight a world war cut off from nearly every source of outside help, and yet reported to be able to continue fighting almost indefinitely upon her own resources and self-support. In Germany every foot of ground is made to produce something. Intensive farming has been applied for years. She plants fruit trees for use rather than shade trees for ornamental purposes. These are the secrets of much of Germany's success, and when I say this I am not violating that strict neutrality which it is my duty to assume. I state it as a fact about which there can be no dispute. In this time of preparedness let us learn our lesson from these facts.

I believe that the safety of our Government will continue to repose in the breasts of a contented and prosperous citizenship rather than in the number of battleships we own or the number of men in our standing army. [Applause.] The great wars of history that were at all just were fought and won by volunteers. A soldier with patriotism and the love of country controlling his actions is worth a regiment of hired men who fight because they are ordered. The wars of this country have always been just, either in the defense of our flag or in the furtherance of the cause of liberty which that flag represents, and they were fought by volunteers, by men who fought out of patriotism and love of country; and the thing that we must seek to do is to maintain here the highest form of free Government, granting to all citizens the greatest possible liberty consistent with safety, engage in every form of industry and manufacture, extend our commerce to every point of the world, open up to our citizens large areas of land not now being farmed, and provide homes where our people may bring up countless generations of loyal American citizens amid proper surroundings. Preparedness for national defense does not consist alone in the purchase of battleships and munitions of war. It consists also in the proper training of future generations in the conservation of our natural resources, and in leaving for our future citizens a country that will be worth fighting for.

The CHAIRMAN. The time of the gentleman has expired.

Mr. LEVER. How much further time does the gentleman wish?

Mr. OVERMYER. Oh, just a few minutes.

Mr. LEVER. I yield five minutes more to the gentleman.

Mr. PLATT. Does the gentleman yield?

Mr. OVERMYER. I yield.

Mr. PLATT. The gentleman said, if I understood him correctly, that one volunteer soldier was equal to a regiment of hired soldiers?

Mr. OVERMYER. I said that one soldier, with his actions controlled by patriotism and love of country, is equal to a regiment of hired soldiers—an exaggeration, perhaps, but illustrating the point I wished to make.

Mr. PLATT. Does he not know that in the War of 1812 we had 250,000 men at the greatest, and that there were never more than 16,000 British here?

Mr. OVERMYER. No; and no such number of Americans was ever engaged in that war; but I wish to say that I do know that one of the most important battles of the War of 1812 was fought where I now live—at Fort Stephenson, which is now Fremont, Ohio—by 160 American soldiers, who were commanded by a boy, Maj. George Croghan, only 21 years of age, and defeated the entire British Army, together with Tecumseh and his Indian allies. I know that to be true. [Applause.] And they had one lone cannon, "Old Betsy," a 6-pounder, and she is standing there to-day guarding the park of which we are so proud. And at the base of the monument that was erected there to-day repose the remains of that young defender of Fort Stephenson, who, with 160 men and that one cannon, defeated the entire British force. [Applause.]

Mr. PLATT. The whole 16,000 men of the British Army or a hundred or so of the British?

Mr. OVERMYER. The British Army under Proctor of more than 2,000 and an equal number of Indian allies.

Mr. CAREW. How many German and French and English armies do you think those young men could lick to-day if they were alive?

Mr. OVERMYER. Under the same circumstances, they would render just as good an account of themselves as they did then. [Applause.]

Some criticisms have already been made, and more will no doubt be made, of some of the items in this bill. Great fears seem to be entertained by some gentlemen that the appropriations for agriculture might be excessive. It is, of course, entirely proper for Members to scrutinize every appropriation bill carefully, and this bill should be no exception. The committee itself held the most extensive hearings on this bill ever had and examined into every item with great care. But in view of what I have heretofore said and the figures submitted showing that the farm, after all, is one real source of wealth and strength, I submit that there is no bill that should be treated with greater liberality by Congress than the Agricultural appropriation bill. I do not favor the wasting of a dollar of this Government's money, but I do insist that there is no industry that yields to our country a greater economic return for every dollar expended in its encouragement than does agriculture.

This bill carries a total of $24,501,093. Compare this with the disbursements for our Military Establishment last year, totaling $267,974,831.47, exclusive of pensions and rivers and harbors; or compare it with the disbursements for pensions of $164,387,941.61; or for rivers and harbors of $46,833,914.24. All of these appropriations are no doubt proper and necessary, but the point I wish to make is that a nation as rich and prosperous as ours that can afford and does spend these vast sums of money for other purposes can well afford to appropriate $24,000,000 for the encouragement and promotion, yea, even for the preservation of an industry that is doing more than any other toward making the United States the first "trillion-dollar" country of the world.

It is as true to-day as in the days of Oliver Goldsmith that—

> Ill fares the land to hastening ills a prey,
> Where wealth accumulates and men decay;
> Princes and lords may flourish or may fade;
> A breath can make them, as a breath has made:
> But a bold peasantry, their country's pride,
> When once destroyed can never be supplied.

[Applause.]

Mr. LEVER. Mr. Chairman, I yield one minute to the gentleman from Massachusetts [Mr. OLNEY].

Mr. OLNEY. Mr. Chairman, I desire to direct the attention of the committee to a question which I consider as germane to the subject concerning the deterioration of one of the important industries of the United States—the sheep industry—and I desire to ask unanimous consent to extend in the RECORD a letter from William M. Wood, president of the American Woolen Co., to me, showing the deterioration of the sheep industry in the United States in the past 20 years. Also I desire to insert an extract from an interview with Hon. D. F. Houston, Secretary of Agriculture, in the New York Herald, showing wherein New England may be encouraged and developed for the future husbanding of this great industry.

And in connection with this I will say that a United States Senator told me a few days ago he had sold his flock of sheep at $8 per head, showing you gentlemen that the law of supply and demand is as preeminent to-day as it always has been. On account of the tremendous consumption of mutton and lamb by the warring nations and considerable cessation in agriculture among European nations at the present time, sheep are growing more scarce each day. The monthly crop reports of 1910 show us that there were 52,000,000 sheep in the United States at that time, while to-day there are but 49,000,000 sheep. The depletion in sheep growing in our country for a score of years under all phases of tariff legislation is evident.

The CHAIRMAN. The gentleman from Massachusetts asks unanimous consent to extend his remarks in the RECORD by inserting certain communications. Is there objection?

There was no objection.

The following are the communications referred to:

AMERICAN WOOLEN CO.,
Boston, Mass., April 12, 1916.

Hon. RICHARD OLNEY, 2D,
House of Representatives, Washington, D. C.

DEAR SIR: I would most earnestly commend to your attention the campaign of the Philadelphia Wool and Textile Association for "more sheep and more wool." Though the population of the United States is rapidly increasing, the number of sheep and the amount of wool produced here are falling off. In 1909, 328,000,000 pounds of wool were grown in this country; in 1915, only 288,000,000 pounds, a loss of 12 per cent in seven years. In the last fiscal year, out of a total of 591,015,495 pounds of wool available for consumption in the United States, foreign wools represented 300,000,000 pounds, or more than one-half.

Nor can we depend upon wool supplies from abroad—for the wool production of the whole world is decreasing. This world supply in 1915 was estimated at 2,836,000,000 pounds. In 1914 the estimate was 2,872,000,000 pounds; in 1913, 2,880,000,000; in 1912, 2,971,000,000. The great war has wholly cut off certain sources of supply and made reliance on others most uncertain. Large numbers of sheep have undoubtedly been destroyed in the course of warfare.

So critical is the situation that Great Britain, which controls nearly two-thirds of the world's wool, is contemplating the imposition of an export duty on this indispensable raw material when bought by any but British purchasers.

National prudence demands an immediate increase in the flocks of the United States. The American people need more sheep for food and clothing. In spite of the rapidity with which the cheap lands of the West have been taken up, there are still great areas in this country where sheep can be grown with a profit by the exercise of intelligence and perseverance. Sheep can be grown again in large numbers on the abandoned pastures of the New England and other Eastern States.

Australasia produces nearly three times as much wool as our own country—chiefly because in Australasia wool growing is a modern, systematized business, and because all laws are made to favor it and worthless dogs are not allowed to harry and murder valuable flocks. National and State Governments with us have done much to encourage agriculture and stock raising, but sheep and wool have not received their proper due. There is urgent need of a searching investigation of the whole question by national and State authorities. May I not ask you to take up this subject and do your share to the end that there may be more food and more wool for the American people?

All this is an essential part of any patriotic national movement for preparedness, for the position in which this country would find itself in war—dependent on foreign sources for more than half its wool—is appalling to contemplate.

Very truly, yours.

WM. M. WOOD, *President.*

[Extract from article by D. F. Houston, Secretary of Agriculture, published in the magazine section of the New York Herald, Sunday, Mar. 5, 1916.]

There seems to be general agreement that by the employment of proper methods a still greater advance can be made in live-stock directions.

The experts believe that there might be a revival of the sheep industry if the farmers would emphasize the mutton feature.

When this industry was established only one purpose was considered, namely, the production of wool, and the New England sheep were apparently developed solely with this end in view. When the western competition became acute the New England farmer who was in the wool business was forced out, and the breeders of fine wool sheep were compelled to disperse their flocks. The farmers either have gone out of business or have clung to the wrinkly, fine wool merino type. The raising of sheep from the mutton viewpoint, broadly speaking, never has been attempted, and it seems desirable that it should be.

The New England environment is congenial to sheep. There are great markets at hand and the land is there in abundance. The public has been increasingly educated to the use of lamb and mutton as food; they have ceased to be cheap and now have become a luxury. The problem of winter feed can be met as the farmers have met the problem of the winter maintenance of dairy cows, by the use of silage and hay, and that of the summer feed can be met by forage crops and pasture rotation.

Mr. HAUGEN. Mr. Chairman, I yield 30 minutes to the gentleman from Oklahoma [Mr. MORGAN].

Mr. MORGAN of Oklahoma. Mr. Chairman, we have under consideration the great Agricultural appropriation bill. We have just heard a most eloquent, able, and inspiring address by the gentleman from Ohio [Mr. OVERMYER] on the subject of agricul-

ture. If I observed correctly, however, he did not speak of one thing which I think will be a mighty factor in the future growth and development of this great industry.

In this morning's Washington Post there was an article with this headline: "United States Rolling in Wealth." The tone of the article carried the impression that this wealth came to us as naturally as the ocean billows beat upon our shores. Such is not the case. All this wealth is the product of toil and labor, and effort and energy. To the great industry of agriculture we are indebted for something like one-half of all the wealth produced annually in this country.

The article asserted that within a year the resources of our national banks had increased 20 per cent, that their deposits had increased 25 per cent, and that their loans, within the year, had increased over $900,000,000. I wondered what proportion of those loans had been made in the interest of agriculture. I was interested in knowing how our national banks had used their enlarged resources to promote the prosperity of our farmers and provide them with better credit facilities.

Some people have the idea that farm-credit legislation simply means the passage of an act for the special benefit of the farmers, and that the Nation, at large, is not interested therein. That is a very erroneous and a very narrow conception of the value of better farm-credit facilities. And when the gentleman from Ohio [Mr. OVERMYER] spoke about agriculture in Germany and the strength the industry added to the German Empire he did not mention the fact that adequate credit facilities had been a most potent factor in the expansion of the agricultural interests of Germany. In the credit facilities she has furnished her farmers Germany has led all other nations.

H. R. 10310 (APPENDIX A).

Mr. Chairman, I have introduced a land-credit bill, House bill 10310. In the preparation of this bill I have tried to present a plan of land credit that will meet the demands of agriculture and that will provide a satisfactory land-credit system for the farmers of the United States.

In attempting constructive legislation we should have clearly in our minds what will be required of the governmental instrumentalities we are about to create. I have tried to do this in the preparation of House bill 10310. Our land-credit institutions should be so constructed that they will meet the following five requirements: First, they should furnish an adequate amount of credit for agriculture; second, they should furnish this credit on favorable and satisfactory terms; third, they should furnish this credit at a low rate of interest; fourth, they should provide equal credit facilities throughout the various sections of the country; and fifth, they should furnish this credit at a uniform rate of interest in all the States of the Union.

These are the essential things which should be supplied by any national system of land credit. Any proposed system of land credit which will not meet these five requirements should be condemned. The farmers of the United States will not be satisfied with any system of land credit that does not meet these five requirements.

I wish now to describe briefly the main provisions of House bill 10310 which I have introduced.

SUPERVISORY POWER.

The power of supervision and control is lodged in the Federal farm-loan board, consisting of three persons, to be appointed by the President. Extensive power is given to this board, not only to supervise and regulate but to control the land banks created to operate the system of land credit to be established.

CORPORATIONS CREATED TO OPERATE SYSTEM.

The system of land credit established by this bill will be operated by the following corporations:

1. One central bank, called the united Federal land bank.
2. Twelve Federal land banks, one in each of 12 districts into which the United States shall be divided.
3. One farm-loan association in each county, where any Federal land bank shall make loans, as many district associations in each State as there are congressional districts in each State, and one State farm-loan association in each State.

Mr. SMITH of Minnesota. Mr. Chairman, will the gentleman yield there?

Mr. MORGAN of Oklahoma. I yield for a question.

Mr. SMITH of Minnesota. In just what respect does the gentleman's bill differ from the Moss bill, which the committee is about to report?

Mr. MORGAN of Oklahoma. Well, the Moss bill provides for 12 district banks. It provides for local farm-loan associations. My bill, in addition to providing those institutions, provides and creates a united Federal land bank. That is a central institution controlled by 12 directors, and each one of the Federal land banks elects one of those 12 directors, so that I create a central bank uniting the 12 district banks.

Now, the Moss bill provides, as the gentleman knows, that each one of these 12 district banks shall be liable for the bonds and contracts and liabilities of every other Federal land bank. In reality that bill does not create 12 banks, but 1 bank with 12 divisions. When you make each one of those banks responsible for the debts, liabilities, and contracts of the others, then you really create but one institution. I think it would add very much to the system to create a central institution, without capital stock, as a corporation through which those 12 banks could act in the interest of all.

Mr. SMITH of Minnesota. Just a moment. The gentleman provides for a central institution, and the Moss bill provides for a Federal land board?

Mr. MORGAN of Oklahoma. My bill provides for the central institution and also for the Federal farm loan board as the supervisory power.

Mr. SMITH of Minnesota. Just in what way would the gentleman's central institution idea work out?

Mr. MORGAN of Oklahoma. The united Federal land bank, as its name implies, unites the 12 district Federal land banks. The united Federal land bank will have no capital stock or income. It will be supported by contributions from the 12 district banks. It will make no loans; but all farm loan bonds will be issued in its name for and in behalf of the various Federal land banks. The united Federal land bank will be controlled by 12 directors. Each Federal land bank will appoint one of these directors. Through the united Federal land bank there may be unity of action along many lines for the mutual benefit and profit of the district banks, which means, of course, for the profit and advantage of the farmers who are borrowers. Through this central corporation the district banks may standardize their business methods of all kinds, their system of appraisements, and adopt various methods to eliminate waste and secure the highest efficiency and economy in their operation and administration. The united Federal land bank is given authority, subject to the approval of the Federal farm-loan board, to do three important things:

First. To fix a uniform rate of interest which all the Federal land banks shall charge until otherwise ordered.

Second. To fix a uniform rate of interest all farm-loan bonds shall bear until otherwise ordered.

Third. To fix uniform rates of commission Federal land banks shall pay agents for securing loans or for selling farm-loan bonds.

Fourth. To do other acts which will aid Federal land banks to cooperate in all business matters, which will promote efficiency, economy, safety, and permanency in the institutions themselves, security to investors, better credit facilities to borrowers, or which will make our land-credit institutions more effective instruments in service to the general public.

Mr. COOPER of Wisconsin. Mr. Chairman, will the gentleman yield there?

Mr. MORGAN of Oklahoma. Yes.

Mr. COOPER of Wisconsin. That matter of uniformity of interest rates is a matter that many people have written to me and said to me is of prime importance. Does the gentleman think that his plan, if enacted into law, would insure to the farmers of the country uniformity in the rates of interest?

Mr. MORGAN of Oklahoma. I think so.

Mr. COOPER of Wisconsin. What does the gentleman think of the Moss plan, with respect to uniformity in the rates of interest?

Mr. MORGAN of Oklahoma. So far as the 12 district banks are concerned, they could loan at a uniform rate of interest.

Mr. COOPER of Wisconsin. Then the gentleman thinks that so far as uniformity of interest is concerned, if either plan were enacted, undoubtedly it would secure that?

Mr. MORGAN of Oklahoma. In answering that question it must be remembered that the so-called Moss bill, which is also what is known as the joint committee bill, provides for two kinds of land banks. It creates 12 district banks and authorizes the organization of any number of joint-stock banks. These joint-stock banks are entirely separate and independent institutions. There can not be uniform interest rates throughout the country if the farm loans are made by land credit institutions which are entirely independent of each other. The 12 district banks created by the Moss bill, in my judgment, would provide uniform rates of interest for the loans made by these banks. Under the provisions of this bill these 12 banks are responsible for each other's debts and obligations. Each one of these 12 banks, under the law, is made responsible for the bonds issued by all the other banks. This, I think, would give them prac-

tically equal credit with investors. For instance, if the States of Texas, Oklahoma, Kansas, Nebraska, and North and South Dakota should constitute one Federal land district, the bonds of the Federal land bank of this district would be guaranteed by the other 11 Federal land banks. If the bonds of the Federal land bank of this district are thus guaranteed by all other Federal land banks, I can see no reason why they would not sell as quickly and at as low a rate of interest as would the bonds of any other Federal land bank. Standing alone, these 12 Federal land banks under the Moss bill meet the idea or principle of unity and centralization of the bond-issuing power. But going back to give a direct answer to the question propounded by the gentleman from Wisconsin [Mr. COOPER], the so-called Moss bill would not furnish credit at uniform rates of interest. The joint-stock banks would be entirely independent of the 12 district banks. They would be a law unto themselves. Indeed, going further than this, each joint-stock bank would be a law unto itself. There might be as many different rates of interest at any time as there were joint-stock banks in existence.

So far as the law is concerned there might be as many different rates of interest charged as there were individual borrowers. No two joint-stock banks organized under the provisions of the Moss bill would have precisely the same credit among investors. One of these banks might have the minimum capital of $250,000, another one might have capital of $10,000,000. Evidently the bank with a large capital will have better credit than the bank with a small capital. Having better credit its bonds will sell at a lower rate of interest and consequently it can make loans to farmers at lower rates of interest. This is not all. The location of a joint-stock bank might have much to do with its credit among investors. The bonds issued by joint-stock banks located in a new and undeveloped State would be at a disadvantage in selling in competition with bonds issued by joint-stock banks located near the money centers or near those sections of our country where the bulk of the accumulated capital is to be found. There is another matter of the highest importance. If the Moss bill should be enacted into law it will be a matter entirely of conjecture as to the amount of land-credit business that will be done by the joint-stock bank or the 12 district banks. In my judgment, unless material changes shall be made in this bill, the joint-stock banks will do a very large part of the business. This will be due to the fact that under the Moss bill loans made by the 12 district banks are subject to many restrictions and limitations. In other words, there is a vast amount of "red tape" provided for farmers who borrow through the district banks. Unless these restrictions and limitations are removed, a large number of American farmers will refuse to do business with them. In other words, with all of the restrictions and limitations placed upon borrowers by the district banks they will not provide proper land-credit facilities for the majority of the American farmers. As a result, the farmers in one State who can not on account of these limitations and restrictions borrow money from the district banks will not be able to borrow money from the joint-stock banks of their State at as low a rate of interest as the farmers of other States can borrow from their joint-stock banks.

Mr. MADDEN. Will the gentleman yield?

Mr. MORGAN of Oklahoma. Certainly.

Mr. MADDEN. Does the gentleman think it is any more likely to be able to secure a uniform rate of interest on loans made to farmers than it is to secure a uniform rate of interest on loans made to merchants, manufacturers, and other industrial institutions of the United States? Is there any more reason why it should be so?

Mr. MORGAN of Oklahoma. In the first place I think it is easier to secure uniformity for the farmers in land credit than it would be to secure it for merchants, manufacturers, and other business interests.

Mr. MADDEN. Why?

Mr. HASTINGS. Is not one reason because there is less fluctuation in the value of farm lands?

Mr. MORGAN of Oklahoma. Commercial interest is based on individual credit, on collateral security, and on very many different things, while land credit is based on a security which is uniform and absolutely safe. The bonds of one institution can be made just as secure as those of another, while the note of one man is not as good as that of another and can not be made so. With Government bonds as security one man should be able at the same bank to borrow as cheap as another man borrows with the same security. One bond of the Government is as good as another. So we propose to make one farm-mortgage bond as good as any other such bond.

Mr. MADDEN. I think the gentleman's argument is fallacious in that the security offered by the merchant for a loan is usually a liquid asset which can readily be turned into cash, while the security offered by the farmer is something that is not liquid and can not be turned into cash readily and is a slower credit, and consequently ought to bring a higher rate of interest.

Mr. MORGAN of Oklahoma. I know the gentleman has been a student of this land-credit question, but he overlooks the fact that it is proposed by these bills to make farm mortgages, through the issue of farm-mortgage bonds, as liquid as Government bonds.

Mr. MADDEN. It is proposed to do that, but can you do it?

Mr. MORGAN of Oklahoma. It has been done in a large number of other countries, and what has been done in Germany, in France, and in a great majority of the European nations certainly can be done by this great Nation, for our farmers are the most intelligent and enterprising of any in the world, and we as legislators would hardly admit we can not do what legislators of European countries have done.

Mr. MADDEN. The gentleman would not assume to say that a man who has money to loan should be compelled to loan it at a given rate of interest to a person whose credit is not as good as that of somebody else who may be able to borrow at a lower rate of interest?

Mr. MORGAN of Oklahoma. Certainly not. But we insist that money lenders will not generally discriminate as between borrowers when they present like security.

FEDERAL LAND BANKS.

The bill provides that the United States shall be divided into 12 districts. A Federal land bank is created in each district. Federal land banks have three kinds of capital, namely, operating capital, reserve capital, and guaranty capital.

The operating capital of each Federal land bank shall be $1,000,000, one half of which, known as founders' shares, may be subscribed by private individuals, and the other half, designated as public shares, shall be subscribed by the United States. The United States will receive no dividends upon its stock.

The reserve capital of each Federal land bank shall be equal to at least 5 per cent of its outstanding loans. This is secured by requiring each applicant for a loan to authorize the bank to retain out of the proceeds of his loan an amount equal to 5 per cent of the loan. Whenever a loan is paid in full this stock must be canceled by the bank and the borrower paid in cash the full face value thereof, less, of course, any reductions that may have been made thereon through defaults of other borrowers. Borrowers will, of course, pay interest on the face value of their loans, which will mean that they are paying interest on an amount equal to 5 per cent of their loan, which they have never received. However, to compensate them for this loss they will receive dividends on this stock which may more than compensate them for the loss. The reserve capital stock is not used for an operating fund. It is made a trust fund, placed upon deposit in some bank, safely secured, at interest, which will in itself be available in payment of dividends upon reserve stock.

Finally, every Federal land bank will have guaranty capital. The amount of guaranty capital will depend upon the amount of the loans. It is obtained in this way: Every Federal land bank is required to set aside from such interest payment an amount equal to one-fourth of 1 per cent of the face of the loan. This is continued until the reserve capital, the operating capital, and the guaranty capital of the bank shall equal 10 per cent of the amount of the outstanding loans. The guaranty capital is made a trust fund, to guarantee the payment of the bonds of the bank, and can be used for no other purpose. It is placed on deposit, at interest, in some bank, with adequate security, and is the first and primary fund upon which a bank shall draw to meet a loss through the default of a borrower. The bill requires that the United States shall subscribe $500,000 to the guaranty fund of each Federal land bank. Under the provisions of the bill the United States would subscribe a total of $12,000,000 to the 12 Federal land banks. Six millions would be invested in the operating capital and $6,000,000 in the guaranty capital. In addition to this, should the entire amount of the founders' shares in each bank be not subscribed the United States would subscribe for remainder thereof. However, under the provisions of the bill there is little doubt that private individuals would subscribe for the entire number of founders' shares; as the owners of such stock would have a voice in the management of the bank, the investment would be a safe one, and at least reasonable dividends would be secured. The propriety of using the cash of the Federal Government to

provide capital for the Federal land banks will be discussed fully at some other time.

DEPOSITORIES.

Federal land banks are required to select one or more banks, to be approved by the farm loan board, as depositories in which their funds shall be deposited. Such depositories shall furnish adequate security for the safety of such funds.

AGENCIES.

National and State banks, trust companies, and savings banks are authorized to act as agents of Federal land banks in receiving and transmitting applications for loans, in closing loans, in payment of proceeds to borrowers, and in selling farm-mortgage bonds. All compensation for such service must be paid by the Federal land bank.

Mr. STEAGALL. Is it not true that commercial paper is given by all classes and interests, and money loaned upon all sorts of securities; whereas the loan provided in this bill is limited to one class of securities, and to one class of citizens, and is absolutely uniform, and therefore should there not be uniformity of interest rate?

Mr. MORGAN of Oklahoma. I think so.

Mr. LINDBERGH. I should like to ask whether the uniformity of interest rate applies to time or to territory?

Mr. MORGAN of Oklahoma. To territory.

AMPLE RESERVE TO MEET LOSSES.

In preparing H. R. 10310 every care has been taken to provide ample reserve funds to meet every possible loss through default of annual payments due on interest or principal of loan. This is done through the reserve and guaranty capital of each district bank. The reserve capital of each bank will be 5 per cent of the amount of the loans. This will be contributed by the borrowers. This reserve capital will not be used in making loans. It will be invested in Government bonds or deposited in a bank at interest, with ample security. The fund will be separately managed. It will be a trust fund and under the control of the Federal fiduciary agent, a Government officer. It is a fund created to secure bondholders, and solely for their use and benefit. It is strictly a trust fund, and is safeguarded in every way possible. It is a fund that will increase automatically with the growth in loans, for each borrower contributes 5 per cent of the amount of his loan to the reserve capital. But each bank has another reserve fund. This is the guaranty capital. From the annual interest payment of each borrower one-fourth of 1 per cent on the face of the loan is set apart and placed in the guaranty capital. This is controlled and managed in the same manner as the reserve capital. While one of these funds is denominated the reserve capital and the other the guaranty capital, they are in reality one fund, serve the same purpose, and together constitute a fund which insures the safety, the permanency, and the success of the system of land credit proposed in the bill. It can not be foretold in advance the amount of loans any district bank will make in one year or in any period of years; but automatically the reserve capital will always be equal to 5 per cent of the amount of the loans and the guaranty capital will be the $500,000 contributed by the Government and the annual contributions of borrowers, equal to one-fourth of 1 per cent of the loans. Leaving out altogether the $500,000 contributed by the Government to the guaranty capital of each district bank, which in itself, at 3 per cent interest, would bring each bank annually $15,000 to be used to meet losses, let me illustrate how the provisions of the bill would work. Assuming that a district bank had $100,000,000 in loans, the annual interest charge, at 5 per cent per annum, would be $5,000,000. There is no way to determine what per cent of the annual interest payments would be in default. Suppose, however, 5 per cent of the interest each year would be in default; 5 per cent of $5,000,000, the total interest due on loans of $100,000,000, at 5 per cent, would be $250,000. A district bank with $100,000,000 in loans would have $5,000,000 in reserve capital. Under the terms of the bill this would be invested in Government bonds or deposited in banks, with ample security, at interest. It may be assumed that this fund would bring the bank an income of at least 3 per cent per annum. From its reserve capital of $5,000,000 the bank would have a net income of $150,000 annually. This amount would be equal to 3 per cent of the total interest due—$5,000,000. Thus from the income on its reserve capital alone the district bank could meet an annual loss of 3 per cent of the interest due it. But, under the terms of the bill, from the annual interest payments, one-fourth of 1 per cent annually on the face of each loan is set aside in the guaranty capital. A bank with $100,000,000 in loans would set aside in the guaranty capital $250,000 annually. With loans at 5 per cent the annual interest payments due it would be $5,000,000. Five per cent of this would be $250,000. The annual contributions to the guaranty capital therefore would meet a loss of 5 per cent of the annual interest due the bank on $100,000,000 in loans at 5 per cent interest. Thus a district bank, with $100,000,000 in loans, at 5 per cent interest, without using any of its reserve capital could annually meet defaults of 8 per cent of the interest due it. Three per cent of this would come from the income from interest on its reserve capital and 5 per cent from the annual contributions of one-fourth of 1 per cent on the face of their loans by borrowers. Under the provisions of this bill a district land bank could each year have a total and final loss of 8 per cent of the interest due it and still run indefinitely without in the least impairing its full reserve capital equal to 5 per cent of its loans. We can not assume that all borrowers who make default in the payment of their annual interest, when due, will remain permanently in such default. In the main, defaults in interest payments will be only temporary. If after reasonable time any borrower fails to pay his interest, the bank will institute foreclosure proceedings and enforce payment through the sale of the land. As the land, according to its appraisal value, will be worth double the amount of the loan, it will be rare indeed when there will be any permanent loss to a bank from any loan it has made. In due course the money which may be temporarily taken from the income of reserve capital and from the annual contributions to the guaranty capital to meet defaults in annual interest payments will be restored to these funds.

In the foregoing discussion I have not taken into consideration the $500,000 which the bill provides shall be subscribed by the Federal Government to the guaranty capital of each of the Federal land banks. This amount contributed by the Government at 3 per cent interest would bring an annual income to each bank of $15,000. At 3 per cent interest, compounded semiannually, this $500,000 in 20 years would amount to $903,055; in 36 years it would amount to $1,449,140; and in 50 years it would amount to $2,191,955. This fund would, of course, add to the safety of the farm-mortgage bond and might be important in meeting emergencies. But this $500,000 contributed by the National Government to the guaranty capital of each of these 12 banks would really be insignificant compared with the contributions thereto made annually by the farmers themselves. In other words, under the plan which I have proposed the great bulk of the capital which is to insure the success of our land-credit institutions will, after all, be furnished by the borrowers. The plan which I present is therefore conservative and sound. It is in harmony with a wise public policy and yet provides for sufficient Government aid to insure the success of the system and obtain for the farmers of the United States adequate land credit, at a low rate of interest, on terms and conditions which will be acceptable and satisfactory.

Mr. MADDEN. Does not the gentleman believe that the combination of accumulations he has suggested would force up the interest rate instead of forcing it down?

Mr. MORGAN of Oklahoma. Do you mean the reserve capital and guaranty capital?

Mr. MADDEN. Why, certainly. The more money you have idle the higher the interest rate must be.

Mr. MORGAN of Oklahoma. It would not be idle. It would go into designated depositories, to be used in all other kinds of business, to be placed in banks active in business, or those banks which would use it to help out the people who live in Chicago and other great cities.

Mr. MADDEN. Does anybody get anything for the use of the money from them?

Mr. MORGAN of Oklahoma. These banks would pay interest on the money at the current rate, whatever would be the rate.

Mr. CLINE. Will the gentleman yield?

Mr. MORGAN of Oklahoma. Yes.

Mr. CLINE. Do I understand that the reserve fund is to be a guaranty to secure the farm loan and give character to it?

Mr. MORGAN of Oklahoma. Yes. Now, you may not remember that the Government will not make loans direct to the farmer; we must rely on selling these securities; they must go out into the money markets of the world.

Mr. DAVIS of Texas. Will the gentleman yield?

Mr. MORGAN of Oklahoma. Certainly.

Mr. DAVIS of Texas. Will the gentleman explain why there is any tangible or economic reason that the Government should not do by the farmer as it does by anybody else?

Mr. MORGAN of Oklahoma. It ought to do more for the farmer than anybody else, because the farmer is more helpless in his organization. But the securing of the adequate credit depends upon the absolute security of the bond. It is well known to the students of the subject in this country that in many other countries the farm mortgage bonds sell practically at as low

rate of interest as do Government bonds; and there is absolutely no reason why we can not construct a system of land credits in this country, backed by all the farmers of the Nation, which will put out a bond which will be absolutely as safe as the bonds issued by the Government of the United States.

Mr. PLATT. Will the gentleman yield?

Mr. MORGAN of Oklahoma. I will.

Mr. PLATT. If I understand the gentleman, he would have a reserve fund equal to 10 per cent of the outstanding bonds?

Mr. MORGAN of Oklahoma. Yes.

Mr. PLATT. The gentleman's plan provides for issuing bonds to twenty times the capital of the bank, the same as the Moss bill.

Mr. MORGAN of Oklahoma. I have no limit, so far as any provision in the bill is concerned. I have three kinds of capital stock—operating capital, reserve capital, and guaranty capital. The operating capital of a million dollars in each bank is used in making mortgages as a working fund, the reserve capital is always 5 per cent of the amount of the mortgages made, and next, the 5 per cent bonds. So the security in the working capital and in the reserve capital would automatically always remain at 5 per cent at least of the amount of the mortgages, which would correspond to 20 per cent of the capital you have in your bank.

Mr. PLATT. You would allow the bank to issue bonds to a hundred times its capital?

Mr. MORGAN of Oklahoma. No; I have three kinds of capital, and it might be five hundred times the working capital, but it never could be over five or twenty times the actual capital, including the working capital and the guaranty capital and the reserve capital. The reserve capital is always in a certain ratio to the amount of the bonds issued. In the guaranty capital it gives one-quarter of 1 per cent interest by each borrower, and that is always in ratio to the amount loaned. So automatically you could go on indefinitely and always have the reserve and guaranty capital in proper ratio.

Mr. PLATT. The gentleman's plan is very ingenious, but it seems to me that if he had a reserve capital of $1,000,000 for every ten million outstanding, and no limit on the number of bonds which could be sold, it would use up a good deal of money in reserve.

Mr. MORGAN of Oklahoma. The reserve capital would be on deposit in the various banks where it would be in use just the same as the $5,000,000,000 in the savings bank—used for any purpose; and one thing is that it would always be at the command of these banks, contributed by the farmers of the United States from every section to their credit in the great reserve fund that will make the security they put out as sound and secure as the foundation of the Federal Republic.

Mr. PLATT. I admit that the gentleman's scheme is very ingenious indeed.

Mr. MORGAN of Oklahoma. I accept that as a compliment. It is something to propose even an "ingenious scheme" of land credits. For myself I have no pride of authorship in the provisions of my bill. I have no personal interest in it, but I am glad, through any study and investigation I may make, to contribute something toward providing the farmers of the United States the very best system of land credits than can be devised. I believe, however, that the plan I have presented is more than ingenious. It is safe and sound. The farmers, above all others, are interested in this feature of our land-credit system. If there is any question about the payment of farm-mortgage bonds, the farmers will suffer the most. If there shall be any question about the payment of the farm-mortgage bonds issued, this will inevitably both reduce the amount of credit and increase the rate of interest. But the investors in farm-mortgage bonds will be equally interested. Millions of our citizens will invest in these bonds. The National Government can not afford to put into circulation farm-mortgage bonds to the amount of two or three billions of dollars about the payment of which there can be any question. Whatever other defect or defects there may be in our land-credit systems, if it be sound, if it be safe, it will be a success in the end. If it be unsound, it will be unsafe and can not secure and hold the confidence of the investing public. Farm-mortgage bonds will be held by banks and other financial institutions in large quantities; they will be purchased by persons of moderate means, by wage earners, and by custodians of trust funds. It is not, therefore, going too far to say that the public welfare demands that these farm-mortgage bonds shall not be issued by any bank or institution or under any conditions and circumstances which would permit their payment to be called in question.

Mr. MADDEN. Will the gentleman yield?

Mr. MORGAN of Oklahoma. I will.

Mr. MADDEN. Does the gentleman's bill propose for the Government of the United States to market these bonds?

Mr. MORGAN of Oklahoma. No.

Mr. MADDEN. What does the Banking and Currency Committee of the House think about the gentleman's bill?

Mr. MORGAN of Oklahoma. I do not know whether they have read it, because, I understand, they have up the so-called joint committee bill and have given all their time to that. They have treated my bill the same as all the others.

Mr. MADDEN. Has the gentleman asked for a hearing?

Mr. MORGAN of Oklahoma. I did.

Mr. MADDEN. What did they say?

Mr. MORGAN of Oklahoma. The chairman said he would take the matter up.

Mr. MADDEN. And the gentleman does not expect to get a hearing?

Mr. MORGAN of Oklahoma. I do not.

Mr. MADDEN. Then it is not very likely that the bill will become a law, is it?

Mr. MORGAN of Oklahoma. I shall do the best I can.

Mr. PLATT. Mr. Chairman, will the gentleman yield again?

Mr. MORGAN of Oklahoma. Yes.

Mr. PLATT. Having established a central bank to unite these 12 other banks, would it not be a good plan to cut out the 12 banks and leave the central bank in accordance with the plan of the gentleman from Georgia?

Mr. MORGAN of Oklahoma. I think that would be better, although, as I have studied the question, I think for the purpose of administration in transacting this business there will be some advantage in having the district banks, though I think the number ought to be reduced to five.

Mr. HOWARD. I would like to ask the gentleman a question.

Mr. MORGAN of Oklahoma. I yield.

Mr. HOWARD. I have noticed that the Banking and Currency Committee has been changing its base of operation so fast that it is like some other individuals and we can hardly keep up with them.

Mr. MORGAN of Oklahoma. I hope the gentleman will be brief.

Mr. HOWARD. Yes; and I want to ask this question: Does the gentleman know any more reason for dividing this country up into 12 regions, so far as land credit is concerned, than there is for dividing the solar system up into 12 regions for the study of astronomy?

Mr. MORGAN of Oklahoma. I do not believe that I could answer that question.

Mr. HOWARD. That is this plan.

Mr. MORGAN of Oklahoma. I may be soaring pretty high, but hardly as high as the solar system.

Mr. HOWARD. That is this plan of this joint committee.

Mr. MORGAN of Oklahoma. I think there is some advantage in the distribution of the administrative control of these banks, and when you tie them together by making them responsible for each other's debts and liabilities, you have thereby unified the system and centralized it, and to a large extent it meets with my views, and also with what I understand to be the view of the gentleman from Georgia as to the advantage of a centralized system.

FARM-LOAN ASSOCIATIONS.

Mr. HASTINGS. In what does the gentleman's bill differ from the so-called subcommittee bill, the one the Banking and Currency Committee has been considering, with reference to these local farm-loan associations?

Mr. MORGAN of Oklahoma. Under the subcommittee bill those local associations have capital stock, they make the loans, they have salaried employees, they may make assessments and fines upon members and no borrower can tell what his membership will cost him.

Mr. PLATT. The gentleman is talking about the subcommittee bill of last Congress?

Mr. MORGAN of Oklahoma. I am talking about the joint committee bill. That is what I mean.

It is altogether different under the provisions of my bill. Farm-loan associations are established in each county where loans are made by any Federal land bank. Every borrower by virtue of his loan becomes a member of the association in the county where his land is located. Farm-loan associations are corporations with limited powers. No assessment, fee, fine, or contribution of any kind upon members is permitted. Loan associations do not make loans. They have no funds. They have officers, directors, appraisement committees, but pay no salaries and have no expenses as associations. Of course the Federal land banks would have authority to pay any officer, committee,

or member for any special service rendered. The associations are designed:

First. To act as agencies for Federal land banks in making loans, to aid them in making appraisements, in securing information not only as to the value of lands but as to the character of applicants for loans, to assist in making collections, and to otherwise contribute to the success of the business of the banks.

Second. To constitute a legal and recognized corporation through which members may cooperate for mutual benefit and protection and through which they may act, speak, and be heard upon all matters involving their interests or welfare.

Third. To form a connecting link through which and by which every borrower is in touch with and forms a part of the great national system of land credit to be established by the bill.

Fourth. To form an organization through which a definite, fixed, though small, financial responsibility may be placed upon each borrower for the defaults of other members, first, of his own association, and, second, for members of all other associations in his Federal land-bank district, as a means to strengthen his own credit and secure for himself a loan on the best terms and at lowest rate of interest possible.

Fifth. To be the unit upon which our whole superstructure of land credit shall rest and which shall give it strength, stability, permanency, and success.

DISTRICT AND STATE ASSOCIATIONS.

The local associations are organized into as many district associations as there are congressional districts within the State. The chairmen of the board of directors of local associations constitute the district council of farm-loan associations. Above the district is the State council of farm-loan associations. This is composed of delegates—two in number—elected by each district council. Each State council elects three members of the advisory board of the Federal land bank of the district. This advisory board elects three of the directors of the Federal land bank of the district. The borrowers, through the local associations, the district associations, the State associations, and the advisory boards, are directly represented in the management and control of each Federal land bank, and through these banks they are represented in the control and management of the united Federal land bank. There is thus a complete organization of borrowers. The expense necessary for meetings of the district and State associations and for the advisory boards is provided by the Federal land banks out of the general-expense funds. This expense would be small. Each association would have but one delegate in the district association, and the district associations would have but two delegates each in the State association, and there would be but two members of the advisory board from each State. The district and State associations as well as advisory boards would hold meetings but once each year. In addition to providing a complete organization of borrowers, the district and State associations and the advisory board for each Federal land bank would afford opportunities for the borrowers to consider matters of general interest. These organizations would be valuable as educational forces. Through them borrowers could discuss matters of mutual interest and devise ways and means for the assistance of each other. Through them, too, each Federal land bank may come in personal contact with borrowers by sending officers to attend meetings of district and State associations. The importance of these associations is further seen when it is remembered that under other provisions of the bill the liability of one borrower for another up to the amount of his stock in the Federal land bank applies, first, as between members of the same local assocation; second, as between the borrowers of an association district; third, as between the borrowers of each State; and, fourth, as between all borrowers in the various States included in each Federal land-bank district. Through local associations borrowers may not only assist each other but protect themselves against the defaults of each other. So the district and State organizations will be instrumentalities for both aid and protection. These suggestions will indicate the wisdom of creating not only local associations but also district and State associations, although the local associations do not make loans, have no capital stock, and have no financial transactions.

INTEREST RATE.

Mr. Chairman, I believe the reduction of the rate of interest is the chief object of the proposed land-credit institutions. It would be folly for the National Government to expend large sums annually in supervising the new land-credit institutions which we propose to create if it could not thereby materially reduce the interest charge. I have, therefore, sought in every way possible to present a plan of land credit that would give the lowest rate of interest possible. With this in view I have provided for what some seem to regard as an exeecssive reserve and guaranty capital. It is well settled that the better the security the lower will be the interest. But there are other things which will affect the interest rate. Economy of administration will contribute to a low rate of interest. Excessive administration charges mean higher rates of interest. Statutory regulation is also a means of reducing interest charges. I have, therefore, placed in my bill a provision which limits the total annual charges to borrowers at 5 per cent. This is to include not only annual interest payment, but the annual amortization payment, payment to the guaranty capital, and contributions to the administration expenses. This annual payment is allotted as follows: One-half of 1 per cent on the principal, one-fourth of 1 per cent to the guaranty capital, and one-fourth of 1 per cent to the expense fund. This would leave 4 per cent to meet the interest charge on the farm-mortgage bond. I provide also that farm-mortgage bonds shall not be issued bearing an interest in excess of 4 per cent. I believe that farm-mortgage bonds issued under provision of my bill bearing 4 per cent interest would sell at a premium. I believe that a bond bearing 3½ per cent could be sold at par; but be that as it may, we will have accomplished practically nothing by our new land-credit system unless the farm-mortgage bonds bearing 4 per cent interest can be sold at least at par. I call attention to another important thing bearing upon administration charges. Everyone who has studied the subject will admit that at the beginning the percentage of administration charges based upon the amount of loans will be much larger than it will be in later years, when the institutions have been well established and when the total amount of loans will be much larger. To meet this condition was one object I had in providing that the Federal Government should subscribe $500,000 to the operating capital stock of each of the 12 Federal land banks and upon which no dividends should be paid. This would be loaned on farm mortgages, and at 5 per cent annual interest would bring to each bank an annual income of $25,000. This $25,000 would go a long way toward paying the entire administration expenses of each of these Federal land banks. This would be a donation to the banks. But these banks are public institutions, organized to promote the development of agriculture, our greatest industry, upon which the very life of the Nation depends. Everyone concedes the wisdom, aye, the necessity, of the National Government appropriating annually a large amount of money in supervising and controlling our land-credit institutions. If the Government may wisely expend annually two or three hundred thousand dollars in supervising these institutions, it may also appropriate a small amount of money in a lump sum, in the nature of an endowment, in order that these institutions may not be compelled to charge borrowers excessive interest rates in order to meet at the beginning extraordinary administration charges. On some other occasion I hope to have the opportunity to discuss at some length the "Government-aid" features of H. R. 10310, which I have introduced. The "Government aid" which I propose I believe is modest in amount, and yet I believe it is sufficient to contribute most effectually to the success of the institutions created by the bill.

The CHAIRMAN. The time of the gentleman from Oklahoma has expired.

Mr. MORGAN of Oklahoma. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD, and in that connection to print my bill H. R. 10310.

The CHAIRMAN. Is there objection?

There was no objection.

APPENDIX A.

A bill (H. R. 10310) to create a Federal land credit system, provide credit facilities for farmers, reduce interest rates on farm mortgages, encourage agriculture, promote thrift, provide a market for United States bonds, and for other purposes.

Be it enacted, etc., That the short title of this act shall be "The Federal land credit act."

DEFINITIONS.

SEC. 2. That wherever the word "county" is used in this act it shall be held to include any civil division of a State corresponding to a county. The term "Federal land bank bonds" shall be held to include all bonds secured by farm mortgages or other collateral deposited with a Federal fiduciary agent under the provisions of this act. Wherever the term "first mortgage" is used in this act it shall be held to include any instrument in writing which gives a Federal land bank a first lien upon a farm to secure a loan thereon, together with the notes or other credit instruments secured thereby.

FEDERAL FARM LOAN BOARD.

SEC. 3. That there is hereby created in Washington, D. C., a Federal farm-loan board, which shall be charged with the administration and execution of this act and of all acts supplementary or amendatory thereof.

The Federal farm-loan board shall consist of three members, who shall be appointed by the President of the United States, by and with the advice and consent of the Senate. Before appointing said board the President shall divide continental United States, excluding Alaska,

into three districts, which he shall designate by number. He shall certify said districts to said board, which shall cause the same to be made of record. One member of said board shall be appointed for each of said districts, and the person so appointed shall have been an actual resident of said district at the time of his appointment for more than two years immediately prior thereto. Thereafter not more than one member of said board shall be a resident of any one of said districts. Not more than three of said members shall be appointed from one political party. They shall be citizens of the United States and shall devote their entire time to the business of the Federal farm-loan board and shall each receive an annual salary of $7,500, payable monthly, together with actual necessary traveling expenses.

One member of said board shall be designated by the President to serve for 2 years, one for 4 years, and one for 6 years, and thereafter each member so appointed shall serve for a term of 10 years, unless sooner removed for cause by the President. One of the members shall be designated by the President as the farm-loan commissioner, who shall be the chairman and the active executive officer of said board. Each member of the Federal farm-loan board shall within 15 days after notice of his appointment take and subscribe to the oath of office.

The first meeting of the Federal farm-loan board shall be held in Washington as soon as may be after the passage of this act, at a date and place to be fixed by the chairman of said board.

No member of the Federal farm-loan board shall be an officer or director of any institution, association, or partnership engaged in banking. Before entering upon his duties as a member of the Federal farm-loan board, each member shall certify under cath to the President that he is eligible under this section.

The President shall have the power, by and with the advice and consent of the Senate, to fill any vacancy occurring in the membership of the Federal farm loan board; if such vacancy shall be filled during the recess of the Senate a commission shall be granted, which shall expire 30 days after the Senate convenes.

The Federal farm loan board shall appoint one Federal fiduciary agent, one or more Federal land-bank appraisers for each land-bank district, and as many special appraisers as it shall deem necessary. Federal fiduciary agents and Federal land-bank appraisers and special appraisers appointed under this section shall be public officials and shall have no connection with or interest in any institution, association, or partnership engaged in banking.

The salaries and expenses of the Federal farm loan board and of Federal fiduciary agents and special appraisers authorized under this section shall be paid out of any moneys in the Treasury of the United States not otherwise appropriated. Federal land-bank appraisers shall receive such compensation as the Federal farm loan board shall fix, and shall be paid by the Federal land banks which they serve in such proportion and in such manner as the Federal farm loan board shall order.

The Federal farm-loan board shall be authorized and empowered to employ such attorneys, experts, assistants, clerks, laborers, and other employees as it may deem necessary to conduct the business of said board. All salaries and fees authorized in this section and not otherwise provided for shall be fixed in advance by said board and shall be paid in the same manner as the salaries of the Federal farm-loan board. All such attorneys, experts, assistants, clerks, laborers, and other employees, and all appraisers shall be appointed without regard to the provisions of the act of January 16, 1883 (22 U. S. Stat. L., p. 403), and amendments thereto, or any rule or regulation made in pursuance thereof: *Provided*, That nothing herein shall prevent the President from placing said employees in the classified service.

Every Federal land bank shall semiannually submit to the Federal farm-loan board a schedule showing the salaries or rates of compensation paid to its officers and employees, and said board shall have power to disapprove such schedule, or any item in it, and to alter any or all salaries therein shown.

The Federal farm-loan board shall, from time to time, require examinations and reports of condition of all Federal land banks established under the provisions of this act, and shall publish consolidated statements of the results thereof. It shall cause to be made appraisals of farm lands as provided by this act, and shall prepare and publish amortization tables which shall be used by banks under its supervision.

The Federal farm-loan board shall prescribe a form for the statement of condition of banks under its supervision, which shall be filled out quarterly by each such bank and transmitted to said board.

POWERS OF FEDERAL FARM-LOAN BOARD.

SEC. 4. That the Federal farm-loan board shall have power—

(a) To organize and charter the united Federal land bank, Federal land banks, and national farm-loan associations, subject to the provisions of this act.

(b) To establish, in connection with the united Federal land bank, the rate of interest to be charged by Federal land banks for loans made by them under the provisions of this act and the rate of interest farm-loan bonds shall bear.

(c) To grant or refuse to Federal land banks authority to make any specific issue of farm-loan bonds.

(d) To make rules and regulations respecting the charges made to borrowers on loans under this act for expenses in appraisal, examining title, drawing legal papers, recording, and similar services.

(e) To require reports and statements of condition and to make examinations of all banks or associations doing business under the provisions of this act.

(f) To prescribe the form and terms of farm-loan bonds, and the form, terms, and penal sum of all surety bonds required under this act and of such other surety bonds as they shall deem necessary, such surety bonds to cover financial loss as well as faithful performance of duty.

(g) To exercise such incidental powers as shall be necessary or requisite to fulfill their duties and carry out the purposes of this act.

THE UNITED FEDERAL LAND BANK.

SEC. 5. That the united Federal land bank is hereby created. It shall be located in such State and at such city as shall be determined by the board of directors of such bank, subject to the approval of the Federal farm-loan board. Said bank shall have no capital stock or shareholders and no funds, except such as shall be contributed by Federal land banks. It shall not be conducted for profit. Its chief work shall be to issue Federal farm-loan bonds for and in behalf of Federal land banks, to aid Federal land banks in the sale of their bonds, and to act for such banks, subject to the approval of the Federal farm-loan board, in all matters which will contribute to the unity of such banks, to the standardization of their business methods, to their economical administration, to the strengthening of their credit, or to the success in general of the land-credit system hereby established. The united Federal land bank shall be controlled by a board of 12 directors. Each Federal land bank shall elect 1 of said directors. At the time of his election such director must be a director of the bank by which he is elected. Should a director of the united Federal land bank cease to be a director of the bank by which he was elected, he shall thereby cease to be a director of the united Federal land bank. The terms of office of such directors and the officers of such bank shall be fixed by the Federal farm-loan board. The board of directors of the united Federal land bank shall elect a president, vice president, secretary, and treasurer. Such officers shall be directors of such bank at the time of their election.

The officers of such bank shall give their entire time to the business thereof, and shall receive such compensation as shall be fixed by the Federal farm loan board. The board of directors may employ all the necessary assistants for the proper transaction of the business of such bank and fix their compensation, subject to the approval of the Federal farm loan board. Within 90 days after its organization each Federal land bank, through its board of directors, shall elect one of its directors as a director of the United Federal land bank. Such directors, under a call or notice issued by the farm loan commissioner, shall under their hands forthwith make an organization certificate containing such statements as shall be prescribed by the Federal farm loan board, and file the same with said board, where it shall be preserved and made of record. The certificate shall be acknowledged before the judge of a court of record or a notary public.

Upon duly making and filing such organization certificate the bank shall become, as from the date of the execution of its organization certificate, a body corporate, and as such, and in the name designated in the organization certificate, it shall have power—

First. To adopt and use a corporate seal.

Second. To have succession until it is dissolved by act of Congress or under the provisions of this act.

Third. To make contracts.

Fourth. To sue and be sued, complain and defend, in any court of law or equity, as fully as natural persons.

Fifth. To elect a president and a vice president, appoint a secretary and a treasurer and other officers and employees, define their duties, require bonds of them and fix the penalty thereof; by action of its board of directors dismiss such officers and employees, or any of them, at pleasure and appoint others to fill their places.

Sixth. To prescribe, by its board of directors, subject to the supervision and regulation of the Federal farm loan board, by-laws not inconsistent with law, regulating the manner in which its officers shall be elected or appointed, its property transferred, its general business conducted, and the privileges granted to it by law exercised and enjoyed.

Seventh. To establish a uniform rate of interest which every Federal land bank shall charge upon farm loans for the ensuing year and until otherwise ordered by said bank; to fix a uniform rate of interest which Federal farm-loan bonds issued under the provisions of this act shall bear, and a uniform rate of discount at which such bonds may be sold by any Federal land bank until otherwise changed by said bank, and to fix uniform fees or commissions which Federal land banks shall pay agents for receiving applications for farm loans and services connected therewith and for the sale of farm-loan bonds, all of which shall be subject to the approval of the Federal farm loan board and within the limitation and restrictions of the law.

Eighth. It shall have power, subject to the approval of the Federal farm loan board, to act upon all propositions which will aid the Federal land banks to cooperate in conducting the business which they are authorized by this act to perform, with a view to standardizing business methods, appraisements, bookkeeping, forms, records, and any other things which will contribute to the economical administration of such banks, the welfare of borrowers, the security of investors, and to the prosperity of agriculture.

Ninth. To exercise, by its board of directors or duly authorized officers or agents, subject to law, all such incidental powers as shall be necessary to carry on the business herein described.

The funds necessary for the operation of the United Federal land bank shall be contributed by the Federal land banks in such proportions as shall be fixed by the Federal farm loan board, based upon the amount of loans made by such bank.

FEDERAL LAND BANKS.

SEC. 6. That within 30 days after the passage of this act the Federal farm loan board shall divide the continental United States, excluding Alaska, into 12 districts, which shall be known as Federal land bank districts, and shall be designated by number. Said districts shall be apportionad with due regard to the farm-loan needs of the country, the conveniences of borrowers, and the economical administration of Federal land banks. No such district shall contain a fractional part of any State. Said districts may be changed by an act of Congress.

The Federal farm loan board shall establish in each Federal land-bank district a Federal land bank, with its principal office located in such city within the district as said board shall designate. Each land bank shall include in its title the number of the district in which it is located, as Federal land bank No. 1, Federal land bank No. 2, and so on, and there shall be no other distinguishing feature in the names of Federal land banks.

Each Federal land bank shall be managed by nine directors. Three of these shall be appointed by the Federal farm loan board and shall be known as public directors, three shall be directed by the shareholders of the founders' capital stock and shall be known as founders' directors, and three shall be elected by the advisory council of each Federal land bank and shall be known as borrowers' directors: *Provided*, That borrowers' directors shall be appointed in the first instance by the Federal farm loan board and shall continue in office until their successors shall be elected by the advisory council of each Federal land bank. Not more than one borrowers' director or one public director shall be a resident, when appointed, of any one State, except in case a Federal land-bank district shall contain less than three States.

No person shall be eligible to the office of borrowers' director unless he shall be experienced in practical farming and at the time of his appointment actually engaged in farming operations within the State of which he is a resident. No director of a Federal land bank shall act as an officer, director, or employee of any other bank.

Directors of Federal land banks shall receive, in addition to any compensation otherwise provided, a reasonable allowance for necessary expenses in attending meetings of their respective boards, to be paid by the respective Federal land banks. Any compensation that may be provided by boards of directors of Federal land banks for directors, officers, or employees shall be subject to the approval of the Federal farm-loan board.

When $500,000 shall have been subscribed to the founders' shares of the operating capital stock of a Federal land bank, the Federal farm-loan board shall appoint three of such subscribers to constitute an organization committee, one of whom said board shall designate as

chairman and another as secretary of such committee. The chairman shall call a meeting of the persons whose subscriptions to such stock shall have been accepted by the Federal farm-loan board and give notice to each subscriber by registered letter, addressed to the post office given in making such subscription. Such letter shall be mailed at least 10 days before the time set for such meeting. The chairman and secretary of such organization committee shall act as chairman and secretary, respectively, of the meeting of subscribers to such capital stock. Every subscriber shall have votes in proportion to the number of shares of stock for which he has subscribed. At such meeting the subscribers shall elect three directors of such bank. Within 10 days after the election and appointment of said nine directors they shall meet at such time and place as shall be fixed by the Federal farm-loan board and elect, from their number, a president, vice president, secretary, and treasurer.

The organization committee shall receive such compensation as shall be fixed by the Federal farm-loan board, and the same shall be paid by the Federal land bank organized by it.

That at any time after its organization any person may make application to the Federal farm-loan board to become subscribers to the founders' shares of the operating capital stock of any Federal land bank at not less than the par value thereof in lieu of any portion of such stock held by the United States. Should such application be approved by the Federal farm-loan board the Secretary of the Treasury shall surrender to such bank such portion of its stock as the applicant applied to purchase, on the payment to such bank the price therefor, which shall be approved by the Federal farm-loan board. Thereupon the stock of the United States to the amount so surrendered shall be canceled, reissued, and delivered to such applicant. The said bank shall thereupon pay to the Secretary of the Treasury the par value of said stock. Any premium paid on said stock to said bank shall be placed in the guaranty capital thereof.

Said directors shall, under their hands, forthwith make an organization certificate, which shall specifically state:

First. The name assumed by such bank.

Second. The district within which its operations are to be carried on and the particular city in which its principal office is to be located.

Third. The amount of capital stock and the number of shares into which the same is to be divided.

Fourth The fact that the certificate is made to enable such persons to avail themselves of the advantages of this act.

The organization certificate shall be acknowledged before a judge of some court of record or notary public, and shall be, together with the acknowledgment thereof, authenticated by the seal of such court or notary, transmitted to the farm-loan commissioner, who shall record and carefully preserve the same in his office, where it shall be at all times open to public inspection.

The Federal farm-loan board is authorized to direct such changes in or additions to any such organization certificate as it may deem necessary or expedient.

Upon duly making and filing such organization certificate the bank shall become, as from the date of the execution of its organization certificate, a body corporate, and as such, and in the name designated in the organization certificate, it shall have power—

First. To adopt and use a corporate seal.

Second. To have succession until it is dissolved by act of Congress or under the provisions of this act.

Third. To make contracts.

Fourth. To sue and be sued, complain and defend, in any court of law or equity, as fully as natural persons.

Fifth. To elect or appoint directors, and by its board of directors to elect a president and a vice president, appoint a secretary and a treasurer and other officers and employees, define their duties, require bonds of them and fix the penalty thereof; by action of its board of directors dismiss such officers and employees, or any of them, at pleasure, and appoint others to fill their places.

Sixth. To prescribe, by its board of directors, subject to the supervision and regulation of the Federal farm-loan board, by-laws not inconsistent with law, regulating the manner in which its stock shall be transferred, its directors elected, its officers elected or appointed, its property transferred, its general business conducted, and the privileges granted to it by law exercised and enjoyed.

Seventh. To do such other acts as shall be authorized by law and exercise, by its board of directors or duly authorized officers or agents, subject to law, all such incidental powers as shall be necessary to carry on the business herein described.

POWERS OF FEDERAL LAND BANKS.

SEC. 7. That every Federal land bank shall have power, subject to the limitations and requirements of this act—

First. To issue through the united Federal land bank, subject to the approval of the Federal farm-loan board, and to sell, farm-loan bonds of the kinds authorized in this act, to buy the same for its own account, and to retire the same at or before maturity.

Second. To invest such funds as may be in its possession in the purchase of qualified first mortgages on farm lands situated within the Federal land bank district within which it is organized or for which it is acting.

Third. To receive and to deposit in trust with the Federal fiduciary agent for the district, to be by him held as collateral security for farm loan bonds, first mortgages upon farm land qualified under section 12 of this act, and to collect the dues, interest, amortization installments, and other sums payable under the terms, conditions, and covenants of the mortgages and of the bonds secured thereby.

Fourth. To receive and to set apart for expenses and profits the excess of interest payments on mortgages above the interest payments on farm loan bonds for which said mortgages are held as collateral security.

Fifth. To acquire and dispose of—

(a) Such property, real or personal, as may be necessary or convenient for the transaction of its business, which, however, may be in part leased to others for revenue purposes.

(b) Parcels of land mortgaged to it as security.

(c) Parcels of land acquired in satisfaction of debts or purchased at sales under judgments, decrees, or mortgages held by it. But no such bank shall hold title and possession of any real estate purchased or acquired to secure any debt due to it for a longer period than five years except with the special approval of the Federal farm-loan board in writing.

Sixth. To deposit its securities and its current funds subject to check with its depository or depositories as prescribed by this act, and to receive interest on the same as may be agreed.

Seventh. To buy and sell United States bonds.

RESTRICTIONS ON FEDERAL LAND BANKS.

SEC. 14. That no Federal land bank shall have power—

First. To accept deposits or to transact any banking or other business not expressly authorized by the provisions of this act.

Second. To loan on first mortgage except as provided in this act.

Third. To accept any mortgages on real estate except first mortgages created subject to all limitations imposed by this act.

CAPITAL OF FEDERAL LAND BANKS.

SEC. 8. That every Federal land bank shall have three kinds of capital, namely: Operating capital, reserve capital, and guaranty capital.

First. Every Federal land bank shall have operating capital stock of $1,000,000, which shall be divided into 100,000 shares of $10 each. Fifty thousand shares shall be known and designated as founders' shares and 50,000 shares shall be known and designated as public shares. Founders' shares may be subscribed for by any individual or by the United States. Public shares may be subscribed for only by the United States. The Secretary of the Treasury is hereby authorized and directed for and in behalf of the United States to subscribe for 50,000 public shares in the operating capital stock of every Federal land bank, and pay for the same out of any funds in the Treasury not otherwise appropriated, and there is hereby appropriated $6,000,000 for such purpose.

Within 30 days after organization of the Federal farm-loan board it shall open books of subscription for founders' shares of the operating capital stock of every Federal land bank. If within 90 days thereafter 50,000 shares of such stock shall not have been subscribed, the Secretary of the Treasury, for the United States, shall subscribe for the remainder thereof. He shall pay for the same out of any funds in the Treasury not otherwise appropriated.

No dividends shall be paid upon the public shares of stock owned by the Government of the United States. Dividends upon the founders' shares of stock shall be paid in the same amount as shall be paid upon shares of stock in the reserve capital of each Federal land bank.

The operating capital of any Federal land bank may be increased on petition of its directors and on the approval of the Federal farm loan board: *Provided*, That said board shall not authorize the increase of the operating capital stock of any such bank to an amount that shall be more than one-twentieth of the reserve capital stock of said bank: *Provided further*, That should said board at any time authorize the increase of the operating capital stock of any Federal land bank, the original subscribers to such stock shall have a preferred right to subscribe for any increase in such stock under such rules and regulations as shall be prescribed by said board.

The Federal farm-loan board is authorized to prescribe the times and conditions of the payment of subscriptions to capital stock, to reject any subscription in its discretion, and to require subscribers to furnish adequate security for the payment thereof.

Founders' shares of stock owned by the United States shall be voted by the farm-loan commissioner, as directed by the Federal farm-loan board.

Second. Every Federal land bank shall have a reserve capital equal to at least 5 per cent of its outstanding loans. Every person applying for a loan from any Federal land bank shall also apply for the purchase of stock in said bank in an amount equal to 5 per cent of the amount of his loan. He shall also authorize the bank to retain out of the proceeds of his loan, in full payment for such stock, a sum of money equal to 5 per cent of the amount of the loan granted under said application and shall authorize the bank to cancel such stock on the payment of his loan. The reserve capital stock of every Federal land bank shall be divided into shares of $1 each, which shall not be assigned or hypothecated in any manner whatever. Said stock shall be held by said bank as collateral security for the payment of said loan and for the payment of the loans of others, as provided in this act. When any loan is paid in full, the reserve stock held by the borrower shall be canceled and retired, and the borrower shall be paid the face value thereof. Semiannual dividends shall be paid on reserve capital stock in an amount equal to the semiannual interest rate on the loan of the holder of the stock, which dividend shall be cumulative.

The reserve capital and the guaranty capital of every Federal land bank shall be managed separately and apart from other funds and shall constitute a trust fund for the use and benefit of the owners of Federal land-bank bonds and to secure the payment of such bonds, together with the interest thereon. Should any borrower fail to pay when due the interest on his loan, or the principal thereof, the Federal land bank in which said borrower holds reserve stock may enforce the lien on the reserve capital stock held by such borrower. Should such borrower at any time thereafter meet his obligations to said bank in full, so far as they may be due at any time the said bank shall restore to said borrower such portion of his reserve capital stock which had been used to make good his defaults as aforesaid.

The reserve capital stock held by any borrower in a Federal land bank shall not be utilized to meet the default or defaults of other borrowers until said bank shall have first used its entire guaranty capital stock in making good its obligation due on farm-mortgage bonds.

When any portion of the reserve capital or of the guaranty capital of any Federal land bank has been used to pay the interest or principal on any mortgage or mortgages upon which the borrower or borrowers are in default, and thereafter such borrower or borrowers shall meet such default or defaults, through voluntary payment or foreclosure proceedings, the sum or sums so paid or so recovered shall be credited to the guaranty capital or reserve capital of such bank in proper proportion, and each borrower whose reserve capital stock may have been used in part to meet the original default in such cases shall be given due credit on the reserve capital stock held by him in such bank.

Third. That every Federal land bank shall have guaranty capital as follows:

First. Every Federal land bank shall set aside as a part of its guaranty capital, from the annual interest payment of each borrower, a sum equal to one-fourth of 1 per cent of the amount of each loan until the operating capital, the reserve capital, and the guaranty capital of such bank combined shall be a sum equal to 10 per cent of the outstanding bonds of such bank, and thereafter only when necessary to maintain a like ratio between the outstanding bonds of such bank and the total amount of its operating capital, reserve capital, and guaranty capital.

Second. Six millions of dollars is hereby appropriated, out of any funds not otherwise appropriated, which shall become a part of the guaranty capital of the 12 Federal land banks created by this act, which sum shall be divided equally between said banks. The Secretary of the Treasury is hereby authorized and directed to pay to each Federal land bank $500,000, which shall become a part of the guaranty capital of said bank.

The guaranty capital shall be a trust fund to insure the payment of the farm-mortgage bonds issued by each Federal land bank and for the

use and benefit of owners of such bonds who shall have a first and prior lien thereon over all other creditors of such bank. It shall be deposited in one or more of the depositaries of the Federal land bank, secured by an equal amount of farm-loan bonds or United States bonds, and, as soon thereafter as possible, shall be invested in farm-loan bonds or United States bonds, which shall be deposited for safe-keeping in such way as shall be prescribed by the Federal farm-loan board. The funds constituting the reserve capital of any Federal land bank shall be under the joint control of such bank and the Federal fiduciary agent for such bank.

The guaranty capital of every Federal land bank shall constitute the first and primary fund upon which such bank shall draw to meet the *payments of* any bond or interest thereon issued for it when such payments can not be met through funds otherwise provided herein. After any Federal land bank has exhausted its guaranty capital in the payment of its bonds and interest thereon it may then use its reserve capital to meet any of its obligations due on farm mortgage bonds.

It shall be unlawful for any Federal land bank, or any officer, director, or employee thereof to use or appropriate any part or portion of the funds constituting the reserve capital or the guaranty capital of any Federal land bank for any other purpose than herein provided. It shall be the duty of the Federal land bank board to provide special rules and regulations for safeguarding the reserve capital and the guaranty capital: *Provided*, That when the reserve capital, the guaranty capital, and the operating capital of any Federal land bank combined shall be equal to 10 per cent of the outstanding bonds of any Federal land bank, and so long as the same shall remain equal to 10 per cent of the outstanding bonds of any Federal land bank the annual contributions of borrowers to the guaranty capital shall be placed in the general fund of such bank and be used in the payment of dividends on founders' shares and shares in the reserve capital, or for any other purpose for which such fund may be used under the terms of this act.

FEDERAL LAND BANK ADVISORY BOARDS.

SEC. 9. That an advisory board for each Federal land bank is hereby created. Each State council of Federal land bank associations shall elect three members of such advisory boards. The advisory board of each Federal land bank shall meet annually at the office of the Federal land bank of such district unless otherwise ordered by such bank and the chairman of the board of directors of such bank, or in his absence some other director of such bank shall act as chairman of the advisory council, and said council shall consider matters which have for their object the success of the land-credit system hereby established and the welfare of the borrowers of such banks. It shall be the special duty of members of said advisory council to present matters which are of special interest or importance to the borrowers in the States they represent. The advisory council may be in session three days, unless additional time be granted by the Federal farm loan board. The Federal land bank shall pay the reasonable expenses of the members of such council in coming from their homes to attend such meetings, and also in returning thereto, and in addition thereto shall pay to such members a reasonable per diem for the time occupied in attending such meetings.

Should the advisory council make any recommendation to such bank in the interest of the borrowers from said bank which shall not be followed by said bank, the council, through its vice chairman, may appeal the matter to the Federal farm loan board. If the matter appealed from be within the power of the Federal farm loan board, or something over which it has jurisdiction, it may by order require the Federal land bank to comply with the recommendation of the advisory council.

FEDERAL LAND BANK DEPOSITORIES.

SEC. 10. That prior to commencing business as herein provided every Federal land bank shall select one or more Federal reserve banks, or member banks thereof, or other banks or trust companies, to be approved by the Federal farm loan board, as a depository or depositories, in which the said Federal land bank shall deposit all its funds of every kind and character, and no part or portion of such fund shall be withdrawn from such depository or depositories except on check or order signed by the secretary of such bank and countersigned by the president of such bank: *Provided*, That any funds which are, by the terms of this act, designated as trust funds shall not be withdrawn from any such depository or depositories except on check or order signed by the secretary of such bank and countersigned by both the president of such bank and the Federal fiduciary agent for such Federal land bank district. From time to time additional depositories may be designated on the approval of the Federal farm loan board. Every bank or other institution acting as a depository for the funds of any Federal land bank shall pay interest upon such deposits, payable semiannually, based upon the average daily balances. Every such depository shall secure the deposits of Federal land banks by delivering to such banks United States Government bonds, Federal farm-loan bonds, or other collateral security approved by the Federal farm loan board. Such security in amount shall be such as shall be required by the Federal farm loan board.

BANKS AUTHORIZED AGENCIES OF FEDERAL LAND BANKS.

SEC. 11. That all national banks and all State banks, including trust companies and savings banks, are hereby authorized to act as agencies for Federal land banks in receiving and transmitting applications for loans, in furnishing information as to the value of lands covered by applications for loans or other information relative thereto; to receive from Federal land banks the proceeds of any loan and pay the same to mortgagors or to the order of mortgagors, to sell Federal farm-loan bonds, and to do such other acts as shall be authorized by any Federal land bank, subject to the approval of the Federal farm loan board: *Provided*, That every such bank authorized to act as aforesaid as the agent of any Federal land bank shall furnish such security to the Federal land bank for which it may act as shall be prescribed by the Federal farm loan board.

For services rendered by any bank under the foregoing provisions Federal land banks are authorized to pay to such bank such sum as shall be fixed by the general council of Federal land banks, subject to approval by the Federal farm-loan board.

It shall be unlawful for any director, officer, or employee of any bank to make any charge or to receive or accept any pay whatsoever from any person who is an applicant for a loan from a Federal land bank in securing such loan.

It shall be unlawful for any director, clerk, officer, or employee of any Federal land bank, either directly or indirectly, to secure loans from any Federal land bank, or to be interested financially therein, or to have any interest whatever in any bond or other security issued under the provisions of this act, or to be in any way personally interested in any of the business transactions of any Federal land bank. No bank shall be held responsible for any information he may give to any Federal land bank as to the value of any tract of land upon which an application for loan is pending, unless it shall be shown that such bank did not furnish such information in good faith, but with the intention of defrauding the Federal land bank for which it was furnished.

FEDERAL FARM LOAN ASSOCIATIONS.

SEC. 12. That corporatons to be known as Federal farm-loan associations shall be organized as hereinafter prescribed. When five or more persons in any county shall have secured loans from any Federal land bank, such bank shall appoint three of such persons as directors of the Federal farm loan association of such county. Such directors shall hold their offices until their successors shall be duly elected at any regular meeting of the members of such association. The Federal farm-loan board shall prepare a form of an organization certificate to be used in the incorporation of Federal farm-loan associations. At least two of such forms shall be transmitted to the persons so appointed as directors by the Federal land bank. Such directors shall sign such organization certificate and duly acknowledge the same before a notary public or some other officer duly authorized in such county to administer oaths. Such certificate shall be transmitted to the Federal farm-loan board, and a copy thereof shall be transmitted to the Federal land bank of such district.

If the Federal farm-loan board shall find that such organization certificate shall be duly executed and in proper form it shall approve the same and issue to said association a charter or certificate of its incorporation, and said Federal farm-loan association shall become a corporation as of the date of the acknowledgment of its organization certificate.

Every person who shall obtain a loan from any Federal land bank shall thereby become a member of the Federal farm-loan association of the county in which the land mortgaged to secure such loan shall be located, and in his application for loan he shall accept membership in such association, under the terms and conditions as prescribed in this act. He shall also, in such application, agree to assume all of the responsibilities and liabilities of such membership. He shall be entitled to all the advantages and benefits of membership in such association without the payment of any fee, commission, or assessment of any kind or character, except as provided in this act. His membership in such association shall continue until the payment in full of his loan, at which time his membership therein shall cease.

Federal farm-loan associations shall have no capital stock and shall not be conducted for profit. Their objects shall be to assist in the administration of the system of land credits established by this act, to assist Federal land banks in conducting their business, and to provide an organization through which and by which the members thereof shall cooperate with each other in securing credit, in the payment of their loans, and in other proper lines for their mutual benefit and for the promotion of agricultural development.

The directors elected at the first election of any Federal farm-loan association shall hold their offices for one, two, and three years, respectively. Thereafter directors shall hold office for terms of three years each. The directors shall serve without pay. Any Federal land-bank may, however, employ any director or member of any Federal farm loan association and pay him for such service. One of the directors shall be designated as chairman, one as vice chairman, and one as secretary-treasurer. Such officers shall perform such duties as are customary for such officers to perform and such other duties as may be prescribed by such association.

Every Federal farm-loan association shall adopt by-laws and rules for its government on such form as shall be prepared and approved by the Federal farm loan board.

Every Federal farm-loan association shall appoint one or more appraisement committees consisting of three members, who shall perform such duties in the appraisement of land offered as security for loans in said county as shall be prescribed by the Federal farm loan board.

Federal farm-loan associations shall have power to adopt and use a corporate seal, to have succession until dissolved by act of Congress or under the provisions of this act, to sue and be sued, complain and defend, in any court of law or equity, as fully as natural persons, to do any other act prescribed by law and to make such contracts as may be prescribed by the Federal farm-loan board.

The directors of Federal farm-loan associations shall meet at such time and place as shall be designated by the chairman of the board. A majority of such board shall constitute a quorum for the transaction of such business.

The members of every Federal land-bank association shall meet every three months in regular meeting. Special meetings may be called by the chairman of the board of directors. A majority of such members shall constitute a quorum. The officers of the board of directors shall be the officers of the general assembly of the members of the Federal farm-loan association. In all meetings of Federal farm-loan associations each member thereof shall have one vote.

Until such time as borrowers in any county or parish shall be organized as provided in this section, the individual borrowers in such county shall be regarded as a national farm-loan association, and all the provisions in this act in any way referring to national farm-loan associations shall be held to refer to individual borrowers in any county before organized as herein provided.

Where it shall be determined by any Federal land bank that a county includes a larger area than should be included in a single national farm-loan association, such county may be subdivided into more than one district, and a national farm-loan association may be organized in each of said subdivisions, and each of such subdivisions shall be held to constitute a county so far as the provisions of this act shall relate to the organization and administration of national farm-loan associations and the liabilities of the members thereof.

MUTUAL PROTECTIVE FUND.

SEC. 13. That a separate account shall be kept by every Federal land bank of dividends due to the members of each Federal land-bank association. The dividends due any borrower shall not be paid to him in cash until such dividend shall be an amount equal to 1 per cent of the face value of his loan, but shall be placed to the credit of the member, and also to the credit of such Federal land-bank association, and so remain until the loan of such member shall be paid, unless paid out as herein provided. The amounts so credited shall be known as the mutual protective fund. Such dividends shall draw interest in favor of the member at the annual rate the bank receives thereon from its depository or depositories. Should any member of any Federal land-bank association at any time be in default in the payment of interest due on his loan, he may apply to his association for financial assistance; and should the said association by majority vote of its members act favorably thereon, said association shall direct the Federal land bank holding such loan to pay the interest in default as aforesaid and charge the same to the mutual protective fund of such association.

ASSOCIATION DISTRICTS.

SEC. 14. That every Federal land bank shall divide each State included in the Federal land-bank district in which it is located into as many divisions as there shall be congressional districts in said State at the time of the passage of this act, and said districts shall be known as "association districts." They shall be formed with a view to the convenience of members of Federal land-bank associations and with a view to providing facilities of transportation for such members in attending meetings of the district council of such associations, but no association district shall contain a fractional part of a county. The chairmen of the boards of directors of the Federal land-bank associations within each association district shall constitute the district council of Federal land-bank associations. The district council of each Federal bank association shall meet annually at such time and place as shall be designated by the Federal land bank of the Federal bank district in which such association is located. One of the directors of such Federal land bank shall meet with the district council of Federal land-bank associations and shall act as chairman of such council. Such district council may take under consideration any matter which may aid borrowers in the payment of their obligations to the Federal land bank or that may in any way contribute to the well-being of such borrowers or to the success of the land-credit system established by this act. It shall be the duty of every Federal land bank through the district councils of Federal land-bank associations to render every assistance possible to the borrowers of such bank and to encourage and enable such borrowers to use the system of land credit established by this act for the promotion of agricultural expansion and prosperity and to contribute to the welfare of its borrowers.

The Federal land bank of such district shall pay the chairman of the board of directors of each Federal land-bank association his reasonable expenses in attending such meetings and may also pay him reasonable compensation for the time necessarily occupied. District associations may be in session three days.

STATE COUNCIL OF ASSOCIATIONS.

SEC. 15. That there is hereby established in each State a State council of Federal land bank associations, which shall be composed of two delegates from each district council of Federal land bank associations. State councils shall be held at such time and place as shall be fixed by the Federal land bank of each district. At the annual meeting of the district councils of Federal land bank associations such councils shall each elect two delegates to the State council of the Federal land bank associations of such State. When practicable one of the directors of the Federal land bank of the district shall attend each State council of Federal land bank associations, and when so attending shall act as chairman of said council. It shall be the duty of said chairman to bring before the council such matters as in his judgment will contribute to the success of the land credit system established by this act, that will contribute to the agricultural development of such State, to the prosperity of the borrowers from the Federal land bank, or that will enable such borrowers to meet their obligations to such bank or add to their general welfare. Each State council of Federal land bank associations shall elect two members of the advisory board of each Federal land bank. The Federal land bank shall pay the reasonable expenses of the delegates to the State council of the Federal land bank association and allow them a reasonable compensation for the time occupied in attending the meetings of the said association.

RESPONSIBILITY OF BORROWERS.

SEC. 16. That the responsibility of borrowers from Federal land banks shall be as follows:

First. Every borrower from any Federal land bank shall be held individually responsible, equally and ratably and not one for another, for all contracts, debts, and engagements of every other borrower from said land bank to the amount of his stock in the reserve capital thereof. Such stock shall be held as collateral security for the responsibility herein prescribed: *Provided*, That the responsibility of one borrower for another, as prescribed in this section, shall be limited, restricted, and enforced as hereinafter set forth.

Second. Primarily, the responsibility of one borrower for another or others as set forth in this section shall be held to apply and shall be enforced as follows:

First, as between members of each Federal land bank association;

Second, as between members of Federal land bank associations comprised in each association district;

Third, as between members of Federal land bank associations in each State;

Fourth, as between members of all the Federal land bank associations in each Federal land bank district.

INTEREST ON BONDS AND MORTGAGES.

SEC. 17. That the rate of interest charged by Federal land banks on farm loans shall be uniform throughout the United States. The rate of interest which farm loan bonds bear shall be uniform.

Before any Federal land bank shall make any farm loan the board of directors of the united Federal land bank, with the approval of the Federal farm loan board, shall establish a uniform rate of interest which every Federal land bank shall charge on farm loans until such time as the said board of directors, with the approval of the Federal farm loan board, shall establish a different uniform rate of interest which Federal land banks shall charge upon farm loans. Neither the the board of directors of the united Federal land bank nor the Federal farm loan board shall have power to authorize any Federal land bank to charge a rate of interest on farm loans which in any way varies from the uniform rate charged by other Federal land banks established under the foregoing provisions.

Before the united Federal land bank shall issue any farm loan bond the board of directors thereof, with the approval of the Federal farm loan board, shall establish a uniform rate of interest which all farm mortgage bonds issued for and in behalf of Federal land banks shall bear, until such time as the directors of the united Federal loan bank and said board shall establish another or different rate of interest which farm loan bonds issued by such bank shall bear. Neither the board of directors of the united Federal land bank nor the Federal farm loan board shall have power to authorize any Federal land bank to issue farm loan bonds bearing any other interest rate than the uniform rate established aforesaid. No farm mortgage bond shall bear interest in excess of 4 per cent per annum.

The annual interest charge, including amortization payments, upon any farm loan made by any Federal land bank shall not exceed 5 per cent upon the face of the loan. Interest shall be paid semiannually. From the annual interest payment of every borrower from any Federal land bank, such bank shall set aside an amount equal to at least one-half of 1 per cent of the face of the loan as a payment on the principal, which amount shall be placed in the sinking fund and used as provided in this act.

From the annual interest payment of every borrower from a Federal land bank an amount equal to one-fourth of 1 per cent of the face of the loan shall be placed in the guaranty capital as provided in this act.

From the annual interest payment of every borrower from a Federal land bank an amount equal to one-fourth of 1 per cent of the face of the loan shall be set aside by such bank to be used in the payment of the administration expenses of such bank, in the payment of dividends, and for any other purpose that may be authorized by law.

No Federal land bank shall sell its farm-loan bonds at less than par value unless authorized to do so by the united Federal land bank, with the approval of the Federal farm-loan board.

Should it be necessary at any time, in order to secure the proper sale of farm-loan bonds, that such bonds shall be sold at less than their par value, the united Federal land bank, by its board of directors, may, with the approval of the Federal farm-loan board, establish an uniform rate of discount at which every Federal land bank shall sell farm-loan bonds issued for and in its behalf and thereafter, until otherwise ordered by the united Federal land bank, with the approval of the Federal farm-loan board, every Federal land bank shall sell such bonds so issued for it at the rate of discount so fixed.

SINKING FUND.

SEC. 18. That all amortization payments on the principal of any mortgage shall be set apart into a separate fund, to be known as the sinking fund, and is hereby declared to be a trust fund. The sinking fund shall be used for no purpose except for the payment, redemption, and retirement of the Federal farm-loan bonds issued by Federal land banks. The sinking fund of every Federal land bank shall be deposited in one or more of the depositories thereof, which shall pay interest thereon, payable semiannually, said interest to be paid upon the average daily balances in such fund for the six months immediately preceding the interest payment. Such interest shall be credited to such fund and become a part thereof. Such deposits shall be secured by United States Government bonds or Federal farm-loan bonds equal in amount to the sinking fund on deposit in any such depository.

The Federal farm-loan board shall prescribe rules and regulations which shall control every Federal land bank in its method and manner of selecting Federal farm-loan bonds for retirement or payment.

Every six months every Federal land bank shall call for payment or retirement Federal land-bank bonds equal in amount to the total sinking fund on hand at that time.

FARM-LOAN BONDS.

SEC. 19. That farm-loan bonds shall be issued in the name of the united Federal land bank for and in behalf of the Federal land bank asking for their issue, and the name of such bank shall plainly appear on the face thereof. All farm-loan bonds shall be secured as hereinafter provided in this section, and the facts showing such security shall be clearly stated on the face of said bond.

Farm-loan bonds issued by the united Federal land bank for and in behalf of any Federal land bank shall be secured—

First. By the farm mortgages deposited as collateral security therefor and by the reserve capital, the guaranty capital, and the operating capital of such bank; and the owners of farm-loan bonds issued for and in behalf of any Federal land bank shall have a first and prior lien over all other creditors upon farm mortgages so deposited and, subject to the proviso next following, upon such reserve capital, guaranty capital, and operating capital for the payment of said bonds: *Provided*, That the foregoing provision shall be subject to the right of any Federal land bank to use any part or portion of its reserve capital, guaranty capital, and operating capital, or any other fund or asset it may have, except farm mortgages deposited as collateral security for the payment of any issue of farm-mortgage bonds, to meet the default in the interest payment on the bonds of any other Federal land bank and to meet the obligations, contracts, and debts of any other Federal land bank, in case of the insolvency thereof, as provided hereinafter in this section.

Second. By any other fund, capital, or asset of such Federal land bank in common with the claims of other creditors.

Third. By the reserve capital, the guaranty capital, the operating capital, and other assets of all other Federal land banks; and the owners of farm-loan bonds issued for and in behalf of one Federal land bank shall have a first and prior lien over all other creditors, except the owners of the farm-loan bonds of such banks, upon the operating capital, the reserve capital, and the guaranty of all other Federal land banks for the payment of such bonds.

Fourth. Every Federal land bank shall be primarily liable for farm-loan bonds issued for it and in its behalf and shall also be liable, upon presentation of farm-loan bond coupons, for interest payments due upon any farm-loan bonds issued by other Federal land banks and remaining unpaid in consequence of the default of such other land banks; and every such bank shall likewise be liable for such portion of the principal of farm-loan bonds so issued as shall not be paid after the assets of any such other land banks shall have been liquidated and distributed: *Provided*, That such losses, if any, either of interest or of principal, shall be assessed by the Federal farm-loan board against solvent land banks liable therefor in proportion to the amount of farm-loan bonds which each may have outstanding at the time of such assessment.

In the organization certificate of every Federal land bank the subscribers shall set forth that the liabilities prescribed in this section are fully assumed as one of the conditions upon which said bank shall be organized.

Every Federal land bank before commencing business shall, by appropriate action of its board of directors, in such form as shall be prescribed by the Federal farm-loan board, duly recorded in its minutes, obligate itself to become liable on farm loan bonds as prescribed in this section.

The form of farm-loan bonds issued by a Federal land bank shall include, among other provisions, a copy or synopsis of this section of this act and a statement that the assets of all the Federal land banks are jointly and severally liable for the payment of each bond, and shall further state the physical basis of such bonds in farm lands and such other information as may be prescribed by the Federal farm-loan board.

APPLICATIONS FOR FARM-LOAN BONDS.

SEC. 20. That any Federal land bank which shall have voted to issue farm-loan bonds under this act shall make written application to the Federal farm-loan board, through the Federal fiduciary agent of the district, for approval of such issue. With said application said land bank shall tender to said agent as collateral security first mortgages on farm lands qualified under the provisions of section 12 or section 17 of this act, or United States Government bonds, not less in aggregate amount than the sum of the bonds proposed to be issued. Said bank

shall furnish with such mortgages a schedule containing a description thereof and such further information as may be prescribed by the Federal farm-loan board.

Upon receipt of such application said agent shall verify said schedule and shall transmit said application and said schedule to the Federal farm-loan board, giving such further information pertaining thereto as he may possess. The Federal farm-loan board shall forthwith cause one or more special appraisers to make such investigation and appraisement of the securities tendered as it shall deem wise, and upon receiving a report from said special appraiser or appraisers it shall grant in whole or in part, or reject entirely, such application.

The Federal farm-loan board shall promptly transmit its decision as to any issue of farm-loan bonds to the united Federal land bank, to the land bank applying for the same, and to the Federal fiduciary agent of the district. Said agent shall furnish, in writing, such information regarding any issue of farm-loan bonds as the Federal farm-loan board may at any time require.

ISSUE OF FARM-LOAN BONDS.

SEC. 21. That whenever any Federal fiduciary agent shall receive from the Federal farm-loan board notice that it has approved any issue of farm-loan bonds he shall forthwith take such steps as may be necessary, in accordance with the provisions of this act, to insure the prompt execution of said bonds and the delivery of the same to the land bank applying therefor.

Whenever the Federal farm-loan board shall reject entirely any application for an issue of farm-loan bonds, the first mortgages tendered to the Federal fiduciary agent as collateral security therefor shall be forthwith returned to said land bank by him.

Whenever the Federal farm-loan board shall approve an issue of farm-loan bonds, the Federal fiduciary agent having the custody of the first mortgages and bonds tendered as collateral security for such issue of bonds shall retain in his custody those first mortgages and bonds which are to be held as collateral security, and shall return to the bank owning the same any of said mortgages and bonds which are not to be held by him as collateral security. The land bank which is to issue said farm-loan bonds shall transfer to said Federal fiduciary agent, by assignment in trust, all first mortgages and bonds which are to be held by saidagent as collateral security, said assignment providing for the right of redemption at any time by payment as provided in this act and reserving the right of substitution of other mortgages qualified under section 12 or section 17 of this act. Said mortgages shall be deposited in such deposit vault or bank as the Federal farm-loan board shall approve, subject to the control of said agent and in his name as trustee for the bank issuing the farm-loan bonds and for the prospective holders of said farm-loan bonds.

No mortgage shall be accepted by a Federal fiduciary agent from a Federal land bank as part of an offering to secure an issue of farm-loan bonds, either originally or by substitution, except first mortgages made subject to the conditions prescribed in said sections 12 or 17.

It shall be the duty of each Federal fiduciary agent to see that the farm-loan bonds delivered by him and outstanding do not exceed the amount of collateral security pledged therefor. Such agent may, in his discretion, temporarily accept in place of mortgages withdrawn United States Government bonds, farm-loan bonds, or cash.

The Federal farm-loan board may, at any time, call upon any land bank for additional security to protect the bonds issued by it.

FORM OF FARM-LOAN BONDS.

SEC. 22. That all bonds provided for in this act shall be issued under the authority and by the direction of the Federal farm loan board. They shall be issued in denominations of $25, $50, $100, $500, and $1,000. They shall run for specified minimum and maximum periods, subject to be paid and retired at the option of the land bank at any time after their issue. They shall have interest coupons attached, payable semiannually, and shall be issued in series of not less than $50,000, whose amount and term shall be fixed by the Federal farm loan board. They shall bear a rate of interest not to exceed 4 per cent per annum.

The Federal farm loan board shall prescribe rules and regulations concerning the circumstances and manner in which farm loan bonds shall be paid and retired under the provisions of this act.

Farm loan bonds shall be delivered through the Federal fiduciary agent of the district to the bank applying for the same.

In order to furnish suitably engraved bonds for delivery to Federal land banks and joint-stock land banks, the Comptroller of the Currency shall, under the direction of the Secretary of the Treasury, cause plates and dies to be engraved in the best manner to guard against counterfeits and fraudulent alterations, and shall have printed therefrom and numbered such quantities of such bonds of the denominations of $25, $50, $100, $500, and $1,000 as may be required to supply such land banks. Such bonds shall be in form and tenor as directed by the Federal farm loan board under the provisions of this act, and shall bear the distinctive numbers and names of the several land banks by which they are issued. They may be exchanged into registered bonds of any amount and reexchanged into coupon bonds, at the option of the holder, under rules and regulations to be prescribed by the Federal farm loan board.

When such bonds have been prepared they shall be deposited in the Treasury, or in the subtreasury or mint of the United States nearest the place of business of each land bank, and shall be held for the use of such bank, subject to the order of the farm loan registrar of the district.

The plates and dies to be procured by the Comptroller of the Currency for the printing of such bonds shall remain under his control and direction, and the expenses necessarily incurred in executing the laws relating to the preparation of such bonds and all other expenses incidental to their issue and retirement shall be paid by the land banks. The Federal farm loan board shall levy semiannually against the respective Federal land banks, in proportion to the issue of bonds by each, a sufficient amount to cover such expenses.

The examination of plates, dies, bed pieces, etc., and regulations relating to such examination of plates, dies, etc., of national-bank notes provided for in section 5174, Revised Statutes, are hereby extended to include bonds herein provided for.

Any appropriation heretofore made out of the general fund of the Treasury for engraving plates and dies, for the purchase of distinctive paper, or to cover any other expense in connection with the printing of paper currency, and any distinctive paper that may be on hand at the time of the passage of this act may be used in the discretion of the Secretary of the Treasury for the purposes of this act, and should the appropriations heretofore made be insufficient to meet the requirements of this act, the Secretary is hereby authorized to use so much of any funds in the Treasury not otherwise appropriated as may be required for the purpose of furnishing the bonds aforesaid, adequate reimbursement being duly made therefor under the provisions of this section.

SEC. 23. That the form of farm loan bonds issued under this act shall be prepared by the Federal farm loan board.

Each bond shall contain a certificate in the face thereof, signed by the farm loan commissioner, to the effect that this bond has the approval in form and issue of the Federal farm loan board and is legal and regular in all respects. It shall be signed by the president of the united Federal land bank and attested by its secretary. It shall contain in the face thereof a certificate, in such form as shall be prescribed by the Federal farm loan board, signed by the president of the Federal land bank for which and in whose behalf said bond was issued, showing in effect that such bond was issued for and in behalf of said bank, and the said bank is bound primarily as prescribed by law for the payment thereof.

Each Federal land bank shall be held to be bound in all respects by the acts of its president in signing farm loan bonds as prescribed in the foregoing paragraph and by the acts of the Federal farm loan board in authorizing their issue, and every Federal land bank shall be held to be bound in all respects by the acts of the president of the united Federal land bank in signing farm loan bonds.

There shall appear on the face of each farm loan bond provided in this act the statement that such a bond is not taxable by national, State, or municipal authority.

AMORTIZATION AND INTEREST PAYMENTS.

SEC. 24. That whenever any Federal land bank shall receive any interest, amortization, or other payment upon any first mortgage pledged as collateral security for the issue of farm loan bonds, it shall forthwith notify the Federal fiduciary agent of the items so received. Said agent shall forthwith cause such payment to be duly credited upon the mortgage entitled to such credit. Whenever any such mortgage is paid in full, said agent shall cause the same to be canceled and delivered to the proper land bank for transmission to the original maker thereof, or his heirs, administrators, or assigns.

Upon written application by any Federal land bank to the Federal fiduciary agent, it may be permitted, in the discretion of said agent, to withdraw any mortgages or bonds pledged as collateral security under this act, and to substitute therefor other mortgages or United States Government bonds not less in amount than the mortgages or bonds desired to be withdrawn, such substituted mortgages being qualified under section 12 or section 17 of this act.

Whenever any farm-loan bonds, or coupons, or interest payments of such bonds, are due under their terms, they shall be payable at the land bank by which they were issued, in gold or lawful money, and upon payment shall be duly canceled by said bank. At the discretion of the Federal farm-loan board, payment of any farm-loan bond or coupon or interest payment may, however, be authorized to be made at any Federal land bank or any other bank under rules and regulations to be prescribed by the Federal farm-loan board.

When any Federal land bank shall surrender to the proper Federal fiduciary agent any farm-loan bonds of any series, canceled or uncanceled, said land bank shall be entitled to withdraw first mortgages and bonds pledged as collateral security for any of said series of farm-loan bonds to an amount equal to the farm-loan bonds so surrendered. and it shall be the duty of said agent to permit and direct the delivery of such mortgages and bonds to such land bank.

Interest payments on hypothecated first mortgages shall be at the disposal of the land bank pledging the same, and shall be available for the payment of coupons and the interest of farm-loan bonds as they become due.

Whenever any bond matures, or the interest on any registered bond is due, or the coupon on any coupon bond matures, and the same shall be presented for payment as provided in this act, the full face value thereof shall be paid to the holder.

Amortization or other payments on the principal of first mortgages held as collateral security for the issue of farm-loan bonds shall constitute a trust fund in the hands of the Federal land bank receiving the same, and shall be applied or employed as follows:

(a) To pay off farm-loan bonds issued by said bank as they mature or as they shall be called for payment by any Federal land bank.

(b) To convert said payment into gold or lawful money.

(c) To deposit in the depository or depositories of such bank on interest, subject to the provisions of this act, until the same shall be used in the payment of farm-loan bonds.

Federal land banks, in the order of their applications, shall have a preference over other subscribers in purchasing the whole or any part of an issue of farm-loan bonds.

Every Federal land bank shall notify the Federal fiduciary agent of the disposition of all payments made on the principal of mortgages held as collateral security for an issue of farm-loan bonds, and said agent is authorized. at his discretion, to order any of such payments or the proceeds thereof, wherever deposited or however invested, to be immediately transferred to his account as trustee aforesaid.

SEC. 25. That the board of directors of every Federal farm-loan association shall appoint one or more appraisement committees, consisting of three persons, which committees may be designated by number. Every application for a loan must be accompanied with an appraisement of the land offered as security by one of such appraisement committees.

Said appraisement committee shall examine the land which is offered as security for the desired loan and shall make a detailed written report, signed by all three members, giving the appraisal of said land as determined by them and such other information as may be required by rules and regulations to be prescribed by the Federal farm-loan board.

The written report of said appraisement committee shall be submitted to the Federal land bank, together with the affidavit provided for in this act, and the directors of said land bank shall examine said written report when they pass upon the loan application which it accompanies, but they shall not be bound by said appraisal.

Before any mortgage loan is made by any Federal land bank it shall refer the application, affidavit, and written report of the loan committee to one or more of the land-bank appraisers appointed under the authority of this act, and such appraiser or appraisers shall investigate and make a written report upon the land offered as security for said loan. No such loan shall be made by said land bank unless said written report is favorable.

Whenever any Federal land bank shall desire to issue farm-loan bonds under the provisions of this act, the Federal farm-loan board shall refer the application of such land bank to one or more of the special appraisers appointed under the authority of section 3 of this act. Such special appraiser or appraisers shall make such examination and appraisal of the mortgages offered as collateral security for such bonds as the Federal farm-loan board shall direct, and shall make a written report to said board. No issue of farm-loan bonds shall be authorized unless the Federal farm-loan board shall approve such issue in writing.

Forms for appraisal reports for farm-loan associations and land banks shall be prescribed by the Federal farm-loan board.

Land-bank appraisers and special appraisers shall make such examinations and appraisals and conduct such investigations concerning farm loan bonds and first mortgages as the Federal farm-loan board shall direct.

No borrower under this act shall be eligible as an appraiser under this section, but borrowers may act as members of an appraisal committee in any case where they are not personally interested in the loan under consideration. When any member of an appraisal committee or of a board of directors is interested, directly or indirectly, in a loan, a majority of the board of directors of any farm-loan association shall appoint a substitute to act in his place in passing upon such loan.

RESTRICTIONS ON LOANS BASED ON FIRST MORTGAGES.

SEC. 26. That no Federal land bank organized under this act shall make loans except upon the following terms and conditions:

First. Said loans shall be secured by duly recorded first mortgages on farm land within the land-bank district in which the bank shall be situated.

Second. Every such mortgage shall contain an agreement for the payment of interest and for the payment of a fixed number of semiannual installments sufficient to provide for an agreed rate of interest during the term and for the payment of the principal during and at the end of the term on what is known as the amortization plan.

Third. Every such mortgage shall run for a period of at least 5 years and not exceeding 60 years.

Fourth. Every mortgage loan made under this act, for whatever period, shall provide for its extinguishment, at the option of the borrower, in whole or in part, at any date set for the payment of interest after one year from the date upon which said loan was made, as follows:

(a) By the tender at their face value of farm-loan bonds issued by the land bank holding such mortgage, all unmatured coupons being attached to said bonds.

(b) By advance payments in cash in sums of $25 or any multiple thereof. In such case the Federal land bank receiving such payments shall purchase for its own account, and credit at par upon the mortgage, farm-loan bonds in suitable amounts and of the proper series; said land bank may call, as may be necessary, farm-loan bonds in suitable amounts and of the proper series, and when such calls shall have become effective shall credit such payments on such mortgage.

Fifth. The rate of interest charged for such loans, including the annual amortization payment and all other annual or semiannual charges thereon, shall not exceed 5 per cent per annum.

Sixth. No such loan shall exceed 55 per cent of the value of the land mortgaged, said value to be ascertained by appraisal, as provided in this act.

In making said appraisal the actual earning power of said land shall be a principal factor. A reappraisal may be permitted at any time in the discretion of the Federal land bank, and such additional loan may be granted as such reappraisal will warrant under the provisions of this paragraph. Whenever the amount of the loan applied for exceeds the amount that may be loaned under the appraisal as herein limited, such loan may be granted to the amount permitted under the terms of this paragraph without requiring a new application or appraisal.

Seventh. The amount of loans to any one borrower shall in no case exceed a maximum of $10,000.

Eighth. Every applicant for a loan under the terms of this act shall make application on a form to be perscribed for that purpose by the Federal farm-loan board, and such applicant shall state the objects to which the proceeds of said loan are to be applied and shall afford such other information as may be required.

Ninth. Every borrower shall undertake to pay when due all taxes which may be lawfully assessed against the land mortgaged.

EXEMPTION FROM TAXATION.

SEC. 27. That every Federal land bank and every national farm-loan association, including the capital stock and reserve or surplus therein and the income derived therefrom, shall be exempt from Federal, State, and local taxation, except taxes upon real estate held, purchased, or taken by said bank or association under the provisions of section 11 and section 13 of this act. First mortgages executed to Federal land banks under the provisions of this act, shall be deemed and held to be instrumentalities of the Government of the United States, and as such they and the income derived therefrom shall be exempt from Federal, State, and local taxation.

Farm-loan bonds issued under the provisions of this act and the income derived therefrom shall be exempt from Federal, State, and local taxation.

INVESTMENT IN FARM-LOAN BONDS.

SEC. 28. That farm-loan bonds issued under the provisions of this act by Federal land banks shall be a lawful investment for all fiduciary and trust funds, and may be accepted as security for all public deposits.

Any member bank of the Federal reserve system may buy or sell farm-loan bonds issued under the authority of this act and accept them as collateral security for any loans made.

STATE LEGISLATION.

SEC. 29. That it shall be the duty of the farm loan commissioner to make examination of the laws of every State of the United States and to inform the Federal farm loan board as rapidly as may be whether, in his judgment the laws of each State relating to the conveying and recording of land titles and the foreclosure of mortgages or other instruments securing loans, as well as providing homestead and other exemptions and granting the power to waive such exemptions as respects first mortgages, are such as to assure the holder thereof adequate safeguards against loss in the event of default on loans secured by any such mortgages.

Pending the making of such examination in the case of any State, the Federal farm loan board may declare first mortgages on farm lands situated within such State ineligible as the basis for an issue of farm loan bonds; and if said examination shall show that the laws of any such State afford insufficient protection to the holder of first mortgages of the kinds provided in this act, the said Federal farm loan board may declare said first mortgages on land situated in such State ineligible during the continuance of the laws in question. In making his examination of the laws of the several States and forming his conclusions thereon said farm loan commissioner may call upon the office of the Attorney General of the United States for any needed legal advice or assistance, or may employ special counsel in any State where he considers such action necessary.

At the request of the executive of any State the Federal farm loan board shall prepare a statement setting forth in what respects the requirements of said board can not be complied with under the existing laws of such State.

EXAMINATIONS.

SEC. 30. That the Federal farm loan board shall appoint as many land-bank examiners as in its judgment may be required to make careful examinations of the banks permitted to do business under this act.

Said examiners shall be subject to the same requirements, responsibilities, and penalties as are applicable to national-bank examiners under the national bank act, the Federal reserve act, and other provisions of law. Said examiners shall be required to examine and report the condition of every Federal land bank at least twice each year.

Said examiners shall receive salaries to be fixed by the Federal farm loan board, which shall be paid by the Secretary of the Treasury out of any money in the Treasury not otherwise appropriated.

PENALTIES.

SEC. 31. That any applicant for a loan from a Federal land bank who shall knowingly make any false statements in his application for such loan, and any member of an appraisement committee or any appraiser provided for in this act who shall willfully overvalue any land offered as security for loans under this act shall be deemed guilty of a misdemeanor and shall be imprisoned not exceeding one year or fined not more than $5,000, or both. Any examiner appointed under this act who shall accept a loan or gratuity from any bank examined by him, or from any person connected with any such bank in any capacity, shall be deemed guilty of a misdemeanor and shall be imprisoned not exceeding one year or fined not more than $5,000, or both, and may be fined a further sum equal to the money so loaned or gratuity given, and shall forever thereafter be disqualified from holding office as an examiner under the provisions of this act. No examiner shall perform any other service for compensation while holding such office, for any bank or banking or loan association, or for any person connected therewith in any capacity.

Any person who shall falsely make, forge, or counterfeit, or cause or procure to be falsely made, forged, or counterfeited, or willingly aid or assist in falsely making, forging, or counterfeiting any bond, coupon, or paper in imitation of, or purporting to be in imitation of, the bonds or coupons issued by any Federal land bank, now or hereafter authorized and acting under the laws of the United States; or any person who shall pass, utter, or publish, or attempt to pass, utter, or publish any false, forged, or counterfeited bond, coupon, or paper purporting to be issued by any such bank, knowing the same to be falsely made, forged, or counterfeited; or whoever shall falsely alter, or cause or procure to be falsely altered, or shall willingly aid or assist in falsely altering any such bond, coupon, or paper, or shall pass, utter, or publish as true any falsely altered or spurious bond, coupon, or paper issued, or purporting to have been issued, by any such bank or association, knowing the same to be falsely altered or spurious, shall be deemed guilty of a misdemeanor and shall be fined not exceeding $5,000 or imprisoned not exceeding five years, or both.

Other than the usual salary or director's fee paid to any officer, director, or employee of a national farm-loan association or a Federal land bank, and other than a reasonable fee paid by such association or bank to any officer, director, attorney, or employee for services rendered, no officer, director, attorney, or employee of an association or bank organized under this act shall be a beneficiary of or receive, directly or indirectly, any fee, commission, gift, or other consideration for or in connection with any transaction or business of such association or bank. No bank or association organized under this act shall charge or receive any fee, commission, bonus, gift, or other consideration not herein specifically authorized. No examiner, public or private, shall disclose the names of borrowers to other than the proper officers of a Federal land bank without first having obtained express permission in writing from the farm-loan commissioner or from the board of directors of such bank, except when ordered to do so by a court of competent jurisdiction or by direction of the Congress of the United States, or of either House thereof, or any committee of Congress or of either House duly authorized. Any person violating any provision of this paragraph shall be punished by a fine of not exceeding $5,000 or by imprisonment not exceeding one year, or both.

Any person connected in any capacity with any farm-loan association, Federal land bank, who embezzles, abstracts, or willfully misapplies any moneys, funds, or credits, or who, without authority from the directors, draws any order, assigns any note, bond, draft, mortgage, judgment, or decree, or who makes any false entry in any book, report, or statement of such association or land bank with intent in either case to defraud such institution or any other company, body politic or corporate, or any individual person, or to deceive any officer of a farm-loan association or land bank or any agent appointed to examine into the affairs of any such association or bank, and every person who with like intent aids or abets any officer, clerk, or agent in any violation of this section, shall be deemed guilty of a misdemeanor, and shall be fined not exceeding $5,000 or imprisoned not exceeding five years, or both.

Any person who shall deceive, defraud, or impose upon, or who shall attempt to deceive, defraud, or impose upon, any person, firm, or corporation by making any false pretense or representation regarding the character, issue, security, or terms of any farm-loan bond or coupon issued under the terms of this act; or by falsely pretending or representing that any farm-loan bond or coupon issued under the terms of this act by one class of land banks is a farm-loan bond or coupon issued by another class of banks; or by falsely pretending or representing that any farm-loan bond or coupon issued under the terms of this act, or anything contained in said farm-loan bond or coupon, is anything other than or different from what it purports to be on the face of said bond or coupon shall be deemed guilty of a misdemeanor, and shall be fined not exceeding $5,000 or imprisoned not exceeding five years, or both.

DISSOLUTION AND APPOINTMENT OF RECEIVERS.

SEC. 32. That upon becoming satisfied that any Federal land bank has failed to meet its outstanding obligations of any description whatever when due and is in default, the Federal farm-loan board may forthwith declare such bank insolvent and appoint a receiver, and require of him such bond and security as it deems proper. Such receiver, under the direction of the Federal farm-loan board, shall take possession of the books, records, and assets of every description of such bank, collect all debts, dues, and claims belonging to it, and, with the approval of the Federal farm-loan board, or upon the order of a court of record of competent jurisdiction, may sell or compound all bad or doubtful debts, and, on a like approval or order, may sell all the real and personal property of such bank, on such terms as the Federal farm-loan board or said court shall direct. Such receiver shall pay over all money so collected to the Treasurer of the United States, subject to the order of the Federal farm-loan board, and also make report to said board of all his acts and proceedings.

No national farm-loan association, Federal land bank, or joint stock land bank shall be dissolved without the written consent of the Federal farm-loan board.

ORGANIZATION EXPENSES.

SEC. 33. That the sum of $100,000, or so much thereof as may be necessary, is hereby appropriated, out of any money in the Treasury not otherwise appropriated, to be expended under the direction of the Federal farm-loan board, for the purpose of carrying into effect the provisions of this act.

LIMITATION OF COURT DECISIONS.

SEC. 34. That if any clause, sentence, paragraph, or part of this act shall for any reason be adjudged by any court of competent jurisdiction to be invalid, such judgment shall not affect, impair, or invalidate the remainder of this act, but shall be confined in its operation to the clause, sentence, paragraph, or part thereof directly involved in the controversy in which such judgment shall have been rendered.

REPEALING CLAUSE.

SEC. 35. That all acts or parts of acts inconsistent with this act are hereby repealed, and this act shall take effect upon its passage. The right to amend, alter, or repeal this act is hereby expressly reserved.

Mr. SMITH of Michigan. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD on the subject of gasoline.

The CHAIRMAN. The gentleman from Michigan asks unanimous consent to extend his remarks in the RECORD on the subject of gasoline. Is there objection?

There was no objection.

Mr. HAUGEN. Mr. Chairman I yield 15 minutes to the gentleman from Pennsylvania [Mr. MOORE].

Mr. MOORE of Pennsylvania. Mr. Chairman, I ask the Clerk to read a clipping from the Philadelphia Record, which I send to the desk.

The Clerk read as follows:

SMALL FARMS ALLOTTED—VACANT LOTS ASSOCIATION MAKES FIRST ASSIGNMENT FOR THE SEASON.

The work of assigning garden plats by the Philadelphia Vacant Lots Cultivation Association started yesterday at the Georges Hill farm, Fifty-fourth Street and Susquehanna Avenue. This is one of the largest plats at the disposal of the association, containing 100 gardens of from one-eighth to one-sixth of an acre. The distribution was scheduled to start at 2 o'clock, and before that time many of the former holders of gardens had gathered. Supt. James H. Dix and his assistant, Charles Horn, did not arrive until a little later, and their appearance was a signal for a grand rush to the little car which they use in overseeing the 24 farms of various sizes that are located in all parts of the city.

Italians predominated, and a few men and numbers of women and children made their appearance to represent families. In many cases the mothers carried babies in arms and other members of their families clung to their skirts. The older children often had to be called in as interpreters for their parents, who spoke only their native language.

After their names had been given they were looked up in the index to see how they had done the year before, for only those who had worked before were present yesterday. Next the dollar that pays for seed, preparation of the ground, and fertilizer was taken, and the applicants were handed cards to show their holding and a crop report that is required to be turned in at the end of the season.

After all this had been settled the actual assigning of the plats was made, and until 6 o'clock the two men were kept busy. At present the ground has not been prepared, though fertilizer is now being spread. Each of the families—for the plats are not given to individuals—has a little shanty, in which they keep their tools.

Among those at the Georges Hill farm is one old man of 85 years, a Grand Army of the Republic veteran, and there are a number of other old men and women among the workers. The veteran is one of the best workers on the entire farm and cultivates one of the most beautiful as well as productive gardens throughout the season. In the near future the other plats, mostly in Germantown and West Philadelphia, will be given out.

Mr. MOORE of Pennsylvania. That is what we are doing to catch up on the farming problem in a great city like Philadelphia. In a small way it is helping us to meet the high cost of living.

Mr. Chairman, I desire to speak briefly in behalf of the back to the farms movement in the East. During the discussion of the river and harbor appropriation bill a great deal was said, some of it in bantering mood, much of it seriously, with respect to the development of the Atlantic seaboard by the opening up of certain inland waterways. There is much to be said in behalf of this great waterways movement from the standpoint of preparedness, and there is more to be said from the standpoint of agriculture and commerce. Both are important. The agricultural phase of the question is very important. It is not often discussed, except amongst those who encourage the back to the farms movement in the East or those who suffer hardship and inconvenience in the matter of transportation to the markets.

BEGINNINGS IN THE EAST.

Mr. Chairman, the beginnings of this great country of ours, of course, were along the Atlantic seaboard.

Everyone familiar with our history is proud of the story of the thirteen original States. Our brethren who have gone out of these States into the Middle West, who conquered the mountain fastnesses and carved their way through the Rockies to the Pacific coast, are to be commended for their sturdiness of character and for the perseverance with which they opened up our great new country. Our present status as a Nation is due largely to the onward march and westward ho! of these good, red-blooded sons of the East; they populated and built up the West. [Applause.]

Next to education, the railroads of the country, perhaps, have done as much to make us understand each other as a people and to develop the various States, as any other factor. Without the railroads we would still have the wilderness and it would be relatively impossible, except for the waterway and the wagon road, to have that community of interest on the part of the peoples of the various States that now so happily prevails.

I rejoice in the success of my brother who has gone to the West, and I can even understand why, in the rush of the past fifty-odd years, busy with his own affairs, struggling against new and harsh conditions, he has sometimes forgotten the East or come to regard it as effete; but I do not like him to forget his "mother country," within the United States, nor to yield up any of that pride of national ancestry which it ought to be the pleasure of every citizen to acknowledge.

Our colonial history is rich, and our national history from the beginning at Independence Hall in Philadelphia in 1776 is such as to have made us the envy if not the admired of all the world. It will do us no harm at any time to recall these patriotic beginnings and to imbibe a little of the spirit of the earlier days.

WEST GAINS ON NEW ENGLAND.

We talk sometimes in the East of the "bounding" and "booming West." We honor the men who made it so; we are proud of them, because they sprang from our loins. We know what many men in New England, even those who voted against the river and harbor bill the other day, are sometimes prone not to speak about, that the western tendency has had its effect upon eastern industries; that no longer is New England the dominating manufacturing center of the United States, and that the Western States have begun manufacturing to such an extent that it may be surprising to some of our cultured friends from Massachusetts, although it is still the fact, to know that the population of St. Louis exceeds that of Boston, and that there are more shoes manufactured in St. Louis to-day, out yonder beyond the Mississippi River, than are manufactured in the Hub, up yonder in New England.

It is a fact that some of our New England friends sometimes hesitate to speak about, even if they are informed upon the subject of New England's transportation handicap, that New England—that little section of the country up yonder, which is a mere thumb tack upon the map of the United States—pays two times as much in freight for the coal it uses as is the actual value of the coal at the mines. That is to say, their annual coal bill for running the industries of New England and for keeping warm the hearthstones of the people amounts to $100,000,000 annually, on which the freight charges from the mines of Pennsylvania, Indiana, and Illinois are $70,000,000. In other words, according to the statistics of the Boston Chamber of Commerce, $70,000,000 is paid annually in freight for coal worth $30,000,000 at the mines. Now, I mention these figures because they explain, to a centain extent, why we desire a competitive or relief means of transportation along the Atlantic seaboard. Of course, the use of fuel is important and deals with the industrial side of the question, but think of the vast industries along the Atlantic seaboard which in turn, to a great degree, support the agricultural output of the interior, involving an interchange of commodities that is greater in the United States than elsewhere.

EASTERN LANDS A PLENTY.

It is true that the New England farmer has gradually been passing out, just as the sailing vessel on the high seas has been given over to the steamer, and to the barge that is working inland and at great risk outside—matters of fact with which some of our friends in discussing river and harbor improvements do not sometimes desire to concern themselves.

But there has been a "back-to-the-farm" movement in the East. It has been stirred up in New England and along the Middle States. Land has been plentiful and cheap. Irrigated land—that is to say, land naturally irrigated—has been cheap. Down in the southern tier of States there is land enough to sustain vast armies of men—many of whom are now seeking homes in the arid and semiarid sections of the West. We sometimes think it strange that home seekers should pass by these rich, watered lands of the Eastern States, where markets await them, for the sagebrush territory, which can only be made fertile after much expenditure of money and labor to bring the water to it. If it is due to ignorance of eastern conditions, we can not be blamed for calling attention to it.

Who knows the extent of land along the Atlantic seaboard that is capable of tillage if farmers are interested sufficiently to apply their labor to it? I have some statistics upon this point that are worthy the attention of the committee. The Director

of the Census, Mr. Durand, in 1911, made a calculation with reference to these available eastern lands. Confining his figures to the area of the thirteen original States, Mr. Durand, in a carefully prepared address, said:

The total area of farm land in the thirteen original States in 1850 was 147,000,000 acres, while in 1910 it was only about 10 per cent greater, 161,000,000 acres. The acreage of improved land had increased somewhat more, from 64,000,000 acres in 1850 to 83,000,000 in 1910, or nearly one-third. In the area outside of the thirteen original States, however, acreage of farm land increased from about 146,000,000 acres in 1850 to 713,000,000 in 1910.

There was your western development coming out of the East. While you were developing by leaps and bounds our progress in improving farm land was slow. The figures of the Director of the Census show that in 1910 we had 161,000,000 acres of farm area and only 83,000,000 acres improved. The remainder—nearly half of it—still awaits the hand of the tiller of the soil.

Now, what kind of land is this? It is not sagebrush land—and I am not reflecting on that—but it is land through which streams of water run, where there is a natural irrigation, and where all the farming of the country once was done. Go with me along the streams of the coast, more than 140 of them, running down into the Atlantic Ocean, and I will show you magnificent old homesteads, over in Virginia, along the James, and elsewhere; over yonder on the York, near by the place of the surrender of Cornwallis, with scenery as beautiful as anything to be found in the East, with land as rich as the sun ever shone upon, where only the remnants of colonial residences are left to show that there was a plantation once existing there. And why? Because in those days when the great planters thrived along the seaboard, George Washington being at their head—and he was one of the original farmers of this country, sending to England, by the way, for skilled farm labor—because in those days a man who was picking a home for himself, who was seeking to establish a plantation, selected a site along the line of the waterways. He did not build up on the hilltops; it was too difficult to get water for the family and the stock. He built down in the valley, along the stream. And it is the relic of these old homes that we see to-day. With the advent of the railroad along about 1830——

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. MOORE of Pennsylvania. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Pennsylvania asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

EFFECT OF RAILROADS ON FARMING.

Mr. MOORE of Pennsylvania. In view of the limitation, Mr. Chairman, I shall briefly discuss the effect of the railroads upon the waterways of the country. The waterways were highly appreciated in the olden days and canalization was resorted to all along the seaboard. Some of the Southern States took the lead in opening up these artificial channels. When the superior advantages of the railroad depreciated the value of canals, they also tended to shift the centers of population. In many instances large areas of farm land which had been successfully operated along the water front, were depopulated in the rush to locate along the line of the railroads. The effect upon the old plantations was immediate and the ruins of old homes are now in many instances all that remains in territories that were once alive with agricultural pursuits. It was an evolution which bore heavily against the East and greatly stimulated that movement westward where fortunes were supposed to be made. It is because we have so much arable land in the East still awaiting the tiller of the soil that the statistics to which I have referred and which I can not now enlarge upon, should be submitted for consideration during the discussion of the Agricultural appropriation bill. Bear in mind the importance of water to the soil, compare the natural irrigation of the East with the artificial irrigation of the West, and there is small cause for wonder that the East, with its wonderful markets, cries out for relief from congested railroad conditions, and for the opening up and the connecting of its waterways in order, amongst other things, that they may enable the eastern farmer to get to market.

TREMENDOUS COMMERCE OF THE EAST.

The Director of the Census told us that the railroad mileage in the thirteen original States was only about 23 per cent of the total mileage of the United States. Think of it! The vast products of the East, with more than 55 per cent of the manufactured output of the United States, doing business upon 23 per cent of the railroad mileage of the country. Is it any wonder farms have been idle and the eastern farmer has been crowded out?

It is not that the waterways do not contribute to the relief of this situation, for they do. They do in the transportation of bulky freight, but they are not so connected up as to be of the greatest possible service.

Speaking of the freight conditions serving 45,000,000 people along the Atlantic seaboard and the Gulf, Mr. O. P. Austin, then Chief of the Bureau of Statistics, in 1910 said:

Let us try to state in a single sentence the sums of money being paid for the transportation of freight in the area in question. I have already shown you that the sums paid for railway transportation approximate $700,000,000 per annum and the sums paid on the Atlantic and Gulf frontage $84,000,000. If we apply one-half of the ocean front tonnage freight rate to the 100,000,000 tons handled on the rivers, we should get for that service about $65,000,000; and aggregating these items of $65,000,000 on the rivers, $84,000,000 on the ocean front, and $700,000,000 on the railways, we should get a total of at least $750,000,000 per annum for transportation of merchandise within this territory and along its water front.

Now, let us sum up this attempt to measure the transportation requirements and transportation charges of the area which we are considering—the area stretching from the northern border of Maine to the southern border of Texas. It contains, first, one-half the population of the entire country, 40 per cent of its farms, 35 per cent of its railway mileage, 35 per cent of its public roads; produces 85 per cent of its cotton, 50 per cent of its lumber, 35 per cent of its tobacco, 56 per cent of its pig iron, 54 per cent of its coal, all of its naval stores, all of its phosphates, 58 per cent of its manufactures, and through its ports passes 80 per cent of the value of the foreign commerce of the country; while the estimated value of the property within its borders is, according to the Census Bureau, greater than that of all the remainder of the country. The value of the merchandise originating in its borders is probably $14,000,000,000 per annum, or more than all of the merchandise forming the international commerce of the world. The freight carried upon its rivers is approximately 100,000,000 tons per annum, that along the Atlantic and Gulf coasts approximately 65,000,000 tons, that upon the railways approximately 600,000,000 tons per annum, or, say, in the aggregate 750,000,000 tons, though a part of this, of course, originates in other sections of the country and is transported into or across the territory in question. The sums paid for this transportation, as nearly as we can estimate it, are, for land and water transportation, about $750,000,000, of which approximately 80 per cent is paid to the railways and the remainder about equally divided between the interior and coastwise water carriers.

COMPARATIVE FIGURES AS TO AREA AND COMMERCE.

A table of comparisons supplied by Census Director Durand in 1911 throws an interesting light upon the problem of area in relation to eastern industry and commerce. A careful study of this table evidences the comparative congestion of commerce and industries for the percentage of railroad mileage in the area of the thirteen original States. It evidences the eastern need for transportation facilities that will at least keep it abreast of other sections of the country. Remember that western shipping points like Chicago, St. Louis, or even Seattle have anywhere from 5 to 25 railroads to come and go on. Put those conditions side by side with Boston, for instance, with its one or two lines of railroads, operating largely through the neck of the funnel at New York, and it is not unreasonable that railroad embargoes upon freight such as have been put into effect during the European war pressure should follow. Note also in the statement I am submitting herewith that the thirteen original States have over 59 per cent of the wage earners, who are the farmers' best customers, and that the gross value of the industries is approximately 55 per cent of the total value of the products of the United States.

Comparison of area, population, industries, and commerce of the thirteen original States with those for the United States as a whole, 1910.

Items.	Totals for United States.	The thirteen original States.	
		Amount.	Per cent of total.
Area (square miles)	2,970,000	376,000	12.7
Population	91,972,000	37,311,000	40.5
Urban population	42,623,000	22,052,000	51.8
Land in farms (acres)	873,720,000	161,056,000	18.4
Improved land (acres)	477,448,000	83,089,000	17.4
Value of farm property	$40,838,000,000	$6,588,000,000	16.1
Manufacturing industries (1909):			
Number of wage earners	6,615,000	3,912,000	59.1
Gross value of products	$20,672,000,000	$11,121,000,000	53.3
Value added by manufacture	$8,531,000,000	$4,715,000,000	55.3
Coal production, tons (1909)	411,432,000	249,877,000	60.7
Value of mining products (1902)	$796,826,000	$343,064,000	43.0
Exports of merchandise	$1,745,000,000	[1] $1,018,000,000	58.3
Imports of merchandise	$1,557,000,000	[1] $1,227,000,000	78.8
Tons of water-borne domestic freight	177,520,000	[2] 65,361,000	36.8
Railroad mileage	236,869	54,815	23.1
Tons of freight carried 1 mile by railways	218,802,986,929	[3] 76,003,996,891	34.7
Passengers carried 1 mile by railways	29,109,322,589	[3] 10,576,588,667	36.3

[1] Atlantic coast ports.
[2] Atlantic coast and Gulf ports.
[3] Not including Georgia or a small section of western New York and Pennsylvania.

ARABLE LAND OF THE SOUTHERN STATES.

The opponents of our Eastern waterway improvements are apparently unaware of the great commerce which now finds recourse to these inland streams. The old Chesapeake & Delaware Canal carries a million tons of commerce every year. The Beaufort-Norfolk link, which was severely criticized during the river and harbor discussion, has also been serviceable, as is the Dismal Swamp Canal, which connect the northern and southern waters. All of these waterways are busy carrying lumber, in particular, from the forests of North Carolina and Virginia to the northern markets. Barges, limited to the size of the locks of existing canals, carry a variety of freight. It was estimated before the general upheaval caused by the European war that the difference in carrying a cargo of lumber from North Carolina to Philadelphia was as $2 to $3 per 1,000 feet in favor of an inside waterway as against the ocean voyage. That is a big item to the consumer. In the matter of fertilizer carried from Philadelphia to Wilmington, N. C., it was estimated that the inside water route would cost $1.30 per ton of 2,200 pounds, as against $4.80 per ton of 2,000 pounds by rail; so that the interest of the farmer who lives along the streams that run into the intracoastal waterway is evident. In North and South Carolina, in Georgia, and in Florida, as well as in the States along the northern coast, the farmer is as much interested in transportation and in methods of marketing his products as is his brother in the Middle West or in the extreme South. If he had the waterway routes properly improved, and the motor boat is helping him considerably in this respect, he would find the Eastern farm lands as rich and productive as any under the sun.

GREAT FARM ACREAGE OF VIRGINIA.

As an indication of the availability of farm land still remaining in Virginia, the "Mother of Presidents" and a leader in population and agriculture in the Revolutionary period, I submit the following letter from the Hon. George Ainslie, mayor of Richmond, Va., who has taken a keen interest in this subject:

OFFICE OF THE MAYOR,
City of Richmond, Va., December 18, 1915.

Hon. J. HAMPTON MOORE,
House Office Building, Washington, D. C.

DEAR MR. MOORE: I find upon investigation that I misstated the unused acreage of Virginia, largely on the safe side. I stated that my recollection was that the amount was approximately 6,000,000 acres. To be exact, the amount is 9,926,566. Our figures in this regard, as compiled from the United States census reports by the Southern Settlement & Development Organization of Baltimore, are as follows:

	Acres.
Land area of Virginia	25, 767, 680
Land under cultivation and producing crops	4, 256, 000
Leaving uncultivated	21, 511, 680
Allowing for pasturage	2, 000, 000
There remains unused	19, 511, 680
Allowing for hills and swamps	9, 685, 114
Which leaves unused arable land of	9, 926, 566

Thinking that possibly these figures, taken from Government reports, might be of use to you as showing conditions in this regard in the oldest of American settlements, where the climate is free from extremes and the soil will raise any crop, I am sending them to you in the above form.

Very sincerely, yours, GEORGE AINSLIE.

Mr. HAUGEN. Mr. Chairman, I yield to the gentleman from Minnesota [Mr. LINDBERGH].

Mr. LINDBERGH. Mr. Chairman, I desire to extend my remarks in the RECORD by inserting a letter from the general manager of the Minnesota & International Railway Co., of Brainerd, Minn., who states that his company was criticized on the floor of the House here for a certain matter, and he wishes to have the letter inserted in answer to that criticism.

The CHAIRMAN. Is there objection?

There was no objection.

The following is the letter referred to:

MINNESOTA & INTERNATIONAL RAILWAY CO.,
Brainerd, Minn., February 17, 1916.

Hon. C. A. LINDBERGH,
Member of Congress, Washington, D. C.

DEAR SIR: My attention is called to a letter written Congressman CHIPERFIELD by R. R. Hurlbut, former agent of this company at Laporte, Minn., dated February 1, 1916, which I understand has been inserted in full in the CONGRESSIONAL RECORD and which states that the agent lost his position with the railway company because of his refusal to allow special Indian agents to inspect his station records in connection with their duties in preventing the introduction of liquor into treaty territory.

The statement of the agent that he was discharged for any action of his in connection with that matter is entirely untrue, and his withdrawal from the service of the company was his own voluntary action and not connected with this Indian agent episode in any way, and anyone interested in the matter is entirely welcome to inspect the records of this case at any time. I am surprised that Congressman CHIPERFIELD would use such a letter without first taking the trouble to ascertain, as he could readily have done from the railway company interested, what the real facts were.

Trusting that you will see to it that this letter receives as much recognition in the CONGRESSIONAL RECORD as did the one Congressman CHIPERFIELD introduced, I am,

Yours, very truly, W. H. GEMMELL.

Mr. HAUGEN. I yield to the gentleman from North Dakota [Mr. YOUNG].

Mr. YOUNG of North Dakota. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. HAUGEN. Mr. Chairman, I yield to the gentleman from Illinois [Mr. MANN].

Mr. MANN. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. LEVER. Mr. Chairman, I yield 15 minutes to the gentleman from Georgia [Mr. VINSON].

Mr. VINSON. Mr. Chairman, I desire to make a few observations in regard to rural credits, but before I do so and before I speak in general terms in regard to this subject I want to say that I commend to the careful consideration of every Member of this House the valuable book written by the distinguished gentleman from Oklahoma [Mr. MORGAN] on that subject.

Mr. Chairman, we point with pride to the wealth and prosperity of this country, and the growth of the same has been phenomenal. Since 1850 the population of the United States has more than quadrupled, and there are now more than 100,000,000 people in this country.

During the past 50 years our foreign commerce has grown from $318,000,000 to $4,254,000,000. The national wealth has increased from $7,000,000,000 to $144,000,000,000. The amount of money in circulation has increased from $279,000,000 to $3,419,000,000. The value of our farm property has increased from $4,000,000,000 in 1850 to approximately $44,000,000,000 in 1910.

In 1850 there were only 9,021 miles of railroad in operation in the United States. To-day there are over 260,000 miles. The valued output of factories in 1850 was about $1,000,000,000 and to-day it is over $25,000,000,000.

From whence comes the marvelous growth of this country? It comes, Mr. Chairman, primarily from agriculture, for it is the corner stone of all of our prosperity. If you take away our farms and agriculture and the results of their labor, we would have no leviathans of the sea laden with foreign commerce; we would have no farm property, no railroads, no factories, no cities, and our onward march as a rich and powerful Nation would cease. Our foreign commerce would disappear, our railroad trains would cease to scream along their steel-ribbed ways, and our centers of trade would become waste places.

By helping by adequate legislation to develop fully the growth of agriculture we are lending aid to every business enterprise in the country. The impoverishment of the tillers of the soil necessarily lay its burden upon man in every walk of life. His short crops and low prices are felt in every channel of trade, and the gentle rains from heaven above to the earth beneath, which give life to the growing plants, regulate the money markets of the world. In all the various pursuits of life there can be no higher nor nobler calling than that of cultivating the capacious bosom of mother earth. Nature with all her wealth would be as useless as the burning sands of the Sahara were it not for the toil and labor of him who cultivates the soil, and who, by his enterprise and industry, has converted the solitude of the gigantic forests into the smiling fields and open meadows. The sun that rises and sweeps back the darkness of night and heralds the approach of a new-born day could not warm the earth to a degree to make it produce enough food to satisfy the appetite of mankind and clothe the back of the human family should the farmers of this country refuse to cultivate the soil and husband the results of their labor.

I know, Mr. Chairman, that whenever one discusses farm life and agriculture in any of its various forms he is tempted to drift into tinseled phrases and trite figures of speech at the expense of healthy, wholesome thought. But I shall not consume the short time allotted to me to-day by flights of fancy endeavoring to portray in words the scene of the golden grain as it bends its head and becomes like the ever-flowing waves of the restless sea as it responds to the gentle caress of the summer's wind; nor will I endeavor to describe the beauty of the cotton bloom, nor talk to you of the grand and glorious work of nature as she causes the flourishing corn out yonder in the expanding West to burst forth its silks into rainbow hues, nor picture in words the scene of the fields of cotton as they wave their white banners of peace to the fields of grain, which in turn

wave back their banners of gold; but I shall, Mr. Chairman, in a brief manner call the attention of the House to why I consider it to be of importance that there should be passed at this session of Congress a rural-credit bill with Government aid, extending to the farmers of the country the same opportunity to borrow money at a low rate of interest and for a long period of time as is now enjoyed by other business. Are not the farmers of this country entitled to the same protection in doing business as the followers of any other occupation? There can be no doubt whatever as to this, and there is no doubt in the minds of the men who have studied the question that the farmer is discriminated against.

There is no country in the civilized world so far behind in providing adequate and suitable laws for the operation of rural credit as this one. And in all the examinations one can make he will not find in this civilized world a country more able to provide the necessary institutions and facilities than the United States, and you will never be able to find a group of people who can offer better basis of credit than the American farmer. There is no problem that confronts Congress or the people of this country which is of more importance than establishing some adequate institution by which the farmers may be given the advantage of doing business on the same businesslike methods in obtaining their money as is enjoyed by those engaged in other occupations.

As the strength and the prosperity of the Nation has its origin in the farmer, he is the artery through which flows the lifeblood of the Republic; and as his prosperity in turn affects the prosperity of all the people of the Nation, Congress owes it to all business of the entire country to see that his prosperity is not diminished.

Mr. Chairman, it long ago became apparent to those who studied farm life in America that something was materially wrong, and that the farmers were not receiving at the hands of the Government laws which would enable them to keep pace with the other interests in the country. To my mind the evidence is overwhelming that the present system by which the farmers are forced to obtain their money is wrong, and it can almost be proven to a mathematical certainty that the system by which he is now compelled to obtain his money is working a hardship, impoverishing him, and affecting the prosperity of the Nation.

It will be contended, when the rural credit bill is reported from the Banking and Currency Committee and comes before this House for consideration, by some illustrious Member, that nothing is wrong with the present system and that all the farmers in the country who now have security can obtain credit. I deny the validity of any such contention, for if there is nothing wrong in the present system I ask why the activity of the Southern Commercial Congress? Some years ago that body arranged for a commission of 100 men to go to Europe and to study and investigate the rural-credit system in operation in the different European countries.

If nothing is wrong, what forced the agitation and the activity in the different State banking associations, and the American Bankers' Association? These organizations following in the footsteps of the Southern Commercial Congress, sent to Europe members of their respective organizations to study the problems and to report the finding.

Even the Department of Agriculture of the Government, whose time in the past has been devoted largely to scientific problems, made investigation and gathered valuable information and data on this important subject. Not only has a search for information been made by the Department of Agriculture, but the State Department has become active and requested the ambassadors from this Government serving in different European countries to make investigations of the operation of the rural-credit system in the countries in which they are serving.

If there is nothing wrong with the present system and no relief should be given to the farmers, why the activity of the governors of the different States in one of their annual conventions? So convinced was ex-President Taft that something was materially wrong and changes should be inaugurated and a new system of credit be established exclusively for the aid and benefit of agriculture, that he addressed a communication to the governors of the different States at one of the conventions, urging an investigation on their part. He said:

The 12,000,000 farmers of the United States add each year to the national wealth $8,400,000,000. They are doing this on a borrowed capital of $6,140,000,000. On this sum they pay annually interest charges of $510,000,000. Counting commissions and renewal charges, the interest rate paid by the farmer of this country is averaged at 8½ per cent, as compared to a rate of 4½ to 3½ per cent paid by the farmer, for instance, of France and Germany.

Again, the interest paid by the American farmers is considerably higher than that paid by our industrial corporations, railroads, and municipalities. Yet, I think it will be admitted that the security offered by the farmer in his farm land is quite as sound as that offered by industrial corporations. Why, then, will not the investor furnish the farmer with money at as advantageous rate as he is willing to supply it to the industrial corporations? Oviously, the advantages enjoyed by the industrial corporations lies in the financial machinery at his command, which permits it to place its offer before the investor in a more attractive and more readily negotiable form. The farmer lacks this machinery, and lacking it, he suffers unreasonably.

Mr. SHALLENBERGER. Will the gentleman yield for a question?

Mr. VINSON. With pleasure.

Mr. SHALLENBERGER. Does the system of rural credits that you advocate contemplate operating with the question of personal loans as well as with real estate loans—farm loans?

Mr. VINSON. I am not wedded to any particular bill that has been introduced, but I can not see any reason why Congress should not extend to the farmers the same kind of protection that it gave to the commercial banking institutions in this country. [Applause.]

Mr. SHALLENBERGER. I wanted to ask one other question along that same line, namely, if the gentleman does not believe that if the farmers were accorded the same rules and rights and privileges in the discounting of their paper to the Federal reserve banks as now accorded to other lines of business they could secure about the same rate of interest?

Mr. VINSON. I think you are correct. If the farmers were given the same privileges in borrowing money as is enjoyed by corporations, why, of course, their interest would be lower.

Mr. CLINE. May I ask the gentleman a question?

Mr. VINSON. I have but a few minutes, and it is a big subject.

Mr. CLINE. Can you cover it in that time?

Mr. VINSON. No; I do not believe I can.

Mr. CLINE. Is it not a fact that the difference in the rates of interest as between the farmers and commercial bodies or corporations is largely due to the extent of the loan? The farmer does not loan $500,000 or a million or two million dollars, and the larger the loan the smaller the rate of interest?

Mr. VINSON. No; the gentleman is wrong. It is due to the reason that the banking institutions of the country can not hypothecate the security given by the farmer, which is probably his land, as well as he can the convertible securities of any corporation, such as bonds and stocks.

Mr. CLINE. I wish to call attention to this fact, that in the panic of 1907 short-time farm mortgages were more readily convertible than municipal or corporation bonds, or bonds of corporations in general. That is the experience we had in the West.

Mr. VINSON. I doubt whether the gentleman's statement will bear out the condition all over the country.

Mr. LEVER. If the gentleman from Georgia will permit, it is due to the fact that the farm mortgages in the gentleman's country are more nearly standardized than in any other section of the country.

Mr. VINSON. If the present method by which the farmer is forced to obtain his money is not wrong, and no relief should be given, what induced Congress to send a commission from this House and appropriate $25,000 to defray the expenses, to visit European countries to study rural-credit operations therein? Towering above all other investigations, the International Institute of Agriculture, with headquarters at Rome, Italy, is now sending volumes to this country describing the operation of rural-credit systems in various European countries.

If nothing is wrong and no change needed, why did the two great political parties in 1912, at their conventions, incorporate the following planks on that subject in their party plaforms?

DEMOCRATIC PLATFORM.

RURAL CREDITS.

Of equal importance with the question of currency reform is the question of rural credits or agricultural finance. Therefore, we recommend that an investigation of agricultural credit societies in foreign countries be made, so that it may be ascertained whether a system of rural credits may be devised suitable to conditions in the United States; and we also favor legislation permitting national banks to loan a reasonable proportion of their funds on real-estate security.

REPUBLICAN PLATFORM.

BANKING AND CURRENCY.

It is of great importance to the social and economic welfare of this country that its farmers have facilities for borrowing easily and cheaply the money they need to increase the productivity of their land. It is as important that financial machinery be provided to supply the demand of farmers for credit as it is that the banking and currency systems be reformed in the interest of general business. Therefore, we recommend and urge an authoritative investigation of agricultural credit societies and corporations in other countries and the passage of State and Federal laws for the establishment and capable supervision of organizations having for another purpose the loaning of funds to farmers.

No thoughtful man can for one moment reach but one conclusion, and that is that the present system and the method by

which the farmers of the country are forced to obtain credit, is inadequate and working a hardship on the already heavy-laden shoulders of the farmers of the country, and it is up to Congress to remove the hardship and provide a more modern method by which he may obtain credit.

Mr. Chairman, the greatest asset of the United States to-day is the agricultural possibilities of farm land, and one of the greatest needs of this country is the establishment of some distinct institution designed to aid the farmers in obtaining money at a low rate of interest and on long periods of time to enable them, in the cultivation of their crops, the improvement of their farms, the acquiring of farms, the harvesting, handling, and marketing of their crops.

There are in America over 12,500,000 farmers who own over $44,000,000,000 worth of property, and produce annually over $9,500,000,000 worth of farm products.

At first blush one would readily conclude that the American farmers are in a most prosperous condition, but, sir, you have only to analyze the figures and you will find the reverse. If you divide the total farm worth by the 12,000,000 farmers, the average income would only be $3.332, and divide the annual farm yield and then you will be astonished to know that the American farmer's gross income is only $791 per annum, and out of this sum of money he must support his family, educate his children, pay his interest and taxes, and lay aside for a rainy day.

Mr. KEARNS. Mr. Chairman, will the gentleman yield at that point?

The CHAIRMAN. Does the gentleman from Georgia yield to the gentleman from Ohio?

Mr. VINSON. Yes.

Mr. KEARNS. The gentleman says the average income of the farmer is something like $770?

Mr. VINSON. I said it was $791.

Mr. KEARNS. Has the gentleman taken into consideration the amount of farm products that the farmer's family consumes in a year?

Mr. VINSON. Yes. On the amount of capital that he has invested in his business, and the amount which the products of his labor bring to him, the farmer receives only a gross income of about 2 per cent.

It was a realization of the condition of the American farmer that aroused the interest of the Southern Commercial Congress, the Department of Agriculture, and the Department of State, and Congress at last awoke from its slumbers and concluded that some method of helping the farmer to solve his problem to enhance his financial well-being and to increase his contribution to the welfare of the Nation must be provided by law.

Never but once in the history of the entire Government has the farmer been the beneficiary at the hands of the Government, and that was in the acquisition of the lands he cultivates.

In ancient Rome the division of public lands was accomplished by riotous epochs of the Gracchi, and in England one-fourth of all the arable lands were inclosed during the last 200 years and became the property of the individual landlords. In France the Revolutionary Assembly of 1789 confiscated the immense landed possessions of the Catholic Church and sold them in lots of 2 or 3 acres for nominal sums to the peasants who had for so many years cultivated them for their ecclesiastical landlords; but in America none of the disagreeable features appeared, for the United States by its preemption laws of 1801 to 1862 allowed the land to be acquired for nothing.

The American farmers are not asking the Government by this legislation or any legislation that they have ever advocated gratuity at the hands of Congress. But they are entitled to a square deal and fair play, and so help me, God, as long as I am a Member of this body I will fight to see that they obtain it. They have security to offer, and they are asking the opportunity of offering the security which they possess as a collateral under a rural-credit system of obtaining money. We all know there must be some pledge given to the lender before money will be advanced, and what better basis for credit could any borrower offer than land. The farm property itself can be pledged to advantage. If the farm property can be pledged to advantage in time of need without months of delay, without great cost for negotiating loans, without having to pay such high and outrageous rates of interest, with the privilege of paying off the debt at the first opportunity, it will be of great advantage to the people of the United States as a whole, for it truly follows, as does the night follow the day, that the impoverishment of the farmer means the impoverishment of all.

Mr. Chairman, during the days of Washington and Jefferson ninty-six out of every one hundred people in the country were engaged in agriculture, but to-day only fifty-two out of every one hundred are so engaged. There must be some reason for this. Why has such a large percentage of the people turned away from the farm to earn their living?

From 1899 to 1909 our urban population increased 34 per cent and our rural population during that period only increased 11 per cent. In our three largest cities—New York, Chicago, and Philadelphia—10 per cent of the population of this country reside and 25 per cent of the rest of the citizens of this country reside in cities with a population of over 100,000.

We have all heard the hue and cry that has been raised repeatedly in this country that the farms are becoming depopulated, and we have read many interesting articles in magazines and periodicals entitled "Back to the farm." Why has not the farm kept pace with the cities in the increased population? Why have the people turned their face toward the city?

I shall not endeavor to enumerate all the reasons which, to my mind, have caused this state of affairs to exist, but I do know that the lack of credit has been one of the things that has stagnated farm life.

Another reason that has caused this condition to exist has been that the farmers only get approximately 35 cents out of every dollar that the consumer spends for the products of his labor, and this has made farming one of the most unremunerative callings.

To my mind the lack of credit and the failure to receive a just compensation for the products of his labor has done more to depopulate the farms of the country than anything else.

Mr. Chairman, the American farmers have been discriminated against in a most outrageous manner in obtaining credit. Credit is an instrument of great protective power. Without credit our industrial and commercial development could never have made the wonderful strides that they have. The sole object of rural-credit legislation is to place in the hands of agriculture a modern method of obtaining credit. In other words, it will enable the farmer to borrow money on the security of his land at approximately the rate first-class business concerns can borrow money on convertible security. And this is nothing but right and fair. As it is to-day the individual farmer is largely at the mercy of the local money lenders. He must pay what is demanded, and he comes very near paying from 10 to 20 per cent on all the money he borrows.

There are in the United States 27,000 banks, and according to the figures submitted by the Comptroller of the Currency for 1914, these 27,000 banks have in resources $26,971,398,030.96. They have $2,132,074,073 capital stock. They have $2,276,517,370 in surplus and undivided profits. They have in loans and discounts and investments in stocks and bonds $20,873,281,196. These banks have but $2,132,074,073 in capital, and on this capital they have extended in loans and investment, in stock and bonds, credit to the amount of $20,873,281,196. The banks, as we all know, own the capital, but the credit power of the bank really belongs to the public, the depositors.

We speak of banks as cash institutions, on the contrary they are credit institutions. They extend $10 worth of credit for every dollar in capital that they have. And from an examination of the report of the Comptroller of the Currency it disclosed that the banks have loaned on farm land only $542,115,491.

In the report of the Secretary of Agriculture for the year 1914, it is estimated that the State, private, and savings banks throughout this country have loaned on what is known as "short-time loans" to farmers approximately $1,000,000,000, and that the national banks have loaned to farmers on "short-time loans" approximately $750,000,000; therefore on short-term loans the farmers of the country have obtained from our credit institutions about $1,750,000,000, and have, as I have already stated, obtained credit from the banks, with their farm land as collateral, $542,115,491, making in all a total loan to the farmers of this country by the banks, approximately $2,292,115,491, and the total loans of banks in accordance with reports of the Comptroller of Currency for 1914, amounts to $20,873,282,169.

In numbers, according to the last census, our farmers of America constitutes one-third of our population, but banking institutions of this country have extended to them but one-ninth of the credit of the country. On the amount of loans made by the banks in this country 2½ per cent of their loans and investments are on farm-mortgage security. Ninety-seven and one-half per cent of the loans made by the banks of this country are upon security other than farm lands. In other words, the banks in this country invest $97.50 in stock and bonds and other forms of security for every $2.50 invested in farm lands. The farm land of this country constitutes one-fourth of the wealth of the Nation, but receives from our banking institutions but one-fortieth of the credit.

It is pertinent, Mr. Chairman, to make inquiry to ascertain what favoritism has been extended to railroads and manufacturing enterprises by the banking institutions of this country.

The banks of this country, according to statistics that I have been able to investigate, have made investment in railroad bonds to the amount of $1,675,303,719, and in railroad stock $75,437,000, making a total investment on railroad stocks and bonds of $1,748,739,728. In other words, the banking institutions of the country have extended credit to the amount of $1,748,739,728 more to the railroad companies than to the farmers.

The railroads are valued at approximately $16,000,000,000; the farms are valued, as I have already stated, at approximately $44,000,000,000. The railroads give employment to about 2,500,000 people; the farms of America give employment to approximately 12,500,000. There are in this country approximately 10,000,000 supported by the railroads, and there are over 45,000,000 supported by the farms.

The banks have actually invested in railroad stocks and bonds more than three times the amount loaned to farmers, with their land as collateral. They have only loaned to the farmers, with their land as collateral, $542,115,491.

Let us see what the banks are doing toward extending credit to the manufacturing enterprises of this country. Manufacturing is the only other industry that compares with agriculture in the amount of wealth annually produced and that industry has access to a source of credit, because the security that they offer consists of stocks and bonds, which are sometimes "watered."

Manufacturing concerns own large corporations, and the value in 1914 of the capital stock of manufacturing concerns was over $64,000,000,000, and they had issued over $37,000,000,000 in bonds and other forms of indebtedness, giving to this business over $101,000,000,000 in stocks and bonds and other forms of security.

The banks of the country have loaned on stocks and bonds as security the enormous sum of $9,712,000,000, and on farms they have loaned but the sum of $541,115,491—over 49½ per cent in stocks and bonds, and 2½ per cent in farm mortgages. In other words, the banking institutions of the country have extended credit to the amount of $9,169,884,519 more to the corporations than to the farmers. One-half of the entire credit power of the banks is extended to corporations.

Has not the farmer a right to claim that the banking institutions have discriminated against him, and is it not conclusive evidence that the banks do not extend to the farmer the credit to which he is entitled? This, therefore, makes it clear to my mind that it is necessary to inaugurate a new system of credit to meet the urgent demands of the farmer.

Not only have the banking institutions of the country been guilty of discrimination against the farmer in obtaining credit, but in the establishment of the national banking system of this country farm loan was outlawed by the Federal enactment as a class of security upon which loans should not be negotiated. Yet it must be admitted that the safest and highest class of gilt-edged securities in the Nation to-day is its improved farm lands, upon which the Government and all other industries of the Nation must depend for support and progress.

Congress has also discriminated in its appropriations. We appropriated for our Navy approximately $147,000,000; to our Army, $104,000,000; to our pensions, $162,000,000; and to the Department of Agriculture the sum of $30,000,000, which appropriation is subdivided into 20 or more classes. The amount appropriated for agriculture in proportion to the number of people engaged in that occupation amounts to just about 40 cents for the benefit of the head of each rural family, while the appropriation to the Army amounts to more than $2,000 per capita.

Now, Mr. Chairman, turn to the subject of taxation; for if there is one thing that is as sure as death in this country it is taxes. The valuation of property in 1912 subject to an ad valorem taxation amounted to $69,452,936,104. Of this amount $51,854,009,436 consisted of real estate. Three-fourths of the burden of our direct taxes for the support of the State, the county, the city, and the town falls upon the burden of real estate. The largest item in the farmer's budget of wealth is his real estate.

It is impossible for the owner of real estate to escape the burden of taxes, while the banks, the corporations, the railroads, with their different securities, are able oftentimes to dodge the tax collector. You find the farmer paying an enormous rate of interest, deprived of the advantage of obtaining credit on the same basis that other business in the country enjoys, and at the same time his entire property being subject to taxes, as it is visible to the ever-seeing eye of the tax collector.

In view of the figures above given, can any reasonable man claim that the farmer is not discriminated against. He does not enjoy the same privilege of offering as collateral to the banking institutions of the country his security as is enjoyed by the railroad, the corporations, and manufacturing enterprises. He is subjected to hardship, inconvenience, and high rate of interest to obtain his money, while those engaged in other business are not forced to encounter the obstacles that the farmer constantly has to surmount to obtain credit.

As I have stated, he yields annually by the toil of himself and his family, and produces oftentime in a mortgaged crop, over $9,500,000,000 worth of wealth; he owns, in round numbers, approximately $44,000,000,000 worth of farm property, yet with all of this accumulated wealth he can not obtain in the money markets of this country money at the same rate of interest as is enjoyed by others.

I respectfully inquire, When will this discrimination cease? Why should fish be made of one and fowl of another? Is it not shortsighted on the part of the banking institutions of this country to continue this discrimination, when the banker should know that the money he has loaned to the corporations, that the money he has loaned to the railroads, the money he has loaned on city and urban property, will shrink in valuation if the farmer becomes impoverished?

Has not the time arrived when the American farmers who follow the noblest of all occupations, who bear the hardships incident to farm life, who are confronted with the uncertain conditions of weather, the fluctuating prices of his commodity, and who, year by year, produce such wealth to the country, should be given a modern system whereby he can obtain money on a long period of time and at a low rate of interest, which is absolutely essential to his continued prosperity?

Mr. Chairman, while I have talked on rural credit in a general way and pointed out why, in my opinion, legislation along this line should be enacted and have called attention to the manner in which the farmers of the country are discriminated against in obtaining credit, it is important to analyze the bill introduced by the gentleman from Virginia [Mr. GLASS], which, in all probability, will be reported from the Banking and Currency Committee for consideration by this House.

The administration of the proposed law would be under a newly created board, known as the Federal farm-loan board, to be established in Washington and to consist of five members named by the President, with the advice and consent of the Senate. Not more than three would be members of the same political party. The members are to devote their whole time to the business of the board and are to receive salaries of $12,000 a year and traveling expense. The term of each member would be 10 years. Large powers would be granted and ample provision made for the necessary force of attorneys, experts, assistants, clerks, laborers, and other employees, and for registrars and appraisers. The President would be given discretion, but would not be required to put these employees under the classified service.

The Federal farm-loan board is to divide continental United States, excluding Alaska, into 12 Federal land-bank districts, apportioned with due regard to the farm-loan needs of the country. They may be readjusted from time to time, and their number may be increased by the board. In no case, it is prescribed, shall a Federal land bank be established with less than $500,000 capital.

In each Federal land-bank district a Federal land bank is to be established, which may establish, subject to approval of the board, branches within the land-bank district. The board of directors of every Federal land bank, apart from the temporary organization, is to consist of nine members, each holding office three years, six to be local directors and to represent national farm-loan associations. The remaining three are to be known as district directors, appointed by the Federal farm-loan board.

Section 5 deals with the capital stock of Federal land banks. Every Federal land bank shall have before beginning business a subscribed capital of not less than $500,000. Shares are $10 each. If within 90 days after opening the books any part of the minimum capitalization is unsubscribed, the Government is to take it.

Section 7 provides that corporations, to be known as national farm-loan associations, may be organized by persons desiring to borrow money on farm-mortgage security under the terms of the act. Every farm-loan association is to elect a board of not less than five directors. Ten or more natural persons who are the owners or are about to become the owners of farm land qualified as security for a mortgage loan under the act, may unite to form a national farm-loan association. They will prepare articles of association and forward them to the Federal land bank

of the district, and on approval of the director of such bank a charter will be issued to the association. Members of such associations will be allowed to borrow on land mortgages in accordance with the act.

The bill goes into much detail as to the nature of the loans and mortgages permitted. The theory is that loans may be made payable back in installments at reasonable interest rates. The maximum loan to any borrower is $10,000.

In addition to providing for Federal land banks, the bill provides for joint-stock land banks, and provision is made for farm-loan bonds or joint-stock bonds secured by first mortgages on farm lands, such as the measure contemplates.

Mr. Chairman, I am frank to admit that after months of study on this bill I am thoroughly of the opinion that the same is not workable and will not accomplish the desired results. While there are many admirable features in the bill, yet it is lacking in the essential of a genuine rural credit bill—Government aid—and I do not believe if it is enacted into law will serve the purpose and object intended, and time will demonstrate the correctness of my conclusion. It is too cumbersome and has too much red tape to be put into successful operation.

Mr. Chairman, the present system of American farming must be revolutionized and made to conform to the best methods of modern twentieth century progress. The weak link in the chain of agricultural success to-day is the absence of a sound and safe system of agriculture finance.

When this system is inaugurated it will at once lighten the present heavy burden of the American farmer and will soon make rural life not only attractive but prosperous. This great Government of ours has not been developed by merchants, lawyers, bankers, and manufacturers. The pioneers of this country were farmers, who for generations past braved the dangers of the wilderness, hewed the forests, tilled the soil, and by their blood on hundreds of battle fields placed this Nation in the first rank among the nations of the earth. I say to my Democratic colleagues here to-day that the people have a right to expect that we redeem the party platform made in Baltimore and give to the farming interests of this country rural credit legislation with Government aid. Do not give to them a law which is a mere makeshift. Give to them a bill with Government aid—with this great Government which they have helped to develop and given their best efforts to make it what it is to-day behind the collateral which they offer. With Government aid in a rural credit bill the Government will do for the farmer of the country what it did for commercial banking in the Federal reserve act—that is, guarantee the observance of all of its contracts and the redemption of all of its obligations.

The American farmer does not come to Congress pleading for any special privileges over any other class of American citizens, but they have the right to expect that a square deal will be accorded to them, and by the passage of a rural credit bill with Government aid it will give to agriculture a new birth and stimulate this great industry, upon which rests the prosperity, the happiness, and the welfare of this great American Republic. [Applause.]

The CHAIRMAN. The time of the gentleman from Georgia has expired.

Mr. LEVER. Mr. Chairman, I yield to the gentleman from Alabama [Mr. BLACKMON] one minute.

The CHAIRMAN. The gentleman from Alabama [Mr. BLACKMON] is recognized for one minute.

Mr. BLACKMON. Mr. Chairman, I am very much interested in the question of rural credits. I ask unanimous consent to extend my remarks on that subject in the RECORD.

The CHAIRMAN. The gentleman from Alabama asks unanimous consent to extend his remarks in the RECORD on the subject of rural credits. Is there objection?

There was no objection.

Mr. BLACKMON. I yield back the remainder of my time.

Mr. LEVER. Mr. Chairman, I yield to the gentleman from Indiana [Mr. CLINE] the remainder of that minute.

Mr. CLINE. Mr. Chairman, I would like to ask unanimous consent to extend my remarks in the RECORD on the American Academy of Arts and Sciences.

The CHAIRMAN. The gentleman from Indiana [Mr. CLINE] asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. LEVER. Mr. Chairman, I yield five minutes to the gentleman from Georgia [Mr. HOWARD].

The CHAIRMAN. The gentleman from Georgia [Mr. HOWARD] is recognized for five minutes.

[Mr. HOWARD addressed the committee. See Appendix.]

Mr. HAUGEN. Mr. Chairman, I yield to the gentleman from North Dakota [Mr. HELGESEN] such time as he desires.

The CHAIRMAN. The gentleman from North Dakota [Mr. HELGESEN] is recognized.

[Mr. HELGESEN addressed the committee. See Appendix.]

Mr. HAUGEN. Mr. Chairman, I yield 30 minutes to the gentleman from New York [Mr. PLATT].

The CHAIRMAN. The gentleman from New York [Mr. PLATT] is recognized for 30 minutes.

Mr. PLATT. Mr. Chairman, in the face of all that has been said this afternoon on the subject of rural credits, and being a member of the Committee on Banking and Currency, I feel very strongly inclined to lay aside my prepared speech, and to talk a little common sense on the subject of rural credits, but I will refrain for the time being, and will speak about a very different subject in which I am not exactly an expert, but in which I am greatly interested, namely, birds.

On Thursday morning, March 30, there passed away in this city Prof. Wells W. Cooke, assistant biologist at the Biological Survey, the leading authority in the United States, and I think I am safe in saying in the world, on bird migrations, a modest unassuming student, but a student of the great mysteries of the open, a most delightful companion, ever ready to share with others his gentle pleasures and to aid them in learning about the birds, the flowers, the ferns, the trees, and the beautiful things that grow wild all about us in the fields and woods, but which most of us never see. Prof. Cooke, like John Burroughs and John Muir, taught many people how much wholesome enjoyment there is to be had without money and without price, almost at our doors, everywhere, in the reading of the book of nature. I never heard him complain of the high cost of gasoline. It was my good fortune to make his acquaintance soon after I came to Washington to attend the extra session of the Sixty-third Congress in the spring of 1913, and to be asked to join the local Audubon Society in its tramps about the neighborhood of Washington under his leadership, and even to be admitted to the smaller coterie of cranks who take early morning tramps in springtime along the Potomac hills and marshes in Virginia, along the Chesapeake & Ohio towpath, or back into the woods that still in part surround the District of Columbia. I should like to tell you something about those tramps, but must confine myself to a brief sketch of some of the splendid work of the Biological Survey, with special reference to Prof. Cooke's work on bird migrations.

First, let me say that the migrations of birds are still in considerable part a mystery. Just why some of them travel such long distances from their summer to their winter homes nobody knows. Generally speaking, like our millionaires who go to Palm Beach or to southern California in the winter, they flee away from the cold at the advance of winter, but that is not true of all of them. There is at least one bird, the arctic tern, the champion migrant, that nests north of the arctic circle as far as land has been found, and then flies 11,000 miles to the antarctic continent, way south of Patagonia. This wonderful bird seems to seek sunshine rather than warmth. The sun never sets during its entire stay at its breeding grounds, and the same is true of at least two months of its sojourn in the antarctic.

A few birds, on the other hand, do not migrate at all, but stay with us all the time, winter and summer. The English sparrows are the most familiar; but the cardinals, or red birds, so common here in Washington, grouse or partridge, and quail are among them. A few others, like meadow larks, go only short distances. Some others are both migratory and nonmigratory, like the Maryland yellow throat, which both winters and breeds in Florida, though most of the species passes north in the spring to New York and New England.

Many birds spend their summers in Canada and as far north as Alaska and their winters along the Gulf of Mexico or in South America. Some birds that nest in Canada seem to like cold weather, but not too much cold. The tree sparrows and juncos, for instance, are abundant around Washington, in New York State, and throughout the Northern States in winter, but go back to Canada in the spring. They are seed eaters and probably simply keep away from snows so deep as to bury their food. Robins migrate, but not very long distances. They are found during all the year a little south of Washington, and a few winter in this neighborhood, but occur along the Gulf only in winter, and in the Northern States only in summer. Generally speaking, they keep below the line where the ground freezes, and come North as soon as the ground softens, so that they can get earth worms for food. I believe that Prof. Cooke has said that

birds do not greatly mind cold weather, but must go where they can find food.

Some of our well-known birds that winter in South America go far south of the Equator and seek a particular locality. The familiar bobolink or reed bird winters in southern Brazil, and nighthawks go well into the Argentine, while purple martins, barn swallows, cliff swallows, and some thrushes winter almost as far south. Scarlet tanagers winter on the west coast of South America, mostly in Peru, south of the Equator.

Mr. SHALLENBERGER. I wonder if the bewhiskered, nut-cracking night bird migrates from that country also.

Mr. PLATT. I am afraid I do not know much about that bird. I mention only a few of these birds and their habits to show the wonderful variety and interest in the subject. Prof. Cooke has discovered many strange and interesting things about the routes of the birds, their speed of flight, and their distribution. He organized a large corps of voluntary workers, and it may surprise Members of this House to know that there are some 300 people covering pretty nearly all parts of the United States and much of Canada who work for Uncle Sam without pay, reporting regularly every year the dates of the arrival and departure of the birds in their localities. [Applause.] From these reports and from reports of trained observers who have visited the Arctic regions and other uninhabited or sparsely inhabited localities Prof. Cooke prepared a series of maps showing the range of almost every bird known in the United States and its routes of migration. Some of these maps have been published in the bulletins written by him for the Biological Survey, and since the passage of the Federal law of March 4, 1913, protecting migratory birds these maps and the data upon which they are based have become of immense importance.

Without such studies as those made by Prof. Cooke some of our game birds would surely be entirely destroyed in time. One very important matter brought out by these studies is the establishment of the fact that most birds concentrate in winter in a much smaller area than that covered by them in breeding in the summer. The ducks and geese breed mostly in northwestern Canada between the Rocky Mountains and Hudson Bay or Lake Winnipeg, in a vast region of many lakes and streams and marshes. A large number of them used to breed in the Dakotas, in Minnesota, and Wisconsin and some still nest there, but increasing agriculture is gradually driving them out. In winter they concentrate along the Mississippi, the Gulf, and the Atlantic coast, where they have been killed in great numbers by sportsmen and pot hunters. Chesapeake Bay was formerly the winter home of millions of canvasback and redhead ducks that nested in Canada. Now, because of constant shooting, canvasbacks are almost rare in the Chesapeake. Prof. Cooke contributed to the National Geographical Magazine of March, 1913, an article entitled "Saving the ducks and geese" that shows by maps the summer and winter homes of these splendid game birds, tells how they have been slaughtered in vast numbers in the winter and spring, and points out the means that must be taken to save them. Further and very interesting information on this point is given in the beautifully illustrated article in the National Geographic Magazine for August, 1915, by Dr. Henry W. Henshaw, Chief of the Biological Survey, on American game birds. Dr. Henshaw reviews briefly the numerous game laws that have been passed by the States, points out the tremendous increase in the number of hunters as shown by the licenses issued, and shows that both Federal and State laws are necessary to save the game birds. The Federal law, it should be noted, applies only to migratory birds and can do nothing to protect quail or grouse and other birds which are nonmigratory.

Laws alone, whether Federal or State, are evidently insufficient. Some splendid birds, like the passenger pigeon, that once existed in countless numbers, have already been exterminated, and many others, like the heath hen, once abundant in the East, are almost extinct and kept from total extinction only by the protection of a special refuge. The heath hen is now only to be found on the Island of Marthas Vineyard where, under the protection of stringent laws of the State of Massachusetts, a few pairs have increased to about 200. This brings me to the subject of bird refuges—special areas set apart for the safety of birds of all kinds, where they may not be killed. The Federal Government has established 68 bird reservations in different parts of the United States, including Alaska, and this does not include the national parks. Several States have also established bird refuges, and to these must be added a large number of private estates where the birds are fully protected, and privately established bird reservations.

Dr. Henshaw mentions as conspicuous examples Marsh Island, acquired through the generosity of Mrs. Russell Sage; the Rockefeller preserve; and the Ward-McIlhenny preserve, all in Louisiana. The last mentioned comprises some 50,000 acres.

The 68 Federal game and bird reservations, I may say here, together with the National Bison Range, in Alaska; the Jackson Hole Elk Refuge, in Wyoming; and the 4,000-acre game preserve on the Wind Cave National Park, in South Dakota, are all maintained on an appropriation of only $22,000 (testimony of Dr. T. S. Palmer, hearing Agriculture appropriation bill, Biological Survey, p. 17) which is entirely insufficient to provide needed protection. A reservation off the coast of Georgia had to be abandoned during the past year because of lack of funds, and the appropriation of $22,000 is only a little more than $300 for each one. The Laysan Island Reservation in the Hawaiian Islands was visited by poachers last year, who killed some 300,000 birds, mostly albatrosses, for their plumage. This great reservation has no warden, and the same is true of many of the smaller reservations.

Mr. YOUNG of North Dakota. The gentleman's remarks are certainly very interesting. I should like to ask the gentleman whether it is not a fact that the birds throughout the country are of immense economic value, particularly to agriculture?

Mr. PLATT. I am coming to that, but I may say, in answer to the gentleman's question, that according to Dr. Henshaw the farmers are saved not less than $500,000,000 every year through the work of the birds in destroying insects, and small animals like field mice and squirrels, and weed seeds.

Mr. YOUNG of North Dakota. In view of that fact, would it not seem that we should appropriate something more than $22,000 annually to take care of these 68 bird reservations, and the immense amount of work that is being done along that line?

Mr. PLATT. The appropriation is too small, especially when it is remembered that that $22,000 takes care of several herds of buffalo and of elk, and a great number of game birds which are of immense value themselves for food.

Mr. GREENE of Vermont. Does the gentleman expect further on in his remarks to call attention to the fact that some species of birds which were once thought to be more or less pests have been proven to be of great economic value?

Mr. PLATT. Yes; I shall touch upon that, and should be glad to say more about it if time would permit.

Mr. REAVIS. My question is not apropos of the line of thought you are now developing, but I am curious to know about the migratory habits of the redbird?

Mr. PLATT. Does the gentleman mean the cardinal that we see so often around Washington?

Mr. REAVIS. Yes.

Mr. PLATT. It does not migrate at all; it stays here all winter and all summer.

Mr. REAVIS. I will say that I have heard a redbird whistling near my home in Nebraska when the temperature was as low as 10° below zero.

Mr. PLATT. Yes; occasionally one of them stays up in the State of New York. Some birds apparently do occasionally migrate which ordinarily are not supposed to do so. For instance, a mockingbird spent considerable time in Downing Park, in the city of Newburg, on the Hudson River, some time ago. Then, the Carolina wren, which is a very common bird around Washington, occasionally nests in New York State and in New England. It seems very unlikely that it stays there in the winter, but I have seen no data on that question.

There is much in the work of the Biological Survey with regard to birds that I should like to mention if time permitted. Perhaps the most unique and valuable work is the examination of the contents of bird stomachs by Prof. F. E. C. Beal and others.

Prof. Beal has been at this work some 27 years. He sits there looking through a microscope at little piles of seeds and other things spread out before him, and he is so expert that he can recognize the half-digested fragment of a weed seed, or caterpillar's hair, or a piece of bone from the hind leg of a little field mouse, or something of that kind. Of course, nearly all the contents of birds' stomachs are partly digested. It takes a man of tremendous experience and expertness to know what he is looking at when he examines these things.

Birds have been called by Dr. Henshaw "the policemen of the air." It has long been known that they devour great quantities of insects and small animals, but the patient scientists of our Biological Survey have undertaken to prove, so far as possible, just what the birds do for agriculture, by showing just what they do eat. They have conclusively proven that some hawks, formerly considered enemies of the farmer, really do much more good than harm, because they destroy a large number of field mice and other small animals and only occasionally take a

chicken. Our country, I understand, has taken the lead in this work, as in the study of bird migration.

Mr. YOUNG of North Dakota. Is it not a fact that the great State of Pennsylvania at one time offered a bounty for the killing of hawks?

Mr. PLATT. Yes; but it had to repeal the law, because it was found that the field mice and other small animals which had been destroyed by the hawks and owls were increasing in such numbers that their devastations had done a great deal more harm than the destruction of the hawks had done good.

Some interesting studies have been made by Prof. Cooke and others in the way of a bird census—to find out how many birds there are living in our great country. It looks like an absolutely stupendous, hopelessly impossible task—like counting the sands of the seashore—but it is not. The average Eastern farm has been found to have one pair of birds to the acre nesting on it. By special inducements this can be increased considerably. For instance, in the Chevy Chase neighborhood in Maryland, just outside of Washington, 13 pairs of birds were nesting in one yard of one-half an acre and 34 species of birds were found nesting on 23 acres in 1914. It has been proven that where birds are best cared for and protected insects are most held down. The estate of Baron Hans von Berlepsch, "Seebach," near Essen, in Germany, was like an oasis in a desert after a great plague of insects had devoured most of the vegetation of the neighborhood. The baron was a great bird lover and had provided special nesting places and food for birds so long that he had greatly increased the number of birds on his estate, and when the invasion came they well repaid his care.

Mr. HOWARD. Does the gentleman know anything about the temperament, habits, location, and value of the bird discovered by President Roosevelt—that bird which has whiskers and nut-cracking proclivities? I should like to have the gentleman tell us something about that if he can. I am interested in that bird.

Mr. PLATT. I am sorry to have to tell the gentleman that I do not think I ever saw that bird. I will say this, however, that Col. Roosevelt is really a competent bird observer. He knows a great deal about our common birds. I know that at first hand, because I spent nearly a day with him once in the woods, along with John Burroughs. He is interested in everything he sees out of doors and never misses an opportunity to study an unusual bird, or the birds of a locality new to him.

Mr. COOPER of Wisconsin. Will the gentleman from New York permit me to reply to the gentleman from Georgia? The gentleman intimates or suggests by his question that Mr. Roosevelt claims to have discovered this bird. In an interview published yesterday in one of the New York papers he disclaims ever having made any such remark as that at all. All he said was that he thought he had discovered some traits of that bird of which he had never before heard; but the papers have been constantly stating that he claimed to have discovered it, although he did not say anything of the sort himself.

Mr. HOWARD. Did he describe the bird as having nut-cracking proclivities?

Mr. COOPER of Wisconsin. Oh, no.

Mr. LEVER. Will the gentleman yield?

Mr. PLATT. Certainly; I will yield to the chairman of the Committee on Agriculture.

Mr. LEVER. The gentleman has made a very interesting statement, and I am glad he has made it. I would like to ask if he has ever considered any plan or method by which we could destroy the English sparrow, which, to my mind, is driving away a great many native birds from this country?

Mr. PLATT. I may say that Ernest Harold Baynes, in his very interesting book on Wild Bird Guests and How to Entertain Them, has shown how the English sparrows were driven out of his home town in Meriden, N. H. He says they can be made to keep out. I should hate to see them all destroyed, however, for they stay here all winter, and are very cheerful little fellows.

Mr. ELSTON. Will the gentleman yield?

Mr. PLATT. I will yield to the gentleman from California.

Mr. ELSTON. I have not been here during the whole of the gentleman's remarks, but I would like to ask whether he made any reference to the birds in the Sandwich Islands?

Mr. PLATT. Yes; I referred to the bird refuge there and the fact that there have been marauders there killing thousands of albatrosses.

Mr. ELSTON. Did the gentleman make any suggestion as to the expediency of preserving bird life in that locality or make any plan for the administration? It is merely a bird refuge.

Mr. PLATT. If I am correctly informed, the Laysan Island Reservation extends over more than 5° of longitude, and includes many small islands, and there ought to be a permanent station there. There ought to be a warden to take care of it. It is a group of islands absolutely uninhabited except by birds.

Mr. ELSTON. Has the gentleman any plan in mind for stimulating interest in that bird locality? I am asking in behalf of parties on the coast who are very much interested in this, and particularly in the Laysan Island proposition.

Mr. PLATT. I know of nothing better than to call attention to the fact that plume hunters have destroyed so many birds there, and get a little more money from the Government for their protection.

Mr. LEVER. My recollection is that the matter was brought to the attention of the committee last year, and that some provision was made in the bill for better service at that point; but I am not sure that my recollection is correct.

Mr. PLATT. Dr. Palmer, of the Biological Survey, refers to it in the hearings before your committee this year.

Mr. LEVER. Probably that is what I had in mind, and it was this year instead of last year.

Mr. CLINE. Will the gentleman yield?

Mr. PLATT. Certainly; I yield to the gentleman from Indiana.

Mr. CLINE. Speaking about the migration of birds, I remember of reading a while ago a statement made by some member of the Audubon Society of Illinois that the birds in their migration observed the trade winds, both coming to and going from the United States. Does the gentleman know anything about that?

Mr. PLATT. It is so of some birds, but birds take a great many different routes. The average bird that winters in South or Central America flies across the Gulf of Mexico, some 700 miles. A few go around through Central America and Mexico. There are birds that take one route in the fall going south and another route coming back in the spring.

Mr. CLINE. They go by the Allegheny Mountains and the coast and come back by way of the Rocky Mountains.

Mr. PLATT. They generally follow the Mississippi River north and come back along the coast.

Mr. CLINE. The article also contains a statement that robins that appear in the spring would appear at Albany, New York, Buffalo, Chicago, and St. Paul within an hour or two of the same time.

Mr. PLATT. I do not know particularly about the history of the robin in its migration. It has been shown that birds that go into the Northwest or into Alaska travel faster than those that come east. The lines of migration on the charts made by Mr. Cook in the West and Northwest bend way up into Canada. For instance, certain birds appear in Washington and at St. Paul, or perhaps at New York and at Winnipeg, on the same dates.

Mr. FESS. Will the gentleman yield?

Mr. PLATT. I yield to the gentleman from Ohio.

Mr. FESS. Has the gentleman made any study or come to any conclusion as to whether there is any bird that ought to be destroyed because it is hurtful to other birds, because it robs the nests of other birds? For instance, there is an impression that the common jay lives on the eggs of other birds.

Mr. PLATT. The bluejay is a beautiful bird and it does occasionally eat the eggs of some other birds, but it is entitled to some kind of food. [Laughter.] I think if there is any bird that ought to be destroyed more than any other because of its bad habits it is the cowbird, which does not take the trouble to build a nest, but drops its eggs into the nests of smaller birds.

Mr. FESS. My question is not a facetious one; I am asking the question of one who has studied birds.

Mr. PLATT. I do not claim to be an ornithologist.

Mr. FESS. But the gentleman knows more about birds than anybody else here.

Mr. PLATT. I think no bird ought to be entirely destroyed. I think some ought to be held down. I think the English sparrow ought to be lessened considerably, but I should hate to see it entirely destroyed.

Mr. MANN. There is no danger. [Laughter.]

Mr. FESS. Is the common blackbird a migratory bird?

Mr. PLATT. Yes; the purple grackle is the common blackbird that you see around Washington. It is the bird that walks; you see it walking around in the parks. It has been here three or four weeks.

Mr. FESS. We have hundreds and thousands of them at Antioch College, in Ohio, during a certain part of the year always in the campus at night. About 5 o'clock you will see them coming in in groups, and they light on the trees until the

trees are simply black with them, and then before the dawn you can begin to hear them and it is a regular frolic as they go. Where do they go in the day?

Mr. PLATT. The gentleman is talking about what they do from day to day.

Mr. FESS. My first question was whether they are migratory. Where do they go during the day?

Mr. PLATT. They go off somewhere to find food, and come back and roost at night.

Mr. FESS. I have never seen them come from the west. They always come from the east at nighttime.

Mr. MANN. That would depend upon where they get the food.

Mr. PLATT. Yes. Their food supply in the neighborhood of Dr. FESS's home is evidently to the eastward.

Mr. MANN. They nest in the locality, and they swarm in the fall.

Mr. PLATT. Yes.

Mr. SHALLENBERGER. Mr. Chairman, will the gentleman yield?

Mr. PLATT. Yes.

Mr. SHALLENBERGER. I have been very much interested in the speech of the gentleman from New York. The State of Nebraska is especially rich in varieties of birds, and I would like to ask him if he can inform us as to the fate of the common bluebird. It used to be quite common in Nebraska, but it seems to have almost disappeared. Is that bird being destroyed by other birds?

Mr. PLATT. I think not. It has been a very common impression that the bluebird has been driven out by the English sparrow, but as a matter of fact some years ago thousands of bluebirds were killed by an ice storm. An ice storm kills more birds than anything else. It puts a coating of ice not only over the ground but over every branch of every tree and bush. If the ice coats everything long enough, thousands of birds will starve to death unless somebody feeds them. The bluebirds all over the East almost disappeared a few years ago. They are coming back now. There are a lot of bluebirds around Washington. I saw them as early as February. They are gradually increasing, and unless they are destroyed by another storm they will continue to increase. Some of them winter here in the neighborhood of Washington. Cats destroy a good many young bluebirds, which are particularly helpless when first out of their nests. In fact, cats destroy a great many birds of all kinds.

Mr. FESS. Where does the scarlet tanager live?

Mr. PLATT. If I remember right, it winters in Peru. Most of them go south of the Equator and off to the west coast of South America, which is a very unusual thing. The tanager is a bird mostly of the woods when it is breeding, though I have known a few pairs to nest around the outskirts of cities and villages.

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. LEVER. Mr. Chairman, I yield 15 minutes to the gentleman from Mississippi [Mr. QUIN].

Mr. QUIN. Mr. Chairman, the bill that the House has before it now, according to my judgment, is the most important matter that this Congress will consider at this session, unless it takes up, if it can ever get it reported to this House, a rural-credit bill. Congress should force the committee to report a real rural-credit bill. Our farmers are entitled to it and must have it. The Congress has done a great deal to teach the American farmer how to produce farm products. The Congress has been liberal for years in showing the farmer how to cultivate the soil, how to treat it, how to diversify his crops in order to get the best results, but there is one thing that the American Nation is behind on, and that is a marketing system. We show the farmer how to produce in abundance all of the splendid farm products and we fail to get his products properly marketed. As shown by the gentleman from Nebraska [Mr. REAVIS] in his able address here to-day, 18 different men handle the steer, so that the original grower of that steer must pay all of this commission which is consumed by these 18 different parties, from the producer of the steer to the ultimate consumer, the man who buys the beef to cook. In my district we have a great fruit and vegetable industry. Several of my counties produce and ship large quantities of truck and fine vegetables. One town, Crystal Springs, shipped 1,300 cars of vegetables in the year 1915. From the little town of Gallman, and the county seat, Hazlehurst, including Crystal Springs, 2,500 cars of vegetables were shipped in 1915, and for those vegetables $350,000 went to the Illinois Central Railroad Co. in freight charges, and now that railroad company has before the Interstate Commerce Commission a proposal to increase that freight rate, and a ruling is to be made on that on the 15th day of this month. I am fighting before that commission to keep the railroad company from perpetrating that outrage on the poor truck farmers of my district. I hope success will crown our efforts. These are two of the things that our farmers are being burdened with in this country—commission charges and transportation charges. Shylock in all of the tide of time never showed such a greedy, grasping hand as some of these produce and vegetable commission men in the large cities show in handling the product of the farmers.

The transportation companies are more than greedy when they try to raise and increase rates on vegetables now. The poor farmer can not stand it.

Now this great vegetable truck is worth big money ordinarily. I am giving you a concrete case and I know that all through the Mississippi Valley and the Central West and the Southwest are these people producing these splendid trucking products who hardly get enough to pay for their fertilizers and a decent wage for production. There must be some remedy for it. These people are paying an enormous fertilizer charge. Fertilizer is higher this year than it has been since I have known anything about farming and yet the transportation companies propose to increase freight rates. The ultimate consumer of the farmer's product pays a big price for it. You go down right into the restaurant below here in this Capitol, and you get a little tomato—10 cents. That farmer for a whole crate of tomatoes only got probably 50 or 60 cents. The same thing in regard to beets; the same thing in regard to carrots and cabbages and beans, and all of his products are the same way. The same thing is true about hogs and about cows; the same thing is true of the southern cotton farmer. The middlemen get it all; freight rates eat a great hole in it, so that the man who actually produces the farm products of this country is held down in a state of almost absolute need. [Applause.] How is it that these people, as shown here from the speech of the gentleman from Iowa the other day, a family of six make only $402 a year on a farm of a valuation of $6,000 with 75 acres in cultivation? If the same capital should be employed with equal intelligence in any other line of industry the man would get many fold more than he really does for his labor as a farmer. I do not say that Congress is to blame for it. Congress is to blame in a measure for not devising a suitable national exchange bureau or system of marketing.

I introduced a bill here to extend the Bureau of Markets, and I am happy to say that some of the principles involved in that bill the distinguished chairman of this committee and his colleagues and colaborers have worked into the bill. [Applause.] But the result of this work does not reach as far as it should. We know that unless there is some proper method of handling the farm products to keep down the exorbitant commission charges, heavy transportation charges that eat up what profits the farmer should receive from the time the products leave the farm until they reach the ultimate consumer, unless there is some radical change in it, the farmer can not grow much more independent. All of this talk we see in the magazines, and some we hear on this floor, of this "back to the farm" can not be brought about by mere talk. The gentleman from Ohio told us there had been a great hegira from the farms of Ohio into the cities of that State. I do not know anything about farm conditions in the State of Ohio, but I know they are not what they ought to be or the people would not be leaving the farms. They do not get enough for their work is the reason they go to the city. I know the reason they leave the farm in my district in my State, Mississippi, to go to work in the railroad shops and in other public works, is because of the fact they do not get the real value of the produce they raise on the farm and for the further reason they want to get into the town where they can have good public-school advantages for their children. The men are willing to work from early dawn until late at night at hard manual labor at small wages in order to have good schools for their children to attend. We owe it to the great agricultural class—the real wealth producers of the United States—to aid them in establishing splendid rural schools in which to educate their children. The farmer, the man who owns a small farm, does his own work in my country, and understand me, he does not fool his time away or spend it around the country store nor around the streets of the town, but he labors from early in the morning till late at night, as long as he can see, and that is from one end of the year to the other. Not only does he himself labor, but his children and oftentimes his wife go to the field and work. They are endeavoring to better their condition in life. The necessity makes it necessary that the whole family should work in order to have a decent living, because the farmer fails to get the full value of his labor in the price of his products.

Mr. REAVIS. Will the gentleman yield?

Mr. QUIN. I do.

Mr. REAVIS. The gentleman spoke of the entire family of the farmer laboring. Does the gentleman know of any one employment where longer hours are put in than by the farmer and his family?

Mr. QUIN. No, sir; there is none. Nobody works as long hours as the real farmer who tills the soil. I know this not only from observation but from actual experience myself on the farm. I have done nearly everything myself except preach. I worked on the farm from the time I was 5 years old until I got education enough to get away from it, and the reason I left the farm was not because I did not like farm work but because I saw no hope in it. I realized, under conditions as they then existed, that the man who toils in the fields of this country could never get the price of his labor. I realized that the man who works on the farm, putting in not 8 hours a day, but at certain seasons of the year he puts in 18, would scratch a poor man's head all of his life. These very vegetable growers I have told you about around Crystal Springs right now, this 13th day of April, and their wives and children, probably little fellows about 4 years of age, the whole crowd of them are in the field at daylight until late in the evenings working with vegetables, and on chilly evenings they work sometimes until 11 o'clock at night, covering those vegetables up to keep the cold from killing them.

That is the way my people work. And yet they have nothing more than a bare living, when if they received the real value of their labor they would soon become independent. We had a bill up in this Congress to take care of individuals sitting around in departments who did not want to work 8 hours a day, but who only wanted to work about 6½ or 7 hours, and who wanted 30 days, and who do get 30 days, sick leave, and 30 days free absent leave, when the poor farmer has to toil day in and day out—and is robbed going and coming—and then forced to pay the taxes of the favored few.

Mr. COX. Will the gentleman yield?

Mr. QUIN. I will.

Mr. COX. Does the gentleman know that the same class of people he is talking about here in the departments are now asking to be retired on half pay when they reach the age of 60?

Mr. QUIN. Yes, sir; and it makes my heart sick to know that there are many Congressmen on this floor who will vote to do it, when these people who work for 18 hours a day on the farm are the ones who will have to pay for it. And if you are going to assist the employee of this Government, because he has a lifetime job and gets a good salary and works eight hours and less a day, what are you going to do for the producers of wealth who must pay the taxes? You propose to give this lifetime employee not only a little less than eight hours a day of work, but retire him on $600 a year after he has quit. That is too preposterous, in my judgment, to talk about. If these 30,000,000 of people who are engaged in the raising of the products of this country knew what Congressmen would vote to put that great burden on them, they would come up here and put them out of this place. You take the six and one-half million farmers and you multiply them by about five, which allows four children to the family, and you have about 30,000,000 people out of a hundred million people, who are producing the farm products of the country, and whom you wish to tax for the benefit of the few.

The 30,000,000 people who are producing these products are asking for no favors. They receive none. But they can not get justice. All I have ever asked for any constituent in my district is justice, and as a representative of the people, I believe this great farming class of 30,000,000 that keep all the wheels of industry in this country running, that keep all these railroad trains moving, that keep our salaries paid, ought to have not only what goes with this agricultural bill that we are considering to-day, but they ought to have a genuine system of exchange for marketing their products [applause] in order that the real value of farm labor will be received in the sale of the products of the farms, whatever they may be. [Applause.] The ultimate consumer pays enough. The Lord knows we do not want to hand down any bigger burden on him than is there now, but what is the matter is the cost of transportation and the further cost of commission. These commission men, as a rule, are parasites.

The CHAIRMAN. The time of the gentleman has expired.

Mr. LEVER. Mr. Chairman, I yield to the gentleman two minutes more.

The CHAIRMAN. The gentleman from Mississippi is recognized for two minutes more.

Mr. QUIN. These commission men are parasites, who live off of the men and women and children who toil, and as an illustration of it the commission man generally has a nice fine house in which to live, he rides in an automobile, he generally wears a diamond, and he wears nice clothes and his family wears nice clothes. The poor farmer and his family are lucky to have simple fare on their table and plain clothes on their bodies, they are lucky if they can have an ordinary horse and buggy, and they are still luckier if the farmer has enough money left, after paying high interest and all other robberies, at Christmas to get a few toys for his children, a jug of "oil of joy" for his Christmas eggnog, and a new calico dress for his wife. [Laughter.]

Mr. CLINE. Will the gentleman yield?

Mr. QUIN. Yes.

Mr. CLINE. Now, I believe all the gentleman has said about these conditions, but when I put it up to a commercial man he said to me, "Why, farm lands have gone up in the last 13 or 14 years 200 to 210 per cent." And I am unable to explain why that should be, considering the fact that the farmer is beaten out of most all of his profits.

Mr. QUIN. I do not know anything about where farm lands have gone up all over the country. That just makes the farmer pay more taxes, for if he still farms he wants to continue to own the land, and a poor man has less opportunity to buy a farm. They have not gone up that way in my country. You can get as fine land as a crow ever flew over in my district for $20 an acre. You can get as good grazing land as any in Nebraska or Ohio for $50 an acre. I advise you gentlemen to go into that country and put your money into the stock-raising business. Do not go into the vegetable-raising business, because the railway companies and the commission men will get all the money you make. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. HAUGEN. I yield one minute for the purpose of asking the gentleman a question: Are you in accord with the suggestion made by the department—by these people who have been objecting to the eight-hour workday—that the farm management be so rearranged as to give additional hours of work to the people on the farm in order to improve the condition and increase the receipts for the year, which seems to be the only remedy suggested so far?

Mr. QUIN. To give additional hours to the farmers?

Mr. HAUGEN. That he may be given additional hours to work during the year.

Mr. QUIN. Oh, my goodness, he works all of the time in the daylight now, and puts up a torch by which to work at night.

Mr. HAUGEN. That seems to be the only remedy discovered so far by the department.

Mr. QUIN. That is it. The department is doing the best it knows how; but it is plain that the few who get the farmer's profits will never discover anything for him except for him to work like hell. [Laughter and applause.]

I here insert my bill as a part of this speech:

A bill (H. R. 10486) to extend the Bureau of Markets in the Department of Agriculture.

Be it enacted, etc., That the Bureau of Markets shall be extended. The Chief of the Bureau of Markets shall name all special agents, clerks, and other employees that may be necessary to fulfill the duties of such bureau in or out of the District of Columbia, and they shall receive the same compensation as other United States Government clerks doing similar work.

SEC. 2. That it shall be the duty of the Chief of the Bureau of Markets to make thorough investigations as to the system of marketing all farm products, especially vegetables, fruits, hogs, poultry, and all diversified products of the farm, cooperative and otherwise, in practice in various sections of the United States and foreign countries. The information and data thus collected shall be distributed to farmers, farmers' unions, farmers' organizations, and societies of consumers throughout the various agricultural sections of the United States, and made available for the use of any individuals or organization, either by the circulation of printed bulletins, letters, circulars, telegrams, or by information given personally by special agents or employees of said bureau. It shall also be the duty of the Chief of the Bureau of Markets to make investigations of the demand for farm products in various trade centers, and the current movement of such normal demand, and the price thereof, with the view of furnishing information as to the best available markets, which information shall be distributed as above set forth.

SEC. 3. That it shall be the duty of the Chief of the Bureau of Markets created under this act from time to time and at appropriate intervals to gather accurate information from the various production areas of the United States upon and relative to the amount of productions of the various fruit and vegetable crops thereof, including the acreage planted therein, and of the various kinds, classes, and varieties thereof, respectively, and the probable dates upon which such crops will become ready for market, and to distribute such information through reports to interested persons, as hereinafter provided.

SEC. 4. That it shall be the duty of the Bureau of Markets to aid in every practicable way the sellers and buyers of such crops and farm products as are mentioned in this act while the same are subjects of interstate commerce, to the end that such buyer shall receive the full amount, quality, and quantity of such crop or commodity shipped, and the seller shall receive the full amount or price, less expense, for which such crops or commodities are bought; and that to this end such bureau and the agents thereof shall have a right, and it is hereby made their duty, to inspect the quality and quantity of such crops or commodities that leave the hands of the shippers thereof and the quality and quan-

tity of such crops or commodities that come into the hands of the buyers thereof, as well as to ascertain by inspection of the records hereinafter provided for, or by deposition or otherwise, the prices paid for such crops or commodities by the buyers thereof, and to report such information to persons directly interested therein; and, further, to prosecute persons guilty under this act of infringements hereof.

SEC. 5. That it shall hereafter be the duty of every agency, person, or corporation, instrumental in selling, handling for sale, or arranging the sale of any such crops or commodities the subject of interstate commerce on behalf of the shipper, whether before or upon delivery to the first purchaser thereof, in each case of such nature to make a true and correct record in writing, dated and signed by the person entering such record, showing the quantity of such crop or commodity received by such agency, person, or corporation, the date and the time of day at which it was so received, the name of the shipper from whom it was received, the quality and condition of such crop or commodity when so received and when sold, the name and address of the first bona fide buyer thereof, the price paid buy such buyer to such agency, person, or corporation to such shipper, and the date of such remittance, the original of which record shall be prepared immediately upon the transaction of the facts and matters therein recorded, and shall be thereafter forthwith transmitted by mail, duly addressed to such shipper, and a duplicate of which record shall be correctly entered by such agency, person, or corporation in a well-bound book or books to be kept for such purpose in the office of such agency, person, or corporation, subject to the inspection of the shipper and the Bureau of Markets.

SEC. 6. That any person or persons, corporations, or other agency, as well as any agent or employee thereof, who shall omit to send the original record, or to keep the duplicate thereof, or to allow inspection of such duplicate as above provided, shall be guilty of a felony and upon conviction thereof shall be punished by a fine of not less than $1,000 and imprisonment of not less than 12 months, or by both such fine and imprisonment

SEC. 7. That any farmer, farmers' union, organization, buying or selling agency that desires telegraphic or telephone information from the Bureau of Markets shall deposit the actual cost of transmitting such telegraphic or telephonic information with the Chief of the Bureau of Markets.

SEC. 8. That the sum of $—— shall be appropriated out of the funds of the United States Government, and the Secretary of Agriculture shall provide suitable offices in which said Bureau of Markets can conduct the business thereof, and the Chief of the Bureau of Markets shall make an annual report to Congress, giving in detail the workings, affairs, operations, and expenditures of such bureau.

Mr. HAUGEN. Mr. Chairman, I yield 20 minutes to the gentleman from Iowa [Mr. HULL].

The CHAIRMAN. The gentleman from Iowa [Mr. HULL] is recognized for 20 minutes.

Mr. HULL of Iowa. Mr. Chairman, no one of the comedy of errors with which the present administration can be justly charged has proved inimical to the public, has demonstrated the inefficiency of the Department of Animal Industry, and has disregarded the rights of a State to deal exclusively with its own affairs more than that episode staged last summer under the name of the "foot-and-mouth quarantine." The things that were done by the Federal officers during that régime would have been ludicrous if they had not been so pitiful, and would have been absurd if they had not ruined many a home, driven many a man into bankruptcy and an untimely grave, and throttled the independence of a State. One benefit has evolved. We have been taught that before the Federal Government can ever hope to be an important factor in the development of the great live-stock industry it must thoroughly reorganize the department in control of this great source of wealth of the United States.

One can only realize the magnitude of the blunder when he considers the millions upon millions that are invested in the live-stock industry of this country. It is the greatest wealth producer in the United States; tens of thousands annually derive their livelihood therefrom; it has paid the mortgage on many thousands of farms, and it involves more capital than any other pursuit of man in the world. The live-stock industry indirectly affects every person in the United States, and directly affects millions of farmers whose future is bound up in its success. With the growth of this great industry at stake, it naturally would follow that the Federal Government would provide as adequately for the development of the live-stock industry as it has for the numerous other of our growing resources. Such, however, is not a fact, for its Federal supervision in the United States is now and has been in the hands of a few veterinarians, lacking the capacity to direct it and entirely out of sympathy with the farmers and others who own and whose money is invested in these great herds of stock. These men are totally inefficient to cope with the immense problems which are involved in the husbandry of this vast branch of the Government's resources.

At the head of our transportation service is an efficient organization employing thousands and thousands of expert men whose sole business is its development; we have a Bureau of Mines, employing the most capable men in the country and annually spending millions to develop our mineral wealth; our forest reserves are efficiently guarded at an annual expense of millions; and vast sums are expended that we may produce more wheat, more corn, and more of those things that add to our wealth. In pitiful comparison with this is the meager amount set apart to further an industry greater than any of these, an industry the future development of which is now in the hands of an organization of men devoid of the necessary qualifications to insure it the greatest amount of success, devoid of the efficiency to handle the vast questions involved, and who are entirely out of sympathy with the farmers who are financially interested. As the European war awakened us to our inadequacy in military preparedness and naval equipment so it was the outbreak of the foot-and-mouth disease throughout the United States last year that demonstrated how totally inadequate and inefficient was our Federal Board of Animal Industry, so inefficient that it was entirely unable to cope with the disease that spread like wildfire through the country. The foot-and-mouth disease has been dispelled, it is true, but only after it has ruined thousands of farmers, added mortgages to hundreds of homes, and cost untold and unnecessary millions, to say nothing of the usurpation of State rights by the Federal Government. All of this might have and should have been avoided, but it was not, because there was a woeful lack of knowledge and efficiency and a lack of the application of good, sound common sense.

The foot-and-mouth disease first made its appearance in the United States in Niles, Mich., a year ago last July. Its origin has been attributed to many sources, but none of these have been specifically verified. When it was first suspected, however, serum tests were sent to the Bureau of Animal Industry in Washington, for analysis. It was right here, at the very beginning, that the bureau made its first big blunder and proved that it was inefficient, for in diagnosing the case it failed to discover the foot-and-mouth germ, and it failed to pronounce it foot-and-mouth disease. If we had had a sufficiently efficient board, the disease would have been throttled in its incipiency, and the germ would never have been carried outside of the State of Michigan. If a proper diagnosis had been made, millions of dollars would have been saved, and the live-stock industry would have avoided the crushing blow it has received. However, as the bureau failed to properly diagnose the case no quarantine was established, and the infection was allowed to spread. Naturally it was not long in reaching the Chicago stock yards, and from there it was disseminated through 11 States. Cars on which infected cattle had been shipped were saturated with the germs, and one can conceive of no way where it could have been more widely scattered.

In October, weeks if not months after the disease first made its appearance in Michigan, the Federal authorities suddenly awoke to the fact that an epidemic of foot-and-mouth disease, in widely scattered areas, was facing the country. Then began those hysterical quarantine orders which came from the Federal department, and which will be recorded as the most amazing spectacle of incompetence, ignorance, and usurpation of authority that has ever been witnessed in a similar event. First began a campaign of publicity, very little of which was founded on fact. The statement was strewn broadcast that the United States was in the throes of a terrible cattle disease for which there was no cure. The public was given to understand that the cattle industry was about to be decimated. It was declared that there was no cure for this terrible disease, and the only thing to do was to lock up great areas of land and let everything confined therein die. It was claimed no method was too drastic, no system was too severe, no price too high to pay in order that we might rid ourselves of this terrible scourge that had suddenly swept over the country.

In this campaign of ignorance and inefficiency State laws were violated, property rights ignored, and individuals terrorized in an insane effort to wipe out something that never should have been allowed to gain a foothold. The worst feature in connection with these orders was that not only the man who had an infected herd was made to suffer by the blundering tactics of the Federal department, but the innocent owner of other herds—not only of cattle, but of hogs—was made to lose his savings of months, if not years, by the arbitrary methods pursued—methods that have no justification in eliminating the disease or in economical management.

The quarantine as first established tended rather to spread than to isolate the disease. Areas were placed under quarantine so large that it was impossible to enforce the rules prescribed. Whole counties at first were isolated. Drastic measures were used in an attempt to coerce the farmers into obeying these stupid rules. They were threatened, bulldozed, and coerced into obeying these mandates of the department that were founded neither on law nor ordinary good sense. When orders began to issue from the Federal department hundreds of head of cattle and thousands of head of hogs, a large portion of which were many miles away from the infected premises, would be tied up. In many instances these cattle and hogs were ready for market. They could have been shipped at once, and

thus the owner would have secured his money and the danger of spreading the infection minimized. Not only would their removal from the inclosed area have aided in destroying the disease but it would have aided the officers in their quarantine.

The result from the attempted enforcement of the quarantine was exactly the opposite. Great quantities of stock were held until they became infected; hogs ready for shipment had to be fed and were held until, in many cases, they died of cholera. It must be remembered that the disease reached its zenith just about the time a large part of the stock was ready for the market. This fattened beef and pork, instead of finding its logical outlet, was held by these obnoxious orders until millions of dollars were lost. When this strong-arm business became so notorious that the people arose in open defiance the Bureau of Animal Industry, to appease the people and secure any semblance of obedience to its orders, modified the original quarantine rule reducing the isolated area from a county to a distance of 15 miles around the affected premises. This was an admission of the error it had made in its original order, but while an improvement over the county quarantine, it came still far from relieving the intolerable conditions that existed. Millions of dollars of stock, still clean of the disease, was tied up, a market for it was unavailable, and the men whose money was invested saw total loss staring them in the face. It must be remembered that only sporadic attempts were made to see that these rules were properly enforced. The result was that while the cattle and hogs were held, other animals were spreading the infection, and we had the spectacle of a vast quantity of live stock being held waiting for the foot-and-mouth disease and the cholera to come and wipe it out of existence. Many of the methods used in an attempt to enforce the quarantine caused much of the antagonism that was raised. In many instances the veterinarians in charge were arrogant and arbitrary. Added to this was the fact that most of them were hopelessly ignorant of what was required.

In many instances proper inspection was not made, but even a more serious charge can be made against them. The public might have excused the lack of knowledge in handling the disease, but it could not excuse the utter disregard of sanitary measures and the criminal carelessness with which these veterinarians carried the disease from one place to another. Infected and unifected herds would be inspected by these same veterinarians without any thought of their disinfecting themselves or their clothing. There is little doubt but what these same veterinarians were responsible for the spread of the disease as much as any other one thing. The climax to this orgy of blunders came about a year after the disease had its inception. The foot-and-mouth disease had practically been eliminated, eliminated by killing all the infected cattle and many more that had no disease and destroying millions in property. Then it was that this same bureau, knowing well that serums suspected of containing the germ had been manufactured in Chicago, allowed this same serum to be sold, resulting in the reappearance of the disease in many places. This second scourge was wiped out only after these drastic measures were put in force once more and added millions of stock destroyed.

Mr. KING. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Iowa yield to the gentleman from Illinois?

Mr. HULL of Iowa. I do.

Mr. KING. Is it not a fact, stated in the evidence taken at Chicago by Senator KENYON in December, that Dr. Bennett, who was acting for the United States Bureau of Animal Industry in Chicago at the time the plague broke out there in the yards, was a stockholder in a hog-cholera serum factory in Wisconsin at the time?

Mr. HULL of Iowa. I believe it was so testified to, and other evidence was adduced at that hearing to the same effect.

Mr. HAUGEN. Mr. Chairman, will my colleague yield there?

The CHAIRMAN. Does the gentleman yield?

Mr. HULL of Iowa. Yes.

Mr. HAUGEN. Do I understand the gentleman to say that Dr. Bennett was then in the employ of the Federal Government?

Mr. HULL of Iowa. I understand so, but I am not an authority on that subject.

Mr. KING. That is the statement contained in the evidence of witnesses taken at the hearings referred to.

Mr. HAUGEN. Is he the party that inspected or passed the serum?

Mr. KING. It was not his concern, but the Chicago serum concern which spread the disease in 1915. Dr. Bennett was a stockholder in that company. He is not now connected with the department.

Mr. HAUGEN. My question was whether he had inspected and passed the serum that started the infection in 1915?

Mr. KING. That inspection was made by Dr. Shearin, of the Bureau of Animal Industry, located at Chicago, and also I think by Dr. Dorset. One of them or both has been dropped by the department.

Mr. HAUGEN. Oh, no. Dr. Dorset was not dropped.

Mr. COX. What excuse was given for their not understanding it?

Mr. KING. They said that they tested out some 60 different samples of that serum, and that it showed negative in those experiments, but they failed to take into consideration the fact that there was one-half of 1 per cent of carbolic acid in it at that time—it being stated by Dr. Dorset at the Sherman House that that would kill any foot-and-mouth germ that was in it, which statement I think they took for granted and which was not true—which might not reach all the parts of the serum. They should not have taken any chances on that proposition. Simply to save $1,800 worth of serum at Chicago their action cost the people of Illinois something like $300,000.

Mr. HULL of Iowa. They should have taken no chances at all. They went out and destroyed hundreds of thousands of dollars' worth of cattle and then allowed serum companies to distribute serum that had practically no value.

Mr. OVERMYER. Mr. Chairman, will the gentleman yield?

Mr. HULL of Iowa. Yes.

Mr. OVERMYER. Can the gentleman tell how many men were in this country at the time of the outbreak of the foot-and-mouth disease who were familiar with it and who had ever seen it?

Mr. HULL of Iowa. That is what I say. They ought to have been posted. They had had outbreaks of this disease before, and they are paid by this Government to know how to deal with it.

Mr. OVERMYER. I thought the gentleman's complaint was that they did not have enough inspectors to handle the situation in all parts of the country.

Mr. HULL of Iowa. No. If the gentleman will wait until I get through, he will see that one of my complaints is the usurpation of power by officials of the National Government over the States in an unconstitutional manner.

Mr. KING. Mr. Chairman, will the gentleman yield again, in order that I may answer some of the questions that have been asked?

Mr. HULL of Iowa. Certainly.

Mr. KING. Is it not a fact that the Bureau of Animal Industry was familiar with the outbreak in 1901 and in 1902 and with the outbreak of 1908, and that it issued a special bulletin on that subject, giving the results of their investigation? And does not the gentleman think they ought to have been thoroughly posted on the foot-and-mouth disease at that time when this last outbreak occurred?

Mr. HULL of Iowa. Yes. As the gentleman from Illinois stated in his remarks here, there were some gentlemen thoroughly posted about this matter. There was the trouble.

Now, I want to call your attention to another phase of the condition that existed during the epidemic of this disease, and that is the important part that the United States Live Stock Sanitary Association had in making the rules and regulations that were adopted to stamp it out. It should be known in the start that the secretary, treasurer, and guiding spirit in this organization is Mr. John J. Ferguson. Mr. Ferguson is the scientific expert and one of the leading men with Swift & Co., one of the biggest packing concerns in the United States. Now, the office of the Secretary of Agriculture might have been densely ignorant as to the proper way to eradicate the foot-and-mouth disease, but the United States Live Stock Sanitary Association was as well informed as the bureau was ignorant. In fact, all reports and evidence tend to show that the United States Live Stock Sanitary Association had much more to do with the rules of quarantine and the methods used to stamp out the foot-and-mouth disease than did the Bureau of Animal Industry. Belonging to this organization are Federal officers of the Government bureau and such well-known men as Dr. J. F. Gibson, chief of the Bureau of Animal Industry of the State of Iowa, and the heads of nearly every State bureau also are members. It is well founded in the minds of many of the farmers, especially those who lost their money by this drastic campaign, that the rules and regulations governing the foot-and-mouth disease were framed in the interests of the packers and insurance companies of which some of those men were the owners, rather than the interests of the farmers. It is claimed that the packers reaped a harvest off the misfortune of the stock raisers, and all the evidence tends to confirm these state-

ments. At least this is so, that Mr. Ferguson, head man of one of the packing companies, was the guiding spirit in an organization that was apparently responsible for the drastic quarantine laws that were placed into effect.

Let me show you how these quarantine rules resulted in benefits to the packers. The disease was rapidly sweeping through the country, such measures as were being used tended to spread rather than isolate the disease; whole counties were being put under quarantine, a quarantine which could not be enforced; the farmers did not know what moment they would be prohibited from shipping their stock; were afraid any moment that it might be tied up, held until it became infected, and they would lose all. As a result they were willing to sell at any price, quantities of stock were dumped on the market, and prices decreased rapidly. Whole States were put into suspected areas, and from this area the farmer could only ship to one market, and there he must sell at the packers own price. This resulted in tremendous losses. This must be considered together with the fact that Mr. Ferguson, one of the leading men in the packing industry, was the head of an organization that was apparently directing the quarantine. In his work he was aided and abetted in drafting these rules by State officers, who were charged with protecting the farmers, but who, by their action, warrant the charge of holding stock in quarantine that the insurance companies of which they were stockholders might grow rich through the farmers' misfortune. When you keep the two in mind, do you wonder that these men who were losing their profits through these quarantine laws became imbued with the idea that a mercenary motive was involved in these quarantine regulations.

I want to call your attention to the manner in which the Federal Government usurped the rights of the various States to make and enforce quarantine regulation within their own borders. I cite your attention to Iowa particularly. This is my own State, and I am very familiar with the actions that were taken there. These vicious quarantine laws that had been enforced had become intolerable. Herds of hogs and cattle were dying by the hundreds. Millions were being lost, farmers were being made bankrupt, and the live-stock industry was going to ruin. At this time a 5-mile quarantine was enforced. So great had become the disaster that the people in the infected areas almost in a body appealed to the governor to give them some relief. On December 31 Gov. Clark sent to David E. Houston, Secretary of Agriculture, the following telegram:

DES MOINES, IOWA, *December 31, 1914.*

HON. DAVID HOUSTON,
Secretary of Agriculture, Washington, D. C.:

Within the 5-mile zone quarantine for foot-and-mouth disease are thousands of hogs ready for market, 60 days in some cases. Feed almost exhausted, tenants unable to pay rent, obligations generally can not be met, hogs threatened with cholera, many already dying with it, great losses sustained by farmers. Can the Government consent that hogs outside of 2 miles of infected farm, after inspection, may be shipped to Iowa market for immediate slaughter? It would be great relief. State desires to cooperate with Government if it is possible and consistent with safety. May the modification be granted.

GEO. W. CLARK, *Governor.*

This shows the condition that existed in Iowa at this time. On January 2, the following reply to that telegram was received:

JANUARY 2, 1915.

GOV. GEORGE W. CLARK,
Des Moines, Ia.:

Order 231, effective January 1, permits shipment of stock for slaughter after inspection from 5-mile zone 30 days after disinfection of premises is completed. This will undoubtedly release in near future much live stock now held in quarantine. Regret three recent outbreaks in Cedar and Iowa Counties; will delay action in those localities.

D. F. HOUSTON, *Secretary.*

Thus, you will see that the appeal of the governor of Iowa for relief found a deaf ear in this Democratic administration, which expressly refused to allow a State to move stock within its own borders. In January of that year the Iowa Legislature met in its biennial session, and one of the first things to come before that body of men was the intolerable condition prevailing in the quarantine of the foot-and-mouth disease. Iowa farmers appealed almost in a body for legislative action that would at one time place a real quarantine around premises infected with the foot-and-mouth disease, and release for shipment stock not infected, stock that was rapidly eating up the profits of the farmer, or hogs that were becoming infected with cholera. The result was that a law was passed providing that a strict quarantine should be placed around an area of not more than 3 miles from any infected premises, and a conditional quarantine should be placed around an area 2 miles from the strict quarantine. Stock could be immediately shipped from the conditional quarantine after due inspection. Stock in the strict quarantine was held. This law you can readily see would have proven a great relief to the farmers. After passing the law, the Iowa Legislature sought the cooperation of the present administration in the enforcement and application of the law it had enacted. Did it get it? No, indeed! Instead, it received a threat that if the governor of Iowa signed the bill that the legislature had passed, the entire State of Iowa would be isolated, and that not one shipment of stock would be allowed to pass its borders. I quote you a telegram signed by Carl Vrooman, Acting Secretary of Agriculture, which clearly indicated the high-handed method the administration used to coerce the State into adopting its rules and regulations:

TO THE GOVERNOR OF IOWA:

Regret very much bill relating to foot-and-mouth disease quarantine does not meet with our approval. It is sometimes necessary to quarantine large areas until extent of infection can become known. Quarantining individual farms or radius of 5 miles around them is not always sufficient. Am advised such bill would automatically release all present quarantines in Iowa and would compel the department, much against its will, to quarantine the entire State. Disease rapidly disappearing and department contemplates in the near future conference with State officials and representatives of live-stock interest as to most effective methods of cooperation in the handling of future outbreaks.

CARL VROOMAN,
Acting Secretary of Agriculture.

Can you beat it? Did you ever before hear of such a Federal piracy of a State prerogative? A department of this Government threatening a State that if it passed a law governing an industry within its own borders that that State would be isolated, cut off from communication with every other State in this Union.

I wish also to quote a paragraph from a letter dated Washington, D. C., July 22, 1915, received by myself and signed by D. F. Houston, Secretary of Agriculture, which confirms the statement that this administration claims the Bureau of Animal Industry has unlimited authority over the property and liberty of citizens of a State in matters that have always been considered under the strict jurisdiction of the State:

It is the practice of the department in establishing and enforcing Federal quarantines to give careful consideration to State quarantine laws and to recognize State quarantines which are found to be adequate to meet the emergencies arising out of the outbreak of animal diseases. The department understands, however, as a matter of law, that when a Federal quarantine has been declared under the authority of a statute dealing broadly with the subject, the Federal quarantine prevails and State laws and regulations inconsistent therein become invalid; and it has not hesitated to enforce Federal quarantines, regardless of State laws or regulations, whenever such action has been found to be necessary to cope efficiently with contagious, infectious, and communicable animal diseases.

I shall at the proper time introduce an amendment to the bill now pending. This amendment has the indorsement of practically every one of the breeders and farmers who have had experience with quarantine of foot-and-mouth disease. I hope that I may have the support of everyone in this House. I hope that all those of the opposition who have hitherto worked to defeat those measures that have been advocated by the Republicans in the interest of the farmer will give this amendment their support. Hitherto they have promised much during that period before the time of election, but when they have come to Washington the interests of the farmer are forgotten, and they have used their power to retain the autocracy of these bureaus rather than in the interest of those who produce the wealth. [Applause.]

If the gentlemen on the opposite side of this Chamber use their power to defeat these measures that are in the interest of the farmers, I remind them that these farmers have it in their power next fall to see that Members of Congress are elected to this House that belong to a party in sympathy with them and their interests. [Applause.]

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. HULL of Iowa. I ask unanimous consent, Mr. Chairman, to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. LEVER. Mr. Chairman, I yield two minutes to myself.

The CHAIRMAN. The gentleman from South Carolina is recognized for two minutes.

Mr. LEVER. Mr. Chairman, agriculture is the greatest occupation of mankind. It is the oldest of all the occupations of mankind. To-day is the anniversary of the birth not only of the patron saint of the party to which I owe allegiance and have the honor to follow, but it is at the same time the birthday of a man who, during his whole life, was the patron saint of agriculture in the early history of this country. I refer to Thomas Jefferson. [Applause.]

His philosophy was that the four chief occupations of man are agriculture, commerce, manufacture, and navigation, and

the chiefest of these is agriculture. He was the first man in this country to show a practical interest in the upbuilding of agriculture, when, as ambassador to France, he began to introduce into this country new seeds and new varieties of plants. He wrote many, many very interesting and valuable dissertations upon agriculture. He was a visionary man in many respects, a dreamer, but in my judgment he looked further into the future, and saw it more clearly, than any human being who ever lived.

The first appropriation upon which the Department of Agriculture finally built itself was secured in 1839—an appropriation of $1,000 for the introduction into this country of new and rare seeds. The department itself was organized in 1887. It was organized largely through the efforts of the father of one of my distinguished colleagues, Mr. AIKEN, of South Carolina. [Applause.]

But I rose only to remind the committee that this is the birthday of one of the great patron saints of this country, who devoted a large part of his time and his thought to the promotion and development of agriculture. [Applause.]

Now, Mr. Chairman, I yield 15 minutes to the gentleman from Alabama [Mr. HEFLIN].

The CHAIRMAN. The gentleman from Alabama [Mr. HEFLIN] is recognized for 15 minutes.

[Mr. HEFLIN addressed the committee. See Appendix.]

Mr. HAUGEN. Mr. Chairman, I yield 10 minutes to the gentleman from Wisconsin [Mr. BROWNE].

Mr. BROWNE. Mr. Chairman, the last Congress of the United States appropriated over a thousand million dollars. One hundred and forty thousand dollars was appropriated for the Forest Products Laboratory. This bill carries a similar amount.

The Forest Products Laboratory is located at Madison, Wis. It was established in 1910, the State of Wisconsin appropriating $50,000, building suitable buildings, and so forth, for housing this department.

I desire to call your attention to the work this Forest Products Laboratory is doing, to see whether the money is well expended, and whether the people of the United States are getting value received for their money.

NUMBER OF PEOPLE EMPLOYED IN WOODWORKING OCCUPATIONS.

The Statistical Abstract of the United States of 1914 gives 1,005,000 people employed in the manufacture of logs, lumber, woodworking, wood pulp, wood-pulp paper, turpentine, cooperage, cabinet work, and wood distillation. The same abstract gives the total number of wage earners engaged in purely manufacturing as 6,615,000; that is to say, almost one-sixth of our wage earners who are engaged in manufacturing are dependent for their employment on forest products. It means also that at least one-sixth of our transportation, more than one-sixth of our building, one-sixth of our commercial, financial, and professional activities are directly or indirectly dependent upon our forests.

Every farmer that owns a wood lot is benefited by being able to utilize it to his best advantage. The settler who formerly burned the greater portion of the wood and timber taken from the land that he was cleaning is now, thanks to scientific investigation, able to sell the greater portion of his forest products and make them pay for the cleaning of the land and placing buildings thereon. Even the bark from the trees and the stumps of the pine are becoming a source of revenue.

In the brief time given me it would be impossible for me to go into detail as to the many kinds of investigations being conducted by this Forest Products Laboratory. I will only have time to briefly call your attention to a few of these activities, and will ask leave to have printed in the RECORD as part of my remarks a more complete statement showing the scope of the work in accomplishments of the Forest Products Laboratory, and statistics concerning the pulp, paper, and other industries, which statement was prepared at my request by Howard F. Weiss, director of the laboratory, and a man of remarkable ability and energy.

TIMBER TESTS.

The work of this section is devoted principally to tests upon commercial woods of the United States.

The grading rules for structural timber, formulated by the American Railway Engineering and Maintenance of Way Association, are based largely on the result of tests made by the Forest Products Laboratory.

The portion of the new building laws for New York City that relates to wooden construction is based largely on the result of the Forest Products Laboratory tests.

Tests by the Forest Products Laboratory on telephone poles of various species have shown that woods heretofore considered unsuitable have the requisite strength for pole purposes.

Formerly timbers cut from trees adapted for turpentine were thought to be weaker than timber from untapped trees, and only unboxed timber was accepted. This discrimination has caused a waste of about 37,000,000,000 board feet of long-leafed pine timber valued at $111,000,000.

Tests made by this Government laboratory have shown that tapping trees for turpentine has no effect on the strength, and the use of box timber is becoming general.

Tests on packing boxes of various types have resulted in the revision of the specifications of the Interstate Commerce Commission for boxes used in shipping explosives. The railroads of the United States paid $40,000,000 annually in claims to shippers for goods lost and damaged in transit. A large percentage of this amount is due to poor design of boxes. By improving the design they hope to save at least $5,000,000 a year to the shippers and to the railroads.

Since the establishment of this forest laboratory in 1910 to 1915, 125,000 strength tests on 130 species of American wood have been made.

THE SEASONING OF WOODS.

A kiln has been designed which has shown greater efficiency than any now used. A carload of water-oak wagon felloes furnished by a large vehicle company, and claimed by them to be of little value because they could not be seasoned without checking and marking, were dried with a loss of only 2 per cent of the material.

Dry kilns have now been built by six large concerns using the advise of the Forest Products Laboratory, which represent an investment of $175,000.

Eleven hundred samples of wood a year are being identified for the public use without charge, and disputes involving large transactions are settled.

WOOD PRESERVING.

The preservation of wood against fire and decay and against all wood-destroying animals, and the study of the durability of wood under various conditions, represents the wood work of this section.

Tests upon the fire-resisting and water qualities of various paints and chemicals are also being carried on.

It has been shown that the life of wood used in the exposed situations, or in contact with the soil or water, can be increased at least three times by treatment with preservatives.

The Forest-Products Laboratory has designated some 12 wood-preserving plants for wood-using companies.

Tests have shown that many woods of comparatively little value, such as jack pine, lodge-pole pine, and other woods that were considered of little value, can be easily treated with preservatives and are suitable for ties. The use of these kinds of wood for tie purposes has doubled in the last five years.

The results of the investigations by the Forest Products Laboratory of the treatment of paving blocks have been utilized by the city of Chicago in drawing up specifications for city pavements.

PULP AND PAPER.

The study of forest products as pulp-making materials and the study of processes of manufacture of pulp and paper have been of inestimable value to the paper industry.

Tests have shown that pulps of commercial value suitable for use in the manufacture of news and wrapping paper can be made by the sulphite process from eight species of native wood, several of which grow in large quantities on the national forests. Some of these woods are now used to a limited extent; others not at all.

Red fir, white fir, jack pine, tamarack, and hemlock can now be satisfactorily substituted for spruce in the ground-wood process in making the cheaper grades of paper, such as news and wrapping paper. Several mills are now using these woods.

THE MANUFACTURE OF VEGETABLE ALCOHOL.

The Forest Products Laboratory has been conducting experiments the last three years on the production of grain alcohol, and they believe that their experiments have been perfected so that vegetable alcohol can be manufactured at a cost sufficiently low so that it will be a substitute for gasoline. The market price for grain alcohol to-day is 55 cents a gallon. The Forest Products Laboratory believes that it can be produced for 15 cents a gallon.

Experiments conducted and just completed by this laboratory show that wood waste, such as sawdust, and other wood refuse, will produce about 20 gallons of 90 per cent alcohol per ton.

This alcohol is the same as that manufactured from grain and potatoes and other similar material, and must not be confused with wood alcohol, which is obtained from the destructive distillation of hardwoods.

Experts upon the subject claim that the advantages in favor of alcohol over gasoline for power purposes are many. It is claimed that with an alteration of engines a gallon of alcohol will be fully equal to a gallon of gasoline. Alcohol is safer to handle, forms no carbon on the spark plug, has no smell, and is not offensive.

In this connection I wish to make the suggestion that the Government is now operating an extensive sawmill on the Menominee Indian Reservation in Wisconsin. It is estimated that there is from one and one-half to two billion feet of timber upon this reservation. The Government could establish at a small cost a plant on this reservation to manufacture alcohol, using the by-product of this mill, which is cutting about 20,000,000 feet of lumber annually. The by-products are not being utilized at the present time.

From advices that I have had from experts upon the subject I believe this is entirely feasible; and if the appropriation of $140,000 specified in this bill for the Forest Products Laboratory, which is the same amount that was appropriated by the Sixty-third Congress, was raised to $215,000, work in the various lines could be substantially increased and a factory of this kind instituted.

I believe that if anyone will take the pains to ascertain the work which our Forest Products Laboratory is doing, they will agree with me that the people of this country are getting more value received for the money expended for the maintenance of the Forest-Products Laboratory than any money appropriated by the Government, and by increasing the appropriation they will greatly increase the benefits that will be derived from this very valuable branch of the Agricultural Department.

NATIONAL WEALTH.

What constitutes our national wealth? Our national resources, our lands, forests, water power, coal, minerals.

In the last 25 years our national wealth has increased at an unprecedented rate. This has been due to our scientific research, our ability to find and utilize our national resources.

Our land and all the wealth pertaining to land was here, of course, hundreds of years ago, but it did not become valuable until man by scientific research was able to utilize it.

The development of agriculture is a most striking illustration of this.

SCIENCE APPLIED TO AGRICULTURE.

In 1890 Prof. Babcock, of the agricultural department of the University of Wisconsin, invented the Babcock test, a chemical process by which he could test milk and determine with absolute accuracy the amount of butter fat contained in the milk. This invention was given to the world absolutely free, without a patent. It made the creamery, and especially the cooperative creamery, possible. It encouraged the farmer to go into dairying; with this test he was enabled to get just what his milk was worth. If he had high-bred cattle that gave rich milk, he received maybe twice the pay per quart that his neighbor who had an inferior breed of cattle received.

The dairy industry increased to a wonderful degree after this great invention, which added millions of dollars to the value of lands in the United States.

At that time the dairy industry in Wisconsin was in its infancy. She produced less than $10,000,000 worth of dairy products annually, while to-day Wisconsin is producing each year over $100,000,000 worth of dairy products.

The introduction of alfalfa has added millions of dollars to the value of lands in the Central West. The scientific breeding of cattle, the propagation of pure-bred seeds, and the study of soils have given our farm lands an increasing value which is beyond estimate.

Scientific investigation has worked the same change in the value of our minerals. Mr. Albert W. Atwood, in the Saturday Evening Post of March 18, referring to our rich deposit of tungsten, says, "What good did my grandfather get out of the undiscovered tungsten in Colorado when he was fighting in the Civil War? And what use was the unguessed deposit of tungsten to the Nation, for that matter, for it was not then being used as an alloy for steel as it is to-day."

The same development has taken place in the utilization of our water power.

In the district that I have the honor to represent, within the last dozen years over $15,000,000 worth of paper mills and other wood-using industries have been built along the Wisconsin River, and not one-tenth of the water power that is running to waste has been utilized.

Wisconsin was once the first timber State in the Union—it is now, I believe, third—but more than one-half of the timber that was cut was wasted. If we had possessed one-half the knowledge of the use of timber that we have to-day, hundreds of millions of dollars of wealth that was wasted because of ignorance could have been saved. Other timber States have had the same experience.

When a great department of the Government is doing a wonderful work in conserving our great national resources, the utilization of our forest products that are now being wasted at the rate of hundreds of millions of dollars a year, is it not a good investment to appropriate a sufficient sum so that this valuable department can carry on its great work faster?

Mr. LEVER. Will the gentleman yield for a question?

Mr. BROWNE. Yes, sir.

Mr. LEVER. Does the gentleman happen to represent the district in which this laboratory is located?

Mr. BROWNE. The laboratory is located in Madison, Wis. I do not represent that district.

Mr. LEVER. Has the gentleman made any personal observation of the working of this laboratory?

Mr. BROWNE. I have; yes, sir.

Mr. LEVER. Of course, the gentleman is giving his opinion, but I would like to have him state it categorically. Does it seem to be doing a good work?

Mr. BROWNE. It is doing a wonderful work, and I expect to file a statement going into details as to that work.

Mr. LEVER. I have recently gone into the study of the question, and I am very much impressed with the character of the work there and the results they are getting, and I am glad the gentleman is making this statement.

Mr. BROWNE. They are getting wonderful results, and Wisconsin is one of the large wood-industry States, and their work is greatly appreciated by every manufacturer of wood products through the United States, and many States and cities are getting valuable information from this Government laboratory, which can be had free by asking or writing.

Mr. LEVER. This laboratory, if the gentleman will permit, was located there for the reason that Madison was in a measure a clearing house through which the lumber products of that country go.

Mr. BROWNE. Yes, sir. And also because we have many scientific men in our great university and other large laboratories are located there, and Wisconsin is right in the center of the timber section. This makes the location of this Government Forest Products Laboratory a very advantageous location. Many places were considered when the location was decided and, I believe, the location was most fortunate.

Lyman Abbott has forcefully said:

A nation is made great, not by its fruitful acres, but by the men that cultivate them; not by its great forests, but by the men who use them; not by its railways but by the men who build and run them. America was a great land when Columbus discovered it; Americans have made of it a great nation.

The CHAIRMAN. The gentleman's time has expired.

Mr. BROWNE. I ask unanimous consent to print in the RECORD as part of my remarks a more complete statement, showing the scope of the work of the Forest Products Laboratory and statistics concerning the same:

Wage earners in manufacture, 1909.

[Pp. 240 to 243. Statistical Abstract, United States, 1914.]

Forest products:	Average No. of employees.
Charcoal	631
Cooperage	26,269
Furniture	128,452
Lumber	695,019
Piano and organs	19,010
Paper and wood pulp	75,978
Pulp goods	783
Turpentine and resin	39,511
Wood carpet	184
Wood distillation	2,721
Wood preserving	2,403
Wood, turned and carved	14,139
Total employees	1,005,100

Census Bulletin, Manufactures, 1909—Table 7, lumber industry.

States.	Value of products.	Value added by manufacture.
Washington	$89,155,000	$52,276,000
New York	72,530,000	30,824,722
Louisiana	62,838,000	39,681,716
Michigan	61,514,000	32,471,918
Wisconsin	57,967,000	32,381,700

STATEMENT SHOWING THE SCOPE OF WORK AND THE ACCOMPLISHMENTS OF THE FOREST PRODUCTS LABORATORY, AND STATISTICS CONCERNING THE PULP AND PAPER AND OTHER WOOD INDUSTRIES OF THE STATE OF WISCONSIN.

(Prepared for Mr. R. B. Goodman to furnish the information requested by the Hon. EDWARD E. BROWNE in his letter of February 21, 1916, to Mr. Goodman.)

The work of the Forest Products Laboratory covers the following general lines:

1. Timber tests.
2. Timber physics.
3. Wood preservation.
4. Pulp and paper.
5. Derived products: (a) Distillation; (b) naval stores; (c) ethyl alcohol and dyestuffs.

1. Timber tests.

The work of this section is devoted principally to tests upon the mechanical properties of the commercial woods of the United States and upon articles made from them. Thus tests are made upon small, clear pieces of full-sized structural timbers, boxes, barrels, vehicle parts, railway ties, etc., to determine not only actual strength but also most fitting designs and most useful specifications. Some of the specific accomplishments of this section are as follows:

(1) The grading rules for structural timber formulated by the *American Railway* Engineering and Maintenance of Way Association, and also the rules formulated by the American Society for Testing Materials, are based largely on the results of tests made by the forest-products laboratory. For the first time in the history of American lumbering, certain progressive companies will now agree to cut structural timbers according to the scientific grading rules formulated by us and guarantee such timbers.

(2) The National Association of Hickory Manufacturers incorporated the results of a series of tests on red and white hickory wagon spokes in their grading rules, allowing red hickory to appear in higher grades than before, thus making better use of material that was formerly considered inferior.

(3) The portion of the new building laws for New York City that relates to wooden constructions is based largely on the results of forest-products laboratory tests.

(4) Tests made by the forest-products laboratory on telephone poles of various species have shown that woods heretofore considered unsuitable have the requisite strength for pole purposes. The tests have resulted in the increased use of lodge-pole pine and Engelmann spruce in the West as substitutes for the less plentiful and higher-priced cedar.

(5) Formerly timbers cut from trees tapped for turpentine were thought to be weaker than timbers from untapped trees, and only unboxed timber was accepted. This discrimination has caused a waste of about 37,000,000,000 board feet of longleaf-pine timber, valued at $111,000,000. Tests made by the Forest Service have shown that tapping trees for turpentine has no effect on the strength, and the use of boxed timber is becoming general.

(6) Tests on packing boxes of various types, including boxes with and without battens, dovetailed boxes, and wire-bound boxes, have been made. These results affect the use of some 4,000,000,000 board feet of box lumber. The tests have resulted in the revision of the specifications of the Interstate Commerce Commission for boxes used in shipping explosives. The railroads of the United States pay $40,000,000 annually in claims to shippers for goods lost and damaged in transit. A large per cent of this amount is due to poor design of boxes. We are now improving this design, and hope to save the railroads at least $5,000,000 a year.

(7) Tests on shortleaf pine and white cedar cross arms in standard sizes have shown these species to possess ample strength for this purpose, as well as the commonly used species, Douglas fir and longleaf pine.

(8) Tests on California tan-bark oak have shown it to be entirely suitable for many purposes for which eastern oak is used. Approximately 400,000,000 board feet of tan-bark oak have been left in the woods to decay after the bark was removed for tanning purposes. Tan-bark oak flooring was used in one of the large hotels recently rebuilt in San Francisco.

(9) The practice of steaming timber before preservative treatment has been practically abandoned as a result of tests that showed the strong possibility of weakening the timber, and also that air seasoning was preferable to steaming as a means of rendering timber more easily treated.

(10) We have completed to date (1915) 125,000 strength tests on 130 species of American woods.

2. Timber physics.

This section devotes its time to the study of the physical properties of wood and carries out researches and experiments upon the kiln drying of wood, identification of wood, the preparation of photomicrographs of wood sections, and the treatment of wood under various conditions to change its mechanical and physical properties. Some of the results of this work are listed below:

(1) A kiln has been designed which has shown greater efficiency than is the case in average practice. A carload of water oak wagon felloes furnished by a large vehicle manufacturing company and claimed by them to be of little value because they could not be seasoned without checking and warping were dried with a loss of only 2 per cent of the material.

(2) Methods of drying already demonstrated when applied to woods studied will give the lumber industry an annual saving of $2,200,000.

(3) Dry kilns have now been built by six concerns using the advice of the forest products laboratory, which represent an investment of $175,000.

(4) Eleven hundred samples of wood a year are being identified for the public without charge and disputes involving large transactions are settled.

3. Wood preservation.

The preservation of wood against fire and decay and against the attack of wood-destroying animals and a study of the durability of wood under various conditions represents the field of work of this section. Tests are made upon various methods of impregnating wood and upon the durability of various kinds of wood treated with various preservatives under varying conditions. Tests upon the fire-resisting and weathering qualities of various paints and chemicals are also being carried on. Some of the results secured from this work are as follows:

(1) Tests to determine the life of both treated and untreated material are being carried on in cooperation with railway companies, cities (paving blocks), telephone companies, and mine companies. It has been shown that the life of wood used in exposed situations or in contact with the soil or water can be increased at least three times by treatment with preservatives. Forty-two sets of test material in various parts of the country are inspected at regular intervals by the forest-products laboratory and the results published from time to time. Information of this sort shows definitely the saving in both material and money due to preservative treatment. In one instance on the advice of the forest-products laboratory a small treating plant was installed by a coal company, which reduced their annual consumption of timber to one-half of the amount previously required, though only part of the timber used was treated.

(2) The Forest Products Laboratory has designed some 12 wood-preserving plants for wood-using companies and assisted in the design and preliminary operation of many others. The industry is now well established. A large amount of information on the best methods of treating certain woods, of operating various types of plants, and of handling certain preservatives is being constantly supplied in reply to inquiries. In 1904 there were 30 plants in operation, while in 1910 there were 84. From 1909 to 1910 there was a gain of over 45 per cent in the quantity of material treated annually.

(3) Tests have shown that many woods of comparatively little value, such as loblolly pine of the Southeast, jack pine of the Northeast, and lodgepole pine of the Rocky Mountain States, can be easily treated with preservatives and are suitable for ties. The use of these pines for tie purposes has doubled in the last five years.

(4) Tests have been made on 23 preservatives, including creosotes and salt solutions, to determine their properties, such as effectiveness in checking the growth of fungus, ability to penetrate into wood, effect on the strength of wood, and permanency. As from 50 to 75 per cent of the cost of treating is for the preservative, accurate data to guide a selection are important. Such tests have shown the necessity of careful analysis and grading of the creosotes used as wood preservatives, and laboratories have been established by the largest water-gas-tar company in the United States and by one of the largest creosote companies for the better handling of their wood preservatives. Our tests have shown farmers and others that preservatives costing 10 to 20 cents a gallon are as good as the ones they were paying 75 to 100 cents for.

(5) As a result of tests to show the possibilities of treated loblolly pine for pole construction a plant has been constructed in the South and is operating on this species.

(6) Tests to show the advantages of treating silo timber have resulted in silo companies furnishing treated material.

(7) The results of investigations of the treatment of paving blocks have been utilized by the city of Chicago in drawing up specifications for city pavements.

(8) The specifications for wood preservatives adopted by the American Railway Engineering & Maintenance of Way Association and by the National Electric Light Association are based on work done by the Forest Products Laboratory in analyzing and grading preservatives.

(9) The methods of treating poles by the brush and open-tank process adopted by the National Electric Light Association are based on the recommendations of the forest-products laboratory. Our tests show that by the expenditure of 30 cents in treating a pole a saving of 20 per cent on the investment is made.

(10) Sap stain in lumber causes a loss of $7,000,000 annually because it degrades the lumber. We have discovered that sodium fluoride gives twice as efficient results as sodium bicarbonate in preventing stain, and its commercial application is now being pushed.

4. Pulp and paper.

The study of forest products as pulp-making materials and the study of processes of manufacture of pulp and paper occupy the time of this section. Besides the plant at Madison, an experimental ground-wood pulp laboratory was operated at Wausau, Wis., for several years. Several important pieces of work upon the utilization of spruce and hemlock bark are now practically ready for commercial demonstration, but are not given in the following list of accomplishments, since no public commercial demonstration of the results of this work has been made:

(1) Tests have shown that pulps of commercial value suitable for use in the manufacture of news and wrapping paper can be made by the sulphite process from eight species of native woods, several of which grow in large quantities on the national forests. Some of these woods are now used to a limited extent, others not at all. Mills have started to use red fir, white fir, and lodgepole pine. Other species are under investigation.

(2) Tests have shown that three native species—jack pine, tamarack, and hemlock—of which large quantities are available in the Lake States, can be satisfactorily substituted for spruce in the ground-wood process in making the cheaper grades of paper, such as news and wrappings. Several mills have begun grinding these woods. A number of western woods are now being tested.

(3) Tests have shown that pulps suitable for book or wrapping paper can be made from 12 new species of native woods by the soda process; several other native species show commercial possibilities as soda-pulp woods. One mill that will operate on western yellow pine is in course of construction in the Southwest.

(4) Tests have shown that the highest grades of "kraft" paper can be made from longleaf pine by the soda and sulphate processes. Three paper mills in the Southeast are now using longleaf pine, a fourth is under construction, and plans are under way for a fifth.

(5) A number of methods of increasing the yield of pulp from the raw material without decreasing the quality of the product have been found.

(6) Tests by the sulphate process, now little used in the United States, have shown especial possibilities as a means of making paper from mill waste. A number of mills are now operating on waste.

5. Derived products.

(A) DISTILLATION.

This line of work has to do with obtaining wood alcohol, acetate of lime, and charcoal from hardwoods, and turpentine, rosin, pine oil, charcoal, and other products from coniferous woods by means of dry distillation or steam distillation, as the case may be. The work upon the extraction of turpentine and rosin by means of solvents, such as gasoline, is also classed under this head. The latter work has been undertaken but recently, and no specific accomplishment can be mentioned at present, although much progress has been made. The more important accomplishments in distillation are given in the list which follows:

(1) In hardwood distillation over 90 per cent of the material used is beech, birch, and maple, and practically no attempt has been made

to utilize other species. Tests made by the forest products laboratory have shown that commercial yields of acetate of lime and wood alcohol can be obtained from hickory, oak, tupelo, and red gum. Mill waste consisting of oak and red gum is now being used by at least one plant.

(2) Commercial methods used in hardwood distillation are generally crude and only part of the possible products are obtained. Tests have shown that it is possible to increase the yield of acetate of lime 50 per cent over present practice. This means a possible annual increase in the amount of acetate of lime produced from the same amount of raw material of over 38,000 tons.

(3) Steam distillation as an industry is still in an experimental stage. Methods of operation vary widely. The service has made tests to show the effect of varying conditions in the steam distillation process on the yield and cost of operation. This information has been of service to operators in standardizing methods and raising the efficiency of their processes.

(4) The American Chemical Society, the American Society for Testing Materials, the Navy Department, and the Isthmian Canal Commission have used the results of tests made by the forest products laboratory in formulating specifications for wood turpentine.

(B) NAVAL STORES.

This line of work has to do with the study of the most efficient production of gum, turpentine, and rosin, and their most efficient utilization. Studies are made upon different systems of turpentine orcharding, including tests upon the depth and height of the chip. Studies are also made upon other species than the long-leaf pine of the South; principal among these is western yellow pine. Studies are also made upon the efficiency of present methods of distilling the crude gum and upon the best methods of testing and specifying gum turpentine. The most important specific accomplishments along these lines are presented here:

(1) In 1902 a new system of hanging clay or metal cups on the trees instead of catching the gum in pockets cut in the base of the trees was introduced. Field experiments conducted for several years under commercial condition proved that 20 per cent more gum could be obtained by the new system than by the old. The deterioration of timber following boxing is about 8 per cent, and following cupping about 2 per cent. The danger from fire is also decreased when cups are used. The value of the additional turpentine and rosin produced annually, should the cup system be universally adopted, would be approximately $5,000,000.

(2) Field experiments demonstrating that less severe methods of chipping will give greater yields of gum have resulted in the adoption of methods recommended by the Forest Products Laboratory by at least one large naval stores company.

(3) Field experiments conducted in Arizona, California, and Colorado in 1911 showed a yield of turpentine and rosin from western yellow pine over two-thirds as great as the average yield in Florida operations. The large areas of western yellow pine may, therefore, be considered as a source of naval stores when sufficient timber is no longer available in the Southeast.

(4) Sources of waste in the methods of distilling crude gum have been pointed out, and "batting dross," formerly thrown away, is now worth $19 a ton.

(C) ETHYL ALCOHOL AND DYESTUFFS.

Researches upon ethyl alcohol have to do with the production of this very important article of commerce from sawdust and other wood waste. Experiments conducted at the forest-products laboratory show that wood waste will produce about 20 gallons of 95 per cent alcohol per ton of dry wood. This alcohol is the same as that manufactured from grain and potatoes and other similar materials and must not be confused with wood alcohol, which is obtained from the destructive distillation of hardwoods.

The laboratory has carried on experiments upon only one dyestuff, namely, the extract secured from the Osage orange, commonly known as bois d'arc, which grows so plentifully throughout southeastern Oklahoma and northern Texas. It is found that this dyestuff is practically identical with the dye agent present in fustic, a well-known vegetable dye. Largely through the efforts of the Forest Products Laboratory, Osage orange extract is now being made upon a commercial scale.

Pulp and paper mills in the State of Wisconsin.

Name of company.	Address of main office.	Location of mills in Wisconsin.	Financial rating.	Mill capacity, pounds of dry pulp per 24 hours.	Mill capacity, pounds of dry pulp per 24 hours.

[1] Estimated value is based on 1912 prices.
[2] Estimated wholesale value f. o. b. mill. With the exception of lumber, lath and shingles, the values used for estimating are for 1909.

Estimated total value of all products, $42,786,655.

STATE OF WISCONSIN.

TABLE 2.—*Wood-using industries, average prices paid for lumber at the factories, and the per cent which each industry used of the total quantity.*

Industries.	Average price paid for lumber at the factory per 1,000 feet b. m.	Apportionment of the total quantity of lumber among the industries (approximate per cent).
Agricultural implements	$32.54	1.59
Beehives and bee keeper's supplies	22.97	.49
Boats	43.64	.29
Boxes	13.09	12.82
Chairs	28.43	5.26
Church and school furnishings	33.39	.47
Cigar boxes	35.51	.56
Coffins and caskets	24.42	.48
Excelsior	9.89	.90
Furniture	25.22	5.20
Handles	18.48	.18
Musical instruments	41.76	.16
Office, store, and bank fixtures and cabinet work	44.12	.64
Pulp	15.54	33.35
Refrigerators	21.66	1.19
Sash, doors, blinds, and interior and exterior finish	30.19	18.72
Toys, wagons, and lawn furniture	24.84	.59
Trunks	23.11	1.24
Vehicles and vehicle stock	41.02	4.48
Windmills, tanks, and silos	36.05	1.02
Woodenware	14.05	6.67
Miscellaneous	25.87	3.70

The total amount of wood consumed in the State of Wisconsin by the industries listed is 930,382,000 feet, board measure, and is valued at the plant at $20,293,034. It is to be noted that almost exactly one-third of this wood is used by the pulp mills of the State.

Mr. HEFLIN. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Alabama asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. BLACKMON. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Alabama asks unanimous consent to extend his remarks in the RECORD. Is there objection? [After a pause.] The Chair hears none.

Mr. HAUGEN. Mr. Chairman, I yield 15 minutes to the gentleman from North Dakota [Mr. NORTON].

Mr. NORTON. Mr. Chairman, it was with the deepest interest that I listened on Tuesday to the splendid address of the very able and affable chairman of the Committee on Agriculture [Mr. LEVER], in which he discussed the most important items in the Agricultural appropriation bill now before this Committee of the Whole House on the state of the Union and in which he outlined a promised program of legislation in the interest of the farmers of this country to be enacted by this Congress.

With the most profound sincerity, and with all my heart, I hope and trust that every one of these beautiful pictured promises of legislation, long needed by the 6,500,000 farmers of this Nation, will be written on our statute books ere this session of the Sixty-fourth Congress adjourns. Every aid that I can give or render here will be to the end of such accomplishment.

With no captious desire to criticize, but having in mind that there is a wide difference between promises and fulfillments in the business world and sometimes even in the American Congress, and being most deeply interested in what I deem one of the most important, if not the most important, subject of legislation that should be considered by this Congress, I desire to briefly again call the attention of the membership of the House, and particularly the attention of those from agrarian districts, to the grave danger that this Congress may not give fair and full consideration to rural-credit legislation, and on this account may fail to enact any law for a Federal rural-credits system.

The State which I have the honor in part to represent has for its chief industry agriculture. During the year last past it produced in spring wheat alone 145,000,000 bushels—considerably more than one-third of all the spring wheat raised in the United States. The value of the farm products produced in 1915 amounted to more than $400 for each man, woman, and child in our State. It is a wonderfully rapidly developing State, as can be understood by the fact that 35 years ago the wheat production in the State amounted to less than 2,000,000 bushels. The total of all its bank deposits three decades ago amounted to less than $1,000,000, whereas to-day the deposits amount to more than $100,000,000. Having grown to manhood on a farm in the State, and having experienced all the difficult and distressing conditions with which the ordinary western farmer has to contend, I have given close attention for several years to the needs and demands for better rural-credit conditions in this country.

As the farmers of North Dakota are now, and have been for many years, paying highly exorbitant interest rates for the money and credit necessary to carry on their business, they, too—each one of them—have been interested in the work that has already been done toward securing the establishment of a national system of rural credit in this country.

It is generally conceded that the most important act of constructive legislation passed by the Sixty-third Congress was the Federal reserve act. For many years prior to the passage and approval of this act in December, 1913, it was well understood and recognized by students of finance and by the public that our banking and currency systems were weak, faulty, and wholly inadequate to meet the rapidly growing needs of the manufacturing, mining, transportation, and commercial interests of the country. The placing of the Federal reserve act upon our statute books has brought about a marvelous improvement in our banking system and in our currency system and has added wonderful strength and stability to all our institutions of trade and commerce.

While the banking and currency systems provided for by the Federal reserve act well meets the needs for credit of those engaged in manufacturing and commerce—those who require credits but for short and definite periods of time—it entirely fails to meet the needs of the great majority of the 6,500,000 farmers of the Nation, who, in the purchase and improvement of their farm property and in the production and harvesting of their crops, must have credits for much longer and more uncer-

tain periods of time and on a different class of security than is looked upon with favor by our present commercial banking system.

It has long been recognized in European countries that the commercial banking systems do not properly take care of agricultural credit. To-day nearly every great nation of the world has provided a separate rural-credit system apart from its commercial banking system to meet the needs of agricultural credit. This Nation has a most important duty yet to perform in this respect, both to itself and to the farmers of the Nation.

The movement for the adoption of a Federal rural-credit system for this country has been actively before the country during the past 10 years. President Taft on several occasions during his administration called attention to the necessity of some system to better provide for credits needed by those engaged in agricultural pursuits in this country.

Mr. BLACKMON. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from North Dakota yield to the gentleman from Alabama?

Mr. NORTON. Yes; I shall be pleased to.

Mr. BLACKMON. I understand the gentleman to say that this legislation has been demanded for 10 years. Has it not been demanded for about 30 years?

Mr. NORTON. It has been considered more during the last 10 years than during any other period of our history, but it has been discussed more or less during the last 30 or 40 years in this country. As the gentleman knows, this country is to-day nearly a century behind some of the European countries in legislation on this subject.

Mr. BLACKMON. I merely wanted to ask the gentleman that question. He said 10 years, and I thought it was considerably longer.

Mr. NORTON. In the last session of the Sixty-second Congress it was provided that a commission should be appointed to visit European countries, study the various rural-credit systems there, and report to Congress. This commission, known as the United States Commission on Agricultural Cooperation and Rural Credit in Europe, was duly appointed, and made a wide study of rural credit conditions in European countries during the summer of 1913. On the return of the members of the commission who visited Europe a very complete and most valuable report of their observations was made to the first session of the Sixty-third Congress.

The Democratic, the Republican, and the National Progressive Parties recognized in their party platforms of 1912 the importance of rural-credit legislation for this country.

The Democratic Party, in its platform of 1912, made this promise to the farmers of the country:

Of equal importance with the question of currency reform is the question of rural credits or agricultural finance. Therefore we recommend that an investigation of agricultural credit societies in foreign countries be made, so that it may be ascertained whether a system of rural credits may be devised suitable to conditions in the United States; and we also favor legislation permitting national banks to loan a reasonable proportion of their funds on real-estate security. We recognize the value of vocational education, and urge Federal appropriations for such training and extension teaching in agriculture in cooperation with the several States.

The Republican Party, in its platform adopted at Chicago on June 22, 1912, says on this subject:

It is of great importance to the social and economic welfare of the country that its farmers have facilities for borrowing easily and cheaply the money they need to increase the productivity of their land. It is as necessary that financial machinery be provided to supply the demands of farmers for credit as it is that the banking and currency systems be reformed in the interest of general business. Therefore we recommend and urge an authoritative investigation of agricultural credit societies and corporations in other countries and the passage of State and Federal laws for the establishment and capable supervision of organizations having for their purpose the loaning of funds to farmers.

The national Progressive Party made these promises on this subject in its platform adopted in Chicago on August 7, 1912:

The development and prosperity of country life are as important to the people who live in the cities as they are to the farmers. Increase or prosperity on the farm will favorably affect the cost of living, and promote the interests of all who dwell in the country, and all who depend upon its products for clothing, shelter, and food. We pledge our party to foster the development of agricultural credit and cooperation, the teaching of agriculture in schools, agriculture-college extension, the use of mechanical power on the farm, and to reestablish the country life commission, thus bringing the benefits of better farming, better business, and better living within their reach.

President Wilson, alive to the demand that was being made by the farmers throughout the country for a lower rate of interest for farm credits, devoted a considerable part of the message he delivered to the joint session of the House and Senate on December 21, 1913, at the beginning of the second session of the Sixty-third Congress to this subject. Speaking to the Members of the House and Senate, he said:

In pursuance of my constitutional duty to give to the Congress information of the state of the Union, I take the liberty of addressing you on several matters which ought, as it seems to me, particularly engage the attention of your honorable bodies, as of all who study the welfare and progress of this Nation.

Then, after stating the situation in Mexico and his views as to Victoriano Huerta, and after commenting on the bill for the Federal reserve act then before the Congress, he continued:

I present to you, in addition, the urgent necessity that special provision be made also for facilitating the credits needed by the farmers of the country. The pending currency bill does the farmers a great service. It puts them upon an equal footing with other business men and masters of enterprise, as it should; and upon its passage they will find themselves quit of many of the difficulties which now hamper them in the field of credit. The farmers, of course, ask and should be given no special privilege, such as extending to them the credit of the Government itself. What they need and should obtain in legislation which will make their own abundant and substantial credit resources available as a foundation for joint, concerted local action in their own behalf in getting the capital they must use. It is to this we should now address ourselves.

It has, singularly enough, come to pass that we have allowed the industry of our farms to lag behind the other activities of the country in its development. I need not stop to tell you how fundamental to the life of the Nation is the production of its food. Our thoughts may ordinarily be concentrated upon the cities and the hives of industry, upon the cries of the crowded market place and the clangor of the factory, but it is from the quiet interspaces of the open valleys and the free hillsides that we draw the sources of life and of prosperity, from the farm and the ranch, from the forest and the mine. Without these every street would be silent, every office deserted, every factory fallen into disrepair. And yet the farmer does not stand upon the same footing with the forester and the miner in the market of credit. He is the servant of the seasons. Nature determines how long he must wait for his crops, and will not be hurried in her processes. He may give his note, but the season of its maturity depends upon the season when his crop matures, lies at the gates of the market where his products are sold. And the security he gives is of a character not known in the broker's office or as familiarly as it might be on the counter of the banker.

Nearly four years have passed since the party now in full control of the legislative and executive branches of the Government declared that the question of financing the farmer was of "equal importance with currency reform." The interest of those engaged in commercial pursuits was taken care of by the Federal reserve act passed nearly two and one-half years ago. Since then Congress has been in session from December 23, 1913, to October 24, 1914, and from December, 1914, to March 4, 1915, and from December 7, 1915, to this date—more than 20 months in all—and still nothing final has been done to provide a proper and adequate system for financing the farmer.

Gentlemen of the House who have followed this subject closely will recall that two years ago at about this time of the year it was stated by different members of the Democratic side that Representative UNDERWOOD, then the floor leader of your party, had agreed to permit one of the rural-credit bills before the Committee on Banking and Currency to be reported out and to be taken up for consideration in the House. This promise, if made, was not kept.

The long summer months of 1914 dragged on, but every effort to bring the question of rural credits on the floor of the House was turned aside by the powers in control of the majority of the House.

The real friends of rural-credit legislation in the House were again, at the beginning of the third session of the Sixty-third Congress, in December, 1914, encouraged to believe that during the session a rural-credit bill would be reported by the Banking and Currency Committee and would be taken up in the House and fairly considered. This was, as you know, not permitted by those in control of the House. But what really took place? In the closing days of the session a combination of the rural-credit bills advocated by Representative Bulkley and Representative Moss was by action of the House added as an amendment to the Agricultural appropriation bill. The Members in the House opposed to any rural-credit legislation and those supporting President Wilson in his opposition to Federal rural-credit legislation embracing the principle of Government aid for the system combined forces and succeeded in having the Agricultural bill, with the amendment for rural-credit legislation sent to a conference committee of the House and Senate.

The conferees, as they were expected to do, quickly and skillfully gave the coup de mort to the amendment for a rural-credit system and brought in as a substitute a provision for the appointment of a joint committee of the House and Senate to investigate the subject of rural credit and report to Congress not later than January 1, 1916, a bill or bills for the establishment of a system of rural credits adapted to American needs and conditions. This committee made its report on January 4, 1916, in which it proposed a bill for a system of land-mortgage credits. No report has as yet been made by the joint committee on the subject of personal rural credit.

The report and recommendations of the joint committee of the House and Senate on land-mortgage credits was, on January 4, referred to the Banking and Currency Committee and

on the same day Representative Moss introduced in the House his bill (H. R. 6383), which was the legislation recommended by the joint committee, and Senator HOLLIS introduced the same bill in the Senate, being S. 2986.

Since January 4 the House Committee on Banking and Currency has from time to time considered the rural-credit bills that have been referred to it, and while I understand on the best of authority that a majority of the committee have decided to report out the bill introduced by Representative Moss, no report has yet been made to the House.

I can conceive of no good reason why if it is the honest intention of the majority in the House to enact a really helpful and practical system of rural credit for the farmers of this country that one of the bills referred to the Banking and Currency Committee has not long before this been reported to the House.

On February 9 I introduced this House resolution No. 135:

[In the House of Representatives Feb. 9, 1916.]

Mr. NORTON submitted the following resolution, which was referred to the Committee on Rules and ordered to be printed.

Whereas a joint committee of the Senate and House of Representatives, by a provision in the Agricultural appropriation bill approved March 4, 1915, was constituted, charged with the duty of preparing a report to the Sixty-fourth Congress on or before January 1, 1916, a bill or bills providing for the establishment of a system of rural credits adopted to American needs and conditions; and

Whereas the said joint committee of the Senate and the House of Representatives so constituted and authorized made to the House on January 4, 1916, and in said report recommended a bill for land-mortgage loans; and

Whereas the report and recommendations of said joint committee on rural credits was, on January 4, 1916, referred to the Committee on Banking and Currency; and

Whereas the bill, H. R. 6838, introduced in the House on January 4, 1916, and which was referred to the Committee on Banking and Currency on said date, embraces the recommendations of said joint committee on rural credits; and

Whereas the Banking and Currency Committee has had before it for consideration since December 6, 1915, the bill (H. R. 391) providing for the establishment of a farm-credit bureau to reduce the interest on farm mortgages and to encourage agriculture and the ownership of farm homes; and

Whereas the great need for the immediate enactment of legislation providing for a rural-credits system in the United States is generally recognized: Therefore be it

Resolved, That the Banking and Currency Committee be discharged from further consideration of the bills H. R. 391 and H. R. 6838 and the report of the joint committee of the Senate and House of Representatives on rural credits, and that the bills H. R. 391 and H. R. 6838 be placed upon the Union Calendar of the House and be given a privileged status in the House under the rules of the House—

calling attention to the failure of the Banking and Currency Committee to report to the House any of the bills introduced on the subject of rural credits and proposing that the Committee on Banking and Currency be discharged from further consideration of the bill H. R. 6838, introduced on January 4 by Representative Moss and the bill H. R. 391 which I introduced on this subject on December 7.

It discourages one and makes one grow sick at heart to observe with what indifference this great needed legislation is treated by the recognized leaders of the Congress and by this administration. Men who might ordinarily be expected to give assistance to this legislation oppose it and seem unmindful of the fact that the agricultural industry is vastly more important to the welfare of this country than any other industry.

As I read history, and as I study the causes of the rise and fall of nations, I am impressed with the fact that there is no subject of legislation more important for this Congress to consider or for any legislative body to consider than legislation which will assist in making life on the farm and in the country more profitable and more attractive and which will in the present and in future generations turn the strongest current of population to the country rather than to the city.

To my mind, one of the most dangerous tendencies of our social and economic systems, as disclosed by the last census taken in this United States, in 1910, was the fact that the population in our cities was increasing at a much more rapid rate than the population in our rural communities. The stability of our Government, the perpetuity of its free institutions, and the health, happiness, and morality of our people will be better assured if a reversal of this trend of our population is brought about. Everyone knows that it is in the cities where crimes are bred and fostered and where the very hotbeds of immorality exist. It is out in the smaller cities and the free air and sunshine of the country that patriotism and good citizenship expand and reach their highest development.

The time has struck in this country when the actual necessities of the case make it imperative that we do something here and now to prevent a decreasing rural population in this country.

We marvel at the wonderful national strength and power that Germany has demonstrated to the world during the past few years, but at the same time let us not forget, as Mr. David Lubin has aptly said:

The great strength of the German Empire does not come from the "goose step" of her soldiers nor from her Krupp guns; it comes as a direct and an indirect result of her Landwirtschaftsrat system for the scientific distribution of her agricultural products, of the food products of Germany, all of which is reenforced by her effective and efficient rural-credit system.

Thus far in this Congress nothing has been done to better agricultural conditions in this country. On the other hand, the majority of this House has found time to pass a Post Office appropriation bill, giving increased salaries to many already well paid city Government employees; it has added an amendment to the Post Office appropriation bill, hamstringing the Parcel Post System in its service to rural communities; it has followed the cry of the Washington newspapers and has decided against requiring clerks in the Government service in Washington to work eight hours a day, and has decided that seven and a half hours a day is all the length of time that shall be required for a day's work for a clerk in the Government service in Washington; and it is now being proposed to soon take up the time of the House with the consideration of a bill to pension all clerks and other employees of the Government service who have been in the service 30 or more years.

Again let me say that I hope the promises for legislation in the interest of the farmers of the Nation as pictured by the gentleman from South Carolina [Mr. LEVER] may be fulfilled by this Congress. But, in the light of what has already been done in this Congress, the old excuse that there has not been time to consider rural-credit legislation will not be accepted and should not be accepted.

During this Congress I have from time to time made inquiry of members of the Banking and Currency Committee as to when one of the rural-credit bills before this committee would be reported to the House and have urged the importance of taking this subject of legislation up in the House early in the session. I do not believe I am betraying any confidences when I say that one of the most prominent Democratic members of the committee assured me several weeks ago that an agreement had been reached as to when rural-credit legislation would be taken up, and the leader of the majority of the House, the gentleman from North Carolina [Mr. KITCHIN], had promised him that the rural-credit bill favored by the Banking and Currency Committee would be permitted to be called up some time in March—that is, last month. That time has long since passed. No rural-credit bill has been called up in the House, and none has even been reported to the House by the Banking and Currency Committee.

I know something of the character of the bill that it is generally understood has been agreed upon to be reported by the committee, and, although I listened to the explanation given a few days ago by the chairman of the Committee on Banking and Currency, the gentleman from Virginia [Mr. GLASS], I can not find any good reason why a bill should not have been reported before this time, so that both the report and the bill might be carefully studied by all Members of the House. I trust that all friends, the real friends, of rural credit legislation will use their efforts to have one of the bills now before the Banking and Currency Committee reported out and taken up in the House for consideration without further delay.

Mr. HAUGEN. Mr. Chairman, will the gentleman yield?

Mr. NORTON. Certainly; I yield to the gentleman.

Mr. HAUGEN. Does the gentleman have in mind the bill reported by the other body at the other end of the Capitol?

Mr. NORTON. Yes; I have in mind the bill that has been reported to the Senate. I am well acquainted with its provisions; but it has not been considered on the floor of the Senate, and I believe that unless we take up within a very short time in this House one of the bills that has been introduced on this subject and consider it and pass it in some reasonably good form this Congress will not enact any rural-credit legislation. We can not reasonably expect that anything will be done with a great subject of this kind during the short session of Congress to be held beginning next December.

Mr. HAUGEN. I would like to inquire of the gentleman what is the urgent need of passing the bill? What has the gentleman in mind? Is it the soft berths provided for at the public crib?

Mr. NORTON. I will say to the gentleman I have in mind the highest welfare of my country and the urgent and distressing needs of a large majority of the 6,500,000 farmers of this country. [Applause.] I have in mind the fact that to-day the farmers of this country are paying an annual rate of about 8½ per cent interest on $6,000,000,000 of farm mortgages and personal credits. I have in mind that this is a highly exorbitant

rate of interest, that can be reduced one-half by a sound rural-credit system.

Mr. HAUGEN. Will the gentleman permit just one more question?

Mr. NORTON. I shall be pleased to if the gentleman will permit me to complete my reply to his first interrogatory.

Mr. HAUGEN. Certainly.

Mr. NORTON. I have in mind that the farming industry is the most important industry in this country. I have in mind that the value of farm property in these United States exceeds $40,000,000,000, and I have in mind that the valuation of railroad property in the United States is about $16,000,000,000, and on a funded debt of about $10,000,000,000 the railroads are paying interest at the rate of from 3 to 4 per cent, while the farmers of the country on their debt of $6,000,000,000 are paying more than twice this rate. I have in mind that while I do not approve of the general principles of the bill that has been reported to the Senate, or of the bill that is proposed to be reported to this House by the Committee on Banking and Currency of the House, I do believe that, with all their defects, if either of those bills was passed it would result in its operation in reducing the interest rate that farmers are now paying on $3,000,000,000 of farm-mortgage loans at least 2½ per cent. This would mean a yearly saving to the farmers of the country of $75,000,000. This legislation would give us something from which to work. It would be a long step in advance of having no legislation at all on the subject.

The CHAIRMAN. The time of the gentleman from North Dakota has expired.

Mr. HAUGEN. I yield to the gentleman one more minute for the purpose of asking him this question: In the gentleman's opinion does the bill referred to supply the need?

Mr. NORTON. I will say to the gentleman that the bill in the form in which I understand it is to be reported to the House does not. Nevertheless, I want this House to consider and take action upon some rural-credit bill. We can do nothing with this subject unless the Banking and Currency Committee or the Rules Committee brings before the House a bill pertaining to the subject of rural credits. It wrings my very heart as I think of the heavy and unjust interest burdens that are borne by thousands of honest, hard-working American farmers. I make this appeal to you, gentlemen, because I know and have felt their needs. This Congress will have failed in one of its highest duties to the country if it does not enact legislation for a rural-credit system. [Applause.]

Mr. HAUGEN. I yield 20 minutes to the gentleman from Maine [Mr. GUERNSEY].

Mr. GUERNSEY. Mr. Chairman, I am interested in the agricultural subjects which are dealt with by this bill, as I represent a very large agricultural district. One county in my district probably raises more Irish potatoes than any other county in the United States. But this bill deals with other subjects besides agriculture. It deals with forestry subjects; and in that connection I wish to call the attention of the House to some phases of the legislation now pending.

In 1911 the Congress of the United States committed the Federal Government to a wise policy—that of establishing national forest reserves in the East. The policy was inaugurated after years of effort, and was upheld by a powerful public sentiment among the great population of the Eastern States. So important was it that means should be taken to preserve and increase the remnant of the once vast forests of the Atlantic seaboard in order to continue and maintain the flow of the rivers that industry dependent upon them should not cease and public health should not suffer, that it was not believed that the policy once adopted would ever be abandoned by Congress. Nevertheless, I have examined the provisions of the appropriation bill now pending before the House in vain for provisions to continue the acquisition of forest-reserve lands in the Eastern States, although the bill provides many millions of dollars for forest reserves and national forests in the West and even in far-away Alaska, far from the great eastern centers of population that contribute through taxation toward the millions herein appropriated for western purposes.

I do not question the wisdom of a dollar of the large sums set aside for these western forest lands. The expenditures, in my opinion, are fully justified. This is a great country, with a future that no man can foretell, but I do most emphatically question the desertion of eastern forest projects, which by the report of the National Forest Reservation Commission up to the close of the fiscal year ending June 30, 1915, represent 1,030,466 acres that had been approved for purchase and surveys completed. Of this amount 770,692 acres had been fully examined as to title, and title to 348,275 acres had been acquired by the United States. All lands up to June 30, 1915, that had been approved for purchase, including those that had been acquired, amounted to 1,317,551 acres.

Obviously, large sums expended in examination of surveys and title examination will be lost to the Government by the abandonment of these projects now. The expenditure of the Government for surveys, appraisals, and title examinations up to June 30, 1915, amounted to $743,112.60, or 56 cents per acre. In addition to the cost of the preliminary steps, $6,885,901.30 had been spent in payment of lands. This was at the average cost of $5.22 per acre.

Briefly I will call attention to the location of the eastern forest-reserve lands purchased or contemplated for purchase. In the State of Georgia 96,977 acres had been approved for purchase up to June 30, 1915, and of 35,174 acres the title had been acquired.

In the State of North Carolina 269,883 acres had been approved for purchase and 69,507 acres acquired.

In the State of South Carolina 23,064 acres had been approved but none acquired.

In the State of Tennessee 267,843 acres had been approved and 72,930 acres acquired.

In the State of Virginia 294,540 acres had been approved and 46,409 acres acquired.

In the State of West Virginia 1,317,551 acres had been approved and 348,275 acres acquired.

In the State of New Hampshire 256,467 acres had been approved for purchase and 106,112 acres acquired.

In the western part of the State of Maine, on the watershed of the Androscoggin, something over 81,000 acres had been designated for examination by the National Forest Reservation Commission.

THREE MILLION UNUSED.

Failure of Congress to provide money to continue these national undertakings in the East can hardly be excused on the ground of other pressing national demands, as Congress at least should make available by reappropriation the $3,000,000 in the Treasury which were set aside for this work, but which has never been drawn, for this reason: Under the act of Congress of March 1, 1911, $1,000,000 were set aside for eastern forest reserves for the fiscal year that began June 30, 1910, and $2,000,000 for the fiscal year 1911, but those years passed before the commission was ready to call upon the Treasury for the money, owing to the careful and conservative manner in which the commission was proceeding in acquiring lands. As a result the $3,000,000 reverted to the Treasury.

The refusal of Congress to make available this money that had been previously appropriated amounts to a repudiation of governmental obligations that Congress entered into with the people in 1911.

I want to say here that I have every reason to believe that the distinguished chairman of the Committee on Agriculture, as well as many of the members of that committee, believe that Congress is in honor bound to keep those obligations, and are not in any way in sympathy with the discontinuance of Government eastern forestry undertakings.

EARLIER FOLLY.

The people in the Eastern States, which is the older settled part of the United States, have been taught by hard experience what the destruction of our forests mean, and to-day they look back in amazement and in deep regret upon the short-sighted folly of the earlier authorities of those States who disposed of State holdings in immensely valuable virgin timberlands to the speculators of the earlier days at prices as low as a shilling an acre and, in some instances, at even a lower figure. The authorities in those days seemed to consider it a wise policy to get rid of the "woods" as fast as possible.

The only justification that I have heard advanced for the discontinuance of the eastern forest policy, inaugurated in 1911, is that it comes within the administration's order to cut all expenditures; but is this the place in which to make a cut? I believe not. Millions are being appropriated by this House weekly for objects that begin to disappear from the start. Forest-reserve purchases begin to increase from the start. Ten years ago, when the agitation was first started, lands could have been acquired at from one-third to one-half what they can be purchased for to-day. The lands that have been acquired would cost more to-day and still more to-morrow. Timberland values are increasing in this country constantly, and will continue to increase as the forests are reduced by the saw and the ax in responding to the ever-increasing demands upon them.

The chief justification for the passage of the $40,000,000 river and harbor bill by this House within a few days was that it took care of projects that are under way. The eastern forest-reserve lands are projects that are under way. Evidences of that fact are found in the report of the National Forest Reservation Commission, 1915, House Document No. 130, Sixty-fourth Congress, first session.

The commission states in this report that from two to three times the amount of forest lands already approved for purchase should be acquired before the undertaking is complete. They place the maximum amount to be acquired in the eastern forest reserves at a little under 4,000,000 acres, while the amount approved for purchase to date is a little over 1,300,000 acres, and their judgment is borne out by hundreds of men with expert knowledge of the situation backed up by the opinion of those interested in the movement that brought the matter before Congress.

RETURN TO THE TREASURY.

The creation of eastern forest reserves is not a new matter. The demand for them started more than 10 years ago and the movement has been on the increase since. Unlike some other undertakings of the Government, every dollar invested in eastern forest lands will increase in value and be returned to the Treasury, all in addition to the chief purposes of the undertaking, and, what is more, the States in which these lands are acquired will not in the end lose through being deprived of taxable property, for the reason that under the Weeks law they receive 35 per cent of the net income derived from the lands. The wisdom of the policy can not be questioned.

EUROPEAN NATIONS.

European nations have long protected their forests by regulating the cut and by other methods conserve timber growth in the interest of their people. Not only have they conserved their forest lands, but they have gone to great expense in reforesting large areas.

Every country and every nation that has failed to care and maintain its forests has been impoverished through such failure. The millions of Europe, after centuries of experience, recognize the importance of protecting the forests as a method of regulating stream flow, and on the regulation of stream flow the value of our water powers is dependent. Each passing year will find us more and more dependent upon water power. Each year we are reducing our available supply of fuel found within this old earth.

We are encroaching on the stores of coal and exhausting the reservoirs of oil, bringing us nearer to the day when we shall have to look to water power for heat as well as lighting and propelling force.

If this Congress passes into history with a record of having abandoned the policy of acquiring national forest reserve lands in the East out of the fast-disappearing remnant of such lands, it should and will bring down upon it the everlasting condemnation of the generations yet to come.

I will insert at this point in my remarks an extract from the annual report of the National Forest Reservation Commission for 1915, above referred to, as follows:

The wisdom of the Government's acquiring and administering extensive bodies of forest land at the headwaters of the great navigable rivers has become entirely clear. Far-reaching good will result in safeguarding the streams from erratic flow and in protecting the watersheds from destructive erosion, to which they are subject when unwisely cleared. A basis will be afforded for permanent industries in regions which otherwise are in danger of ceasing to be productive and of becoming a menace to the navigable rivers and to the communities situated upon them.

The appropriations which were made have been sufficient to start the work and make very substantial progress. Through the care exercised in making purchases the lands acquired are so well situated for administration and use that even should appropriations cease considerable good would be accomplished. But the program should not stop at this point. It should go further. However, the commission does not look upon the program as requiring expenditures through a long period of time, but rather through only a limited number of years.

Renewing its recommendation of the last year, it is the judgment of this commission that the work can best be done under appropriations covering periods of five years each, the appropriations becoming available annually and remaining available until expended, as is now the case. Experience has shown that it is impracticable to attempt to do this work under appropriations which expire with the fiscal year. It is also of the utmost importance that appropriations be continued through periods of not less than five years. When the work was begun a force of timber cruisers, title examiners, and surveyors had to be assembled and trained, a task which required two years. It would be most unbusinesslike to have to disband this force on account of a gap in the appropriations. If purchases were suspended, it would also require much time and expense to build up a new force and get under way again the negotiations that would have to be broken off. Many of the cruises and examinations which have been made and which had not resulted in purchases would have to be made over again and the intimate touch with the land situation which is now enabling purchases to go forward smoothly would be lost. From every point of view it is highly desirable that appropriations continue without a break.

It is again emphasized that the Congress establish this project upon the basis of an appropriation of $11,000,000. One million dollars appropriated for the year 1910 never became available at all. Instead of hastening into purchases in order to utilize the appropriation for the year 1911, which would have been unbusinesslike and would have resulted in loss to the Government, the commission adopted the conservative policy of making purchases only after full information had been secured in regard to each tract and reasonable prices had been obtained. By so doing it established the work upon a sound basis, but nearly all the $2,000,000 appropriated for the year 1911 reverted to the Treasury. These appropriations which were not utilized ought to be reappropriated.

In the judgment of the members of the commission, the work should be carried forward in a steady, systematic way. Since the existing appropriations ceased with the fiscal year 1915, it is recommended that action be taken by the Congress during the present session to continue the appropriations at the rate of $2,000,000 per year from the fiscal year 1917 to the fiscal year 1921, inclusive, and that it make all the appropriations available until expended.

In the discussion of forest reserves for the East I have made some reference to the national forests of the West. They number 152 and include vast areas. They are administered in the public interest. The merchantable trees are cut according to scientific foresters. The smaller trees are conserved and allowed to grow until of proper size before being cut, and the forests are thereby perpetuated.

NATIONAL PARKS.

In addition to the national forests of the West, the Federal Government has set aside for the preservation of natural scenery, as well as conservation, great sections of wild country as national parks. I will mention them in the order of their erection.

In 1832 in Arkansas a national park was established which included 46 hot springs, covering an area of 1½ square miles.

In 1872 the Yellowstone National Park in Wyoming, the greatest of all our national parks, was established, and contains 3,348 square miles, and it is said to contain more geysers than all the rest of the world together. Petrified forests, the Grand Canyon of the Yellowstone, lakes and streams, and a vast wilderness, which forms a retreat for the wild life of the country, which swarms with elk, moose, deer, antelopes, and bison, as well as birds and fowls of the air. In this place of safety for wild life all live together in harmony with nature and with man without fear of being disturbed or injured, demonstrating that wild animal life is dangerous only when pursued by man as game or an enemy.

In 1890 the national park of the Yosemite in California came into existence, and it includes the remarkable Yosemite Valley, which is described as a crack in granite mountains 7 miles long and less than a mile wide. Some of its snow-topped mountains rise to a height of 2½ miles.

In 1890 the Sequoia National Park was erected, and contains 237 square miles, and it also contains the greatest trees in the world, thousands of years old, many of them reaching to a height of nearly 300 feet.

The same year the General Grant National Park, in the State of California, was established. It contains 4 square miles, but, with the park previously mentioned, is said to contain 12,000 monster trees more than 10 feet in diameter.

In 1892 the Casa Grande Ruin of Arizona, containing prehistoric Indian ruins, was set aside as a national park.

Next there came into existence, in 1899, in the State of Washington, Mount Rainier Park, with an area of 324 square miles.

In 1902 Crater Lake National Park, in southwestern Oregon, containing 245 square miles, was set aside.

In 1903 and 1904, in South and North Dakota, two parks were set aside, called Wind Cave and Sullys Hill, respectively.

In 1906 Mesa Verde Park, in Colorado, containing 77 square miles, was established by the Federal Government.

In 1906, in Southern Oklahoma, the Platt National Park was brought into existence, and in 1910 the great Glacier Park, of Montana, containing 1,534 square miles, with more than 250 glacier-fed lakes, was set aside.

The latest park to be created in the West was in 1915, when the Rocky Mountain Park, in Colorado, containing 358 square miles, was established by Congress.

These great parks and forest reserves, lying west of the Mississippi River, are serving now, as they will continue to serve, purposes so useful that none will question their continuance so long as this Government stands; but their very number and the importance attached to them by our Government and the people as a whole adds emphasis to conditions that exist in that section of our country that lies east of the Mississippi River and within the bounds of which live two-thirds of the population of the Republic, a condition as to population that will always prevail.

The Atlantic seaboard will always be the most populous, as the commerce of the world will continue for all time on the Atlantic.

East of the Mississippi River there is not a single national park that the millions in the Eastern States can visit and

enjoy—a condtion that ought not to be continued, and one that Congress can remedy.

THE MOUNT KATAHDIN REGION.

In a bill that I presented in the last Congress, and will reintroduce in this, it is proposed that legislation be enacted to create a national forest reserve in the Mount Katahdin region in the State of Maine, to protect the stream flow of two of Maine's greatest rivers—the Kennebec and Penobscot—and in turn maintain great water powers, developed and undeveloped, which, if fully harnessed, would turn all the machinery of all the New England States; and out of the forest reserve acquired by the Federal Government that there be created a Mount Katahdin national park, as within this region there arises Maine's greatest and most majestic mountain, standing by itself in a wonderfully wild country, presenting the most striking scenic features of the East, the great Maine forest stretching away on every side as far as the eye can see, broken only by numberless enchanting lakes which feed swift-moving streams.

It is in such a region that Mount Katahdin rears its towering peaks more than 5,000 feet above the sea. Around its northerly base flows the Penobscot River on its way to the sea, and to the southwest of the mountain lies the largest lake in New England, Moosehead, the source of the Kennebec.

In the region of Mount Katahdin there lies the greatest natural fish and game preserve in North America east of the Mississippi. This remarkable region is within easy access to the people of eastern United States. It may not contain curative hot springs, but it has a life-giving atmosphere that has long acted as a magnet to the health and pleasure-seeking people of the Nation. It may not equal the Yellowstone in geysers, canyons, and petrified forests, but it has fascinating streams, deep gorges, and the fir and the pine. It may not possess the world-famed beauty features of the Yosemite, but there are those who contend that it possesses features equally as attractive.

The importance of Congress taking steps to save the Mount Katahdin region to the people of the United States can not be overstated. Once this forest is removed, an asset of great national value will be gone, probably for all time.

The Mount Katahdin region as a national park would provide a retreat for the wild life of the eastern section of our country, and would insure a place of safety where animal and bird life would propagate their species under natural conditions and insure the perpetuation of such life not only within the park but to the entire eastern country.

As a national park it would not only benefit wild life in securing to it a place of freedom from the hunter's gun but mankind as well. Thousands of our eastern citizens would like to go into the Maine woods and enjoy for a season out of door and camp life but for the fear of the hunter's gun which seems to point with unerring aim when a human being is mistaken for game.

During the past 10 years 110 persons have been fatally shot in the hunting season, and 114 shot but not killed, according to the official figures of the commissioners of inland fisheries and game of Maine, which I will incorporate in detail below:

MEMORANDUM OF HUNTING ACCIDENTS FOR THE YEARS 1906 TO 1915, INCLUSIVE

1906.

Two persons shot and killed; mistaken for deer.
One person shot and killed; mistaken for bear.
No record of nonfatal accidents this year.

1907.

Three persons accidentally shot and killed; none mistaken for deer this year.
No record of nonfatal accidents this year.

1908.

Two persons shot and killed; mistaken for deer.
Ten persons accidentally shot and killed.
No record of nonfatal accidents this year.

1909.

Four persons shot and killed; mistaken for deer.
Two persons shot; mistaken for deer, not fatal.
Nine persons accidentally shot and killed.
Sixteen persons accidentally shot; not fatal.

1910.

Two persons shot and killed; mistaken for deer.
Two persons shot; mistaken for deer, not fatal.
Four persons accidentally shot and killed.
Nine persons accidentally shot; not fatal.

1911.

Two persons shot and killed; mistaken for deer.
Two persons shot; mistaken for deer, not fatal.
Eleven persons shot accidentally and killed.
Fourteen persons shot accidentally; not fatal.

1912.

Four persons shot and killed; mistaken for deer.
Three persons shot; mistaken for deer; not fatal.
Thirteen persons shot accidentally and killed.
Ten persons shot accidentally; not fatal.

1913.

Five persons shot and killed; mistaken for deer.
One person shot and killed; mistaken for a mink.
Ten persons accidentally shot and killed.
Fourteen persons accidentally shot; not fatal.

1914.

Six persons shot and killed; mistaken for deer.
One person shot and killed; mistaken for a rabbit.
Eight persons shot accidentally and killed.
Twenty-three persons shot accidentally; not fatal.

1915.

Six persons shot and killed; mistaken for deer.
One person shot; mistaken for deer; not fatal.
Six persons accidentally shot and killed.
Eighteen persons accidentally shot; not fatal.

In calling attention to the danger from the hunter's gun as a reason for setting aside a section of wild country as a national park that would be free from such danger, I am not speaking in the interest of Maine people alone, but in the interest of the people of all the Eastern States, as a multitude from these States go to Maine annually for recreation and health, which can only be obtained through the freedom and enjoyment of out-of-door life.

The State of Maine for months in summer and fall, due to its exhilirating climate, inland lakes, forests, and its extended, picturesque coast has become the playground of the Nation. As our country develops the demand upon Maine as a place for recreation will rapidly increase, and the Nation may well consider that it has certain duties that it ought to fulfill to secure for the people the fullest enjoyment and advantages of this American Switzerland.

A national park in the Mount Katahdin region would be a long step taken by the Federal Government to secure to the people for all time the advantages I have mentioned, and such a park once made accessible through the development of park roads and trails would, in my judgment, be visited and enjoyed annually by thousands of our citizens.

The Legislature of Maine has memorialized Congress in the interest of this project. It has the indorsement of a very large number of organizations throughout New England. It has the most hearty support of the New England press, and, in addition, individuals not only in New England but in other Eastern States have expressed their enthusiastic support in favor of a Mount Katahdin National Park.

Mr. LEVER. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. HAMLIN, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill (H. R. 12717) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1917, and had come to no resolution thereon.

MONUMENT AT COWPENS BATTLE GROUND, S. C.

The SPEAKER. The bill (H. R. 9425) providing for the erection of a monument at Cowpens battle ground, Cherokee County, S. C., commemorative of Gen. Daniel Morgan and those who participated in the Battle of Cowpens on the 17th day of January, 1781, was by some mistake referred to the Committee on Public Buildings and Grounds instead of the Committee on the Library.

Mr. FINLEY. Mr. Speaker, I ask unanimous consent that it be referred to the Committee on the Library.

The SPEAKER. Without objection, it will be so ordered.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Waldorf, one of its clerks, announced that the Senate had passed bills of the following titles, in which the concurrence of the House of Representatives was requested:

S. 3723. An act providing for the holding of terms of the district court for the southern division of the western district of the State of Washington at Aberdeen; and

S. 5466. An act to open abandoned military reservations in the State of Nevada to homestead entry and desert-land entry, and to amend an act entitled "An act to open abandoned military reservations in the State of Nevada to homestead entry," approved October 1, 1890.

SENATE BILLS REFERRED.

Under clause 2 of Rule XXIV, Senate bills of the following titles were taken from the Speaker's table and referred to their appropriate committees, as indicated below:

S. 3723. An act providing for the holding of terms of the district court for the southern division of the western district of

the State of Washington at Aberdeen; to the Committee on the Judiciary.

S. 5466. An act to open abandoned military reservations in the State of Nevada to homestead entry and desert-land entry, and to amend an act entitled "An act to open abandoned military reservations in the State of Nevada to homestead entry," approved October 1, 1890; to the Committee on the Public Lands.

ENROLLED BILLS SIGNED.

The SPEAKER announced his signature to enrolled bills of the following titles:

S. 4399. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors;

S. 3984. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors; and

S. 1424. An act incorporating the American Academy of Arts and Letters.

JOINT RESOLUTION AND ENROLLED BILLS PRESENTED TO THE PRESIDENT FOR HIS APPROVAL.

Mr. LAZARO, from the Committee on Enrolled Bills, reported that this day they had presented to the President of the United States, for his approval, the following joint resolution and enrolled bills:

H. J. Res. 171. Joint resolution to continue in effect the provisions of the act of March 9, 1906;

H. R. 9923. An act granting the consent of Congress to the county of Mitchell, or to the county of Baker, both of the State of Georgia, acting jointly or separately, and their successors and assigns, to construct a bridge across the Flint River; and

H. R. 10139. An act to authorize the city of Fairmont to construct and operate a bridge across the Monongahela River at or near the city of Fairmont, in the State of West Virginia.

HOUR OF MEETING TO-MORROW.

Mr. LEVER. Mr. Speaker, I ask unanimous consent that when the House adjourns to-day it adjourn to meet at 11 o'clock a. m. to-morrow.

The SPEAKER. The gentleman from South Carolina asks unanimous consent that when the House adjourns to-day it adjourn to meet at 11 o'clock a. m. to-morrow. Is there objection?

There was no objection.

ADJOURNMENT.

Mr. LEVER. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 56 minutes p. m.) the House adjourned until to-morrow Friday, April 14, 1916, at 11 o'clock a. m.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills were severally reported from committees, delivered to the Clerk, and referred to the several committees therein named, as follows:

Mr. MAYS, from the Committee on the Public Lands, to which was referred the bill (S. 36) to authorize the Secretary of the Interior to issue patents for certain lands to the town of Duchesne, Utah, reported the same with amendment, accompanied by a report (No. 537), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

He also, from the same committee, to which was referred the bill (S. 3764) to consolidate certain forest lands in the Florida National Forest, reported the same without amendment, accompanied by a report (No. 539), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. OGLESBY, from the Committee on Patents, to which was referred the bill (H. R. 12481) granting an extension of patent to the United Daughters of the Confederacy, reported the same with amendment, accompanied by a report (No. 538), which said bill and report were referred to the House Calendar.

Mr. TAYLOR of Colorado, from the Committee on the Public Lands, to which was referred the bill (H. R. 21), authorizing the city of Salida, Colo., to purchase certain public lands for public park purposes, reported the same with amendment, accompanied by a report (No. 541), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, private bills were severally reported from committees, delivered to the Clerk, and referred to the Committee of the Whole House, as follows:

Mr. VINSON, from the Committee on Pensions, to which was referred sundry bills of the House, reported in lieu thereof the bill (H. R. 14576) granting pensions and increase of pensions to certain soldiers and sailors of the Regular Army and Navy and certain soldiers and sailors of wars other than the Civil War, and to widows of such soldiers and sailors, accompanied by a report (No. 534); which said bill and report were referred to the Private Calendar.

Mr. OGLESBY, from the Committee on Patents, to which was referred the bill (S. 4889) to permanently renew patent No. 21053, reported the same with amendment, accompanied by a report (No. 535); which said bill and report were referred to the Private Calendar.

Mr. GANDY, from the Committee on the Public Lands, to which was referred the bill (H. R. 11286) for the issuance of a patent for certain Government land to Benjamin F. Robinson and John Dows, reported the same with amendment, accompanied by a report (No. 536); which said bill and report were referred to the Private Calendar.

Mr. MAYS, from the Committee on the Public Lands, to which was referred the bill (S. 32) for the relief of William G. Williams, sr., reported the same without amendment, accompanied by a report (No. 540); which said bill and report were referred to the Private Calendar.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills were introduced and severally referred as follows:

By Mr. FAIRCHILD: A bill (H. R. 14577) to amend paragraph 207 of the act approved October 3, 1913, entitled "An act to reduce tariff duties and to provide revenue for the Government, and for other purposes"; to the Committee on Ways and Means.

By Mr. STOUT: A bill (H. R. 14578) authorizing the Secretary of War to extend the lease issued under the act of August 23, 1912, entitled "An act authorizing the Secretary of War to lease to the Chicago, Milwaukee & Puget Sound Railway Co. a tract of land in the Fort Keogh Military Reservation, in the State of Montana, and for a right of way thereto for the removal of gravel and ballast material"; to the Committee on Military Affairs.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills were introduced and severally referred as follows:

By Mr. VINSON: A bill (H. R. 14576) granting pensions and increase of pensions to certain soldiers and sailors of the Regular Army and Navy, and certain soldiers and sailors of wars other than the Civil War, and to widows of such soldiers and sailors; to the Committee of the Whole House.

By Mr. ALEXANDER: A bill (H. R. 14579) granting a pension to Arminda J. Osborn; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14580) granting an increase of pension to Ella R. Brown; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14581) granting an increase of pension to Sarah E. Overman; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14582) granting a pension to Allie Hicks, helpless child of Francis M. Hicks; to the Committee on Invalid Pensions.

By Mr. BACHARACH: A bill (H. R. 14583) granting a pension to William W. Faunce; to the Committee on Pensions.

By Mr. BELL: A bill (H. R. 14584) for the relief of the State of Georgia; to the Committee on Claims.

By Mr. BURKE: A bill (H. R. 14585) granting an increase of pension to Mathias Regner; to the Committee on Invalid Pensions.

By Mr. DOOLITTLE: A bill (H. R. 14586) granting an increase of pension to George W. Stoors; to the Committee on Invalid Pensions.

By Mr. DRUKKER: A bill (H. R. 14587) granting a pension to Mildred F. Keiller; to the Committee on Pensions.

By Mr. DYER: A bill (H. R. 14588) authorizing the President to appoint Archibald Grymes Hutchinson a first lieutenant of Infantry, and for other purposes; to the Committee on Military Affairs.

By Mr. EDMONDS: A bill (H. R. 14589) for the relief of Charles Tomkins; to the Committee on Military Affairs.

By Mr. ELSTON: A bill (H. R. 14590) granting a pension to Margaret F. La Blanc; to the Committee on Invalid Pensions.

By Mr. HAYDEN: A bill (H. R. 14591) granting a pension to Hood Sikes; to the Committee on Pensions.

By Mr. HENSLEY: A bill (H. R. 14592) granting an increase of pension to Mary E. Danley; to the Committee on Invalid Pensions.

By Mr. HUTCHINSON: A bill (H. R. 14593) granting a pension to Louis Coutier; to the Committee on Invalid Pensions.

By Mr. LAFEAN: A bill (H. R. 14594) granting an increase of pension to Henry C. Brant; to the Committee on Pensions.

Also, a bill (H. R. 14595) granting an increase of pension to Eliza H. Hector; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14596) granting an increase of pension to Mary A. Brady; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14597) granting an increase of pension to Samuel Saylor; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14598) granting an increase of pension to Franklin Deal; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14599) granting an increase of pension to Olive E. Campbell; to the Committee on Pensions.

By Mr. McGILLICUDDY: A bill (H. R. 14600) granting a pension to Dora E. Davis; to the Committee on Invalid Pensions.

By Mr. MILLER of Pennsylvania: A bill (H. R. 14601) for the relief of Mrs. Alice May Robinson; to the Committee on Claims.

By Mr. MOON: A bill (H. R. 14602) granting an increase of pension to Harriet E. Corbly; to the Committee on Invalid Pensions.

By Mr. NEELY: A bill (H. R. 14603) granting an increase of pension to Charles E. Watts; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14604) granting an increase of pension to John M. Millan; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14605) granting an increase of pension to Allie M. Kirkwood; to the Committee on Pensions.

By Mr. ROWE: A bill (H. R. 14606) granting an increase of pension to Augustus B. Tickner; to the Committee on Invalid Pensions.

By Mr. RUSSELL of Missouri: A bill (H. R. 14607) granting an increase of pension to F. M. Harris; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14608) granting a pension to Thomas P. Pope; to the Committee on Pensions.

By Mr. SWEET: A bill (H. R. 14609) granting an increase of pension to Lewis H. Lake; to the Committee on Invalid Pensions.

By Mr. TINKHAM: A bill (H. R. 14610) granting a pension to Celestia Watkins; to the Committee on Invalid Pensions.

By Mr. WARD: A bill (H. R. 14611) granting an increase of pension to Mary M. Crosby; to the Committee on Invalid Pensions.

By Mr. WINGO: A bill (H. R. 14612) granting an increase of pension to James H. Couch; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14613) granting an increase of pension to Ezra Rodgers; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14614) granting a pension to Mrs. A. M. Hughes; to the Committee on Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. ALMON: Petition of C. A. Wilson and other residents of Huntsville, Ala., asking that House bill 6468, to amend the postal laws, and also House bill 491, with the same title, or any other like measure, be not passed; to the Committee on the Post Office and Post Roads.

By Mr. ASHBROOK: Evidence to accompany House bill 13725, for relief of Thomas Adams; to the Committee on Invalid Pensions.

By Mr. BACHARACH: Memorial of New York Young Republican Club of New York City, in re coast fortifications; to the Committee on Military Affairs.

Also, petition of 451 people of Moorestown; St. Pauls Methodist Episcopal Church of 992 people, of Altantic; Young People's Baptist Union of Florence, all in the State of New Jersey, favoring national prohibition; to the Committee on the Judiciary.

Also, memorial of New York Young Republican Clubs, of New York City, in re Clarke Philippine amendment; to the Committee on Insular Affairs.

Also, petition of sundry citizens of Bridgeton, N. J., in re House bills 491 and 6468; to the Committee on the Post Office and Post Roads.

Also, memorial of Chamber of Commerce of the United States, in re industrial efficiency; to the Committee on Appropriations.

Also, memorial of Chamber of Commerce of the United States, in re dumping legislation; to the Committee on Interstate and Foreign Commerce.

By Mr. BAILEY: Memorial of Bedford Grange, No. 619, of Pennsylvania, on preparedness; to the Committee on Military Affairs.

Also, memorial of Bedford Grange, No. 619, of Pennsylvania, on postalizing the wires; to the Committee on the Post Office and Post Roads.

Also, petition of sundry citizens of Altoona, Pa., opposing House bills 491 and 6468; to the Committee on the Post Office and Post Roads.

By Mr. BURKE: Petition of H. E. Wendorf and 30 other citizens, of Lake Mills, Wis., protesting against the passage of House bills 491 and 6468; to the Committee on the Post Office and Post Roads.

Also, petitions of 48 citizens of Portage, Wis., protesting against the passage of House bills 491 and 6468, to amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. DALE of New York: Memorial of Army and Navy Union of the United States of America, favoring raising salaries in classified civil service; to the Committee on Reform in the Civil Service.

Also, petition of W. J. O'Meara, of Brooklyn, N. Y., in re Army organization; to the Committee on Military Affairs.

Also, memorial of Fifth Avenue Association on National Defense, favoring adequate preparedness; to the Committee on Military Affairs.

Also, memorial of Illinois Publishing Co., in re foreign relations; to the Committee on Foreign Affairs.

By Mr. DYER: Memorial of the national workmen's committee on Jewish rights; to the Committee on Foreign Affairs.

Also, memorial of Southwestern Millers' League, favoring adequate merchant marine; to the Committee on the Merchant Marine and Fisheries.

Also, memorial of New York Young Men's Republican Club, against Clarke amendment, relative to withdrawal of United States from Philippine Islands; to the Committee on Insular Affairs.

Also, memorial of New York Young Men's Republican Club, against the Hay bill and favoring a larger Army; to the Committee on Military Affairs.

By Mr. EAGAN: Memorial of congregatioon of the First Presbyterian Church of Jersey City, N. J., favoring legislation to prohibit the exportation of alcoholic beverages to Africa; to the Committee on Interstate and Foreign Commerce.

By Mr. ELSTON: Petition of Mrs. Rose Harvey and other citizens of Alameda County, protesting against House bills 6468 and 491; to the Committee on the Post Office and Post Roads.

By Mr. ESCH: Petition of citizens of Greenwood, Wis., favoring national prohibition; to the Committee on the Judiciary.

By Mr. FULLER: Petition of Tuthill Spring Co., of Chicago, Ill., favoring 1-cent letter postage; to the Committee on the Post Office and Post Roads.

Also, petition of citizens of Streator, Ill., against bills to amend postal laws; to the Committee on the Post Office and Post Roads.

By Mr. GALLIVAN: Memorial of Fifth Avenue Association on National Defense, in re preparedness; to the Committee on Military Affairs.

By Mr. GORDON: Petition of Rev. Paul Schwan and 14 other Lutheran ministers of Cleveland, Ohio, protesting against the enactment of House bills 6468 and 491; to the Committee on the Post Office and Post Roads.

By Mr. HOLLINGSWORTH: Memorial of J. Easton McGowan, of Steubenville, Ohio, favoring naval program recommended by naval board of the Navy; to the Committee on Naval Affairs.

By Mr. HOWELL: Petition of Young People's Society of Christian Endeavor of Milford, Utah, favoring Federal censorship of motion pictures; to the Committee on Education.

Also, petition of Young People's Society of Christian Endeavor of Milford, Utah, favoring prohibition in the District of Columbia; to the Committee on the District of Columbia.

By Mr. HUMPHREY of Washington: Petition of Overton T. Stephens and 13 citizens of Seattle, Wash., favoring national prohibition; to the Committee on the Judiciary.

By Mr. JOHNSON of Washington: Petition of 41 citizens of Vancouver, Wash., opposing House bills 491 and 6468; to the Committee on the Post Office and Post Roads.

Also, petition of 41 citizens of Battle Ground, Wash., opposing House bill 652; to the Committee on the District of Columbia.

Also, petition of 51 citizens of Battle Ground, Wash., opposing House bills 491 and 6468; to the Committee on the Post Office and Post Roads.

By Mr. LOUD: Petition of J. L. Murphy and 25 other citizens of Hope, Mich., favoring national prohibition; to the Committee on the Judiciary.

By Mr. McARTHUR: Petition of Young Men's Forum of Portland, Oreg., favoring Federal censorship of motion pictures; to the Committee on Education.

By Mr. McFADDEN: Resolutions adopted by the Constant Workers' Bible Class, Baptist Young People's Society, the Helpers' Class, Women's Baptist Missionary Society, Woman's Christian Temperance Union, and Men's Original Bible Class of the Baptist Church, all of Factoryville, Wyoming County, Pa., favoring national constitutional prohibition; to the Committee on the Judiciary.

By Mr. MEEKER: Petitions of 135 citizens of St. Louis, Mo., against bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. PETERS: Petitions of citizens of Lubec and Methodist Episcopal Church of Mount Vernon, Me., favoring national prohibition; to the Committee on the Judiciary.

Also, memorial of Mount Vernon, Me., Methodist Episcopal Church, urging against preparedness; to the Committee on Military Affairs.

By Mr. RANDALL: Petitions of sundry citizens and organizations of the State of California and First Free Baptist Christian Endeavor Society, of Boston, Mass., favoring national prohibition; to the Committee on the Judiciary.

By Mr. ROGERS: Petitions of 80 people of Reading and 40 people of Reading, favoring national prohibition; to the Committee on the Judiciary.

By Mr. ROWE: Memorial of the International Council for Patriotic Service, against polygamy in the United States; to the Committee on the Judiciary.

Also, petition of Thomas W. Sanner, of Brooklyn, N. Y., favoring House bill 13671, for the benefit of headquarters and quartermasters' clerks of the United States Army at large; to the Committee on Military Affairs.

Also, memorial of Fort Greene Chapter, Daughters of the American Revolution, Brooklyn, N. Y., favoring preparedness; to the Committee on Military Affairs.

Also, petition of sundry citizens of New York, favoring Stevens standard-price bill; to the Committee on Interstate and Foreign Commerce.

By Mr. SCHALL: Petition of sundry citizens of Minneapolis, Minn., favoring national prohibition; to the Committee on the Judiciary.

By Mr. SNYDER: Memorial of Camden (N. Y.) Chapter, Daughters of the American Revolution, favoring the establishment of a national park on the Oriskany battle field; to the Committee on Military Affairs.

Also, memorial of Rome (N. Y.) Chamber of Commerce, favoring a relocation of the proposed power site in the District of Columbia; to the Committee on the District of Columbia.

Also, memorial of Utica (N. Y.) Chamber of Commerce and the Utica Automobile Association, favoring the creation of a national park on the battle field of Oriskany; to the Committee on Military Affairs.

Also, petition of various residents of Camden, N. Y., opposing legislation barring the use of the mails to certain publications; to the Committee on the Post Office and Post Roads.

Also, memorial of the Rome (N. Y.) Chamber of Commerce, favoring increased appropriations for the Consular Service; to the Committee on Foreign Affairs.

By Mr. STINESS: Petition of Manton Baptist Church, of Johnston, R. I., favoring national prohibition; to the Committee on the Judiciary.

By Mr. TIMBERLAKE: Petitions of sixth district of the Woman's Christian Temperance Union of Colorado; churches in Larimer, Washington, and El Paso Counties, Colo., in support of pending prohibition legislation; to the Committee on Alcoholic Liquor Traffic.

Also, memorial of Progressive Rural League of Lincoln County, Colo., protesting against any weight limit on mailable parcels; to the Committee on the Post Office and Post Roads.

Also, petition of citizens of Karval and Wezel, Colo., urging action on Federal farm-loan measures now pending; to the Committee on Agriculture.

By Mr. WALSH: Petition of Methodist Baptist Union Congregation, of Osterville; Osterville Woman's Christian Temperance Union, of Osterville; and Wesley Methodist Episcopal Church, of New Bedford, all in the State of Massachusetts, favoring national constitutional prohibition; to the Committee on the Judiciary.

Also, petition of Major How Women's Relief Corps, No. 96, Department of Massachusetts, by Carrie E. Elliott, its secretary, favoring passage of so-called Ashbrook widows' pension bill, House bill 11707; to the Committee on Invalid Pensions.

Also, petition of Special Aid Society for American Preparedness, Cohasset, Mass., by George W. Collier and four others, favoring adequate appropriations for increasing the Army and Navy; to the Committee on Appropriations.

Also, petition of Special Aid Society for American Preparedness, Cohasset, Mass., by Benjamin F. Crane and 25 others, favoring adequate appropriations for increasing the Army and Navy; to the Committee on Appropriations.

Also, petition of Special Aid Society for American Preparedness, Cohasset, Mass., by H. B. Pennell and 12 others, favoring adequate appropriations for increasing the Army and Navy; to the Committee on Appropriations.

Also, petition of Special Aid Society for American Preparedness, Cohasset, Mass., by Joseph St. John and 40 others, favoring adequate appropriations for increasing the Army and Navy; to the Committee on Appropriations.

By Mr. WILLIAMS of Ohio: Petition of Brotherhood Bible Class of Kenmore and Congregational Church, of Atwater, Ohio, favoring national prohibition; to the Committee on the Judiciary.

By Mr. WINGO: Petition of citizens of Miller County, Ark., against preparedness; to the Committee on Military Affairs.

Also, petition of sundry citizens and organizations of Miller County, Ark., favoring national prohibition; to the Committee on the Judiciary.

By Mr. WINSLOW: Petition of residents of Worcester, Mass., against bills to empower the Postmaster General to bar certain publications from the mails; to the Committee on the Post Office and Post Roads.

SENATE.

FRIDAY, *April 14, 1916.*

The Chaplain, Rev. Forrest J. Prettyman, D. D., offered the following prayer:

Almighty God, we thank Thee for the permanency and changelessness of Thy love and power and grace. Thou dost lead us by paths that we do not know. Thou dost sustain us through providences that we can not understand. In the midst of problems unsolved in each new day we come to the tasks of the day. We bless Thee that the changeless force of life is Thy changeless love and Thy changeless grace, and we lift our hearts to Thee that we may be sure that God is leading us on, and at every step of the way Thou art unfolding to us the riches of Thy grace in Christ Jesus. Hear us in this prayer. Fit our hearts and minds for the duties of this day. For Christ's sake. Amen.

The Secretary proceeded to read the Journal of the proceedings of the legislative day of Wednesday, April 12, 1916, when, on request of Mr. CHAMBERLAIN, and by unanimous consent, the further reading was dispensed with and the Journal was approved.

PRESIDENTIAL APPROVALS.

A message from the President of the United States, by Mr. Sharkey, one of his secretaries, announced that the President had approved and signed the following acts and joint resolution:

On April 11, 1916:

S. 585. An act conferring jurisdiction on the Court of Claims to hear, determine, and render judgment in claims of the Sisseton and Wahpeton Bands of Sioux Indians against the United States;

S. 922. An act for the relief of Mary E. Nicolson;

S. 1809. An act to create an additional judge in the district of New Jersey;

S. 3391. An act to amend an act entitled "An act for the relief of Indians occupying railroad lands in Arizona, New Mexico, or California," approved March 4, 1913;

S. 3977. An act to authorize the Shamokin, Sunbury & Lewisburg Railroad Co., its lessees, successors, and assigns, to construct a bridge across the Susquehanna River from the borough of Sunbury, Northumberland County, Pa., to Monroe Township, Snyder County, Pa.;

S. 3978. An act to authorize the Catawissa Railroad Co., its lessees, successors, and assigns to construct a bridge across the west branch of the Susquehanna River from the borough of Milton, Northumberland County, Pa., to the borough of West Milton, Union County, Pa.;

S. 4190. An act authorizing the Yankton County Bridge Co., a corporation, to construct and maintain a bridge or bridges and approaches thereto across the Missouri River at a point between Yankton County, S. Dak., and Cedar County, Nebr.;

S. 4671. An act to exempt from cancellation certain desert-land entries in Riverside County, Cal.; and

S. J. Res. 80. Joint resolution authorizing the Secretary of War to receive for instruction at the United States Military Academy, at West Point, René W. Pintó y Wentworth, a citizen of Cuba.

On April 12, 1916:

S. 707. An act for the relief of Beverly E. Whitehead.

On April 13, 1916:

S. 5016. An act to authorize the reconstruction of an existing bridge across the Wabash River at Silverwood, in the State of Indiana.

On April 14, 1916:

S. 1048. An act for the relief of Warren E. Day.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the House had passed the bill (S. 5229) granting the consent of Congress to the county commissioners of Warren County, Pa., to construct a bridge across the Allegheny River in the borough of Warren, county of Warren, in the State of Pennsylvania.

The message also announced that the House disagrees to the amendments of the Senate to the bill (H. R. 11471) to amend the act entitled "An act to revise the tariff duties and to provide revenue for the Government, and for other purposes," approved October 3, 1913, agrees to the conference asked for by the Senate on the disagreeing votes of the two Houses thereon, and had appointed Mr. KITCHIN, Mr. RAINEY, and Mr. FORDNEY managers at the conference on the part of the House.

ENROLLED BILLS SIGNED.

The message further announced that the Speaker of the House had signed the following enrolled bills, and they were thereupon signed by the Vice President:

S. 1424. An act incorporating the American Academy of Arts and Letters;

S. 3984. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors; and

S. 4399. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors.

NATIONAL DEFENSE.

The VICE PRESIDENT. The Chair is in doubt about the unanimous-consent agreement. The Senate agreed that after the hour of 12 o'clock meridian of this day "no Senator shall speak more than once or longer than 10 minutes upon the bill, or more than once or longer than 10 minutes upon any amendment offered thereto." The Chair is inclined to think that the bill is now before the Senate.

Mr. CHAMBERLAIN. Mr. President, I understood when adjournment was had last evening that there were some matters which some Senators desired to bring up, but I am perfectly willing to go ahead with the bill. If there is any question about it, I would not want it interfered with as the unfinished business, and therefore I ask that House bill 12766 be laid before the Senate.

The VICE PRESIDENT. The Chair has no desire about this matter, but that seems to the Chair to be a fair construction of the unanimous-consent agreement, although the Chair is not of the opinion that under the unanimous-consent agreement it is necessary to keep the bill all the while before the Senate until it is finally disposed of.

Mr. CHAMBERLAIN. The pending question is the amendment of the Senator from Alabama [Mr. UNDERWOOD] to the amendment of the Senator from South Carolina [Mr. SMITH], and I suggest that the Senate proceed to dispose of that amendment.

Mr. MYERS. Mr. President, I should like to make an inquiry. Is there no morning business to-day?

The VICE PRESIDENT. It was the opinion expressed by the Chair that the unanimous-consent agreement requires the Senate to proceed at 12 o'clock to-day to the consideration of House bill 12766.

Mr. MYERS. The RECORD of yesterday's proceedings says that "the Senate adjourned until to-morrow, Friday, April 14, 1916, at 12 o'clock meridian."

The VICE PRESIDENT. There is no doubt about that.

Mr. MYERS. Is not that correct, Mr. President?

The VICE PRESIDENT. There is not any doubt about that being what was done, but the Chair calls the attention of the Senator from Montana to the unanimous-consent agreement heretofore entered into, which, under the rules of the Senate, constitutes an order of the Senate, and can only be set aside on one day's notice and by unanimous consent.

Mr. BRANDEGEE. Mr. President, I have taken a different view of the unanimous-consent agreement from that announced by the Chair. Inasmuch as the Chair states that clearly the unanimous-consent agreement does not contemplate keeping the bill before the Senate all the time, and inasmuch as we took an adjournment yesterday so that we could have a morning hour this morning, it seems to me the unanimous-consent agreement simply is that at 12 o'clock to-day no Senator shall speak more than 10 minutes, but that there is nothing in it to compel us to speak or to vote until the bill shall come before us two hours after the opening of the Senate. I am perfectly willing to take up the bill by unanimous consent if the Senate wants to do it, and I have no interest in the matter whatever, except that which I have taken.

The VICE PRESIDENT. The Chair has no interest in this matter whatever. The view of the Chair is different from the view of the Senator from Connecticut. The unanimous-consent agreement is for the decision of the Senate as to what is meant by its own unanimous-consent agreement.

Mr. CHAMBERLAIN. Mr. President, I do not object personally to having a morning hour, unless it will in some way interfere with the unanimous-consent agreement. If the Chair has any doubt about that, I would prefer that the Senate would go ahead with the unfinished business.

The VICE PRESIDENT. It is not a question as to whether the Chair has any doubt about it. It is a question what the Senate is going to do about it.

Mr. SMITH of Georgia. Could we not solve the question if we now by unanimous consent took up the unfinished business? I ask unanimous consent to proceed to the consideration of the unfinished business.

The VICE PRESIDENT. Without objection, the Chair lays the unfinished business before the Senate.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States.

Mr. REED. The pending amendment is one relating to nitrates?

The VICE PRESIDENT. It is the amendment of the Senator from Alabama [Mr. UNDERWOOD] to the amendment of the Senator from South Carolina [Mr. SMITH].

Mr. MYERS. Mr. President, I desire to read into the RECORD a telegram which I received this morning. I will proceed to do so. It is as follows:

[Telegram.]

GREAT FALLS, MONT., *April 13, 1916.*

Hon. HENRY L. MYERS,
United States Senate, Washington, D. C.

Gasoline wholesaling in Great Falls 27½ cents; in Spokane, 18½ cents, according to reliable information. Consumers, backed by newspapers and public generally, indignant over what seems rank injustice. Suggest matter be laid before Congress, so that committee having investigation under way may be informed. Can you suggest any course which we might follow to bring a remedy for this wide variance in price? Answer.

GREAT FALLS COMMERCIAL CLUB.

Mr. President, I will ask if an investigation of the unprecedented rise in the price of gasoline and other products of oil is being investigated by any committee of the Senate, general or special? Can the Chair inform me?

The VICE PRESIDENT. The Chair has no information on that subject.

Mr. MARTINE of New Jersey. Mr. President——

Mr. CHAMBERLAIN. I hope, Mr. President, we may be able to proceed with the pending bill. There is an amendment pending to be disposed of, and I think the discussion has about closed.

Mr. MYERS. I have 10 minutes under the unanimous-consent agreement.

The VICE PRESIDENT. The Chair has no information on the subject about which the Senator from Montana inquired.

Mr. MYERS. Then I ask that the telegram, which is in the nature of a petition, may lie on the table for future action.

Mr. MARTINE of New Jersey. Mr. President, I wish to ask whether it will be possible, under the ruling of the Chair or the unanimous-consent agreement, for me to bring up the preamble and the resolution regarding gasoline that I introduced some days ago?

The VICE PRESIDENT. The Chair decides that it will not.

Mr. MARTINE of New Jersey. It will not?

The VICE PRESIDENT. It will not.

Mr. MARTINE of New Jersey. All right; I will bide my time to bring it up.

Mr. CHAMBERLAIN. May I ask that a vote be had on the pending amendment to the amendment?

The VICE PRESIDENT. The question is on the amendment of the Senator from Alabama [Mr. UNDERWOOD] to the amendment of the Senator from South Carolina [Mr. SMITH].

Mr. UNDERWOOD. I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. KENYON. Mr. President, I understand the pending amendment is the amendment of the Senator from Alabama. I want to say one word, Mr. President. It seems to me that the amendment proposed by the Senator from Alabama destroys that part of the amendment of the Senator from South Carolina embraced on page 3, lines 12 to 16. My reason for feeling that way is this: The amendment to which I refer was to prevent the Government building a plant and operating it in conjunction with private properties or furnishing the money for a plant and then having it operated together with private parties. It is true the amendment of the Senator from Alabama provides for leasing, but that in itself destroys the purpose of the amendment I have heretofore referred to.

I think we might just as well be perfectly frank with ourselves about the situation. The Smith bill is for Government control, Government operation. I shall vote for it because I believe the making of nitric acid is a proper governmental function, as it is a constituent part of munitions of war. The Underwood amendment, if it is adopted, will provide for the Government furnishing the money and building a plant and then leasing it to private parties, and if that amendment is adopted I can not vote for the Smith bill.

That amendment authorizes and directs the Secretary of War for the purpose of securing a suitable air-nitrogen process for the use of the Government to make contracts with the owners thereof. The evidence before the committee shows that the owners of those particular processes are the Cyanamide Co., and that through its interlocking directorates while it is not the owner, a company that it is associated with, the Muscle Shoals Hydro-Electric Co., is the owner of the power sites at Muscle Shoals.

It seems to me that that is practically a direction to the Secretary of War to open negotiations for the use of particular processes, and I do not want him to be confined to any particular process or to recognize that those patents in themselves are valid. There are over a hundred patents of these processes, I understand, for the fixation of nitrogen from the air. It may be that new processes will be developed; it may be that our own Government can work out processes that may not be an infringement of these patents.

That is another objection which occurs to me; but my main objection is that it destroys the principle which the Committee on Agriculture and Forestry placed in the bill, that these plants shall be constructed and operated by the Government for the benefit of all the people, and that is the principle I believe in and contend for as far as this bill is concerned.

Mr. UNDERWOOD. Mr. President, I think the Senator from Iowa has clearly stated the effect of the amendment I offered. As far as his statement about the patents at Muscle Shoals is concerned, I do not concur with his views on that subject, because they have nothing to do with this transaction nor with this amendment; but his statement with reference to the purpose of this amendment is clear.

The amendment as offered by the Senator from South Carolina provides that the Government itself must own and operate this factory under all conditions and under all circumstances. If it is impossible for the Government to operate it, then the plant must lie idle. The amendment which I offer in reference to that portion of the amendment is very clear, and I have no desire not to have the Senate fully understand it; I concur with what the Senator from Iowa said in reference to it. The purpose of my amendment is to give the Secretary of War, if he thinks it is ill advised to operate the plant when it is lying idle and is not being used to make nitrates for powder, the opportunity to lease the power in that plant to somebody else and let them operate the plant, the Government make the interest.

I can explain in detail what I mean in a more practical way. Suppose we build this hydroelectric plant and it will have 100,000 horsepower. That is what we are contemplating. The Government is prepared to make powder for war, but after we have it completed our peace necessities require only 20,000 tons of concentrated nitric acid instead of 180,000 tons. The Secretary of War will probably have from 80,000 to 90,000 horsepower that he does not have to use for the peace possibilities of the plant that he is holding in reserve merely for war purposes, which may happen. Then if you adopt the Smith bill without my amendment you drive the Secretary of War to the necessity of either letting that 80,000 or 90,000 horsepower go to waste and not be utilizing it or you force him to go into the business of manufacturing nitrogen and selling it. But if the amendment which I offered prevails, then the Secretary of War, in his discretion—this amendment does not direct him—can use the power under the Smith amendment to manufacture nitrates by the Government and to sell them, or, if he desires to exercise the discretion, he can lease that additional horsepower to private persons, to be used until war necessities require him to take it back. This amendment will not allow him to make any lease to private parties that will prevent his calling the plant back to the Government at any time he may want it for governmental purposes; but it would leave him the discretion, if he wanted to exercise it, of allowing the Government to lease this hydroelectric power to somebody else that the Government might thereby make money.

Of course, if you adopt the Smith amendment without putting in this power to lease—and there is nothing in the bill that would authorize it now—and if you reject the amendment I have offered, and you build this plant, the Government itself must either go to manufacturing nitrogen to sell to private individuals outside of its Government requirements, or so much of the plant as is not needed for peace purposes must lie idle.

I think you can safely leave it to the discretion of the Secretary of War to determine whether or not it is to the interest of the Government to manufacture nitric acid for peace purposes, and to use it for peace purposes, or whether it is more to the advantage of the Government to lease this additional horsepower to private enterprise to manufacture nitric acid and to sell it.

Of course, I want to be candid with the Senate. My amendment puts in a limitation as to whom the Secretary of War can lease the plant. It says he must lease to people who are going to use the power to make nitric acid to be converted into fertilizer. There are two great fields of consumption of nitric acid—one is the industrial field, the great manufacturing corporations of this country for manufacturing purposes; the other is the use of nitric acid for fertilizers that will ultimately go to the farm. I admit that my amendment seeks to secure the use of that power for the benefit of the agricultural classes of America. If you strike out the provision that it shall be sold for fertilizer, then the Secretary of War may sell it to manufacturers who are in the mining business or in any other business. If we are to have this idle power and it is going to be leased to somebody, there is a field in which it can be used for the manufacture of fertilizers. We are about to adopt a reorganization of the Army, and the agricultural classes of this country get no direct benefit from this bill. The men who manufacture munitions of war, the men who manufacture clothing, the men who supply the great necessities of the Government, get a direct benefit out of this bill, because the expenditures of the Government will go to them; but the agricultural classes get no benefit.

Mr. REED. Mr. President——

Mr. UNDERWOOD. Just a moment, if the Senator will allow me to finish my sentence. The agricultural classes must pay their portion of the burden of carrying this Army; they must send their boys to make the recruits in this Army; and I think it is not any violation of any principle or doctrine, if this power is to be leased, for the Government of the United States to state in what direction the lease shall be made. It is for a very proper purpose; and I think if we are going to write this legislation it ought to be directed along that line. Now I yield to the Senator from Missouri.

Mr. REED. Does not the Senator from Alabama think that it is a perfectly proper thing for the Government to manufacture nitric acid for use in making powder?

Mr. UNDERWOOD. Undoubtedly; it is a war power.

Mr. REED. And does he not think it would be beneficial for the Government to enter into that work?

Mr. UNDERWOOD. I do.

Mr. REED. If that be true, it must follow that the Government can do this work as well or better than can a private manufacturer, does it not?

Mr. UNDERWOOD. Well, I am not sure whether or not the Government can always do such work cheaper than it can be done by the private manufacturer; but I think it is wise as to some of these great supplies for the Government to keep its hands on their production. It is not always a question of the cheapest way to do things.

Mr. REED. If it is true that the Government can and ought to build this great plant for the purpose of supplying

nitric acid with which to make powder, does it not almost necessarily follow that the Government can also so manage the plant that a surplus can be made as cheaply as it can be produced by private parties and without loss to the Government?

Mr. UNDERWOOD. Mr. President——

The VICE PRESIDENT. The 10 minutes allotted to the Senator from Alabama under the unanimous-consent agreement have expired.

Mr. HARDWICK. Mr. President, I ask that the amendment be reported to the Senate.

Mr. UNDERWOOD. If the Senator from Missouri will take the floor in his own time, I should like to answer him.

Mr. REED. I will let the Senator from Alabama answer in my time.

The VICE PRESIDENT. That is not in accordance with the unanimous-consent agreement.

Mr. REED. Mr. President, I desire to address the Senate.

The VICE PRESIDENT. The Senator from Missouri.

Mr. REED. I desire to ask the Senator from Alabama the question I propounded a moment ago.

Mr. UNDERWOOD. If I may be permitted to answer, I shall be glad to do so.

The VICE PRESIDENT. Undoubtedly the Senator has that right, but the 10 minutes allotted to the Senator from Missouri are now going on.

Mr. UNDERWOOD. Mr. President, I do not controvert what the Senator from Missouri says in reference to that question; I am not trying to decide it. I can see no objection whatever, however, to leaving it discretionary with the Secretary of War to determine as to what is the best interest of the Government, either to operate or to lease the surplus power in time of peace. For that reason I think the amendment is advisable.

Of course the other reason why I insist on the amendment is that there is no power under the bill except by condemnation to acquire one of these processes; and if you acquire it by condemnation you could not use it for peace purposes, you could only use it for war purposes.

Mr. REED. Mr. President, I understand that in order to remove all difficulty in the matter of construction the Senator from South Carolina [Mr. SMITH] intends to make a modification of his amendment, including the word "processes" therein, although I agree with the Senator from Montana [Mr. WALSH] that the general language of the amendment is sufficiently broad so that it will in all probability carry the right without any amendment.

I do not agree that it is always wise to turn over to some departmental chief or to some Cabinet member the discretion to breathe the breath of life into our legislation or to destroy its effect. If I always knew who would be Secretary of War, and always knew that he would entertain the same opinion which I think the Senate entertains upon this bill, I should not object; but it seems to me that we are likely at some time in the future to be confronted with a situation where we have a Secretary of War who is wedded to the idea that the Government should never engage in anything whatsoever except that which he may consider a purely governmental function. I do not think it is wise to vest so broad a discretion in the Secretary of War. In the second place, I think it is an error to claim that because a plant has a maximum capacity of 180,000 tons it must be always operated at that full capacity in order that a loss may not be incurred, because very few factories ever operate at their absolutely maximum power.

Mr. UNDERWOOD. Mr. President, if the Senator will yield, I should like to say that if it is only a question of economy the Government could let its money lay idle; but if it has the surplus power, by the use of it, either by the Government or by lease, it could properly earn interest on the Government's money.

Mr. REED. I answer that by concluding what I was saying, that no plant is ever run absolutely at its maximum except in cases of great emergency. In the next place, I remark that if we can manufacture nitrates for the making of powder, and if we can do it more cheaply than it can be done by private individuals—that is, so that the Government will receive it more cheaply than it would from private individuals—it seems to me it follows that we can manufacture a surplus cheaper than it will be furnished by private individuals; and, if that be true, why not let the agricultural districts of our country have that benefit?

I usually am in agreement with the Senator from Alabama, but I fear his amendment would imperil the utility of the pending proposal.

Mr. THOMAS. Mr. President, I am in favor of the amendment originally proposed by the Senator from Alabama [Mr. UNDERWOOD], not the least attractive feature of which is the opportunity which it will offer for the use of the surplus energy, if there be any, of the plant it is proposed to construct for the manufacture of nitrates for agricultural and other practical purposes. I believe that where the Government has the power, which it undoubtedly has here, to expend money, and especially where, as here, a large sum of money is necessary for the purpose of constructing a plant for the production of something which is concededly essential to the national security in times of great national emergency, it necessarily carries with it the authority to use any surplus energy of power which it may thus have created for other legitimate purposes; and I very much prefer to pursue a direct course in regard to such matters of legislation than an indirect one, such, for example, as that which we follow when we seek to endow private enterprise with the authority to construct power plants on the theory—which is virtually upon a pretense—that we are exercising a general power under the commerce clause of the Constitution to improve navigation, when everyone knows that the purposes of navigation are either fictional or entirely subservient to the main object of the legislation.

Mr. President, why should not the Government utilize any property which it possesses? If it can sell, but does not care to do so; if it can lease, but is not able to do so upon advantageous terms, why can it not devote its own energy to the proper development and utilization of that property for the general good? I have in mind an instance, Mr. President, where the Government prevented by legislation from using for general commerce its system of transports plying between the Pacific coast and Manila. At this time of unprecedented demand for ocean carriage these transports should be devoted to the accommodation and development of our oriental commerce, and its earning power thus largely contributing to the payment of the public expenses.

Those transports, Mr. President, as I am informed, have been running empty, or practically so, for some time. They can not be devoted to the purposes of general commerce because we have so enacted. Through the influence of the coastwise shipping trust they are prevented by law from so doing.

In March, 1907, a rider to the Army appropriation bill prohibited the use of the appropriations therein made for the payment of expenses in using the transports in any other than Government service. We confined its activities to the transportation of the Army and, of course, those commodities and equipment which are incidental to it. It is true that the coastwise trust, a few years later, with unprecedented generosity, permitted us to modify this provision by the act of March 3, 1911, so as to permit the carrying of general cargoes to the island of Guam, whose commerce is wholly negligible. The legislation is worse than farcical.

The point is, Mr. President, this Government would possess the authority but for these restricted laws to use its transports for purposes of general cargo, and our oriental commerce would be greatly benefited, the profit to the United States would be considerable, and, at the same time, there would be no interference whatever with legitimate business; on the contrary, foreign commerce would be promoted. But with this legislation upon the statute books, it is impossible to utilize this great agency in commerce at all; that commerce is paralyzed for lack of ocean carriers, while these transports make their trips to and fro between San Francisco and Manila without carrying any general cargo and very little for any purposes. Instead of being permitted to carry freight, ballast, useless, worthless ballast, must be carried in order to navigate the boats at all. But the coastwise traffic must enjoy its monopoly undisturbed. Shall we duplicate this situation by prohibiting nitrogen production for agricultural purposes?

Here we are confronted with a situation, Mr. President, which, in my judgment, absolutely requires the Government itself to erect a power plant and equip the structure for the manufacture of this greatly needed article. Legislation which is possible, by this Congress at least, with regard to the ultilization of water power is not such as will attract private capital. I do not think it can safely invest in the development of plants of this character under contemplated restrictions, nor am I at all hopeful, Mr. President, of any legislation sufficiently liberal in that regard in the near future.

Mr. LODGE rose.

Mr. THOMAS. I should like to yield to the Senator, but my time is limited.

Mr. LODGE. I do not ask the Senator to yield. I thought the Senator had concluded.

Mr. THOMAS. I will be through in just a moment. For this reason if for no other, Mr. President, if this emergency is

to be met and this commodity be manufactured it must be done through governmental agencies.

Mr. President, let me say that it has been generally conceded by some of us that monopoly had encompassed practically every pursuit and every element of nature except the circumambient air. That was free because it could not be capitalized. But it is now proposed to deny to the Government of the United States and the people it represents authority to utilize the air in the manufacture of a commodity which is absolutely essential to the future, if not to the present, needs of this Republic lest it should thereby deter private enterprise from embarking upon this novel and attractive pursuit. Let us draw the line somewhere, even if it is between the solid earth and the atmosphere which surrounds it, between that which private combinations can absorb and that which the people can enjoy.

Mr. LODGE. Mr. President, the amendment proposed by the Senator from Alabama provides for making contracts with the owners of suitable air-nitrogen processes. I want to call the attention of the Senate to the owners of the patents. Mr. Washburn, whose connection with various companies I adverted to the other day, testified as follows on page 917 of the hearings before the Committee on Agriculture:

The CHAIRMAN. That is what I am trying to get at. Are these processes available to the general public or are they controlled by one firm or set of men in this country?

Mr. WASHBURN. They are controlled by one concern, under patents.

On page 920:

The CHAIRMAN. Now, let me ask you one further question about this process. Who controls this process in this country—your company?

Mr. WASHBURN. Yes.

Then on page 925 there is a little statement, already brought to the attention of the Senate by the Senator from Iowa [Mr. KENYON], but which I think it is worth while to call attention to again:

Mr. RUBEY. What is the date of your patent?

Mr. WASHBURN. You mean of the patent?

Mr. RUBEY. Yes.

Mr. WASHBURN. We have not any single patent. We have about 100 patents.

Mr. RUBEY. And then the next year and the next year you would have additional patents, so that the time would never come——

Mr. WASHBURN (interposing). We do not propose that it ever shall come when anybody can compete with us, if it is within our power.

The Secretary of War is authorized to purchase these processes; and it is evident from that testimony that they are patent monopolies, in the control of one company, of which Mr. Washburn is the representative.

Mr. UNDERWOOD. Mr. President, will the Senator yield?

Mr. LODGE. No, Mr. President; under the rule and the unanimous-consent agreement I think I had better finish my statement.

Mr. Washburn is the head of those companies. That has been proved beyond a peradventure; and he has testified that they own these processes. As they control these processes under American and Canadian patents, the Secretary of War will be compelled to buy or lease of them. It is a patent monopoly. More than that, it is a monopoly of the patents, apparently, in the hands of one company.

I know, Mr. President, the earnest hostility to monopolies of which we hear so much from the other side of the Chamber, from courageous men who are never afraid to declare their opposition to monopolies, and who are the friends of the people, and who do not care who knows it. They are perfectly daring in those respects. I know that they draw the lines on monopolies. There are some monopolies to which they are hostile, and some to which they are not. They do not mind a foreign monopoly. It is only when they think there is a monopoly where some American makes money that they cry out. These patents are monopolized by an American company, so that evidently they are enlarging their charity toward monopolies.

But there is more in it than that. Mr. Washburn—who, I have no doubt, truthfully testified as to the possession of these patents—is also, through his companies, largely interested in the water powers of Alabama, and the land in the neighborhood of Muscle Shoals. In fact, they are the riparian proprietors. If he controls these patents, which, so far as we know, are the only patents for the fixation of nitrogen from the air, he will come pretty near dictating where the plant is to be.

Mr. President, I think this is a pretty large power to confer on anyone; and I think really we are settling, under this amendment, the site where all this nitric acid and nitrogen is to be made.

Mr. SHAFROTH. Mr. President, if there is one thing that has been settled by the Senate this session it is that it is wise for the Government to undertake the manufacture of those things which enter into munitions of war.

It is for two reasons that that has been sanctioned by this body, namely: First, that there are certain improvements and discoveries always going on in the manufacture of these munitions of war which it is important that this Government should have a knowledge of, and that no other nation should have a knowledge of, and that that can not be accomplished and the secrets kept if other people exclusively construct and manufacture these implements and these ingredients that go into the manufacture of high explosives; and, second, because when outside parties become the sole manufacturers of these munitions it creates an interest in the manufacturers to make a market for their product and to influence the Government of the United States to undertake war when war perhaps might not otherwise follow.

The difficulty with the proposition of the Senator from Alabama [Mr. UNDERWOOD] arises from the fact that under this bill there must be the manufacturing of these nitrates by the Government of the United States all the time. Inasmuch as the amendment which he offers does not change that part of the bill, it seems to me the amendment is not practicable. Under the terms of the bill it is absolutely necessary that the Government should manufacture nitric acid during times of peace, as a considerable amount is needed then, because we are continually carrying on target practice, and we will require this product in the manufacture of explosives. Now, when we are required under this bill to manufacture nitric acid for this governmental purpose, to provide that for a part of the time we can lease it out to some one else, makes it impracticable. It seems to me that we could not do so with any degree of economy or efficiency. Whenever we provide that the Government shall manufacture nitric acid to the extent of even one-fourth of the 180,000 tons per annum required in war times, and that after we manufacture the one-fourth we shall lease the plant for the balance of the time, it seems to me that that makes it a proposition which would not be economical to the Government. Besides, it would not be to the interest of the Government to let its plant and the secrets that it may have with respect to the manufacture of nitrates, and the improvements that may be made thereto, be turned over to anyone else to be used by them in the manufacture of products to sell to other nations.

Mr. President, inasmuch as it is constitutional for the Government to manufacture munitions of war or anything that has a tendency to increase the efficiency of the Government in war times, it should utilize the plant for its own purpose, and if there is any surplus it should sell the product thereof in peace times for commercial purposes. When that is done, if there are other plants of the kind—and I have no doubt other plants will be erected—it will prevent the making, by gentlemen's agreements or by combinations, of higher prices than those which would prevail under ordinary conditions.

I do not believe a government ought to attempt to manufacture something for commerce to the exclusion of commercial enterprises, but I do say that when we have a purely governmental function to perform and we have a surplus in the way of manufactured product that we can dispose of the very fact that the Government knows exactly how much it costs prevents the people who may also manufacture the product from combining and placing such a high price upon it as to create a monopoly to the detriment of our people.

It seems to me that when the Government must, under the amendment of the Senator from South Carolina, operate the plant at least sufficiently to furnish nitrates during time of peace it is absurd to talk about dividing the time of operation and letting it be leased for a part of the time to a private company. You can not divide the operation very well, and if you should lease the water power only it would be of very little benefit to the lessee, but might be of great detriment to the plant itself.

It seems to me the amendment of the Senator from South Carolina [Mr. SMITH] is framed upon a different theory. That theory, as I have stated, is that the Government should undertake the operation of the plant and the manufacture of these nitrates. To divide it in some way makes it inconsistent with the bill itself, and is not, from an economical standpoint, to the best interest of the Government.

Mr. VARDAMAN. Mr. President, if the Government of the United States is to build this plant and operate it for the purpose of making nitric acid for manufacturing munitions of war, we all understand that this particular work will necessarily be of short duration; that is, we hope so. Then, when the plant is not running for the purpose of making nitric acid to be used in the manufacture of munitions of war, it must remain idle, at an enormous expense to the taxpayers of the Republic, or be used for the purpose of manufacturing nitric acid to be used in

the manufacture of fertilizer or some other commercial or scientific purpose.

If the Government has the right under the Constitution to create the power and sell it, it certainly has the right to use the power which it creates and to manufacture the nitric acid which could be sold to the farmers of the country, from which great good would come to the whole country. We all understand that whatever helps the farmer—enlarges his crop and prospers his efforts—benefits every other class of men. I can not understand why it should be left to the discretion of the Secretary of War to determine whether it is prudent that the Government should run it or whether it should be leased. If somebody could buy the power from the Government and manufacture nitric acid and sell it to the farmer and make a profit, certainly it seems to me the Government itself could use its own power, and instead of giving the lessee the profit to be derived from the manufacture of nitric acid, give it to the men and women upon whose shoulders this great burden of taxation which we are preparing to levy will rest. Why not give it to them and let them enjoy the profit? I want the power developed, but I want it to be used after it is developed for the benefit of all the people, and the best way to do that is to use it for the enrichment of the farmer's land.

For that reason I can not support the amendment offered by my friend the able Senator from Alabama [Mr. UNDERWOOD] to the amendment offered by the learned Senator from South Carolina [Mr. SMITH]. I think the Senate ought to adopt the amendment proposed by the Senator from South Carolina; and then, if it is not perfect in all its details, if we find out in the future that probably it would be better to manage the plant in some other way, the Congress will be in session, and can remedy any defect that may develop. The thing I desire above all others—even more than for the purposes of war—is the establishment of the plant for the manufacture of one of the essential elements that go into the manufacture of fertilizer, which is of such vital importance to the well-being of the agricultural people of America.

Mr. UNDERWOOD. Mr. President, will the Senator from Mississippi yield for a question?

Mr. VARDAMAN. I will.

Mr. UNDERWOOD. By way of a question, I wish to make a statement. I believe that the power to lease ought to be in this amendment; but I realize, from the expressions on the other side of the Chamber and on this side, that it is evident that the amendment, so far as allowing the Government to lease this plant and power is concerned, will not be adopted. I do think it is necessary, though, to give the Secretary of War the right to buy or purchase these processes. It does not wipe away the power to condemn if he wants to; but at least he ought to have the power to purchase if he can or to make a contract for these patented processes. So I will amend my amendment by striking out the last section. I will not take the time of the Senate further.

Mr. VARDAMAN. The Senator's amendment, I understand, means now that——

Mr. UNDERWOOD. I will ask to have it read at the desk.

Mr. VARDAMAN. Very well.

Mr. UNDERWOOD. It may save the time of the Senate. I should like to insist on the other proposition. It is apparent from the debate that the Senate will not agree with me, and I will not take further time on it.

The VICE PRESIDENT. The modified amendment to the amendment will be stated.

The SECRETARY. It is proposed to strike out all after the word "process," at the end of line 5, in the following words:

And the Secretary of War is authorized to operate or lease the plant, hydroelectric power, or works provided for in this act for the making of nitrogen products for the manufacture of fertilizers in times of peace, when the output of said plant is not needed for the manufacture of explosives.

Mr. VARDAMAN. I would suggest, Mr. President, that the Senator from South Carolina might accept that.

Mr. SMITH of South Carolina. I did not hear the amendment as proposed. I will ask the Secretary to state it again.

The SECRETARY. As proposed, the amendment would read:

That the Secretary of War is authorized and directed, for the purpose of securing a suitable air-nitrogen process for the use of the Government of the United States, to make a contract or contracts with the owners thereof, for the use, rental, lease, or purchase of a suitable air-nitrogen process.

Mr. SMITH of South Carolina. Mr. President, I hope those who have this amendment before them will turn to page 2, on line 14, where it says:

That the Secretary of War is authorized and directed to investigate and to recommend for designation or withdrawal such dam sites and water-power sites as in his opinion will be necessary for carrying out the purposes of this act, and is further authorized to construct, maintain, and operate at or on any site so designated or withdrawn dams, locks, or other improvements to navigation, power houses, and other plants *and equipment* necessary or convenient for the generation of electrical or other power.

Now, if there should be any doubt about this matter being covered, it seems to me that on line 25, page 2, after the word "minerals," to insert the word "processes" would cover the whole situation.

Mr. VARDAMAN. I rather agree with the Senator about that. The only purpose I have is that the matter may be taken care of.

Mr. UNDERWOOD. Mr. President, it seems to me the matter may be in doubt in the amendment of the Senator from South Carolina, and is, I think, very much in doubt. He wants to get a patented process. What harm can it do to his amendment to give to the Secretary of War the direct authority to purchase, lease, or use the process, when he has to get it somewhere?

Mr. SMITH of South Carolina. My opinion is that the very nature of the amendment vests him with that power. It gives him $15,000,000 to go out and do this thing. Of course, so far as that is concerned, it is a matter of indifference to me.

Mr. NORRIS. Mr. President, I agree with the Senator from South Carolina [Mr. SMITH] and also the Senator from Oklahoma [Mr. OWEN], who addressed himself to this subject yesterday, that if it is necessary for the Secretary of War to purchase or lease any process or machinery he has the authority in the amendment of the Senator from South Carolina without adding the amendment of the Senator from Alabama. It seems to me there are a good many reasons why we should not adopt the amendment of the Senator from Alabama. Even as he has it modified it would direct the Secretary to purchase or to lease this process or the machinery or whatever it is that is patented.

Mr. President, this is a system that is rapidly developing, changing, and improving. It may be that it will be unnecessary for the Secretary of War to purchase any patented process, to rent any patented machinery, and that he will be able to do this by improved processes from chemists who are in the employ of the Government.

I want to read to the Senate some of the testimony of Dr. Baekeland before the Committee on Agriculture and Forestry of the Senate. Dr. Baekeland is a member now of the naval consulting board. He is a native of Belgium, who studied chemistry and graduated in one of the colleges of Belgium. He came to America and has been here 27 years. He is a naturalized American citizen and he is now in the consulting advisory board that has been selected by the President or the Secretary of the Navy. He has been selected by at least two organizations, I think, of chemists and chemical engineers to represent them on that body, and is now serving our country without pay in that advisory capacity.

He says in his testimony that at the beginning of the war now going on in Europe Germany was manufacturing not to exceed 10,000 tons by water power, and that while she had gotten some saltpeter from Chile, the supply was entirely inadequate, and that she immediately had to devise means of increasing her supply of nitrates, which she did by the utilization of coal and the development of steam power, and that she is making large quantities of it now from that source. Perhaps it is a little more expensive, but it is a case of necessity, and the main supply of nitrates are now, this professor says, manufactured from the air by the use of steam and coal.

This nitric acid—

He says, quoting now:

This nitric acid is made by a chemical process, which, I am glad to say, the chemists of the United States can duplicate at any time. There is no particular secret about it, and if the chemists of the United States were confronted with this problem I have no hesitation in saying that, if properly supported and given the necessary time, they would make as good a showing for themselves as did the German chemists.

Then he goes on further and says they ought to have from 8 to 12 months, perhaps longer, to develop the proper machinery and power for the purpose of getting nitrates out of the atmosphere. He says:

This country, just like Germany, can manufacture this nitric acid. It can be done by using the same processes or processes somewhat better adapted to the peculiar conditions in this country, but it will take some time—it may take a year, it may take more, to get in shape; and even then our chemical engineers have to do a lot of hustling.

The Doctor speaks of another process that requires more power and, for that reason, is more expensive, but it is not necessary to adopt the process that Mr. Washburn and his company control.

Mr. GALLINGER. Mr. President——

Mr. NORRIS. I yield to the Senator from New Hampshire.

Mr. GALLINGER. What length of time did this witness suggest would be necessary to perfect that process?

Mr. NORRIS. He says in a year's time, as I understand it, even without this bill. He was not speaking, I think, in reference to this bill; he was speaking of the use of coal and the development of steam, if necessary, which would, of course, be a little more expensive. He says in his testimony it is perhaps more expensive for Germany, but it is a case of necessity, and she does it.

For that reason, Mr. President, it seems to me that we ought not to adopt an instruction to the Secretary of War that in effect says to him, "You must get this particular process." It is something comparatively new in the scientific world and, as the doctor says, among chemists it is practically no secret now. They can go to work and develop the power and manufacture it within a year's time without anything except financial assistance; they are working at it all the time; and I do not believe we ought to confine the Secretary to any particular process. Let it remain as it is now in the amendment offered by the Senator from South Carolina. That gives him the right to get it there if he can, if he wants to, if it is necessary, but gives him the whole world to figure in if he wants to.

It seems to me that having that power under the original amendment of the Senator from South Carolina we are simply tying his hands if we say to the Secretary of War in the words of the amendment of the Senator from Alabama that he shall go to this particular corporation or to that particular patentee and adopt his process and buy his patent; in other words, putting him at the mercy of men who may as far as I know have the best process, I do not know, but they may not have what will be the best process to-morrow. As this witness says, the chemists of America can develop what the chemists of Germany have already done. It seems, therefore, to me that even as the amendment is modified it ought to be voted down.

Mr. HUSTING. Mr. President, the main objection I had to the amendment offered by the Senator from Alabama to the amendment offered by the Senator from South Carolina has been removed, but I want to say that I indorse what the Senator from Nebraska [Mr. NORRIS] has just said in regard to the effect of the amendment of the Senator from Alabama. This amendment would put us squarely in the position of appropriating money to purchase one of two processes now owned and monopolized by two companies. It may be entirely unnecessary for us to purchase either of these processes, as was stated by the Senator from Nebraska. It may be that our chemists or experts can devise a better means of serving the purpose than by accepting one or the other of these two processes which we have been told about.

For that reason I am opposed to the amendment and believe that it is matter that should be settled by the Secretary of War. The terms of the amendment of the Senator from South Carolina fully cover this situation. I believe that there is sufficient authority in the bill to give the Secretary of War the power to adopt such means as he deems best to bring about or carry out the purposes of this act.

I think it is unwise for Congress to appropriate any money to buy out any monopolies or to choose between one or the other of monopolies, and especially so in view of the fact that one of the companies which are represented by Mr. Washburn has taken so much interest in the water-power legislation that has been before the Senate and before the Congress of the United States. The hearings before the Committee on Agriculture and Forestry disclose, on pages 35 and 36, the interest that Mr. Washburn has taken in the water-power legislation before the Senate. He was asked this question by the Senator from Iowa [Mr. KENYON]:

Senator KENYON. You have been here helping with the Shields bill?
Mr. WASHBURN. I have helped with the Shields bill.
Senator KENYON. How long have you been in Washington working on these propositions?
Mr. WASHBURN. I think I have certainly, for the last six months, not been in Washington any time except upon the invitation of a committee or one of the departments in connection with anything of the kind.
Senator KENYON. Have other people associated with your company been working on the Shields bill or on this proposition?
Mr. WASHBURN. Yes; in connection with the Shields bill.
Senator KENYON. And on this proposition, too?
Mr. WASHBURN. Yes.
Senator KENYON. Mr. Worthington?
Mr. WASHBURN. Mr. Worthington has worked in connection with the proposed development at Muscle Shoals, primarily, as it originally was in the interest of the Muscle Shoals Hydro-Electric Power Co., which owns certain rights, and so forth, at Muscle Shoals.

It seems to me that a bill which passes Congress should not in any way be open to the construction that the appropriation of $15,000,000 is being made in the interest of any one of two corporations, whether it is going to have that effect or not. It is true if we are going to establish a nitric plant we have got to get some process for the fixation of nitrate, but I do not think we are warranted on the evidence before the Senate to assume that there are only two ways in which it can be done, and that we can only engage in this by buying out one or the other of two processes.

For that reason, I believe that the amendment of the Senator from South Carolina fully covers the ground and leaves the matter open to the Secretary of War to carry out the purposes of this act in accordance with the best interests of the country.

Mr. SMITH of Georgia. Mr. President, the amendment either authorizes the Secretary of War as it stands to negotiate for plants or it does not. If it does, then the criticism of the amendment of the Senator from Alabama is utterly uncalled for. If the amendment does not do it, then it can not work unless the power is given. If there are patents that cover the process, and if there is no way to extract nitrogen from the air except by using somebody's patent, then the Secretary of War ought to have the right to obtain them. If we are to procure a plant either by contract, condemnation, purchase, or some way in defiance of the patentee——

Mr. KENYON. May I ask the Senator if in case of war the Government could not take patents?

Mr. SMITH of Georgia. I think the Government can take them at any time.

Mr. KENYON. Then, under this——

Mr. SMITH of Georgia. But I can not yield to the Senator. I am under the 10-minute rule. The Senator will have to speak in his own time.

Mr. President, if there are patents that control the process, and there is no other way to extract nitrogen from the air, then we must use them.

I was very much amused by the deep distress of the Senator from Massachusetts [Mr. LODGE]. He was so concerned lest we might be fostering some monopoly. The truth about the matter is, perhaps that the Senator from Massachusetts is opposed to the Government having any plant to manufacture munitions of war of any kind. He said there was but one process and it would be necessary to go to Mr. Washburn. We have always been permitted to understand that the senior Senator from Massachusetts was the master of all subjects and possessor of all information. This one time he discloses the fact that he knows not all things, for certainly we all understand that there are two perfected processes, the arc as well as the cyanamide, and the evidence discloses the fact that there are several others. There is nothing in the amendment of the Senator from Alabama fixing what process shall be used or what patents shall be taken. It is simply an effort to give the Secretary of War opportunity to do whatever he might be compelled to do to put the plant into operation. I am inclined to believe that he has the power under the bill as it stands, but he must have the power somewhere given in the bill, and if he has not he can not move.

Mr. KENYON. Mr. President, I want to say a word. In time of war I think already the Government would have the right to take a patent, and the recourse will be in the Court of Claims. What are we doing under the Underwood amendment as it now stands? We are directing the Secretary of War to enter into a contract with the owners of this patent.

The VICE PRESIDENT. The Senator from Iowa has already spoken upon this question.

Mr. KENYON. Pardon me; the amendment was changed, and I am speaking now to the new amendment of the Senator from Alabama. He amended his amendment, and I certainly can speak on that; but I do not press it. We are putting ourselves in the position of directing the Secretary of War to make a contract with the owners of a patent and tying up the Government so that it could not condemn the patent if it wanted to do so. That is what it amounts to.

The VICE PRESIDENT. The question is on the amendment of the Senator from Alabama to the amendment of the Senator from South Carolina.

Mr. KENYON. I ask for the yeas and nays.

Mr. STONE. I should like to have the amendment read as it now stands.

The VICE PRESIDENT. The Secretary will read the amendment of the Senator from Alabama.

The SECRETARY. Add at the end of the amendment proposed by the Senator from South Carolina the following words:

That the Secretary of War is authorized and directed, for the purpose of securing a suitable air-nitrogen process for the use of the Government of the United States, to make a contract or contracts with the owners thereof, for the use, rental, lease, or purchase of a suitable air-nitrogen process.

Mr. UNDERWOOD. Mr. President, before the amendment is submitted to a vote I will state that I think it is very important that the Government should have this authority. These are patented processes. If they are not going to wait indefinitely, there

must be some process adopted; and if they are going to take one that exists to-day, they have got to buy it or condemn it. It is not necessary to condemn it if you buy it at a reasonable price. In order to remove the objection which has just been made, I desire to have the Secretary strike out the words "and directed," and just let it read "That the Secretary of War is authorized." I ask the Secretary to report the amendment as modified.

The SECRETARY. In line 1 of the printed amendment strike out the words "and directed," so that as modified it will read:

That the Secretary of War is authorized, for the purpose of securing a suitable air-nitrogen process for the use of the Government of the United States, to make a contract or contracts with the owners thereof for the use, rental, lease, or purchase of a suitable air-nitrogen process.

The VICE PRESIDENT. The question is on the amendment of the Senator from Alabama.

Mr. KENYON. I ask for the yeas and nays.

Mr. THOMAS. I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Bankhead	Hardwick	Nelson	Smith, Md.
Beckham	Hollis	Norris	Smith, S. C.
Borah	Hughes	Oliver	Sterling
Brady	Husting	Overman	Stone
Brandegee	James	Owen	Sutherland
Burleigh	Johnson, Me.	Page	Swanson
Chamberlain	Jones	Pittman	Thomas
Clapp	Kenyon	Poindexter	Tillman
Clark, Wyo.	Kern	Pomerene	Underwood
Clarke, Ark.	La Follette	Ransdell	Wadsworth
Culberson	Lane	Saulsbury	Walsh
Curtis	Lippitt	Shafroth	Warren
Dillingham	Lodge	Sheppard	Weeks
Gallinger	Martin, Va.	Sherman	Williams
Gronna	Martine, N. J.	Smith, Ariz.	
Harding	Myers	Smith, Ga.	

Mr. KERN. I desire to announce the unavoidable absence of the senior Senator from Florida [Mr. FLETCHER], of the junior Senator from Maryland [Mr. LEE], of the senior Senator from West Virginia [Mr. CHILTON], and of the junior Senator from Indiana [Mr. TAGGART]. Those Senators are necessarily detained from the Senate, and they are all paired. This announcement may stand for the day.

The VICE PRESIDENT. Sixty-two Senators have answered to the roll call. There is a quorum present. The pending amendment is the amendment of the Senator from Alabama [Mr. UNDERWOOD] to the amendment of the Senator from South Carolina [Mr. SMITH].

Mr. JONES. Let the amendment to the amendment be reported, Mr. President.

Mr. KENYON. I ask for the yeas and nays on the amendment to the amendment, Mr. President.

The VICE PRESIDENT. The yeas and nays have not been called for since the amendment has been modified.

Mr. KENYON. The yeas and nays have been asked for, Mr. President.

Mr. CLARK of Wyoming. I ask for the yeas and nays, Mr. President.

Mr. SMITH of South Carolina. Mr. President, I want to state before the vote is taken that I desire to perfect my amendment as nearly as it is possible to do so. I suggest that, on page 2, line 25, after the word "minerals," the words "and processes, patented or otherwise," be inserted.

Mr. SUTHERLAND. I call for the yeas and nays, Mr. President.

The VICE PRESIDENT. The yeas and nays have been requested and seconded.

The yeas and nays were ordered.

Mr. JONES. I should like to have the amendment on which we are to vote now reported.

The Secretary proceeded to call the roll, and Mr. ASHURST responded in the negative.

The VICE PRESIDENT. To the certain knowledge of the Chair, the amendment to the amendment has been reported three times within five minutes. The Secretary will proceed with the roll call.

The Secretary resumed the calling of the roll.

Mr. BECKHAM (when his name was called). I am paired with the senior Senator from Delaware [Mr. DU PONT]. He is not here, and I shall therefore withhold my vote.

Mr. BRADY (when his name was called). I have a general pair with the senior Senator from Florida [Mr. FLETCHER], and therefore withhold my vote.

Mr. GALLINGER (when his name was called). I have a general pair with the Senator from New York [Mr. O'GORMAN]. Under an arrangement made with that Senator, however, I think I would be privileged to vote; but, to remove any possibility of doubt on that point, I will transfer my pair to the Senator from Utah [Mr. SMOOT] and vote "nay."

Mr. MYERS (when his name was called). I have a pair with the Senator from Connecticut [Mr. MCLEAN], who is absent. I transfer that pair to the Senator from Indiana [Mr. TAGGART] and vote "nay."

Mr. NELSON (when his name was called). I am paired with the junior Senator from Mississippi [Mr. VARDAMAN] on this vote, and for that reason I withhold my vote.

Mr. OVERMAN (when his name was called). I have a general pair with the junior Senator from Wyoming [Mr. WARREN]. I therefore withhold my vote, not knowing how the Senator from Wyoming would vote if present.

Mr. OWEN (when his name was called). I transfer my pair with the Senator from New Mexico [Mr. CATRON] to the Senator from Illinois [Mr. LEWIS] and vote "nay."

Mr. SAULSBURY (when his name was called). I have a general pair with the junior Senator from Rhode Island [Mr. COLT]. Not knowing how he would vote if present, I withhold my vote.

Mr. TILLMAN (when his name was called). I transfer my pair with the Senator from West Virginia [Mr. GOFF] to the Senator from Maryland [Mr. LEE] and vote "nay."

Mr. WEEKS (when his name was called). I have a general pair with the senior Senator from Kentucky [Mr. JAMES], who is absent. I therefore withhold my vote.

Mr. WILLIAMS (when his name was called). Transferring my pair with the senior Senator from Pennsylvania [Mr. PENROSE] to the Senator from Tennessee [Mr. LEA], I vote "yea."

The roll call was concluded.

Mr. GALLINGER (after having voted in the negative). Mr. President, on yesterday the Senator from North Carolina [Mr. SIMMONS] asked me to pair with him, as I understood, for that day, on the vote on this amendment. He does not seem to be present this morning, and therefore I withdraw the transfer of my pair to the Senator from Utah [Mr. SMOOT], announce my pair with the Senator from North Carolina on this vote, and will withdraw my vote.

Mr. CURTIS. Mr. President, I am requested to announce the following pairs:

The Senator from New Mexico [Mr. FALL] with the Senator from West Virginia [Mr. CHILTON]; and

The Senator from Michigan [Mr. TOWNSEND] with the Senator from Florida [Mr. BRYAN].

The result was announced—yeas 12, nays 48, as follows:

YEAS—12.

Bankhead	Martin, Va.	Smith, Ga.	Thomas
Hughes	Pomerene	Smith, Md.	Underwood
Kern	Smith, Ariz.	Swanson	Williams

NAYS—48.

Ashurst	Dillingham	Lodge	Shafroth
Borah	Gronna	McCumber	Sheppard
Brandegee	Harding	Martine, N. J.	Sherman
Broussard	Hardwick	Myers	Smith, Mich.
Burleigh	Hollis	Norris	Smith, S. C.
Chamberlain	Husting	Oliver	Sterling
Clapp	Johnson, Me.	Owen	Stone
Clark, Wyo.	Jones	Page	Sutherland
Clarke, Ark.	Kenyon	Pittman	Tillman
Culberson	La Follette	Poindexter	Wadsworth
Cummins	Lane	Ransdell	Walsh
Curtis	Lippitt	Reed	Works

NOT VOTING—36.

Beckham	Gallinger	McLean	Shields
Brady	Goff	Nelson	Simmons
Bryan	Gore	Newlands	Smoot
Catron	Hitchcock	O'Gorman	Taggart
Chilton	James	Overman	Thompson
Colt	Johnson, S. Dak.	Penrose	Townsend
du Pont	Lea, Tenn.	Phelan	Vardaman
Fall	Lee, Md.	Robinson	Warren
Fletcher	Lewis	Saulsbury	Weeks

So Mr. UNDERWOOD's amendment to the amendment of Mr. SMITH of South Carolina was rejected.

The VICE PRESIDENT. The question recurs on the amendment of the Senator from South Carolina to the substitute for the bill reported by the Committee on Military Affairs.

Mr. JONES. I offer the amendment which I send to the desk, to come in after the word "act," in line 6, on page 2.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 2 of the amendment of Mr. SMITH of South Carolina, line 6, after the word "act," it is proposed to insert:

And when the sites to be developed under this act are determined any other sites withdrawn shall be immediately released from any such withdrawal.

Mr. JONES. I take it, Mr. President, that the Senator from South Carolina has really no objection to that amendment.

The VICE PRESIDENT. The amendment to the amendment is agreed to, then, without objection.

Mr. JONES. Mr. President, I desire, after the word "fertilizers," in line 17, page 2, to offer the amendment which I send to the desk.

The VICE PRESIDENT. The amendment to the amendment will be stated.

The SECRETARY. On page 2 of the printed amendment, line 17, after the word "fertilizers," it is proposed to insert:

And which may be sufficient and best adapted to conserve and utilize the water resources of the region in the interests of navigation, the needs of the Government, and the public welfare.

Mr. JONES. Mr. President, I take it that the Senator from South Carolina will have no objection to that amendment either.

Mr. SMITH of South Carolina. Mr. President, I must object to that, because it seems to cover too much territory. I do not understand exactly the purport of it.

Mr. JONES. The very purpose of it is to cover territory. I stated the other day, in substance, my reason for this amendment. It follows almost exactly the language of the Shields bill as passed by the Senate some little time ago, and I can not see how anyone can have any objection to the amendment.

The purpose of it is simply this: Wherever the Government designates a site which it is going to use for the purpose of constructing a Government plant for the production of nitric acid for fertilizer, and so forth, I want that development to be the highest practical development possible at such site. If it is practicable to develop 150,000 horsepower I do not want to stop with 100,000 horsepower. I want the Government to make the highest practicable development at any such point. That is the sole purpose of this amendment, and I can not see what objection anybody can have with reference to it.

It may be desirable to have power developed at some point not only for the manufacture of nitric acid and the production of fertilizer, but for some other purpose; yet as far as we can go, under the amendment of the Senator from South Carolina, is the production of nitric acid and fertilizer, and there we must stop. I say, Mr. President, if the possibilities of the development go beyond those two objects and purposes, the Government ought to go forward and carry out any additional purpose. If the Government can increase the energy developed by 30,000 horsepower for the production of something else besides fertilizer, why should it not do so? It would be the very antithesis of conservation to restrict the Government in its development.

Mr. NORRIS. Mr. President——

The PRESIDING OFFICER (Mr. PITTMAN in the chair). Does the Senator from Washington yield to the Senator from Nebraska?

Mr. JONES. Certainly.

Mr. NORRIS. I want to ask the Senator if he does not think under the terms of his amendment, if it were adopted, that it might become necessary for the Secretary of War to build several dams on the same stream or on streams close together, in order to develop all the resources of the region?

Mr. JONES. I do not think so; that is not the intention.

Mr. NORRIS. I think the Senator did not mean it in that way, but it seems to me that that would be the effect. It was argued in connection with a similar amendment when it was proposed to the Shields bill, or when a similar provision was in the Shields bill, that that was its purpose, so that if a lease were made to a man he might fully develop a certain territory.

Mr. JONES. I think the Senator is mistaken as to that. However, I think I can modify the amendment so as to meet the suggestion.

Mr. NORRIS. If the Senator only wants to develop to its maximum capacity the particular place where the dam is built, I have sympathy with his amendment, but I think it goes much further than that.

Mr. JONES. That is all I want. I will insert the words "site selected," so that it will read:

And which may be sufficient and best adapted to conserve and utilize the water resources of the site selected in the interests of navigation, the needs of the Government, and the public welfare.

Mr. NORRIS. Why does the Senator put in the words "in the interests of navigation"?

Mr. JONES. Because I want the interests of navigation conserved.

Mr. NORRIS. I have no objection to developing navigation, if the development of navigation is a matter that is involved, but it does not appear to me to be necessarily involved.

Mr. JONES. The development of navigation is referred to in the preceding portion of the amendment of the Senator from South Carolina, and, furthermore, the dams are to be on navigable streams.

Mr. NORRIS. No.

Mr. JONES. Oh, yes. The amendment of the Senator from South Carolina is confined to navigable streams.

Mr. NORRIS. I think not.

Mr. JONES. Here is the way it reads:

The President * * * may * * * designate for the exclusive use of the United States any site upon a navigable river.

Mr. NORRIS. But that is not the only designation he can make. As I recall, another portion of the amendment applies to streams on the public domain.

The PRESIDING OFFICER. The Chair will suggest to the Senator from Washington that he may yield for a question, as the Chair understands, but not otherwise.

Mr. JONES. I think, Mr. President, that there is nothing of a dilatory nature in connection with the discussion on the amendment. We are trying to get information with reference to this matter; and if I can yield for the purpose of getting a little information, I do not think that the rule ought to be called to our attention. The amendment of the Senator from South Carolina refers entirely to the designation of sites upon navigable streams. Then it says:

That the President may also at any time, in his discretion, withdraw from settlement, location, sale, or entry and reserve for the exclusive use of the United States any public lands of the United States—

And so forth.

But the only place where he is authorized to designate or withdraw a site for a dam is on a navigable stream. That is the reason why I put in that language, because it follows the language of the Shields bill, which relates to navigable streams.

Mr. NORRIS. Will the Senator yield for another question?

Mr. JONES. Certainly.

Mr. NORRIS. Commencing on line 7, page 2, is the place where authority is given to the Secretary of War to utilize any water power?

Mr. JONES. Yes, Mr. President; but let me call the Senator's attention to this fact——

Mr. NORRIS. The construction which I place on the amendment of the Senator from South Carolina not only includes navigable streams, but streams on the public domain.

Mr. JONES. No; I think not. No water-power sites are referred to anywhere except those upon navigable streams; and then, in the language to which the Senator is referring, it says, "recommend for designation or withdrawal such dam sites." That is simply those on navigable streams. They would certainly be construed together. While I have no objection to including the construction of dams on nonnavigable streams, I think it was clearly the intention of the Senator from South Carolina and is clearly the language of the amendment that it does apply to the designation or selection of sites only on navigable streams.

Now, Mr. President, I ask that the amendment as I have modified it may be stated.

The PRESIDING OFFICER. The Secretary will state the amendment as modified.

The SECRETARY. In the amendment proposed by the Senator from South Carolina, on page 2, line 17, after the word "fertilizers," it is proposed to insert:

And which may be sufficient and best adapted to conserve and utilize the water resources of the site selected in the interests of navigation, the needs of the Government, and the public welfare.

Mr. JONES. In other words, that requires the Government to make the fullest possible practical development of any site it determines to improve; and how there can be any objection to that I can not see.

Mr. GALLINGER. Mr. President, in my time, I desire to ask a question of the Senator from Washington. I may not understand the amendment, and very likely do not.

Do I understand that after we have manufactured nitrates for the Government, and fertilizers for the farmers, then the Government will go into the manufacture of other articles as long as the power continues?

Mr. JONES. No, Mr. President; that is not the purpose of this amendment. The purpose of the amendment is this: I am assuming that we are going to adopt this amendment, and authorize the Government to select some site where it will put in a plant and put in a dam. Now, all that I want is this: If the Government is to do that, if the Government is to put in a dam at any point, I want it to put in a dam that will produce the highest possible water-power development.

Mr. GALLINGER. That is all it contemplates?

Mr. JONES. That is what I contemplate.

Mr. GALLINGER. I did not know but that——

Mr. JONES. Of course we expect that power to be used for some purpose.

Mr. GALLINGER. Yes.

Mr. JONES. And if more power should be developed than is needed for nitric acid and fertilizer, possibly something would be done with it, although I do not make any provision about that. What I want to insure is, if there is a water-power site where 150,000 horsepower can be developed in a practical way, if the Government goes into it, and if the Government agrees to put in a dam, that it shall put in a dam that will produce that 150,000 horsepower.

Mr. GALLINGER. Now, I will resume the floor, and suggest that I think the Senator has agreed to the proposition I submitted to him—that the Government then could go on to the manufacture of other articles. I suppose the Government could then manufacture blankets for the soldiers. Possibly they might manufacture ice cream for the soldiers, and give them a chance to have some luxuries while they are fighting.

I think it is a very dangerous proposition, and yet I do not suppose there is any limit to the socialistic tendencies of the Congress of the United States to-day. I apprehend that this is only the beginning, and I think I shall live long enough to see some developments along the line of Government ownership and Government operation of industries that private parties and private corporations ought to be permitted to operate. This does not alarm me very much, and hence I shall not allow myself to get excited over the suggestion contained in the amendment to the amendment, which as I suggested, does, in my opinion, allow the Government, after it has manufactured the nitrates and the fertilizers, then to manufacture anything else it pleases, so long as it has available the power to do it.

The PRESIDING OFFICER. The question is on the amendment of the Senator from Washington to the amendment of the Senator from South Carolina.

Mr. JONES. On that I ask for the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. BRADY (when his name was called). I have a general pair with the senior Senator from Florida [Mr. FLETCHER]. As he is absent from the Chamber, I withhold my vote.

Mr. CLAPP (when his name was called). I have a general pair with the senior Senator from North Carolina [Mr. SIMMONS]. By an agreement with him, I am released on certain phases of this question, but I do not think that that agreement applies to this amendment, and I therefore withhold my vote. If at liberty to vote, I would vote "yea."

Mr. GALLINGER (when his name was called). I announce my general pair with the senior Senator from New York [Mr. O'GORMAN], but under an arrangement with that Senator I feel privileged to vote on this question. Having promised, however, to protect the senior Senator from North Carolina [Mr. SIMMONS] on this amendment, I will announce a pair with that Senator, and will withhold my vote.

Mr. MYERS (when his name was called). I reannounce the transfer of my pair with the junior Senator from Connecticut [Mr. MCLEAN] to the junior Senator from Indiana [Mr. TAGGART], and will vote. I vote "nay."

Mr. NELSON (when his name was called). On this question I am paired with the junior Senator from Mississippi [Mr. VARDAMAN]. On that account I withhold my vote.

Mr. OVERMAN (when his name was called). I have a general pair with the junior Senator from Wyoming [Mr. WARREN], and therefore withhold my vote, not knowing how he would vote on this matter.

Mr. SAULSBURY (when his name was called). I repeat the announcement of my pair and withhold my vote.

Mr. TILLMAN (when his name was called). I transfer my pair with the junior Senator from West Virginia [Mr. GOFF] to the junior Senator from Maryland [Mr. LEE] and will vote. I vote "nay."

Mr. WEEKS (when his name was called). I have a pair with the senior Senator from Kentucky [Mr. JAMES]. In his absence I withhold my vote.

Mr. WILLIAMS (when his name was called). Repeating the announcement made by me upon the previous roll call, I vote "nay."

The roll call was concluded.

Mr. MARTINE of New Jersey. I have been requested to announce that the junior Senator from Kentucky [Mr. BECKHAM] is paired with the senior Senator from Delaware [Mr. DU PONT].

Mr. CLARK of Wyoming. I desire to ask if the senior Senator from Missouri [Mr. STONE] has voted?

The PRESIDING OFFICER. He has not.

Mr. CLARK of Wyoming. I have a general pair with that Senator, and withhold my vote. If at liberty to vote, I should vote "yea."

Mr. DILLINGHAM. I inquire whether the senior Senator from Maryland [Mr. SMITH] has voted?

The PRESIDING OFFICER. He has not.

Mr. DILLINGHAM. Then I withhold my vote, having a pair with him.

Mr. GALLINGER. Observing that the junior Senator from Minnesota [Mr. CLAPP] announced a pair with the senior Senator from North Carolina [Mr. SIMMONS], I will take the liberty of voting. I vote "nay."

The result was announced—yeas 12, nays 43—as follows:

YEAS—12.

Bankhead	Cummins	Pittman	Smith, Mich.
Borah	Jones	Poindexter	Thomas
Brandegee	Page	Smith, Ariz.	Underwood

NAYS—43.

Ashurst	Hollis	Martin, Va.	Smith, Ga.
Broussard	Hughes	Martine, N. J.	Smith, S. C.
Burleigh	Husting	Myers	Sterling
Chamberlain	Johnson, Me.	Norris	Sutherland
Clarke, Ark.	Kenyon	Oliver	Swanson
Culberson	Kern	Pomerene	Tillman
Curtis	La Follette	Ransdell	Wadsworth
Gallinger	Lane	Reed	Walsh
Gronna	Lippitt	Shafroth	Williams
Harding	Lodge	Sheppard	Works
Hardwick	McCumber	Sherman	

NOT VOTING—41.

Beckham	Fletcher	Newlands	Smoot
Brady	Goff	O'Gorman	Stone
Bryan	Gore	Overman	Taggart
Catron	Hitchcock	Owen	Thompson
Chilton	James	Penrose	Townsend
Clapp	Johnson, S. Dak.	Phelan	Vardaman
Clark, Wyo.	Lea, Tenn.	Robinson	Warren
Colt	Lee, Md.	Saulsbury	Weeks
Dillingham	Lewis	Shields	
du Pont	McLean	Simmons	
Fall	Nelson	Smith, Md.	

So Mr. JONES's amendment to the amendment of Mr. SMITH of South Carolina was rejected.

Mr. JONES. Mr. President, I offer the amendment which I send to the desk, to come in after the word "War," on line 18, page 2.

The PRESIDING OFFICER. The amendment to the amendment will be stated.

The SECRETARY. After the words "Secretary of War," on page 2 of the printed amendment, on line 19, it is proposed to insert:

Provided further, That no site shall be selected at which the water-power possibilities exceed the amount necessary to carry out the purposes of this act.

Mr. JONES. Mr. President, the purpose of that amendment is to accomplish, in I might say an indirect way, the purpose of the other amendment. That is, the Senate by its vote has just said that it does not desire all the water-power resources of any site developed to their highest capacity. The Senate has said by its vote that it does not desire these sites conserved to the highest possible degree.

I have been just a little bit surprised at the vote of some of my friends who have been strong conservationists who are willing to let part of the power of these sites go to waste, and have so expressed themselves by the vote on the amendment, which simply required that where a site should be taken by the Government where a dam should be constructed the highest possible development should be had. If that is not to be done, then it seems to me we ought to see to it that if the War Department does select a site it should select a site where, as nearly as possible, the power-development possibilities are no greater than are required for the purposes of this act, so that we will not work a waste in connection with these things.

That is the purpose of this amendment. It is to require the War Department, in the selection and investigation of the site that it is going to improve, not to go to a site where 400,000 horsepower is possible and put in a plant of 150,000 horsepower and let the balance go to waste, but that in the selection of the site, if it concludes that it needs 100,000 horsepower for the purposes of this act, it shall select a site where the highest practicable horsepower that can be developed is 100,000 horsepower.

Mr. SMITH of South Carolina. Mr. President, in the hearings with reference to the development of this chemical it was brought out that the minimum horsepower under which it could be economically developed was 30,000. That was the minimum; but it also appeared that the greater the power the cheaper the process, and therefore it is almost impossible to fix any limit. The Government might find one place where strategically and for other purposes of the site they could develop economically 300,000 horsepower and in another place 100,000 horsepower. So that any attempt to limit the site according to the horsepower that may be developed would be unwise, because there might be a place where they would develop the last ounce

and still do it economically, and there might still be another place where the available horsepower was four or five times as great as that, and it would do identically the same thing. So a stated, fixed number of horsepower is not essential above or below. It is flexible from 30,000 up, and cheapens as the horsepower becomes greater. Therefore the committee thought it was best not to have any regulation as to the number of horsepower.

Mr. JONES. Mr. President, will the Senator permit a question?

Mr. SMITH of South Carolina. Yes.

Mr. JONES. Does the Senator contend that under his amendment, if it should be found that 150,000 horsepower is all that it is necessary to develop at a certain point to produce nitric acid for fertilizer, but that there is a possibility of developing at that point 200,000 horsepower, the Secretary of War would be authorized to go on and develop it to the extent of 200,000 horsepower?

Mr. SMITH of South Carolina. Why, I think, by the very nature of the work itself, that common sense would dictate that, because it cheapens as the number of horsepower is increased.

Mr. JONES. But does the Senator think that could be done, under the terms of his amendment?

Mr. SMITH of South Carolina. I think it would be done, under the terms of the common sense of the Secretary of War.

Mr. JONES. Well, Mr. President, that is not what is controlling here. It is the terms of the Senator's amendment.

Mr. NORRIS. Mr. President, I am rather inclined to believe that in theory at least the former amendment offered by the Senator from Washington was proper. I had no serious objection to it, and yet I was one of those who voted against it. His theory is that wherever a water power is to be developed, the maximum amount of it ought to be developed.

As a general proposition, I think we will all agree to that; and I was perhaps one of those the Senator had reference to, who, he said, when the Shields bill was up, were advocating that kind of theory. I had not any serious objection to the Senator's first amendment. I have not any serious objection to the present amendment. At the same time, I believe the bill is better without either one of them, in this case.

I want to say to the Senator from Washington that the difference now, in my judgment, is between the development of water power by private individuals for profit and the development of the same power by somebody in the interest of all the people. I can see that there is a little difference. We might have a case here where the Secretary of War would say: "Well, I ought to have now, for the purposes of this bill, 100,000 horsepower. Here is a particular site on a navigable stream that can be easily developed at a comparatively small expense per horsepower; but the maximum capacity of this particular site is 110,000 horsepower." He would say: "Well, I only need 100,000 horsepower, and I will not develop this site." And he would go to another place where there was just 100,000 horsepower that could be developed, that it would cost him two or three times as much per horsepower to develop.

Now, he represents all of the taxpayers, all the citizens of the United States. What would be the proper thing for him to do? Even though he leases 10,000 horsepower, I do not believe there could be any doubt but that he would say, "We will take it and develop 100,000, perhaps develop 110,000." I presume if he got within 10,000 he would go that far anyway. So it seems to me we ought not to make the same requirement here for the development of horsepower on behalf of the public that we would naturally be inclined to do were a private individual going to develop it for private profit, and who perhaps would be interested in preventing the development of some horsepower for the purpose of making more profit out of some other power.

There is another thing that has some weight with me. The Secretary of War being representative of all his fellow citizens, of all the people of the country, will use absolutely the best judgment and discretion for the fullest enjoyment of benefits to all of the people, and if we give to him the full discretion which it seems to me he ought to have—and that the Senator's amendment would take away from him to some extent—he will always develop the maximum amount of horsepower of any reservation that is made if it is a practical proposition to do it. It seems, therefore, that we ought not to limit him. He will know, too, what will be the requirements of the Army and the Navy for present conditions, and they may not be at all sufficient in 25 years from now. If he went in any direction from the strict rule laid down by the law, he would probably go further in the development of the excess of power rather than stop on the other side of the line.

The only effect of this amendment and the other one that was voted down is to take away from the representative of the people a discretion that the bill as it now stands gives to him. While I concede that we ought not to give too wide a discretion, in a case like this it seems to me that any Secretary of War, under the conditions that exist at the time he or the President withdrew the site for dams, would do in his honest judgment what was the best for all the people. There might be such a case, as I mentioned, where he would not perhaps in the first instance develop every horsepower that could possibly be developed there if it would be profitable for the people of the United States not to do it.

The PRESIDING OFFICER. The question is on the amendment of the Senator from Washington to the amendment.

The amendment to the amendment was rejected.

The PRESIDING OFFICER. The question recurs on the amendment of the Senator from South Carolina.

Mr. HARDWICK. Mr. President, we are about to vote on this proposition. My unalterable opposition to it is so well known to the Senate that it is unnecessary for me to repeat the reasons that force me to oppose it. I do not believe I can emphasize it more strongly than I have already tried to do. Yet there are some things about this situation that are not altogether free from humor, to which I think the attention of the Senate might be directed in the closing hours of this debate.

In the first place, the Senator from South Carolina continually refers to what "the committee" has determined, what the committee has decided, or what the committee heard. So we are somewhat in the air as to whether at present we are operating under the advice and direction of the Committee on Agriculture or the Committee on Military Affairs.

This proposition is presented by some of its advocates as a matter of military necessity, of preparedness, and yet the chairman of the Military Affairs Committee of the Senate tells us it has no place on this bill and he expects to vote against it. So much for that phase of the question.

But, Mr. President, some of my brethren are determined to sell their birthright on a fundamental Democratic question for a mess of potash. I think they had better be sure about who is going to get the potash. The Senator from South Carolina has inveighed with all the eloquence of which he is capable, backed by his distinguished colleague, against the Fertilizer Trust, which has robbed the people of this Republic, the Virginia-Carolina Chemical Co., of which the Senator from South Carolina complains, and possibly one other combination. There may be other trusts equally odious in other parts of the Republic, equally repulsive, that are engaged in this most reprehensible conduct.

Yet the Senator from South Carolina and his cohorts who complained against the exactions of these trusts, in spite of our laws and our Democratic administration and our Democratic Attorney General in power, have, as I propose to show to the Senate, now presented to this body a measure the only effect of which can be to increase the profit of these unconscionable trusts that are robbing the farmers. It will not help the poor farmer at all, because after Senators pass this bill they will simply furnish the raw material to the Fertilizer Trust at a cheaper price, and the Fertilizer Trust will continue to rob the farmer in all that they are going to use, unless they can be otherwise restrained by law.

Now, let us see why. The Senator from Alabama [Mr. UNDERWOOD] first directed my attention to this. The Senators in their new incursion into governmental activities do not propose to manufacture the fertilizer itself that the farmer can use to put in the ground and make blades of grass grow, and all that sort of stuff. Not a bit of it. They do not propose that, but what they propose is this:

> That the Secretary of War is * * * further authorized to construct, maintain, and operate at or on any site so designated or withdrawn dams, locks, other improvements to navigation, power houses, and other plants and equipment necessary or convenient for the generation of electrical or other power and for the production of nitrates or other products needed for munitions of war and useful in the manufacture of fertilizers.

So they are going to furnish these trusts their raw material by governmental manufacture, and they are going to sell the birthright of their people in order that they may swell the profits of the very trusts of whom they are complaining of, who are oppressing the farmers, in whose name this thing is being done.

Now it does not concern me very much. I am not willing to embark in any such enterprise as that for the Fertilizer Trust——

Mr. LANE. I should like to ask the Senator how he explains it.

Mr. HARDWICK. I have already explained it, if the Senator understood me.

Mr. LANE. But it is nitric acid.

Mr. HARDWICK. But they provide themselves, if the Senator will listen to the bill, they are going to produce this material that is useful in the manufacture of fertilizer.

Mr. LANE. Nitrates.

Mr. HARDWICK. I understand; but they do not propose to furnish the farmer anything that he can use.

Mr. LANE. Yes; nitrates.

Mr. HARDWICK. Mr. President, I can not yield to the Senator, because I have only 10 minutes. I am quoting from the language of the bill. We are not going to give him anything that the farmer can put in the ground, but it proposes to furnish a product that is "useful in the manufacture of fertilizer." Who will get that product, the farmer or the Fertilizer Trust? Who will be benefited, the farmer or the Fertilizer Trust?

Mr. LANE. Mr. President, I do not understand the argument of the Senator from Georgia [Mr. HARDWICK]. The nitrate the Government is allowed to produce for fertilizer is nitrate of potash or soda. I wanted the Senator to make it plainer. We would say nitrate of soda, nitrate of potassium, or any other thing that is combined with nitric acid. Nitric acid when combined with an alkaline base forms a salt called a nitrate, some kinds of which are used as fertilizers. It is absolutely distinct and beyond peradventure in this amendment.

Mr. KENYON. I want to have one matter cleared up before we vote if possible. Yesterday the Senator from Georgia [Mr. SMITH] said in his speech, page 6894, of the RECORD:

> The amendment prepared by the Senator from Alabama and offered to the amendment of the Senator from South Carolina, which the Senator from South Carolina stated that he accepted, I suppose is now a part of the bill. It provides for the immediate appropriation of a million dollars and a subsequent plan of expenditure of $30,000,000 more. I do not believe $15,000,000 will equip a plant, and I favor the bill more cordially with the provision for $30,000,000.

Mr. SMITH of South Carolina. Let me set it right now. I said, as I have stated this morning, that after reading the amendment to the amendment and hearing the arguments adduced I think the amendment in its present form is better than anything that has been offered to it, and I hope those who are in favor of this legislation will vote for the amendment as originally presented.

Mr. KENYON. I should like to inquire if the Senator did accept the amendment, if the RECORD so shows, and if we are now voting for $30,000,000 instead of $15,000,000.

Mr. SMITH of South Carolina. I do not think the RECORD will show it.

Mr. KENYON. There is quite a difference, Mr. President, between $15,000,000 and $30,000,000.

The PRESIDING OFFICER. The Chair will state to the Senator from Iowa that the Senator from South Carolina may have been willing to agree to the amendment, but the RECORD does not disclose that the amendment was agreed to by the Senate.

Mr. SMITH of Georgia. But, Mr. President, a Senator has a right to control an amendment which he offers and modify it until the vote of the Senate is had upon it. If he accepts an amendment to it the accepted amendment becomes a part of his original amendment, and it amounts to the tender of the amendment in that shape by him. The Senator from South Carolina did state day before yesterday that he accepted the amendment of the Senator from Alabama. Of course, it is still the amendment of the Senator from South Carolina, and he can change it at his pleasure.

Mr. SMITH of South Carolina. A parliamentary inquiry, Mr. President. If that established the status and it has become a part of my amendment, I ask that it be withdrawn.

The PRESIDING OFFICER. The Chair holds that there has been no such modification of the amendment.

Mr. JONES. I desire to offer another amendment. After the word "act," in line 9, page 1——

Mr. SMITH of Georgia. I desire to inquire what was the ruling of the Chair. Does the Chair rule——

The PRESIDING OFFICER. Does the Senator from Washington yield to the Senator from Georgia?

Mr. SMITH of Georgia. I rose to a question of the Chair.

Mr. JONES. I yield, unless the Chair holds that I have begun my remarks on another amendment.

The PRESIDING OFFICER. The Senator from Washington has begun remarks on his amendment.

Mr. JONES. Then I shall offer an amendment. I can not begin my remarks, I suggest to the Chair, until I have offered the amendment.

Mr. SMITH of Georgia. I rise to a question of parliamentary status, Mr. President.

The PRESIDING OFFICER. The Senator from Georgia will state his parliamentary inquiry.

Mr. SMITH of Georgia. Does the Chair hold that a Senator can not modify his own amendment at his pleasure?

The PRESIDING OFFICER. The Chair recognizes that any Senator, before an amendment is acted upon, may modify it, but the Chair holds that the consent of a Senator to an amendment by another Senator does not become an amendment before the Senate unless agreed to or carried by motion.

Mr. SMITH of Georgia. Does the Chair hold that if a Senator offering the original amendment states that he accepts the proffered amendment it does not become a part of his amendment?

The PRESIDING OFFICER. The present occupant of the chair is of the opinion that it may be offered, but it does not become an amendment to the bill until it is agreed to by the Senate, either without objection or by a vote.

Mr. JONES. Now, Mr. President, I desire to offer an amendment. After the word "act," in line 9, page 1, I move to insert:

> But when the site or sites to be developed under this paragraph are determined all other sites shall be released from any designation hereunder.

The PRESIDING OFFICER. The Secretary will read the amendment to the amendment.

The SECRETARY. On page 1, line 9, after the word "act," insert:

> But when the site or sites to be developed under this paragraph are determined all other sites shall be released from any designation hereunder.

Mr. JONES. Mr. President, I simply wish to make one suggestion. Under the first paragraph the President can tie up every water-power site on the navigable streams anywhere in the country. Of course, I think they are all tied up now, as far as that is concerned, and will be tied up until we have legislation, but this gives the President special power to tie up these sites.

There is some difference of opinion as to whether that is a separate power, and these are separate sites from those named in paragraph 2 of the bill. I had understood that they all referred to the same, but some Senators think, and, I believe, with very much reason, too, that under the first paragraph certain designations can be made and under the second paragraph other designations, and that this limitation of buying sites applies only to those where there are public lands, and so forth.

Mr. SMITH of South Carolina. I have no objection to that amendment.

Mr. JONES. I just want to make it plain.

Mr. WORKS. Mr. President, I should like to understand a little better what the ruling of the Chair was a moment ago upon the parliamentary inquiry of the Senator from Georgia. I understood the Chair to hold that an amendment accepted did not become an amendment to the bill until it was actually voted upon by the Senate, and I think he is right in that ruling. But it does, it seems to me, become a part of the amendment that is before the Senate, and if a vote was not taken upon it, it must be taken with that amendment included. In other words, it becomes a part of the amendment offered by the Senator from South Carolina but does not become an amendment to the bill until the Senate has acted on it.

Mr. SMITH of Georgia. And if the Chair will turn to Rule XXI, second paragraph, he will see that that is specifically laid down as the rule of the Senate.

The PRESIDING OFFICER. The question is upon the last amendment of the Senator from Washington to the amendment. Is there objection to the amendment to the amendment? If not, it is agreed to.

Mr. REED. Mr. President, there has been a good deal of talk here in the Senate about lobbies on behalf of members of the National Guard. I have about arrived at the conclusion that when citizens come before Congress with something that we like they are simply patriotic citizens, but when they come with something we do not like they are to be characterized as wicked lobbyists. At least that appears to be the rule applied to this bill.

Some members of the National Guard—a very few—took an interest in presenting the claims of the National Guard to Congress and they have been rather roundly denounced, and on yesterday the Senator from Minnesota [Mr. NELSON] took occasion, for the purpose of showing a lobby by the National Guard, to put into the RECORD some telegrams and letters.

I desire to say, if this case is to be tried upon the charge of lobbying, that I can produce a hundred times as much evidence against the Regular Army and against certain other influences as can be produced against the National Guard, and in order

that the evidence, or some of it, may be before the Senate I ask leave to insert in the RECORD, without taking the time to read it, a telegram from Col. James H. McCord and Col. John D. McNeely, setting forth the propaganda that has been made on behalf of the supporters of the volunteer army plan:

ST. JOSEPH, MO., *April 13, 1916.*

Hon. JAMES A. REED,
United States Senate, Washington, D. C.:

With reference to charge that militia are lobbying, your attention respectfully invited to activities of those who support greater Army increase and volunteers' bill. Some weeks ago S. Stanwood Menken, president National Security League, wired undersigned and numerous citizens here to wire Representative to support Kahn amendment to Hay bill. To-day he has wired secretary local branch Security League to endeavor to get a number of citizens to wire Representatives, and particularly Senators, to support volunteer bill as naturally opposed to the National Guard under Federal control. This seems to us like a systematic effort to secure national legislation through false and forces expression rather than upon merit. It would not be difficult for us to secure many such telegrams, but such action would add nothing to the merits of our cause. We believe that you correctly interpret our motives and those of sensible and patriotic Missourians generally.

JAMES H. MCCORD,
JOHN D. MCNEELY,
Colonels, National Guard of Missouri.

I also desire to insert in the RECORD, without reading, in connection with the subject I am discussing, some remarks made by the chairman of the committee on April 3, in which he said:

We have had the views of the representative men of these bodies, and after we have undertaken to formulate a bill which seemed, in the committee at least, to meet pretty generally the approval of the authorities, we find that not only the National Guard and its officers—and I sometimes fear a lobby is maintained for that purpose.

In connection with the statement just read I want to call attention to the further statement of the chairman of the committee:

In our further efforts to get the bill before the Senate in proper shape we had the Secretary of War detail to us two very competent and distinguished officers of the Army, to whom we are greatly indebted for the assistance they have given us. Gen. William H. Carter, a retired Army officer, who has probably commanded larger bodies of troops in this country than any other officer in the Army, has assisted us, and Maj. William D. Connor, an officer of the Engineer Corps, was with us, and has remained with us all the time, not to formulate a bill, but in an advisory capacity, to discuss with the committee all the technical questions which have arisen, and they have been faithful in their efforts to assist in reaching a proper conclusion. So much for the genesis of the bill and the efforts the committee has made to try to get before the Senate a proper measure.

Now, I call attention, in connection with the foregoing, to the following explanatory statement relating to the lobby of certain Army officers, which I desire to have printed:

"In view of the references which have been made to the influence which is being exerted by the National Guard with a view to shaping the pending legislation to serve the interests of that branch of the service, it would be of interest to know what other branches of the military service are specially represented here and in what way.

"The chairman of the Senate Military Committee in his remarks a day or two ago stated that, in the preparation of the pending bill, his committee had been assisted by Gen. W. H. Carter, United States Army, retired, and other Army officers who have been detailed for that purpose by the Secretary of War.

"Attached hereto is a report of the proceedings of the United States Cavalry Association, having its headquarters at Leavenworth, Kans., which report it is very much desired shall be placed in the RECORD.

"Attention is invited to the marked provisions of the report, from which the following will be noted:

"First. That Gen. Carter represents the Cavalry arm of the service in a special way and for the purpose of obtaining legislation favorable to that arm.

"Second. That the Cavalry is interested in the continental army scheme, because they believe that it will permit any increase made in the Regular Establishment to be divided between the Field Artillery and the Cavalry.

"Third. That to enable Gen. Carter to perform these functions in the interest of the Cavalry this association has undertaken to defray his expenses, furnish stationery, postage, and clerical assistance, and to subject all officers in the Cavalry branch of the standing army to an assessment for that purpose.

"Fourth. That he asked to be permitted to act without a large committee in influencing legislation for the benefit of the Cavalry; that Gen. Carter stated that he was friendly with the chairmen of the House and Senate Military Committees.

"Fifth. That Gen. Johnson, in recommending the selection of Gen. Carter to perform these important functions in the interest of the Cavalry, gave the following reasons therefor:

"Because he, Gen. Carter, is thoroughly familiar with this kind of work and is an expert in handling legislation before Congress and before the committees, as well as in the preparation of data for their guidance.

"This testimony of Gen. Johnson as to Gen. Carter's fitness for influencing military legislation develops two things:

"First. What the National Guard representatives meant in saying that there were experts in influencing military legislation whose methods they could not approach.

"Second. That in the preparation of the pending bill Gen. Carter has been afforded ample opportunity to exercise those peculiar qualities which fit him for the preparation of data for the guidance of the committees of Congress."

I put into the RECORD, with the permission of the Senate, the proceedings of the United States Cavalry Association, which shows conclusively a propaganda agreed upon—a concerted effort agreed upon—and which goes further than that and shows that an assessment has been agreed upon to pay the expenses of the propaganda. It also shows that the very men mentioned by the distinguished chairman of the committee as having been before the Military Committee, acting as its assistants, were the men selected by this association for the purpose of advancing the particular interests of one branch of the Regular Army.

THIS IS OF VITAL IMPORTANCE TO ALL CAVALRY OFFICERS.

UNITED STATES CAVALRY ASSOCIATION,
Fort Leavenworth, Kans., January 23, 1916.

At the annual meeting of the United States Cavalry Association held on Monday last a number of letters from various officers at different stations, regarding the action that should be taken by the Cavalry in regard to the expected increase in the Army and relative to the promotion that would result from such increases, etc., were read.

After considerable discussion it was decided to appoint a committee to consider the several propositions set forth in these letters and to prepare a set of questions covering the several questions proposed, which questions should be submitted to all Cavalry officers at Fort Leavenworth for their consideration. It was further directed that, at as early a date as practicable, the chairman of the meeting should call a special meeting for the purpose of discussing and coming to a vote on the several questions involved.

The committee appointed consisted of Maj. S. Rice, Maj. L. J. Fleming, Capt. S. Heintzelman, and Capt. J. R. McAndrews. Their report is as follows:

In November last there was held at Douglas, Ariz., a meeting of the representative officers of the Eighth, Ninth, Tenth, and Thirteenth Cavalry Regiments to discuss the present Cavalry situation. At that meeting it was decided:

1. That it would be for the best interests of the Cavalry service for the Cavalry Association to enter a wider field, as its activities had been confined hitherto to the publication of the Cavalry Journal.

2. That to arouse greater interest they believed that the headquarter of the Cavalry Association should be transferred to Washington, where the executive council would be brought directly into contact with people from all parts of the country, and where there are people from all horse districts in greater or less numbers throughout the year.

3. That the place of publication of the Cavalry Journal should remain at Fort Leavenworth and that the secretary of the association be a resident of that place.

4. Inasmuch as the constitution of the Cavalry Association requires that the headquarters shall be at Fort Leavenworth, and as the above-mentioned interest should be awakened as soon as possible, it was recommended that the executive council appoint a committee of Cavalry officers residing in Washington to look after the interests of the Cavalry service, and it was suggested that such committee be composed of Maj. Gen. W. H. Carter, Brig. Gen. J. A. Johnston, and Maj. L. C. Sherer, this committee to cooperate with the members of the association in Washington.

5. That this committee should be furnished with clerical assistance at all times.

6. As the expenses of such assistance and the expenses attendant upon any increase in the activities of the Cavalry Journal will probably exceed the revenues, it was recommended that all officers of Cavalry pay to the association, in lieu of dues for 1916, one day's pay.

7. That, inasmuch as the proposed continental army would undoubtedly have a large proportion of Infantry and Coast Artillery, any increase in the Army should therefore be divided between the Cavalry and Field Artillery.

8. That the single list for promotion should be adopted, provided that officers are arranged according to their length of service.

Subsequently, at a meeting of the Cavalry officers at Fort Sam Houston, they requested that a committee, consisting of Maj. Gen. Carter, Gen. Johnston, Lieut. Col. Cameron, Lieut. Col. Read, Lieut. Col. Michie, and Maj. Lochridge, be appointed to represent the Cavalry service in Washington in any manner that may seem best to them.

The officers at this meeting favored the following propositions:

1. An increase in the number of Cavalry regiments.

2. Equalization of promotion among the various arms according to length of commissioned service:

(a) By utilizing the extra officers' list.

(b) By single list for promotion according to length of commissioned service.

They further agreed to contribute one day's pay, for defraying the expenses incident to this work, when called upon to do so.

Still later, at a meeting of the officers of the Sixth Cavalry, at Harlingen, Tex., they approved of the suggestions made at the Douglas and Fort Sam Houston meetings and furnished a list of officers who agreed to subscribe one day's pay. They further suggested that the committee in Washington be composed of the same officers recommended at the Fort Sam Houston meeting, with the addition of the name of Maj. Scherer, but stated that they would be satisfied with any committee selected from the officers mentioned. The report of this meeting further states that "some of the officers favor adopting the proposals suggested by the San Antonio officers," and enumerates those above noted. They also believe that the committee in Washington should be given carte blanche to do what they might deem best for the Cavalry service.

Soon after the receipt of the above-mentioned reports of these meetings the executive council of the Cavalry Association acted upon the same, as follows:

1. That, acting upon a previous suggestion, they had already agreed to request Gen. Carter to look after the interests of the Cavalry in Washington, and had agreed to defray all his necessary expenses—stationery, postage, and clerical assistance. That he would again be asked to take up this work and to associate with him any or all of the officers suggested at the above-noted meetings, but that Gen. Carter should be free to select his associates in this work.

2. The executive council does not deem it advisable or necessary, at present at least, to make an assessment of one day's pay, as it was believed that the funds on hand would be sufficient for all legitimate expenses that will be incurred in Washington, especially if an earnest effort be made, as suggested at the Douglas meeting, to bring every Cavalry officer into the association.

3. The executive council has grave doubts as to the advisability of establishing a permanent bureau in Washington for the purpose of influencing legislation, and reiterates its former declaration that none of the funds of the association should be used for lobbying.

The executive council further stated that, in case it is deemed wise by the members of the association to have the headquarters moved to Washington, or to have a certain number or all of the executive council located there, that is a matter requiring an amendment to the constitution and is of minor importance compared to the present question of securing for the Cavalry arm a proper recognition in the forthcoming increase of the Army.

To the request that he represent the Cavalry interests in Washington, Gen. Carter replied, in brief, as follows:

1. That his previous experience had convinced him that the larger the committee the less chance of achievement.

2. That he did not favor the collection of one day's pay.

3. That he had already filed his views with the War Department, at the request of the Secretary of War; that he was personally friendly with the chairman of the House and Senate Military Committees, and that he would undoubtedly have a hearing before the committees.

4. That he recommends a reorganization of the Cavalry on the three-troop, three-squadron, with a machine-gun troop basis, and an increase of three additional regiments, and states that he believes this can be gotten. He further recommends that the troop be composed of 108 men at all times.

5. He further states that he would have much difficulty in meeting and advising with a large committee.

Among other letters received and read were some from various officers approving to a greater or less extent the propositions suggested at these several meetings. Gen. Johnston wrote that he was located for the coming year in New York and could not, therefore, act with any committee. He also states that he is entirely convinced that the executive committee is wise in their selection; that we could get no better person, who is on the ground or elsewhere, to represent the Cavalry service than Gen. Carter, this because he is thoroughly familiar with this kind of work and is an expert in handling legislation before Congress and before the committees, as well as in the preparation of data for their guidance. He further states that he will be glad to assist Gen. Carter in any way possible, and that, in case contributions are necessary, he will be pleased to contribute, etc.

Finally the committee has prepared, from all the letters above mentioned, a set of questions embodying all the several topics discussed in them, which questions all Cavalry officers are urgently requested to be prepared to answer at the meeting on Sunday next.

It goes without saying that every Cavalry officer should be present at that meeting.

THE COMMITTEE.

—

At the called meeting on Sunday, January 23, at which there were present representatives from all Cavalry regiments except four, the report of the committee and the questions submitted by them were acted upon as follows:

The following resolution was adopted by a vote of 22 to 6 (it will be observed that all the officers did not vote on all questions; there were 33 present at the meeting):

"*Resolved*, That the executive committee of the Cavalry Association should take action to forward in every possible way the plan for betterment of the Cavalry service decided upon at Douglas, Ariz., by the representatives of the Eighth, Ninth, Tenth, and Thirteenth Regiments of Cavalry."

The following resolution was adopted by a vote of 25 to 4:

"*Resolved*, That the executive committee of the Cavalry Association should continually agitate the question of the imperative need of equalization of promotion in order to do away with the present haphazard system."

The meeting then proceeded to vote on the several propositions that had been prepared by the committee, which questions are as follows, the votes on them being indicated in italics and in parentheses:

1. Are you in favor of having a committee of Cavalry officers in Washington for the purpose of looking after the interests of the Cavalry service? (*Carried by 29 votes.*)

2. Are you in favor of having the executive council of the Cavalry Association appoint and maintain such a committee in Washington? (*Carried by 27 votes.*)

3. Are you in favor of having the Cavalry officers on the General Staff in Washington act as such Cavalry committee? (*Carried by 27 votes.*)

4. Do you wish to nominate Cavalry officers as members of such committee? If so, whom do you wish to nominate? (*Lost by a unanimous vote.*)

5. Are you in favor having the executive council of the Cavalry Association transferred to Washington? (This would necessitate a change in the constitution of the association, hence delay, but the movement can be initiated now.) (*Lost by a vote of 17 to 7.*)

6. Are you in favor of a permanent Cavalry committee in Washington? (*Carried by 27 votes.*)

7. Are you in favor of having such Cavalry committee in Washington uninstructed (question No. 7 was amended by inserting the words "as to the methods of carrying on their work" after the word "instructed"), and will you abide by their best judgment? (*Carried by a vote of 25 as amended.*)

8. Are you in favor of having such Cavalry committee instructed (question No. 8 was amended by striking out the word "instructed" and inserting in its place the words "informed from time to time as to the opinion of the whole Cavalry arm") as to certain matters hereunder, and will you abide by the majority vote thereon? (*Carried as amended by 25 votes.*)

9. Are you in favor of agitating any change in the organization of the Cavalry at the present time? (*Lost by vote of 23 to 3.*)

10. Are you in favor of requesting all Cavalry officers to contribute one day's pay to defray necessary clerical expenses, subscribers to be entitled to become members of the Cavalry Association with dues for 1916 paid? (*Carried by a vote of 24 to 1.*)

11. Do you favor, in the event of any increase in the Cavalry, Infantry, and Field Artillery at any time hereafter that the three arms shall share proportionately in the officers created? (*Carried by a vote of 28.*)

12. Are you in favor of the single list for promotion:

(a) On a basis of the present relative list? (*Lost by a vote of 30 to 1.*)

(b) On the basis of length of commissioned service in the Regular Army? (*Lost by a vote of 19 to 9.*)

(c) On the basis of length of commissioned service in the service of the United States? (*Carried by 25 votes.*)

13. In the case of the adoption of any form of a single list, are you in favor of distributing vacancies:

(a) By the utilization of the extra officers' list? (*Lost by 26 votes.*)

(b) By the promotion of officers to any arm in which the vacancies may occur? (*Lost by a vote of 17 to 7.*)

(c) By a combination of both methods as set forth in (a) and (b)? (*Carried by 26 votes.*) (Subhead (c) was not among the questions submitted by the committee, but was inserted at the meeting and carried as indicated.)

14. Are you in favor of a single list, after evening inequalities of promotion among the different arms resulting from specific legislation since ——— (fill in the date you deem best), creating original vacancies? (*Stricken out by 26 votes.*)

15. Do you wish these several propositions submitted to all Cavalry officers in the United States (question No. 15 was amended by striking out the words "in the United States." The committee stated that their idea was to send the question now to the officers in the United States only, in order to get prompt action as it would take nearly three months to hear from all officers in the Philippines) so as to obtain the true sentiment of such Cavalry officers? (*Carried as amended by 24 votes.*)

16. To whom should the results of these questions be sent? (*To the executive council of the Cavalry Association and to be by them tabulated and forwarded to the committee in Washington.*)

It was agreed that the above questions should be sent to all Cavalry officers without delay and that, as soon as the votes of those in the United States had been received, the same should be tabulated and forwarded to the committee in Washington, and those received later from Hawaii and the Philippines should be similarly tabulated and forwarded.

The following preamble and resolution was then adopted:

"Whereas action in the interest of the Cavalry service and all action taken by the Cavalry Association has invariably been paralyzed by differences of opinion among Cavalry officers and by conflicting action by individual members: Be it

"*Resolved*, That every Cavalry officer be requested to sign the following pledge and forward it for record to the secretary of the Cavalry Association:

"PLEDGE.

"I hereby agree to abide by any decision arrived at by a majority vote of Cavalry officers as to any policy to be advocated by the Cavalry Association; to support such action and to use all my influence to prevent any Cavalry officer from advocating any policy which conflicts with the instructions arrived at by a majority vote."

The above is submitted for your consideration with the *earnest request* that you vote upon the same without delay and forward your vote with any remarks on the same that you may desire to make to the secretary of the Cavalry Association.

By order of the executive council.

EZRA B. FULLER,
Lieutenant Colonel, Retired, Secretary.

I do not offer this for the purpose of reflecting on anybody, but I do offer it in the interests of fairness and justice, and I ask that the several documents shall be printed as a part of my remarks.

I further desire, Mr. President, to put in the RECORD a compilation of statements from officers of the National Guard showing the amount of labor those officers who are above the rank of captain actually perform. I want that evidence before the Senate when an amendment which I propose to bring up a little later on shall be under discussion.

The PRESIDING OFFICER. Without objection, it is so ordered.

The matter referred to is as follows:

[From J. C. R. Foster, head of the National Guard of Florida and chairman of the National Guard Association of the United States.]

Section 108 of the military bill now pending allows pay only to the captains and lieutenants of companies, and it is argued by the advocates of this provision that those officers only should be given pay, because only company officers participate in the weekly drills when organizations are at their home stations. This idea will not find support with those who know that the hour and a half or two hours of company drill held each week is but a part, and a small part at that, of the military duty which commissioned officers are required to perform.

The duties and the responsibilities of officers increase with their rank, and if the theory of increased pay for increased rank and responsibility is sound in its application to the standing army it is sound in equal degree and necessary in its application to the National Guard. Until such time as this country may be willing to accept a system of compulsory, universal military training, military service, as every other kind of service, must offer the incentive of some form of reward. One reward peculiar to every known system of military organization is the hope of promotion and opportunity for it; another is compensation for duty performed by a few on behalf of the many. The provisions of section 108 would deny both of these rewards to commissioned officers—to the very class of men who must be depended upon to build the National Guard up in efficiency and in strength if the proposed plan for developing this branch of the national military service is to be realized.

It must be apparent even to those who give only casual consideration to the matter that to deny pay to officers when they may be detailed away from companies, or when they may be promoted above the grade of captain would check promotions and disrupt the higher units. As a rule promotion above the grade of captain is not attained without years of service in the junior grades and an experience which makes the officer particularly valuable to the Government. It is a greatly mistaken idea that the general and field officers have no duties and no responsibilities save when in the field.

The commanding officer of a regiment is responsible for the discipline and training of his command and for its equipment and administration as well. This means that if he is an efficient officer (which he will have to be to hold his commission under the provisions of the proposed legislation) he must be fully advised at all times as to the affairs of each unit of his regiment. If these units be scattered, it entails a volume of correspondence; if assembled at one post, it means personal supervision and direction. Then there are battalion drills and regimental drills as well as company drills. Then there are inspections to be held, innumerable duties to be performed in connection with the management and control of armories, care of public property, discipline of the troops, etc.

Under the system of training now prescribed by the War Department every officer must gives hours of time each week to study. Not only must he study but he must attend lectures, take part in the post schools for officers, undergo examinations, conduct written exercises, etc. The conduct of these schools devolves upon the senior officers; and the officers are also called upon to give other evenings for the conduct of noncommissioned officers' schools.

The theory that no officers above the grade of captain should be encouraged to remain in the National Guard is in line with other provisions for military legislation suggested by that military group who feel that the National Guard should not be permitted to officer larger units than a company. The same theory manifests itself in other provisions. We believe that there are hundreds of capable field officers and many most efficient general officers in the National Guard who are fully qualified to discharge the duties of their respective grades. If they are not so qualified, the pending bill provides the means for eliminating them. If the Congress is to accept the view that a national guardsman can not hope to and should not attempt to qualify for a grade higher than that of captain, then it is submitted that the consistent thing to do would be to provide that no units higher than that of a company should be organized in the National Guard, this under the power of Congress to prescribe the organization of the militia.

The wording of section 108 does more than deny the higher officers pay; it denies pay to many officers of junior rank who perform important duties. Take, for example, medical officers of the grade of first lieutenant. In addition to the duty which they perform with sanitary troops, those officers keep up with the studies prescribed for them and conduct the physical examination of all recruits, without compensation. The value of this service is indicated by testimony introduced into the record a few days ago as to the cost of the physical examination of recruits for the standing army. It is the same examination.

Every officer, regardless of grade, must uniform and equip himself. This costs, at the outset, anywhere from two to five hundred dollars, increasing with the higher grades. They must keep equipped and conform to every change prescribed for the Army. They are constantly subjected to expense because of their official position, expense which increases with their rank and responsibilities. If the principle of Federal compensation for militia service is to be applied, it is clear that it should be applied without unfair discrimination and in a manner consistent with and calculated to sustain the well-established graduation of rank in the military service. This is necessary if the National Guard is to be made a well-balanced and effective force rather than a mere recruiting agency to provide an enlisted personnel, with the expectation and intention that the officers shall be provided by another branch of the service.

I make this statement to you feeling that I can consistently do so not only because of my personal knowledge of the duties which are performed by officers not recognized for pay under the present bill, but because I belong to that class of officers who will receive no benefits of pay under either bill or any amendment proposed.

—

[From James U. Andrews, colonel of the New York National Guard and a graduate of West Point.]

From information I have received, it would appear that there is an erroneous impression gaining ground in Washington that the National Guard officers above the rank of captain are not entitled to compensation for the reason that they do not drill. It is possible that my experience may be of interest to you.

After graduating from West Point, in 1890, I served three years as second lieutenant, First United States Cavalry, in active campaigning in the West. I was in the field practically all the time. For example, I participated in the Sioux campaign in the winter of 1890–91; following that I was stationed in Arizona. After resigning from the Regular service I joined the National Guard as a first lieutenant and have subsequently held all the ranks to my present rank of colonel Second Infantry.

I can assure you that the National Guard in New York State not only requires, but insists, on a very large portion of one's time if one is to keep up with the always increasing requirements. Every Monday night all my field and staff officers, and any others who may have any business with the regimental commander, meet me at my headquarters. These meetings, together with the routine work only, consume on an average of five hours. In addition to this it is conservative to say that at least two hours of every day of my life is devoted to matters pertaining solely to the regiment. My regiment is so divided that there are nine different armories in different towns, extending from Hoosick Falls on the east, Whitehall on the north, and Gloversville on the west. These posts have to be visited and inspected at regular intervals, and this work has to be done usually at night. It is safe to say that, outside of the work done in the daytime for the regiment, I have to devote three evenings of every week for this duty, and away from home.

My expenses for these trips and other matters amount to a very considerable sum per year, and it is an actual outlay. I estimate that it costs me personally, outside of time and labor, at least $300 per year, and that, therefore, the so-called pay in the bill should properly be termed compensation, for it is truly that. What I have said with regard to myself applies equally to the field officers.

—

[Statement of Henry R. Hill, brigadier general of the State of Illinois.]

Regarding the bill that proposes pay only for company officers, I wish to say, however, that the regimental adjutant is one of the hardest workers in the National Guard service. I was company commander eight years and adjutant two years, and had I asked pay for my services I would have said $500 per year as company commander and $1,000 per year as adjutant. Moreover any colonel or major who works at his job is worth $500 a year to the United States. If the War Department requires adequate examination before pay is received, then the amount of study and preparation necessary is well worth the pay.

If the National Guard suffers through the fact that all officers are not worthy of pay, would it not be better to muster out the worthless through examination and pay the worthy?

As to my own position, I care not; I have put in most of my spare time during the past 24 years for nothing, and the few more years that I shall remain in service would make little difference in my bank account with or without pay.

The spirit of the American press in the past month and of the War Department in the past four years leads one to believe that none but the National Guard itself believes it is worthy of pay. If that be true, then neither should any sum be allowed for any purpose to them, because their work is either worthy pay and equipment or neither.

In the above I pray you not to read into it anything that will stand in the way of preparedness in this country. I am willing to do my share or not as duty may be. But I do believe that the National Guard should be bettered by pay and thorough examination or not encouraged whatever.

—

[From Charles W. Abbot, jr., adjutant general of Rhode Island.]

Understanding that you are interested in the matter of pay for militia, I take the liberty, in behalf of the field and staff officers of the Rhode Island National Guard, to urge your efforts to the end that there may be provision for them as well as company officers. We have a colonel, lieutenant colonel, and four majors of a coast artillery corps of two bands and 17 companies. The majors actively superintend the drill of their several battalions, and in addition are members of examining boards for officers, specialists, rated position men, gunners, and noncommissioned officers. It means two and three nights a week in addition to the study involved in fitting themselves and keeping fit, no small task. The colonel has a vast amount of administrative work, and devotes many hours every day in his business time, to its undoubted detriment, in managing the affairs of his command. The lieutenant colonel assists him, and is quite as busy as either of the majors. It would be, in my opinion, a manifest injustice to ignore field officers if pay is to be allowed. They are much more deserving of it than are lieutenants and equally so as captains. Regimental staff officers should also be included, for their duties and responsibilities are as engrossing as those of company officers.

Mr. REED. Similar letters and telegrams received from the following:

Charles A. Walz, major, First Cavalry Illinois National Guard.
Charles N. Neal, captain, quartermaster Fifth Infantry Illinois National Guard.
C. H. Hitchcock, colonel First Infantry New York National Guard.
W. G. Bates, colonel Seventy-first New York National Guard.
C. G. Davis, colonel Sixth Illinois Infantry.
Charles H. Greene, colonel Third Infantry Illinois National Guard.
Charles F. Tillinghast, colonel Coast Artillery Corps Rhode Island National Guard.
Arthur B. Donnelly, colonel First Infantry Missouri National Guard.
Arthur N. Nash, major Coast Artillery Corps Rhode Island National Guard.
H. M. Bush, major, Field Artillery Ohio National Guard.
Louis F. Strawn, major, Third Infantry Illinois National Guard.
Ed. H. Dunavin, major, Sixth Infantry Illinois National Guard.
F. F. Putnam, major, Fifth Infantry Illinois National Guard.
Henry R. Hull, brigadier general Illinois National Guard.
Walter M. Mann, adjutant Missouri National Guard.
Leroy K. Robbins, of St. Louis, Mo.

Mr. KENYON. May we have the amendment now read as it will be voted on?

The PRESIDING OFFICER. The Secretary will read the amendment to the amendment.

Mr. KENYON. I will withdraw the request if it is the amendment of the Senator from Washington.

The PRESIDING OFFICER. That has been agreed to, and the question recurs on the amendment to the amendment of the Senator from South Carolina as amended.

Mr. KENYON. I ask that the amendment that is to be voted on shall be read.

The SECRETARY. It is proposed to add, as an additional section to the bill, the following:

SEC. 120. That the President at any time, in his discretion, may, by Executive order, designate for the exclusive use of the United States any site upon a navigable river, the improvement of which for purposes of navigation will make available at such site surplus water power over and above the needs for navigation. After being so designated, and until the designation is modified or revoked, every such site shall be developed and improved only in the manner and for the purposes authorized by this act, but when the site or sites to be developed under this paragraph are determined all other sites shall be released from any designation hereunder.

That the President may also at any time, in his discretion, withdraw from settlement, location, sale, or entry and reserve for the exclusive use of the United States any public lands of the United States, including the Territory of Alaska, whether within national forests or other reservations or withdrawals, which are valuable as water-power sites for the purposes of this act: *Provided*, That not more than five sites shall be withdrawn in pursuance of the authority given by this act, and when the sites to be developed under this act are determined all other sites withdrawn shall be immediately released from any such withdrawal.

That the Secretary of War is authorized and directed to investigate and to recommend for designation or withdrawal such dam sites and water-power sites as in his opinion will be necessary for carrying out the purposes of this act, and is further authorized to construct, maintain, and operate at or on any site so designated or withdrawn dams, locks, other improvements to navigation, power houses, and other plants and equipment necessary or convenient for the generation of electrical or other power and for the production of nitrates or other products

needed for munitions of war and useful in the manufacture of fertilizers: *Provided*, That all plans and specifications for dams in navigable rivers shall be submitted to and approved by the Secretary of War.

That the Secretary of War is authorized to lease, purchase, or acquire, by condemnation, gift, or devise, such lands and rights of way as may be necessary for the construction and operation of such plants and to take from any lands of the United States, or to purchase or acquire by condemnation, materials, minerals, and processes, patented or otherwise, necessary for the construction or operation of such plants and for the manufacture of such products.

That the products of such plants shall be used by the Secretary of War or the Secretary of the Navy for military or naval purposes, and any surplus not so required may be sold and disposed of by the Secretary of Agriculture under such regulations as he may prescribe.

That the sum of $15,000,000 is hereby appropriated, out of any moneys in the Treasury not otherwise appropriated, available until expended, to enable the Secretary of War to carry out the purposes of this act.

That the plant or plants provided for under this act shall be constructed and operated solely by the Government and not in conjunction with any other industry or enterprise carried on by private capital.

That in order to raise the money appropriated by this act and necessary to carry its provisions into effect, the Secretary of the Treasury, upon the request of the Secretary of War and the approval of the President, may issue and sell or use for such purchase or construction hereinabove authorized any of the bonds of the United States now available in the Treasury of the United States under the act of August 5, 1909, the act of February 4, 1910, and the act of March 2, 1911, relating to the issue of bonds for the construction of the Panama Canal, to a total amount not to exceed $15,000,000: *Provided*, That any Panama Canal bonds issued and sold or used under the provisions of this section may be made payable at such time after issue as the Secretary of the Treasury, in his discretion, may deem advisable and fix, instead of 50 years after date of issue, as in said act of August 5, 1909, not exceeding 50 years.

Mr. WALSH. Mr. President, I merely desire to direct the attention of the Senator in charge of the bill to the concluding language in the paragraph embraced in lines 12 to 15, page 3, to the effect that the plant provided for under this act "shall be constructed and operated solely by the Government and not in conjunction with any other industry or enterprise carried on by private capital." I think that language is confusing. It will be very readily conceived that there would be an excess power which the Government would want to sell. That power might be transmitted and utilized for the operation of street railways in a neighboring town and that enterprise would be in a way connected with this.

So the nitric acid might be manufactured here and private interests might put up a fertilizer plant close by, and possibly use some of the power in operating the fertilizer plant. I supposed it was intended to limit the activities of the Government to the production of nitric acid. If that is the case, I should think it would be necessary to insert the words "by it," after the word "not," in line 14; so that it should read:

That the plant or plants provided for under this act shall be constructed and operated solely by the Government and not by it in conjunction with any other industry or enterprise carried on by private capital.

But I see that would not make it, because the clause concludes with the words "by private capital."

Mr. SMITH of South Carolina. Mr. President, the object of those who proposed this amendment was clearly—and the Senate has overwhelmingly indicated its approval of that intention—that the Government should not lease or sell this power in such a way that the appropriation herein contemplated might be given over to private capital. It was to restrict the operations to the Government and not open the way for the Government to go into partnership with private parties or lease or sell the plant or the power.

Mr. WORKS. Mr. President——

The PRESIDING OFFICER. The Senator from Montana [Mr. WALSH] has the floor. Does he yield to the Senator from California?

Mr. WALSH. I have yielded the floor; but I was going to suggest——

Mr. WORKS. I will yield if the Senator from Montana desires to ask a question or to make a suggestion.

Mr. WALSH. I was going to ask the Senator from South Carolina whether the whole object would not be achieved if the sentence ended with the word "Government"? The paragraph would then read:

That the plant or plants provided for under this act shall be constructed and operated solely by the Government.

Mr. SMITH of South Carolina. I rather think, Mr. President, that that would cover it; but, out of abundance of caution, we went on to define just exactly what we were trying to do.

Mr. WALSH. I am afraid, however, that that may introduce some trouble there.

Mr. SMITH of South Carolina. I rather think not, Mr. President. I think, without being in any way united or in conjunction with private parties, the Government could sell the power just as easily as it could the product. I do not see anything to prohibit the Government, if it has an excess of power, selling it. If anybody wants to put up a factory and the Government wants to sell them any excess of power, it can sell it to them; but it could not enter into cooperation with them to take the product of the plant, and, by means of some contract, shift to some private company the very functions to which we are trying to restrict it.

Mr. WORKS. Mr. President, I think this is a very serious and unfortunate attempt to limit the use of the waters of the stream. I voted against the amendment offered by the Senator from Washington [Mr. JONES], which would have compelled the Government to improve the water sites to their full capacity, because I thought, and still think, the Government should go no further than to supply its own needs. On the other hand, there is no reason in the world why some one else might not be allowed to use the stream for the purpose of irrigation, for example, that would not interfere with the development of the power or the development of additional power for other uses and purposes.

In the State of California there is a provision in our statutes that where a dam is erected at a certain height, for example, for certain purposes, by one corporation or by an individual, another shall have the right, under proper permit, to increase the size of the dam in order to increase the use of the water. That might be very desirable in the case of the Government as well.

Another thing. Mr. President, there is an effort now being made to lease these power sites, not only upon navigable streams but upon streams that are nonnavigable, and the Government might very well use a stream of this kind for its own purposes up to a certain amount of power and lease the balance to somebody else. There the two would be operating in cooperation, I think, within the meaning of this amendment, and certainly I do not think the Senator from South Carolina wants to prevent anything of that kind by the provisions of his amendment. I think, however, that would be the effect of the amendment.

Mr. SMITH of South Carolina. I think, Mr. President, that the purpose is clearly set forth in the first two lines—lines 12 and 13—which provide:

That the plant or plants provided for under this act shall be constructed and operated solely by the Government.

The clause says nothing about anything else but the plant for the manufacturing process. It goes no further than that.

Mr. CUMMINS. Mr. President, I would be very glad to vote for a plain proposition that the Government should make its own nitric acid or any other commodity that was necessary in the production of powder or other explosives. I would be entirely willing to see the Government use the power that it created in pursuance of the objects that I have just stated in any other useful way when not needed in the production of powder or other explosives; but I can not bring myself to vote for a measure which has not for its chief purpose the manufacture of an article needed by the Government in war, but which has for its chief purpose the manufacture of an article needed in commerce and in general production. The people of Virginia, North Carolina, and South Carolina need fertilizers of various kinds, and I hope they will be able to procure fertilizers. The people of my State do not need fertilizers so much as they need binding twine at a fair price and as we need agricultural implements at a fair price. The fertilizer trust is certainly no more objectionable than is the agricultural implement trust. What are you going to do for us? If every time the people of this country seem to be afflicted with a monopoly—and I am sorry to say that the instances occur so frequently—the Government is to enter the business in order to relieve them of the monopoly, instead of enforcing in some effective way the laws already in existence to destroy the monopoly, it will not be very long until the Government will be in the manufacture of everything under the sun. I am not ready to take that step as yet.

I object to this amendment, first, because it ought not to be added to a measure that is intended for no other purpose than the reorganization of the Army. The senior Senator from South Carolina [Mr. TILLMAN], when he proposed the establishment of an armor-plate plant, did not attach the proposition to some other measure with which it had no connection. He did what I think the junior Senator from South Carolina [Mr. SMITH] ought to do in this case. He ought to allow this proposal to rest upon its own foundation, and not make it a part of a bill that is devoted to an entirely different subject.

I object to the amendment proposed by the Senator from South Carolina, in the second place, because it excludes the Government from taking advantage of the best opportunity in the United States for the purpose of making nitric acid. There is a dam across the Mississippi River at Keokuk, and it will yield 150,000 or 200,000 horsepower. If the Government wanted to make nitric acid, and to make it quickly and continuously,

it could do nothing better than to commandeer or condemn the water power already there in existence; and yet, under this amendment that could not be done, nor could any other water power that is now in existence be taken by the Government under this amendment for the purpose of making nitric acid.

There is in the minds of some Senators a very good reason possibly why the dam to which I have referred should not be taken, because in the manufacture of nitrates for fertilizing the soil, it might require a shipment over a long distance, and, of course, I understand perfectly that a factory that is intended to make nitrates for fertilizing the ground should be located in the vicinity of the ground to be fertilized. I can not, however, think that, if this power that I have mentioned were available, and if the Government were to take it, it ought to be limited to the manufacture of nitrates for fertilizing purposes. Why not allow the power that would be developed by the Government construction to be used to manufacture agricultural implements or binding twine or anything else that the farmers of the country need just as much as they need fertilizers?

I think, with all due deference to the Senator from South Carolina—and I have the highest opinion of his patriotism; I know that he is absolutely sincere about this—that this is not sufficiently thought out. This amendment is not constructed with a view to all the contingencies and all the possibilities that may arise under it; and, so far as I am concerned—much as I am in sympathy with the proposal to have the Government make its own munitions of war and its own nitric acid either by steam power or water power—I can not secure the consent of my judgment to usher the Government into the general business of the country in the way in which this amendment proposes.

Mr. GALLINGER. With his permission, I desire to ask the Senator from Iowa a question. If I understood the Senator correctly, he suggested that the Keokuk Dam would probably be rejected for the reason that the product ought to be made in the vicinity where it would be needed?

Mr. CUMMINS. I suggested that.

Mr. GALLINGER. We all know the productivity of the soil of Iowa, and that it needs less nitric acid, probably, than does any other part of the country; but what becomes of poor New England, where we do need fertilizer?

Mr. CUMMINS. Possibly they may find water power in that vicinity; I do not know.

Mr. GALLINGER. But the proposition is to build but one such plant, apparently.

Mr. CUMMINS. No; this amendment authorizes the building of a hundred; there is absolutely no limit to it except the appropriation.

The reason I said the dam at Keokuk would not be taken is that the amendment applies only to those water sites that are undeveloped, and the Government can not take a dam already built or partially built. It must take a site undeveloped and construct the dam and maintain it.

Mr. GALLINGER. Mr. President, I want to ask the Senator from South Carolina [Mr. SMITH] a question, if he pleases.

Mr. SMITH of South Carolina. Certainly.

Mr. GALLINGER. I notice from the bill that the sum of $15,000,000 is suggested as the amount that the Government should appropriate and tax the people for. I have had a little observation along that line. I remember that for nearly two years—and I do not know but that for more than that—we were told that an interoceanic canal would cost $135,000,000. It has cost $400,000,000, and I do not know whether or not we have a canal now; it is operated part of the time, and part of the time it is not operated. So, with a great many other appropriations which we have made during my service in this body, the amount ultimately required has very greatly exceeded the original estimate. I want to ask the Senator from South Carolina if he has looked into this matter sufficiently to satisfy himself that $15,000,000 will be the sum necessary to establish a plant such as the Senator has in contemplation?

Mr. SMITH of South Carolina. I have.

Mr. GALLINGER. The other day a suggestion was made that the amount should be increased to $30,000,000, and the Senator offhand said he would accept that amendment, as I remember.

Mr. SMITH of South Carolina. I will state to the Senator that I am thoroughly satisfied from the testimony of the experts that the amount set forth in the amendment is sufficient for the purpose contemplated.

Mr. GALLINGER. And the Senator has, as a basis for his opinion, the opinions of men in whom he has great confidence?

Mr. SMITH of South Carolina. Yes; I have information from men in whom I have great confidence.

Mr. GALLINGER. But, of course, the Senator is still indulging in a mental reservation to the effect that very likely it will cost $30,000,000 or $40,000,000?

Mr. SMITH of South Carolina. The Senator from South Carolina will not at this time divulge whatever mental reservations he may have about this matter.

Mr. GALLINGER. I think it would be wise for the Senator not to do that, Mr. President, because I prophesy that the $15,000,000 will disappear in a short time, and that at least another $15,000,000, or perhaps two more $15,000,000 amounts, will be required to carry out this socialistic project.

Mr. POINDEXTER. Mr. President, I move to amend the amendment by inserting after the word "whether," in line 2, on page 2, the words "or not," so as to carry out what I think is the evident purpose of the Senator from South Carolina—to authorize the withdrawal of sites upon the public lands whether or not they are within a reservation. As the amendment is written now it might be construed as confining the withdrawal authority to reservations. I move the amendment I have suggested so as to make it read:

Including the Territory of Alaska, whether or not within national forests or other reservations.

The PRESIDING OFFICER. The Secretary will state the amendment to the amendment.

The SECRETARY. On page 2, line 2, of the amendment of Mr. SMITH of South Carolina, after the word "whether," it is proposed to insert "or not," so that it will read "whether or not within national forests," etc.

Mr. SMITH of South Carolina. I accept that amendment.

The PRESIDING OFFICER. The question is on the amendment of the Senator from Washington to the amendment of the Senator from South Carolina. [Putting the question.] In the opinion of the Chair, the "noes" have it.

Mr. POINDEXTER. I ask for a resubmission of the question, Mr. President.

The PRESIDING OFFICER. At the request of the Senator from Washington, without objection, the question will again be put to the Senate. The Chair will ask the Secretary first to state again the amendment.

The SECRETARY. On page 2, in the printed amendment of the Senator from South Carolina [Mr. SMITH], in line 2, after the word "whether," it is proposed to insert the words "or not," so as to read:

Whether or not within national forests or other reservations or withdrawals.

The PRESIDING OFFICER. Without objection, the amendment will be agreed to. It is agreed to.

Mr. POINDEXTER. Mr. President, I move to amend that portion of the amendment which was adopted on motion of my colleague [Mr. JONES]. The amendment came in on line 6, page 2, and reads:

And when the sites to be developed under this act are determined any other sites withdrawn shall be immediately released and restored.

I move to insert, after the word "withdrawn," the word "hereunder," so as to limit it to withdrawals under this act. I think that is the intention of the Senator from Washington?

Mr. JONES. That is correct.

The PRESIDING OFFICER. Without objection, the amendment to the amendment is agreed to. The question recurs on the amendment of the Senator from South Carolina as amended, and the Chair——

Mr. BRANDEGEE and Mr. MARTINE of New Jersey addressed the Chair.

The PRESIDING OFFICER. If Senators will wait a moment, the Chair desires to make a statement. In stating the amendment the Chair is of the opinion that the form of the amendment at the present time depends upon whether or not the Senator from South Carolina modified the written form of the amendment which is now upon the table and which has been stated.

Mr. SMITH of South Carolina. I do not think I have.

The PRESIDING OFFICER. The Chair will further state that he is of the opinion that to comply with Rule XXI, which permits the mover of a motion to modify it, such modification must be definite and must be of record in the Senate, so that it may be submitted by the Chair to the Senate for action. For the information of the Chair and the Senate, the Chair asks the Senator from South Carolina whether or not he has modified in any way the amendment which is now before the Senate?

Mr. SMITH of South Carolina. I have not.

The PRESIDING OFFICER. The Senator states he has not done so; therefore the amendment of the Senator from Georgia is not a part of the amendment of the Senator from South

Carolina. The question before the Senate is on the printed amendment of the Senator from South Carolina as amended.

Mr. BRANDEGEE. Mr. President, I desire to ask the Senator from Oregon [Mr. CHAMBERLAIN], the chairman of the Committee on Military Affairs, a question. He may have given previously, in the course of the extensive debate which has taken place, an answer to the question I am about to propound, but I ask it, nevertheless, because I was not on the floor if such information was given. Did the Senator make any statement concerning the attitude of the War Department or the Navy Department upon the pending amendment of the Senator from South Carolina, or whether either of those departments have made any suggestions to the Committee on Military Affairs that legislation of this character ought to be ingrafted upon this bill as a matter of national defense?

Mr. CHAMBERLAIN. Mr. President, I will state, in answer to the Senator, that I do not recall having made any statement upon that subject. I believe Mr. Garrison, either in his annual report or possibly in his statement before the committee, did say something about the manufacture of munitions, and I think possibly Gen. Crozier called attention to the necessity of something of that kind, although never in connection with the Army reorganization bill; and I have had no consultation with the War Department or any department of the Government about making it a part of the general reorganization scheme of the Army. It is for that reason, without any question as to the advisability of the legislation, that I myself have opposed this amendment, because I did not feel that it was a part of any scheme for the reorganization of the Army.

Mr. BRANDEGEE. Mr. President, I will assume, of course, that there would have been some statement before the Committee on Military Affairs in relation to munitions, if by munitions are meant guns and explosives, and so forth; and it seems to me somewhat strange that, if there is a scarcity or dearth of power in this country to furnish powder and guns for the Army and Navy, one of the great military departments of this Government has not said something to one of the Committees on Military Affairs of Congress.

Mr. WORKS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Connecticut yield to the Senator from California?

Mr. BRANDEGEE. I do.

Mr. WORKS. Will the Senator permit me to put another question to the chairman of the committee in that connection?

Mr. BRANDEGEE. I yield to the Senator for that purpose.

Mr. WORKS. I should like to know whether the Committee on Military Affairs has considered as a committee the amendment which is now before the Senate or has taken any action upon it?

Mr. CHAMBERLAIN. Mr. President, I stated here the other day that the Committee on Military Affairs did not consider this proposition at all until after the proposed amendment of the Senator from Alabama was submitted to the committee, and then later the amendment of the Senator from South Carolina was submitted. So the committee had both, not for investigation, but they had them both before them practically after the bill had been reported to the Senate. The committee did not enter into an investigation of it and did not take action on it at all.

Mr. BRANDEGEE. Mr. President, I am very doubtful whether there is any necessity whatever for the adoption of this amendment, so far as the national defense is concerned. It seems to me almost inconceivable that a debate of this kind should have gone on here day after day upon this matter, based upon an alleged necessity for munitions for our Army and Navy, without some information from the departments of the Government which are so deeply concerned about these matters. I for one would concede that it is a perfectly proper exercise of governmental activity to manufacture powder or to manufacture the ingredients of powder or other explosives, just as I would concede the right and propriety on the part of the Government of maintaining arsenals and gun factories; but if I were satisfied that a plant of the kind proposed were needed for a purely governmental function, to maintain the Army and Navy, even then I would think as an ordinary layman, without any particular technical knowledge upon these subjects, that the matter ought to be estimated for and the bill drawn under some expert advice, and perhaps upon the suggestions of Army and Navy boards of officers and under some recommendations from the department.

I do not feel that the fertilizer end of this amendment ought to be passed by Congress at all, and I am free to say that I think that a large portion of the support that will be given to this amendment will not be primarily given to it to furnish the Army with nitric acid for powder, but will be because of the commercial features attached to the selling of fertilizer by the proposed Government plant. I can not support an amendment at present having that in view. I think it is just one of the frequent occasions where we are asked, upon the urgent solicitation of Senators who become peculiarly interested in certain measures for the benefit of their constituents, to rush in rashly and spend $20,000,000 here and $15,000,000 there and $30,000,000 in the other place which no business man of any common sense whatever would think of doing without the most thorough investigation and after estimates had been furnished.

I should like to ask the chairman of the Committee on Agriculture, if he is present, or some member of that committee, if the bill goes into operation and the business is to be conducted by the Secretary of War, what is the object in having the Secretary of Agriculture called in to sell the surplus product? If the Secretary of War is competent to conduct the business, why is he not competent to sell the surplus which the Government does not need?

Mr. CHAMBERLAIN. Does the Senator address that question to me?

Mr. BRANDEGEE. No; to the chairman or some member of the Agricultural Committee.

Mr. SMITH of South Carolina. As a member of that committee, I will reply by saying that it seemed to me and to the committee to be carrying out the purposes of disposing of the surplus.

Mr. BRANDEGEE. I do not get much illumination from the reply, because I read that in the amendment itself; but why is the Secretary of Agriculture deemed a better agency to dispose of what the Government does not want of this war material than the Secretary of War?

Mr. SMITH of South Carolina. For the reason that the Secretary of Agriculture is supposed to know something about the use of this thing in agriculture.

Mr. BRANDEGEE. I do not think myself that he could sell to the fertilizer companies any better than the Secretary of War could.

Mr. MARTINE of New Jersey. Mr. President, I am very much in favor of the amendment of the Senator from South Carolina [Mr. SMITH]. I have been startled with the arguments that have been presented by the other side, and particularly the arguments about the constitutionality of this question. Of course, I know nothing of the legal side of it; but I want to say, as a layman, that I am often prompted to feel sad for my many legal friends when I see them rise in the Senate and expound their constitutional objections to almost every measure that is calculated to help the people. Of course, Mr. President, they can not help it. This tendency is a part of their education, and it has grown to be a habit with them. I am prompted to say how much they lose of this good world.

I say I am sorry for them, for I wonder, Mr. President, whether the sunrise and the glorious sunset, with its wondrous colors and its flashes of light, is not robbed of half its delights and beauty to them as the softened rays of that great orb come to their eyes, strained through their legal lens, constitutionally focused. I have wondered whether the sparkle of the morning dew, the bloom and blush of the rose, the cheerful chirp of the redbreast robin, and the full voice of the thrush have any attractions for them until they have first squared them with the Constitution. Mr. President, I feel constrained to exclaim: "Forgive them, for they know not what they do. Poor old Constitution. What wrongs have been committed in thy name!"

Mr. President, I love my country and obey her laws; but when it comes to the Constitution standing between the people and their right to use God's free air for the manufacture of a substance that will tend to enrich the soil and thereby increase its productivity, and hence the welfare of the human race, then I say, for myself, the Constitution must yield and stand aside, that cheaper bread and butter may come to humanity and to my country.

I shall vote for this amendment with the greatest relish, and particularly with the greatest relish inasmuch as the Government of the people will hold the handspring and will control the manufacture of this vitally important product.

Mr. NORRIS. Mr. President, much has been said as to the motives Senators have in voting for this amendment, and it has been said several times on the floor of the Senate that the most of the votes this amendment will get will be given because it provides for the manufacture of fertilizer. I do not want to let that statement pass unnoticed, although it may be that the fact that fertilizer will be manufactured by the Government if this amendment is agreed to has a great deal of influence with most of the Senators who vote upon the proposition; but the

prime moving reason for the amendment is that it provides for the manufacture of explosives—something that it is admitted that the Government can legally and properly manufacture.

As far as my vote is concerned, I am favorable to the amendment, and I come from a section of the United States where fertilizers are not used and are not necessary.

Mr. OLIVER. Mr. President, will the Senator yield to me?

Mr. NORRIS. In just a moment. I shall vote for it, because I believe it is a proper thing for the Government itself to manufacture ammunition. I would vote for the Government manufacture of almost everything used in time of war or used for war purposes. I would vote for almost any proposition that would take the private profit out of war matériel.

Now I yield to the Senator from Pennsylvania, for a question.

Mr. OLIVER. The Senator has said that he believes that the prime object of this amendment is to provide explosives for the use of the Government in time of war. How, then, can he explain the fact that the measure originated in and emanated from the Committee on Agriculture and Forestry, which has nothing to do with war or with the consideration of warlike questions?

Mr. NORRIS. The answer to it is that the Committee on Agriculture and Forestry did have something to do with the manufacture of a war matériel. It seems to me it would be just as reasonable for a rich man to say that he could not follow Christ because Christ was born in a stable. The immateriality of how it got here, though, it seems to me, ought to be apparent. It is a governmental function, as I look at it, for the Government to manufacture munitions of war.

It is said: "When you manufacture this matériel to be used for explosives, why do you also provide for the manufacture of fertilizers?"

The answer is that in the manufacture of the explosives the Government needs we are necessarily making a product that is used and is the principal ingredient in making fertilizer. If we manufacture sufficient of this product for the Government's needs in time of war, we must either let the plant lie idle in time of peace, when we do not need to run it to its full capacity, or we must sell the ingredient of the fertilizer made in the operation of the plant when it is run to its full capacity.

Is it not good judgment, is it not good business, and is it not the patriotic duty of the Government, when it is manufacturing nitrates, if it can not and does not utilize all of the nitrate manufactured for its own use, to dispose of it for the good of the people to those people who can use it? It just happens that in the manufacture of explosives we are making something that is good for an explosive and is also good as a fertilizer; and if we provide a plant sufficient for the Government's use, there will be a large portion of the time—I hope all the time—when the plant will necessarily make more of the nitrates than the Government can use. Now, it just happens that this can be used for a fertilizer. Because none of it will go into my section of the country, it does not seem to me that is sufficient reason why I should oppose it.

That is an answer, it seems to me, to those who say: "Why do you not make shoes or why do you not make cotton cloth?" It is because the product that the Government makes in its own business can be used in the manufacture of a fertilizer, and is one of the principal ingredients of it.

It is proper for us to consider, in connection with the investment of the money, the fact that the Government can sell the fertilizer at a high enough price so that it will not lose money on the operation, and still do a great deal of good to agriculture. No matter what portion of the country happens to get the direct benefit of it, indirectly the whole country gets the benefit of it, and we are doing something strictly within the business of the Government.

If it happened that in the manufacture of the nitrates necessary for governmental use some other substance was a by-product, it would be some other industry that would get whatever benefit might come from it. I do not believe we ought to turn down the proposition because in the manufacture of what the Government legitimately wants and needs we happen to make another product or a surplus of a product that we can not use that is useful in some other occupation or business.

Mr. President, I am not one of those who believe this is something which is absolutely essential. I am not one of those who believe that the Government would fail, even if it got into a world war to-morrow, because we do not have this plant running now. It seems to me it is a good part of the preparedness program, however, that we ought to undertake; and I am one of those who are ordinarily considered as being opposed, and I am opposed, to the President's plan of preparedness and all the other military schemes that would get us into a race with the balance of the world to see who can have the biggest army and the greatest navy on the face of the globe. Yet it seems to me that this is wisdom, because I can see no loss anywhere. Even in time of peace it will be a benefit to our people, and it certainly will prepare us for an emergency in time of war.

I was about to say a few moments ago that we could do as Germany has done—we could use steam if we got into war and it became necessary to make our nitrate. We could get along without Chilean nitrate in case of war, but it would be an expensive proposition; and as long as in time of peace we can make it and yet save some money for the Government and save some money for those who have to buy fertilizers, it strikes me that it is a good proposition for the Government to go into it. That is the reason why I favor this amendment, although I am not favorable to the bill as a whole; and I may take occasion afterwards, if the substitute is adopted, to offer this same amendment to the House bill. It does not overstep any governmental function.

I presume it would be an answer to those who have objected to our making fertilizer to say: "We will invest this money, get the machinery and everything ready, and then we will let it lie idle until we get into war, or we will use it only to the extent of the manufacture of the nitrates we need in time of peace;" but it does not look to me as though that is necessary from a legal or a constitutional standpoint. It certainly is not wise from a business standpoint. If we go into the business for the purpose of preparing us in case of war, and then in time of peace can also do good—coming in contact, as I have been told it does by governmental publications and other statements of a reliable nature, with one of the trusts of the country that controls the fertilizer proposition and demands and exacts exorbitant prices—it will have a tendency to meet that proposition.

There is an abundance of testimony before the committees to the effect that if we could manufacture fertilizer in this country out of the atmosphere at as low a price as Norway makes it, we would increase the productivity of the United States in an enormous amount. I read to-day some of the figures given by one of the governmental chemists showing how much that increase would be. The figures are startling, because as a fertilizer proposition there is a limit. When the price gets so high that the farmer can not afford to buy, he has to go without it. If it is low, and he buys it, it produces a larger crop.

The VICE PRESIDENT. The Senator's time has expired.

Mr. OWEN. Mr. President, continuing the comments of the Senator from Nebraska, my attention was called to a boy who by the use of nitrates raised 236 bushels of corn on a single acre. The possibility of increasing the food output of the United States by the use of nitrates that may be produced by water power is perfectly gigantic. Moreover, the system which has been adopted in Norway of taking the nitrogen out of the atmosphere is being steadily improved. There are improved processes which will convert the electric energy into a still higher percentage of the oxides of nitrogen.

There is no preparation which is more important for a nation than to have an abundant supply of powder in case of war and an abundant supply of powder for the training of troops in the use of firearms, so that in case of need the troops would be skilled in the use of firearms. For that reason the Government ought to be furnished with a very abundant supply of cheap powder, which ought to be furnished at cost, or perhaps free, to the National Guard, the Volunteer Army, and the Army of the United States for the purpose of practice. But above and beyond that I favor this amendment because it is proposed to use these nitrates, when this first emergency of an adequate supply of powder for the United States is supplied, for the use of the agriculture of the Nation.

It has been said in opposition to this: "If we furnish cheap nitrates to the farmers of the country, why should we not be compelled, by parity of reasoning, to furnish also cheap food for men who are starving in the United States?"

Mr. President, in my opinion the greatest problem in the United States and in the world is for the Governments of the world to find constant employment for those who are willing to labor and who are unable, under the stress of modern life, to find a means by which to live. For that reason I favor broadly, as a governmental policy, the finding of means of employment for the unemployed, so that this Government shall not have within its borders any man willing to work who can not feed himself and feed those who are dependent upon him.

The way is wide open without competing with private enterprises in the building of roads, the protection of the Mississippi, Missouri, and Ohio Valleys from overflow, the building of irrigation plants, and the development of public enterprises of all sorts. There is an open and unlimited field; and if those fields had been occupied I should be in favor of creating a housing commission which would make Portland cement on a

gigantic scale and furnish that cement at cost to householders and men who have families, in order that they might build cheaply an indestructible abode and covering for themselves and their families.

This Government ought to proceed along these lines with a view of promoting the welfare, the efficiency, and the happiness of our people; and this is the kind of preparedness that will make this country what it ought to be—the most powerful in all the world and the guide of all other nations.

Mr. SUTHERLAND. Mr. President, a parliamentary inquiry.

The VICE PRESIDENT. The Senator from Utah will state it.

Mr. SUTHERLAND. I desire to inquire whether or not an amendment has been inserted by the Senator from South Carolina [Mr. SMITH] in line 25, on page 2, adding the words, which I think he suggested at one time, "or processes," so that that now forms a part of the Senator's amendment?

The VICE PRESIDENT. "And processes, patented or otherwise."

Mr. SUTHERLAND. So that it reads now "purchase or acquire, by condemnation, materials, minerals, and processes, patented or otherwise"?

The SECRETARY. "Minerals and processes, patented or otherwise, necessary for the construction or operation of such plants and for the manufacture of such products."

Mr. SUTHERLAND. Then, I ask whether or not the bill has been further modified so as to provide an appropriation of $30,000,000 instead of $15,000,000?

The VICE PRESIDENT. It has not.

Mr. SUTHERLAND. Mr. President, I said the other day, in a general way, all that I cared to say about this amendment; but I call attention to the fact that we are going in rather a headlong way in the direction of authorizing some pretty large appropriations not directly connected with the organization of the Army or the building of the Navy.

The other day we passed a bill which appropriates $11,000,000 for building an armor-plate plant—an amount which I feel quite sure will be doubled, and probably trebled, before the plant is finally completed. It has been said here by those who I think are competent to judge that $15,000,000 will not be sufficient to build this contemplated plant, and that it will require at least double that sum, which is $30,000,000. I have understood that an amendment would be offered to that effect. Perhaps it will be offered before this matter is finally disposed of.

There is another amendment pending which proposes to appropriate $20,000,000 to build at least four munition factories at four different points in the country.

I happened to find on my desk a few moments ago another bill which proposes to appropriate $25,000 for the purpose of enabling the Secretary of Agriculture to employ expert advice and assistance to ascertain, by anatomical research, and so on, among other things, "to what extent the short back of the Arab horse is found in his immediate descendants." [Laughter.] This somewhat unique bill was introduced by request, but we are not enlightened as to just who the military genius is who has made the request, and that was proposed in the name of preparedness, because the bill is entitled "A bill to increase the efficiency of the United States Cavalry and Artillery." So, in order to increase the efficiency of the United States Cavalry and Artillery, we are to ascertain by expert investigation precisely to what extent the short back of the Arab horse is found in his immediate descendants! I do not know how much further we are going to go.

Mr. President, I think this amendment, which proposes to put the United States into the business of manufacturing nitrates, is a fraud and a sham, because nobody who has investigated the subject at all can for one moment pretend that it is necessary for us to build a plant at a cost of $15,000,000 or $30,000,000 in order to manufacture nitrates to be used in the manufacture of powder. It is conceded, and has been conceded over and over again during this debate, that except when some great emergency arises, when we shall be at war with some of the great military powers of the world, the expenditure of this money is absolutely unnecessary in so far as it may be regarded as a measure of public defense. In time of peace we do not need it. There is an abundant supply. Perhaps it may be true that the nitrates we are compelled to buy in time of peace, and can buy in time of peace without any difficulty, might cost us a little more; but certainly the difference in price is not sufficient to justify us in investing the enormous sum of $15,000,000 or $30,000,000 solely for the purpose of equalizing that difference.

The truth about it is that the object of this amendment—the primary object, the principal object—is to put the Government of the United States into a commercial enterprise, into a private business, a function which is not a governmental function at all, but purely a private function.

Whether we shall have a foreign war with some great military power at all is entirely problematical. Certainly it is not imminent. It may never come, and the probabilities strongly are that it will never come, although I recognize that it is something that may come and that we ought to provide against, precisely upon the same theory that the prudent man takes out a policy of fire insurance upon his home—not because he expects that his house is likely to be burned, for he recognizes that it is not likely to be burned, but because he wants to provide against that contingency. So I believe that it is wise to provide against the contingency of war. But this business is to go on perpetually—there is no limit—50 years or 100 years. The principal business of that 50 or 100 years, of course, will be the business of peace. If we are to be engaged in war, it can only be for an extremely small portion of that time. Nine-tenths of the time, nineteen-twentieths of the time, perhaps, or even more than that, there will be no occasion to utilize this plant for war purposes at all; so that for nineteen-twentieths of the time we have provided for purely a commercial operation. What right have we to tax all the people of the United States for the benefit of one class of the people? The money comes from the pockets of the merchants, tailors, lawyers, doctors, and everybody else. Why should we impose taxes on that class of people for the benefit of one class, the farming class? Why should we impose a tax upon the farmers of the Middle West and the farmers of the Rocky Mountain section, who up to this time do not need these fertilizers, whose soil is still virgin, for the benefit of the outworn soil of the South or the outworn soil of some parts of the New England section?

Mr. BRANDEGEE. Will the Senator let me ask him a question?

Mr. SUTHERLAND. Certainly.

Mr. BRANDEGEE. Has the Senator happened to hear that Germany is alleged to have sold out its interest in the great water-power nitrogen-producing plant in Norway and is now manufacturing by far the greater portion of its nitric acid by the coke-oven process, and doing it at a much cheaper rate?

Mr. SUTHERLAND. I have not heard that, but——

Mr. BRANDEGEE. I have heard that, and I think the documents will be in Washington shortly to prove it.

Mr. SUTHERLAND. I said the other day, in the course of some remarks, that if an emergency arises, if we get into a war with some foreign country which makes it necessary for us to manufacture a very large supply of powder immediately, we can do exactly what England is doing and what Germany is doing—manufacture it by the employment of steam power.

The VICE PRESIDENT. The Senator's time has expired.

Mr. STERLING. Mr. President, I do not know but there are some of us who, having come to the conclusion that we should support this amendment, through some doubt and hesitation might feel a little sensitive when charged that in voting for the amendment we are voting for a "sham and a fraud," as the amendment is characterized by the Senator from Utah.

But, Mr. President, I see no objection on principle to the amendment when we consider what I think is the primary purpose of the amendment. I voted in favor of the amendment of the Senator from Georgia [Mr. HARDWICK] to strike out that part of the pending amendment relating to the production of nitrates for fertilizer purposes. I did not think that provision should be included in the amendment, but the Senate voted to retain it; and while I regret that decision, yet, looking at what I believe to be the primary purpose of the amendment, namely, the manufacture by the Government of nitrates for use in the manufacture of explosives, I see no objection on principle to this, the main purpose to be effected by the amendment. If there is a surplus which may be used as a fertilizer and in farming communities anywhere in the United States, let it be so used and let the people have any benefit or advantage that may be derived therefrom.

Mr. McCUMBER. May I ask the Senator just a short question?

Mr. STERLING. Certainly.

Mr. McCUMBER. Is there in this proposed amendment anything more that will require that the surplus shall be sold for fertilizer purposes than the fact that it is to be sold by the Secretary of Agriculture? Can he not under the provisions of the amendment sell to anyone who may be a customer?

Mr. STERLING. I am not saying but that the Secretary of Agriculture may so dispose of the product.

Mr. McCUMBER. It simply says it shall be disposed of by the Secretary of Agriculture under such regulations as he may prescribe. That does not necessarily mean——

Mr. STERLING. Does the Senator infer from that statement that it will be sold for any other purpose than as a fertilizer?

Mr. McCUMBER. Certainly; he can sell it for anything he sees fit, as far as the amendment is concerned.

Mr. STERLING. I think other language in the section, the language contained on the second page of the amendment, discloses the purpose for which the surplus product may be used, and that it can not be used for other purposes than in the manufacture of fertilizers.

So, Mr. President, it is with this in view and not because it is for the purpose of providing for the Government manufacture of fertilizers that I support the amendment. I am willing to support the amendment notwithstanding that, as an incident, there may be some surplus production which may be disposed of by the Government for fertilizing purposes.

Mr. BRANDEGEE. Is it in order to offer an amendment?

The VICE PRESIDENT. There is no amendment to the amendment pending.

Mr. BRANDEGEE. On page 3 of the amendment of the Senator from South Carolina, line 6, I move to strike out the word "Agriculture" and insert in lieu thereof the word "War."

The VICE PRESIDENT. The amendment to the amendment will be stated.

The SECRETARY. On page 3, line 6, strike out the word "Agriculture" and insert "War," so as to read "the Secretary of War."

Mr. BRANDEGEE. The effect of that amendment would be to allow the surplus product to be disposed of by the Secretary of War instead of by the Secretary of Agriculture.

Mr. SHERMAN. Mr. President, the bill that is under consideration before the Senate is one to increase the efficiency of the Military Establishment of the United States. We have consumed some days. This is chargeable, so far as it is the fault of the Senate, not to the chairman of the Committee on Military Affairs, whose difficulties have been very great—almost insurmountable, seemingly, at times—but to ourselves. I think we ought to contribute to facilitate the passage of the bill and promote the end in view rather than cause the consumption of further time.

If it be, however, a matter of definition or of description of this amendment, whether it be a delusion or a sham or something else, I am not prepared to split terms. If it would be a compromise, I would define it as a parasite. I read in the dictionary a moment ago that a parasite is an animal that lives wholly or in part during its existence upon the body of some other animal, drawing its sustenance from the primary animal. The primary matter here is the bill. All these amendments are parasitical in character.

There is no merit in the amendment as applied to military preparation. These different schemes that are promoted here have no independent standing in ordinary times, but they seek to harness themselves up in a way that will lend them a fictitious strength.

I protest—I am not going to take all the 10 minutes to do it, Mr. President—I protest against the further delay in a matter that may within a few hours become vital to the safety of our men who are now far beyond the borders of the United States. I shall take a very few minutes, and I promise to take fewer than that in the future discussion of this bill, because, so far as I have to act upon it, I have made up my mind what to do. Further discussion will only confirm me, possibly, in the opinion that I have already formed.

But so far as these resources may be necessary to be promoted in peace, in time of war there is not a resource of the private citizen, individual or corporate, that may not be commandeered by the Government when it is in peril. The greater the private resources,, the more money and means of every kind useful in war that may be developed by private enterprise, the greater will be the strength of the Government in its day of trial.

There is nothing standing alone on this amendment offered by the Senator from South Carolina that is a necessary part of increasing the Military Establishment of the United States that could not as well be said of a dozen other enterprises. If you will take the commissary away from the Army I will engage to overcome the country in 30 days. It may have tons of explosives, it may have millions of armor plate, it may have an unlimited supply of nitrates, but if you take away provisions from the Army, inside of 30 days it will be reduced to a state of utter helplessness.

I would therefore as lief vote to start a packing house, because it is sometimes said that that is a very large undertaking, requiring a vast capital. I would as lief vote to start an overall factory, a boot-and-shoe factory, a cracker factory, a hardtack plant, a spaghetti factory, because we will have patriotic Italians in the next war, and why not consider the nationality and furnish them some of the products to which they are accustomed in time of peace? Why not start a brewery, because many thousands of patriotic Germans will go into the service, as they did in the Civil War, and malt liquor is said to furnish a great deal of nutriment when it is taken in moderation.

There is not a thing used in time of war, Mr. President, that is not a product of peace. There is not a thing that could be urged for this proposal to start a nitrate plant and develop water power that could not be urged for anything else used by an army or navy.

I am opposed to the whole of it because it is something that is merely a pretext. If it comes up on its merits, and we want to fertilize any part of the country that needs it, present it on its merits and let us vote upon it alone. Then I am willing to discuss whether we ought to take money out of the Public Treasury to enrich other parts of the country where they need fertilizers. Then it can be disposed of in due season and not upon the hurried discussion which takes place incident to preparation. I think it is high time we stopped losing further days here in the discussion of such projects as this.

This bill is like an army that I once read about in the days when we used to toil over Latin roots. The army of the Roman people got in the countries of north Europe among the barbarians and the swamps. The army was so luxurious in its habits—it had so much baggage that, according to Tacitus, it was loaded down, and finally, conquered by its impedimenta, it perished miserably in the swamps because of its immense burden.

This bill is hooked up with a multitude of schemes that have nothing to do with the measure reported from the committee, which I regard, by the way, as a very excellent measure upon the whole, when we consider what the committee had to deal with, and the difficulties which the chairman has encountered in the variety of opinions presented to him. If we load up this bill with so much impedimenta before we get through it will have perished miserably in the bogs of legislation.

This is a question of increasing our military strength, not a question of promoting a number of private schemes. I shall vote against this and all kindred propositions. Bring them up on their merits as independent measures and facilitate the passage of the bill that is under consideration. I think we will be remiss in our duty if we waste any more days on such a discussion.

Mr. CHAMBERLAIN. Mr. President, a few days ago the senior Senator from Maryland [Mr. LEE] introduced some matter from the New York Times on the subject of a lobby, and today the Senator from Missouri [Mr. REED] introduced other matter on the same subject, tending to show that there is a regular Army lobby. I am very glad to have any information that tends to show that the Army itself is guilty of lobbying. I hope the people will learn from the statements that have been published the attitude and motives that animate men in these matters.

I ask leave to insert in the RECORD on the same subject an article in the New York Times of April 10, 1916, and one in the same paper under date of April 13, 1916, on the same subject. I do it, Mr. President, for the purpose of allowing Congress to determine for itself the motives that are behind the efforts made here to perfect legislation.

The matter referred to is as follows:

[From the New York Times, Monday, Apr. 10, 1916.]

STIMSON SUPPORTS GUARD LOBBY CHARGE—DECLARES CIRCULAR SHOWS CLIQUE IS PUSHING LEGISLATION TO MAKE SURE OF PAY—SEES MENACE IN POLICY—UPHOLD DEFENSE SOCIETY IN ATTACK ON COL. ANDREWS'S APPEAL TO THE STATE MILITIA.

The American Defense Society, with headquarters at 303 Fifth Avenue, yesterday made the direct charge that the National Guard has a lobby in the Capitol at Washington, well equipped with funds, which is conducting a fight on the pending Army bills.

In support of its contention, the Defense Society made public a letter of ex-Secretary of War Henry L. Stimson. The Defense Society had asked Mr. Stimson to give his views of a letter circulated under the name of the National Guard Association, at the end of which appears the signature of Col. James M. Andrews, of the Second Infantry, National Guard.

Ex-Secretary Stimson's letter commenting on the circular letter, as made public by the Defense Society, follows:

"C. S. THOMPSON, Esq.,

"American Defense Society, 303 Fifth Avenue, New York City.

"DEAR SIR: I have your letter inquiring about the circular letter now being issued under the name of the National Guard Association. That letter, a copy of which you have sent me, is genuine. One of my friends who is a captain in the National Guard showed me a similar letter which he had received through the mail this morning. It bears on its face evidence to the effect:

"1. That there is now a lobby of National Guard officers at work in Washington on this legislation.

"2. That their energies are principally devoted to obtaining pay.

"3. That their chief interest is in the pay of the higher officers of the guard.

"This evidence tends to confirm what my own experience and observation have indicated for some time, namely, that this proposed legislation does not represent the viewpoint of the great body of our National Guardsmen—its rank and file—but has been skillfully and persistently pushed in the interest of an organized clique of the higher officers who are primarily interested in the question of pay.

"And the fact that, without any widespread support from the country, they have, through their skillful organization, been able to bring such effective pressure upon Congress offers striking evidence of what may be expected if this proposed system of putting our National Guard officers upon the national pay roll becomes law. There will be created a vested interest in the 'pork barrel' more compactly and powerfully organized than anything which we have now.

"Very truly, yours, HENRY L. STIMSON."

THE NATIONAL GUARD CIRCULAR.

The circular letter which evoked the criticism of ex-Secretary Stimson, as made public by the Defense Society, follows:

"To the members of the National Guard Association, State of New York:

"GENTLEMEN: The Chamberlain bill in the Senate is now being actively taken up, and some definite action can be expected within the next week or 10 days. There have been many amendments offered to this bill, one of which strikes out pay for all officers above the grade of captain. It is easy to see the origin and reason for this amendment. It is intended unquestionably to create confusion in the National Guard and is put forward by those who are not only opposed but actually hostile to the Organized Militia.

"If no officer above the rank of captain is to receive pay, it is evident that captains would not desire promotion, and, therefore, it would be difficult to get higher officers, and a serious block in promotion would result. A captain certainly does a vast amount of work, but in the National Guard as it exists to-day in the larger States higher ranking officers do at least as much work as captains and in some cases necessarily more. Certainly the higher rank one has the greater are the obligations and responsibilities.

"As you probably know, the Hay bill cut out the increase of pay for officers above the grade of captain, but allowed $500 per year for officers of all grades above that of first lieutenant. While this is open to criticism, it was felt by the National Guard officers in Washington that it would be better not to raise any issue on that point, but to concentrate against the adoption of the Chamberlain bill, which cuts out pay for all officers above the grade of captain.

"It is evident that there is a group of people backing the Chamberlain bill who intend that ultimately National Guard officers shall not hold rank above that of captain, and this would be a very effective step toward that end. The public would in time, undoubtedly, conclude that the services of officers in the National Guard above the grade of captain were not worth paying for.

"It is evident that we must get together at once and exert all the influence in our power to prevent the passage of this bill or anything similar, which would be harmful, almost fatal, to those who have worked so long and faithfully and without recognition in the National Guard.

"Will you therefore at once communicate with your Representatives, stating your wishes on this subject, and get as many others to do so as you possibly can? The only way our Representatives in Congress can know the feelings of their constituents is through the papers, which are at times biased, and by personal interviews and letters. A concerted effort on our part now will, I feel sure, have much weight, and I trust that you will do your share.

"JAS. M. ANDREWS."

O'RYAN DEFENDS THE GUARD.

Maj. Gen. John F. O'Ryan, commander of the National Guard, replying last night to the charge made by the National Defense Society, said:

"If there is any menace to American liberties and institutions in the existence of a powerfully organized military party determined to expand and intrench itself, that menace will not be found in the National Guard. Evidence exists that there are influences at work to eliminate the National Guard from its proper rôle in the national defense.

"Much misstatement concerning the National Guard is being disseminated. It is criticized because under the law as it exists at present it has no Federal status, except when called into the Federal Service by the President. The pending legislation corrects this defect; but to make certain the Federal status Senator WADSWORTH has offered an amendment to the Chamberlain bill providing for the Army oath to be taken by every officer and man in the National Guard of the United States. Yet it is said that the same influences which oppose the guard, ostensibly because it is not primarily a Federal force, will doubtless oppose this very amendment, which would leave no question regarding that status.

"The General Staff amendment, which passed the Senate last week, providing for National Guard representation, is essential. It is as necessary that the new Federal force, to be known as the National Guard, be represented in the General Staff by a 'National Guard section' as it is that the Regular Army be represented by what is known as the 'mobile Army section of the General Staff.' It is to be remembered that the General Staff is not the General Staff of the Regular Army, but the General Staff of the Army of the United States, which will be composed of the Regular Army, the National Guard, the militia, when in the Federal service, and such volunteers as may be authorized in time of war.

"When the National Guard has representatives in the General Staff there will be no longer need for a National Guard Association."

Col. James M. Andrews is a graduate of West Point and lives in Schenectady.

—

[From the New York Times, Thursday, Apr. 13, 1916.]

GUARD CIRCULAR URGES LOBBYING—DOCUMENT ISSUED TO MEMBERS AT SAME TIME DENIAL IS SENT TO SENATOR LEE—WANTS MORE OFFICERS PAID—FORECASTS NEW PROPOSAL BY SENATOR REED—HOPES YET TO KILL VOLUNTEER RESERVE.

The executive committee of the National Guard Association of the United States, through its chairman, Brig. Gen. J. Clifford Foster, adjutant general of Florida, in a bulletin just issued to its members, announces that Senator REED, of Missouri, will offer a substitute section for section 76 of the Hay bill, which will provide for the payment of National Guard officers of the higher as well as the lower commissioned grades. The bulletin suggests the members of the association communicate with their Senators and urge support for the Reed amendment.

Under this amendment all officers of the rank of captain and higher grades will receive an annual remuneration of $500. Under the Hay bill officers above the rank of captain serve without pay.

With the bulletin there was issued also by Gen. Foster a copy of a letter written to Senator BLAIR LEE, of Maryland, in which Gen. Foster denied that the National Guard Association was maintaining a lobby in Washington to influence pending military legislation. In that letter Gen. Foster coupled the Military Training Camps' Association with partisans of the proposed Volunteer Army, which is a feature of the Chamberlain or Senate bill.

The bulletin, which is dated April 10, says:

"Bulletin to the National Guard Association: The following information is furnished regarding the progress of the military bill in the Senate:

"Two of the amendments suggested by the executive committee of the National Guard Association have been considered. The first was an amendment to section 6 providing for a National Guard section in the General Staff to consist of five National Guard officers, etc. This amendment was passed. The second proposed to strike out section 56, known as the Volunteer Army section of the bill, but embracing the continental scheme as originally proposed by former Secretary of War Garrison. This amendment was defeated. The friends of the National Guard who undertook to strike out this section from the bill still feel that this may be accomplished. The bill is now being considered by the Senate acting as a Committee of the Whole. Later the bill will come before the Senate for formal consideration and to confirm the action taken by the committee. It is then proposed to again move to strike out section 56. The first vote was so close and there were so many Senators absent who would have supported the proposal to strike the section out that it is felt that reverse action may be still obtained.

"As you are probably aware, the present Senate bill provides pay for only captains, first lieutenants, and second lieutenants of companies. The Senate committee advanced the suggestion that as these were the only officers who actually drilled when not in the field and on full pay, and that as the pay for enlisted men was made upon the basis of drills, pay need not be provided for other officers. Unfortunately, this view (which seems plausible to the uninformed) has been accepted by many in the Senate who are friendly to the National Guard. The fact is that this provision accords with many other provisions of the Senate bill and the ideas of those who have guided the preparation of the Senate bill, which is that the National Guard should not be encouraged or even permitted to furnish officers for higher grades than those of the company.

PROVIDES PAY FOR OFFICERS.

"We first proposed to our friends that effort be made to substitute section 76 of the Hay bill for sections 108, 109, 110, and 111 of the pending bill. This would be very much preferable to the adoption of the provisions of the present bill. Senator REED, of Missouri, will, however, introduce a substitute section for section 108 of the Senate bill, which will read as follows:

"'SEC. 108. Pay for National Guard officers: Commissioned officers on the active list belonging to organizations of the National Guard participating in the apportionment of the annual appropriation for the support of the National Guard, shall receive compensation for their services (except during periods of service for which they may become lawfully entitled to the same pay as officers of corresponding grades of the Regular Army) as follows, not to include longevity pay: Captains and officers above the rank of captain, $500 a year; first lieutenants, $300 a year; second lieutenants, $250 a year. Regulations to be prescribed by the Secretary of War shall determine the amount and character of service that must be rendered by officers to entitle them to said pay: *Provided*, That only officers (line) or officers of the staff corps and departments on duty with organizations of the line shall receive pay.'

"This provision would be very much more favorable to the National Guard than would section 76 of the Hay bill, for, while the pay to officers above the grade of captain would be the same, the higher and other officers are included who would not draw pay under the Hay bill, but who should do so. It will be noted also that the provision authorizing the Secretary to make rules as to the duty to be performed by officers to entitle them to pay does not permit such rules to reduce the pay below the rate named, while under section 76 of the Hay bill the following phrase which occurs, viz., 'Regulations to be prescribed by the Secretary of State shall determine the amount and character of service that must be rendered by officers to entitle them to the whole or specific parts of the maximum pay hereinbefore authorized,' is undoubtedly intended to provide a means by which the regulations to be prescribed may be so fixed as to make it impossible for field or other senior officers to obtain the full pay authorized for their grades.

"It is recommended, therefore, that your Senators be urged to support the amendment to section 108 of the Senate bill, which will be offered by Senator REED, of Missouri, as being more fair and equitable to the National Guard and still providing no higher rate of pay than contemplated under the Hay bill.

"By rule adopted Saturday afternoon the consideration of the Military bill went over until Wednesday next at noon. The general debate will then continue until Friday, when a 10-minute rule will apply to all speeches and one speech to each amendment. It was agreed that the final vote on the bill and all amendments will be taken Tuesday, April 18.

"It is trusted that all receiving this bulletin, and particularly the adjutant generals of the States, are regularly receiving the CONGRESSIONAL RECORD, and thus keeping advised as to the debate on the bill. It is recommended that this be done. The attitude of Senator CHAMBERLAIN toward the National Guard, as brought out in the debate, has been somewhat surprising, but is explained perhaps by the influences with which he has been surrounded during the preparation of his bill. The National Guard representatives here have been attacked in a most unreasonable manner on the floor of the Senate by Senator CHAMBERLAIN and others, which has not been a pleasant experience, but has not had the effect of scaring us away, as was doubtless intended.

"The biased metropolitan press has endeavored to make much of this talk of a National Guard lobby, and continued references to the charges made by Senator CHAMBERLAIN occur. To meet this your committee has addressed a letter to Senator BLAIR LEE of Maryland, which appears in the CONGRESSIONAL RECORD of Saturday, April 8, and copy of which is inclosed. The publication of the substance of this letter in State papers is recommended, so as to overcome the ill effect of the lobby charge, as it remains unanswered.

"It is very important that there be a few National Guard officers here after Wednesday who can go direct to their Senators with proposals or recommendations which we may find it necessary to make.

"For the executive committee.

"J. CLIFFORD R. FOSTER, *Chairman.*

"For your information.

"GEORGE ALBERT WINGATE,
"Member Executive Committee."

VIGOROUS DENIAL OF A LOBBY.

After he had urged the guard leaders to be in Washington and approach personally their Senators, Gen. Foster sent the letter to Senator LEE denying lobbying. The letter said:

"The charge that the National Guard is represented in Washington by a lobby, and that it is seeking by improper means to influence the action of Congress with regard to pending military legislation, would not perhaps call for comment if the statement had emanated from a less important source. As that charge has been made, it seems proper that this committee make a statement with regard to that matter. Inquiry suggests itself as to what constitutes a 'bold' or 'insidious' lobby?

"We may, without disadvantage, I think, compare the activities of the National Guard committee with those of other organizations interested in the same legislation. What the 'bold lobby' of the National Guard has done has already been stated. Here are some of the things it has not done:

"Those composing it have not sought to interview or called upon any Senator or Representative except when specially invited to do so.

"No printed matter has been gotten out or circulated.

"No headquarters is maintained, no publicity agent is employed, and no propaganda put forth."

Mr. JONES. Mr. President, I am not going to discuss the amendment at any length, but I want to ask the Senator who proposes it, in my time, a question or two that may have been answered at some time during the discussion, although not when I was here.

As I understand it, there are only two processes by which this nitric acid can be produced at the present time; those two processes are both patented and controlled by private parties, and the Government in order to engage in this manufacture will have to get one or the other of the processes. I wish to ask the Senator from South Carolina if any investigation has been made as to what the cost is likely to be of securing one of these processes.

Mr. SMITH of South Carolina. A statement was made in reference to these patents and a letter presented which it would take some little time to find in the RECORD. There is already in the RECORD a statement of a member of our Naval Advisory Board to the effect that there are a sufficient number of these patents, especially of the primary and fundamental principle which have already expired, for the Government to go ahead with the manufacture without having to purchase any very costly patent.

Mr. JONES. What do we know about the cost of the processes that we shall have to purchase?

Mr. SMITH of South Carolina. There are not any that would be extremely costly. In this letter it is stated that there are enough for the Government to go ahead and get these ingredients. We have also investigated as to the cost and obtained information from the very men who are most familiar with the matter in this country, and had it included in the $15,000,000 appropriation.

Mr. JONES. What was their estimate?

Mr. SMITH of South Carolina. Their estimate was that the appropriation of $15,000,000 would cover all that was essential to supply the Government with its needs.

Mr. JONES. How much of the $15,000,000 will go to private parties for the purchase of patents which we will have to get?

Mr. SMITH of South Carolina. I do not think any, under the statement from Dr. Baekeland.

Mr. JONES. But Dr. Baekeland may be mistaken. Has the Senator inquired from anyone else?

Mr. SMITH of South Carolina. I did from Dr. Norris, who was sent abroad three years ago, and he substantiated the same statement.

Mr. JONES. I have understood from the debate here that there are two processes—the cyanamide process and the arc process. Have we either one of them?

Mr. SMITH of South Carolina. The patents on both are available. The fundamental idea is available already, and provision is made for whatever is needed by purchase.

Mr. JONES. What I am trying to get at is, if these two are the only processes, and they are owned by private parties, how are we going to get them? I would like to know how much it is likely to cost. They must be very valuable. If there are only two, they must be worth a great deal, because the proposition of supplying fertilizers to the people of this country is a great thing and means a great deal to those who may control the processes by which the material is to be manufactured.

If the time ever does come, and I hope it will, when we open up the water-power resources of the country to private activity and private energy and private investment, these processes will be worth almost incalculable sums of money; and, unless we are going to say that we are going to keep these resources tied up, that we are not going to pass any water-power legislation by which private capital can go into it, and thereby diminish the worth of these patented processes, we are going to find ourselves compelled to pay a tremendous sum for these things. I should like to have had a more extended investigation as to what we are likely to have to pay for these things, what they are likely to cost, what these people are likely to ask for them, and, if we have to go into a condemnation, what they will be able to show before a jury that they are worth, and what we would have to pay. There does not seem to be very much information of that kind. One or two experts have said this and said that, but I have seen so many different statements of experts, I have heard so many different opinions expressed, and so forth, I think the matter ought to be looked into very carefully.

Mr. REED. Mr. President, perhaps I can make a little plainer the statement of the Senator from South Carolina. Alexander Graham Bell patented the telephone. He had a monopoly of the idea of the telephone—the fundamental principle. In a little while he patented an improvement, and then another, and another, until he had a great multiplicity of patents. When that fundamental patent expired the situation was such that any person could construct a telephone system, he being simply obliged to modify the apparatus slightly. The result was that independent telephone companies at once sprang up in the country.

The Senator from South Carolina says that the fundamental patents back of both these processes have expired; that all that remain in the hands of private parties to-day are patents that do not relate to the fundamentals but simply to the application of the fundamental principle. If that is true we need not get frightened.

Moreover, I make this suggestion to the Senator, that if that is true it will continue to be true by the continued multiplication of new patents, and if we are to pause for that reason we can pause forever. That was pretty well demonstrated in the testimony read by the Senator from Massachusetts [Mr. LODGE] this morning.

I make the further suggestion that in my opinion there is not a single doubt about this fact, that if a patentee undertook to hold the Government of the United States up we can pass a statute at once annulling his patent, for a patent is not a property right when the Government sees fit to repeal the patent law applicable to it. But that, of course, ought not to be done in fairness unless the owner of the patent is unfair.

Mr. JONES. I was going to suggest that that would not be followed except as a last resort.

Mr. REED. But it could be done very speedily if the patentee undertook to hold the Government up and deprive us of the opportunity to prepare ourselves for proper national defense.

Mr. JONES. Of course, I assume that we would condemn it, that we would make provision for it in the bill, and that would be the process we would go through.

The VICE PRESIDENT. The question is on the amendment of the Senator from Connecticut [Mr. BRANDEGEE] to the amendment of the Senator from South Carolina [Mr. SMITH].

The amendment to the amendment was agreed to.

The VICE PRESIDENT. The question recurs on the amendment of the Senator from South Carolina.

Mr. SMITH of South Carolina. Mr. President, I think the Senate was under a misapprehension as to the amendment that it voted upon. It was the amendment moved by the Senator from Connecticut to strike out "the Secretary of Agriculture" and substitute "the Secretary of War." I should like to have that amendment stated again so that the Senate may vote intelligently on it.

The VICE PRESIDENT. The Chair has decided that the amendment to the amendment has been adopted.

Mr. SMITH of South Carolina. I am quite sure Senators voted upon it under a misapprehension, and I think a mere oversight of that kind should be corrected.

The VICE PRESIDENT. The only way is to move to reconsider.

Mr. BRANDEGEE. The Senator from South Carolina could not make the motion, because he did not vote in the affirmative; but I do not want to take advantage of the Senate. If he thinks any Members voted under a misapprehension, I myself will move that the Senate reconsider its action.

The VICE PRESIDENT. The question is on the motion to reconsider the vote by which the amendment to the amendment was agreed to.

The motion to reconsider was agreed to.

The VICE PRESIDENT. The pending question is on the amendment of the Senator from Connecticut [Mr. BRANDEGEE]

to the amendment of the Senator from South Carolina [Mr. SMITH].

Mr. BANKHEAD. Mr. President, I think the amendment proposed by the Senator from Connecticut is a very wise one, for the reason I shall state. If we include in the amendment as it is proposed the Secretary of Agriculture as the person who is authorized to sell the surplus products of the plant, we simply create a divided responsibility. The Secretary of Agriculture may say there is a surplus here and I want to sell it for the purpose of fertilizers; the Secretary of War perhaps will say that there is no surplus that we can spare from our purpose, and therefore a conflict of authority at once arises. It does seem to me that the amendment suggested by the Senator from Connecticut would clear up this difficulty, and it certainly can do no harm, so far as the operation of the amendment is concerned.

Mr. SMITH of South Carolina. Mr. President, if it is going to lead to any discussion, as a matter of course I will submit the question to the Senate.

The VICE PRESIDENT. The question is on agreeing to the amendment of the Senator from Connecticut to the amendment of the Senator from South Carolina.

The amendment to the amendment was agreed to.

Mr. SUTHERLAND. On page 2, line 17, after the word "fertilizers," I move to insert "and other useful products," so that it will read:

Needed for munitions of war and useful in the manufacture of fertilizers and other useful products.

The VICE PRESIDENT. The question is on agreeing to the amendment of the Senator from Utah to the amendment of the Senator from South Carolina.

The question being put, there were on a division—ayes 15, noes 15.

The VICE PRESIDENT. It is a tie vote. The Chair votes "aye," and the amendment to the amendment is agreed to. The question recurs on the amendment of the Senator from South Carolina as amended.

Mr. BRANDEGEE and Mr. GALLINGER called for the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. GALLINGER (when his name was called). I am paired with the senior Senator from New York [Mr. O'GORMAN], but under an arrangement with him I am privileged to vote on this amendment. I vote "nay."

Mr. NELSON (when his name was called). I am paired with the junior Senator from Mississippi [Mr. VARDAMAN], and therefore withhold my vote.

Mr. SUTHERLAND (when his name was called). I have a general pair with the Senator from Arkansas [Mr. CLARKE], who is absent. For that reason I withhold my vote.

Mr. TILLMAN (when his name was called). I transfer my pair with the Senator from West Virginia [Mr. GOFF] to the Senator from Maryland [Mr. LEE] and vote "yea."

Mr. WALSH (when his name was called). I have a general pair with the Senator from Rhode Island [Mr. LIPPITT], who appears to be absent this afternoon. I am advised that the Senator from Oklahoma [Mr. GORE] would, if he were present, vote "yea." I transfer my pair to that Senator and vote "yea."

Mr. WEEKS (when his name was called). I have a general pair with the senior Senator from Kentucky [Mr. JAMES]. As he is absent, I will withhold my vote.

Mr. WILLIAMS (when his name was called). Repeating the announcement as to my pair and its transfer which I made upon the last roll call, I vote "yea."

Mr. ROBINSON. The senior Senator from Arkansas [Mr. CLARKE] is unavoidably absent from the Chamber on public business. If he were present, the Senator from Arkansas would vote "yea." He is paired, as has been stated, with the Senator from Utah [Mr. SUTHERLAND].

Mr. CURTIS. Mr. President, I am requested to announce the following pairs:

The Senator from New Mexico [Mr. FALL] with the Senator from West Virginia [Mr. CHILTON]; and

The Senator from Idaho [Mr. BRADY] with the Senator from Florida [Mr. FLETCHER].

The roll call was concluded.

Mr. OVERMAN. I have a general pair with the junior Senator from Wyoming [Mr. WARREN]. I transfer that pair to the junior Senator from Tennessee [Mr. SHIELDS] and vote "yea."

Mr. MYERS. I reannounce my pair with the Senator from Connecticut [Mr. MCLEAN], who is absent. I transfer that pair to the junior Senator from Indiana [Mr. TAGGART] and vote "yea."

Mr. BECKHAM. I have a general pair with the senior Senator from Delaware [Mr. DU PONT]. I transfer that pair to the Senator from Nebraska [Mr. HITCHCOCK] and vote "yea."

Mr. KERN. I desire to announce the unavoidable absence of the senior Senator from Florida [Mr. FLETCHER], of the junior Senator from Maryland [Mr. LEE], of the senior Senator from West Virginia [Mr. CHILTON], and of the junior Senator from Indiana [Mr. TAGGART], all of whom are paired.

Mr. OWEN. I transfer my pair with the Senator from New Mexico [Mr. CATRON] to the Senator from Illinois [Mr. LEWIS] and vote "yea."

Mr. SMITH of Michigan. I desire to announce the unavoidable absence of my colleague [Mr. TOWNSEND] on account of sickness in his family. He is paired with the Senator from Florida [Mr. BRYAN].

The result was announced—yeas 43, nays 22, as follows:

YEAS—43.

Ashurst	Kern	Pomerene	Smith, S. C.
Bankhead	La Follette	Ransdell	Sterling
Beckham	Lane	Reed	Stone
Broussard	McCumber	Robinson	Swanson
Clapp	Martin	Saulsbury	Thomas
Culberson	Martine	Shafroth	Thompson
Gronna	Myers	Sheppard	Tillman
Hollis	Norris	Simmons	Underwood
Hughes	Overman	Smith, Ariz.	Walsh
Husting	Owen	Smith, Ga.	Williams
Kenyon	Poindexter	Smith, Md.	

NAYS—22.

Brah	Cummins	Johnson, Me.	Smith, Mich.
Brandegee	Curtis	Jones	Smoot
Burleigh	Dillingham	Lodge	Wadsworth
Chamberlain	Gallinger	Oliver	Works
Clark, Wyo.	Harding	Page	
Colt	Hardwick	Sherman	

NOT VOTING—31.

Brady	Goff	Lippitt	Shields
Bryan	Gore	McLean	Sutherland
Catron	Hitchcock	Nelson	Taggart
Chilton	James	Newlands	Townsend
Clarke, Ark.	Johnson, S. Dak.	O'Gorman	Vardaman
du Pont	Lea, Tenn.	Penrose	Warren
Fall	Lee, Md.	Phelan	Weeks
Fletcher	Lewis	Pittman	

So the amendment of Mr. SMITH of South Carolina to the substitute reported from the Committee on Military Affairs was agreed to.

Mr. POMERENE. I offer the amendment, which I send to the desk, to the substitute reported by the committee.

The VICE PRESIDENT. The amendment proposed by the Senator from Ohio to the committee amendment will be stated.

The SECRETARY. On page 116 it is proposed to strike out from lines 1 to 17, both inclusive, and in lieu thereof to insert:

The President is hereby authorized to appoint and commission, by and with the advice and consent of the Senate, dental surgeons at the rate of 1 for each 1,000 enlisted men of the line of the Army. Officers of the Dental Corps shall have the rank, pay, and allowances of first lieutenants until they have completed five years of service, when they shall be eligible for promotion to the grade of captain. Officers of the Dental Corps, after 15 years of service, shall be eligible for promotion to the grade of major: *Provided*, That the number of majors at no time shall exceed 22 per cent of the strength of the Dental Corps: *Provided further*, That the officers of the Dental Corps shall have the rank, pay, and allowances, including the right to retirement on account of age, service, or disability, of officers of like grade in the Medical Corps of the Army, and that service heretofore rendered as contract dental surgeon shall be computed as commissioned service: *And provided further*, That examinations for promotion in the Dental Corps shall be governed by act of April 23, 1908, section 5, as prescribed for the Medical Corps, except that the examining and review boards shall consist of one medical and two dental officers.

Mr. POMERENE. Mr. President, the bill as presented by the Senate Military Committee provides for giving to members of the Dental Corps the pay and allowances of lieutenant or captain or major. Under the law as it exists to-day members of the Dental Corps are entitled to the rank of lieutenant. Under the amendment I have offered members of the Dental Corps will be given the pay, allowances, and rank of either lieutenant, captain, or major, under the terms and conditions provided in the amendment, which are substantially the same as those in the Senate committee substitute, save perhaps that there has been a change as to the length of time which they must serve before they may be entitled to promotions. Those promotions are to be granted upon examination.

Mr. President, under the law as it exists to-day, and under the substitute as reported to the Senate by the Senate committee, members of the Medical Corps are entitled to the rank and pay of lieutenant, captain, major, lieutenant colonel, colonel, and major general. We are only asking, by this amendment, that the dental surgeons be entitled, under the conditions provided, to the rank of lieutenant, captain, or major. I notice in examining the bill that chaplains are given the rank, as well as the pay and allowances, of certain officers; and I do not

quite understand why the dental profession should be discriminated against.

Senators are well aware of the very great advance which has been made by the dental profession in the last 50 years. We see in the newspapers to-day many accounts of the wonderful work which dental surgeons are performing in the hospitals and on the field of battle in Europe; and it has seemed to me that one of the reasons which heretofore has made medical work or dental work attractive to members of those professions is not so much the pay as it is perhaps the rank which is conferred upon its members under the statutory provisions now in vogue. Nearly every man who enters the Dental Corps, if he were simply seeking the financial emoluments connected with the office, could do better in his private practice; but he will be attracted by the fact that he may be entitled to some official rank. Some men may not regard that as of very much importance, but others do. The question of rank seems to be a matter of very great importance to the medical profession; and I would not be understood for one moment as attempting to decry the merits of that profession; but the dental profession is entitled to some recognition, as well. We are interested in having the Dental Corps so attractive that it will bring to it the best of the young men in that profession; and if we are going to deny to them the right of rank, certainly we are going to detract from the service itself. Let us encourage rather than discourage the young men of the great dental profession.

Mr. GALLINGER. Mr. President, will the Senator from Ohio permit me a question?

Mr. POMERENE. I will.

Mr. GALLINGER. Will the Senator state, for my information, and perhaps for the information of other Senators also, how high a rank is conferred upon chaplains in the Army?

Mr. POMERENE. It is only my impression, but I think the rank of captain is conferred upon them. I am not, however, certain about that; the bill itself provides that they are entitled to that rank, is my impression; but I would not state it as a fact.

I hope, Mr. President, the Senate will adopt the amendment which I have proposed, so that the dental profession may not be discriminated against.

Mr. THOMAS. Mr. President——

The VICE PRESIDENT. Does the Senator from Ohio yield to the Senator from Colorado?

Mr. POMERENE. I do.

Mr. THOMAS. I should like to ask the Senator from Ohio, before he takes his seat, if he would not be satisfied with the provision which is found in the House bill upon this subject? He will find it on page 17 of the bill as it came from the House. My impression is that it is a well-considered proviso, and is preferable both to his proposed amendment and to the provision of the Senate bill.

Mr. POMERENE. As I recall that provision, it gives to the members of the Medical Corps the rank of captain——

Mr. THOMAS. Yes.

Mr. POMERENE. And also the rank of major?

Mr. THOMAS. No.

Mr. POMERENE. Well, Mr. President, of course it would be very much better that dentists be entitled to the rank of either lieutenant or captain, or both, than not to receive any recognition at all; but, in view of the fact that the Medical Corps receives these very much higher ranks—and I am not contesting the justice of that provision at all—the Senate might very readily consent to give to the dentists these three grades.

Mr. LODGE. Mr. President——

The VICE PRESIDENT. The Senator from Massachusetts.

Mr. SHAFROTH. Mr. President, I should like to ask the Senator from Ohio a question before he takes his seat, and that is whether or not the provisions of the Senator's amendment increase the pay, or whether the dental surgeons now get the pay of lieutenant, captain, and major?

Mr. POMERENE. I am not sure as to that.

Mr. LODGE. No; it does not increase their pay. I understand they receive longevity pay.

Mr. CHAMBERLAIN. If I may answer the Senator, I will say that the amendment of the Senator from Ohio not only increases the rank that the dental surgeons now have, but with each increase in rank the pay increases, of course.

Mr. LODGE. But do they not now receive a longevity increase?

Mr. CHAMBERLAIN. Only in the grade of first lieutenant; that is all.

Mr. LODGE. There is no longevity increase after that?

Mr. CHAMBERLAIN. Not as I understand. I will say to the Senator that the maximum pay which the dental surgeons now receive under the law is $2,800 and allowances for quarters, heat, and light, which are equivalent to $450, making $3,250 as the amount which they get under the present law. Under the Senate bill the maximum pay is $4,000, with allowances amounting to $950.

Mr. LODGE. But, Mr. President, I think the Senator misunderstood me. The amendment of the Senator from Ohio does not increase the pay proposed by the bill.

Mr. CHAMBERLAIN. No; but there is this difference, I will say to the Senator, that the proposal of the Senator from Ohio is to give them rank as well as increase of pay.

Mr. LODGE. Certainly.

Mr. CHAMBERLAIN. And the amendment shortens the length of time they must serve to get the increase.

Mr. LODGE. But the amendment does not increase the pay which dental surgeons get under the bill, which, as reported by the committee, does not give them rank.

Mr. CHAMBERLAIN. No; I think not.

Mr. LODGE. That is what I said.

Mr. CLARK of Wyoming. On what page of the bill is the provision?

Mr. LODGE. Page 116. Was I recognized, Mr. President?

The VICE PRESIDENT. The Senator is recognized now. His 10 minutes will now start.

Mr. LODGE. Mr. President, I shall not consume all of my time. The bill, as it stands, gives dental surgeons the pay and allowances of first lieutenants until they have accomplished 10 years' service; after 10 years' service and up to 25 years' service they receive the pay and allowances of captain; and after more than 25 years' service they receive the pay and allowances of major. The proposition of the Senator from Ohio, as I understand, is simply to give them the rank. It provides that—

The President is hereby authorized to appoint and commission—

And so forth. The pending bill does not give them rank, although it gives them the pay and allowances for the rank.

Mr. President, during the many years which I have been here the question between staff and line has been frequently before both bodies and before committees on which I have served. I was never a friend in those days of giving high rank to the various divisions of the staff; but Congress always seemed to differ from me in that respect, and seemed always to have a great feeling of favor for the staff, and the question now seems to be well settled. The highest rank has been to the surgeons, to the paymasters, to the civil engineers in the Navy, and so on.

Mr. OVERMAN. And to chaplains.

Mr. LODGE. And to chaplains. Congress gave the relative rank, as it used to be called, to the different branches of the staff. That being the case and the policy being well settled, it seems to me a very unfair discrimination to leave out the Dental Corps, which has been established within the last 10 or 15 years in the Army.

The men who form that corps are necessarily highly educated. Their course during their first year at the medical school is the same as that taken by the men who intend to be surgeons and physicians; and then, as a rule, they are required to spend at least two years in a dental college. They are, as I have said, highly educated, and their branch of the medical profession has been constantly assuming a greater importance. They are subjected to severe examinations, and they have, to my mind, every qualification for rank that the Medical Corps has.

Of late years particularly, as we are all aware, there has been a very great development, indeed, in dental surgery. The Senator from Ohio has referred to the present war in Europe. As we all know, under the conditions of the present war face wounds and head wounds, owing to the explosive shells, are extremely common.

Mr. GALLINGER. And they are very severe.

Mr. LODGE. And they are very severe. There have been some most extraordinary benefits conferred on the wounded men by the application of the principles of dental surgery. There have been cases here in our own country where soldiers who have been badly shot in the head and face have been greatly relieved by mechanical dentistry; and that branch of the science has reached a very high point. There is a Harvard unit at this moment serving in France, and in the French hospitals their work has been widely noted. American dental surgery has always stood at the head of the dental profession everywhere in the world.

Now, as we have established this matter of staff and rank, and given high rank to paymasters, to members of the Medical Corps, and to chaplains, and, in the Navy, to civil engineers, giving such officers in some of these corps in the Army the rank of brigadier general and major general, and giving paymasters in the Navy the rank of admiral, it seems to me the very modest rank proposed to be given in the amendment of the Senator from Ohio to the members of the dental profession is

only fair, if we give rank to the staff corps at all. I think they ought to be included, and I hope the committee will accept the amendment of the Senator from Ohio proposing to give rank to the members of the Dental Corps.

Mr. CHAMBERLAIN. Mr. President, may I call the attention of the Senate to what the effect of the amendment will be? As the law stands now, dental surgeons have the rank, pay, and allowances of a first lieutenant. That is the highest rank that they have. The Senate bill, as it has been reported to the Senate, cuts out the provision giving them the rank of lieutenant, but gives them the pay and allowances of a lieutenant, of a captain, and of a major in due course, as they are promoted. As they serve a sufficient length of time they are promoted so that they receive pay and allowances but not rank from lieutenant to captain and from captain to major. The highest pay and allowances which dental surgeons will get under the Senate bill are those of a major.

Now, let me call the attention of the Senate to just one thing in that connection. Under the law which is proposed by the Committee on Military Affairs dental surgeons will have to serve 10 years as first lieutenants before they can be promoted and obtain the pay of captain, and they will have to serve 25 years before they can be promoted to the rank and obtain the pay of major. The amendment of the Senator from Ohio shortens those periods so that a man can be promoted from a lieutenant to a captain after 5 years and promoted to major after 15 years. They therefore will attain a higher rank in 15 years than it is possible for a man in the line sometimes to attain.

Mr. LODGE. May I ask the Senator a question?

Mr. CHAMBERLAIN. Yes, sir.

Mr. LODGE. The bill reported by the Senator very greatly increases their pay and allowances?

Mr. CHAMBERLAIN. Very greatly.

Mr. LODGE. But that bill takes from them the rank they now enjoy?

Mr. CHAMBERLAIN. Yes, sir.

Mr. LODGE. I have not carefully examined the amendment of the Senator from Ohio, and I did not know that the intervals were shortened by the amendment.

Mr. CHAMBERLAIN. They are.

Mr. LODGE. I do not think that is essential, but I do think they ought to have the recognition of rank.

Mr. CHAMBERLAIN. We have benefited their condition very materially, but have not given them increased rank.

Mr. BORAH. Mr. President, the practical working of the proposal to shorten the time they must serve before they can move up is to increase their pay.

Mr. CHAMBERLAIN. Certainly; it increases it very materially.

Mr. HARDWICK. Mr. President, if the Senator will yield for a question, would the Senator be willing to give them the rank as well as the pay and allowances according to the plan which the committee has worked out in the bill?

Mr. CHAMBERLAIN. I really do not think they ought to have it at all, Mr. President. If I had to go over the whole field again and start anew, I do not think any of the noncombatant forces ought to have rank; but we have heretofore started out by giving rank. Rank has been given to dental surgeons; it has been given to chaplains; it has been given to the Medical Corps, although none of these corps, except the Medical Corps, command troops. The result is frequently seen in the promotion so rapidly of a noncombatant, of a man who is confined to his office, that he goes away ahead of a man who has had to fight his way up to a higher grade.

Mr. CLARK of Wyoming. What is the motive in taking away rank from the Dental Corps?

Mr. CHAMBERLAIN. As compensation for that the committee has given them the pay and allowances of major.

Mr. CLARK of Wyoming. But at whose suggestion was this trade made—of rank for compensation?

Mr. CHAMBERLAIN. I do not know that anybody suggested it. I think it was along the line of the thought of the committee that they ought not to have any rank. It is the same way with the veterinarians. We have the same problem to meet there. The fact is that every civilian force that crowds its way into the Army asks for rank.

Mr. CLARK of Wyoming. What I can not understand is just why the committee should select the Dental Corps, deprive them of rank, and make a horrible example of them, leaving the other noncombatant corps intact as to rank. It does not seem like a square deal to me.

Mr. CHAMBERLAIN. Perhaps not. I realize fully what the Senator from Massachusetts [Mr. LODGE] has said, that in the modern method of trench fighting many of the wounds are above the shoulder, and dentists have done a great work in relieving the sufferings of those men so wounded; but dentists do not command.

Mr. LODGE. Neither do doctors.

Mr. CHAMBERLAIN. Doctors in the Army do command.

Mr. OVERMAN. Chaplains do not.

Mr. HARDWICK. And paymasters do not.

Mr. LODGE. Chaplains and paymasters do not command.

Mr. CHAMBERLAIN. There are a lot of men who have rank who ought not to have it; but when you start along that line it is difficult to stop.

Mr. CLARK of Wyoming. My question is, If you are going to take rank from one corps, why not take it away from all of them and, as the Senator says, make a scientific sweep of it?

Mr. CHAMBERLAIN. Possibly the Senator will help us to do that now?

Mr. CLARK of Wyoming. Not at all. I consider that the Dental Corps ranks up with the Medical Corps, so far as service in actual strife is concerned; and I think their service in time of peace is very important—as important as is the service of the surgeons—and it is growing greater and greater in importance all the time. It occurs to me that taking away the rank which they already have and seeking to compensate them with additional pay is making an example of the Dental Corps apart and alone from the other corps, and it looks like—I do not say it is—but it looks like somebody was working somehow against the Dental Corps and not against the system of noncombatant rank.

Mr. DU PONT. Mr. President, the whole matter at issue, as I see it, is a question of a fair deal to all concerned. The relative claims of the different branches of the staff have been brought forward with great persistency, and from all of them comes a demand for more pay, more rank, and more allowances, while the fighting force of the Army, who make no demands, are treated unfairly.

Take the case of the Dental Corps. A man enters the Army as a first lieutenant, and with this rank he is able, when he goes into a garrison, to turn every second lieutenant out of his quarters. In 10 years he becomes a captain. A young man may be 25 or 26 years old when he enters the Dental Corps of the Army and officers of his own age, who belong to the fighting force, have not by any means reached that rank. The ordinary course of promotion in the line averages from 12 to 14 years. It will be seen, then, that the noncombatant officers have an immense advantage over the part of the Army that does the fighting, the real bone and sinew of the Army; and I for one do not think that this is a fair proposition. Give them, if you please, equal consideration and equal advantages, but do not give them more. The members of the Dental Corps, as I understand it, are asking for increased rank. They were formerly only first lieutenants, and now they want to be captains and majors. The committee has felt that if anything was to be done for them it should be done for them on the lines set forth in the bill. We gave them a substantial increase in their pay, and we thought that was just and equitable to all concerned.

Mr. CLARK of Wyoming. Mr. President, may I ask the Senator a question?

Mr. DU PONT. I have concluded.

Mr. CLARK of Wyoming. I should like to ask the Senator a question.

Mr. DU PONT. Certainly.

Mr. CLARK of Wyoming. What was the reason for taking away the rank of first lieutenant, which they now have?

Mr. DU PONT. On the general principle that they should not have had any rank in the beginning; and it was thought, as the question of pay was a very vital and important one, that after they had served in the Army for a certain length of time they were entitled to more pay, as other staff officers get. But, then, if you are to give them rank insist upon longer service as a prerequisite. Do not foist them into the different grades over everbody else's head.

Mr. LODGE. That is not proposed.

Mr. CLARK of Wyoming. I should like to ask the Senator another question. If the right theory is to deprive the Dental Corps of rank, why, in order to be consistent, did not the reform touch the Pay Corps and the Medical Corps the same as the Dental Corps?

Mr. LODGE. They have covered the Pay Corps in the Quartermaster's Department.

Mr. DU PONT. There is no such thing as a Pay Corps in the Army. The only analogous corps are the veterinarians and the chaplains.

Mr. LODGE. And you put the dentists on the level of the veterinarians?

Mr. DU PONT. The veterinarians to-day think they are on the level of the dentists.

Mr. GALLINGER. Mr. President, I have great familiarity with the requirements of dental colleges at the present time, and as compared with what was required to get a dental education a very few years ago it is very astonishing to see the great advances that have been made. Indeed, a man to-day graduating in dentistry has to give as much time and as much attention to his profession as he has to graduate in medicine in the very best colleges of this country. Therefore I am very strongly in favor of giving these men adequate rank and giving them liberal pay. I would not discriminate in their favor over the medical officers, but I certainly would treat them with as much generosity.

Mr. DU PONT. Mr. President, may I interrupt the Senator a moment?

Mr. GALLINGER. Certainly.

Mr. DU PONT. The point of the matter is that the bill discriminates against the officers of the line; and I will ask the Senator if he is in favor of that?

Mr. GALLINGER. Does the bill itself so discriminate?

Mr. DU PONT. Yes; because it gives them superior advantages after shorter service than it does officers of the line.

Mr. GALLINGER. I have not looked into that.

Mr. DU PONT. That is the whole point.

Mr. GALLINGER. I stand by the suggestion I made that I think they ought to be given equal rank and equal pay.

Mr. President, if any Senator will take the trouble to look through a publication entitled "The Medico-Military Aspects of the European War," by Surg. Fauntleroy, and examine the plates in that interesting publication—which, I think, we are intending to print in rather large quantities for the use of the Senate—he can not fail to see that at the present time the requirements of the dental surgeon are certainly equally as great and important as those of the medical surgeon. The shells that are being used now, the shrapnel, are literally tearing the faces of the soldiers to pieces. They are playing so much greater havoc than ever was played in any former war that it requires very much greater attention than it ever did before, and these educated dentists are called upon to perform a service on the battle field such as was never dreamed of a few years ago.

Mr. OVERMAN. Mr. President, will the Senator allow me to ask him a question?

Mr. GALLINGER. Certainly.

Mr. OVERMAN. In time of peace do not the soldiers require more attention now? Has it not been discovered that constant attention to their teeth prevents disease? Take Riggs's disease, for example, and other diseases of the mouth. Are there not new discoveries among the dentists in relation to those matters?

Mr. GALLINGER. The Senator is right about that. If I should undertake to enumerate the diseases that are dependent upon the health of the teeth I think I would astonish some Senators, because it is a fact that a decayed tooth does develop a great many diseases in the human body that need very careful attention.

But what I wanted to say, and all I wanted to say, was that with the knowledge I have of the requirements for preparation on the part of the dental surgeon, the value of his services on the battlefield, and the value of his services in time of peace, I feel that he is entitled to very liberal consideration on the part of the Senate. For that reason, any amendment that is fair to all the various classes of the Army certainly ought to be extended to the Dental Corps.

Mr. POMERENE. Mr. President, a moment ago the Senator from New Hampshire asked me a question relative to the rank which is given to the chaplains. I am advised that all of them have the rank of captain save 15, and they have the rank of major.

Mr. GALLINGER. I had an impression that that was about the rank that was given to them.

Mr. POMERENE. Mr. President, there seems to be some objection to the form in which I have framed my amendment, slightly decreasing the number of years of service under which they would be entitled to these promotions. If it is going to avoid any objection to the bill, I shall be quite willing to withdraw that amendment; and I do withdraw it at this moment, but I offer the further amendment on page 116, to insert, on line 5, before the word "pay," the word "rank"; and on line 9, before the word "pay," the word "rank"; and on line 12, before the word "pay," the word "rank." This will then leave the bill just as it was framed by the committee——

Mr. HARDWICK. Mr. President, if the Senator will pardon me, it should be inserted also on line 13 before the word "pay."

Mr. POMERENE. Yes; I thank the Senator very much. Also, on line 13, I move to insert the word "rank" before the word "pay." This will leave the bill, then, just as it was framed by the committee, save that it gives to these officers the rank of lieutenant, captain, or major.

Mr. GALLINGER. Mr. President, I will simply suggest that I think the Senator has made a wise amendment to his first proposition. If these men are treated just as others of the Medical Corps are treated, they ought to be satisfied.

Mr. HUGHES. Mr. President, I am in favor of the amendment proposed by the Senator from Ohio [Mr. POMERENE], and I would go considerably further than perhaps he desires to go. I would give rank to other civilians now connected with the Army who are engaged in such a high class of work.

I can not see any reason for denying rank to dental surgeons. I can not see any reason for denying rank to veterinary surgeons. A veterinarian is a man who spends three or four years at a high-class college. He is a gentleman. He is entitled to anything that we can give him in the way of rank. I have a further reason for it, however. If there is a single thing offensive about the United States Army, it is this caste of rank. I do not suppose there is an army in the known world where the gulf between the enlisted man and the officer exists to such a degree as it exists in the United States Army.

I want to say to you that you are never going to have an army in this country that is worthy of the name until you make the service more attractive than it is to-day, and one of the ways to make it attractive is in some way to democratize your commissioned staff. The spectacle is intolerable to me of these gentlemen standing back and saying that this or that set of men, who are every bit as good as they are, who are as highly educated as they are, who are performing as valuable a kind of service as they are, shall not, forsooth, have rank; that they shall not be permitted to associate with these men engaged in a common work with them, engaged in the defense of the United States of America—not engaged entirely in the occupation of seeking to increase their rank, pay, and allowances.

What reason can there be for denying rank to these men? Why, the suggestion was made to increase their pay, to increase their allowances, to let the Treasury suffer, but do not permit dental surgeons and veterinary surgeons or any other kind of surgeons or chaplains or paymasters or anybody else who is doing useful work even in time of peace to enter this sacred circle!

I am against it all. I will give rank wherever I can give rank. I will give rank before I will give pay and allowances, and I will do whatever I can do to make it possible to have a Regular Establishment in a Republic.

We have an Army that is more incrusted with caste than the British Army. Caste is all right in England. Caste is all right in a country where men are taught to honor and respect caste in varying degree, from birth to death, but we have not any class of men in this country who are running around touching their caps and mumbling thanks for every little gratuity that is handed to them.

You are trying, and trying in vain, to have American boys put themselves in that class, and they never will do it; and you will never have an efficient Regular Army in this country so long as you make it necessary for an American boy to put behind him, at the behest of any commissioned officer, the rights and privileges that were his the moment he was born.

Mr. SMITH of Georgia. Mr. President, I wish to say only a word.

The dentists of the United States have honored a citizen of the city where I live with the position of president of their association. He has been deeply interested in this matter, and has written to me frequently about it. I feel that his pleasure at the action of the Senate would not be complete unless I, as the representative of the city, expressed also my thorough sympathy with the proposition of the Senator from Ohio, and my high appreciation of the great service that the dentists render to the health of the human race. For him I am extremely gratified, as well as for myself, at the evident purpose of the Senate to recognize the dentists in the Army with proper official title.

Mr. WORKS. Mr. President, I think a mistake was made in the beginning in giving rank to anybody but the fighting force of the Army. I have never seen any reason why a chaplain or a doctor or a dentist should be called "captain" or "major." I think the title of the profession of a physician or a dentist is amply sufficient, and he should be proud of it.

The physicians and surgeons are doing a great work in the war that is going on in Europe, and they are deserving of all credit for the part they are taking in the conflict; but as we have gone so far in that direction and have allowed rank to the others, I see no reason why there should be any discrimination

between them and the dentists. One is certainly as much entitled to be placed under rank as the other.

If I were to begin at the beginning, I should be in favor of dispensing with anything of that sort as to all of them. They should be paid, and well paid, for their services; but there is no reason that I am able to see why they should be given rank or called "captain" or "major" or any other title except the one that justly and fairly belongs to them. But under the conditions, as rank is allowed to the others, I feel disposed to treat the dentists just the same as the others.

The dentists of the country are undoubtedly taking a great interest in this matter. I have received, I think I may say, hundreds of letters, great numbers of letters, from dental organizations and from individual dentists who are taking a great interest in securing what is intended to be given them by the amendment which is now offered; and under the circumstances I am disposed to support it.

Mr. CHAMBERLAIN. Mr. President, the committee has no feeling that the dentists ought to be discriminated against. Like the Senator from California [Mr. WORKS], I see that a mistake has been made in giving commissions to this class of the service, but I differ from him in that when there is a chance to stop it a little bit I believe in stopping it.

There is this difference, however, between the Medical Corps and the Dental Corps: The Medical Corps is allowed 5⅞ men to a thousand soldiers, while the Dental Corps, I think, has 1 to 1,000. The Medical Corps commands the hospital units. The surgeon has men under him. A young Portland friend of mine, a young doctor, went over and took charge of the Red Cross Relief Association in Belgium. He commands a body of physicians. They obey him just exactly as the enlisted men of a company obey the captain. There is that difference. The Dental Corps is a part of the Medical Corps, and comes under the supervision of the Medical Corps. That is the distinguishing difference between the two.

If the Senate is determined to amend that anyway, then it ought at least to change the time of service to conform to the time specified in the Senate bill, because otherwise you will have majors in the Dental Corps over men who have been in the active service of the Army for a longer time than they and have not gotten any higher than first lieutenant.

Mr. OVERMAN. That is accomplished by the last amendment, is it not?

Mr. CHAMBERLAIN. It will not do it completely.

Mr. OVERMAN. It only adds to the bill the word "rank" before the word "pay."

Mr. CHAMBERLAIN. I understand what that does. Adding the word "rank" just gives them all these commissions.

Mr. President, I do want to take this occasion again to say that it is no wonder that the American youth does not enlist in the Army of the United States when such speeches are made as my good friend the Senator from New Jersey [Mr. HUGHES] has made here. There is not any caste in the Army except as there is a caste between an employer and an employee. There is bound to be a little line of cleavage in the very nature of things. It is not because the Army officer thinks he is a better man than the enlisted man, but there is that reserve between the two which is bound to exist in the very nature of things. There is not any caste. The enlisted man in the Army of the United States is treated like a prince in comparison with many of the laboring men in this country. So, with such utterances as the Senator from New Jersey sends out to the young men of this country, no wonder the young men do not enlist to serve their country. I say they are not treated in that way. I have never found it so, and I have come in contact with them nearly everywhere.

Now, Mr. President, I am going to suggest in all sincerity that if the Senate is determined to change that provision—and it seems to be determined to change it—the Senate bill ought to be changed only by giving rank, instead of modifying——

Mr. DU PONT. Mr. President, may I ask the Senator a question before he takes his seat?

Mr. CHAMBERLAIN. Certainly.

Mr. DU PONT. I want to ask him if he does not think that, so far as the question between the line and the staff is concerned, the principle of caste only enters into it as between those who fight and those who do not fight, as between the fighting men and the men who do not risk their lives in battle?

Mr. CHAMBERLAIN. Yes.

Mr. MYERS. Mr. President, I am very heartily in favor of this amendment, which has been brought to my attention. I think very sincerely that there is merit in it. It has long been the law to give rank to surgeons in the United States Army, and I do not see why dentists who enlist and perform faithful service to their country should not receive the same distinction as surgeons.

I do not see why a line should be drawn in favor of surgeons and against dentists. I can not see the reason for any such line of demarcation. Surely nobody would think of taking the rank away from surgeons and restoring them to the condition of privates. They render very great service to the Army, both in time of peace and in time of war. Surely no one would think of taking the rank from surgeons, to which they have long been justly entitled by recognition of law. Why should not the dentists have some recognition if they care to go into the Army, and bring their services and learning and knowledge and talents into the Army for the benefit of the country?

The dentists have to be men of knowledge and intelligence. According to the law of practically all the States now, they have to go to a professional school for four years before they can be licensed to practice their profession. In addition to that, in practically all of the States they have to have at least a high-school education, and in some States a college education. In practically all of the States, in addition to that, they have to take their professional training of three or four years in order to become qualified to practice their profession, according to the law.

Mr. GALLINGER. Mr. President, will the Senator permit me to interrupt him?

Mr. MYERS. With great pleasure.

Mr. GALLINGER. The truth is that a young man or a young woman who graduates from one of our first-class dental schools to-day takes the entire medical curriculum, except that of practice.

Mr. MYERS. That is what I understand.

Mr. GALLINGER. They graduate absolutely qualified to answer any question of a medical nature, as well as of a dental nature.

Mr. MYERS. Yes, sir. I thank the Senator from New Hampshire for that timely suggestion. That is what I understand. They have in large part to take the medical course, to qualify themselves for a knowledge of medicine as well as of dental surgery; and why there should be any discrimination against these men who enter the Army upon the invitation of the Government, and devote their knowledge, talents, and education to the service of the country, is more than I can see.

I think there is merit in the amendment. I think young men who are dentists of experience and knowledge and ability should be encouraged to go into the Army, and this amendment will surely offer them some encouragement. I think they are entitled so some distinction, more than a private soldier in the ranks, because they bring more knowledge and education and technical skill and intelligence to the discharge of their duties than a man who is a private; and if they are entitled to it, I think we ought to give it to them. I think justice demands it, and I am very heartily in favor of the amendment.

Mr. LANE. Mr. President, I am of the opinion that these men should receive the same degree of consideration as the members of the Medical Corps. Their line of training is about as severe, and in equity they should be granted the same degree of rank.

The VICE PRESIDENT. The question is on the amendment of the Senator from Ohio [Mr. POMERENE] to the amendment of the committee.

Mr. SAULSBURY. On that I ask for the yeas and nays.

The yeas and nays were not ordered.

The VICE PRESIDENT. The question is on agreeing to the amendment to the amendment.

The amendment to the amendment was agreed to.

Mr. WADSWORTH. Mr. President, I offer the amendment which I send to the desk.

The VICE PRESIDENT. The amendment to the amendment will be stated.

The SECRETARY. The Senator from New York offers the following amendment to the amendment of the committee:

On page 169, line 23, after the word "signed," strike out the remainder of the section and add the words:

"A contract of enlistment effective to create the status of Federal soldiers within the meaning of section 8, Article I, of the Constitution of the United States: *Provided*, That officers shall take and subscribe to the following oath of office: 'I, ———, do solemnly swear that I will support and defend the Constitution of the United States and the constitution of the State of ——— against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same; that I will obey the orders of the President of the United States and of the governor of the State of ———; that I take this obligation freely, without any mental reservation or purpose of evasion; and that I will well and faithfully discharge the duties of the office of ——— in the National Guard of the United States and of the State of ——— upon which I am about to enter, so help me God': *And provided further*, That enlisted men shall take and subscribe to the following oath of enlistment: 'I do hereby acknowledge to have voluntarily enlisted

this — day of ———, 19—, as a soldier in the National Guard of the United States and of the State of ——— for the period of three years in service and three years in the reserve, under the conditions prescribed by law, unless sooner discharged by proper authority. And I do solemly swear that I will bear true faith and allegiance to the United States of America and to the State of ———, and that I will serve them honestly and faithfully against all their enemies whomsoever, and that I will obey the orders of the President of the United States and of the governor of the State of ———, and of the officers appointed over me according to law and the Rules and Articles of War.'"

On page 169, line 18, after the word "have," insert the words "taken and" and after the word "an" insert the words "oath of," and strike out the word "contract," so as to read, "have taken and signed an oath of enlistment."

On page 170 strike out all of section 73 and substitute a new section, as follows:

"SEC. 73. Federal status of present officers of the National Guard—Commissioned officers of the National Guard now serving under commissions regularly issued shall continue in office as officers of the National Guard, subject to the provisions of this act, without the issuance of new commissions: *Provided*, That they take and subscribe to the oath of office provided for in section 71 of this act."

On page 172, line 5, after the word "in" insert the word "active."

On page 185, line 9, insert the word "active" at the end of the line.

On page 185, line 19, after the words "into the" insert the word "active."

Mr. WADSWORTH. Mr. President, it is with some trepidation that I offer this amendment at this hour in the afternoon, and particularly because I imagine that it may possibly give rise to a discussion of the constitutionality of both the Hay bill, so called, and the Chamberlain bill, so called, so far as those bills relate to the federalization of the national forces. However, it is apparent that both Houses of Congress intend to federalize the National Guard. This amendment is intended to strengthen the provisions of the bill in that direction. It is not intended or can not possibly be proposed to get anything for the National Guard. It is intended to require the guard to give more.

I call the attention of Senators to section 71 of the Senate committee bill, commencing near the bottom of page 169, which contains the provision of law under which a soldier of the National Guard enters into an obligation conditional with the Federal Government. It contains the following agreement which the soldier must take:

In the event that the President of the United States shall order the National Guard into active service because of actual or threatened war within three years from the date of my enlistment I agree to serve as a member of the National Guard in the service of the United States within or without the continental limits of the United States for the period of three years from the date of said order or until discharged by order of the President of the United States.

Mr. President, in my humble judgment 95 or 98 per cent of the men who would undertake that agreement would abide by it should war break out and the President call for their services. Nevertheless, I can not see that that is a particularly wise or efficient provision of military law. Under that provision a man enlisting in the National Guard makes a voluntary agreement with the Federal Government to perform a voluntary act at some future time.

Mr. SMITH of Georgia. Is it not worse than that? Are we not legislating to require him to make an agreement which the Constitution never contemplated that he should make?

Mr. WADSWORTH. Mr. President, if I should embark on a discussion of the point raised by the Senator from Georgia I would be treading upon very thin ice, as that is a close point. I am not a lawyer, constitutional or otherwise; but I am impressed with the fact that at the best that language simply invites the man to make a voluntary agreement to do a specific act at his own volition at a later period, and should war break out and the President call upon the men who have made such an agreement and one of them should refuse he can not be compelled, in my humble judgment, to abide by that agreement, for he is not under the military jurisdiction of the United States, because prior to that time, the outbreak of the war, we will say, he has not been a Federal soldier.

The amendment which I have offered is for the purpose of federalizing the officers and enlisted men of the National Guard on the day they take their commissions in the guard if they are officers or on the day they enlist in the guard if they are enlisted men.

Under the provisions of the bill the Judge Advocate General of the Army, I presume, would be called upon to draw up a form of contract, as this amendment says, effective to create the status of a Federal soldier, and the officer and enlisted man would be called upon to sign an enlistment contract and take an oath of enlistment, creating as his primary obligation his adherence to the orders of the President and the Federal Government, and as his secondary obligation his adherence to the orders of the governor of his State and the constitution of the State in which he resides.

Mr. THOMAS. May I interrupt the Senator?

Mr. WADSWORTH. I yield to the Senator from Colorado.

Mr. THOMAS. Is there not a possibility of conflict between the orders of the President and those of the governor, and in such an event would not the oath proposed by the Senator be impossible of performance?

Mr. WADSWORTH. Again with some diffidence I express the opinion that the conflict if it occurs will result to the advantage of the Federal Government. I think it is not a new thing in our system of Government for an officer to undertake a dual obligation, one to the United States and its Constitution and one to the State in which he resides and its constitution. I know that the majority of civil officers when sworn into their duties in a State swear to take an oath to obey and abide by the Constitution of the United States and the constitution of their own State. I am of the very humble opinion that the dual obligation entered into by a military officer voluntarily on his part, with no compulsion under the provisions of the Constitution, which authorize Congress to raise and maintain armies, not as a part of the militia of the State but under that other provision of the Constitution, would hold those men in a primary obligation to the President and a secondary obligation to the governor.

Mr. CLARK of Wyoming. Will the Senator yield for a question?

Mr. WADSWORTH. I yield.

Mr. CLARK of Wyoming. Has the Senator any opinion as to what effect his amendment would have upon enlistment in the National Guard, whether a deterrent effect or otherwise?

Mr. WADSWORTH. My experience and observation have been in coming in contact with a great many members of the National Guard that the overwhelming majority of them now believe that they are Federal soldiers primarily; and those who doubt it want to be Federal soldiers. If there is anything that a modern guardsman wants it is to have it thoroughly understood and accepted as a matter of law that his first obligation is to the United States and that his second obligation is to the State. I think I am violating no confidence when I say that the suggestion for this amendment, although not all its language, a part of which is mine and a part of which I accepted, is the result of an informal conference with a law officer of the Army and that the suggestion of this amendment comes from the National Guard, who are exceedingly anxious to be known as American soldiers instead of New York soldiers or Wyoming soldiers, as the case may be.

The latter part of the amendment, Mr. President, commencing at the bottom of page 2 of the amendment, referring to page 169, line 18 of the bill, and those portions of the amendment following thereafter are simply for the purpose of making those sections of the bill conform with this amendment to section 71 if it is adopted.

You will notice that the word "active" is inserted in line 5, page 172, and again in line 9 of page 185. That word is inserted for the purpose of drawing a distinction between service of the United States and active service of the United States. In my judgment, if this amendment is adopted a man when enlisting in the National Guard puts himself in the service of the United States primarily, and then when the President calls upon the National Guard in time of war or threatened hostilities the guardsman comes into the active service of the United States, and then commences to receive the pay and allowances of a regular soldier. That is the object of those succeeding amendments or corrections.

The VICE PRESIDENT. The time of the Senator from New York has expired.

Mr. CHAMBERLAIN. Mr. President, the committee have had this proposed amendment of the Senator from New York under consideration, and so far as the committee can accept it they are willing to accept it.

Mr. OVERMAN. I desire to ask the Senator from New York a question. I understood him to say that his amendment not only federalizes the National Guard, but puts them under the jurisdiction of the President. Would not that conflict with the jurisdiction of the governor in calling them out if he needs them in the case of an emergency?

Mr. WADSWORTH. Not, in my judgment, unless the Federal Government has superior need for them at that particular time.

Mr. OVERMAN. Would not the governor of a State have to ask the President of the United States whether he could call them out or not?

Mr. WADSWORTH. Not at all.

Mr. OVERMAN. There might be a conflict of jurisdiction.

Mr. WADSWORTH. I hardly think that is possible.

Mr. WORKS. Mr. President, the idea that the Government of the United States may fix the liability of one of its citizens to serve it in time of war or in time of peace by a contract and

not by law is to me rather a novel proposition. The obligation of a member of the National Guard is fixed by the Constitution as a result of his enlistment in the National Guard. Whenever he enlists in the National Guard his obligation to the National Government is just as much fixed as his obligation to serve his State. The Constitution provides in express and explicit terms upon what contingency and under what circumstances the National Government may call him into the service. There is no necessity for any contract about it. The amendment offered here is evidently an attempt to avoid the effect of the Constitution and make him a Federal instead of a State soldier.

I do not myself believe, as I have said, in the federalization of the National Guard. I think the duty of a member of the National Guard is first to his State, and that he is only obligated to serve the National Government when one of the conditions arises under which the Government may call upon him for his services. I think it is quite well enough to leave it in that condition.

Mr. NELSON. May I ask the Senator a question?

Mr. WORKS. Certainly.

Mr. NELSON. Is it not true that, under this paragraph of the Constitution "to provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions," until the State militia are called out under that provision of the Constitution they can not well be in the Federal Army?

Mr. WORKS. Certainly not.

Mr. NELSON. They are State troops, are they not?

Mr. WORKS. They are State troops, and any contract made or any oath taken by a member of the National Guard to do anything more than is provided in the Constitution would be absolutely void.

Mr. THOMAS. Mr. President, I think the proposed amendment has some advantages over the text of the bill for which it is substituted, but I am unable to see how the taking of the oath, even if it provides for officers and men, will change their status under the Constitution of either, or in any manner federalize them. However that may be, the oath may put those taking it in the dual position of subservience to the governor of the State of which he is a citizen and also of the President of the United States, in requiring that the orders of both shall be obeyed, for these orders may not always harmonize.

I do not think, Mr. President, that this status of the soldier taking the oath would be analogous to that of a State officer who subscribes to an oath to support the Constitution of the United States and of the State. The Constitution of the United States is a grant of power from the States to the Nation, and all that is not granted expressly or by necessary implication is retained by the States respectively. An oath to support the Constitution of the United States and of the State can not therefore involve any conflict of duty, certainly not since the supremacy of the Nation has been determined by the arbitrament of arms.

But under the Constitution the governor of the State, not the President, is commander in chief of the militia within his Commonwealth until ordered out by the President; and while the discipline and organization of the militia is under the control of the National Government, it is officered by the governor in virtue of his supreme command. The militia can be used for three national purposes only. It may be mobilized to execute the laws, to suppress insurrection, and to repel invasion.

The President has the authority under the Constitution as the Commander in Chief to use the Federal forces for every legitimate purpose, including the three specific things, for which he may mobilize the National Guard. But should he call them out for some other than one or more of the three duties specified I can easily understand how conditions might arise, or a situation present itself, which would justify the governor in issuing an order countermanding that of the President and therefore clearly within the scope of his authority.

Suppose, for example, that the Mexican situation should materialize into one making intervention unavoidable, and the President should summon the National Guard for duty in Mexico. Suppose, for example, he should order the National Guard of the State of Colorado for purposes of invasion, intending to use them beyond the border, into the Republic of Mexico, such mobilization, while it would find ready response, would not be to execute the laws to suppress insurrection or to repel invasion. And suppose in such event that the governor, for reasons justifying his action to himself, should issue an order countermanding that of the President and forbidding the National Guard to leave the State. The oath required by this amendment would be impossible of performance.

Therefore, even if we have the power to do so, which I doubt, I very much question the propriety of either providing for a contract from the members of the National Guard or exacting such an oath as is contemplated by the amendment offered by the Senator from New York, or any oath whatever. The enlistment carries with it the performance of every duty which either President or governor may rightfully require.

Mr. REED. Mr. President——

Mr. THOMAS. Congress has no power to exact from a citizen of the United States, either by oath or otherwise, the attempt to perform an impossible duty.

Mr. REED. I was going to ask the Senator from Colorado a question, but he has taken his seat and I will ask it in my own time.

Mr. THOMAS. I thought the Senator rose to take the floor in his own right or I would have yielded for his question.

Mr. REED. I do not agree with the position taken by the Senator from Colorado, that if the militia of Colorado were to-day ordered to the border of Mexico for the purpose of defending the country against an invasion the power would not exist in our Government to send the militia beyond the border.

Mr. THOMAS. That was not my statement; or, if I did say that, I did not intend to make the statement.

Mr. REED. That was as I understood the Senator; but if it was not his intention——

Mr. THOMAS. Oh, there is no question, in my judgment, that the President has the power to order out the militia to repel invasion.

Mr. REED. And so the President has the right to order them beyond the border.

Mr. THOMAS. But not to invade another country in an offensive war. I do not think any such power exists.

Mr. REED. Mr. President, that brings me just to this question; and I mention it now because it has been often mentioned in these debates: When it comes to the question of repelling an invasion, who is to decide how that invasion is to be repelled and from what point it is to be repelled? It must be decided by the Commander in Chief of the Army and Navy of the United States. It is utterly absurd to say that the President of the United States can order the troops to stand along the northerly side of the red line of the map between our country and Mexico, and that, if it becomes necessary in order to defend this country, he could not send them across that line to annihilate or to capture the force of men congregated just beyond our borders for the purpose of invading our country.

Mr. THOMAS. Does the Senator——

Mr. REED. Just a moment. So, if we are engaged in a war with another country—and we know we are constantly liable to invasion—the power undoubtedly exists, in my humble judgment, in the President to go into that other country and to destroy the military forces of that country which are liable to invade this country. We are not obliged to defend our country from invasion solely by standing upon our own soil and waiting until we are actually invaded, but we have the right to go anywhere and to do anything which it is necessary to do in order to defend our country from attack by a foreign enemy.

This doctrine about armies for defense and navies for defense has been stated here until one would think that our Navy was organized simply to hang around the coasts of this country and to repel the enemy when once they have come within gunshot of our shores; whereas, in actual practice, the probabilities are—the very great probabilities are—that in wars, commonly called defensive wars, our Navy would strike its very first blow hundreds and, mayhap, thousands of miles from our shores.

There is no such thing, strictly speaking, as a defensive war, because the defense implies offense. You can not defend unless you attack; and the place of attack is the place where the greatest advantage may fall to you. I therefore do not entertain the slightest doubt that if our Government was engaged in a war that war would necessarily be an offensive war, because if attacked, or having attacked another nation and in turn being attacked, we are at once upon our defense; and attack is the very best method of defense in many instances.

Accordingly, in the present Mexican situation, if it should develop now to a point that is feared by some—and I hope their fears are groundless—where our Regular forces in Mexico should be attacked, and if it became necessary to send troops to their assistance, I have not the slightest doubt that every member of the militia in the United States could be ordered into Mexico. Neither have I the slightest doubt about the proposition that every living man would go, and do his duty.

Mr. WORKS. Mr. President——

The PRESIDING OFFICER (Mr. POMERENE in the chair). Does the Senator from Missouri yield to the Senator from California?

Mr. REED. Well, I think my 10 minutes are about up.

Mr. WORKS. I was going to ask the Senator simply whether he thought anything could be added to the obligation of a member of the National Guard by taking a specific oath to do certain things? Does not the obligation rest upon him by virtue of his enlistment, under the Constitution?

Mr. REED. I am inclined to think that the Senator from California is correct about the proposition, that the enlistment carries with it all that is necessary; and yet I never saw any harm in asking citizens of the United States to swear that they will support the Constitution of the United States and defend that Constitution against all comers.

Mr. SMITH of Georgia. Mr. President, I ask that the amendment proposed by the Senator from New York [Mr. WADSWORTH] be stated by the Secretary.

The PRESIDING OFFICER. The Secretary will state the amendment proposed by the Senator from New York to the substitute reported by the committee.

Mr. WADSWORTH. I ask that the Secretary start at the beginning of the section to which the amendment is proposed and to read it as it will be if the amendment shall be adopted.

The PRESIDING OFFICER. The Secretary will read as requested.

The SECRETARY. Section 71, down to the point where the amendment proposed by the Senator from New York [Mr. WADSWORTH] begins, reads as follows:

SEC. 71. Federal enlistment contract.—The provisions of this act, as to the National Guard, shall not apply to enlisted men thereof who have not signed—

From that point the matter proposed to be inserted is new, and reads as follows—

A contract of enlistment effective to create the status of Federal soldiers within the meaning of section 8, Article I, of the Constitution of the United States: *Provided*, That officers shall take and subscribe to the following oath of office: "I, ———, do solemnly swear that I will support and defend the Constitution of the United States and the constitution of the State of ——— against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same; that I will obey the orders of the President of the United States and of the governor of the State of ———; that I take this obligation freely, without any mental reservation or purpose of evasion; and that I will well and faithfully discharge the duties of the office of ——— in the National Guard of the United States and of the State of ———, upon which I am about to enter; so help me God:" *And provided further*, That enlisted men shall take and subscribe to the following oath of enlistment: "I do hereby acknowledge to have voluntarily enlisted, this — day of ———, 19—, as a soldier in the National Guard of the United States and of the State of ———, for the period of three years in service and three years in the reserve, under the conditions prescribed by law, unless sooner discharged by proper authority. And I do solemnly swear that I will bear true faith and allegiance to the United States of America and to the State of ———, and that I will serve them honestly and faithfully against all their enemies whomsoever, and that I will obey the orders of the President of the United States and of the governor of the State of ———, and of the officers appointed over me, according to law and the rules and articles of war."

The amendment also proposes to strike out all of section 73, as printed in the committee amendment, and to insert in lieu thereof:

SEC. 73. Federal status of present officers of the National Guard.—Commissioned officers of the National Guard now serving under commissions regularly issued shall continue in office as officers of the National Guard, subject to the provisions of this act, without the issuance of new commissions: *Provided*, That they take and subscribe to the oath of office provided for in section 71 of this act.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from New York [Mr. WADSWORTH] to the committee amendment.

Mr. SMITH of Georgia. Mr. President, I still can scarcely grasp the meaning of the amendment proposed by the Senator from New York. It reads—

A contract of enlistment effective to create the status of Federal soldiers.

I do not exactly understand what that means. Does it mean that the National Guard are to make contracts to enlist as members of the militia, and that that will place them in the status of Federal soldiers within the meaning of article 1 of the Constitution of the United States, before the President calls them into service?

Mr. WADSWORTH. Mr. President, the purpose of that language is to have it clearly defined that, if a man enlists in the National Guard from now on, he enlists primarily for the service of the United States, and, secondarily, for the service of the State.

Mr. SMITH of Georgia. Mr. President, that answers me sufficiently, and that makes it utterly impossible that I could vote for such an amendment, as I view the matter and regard my oath to support the Constitution of the United States.

The control of the militia is put in the charge of the States. They are primarily State troops and not Federal troops. We can not change that by statute; we have no right to change it by satute, so long as Senators regard the Constitution as I view it. The paragraph, I thought, was bad enough before; but this, I think, moves it further in the direction to which I was objecting.

Mr. WADSWORTH rose.

Mr. SMITH of Georgia. Does the Senator desire to ask me a question?

Mr. WADSWORTH. My purpose in rising was to suggest to the Senator that under Article I, section 8, of the Constitution there resides in Congress the power to raise and support armies. It strikes me that Congress has the right to raise and support an army in any way it pleases under that section, and, if it may do so jointly with a State, outside of the militia provisions of the Constitution entirely, I can see no objection to it, provided the primary duty of the soldier or the officer is to the United States. This is not under the militia provision.

Mr. WORKS. Mr. President, I should like to ask the Senator from Georgia whether he does not think that the taking of an oath of that kind—which is an attempt to make the soldier a Federal soldier instead of a State soldier—would be an act of disloyalty?

Mr. SMITH of Georgia. I think it is an effort to take the soldier away from his legal status and place him in another, just as the contract in this paragraph, I think, is an effort to take him away from his legal, constitutional status and place him in another. The contract provided on page 170 requires that he shall agree "to serve as a member of the National Guard in the service of the United States within or without the continental limits of the United States." Why is that provision made? Why put in a contract provision requiring a member of the National Guard or militia to agree to serve without the continental limits of the United States, except because the Constitution does not locate him there and his normal position as a member of the National Guard does not take him there? The Constitution expressly provides that Congress shall have power—

To provide for calling forth the militia to execute the laws of the Union, to suppress insurrections, and repel invasions.

Then the Constitution declares that the States respectively are to name the officers and train the militia. The President is only authorized by the Constitution to command the "militia of the several States when called into the actual service of the United States."

Now, why require this contract that he shall go beyond the continental limits of the United States, requiring him to do that which he would not be required to do under his constitutional status?

Then later on is a provision, which Congress is asked to pass, that unless he agrees by contract to do what Congress can not legally require him to do no money shall go to him at all and none to those branches of the National Guard who fail to make the contract.

I do not understand whether the amendment of the Senator from New York is to supersede this contract. I will ask him if it is to take the place of that entire section?

Mr. WADSWORTH. Mr. President, it is to supersede that part of section 71 under which the man enlisting in the National Guard undertakes a voluntary agreement to perform a voluntary act at a future time. It is an effort to clarify his status.

Mr. SMITH of Georgia. If the amendment of the Senator from New York prevails, then the contract contained in this paragraph is stricken out?

Mr. WADSWORTH. On page 170?

Mr. SMITH of Georgia. On page 170.

Mr. WADSWORTH. It is not a contract; it is an agreement.

Mr. SMITH of Georgia. If that is not a contract, I can not distinguish what a contract is.

Mr. WADSWORTH. Will the Senator from Georgia indicate what court or power would enforce such an agreement?

Mr. SMITH of Georgia. Any agreement is a contract. I think there is no power of enforcement in this instance, because I think it is an effort to make him contract in disregard of limited power conferred on Congress by the Constitution of the United States; and I think the entire provision would fall as unconstitutional.

Mr. WADSWORTH. Mr. President, my amendment does not propose to have the man swear to serve within or without the United States; that is in the bill now. The Senator has laid some emphasis upon that point.

Mr. SMITH of Georgia. I was attracted first to the Senator's amendment, hoping that it was intended to get rid of the objectionable feature which I thought was in the paragraph. I object to that part of the Senator's amendment which contains the language "a contract of enlistment effective to create the status of Federal soldiers." Why not "members of the militia"? The Constitution provides for the organization of the militia; the Constitution evidently contemplated a distinction between the Regular Army and the militia. There was to be a Regular Army entirely within the control of the United States and a militia primarily in control of the States, but to be called in certain instances to the active service of the National Government.

Mr. NELSON. Mr. President, may I ask the Senator a question?

Mr. SMITH of Georgia. Yes.

Mr. NELSON. Can the National Guard or the State militia under any conditions be in the service of the United States until they are called out by the President?

Mr. SMITH of Georgia. Certainly not; and the President can only call them out as Congress provides, and Congress can only provide that the President may call them forth for limited purposes.

Mr. NELSON. I think the Senator is right.

Mr. SMITH of Georgia. The very distinction between the militia, as contemplated by the Constitution, and the Army is that the militia are not in the service of the United States until they are called out, and then the Constitution provides the circumstances under which Congress may authorize the President to call them out. I do not believe, even though we enact a law following the language of the Constitution, that there will be any serious trouble about using the National Guard whenever they are required. I agree with the Senator from Missouri [Mr. REED]. I know I can speak for the National Guard of my State, that if the President called them out to-morrow and declared that he needed them to go to the border of Mexico there is not a man who would not go, unless he had some providential cause which stopped him, and the only thing that would stop him at the border, when he got there, would be that he was required by the President to stop.

Mr. HARDWICK. If my colleague will pardon a suggestion, the entire first regiment of the Georgia National Guard enlisted in a body, officers and men, during the Spanish-American War.

Mr. SMITH of Georgia. And the only complaint in the Spanish-American War of the National Guard of Georgia was that the President would not let them go to Cuba as fast as they wanted to go.

Mr. REED. Mr. President, in the Spanish-American War 100 per cent of the National Guard of Missouri enlisted.

Mr. SMITH of Georgia. I do not believe in undertaking in this bill to put obligations on the National Guard that the Constitution does not permit Congress to place on them, and I do not believe in undertaking to turn them, as the amendment of the Senator from New York seeks to turn them, into a class to which they can not legally belong.

Mr. WORKS. Mr. President, does the Senator think we can impose any duty on them that is not fixed by the Constitution?

Mr. SMITH of Georgia. I do not, and I do not think it is necessary. I feel sure we can not, and I am equally sure that it is uncalled for.

Mr. CUMMINS rose.

Mr. SMITH of Georgia. Does the Senator desire to ask me a question?

Mr. CUMMINS. I will not ask it, because I see the Senator's time has about expired.

The VICE PRESIDENT. The time of the Senator from Georgia has expired.

Mr. CUMMINS. Mr. President, I have not heard the discussion up to this time, as I have been necessarily absent for a few minutes; but I confess that I can not understand this fear of the National Guard and the disinclination to take advantage of the National Guard for the Nation's need.

The amendment offered by the Senator from New York [Mr. WADSWORTH] is a limitation upon the bill rather than an extension of the bill. Does anyone doubt that under the circumstances named in the Constitution the President can order the National Guard into the service of the United States? Certainly no one will question that. If the President can order the National Guard into the service of the United States, what possible objection is there to the oath that the Senator from New York suggests? Why should not the National Guardsman agree or undertake in his oath to obey the President of the United States when the President acts within his constitutional power? And it must be assumed that the order that is to be given by the President, and the order which the guardsman agrees to observe, will be an order given by the President under his constitutional power.

Mr. THOMAS. Mr. President, does not the enactment of a statute requiring the oath presuppose that the oath is necessary?

Mr. CUMMINS. Mr. President, I can not say definitely about that. I think the guardsman would be subject to the orders of the President without taking the oath that is here suggested. I have no doubt about that. But why should not a soldier take an oath and agree to do the thing that he will be required to do if the order is issued by the President? I can not understand.

Mr. THOMAS. If he is required to do it because of his enlistment, why should we add a further requirement?

Mr. CUMMINS. Why should we not add to it?

Mr. THOMAS. Because it is unnecessary.

Mr. CUMMINS. There are many things in the bill that the Senator from Colorado has helped to report that are not necessary.

Mr. THOMAS. Yes; and if the Senator will point them out, I will agree that they should be eliminated.

Mr. CUMMINS. And there are a great many things that might be inferred that are here stated. I believe in making the people understand the relation which does exist between the officer of the National Guard and the General Government.

Mr. WORKS. Mr. President——

Mr. CUMMINS. I can not yield. We ought to know—every one of the National Guardsmen ought to know—from the very moment that he enters the service, that the laws of his country, the Constitution of his country, and his own obligation, require him to come into the country's service whenever the event arises upon which he can be called.

The objection, it seems to me, must be based upon a suspicion of the integrity and the patriotism of the National Guard. It is a part of the constant effort to keep this military arm or force in our Government away from the duty which it may be required to perform, and which I think it ought to perform whenever the occasion arises.

I do not believe that the bill ought to contain, as it does now contain, a provision that the guardsman, whether officer or enlisted man, must render his service within or without the continental limits of the United States. I think he can be required under some circumstances to render it beyond the limits of the United States; but that is so doubtful a question, and depends so much upon the circumstances of the service, that I have questioned the propriety of inserting it in the bill or in the agreement. I hope, however, that the Senate will not refuse to adopt the amendment proposed by the Senator from New York, and by its adoption explicitly establish the relation which really exists between the officer of the National Guard and the Government.

With respect to the first part of the amendment, I have less concern. The preliminary statement that this obligation or oath shall establish the status of a Federal soldier to me is unimportant. That is merely a construction of the effect of the proposed oath or agreement. In my opinion, the very moment the guardsman is called into the service by the President of the United States he is a Federal soldier, and nothing that Congress can say will deprive him of that character and that relation to the Government.

I see no objection whatever to it, but I see no effect which can be brought about by the use of those words. I hope they will be retained simply as educational suggestions, so that the minds of the people will gradually come to understand just what a guardsman is and what his relation to the Government of the United States is.

Mr. SMITH of Georgia. Then, Mr. President, does not the Senator think that there ought to be a distinction between the two statuses, so that the soldier will understand his different relation?

Mr. CUMMINS. Mr. President, he does understand it. We all bear a dual relation to the governments of this country. I am a citizen of the State of Iowa and I am a citizen of the United States, and I can render my duty to both these forms of organized society without any conflict whatsoever. Just so can the National Guardsman. He is a soldier of the United States and a soldier of the State as well, depending upon the circumstances under which he serves.

The VICE PRESIDENT. The question is on the amendment of the Senator from New York [Mr. WADSWORTH] to the amendment of the committee.

Mr. CUMMINS. On that I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. OVERMAN. Let us take a recess.

Mr. SMITH of Georgia. We can not have a yea-and-nay vote to-night.

Mr. OVERMAN. I move that we take a recess until to-morrow.

Mr. CHAMBERLAIN. Mr. President, I hope the Senate will vote on this amendment to-night.

The VICE PRESIDENT. The Secretary will call the roll.

Mr. SMITH of Georgia. Mr. President, before the roll call begins, I move that when we take a recess to-day we recess until to-morrow morning at 11 o'clock; that not later than 8 o'clock this evening we take a recess until 11 o'clock to-morrow morning.

Mr. OVERMAN. What is the motion?

Mr. SMITH of Georgia. The motion is that not later than 8 o'clock this evening we take a recess until 11 o'clock to-morrow morning. What I desire is simply to get the recess in before we call the yeas and nays and disclose the lack of a quorum, after which we can do nothing but adjourn. That is the object I had in view.

Mr. OLIVER. I move to amend that motion by inserting "6" instead of "8."

Mr. SMITH of Georgia. I accept that.

The VICE PRESIDENT. The motion is that the Senate recess not later than 6 o'clock this evening until 11 o'clock to-morrow morning.

The motion was agreed to.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary proceeded to call the roll.

Mr. JOHNSON of Maine (when his name was called). I have a general pair with the junior Senator from North Dakota [Mr. GRONNA]. In his absence I withhold my vote.

Mr. OWEN (when his name was called). I transfer my pair with the junior Senator from New Mexico [Mr. CATRON] to the junior Senator from Illinois [Mr. LEWIS] and will vote. I vote "nay."

Mr. THOMAS (when his name was called). In the absence of my pair, the senior Senator from North Dakota [Mr. MCCUMBER], I withhold my vote.

Mr. WALSH (when his name was called). I am paired with the senior Senator from Rhode Island [Mr. LIPPITT], who is absent. I transfer that pair to the junior Senator from Oklahoma [Mr. GORE] and will vote. I vote "yea."

Mr. WILLIAMS (when his name was called). Repeating the announcement which I made on the last roll call, I vote "yea."

The roll call was concluded.

Mr. BECKHAM. I am paired with the senior Senator from Delaware [Mr. DU PONT]. I understand that Senator has not voted, and I withhold my vote.

Mr. JOHNSON of Maine. I transfer the pair which I have heretofore announced to the junior Senator from California [Mr. PHELAN] and will vote. I vote "nay."

Mr. POMERENE. I desire to announce the unavoidable absence of the junior Senator from Delaware [Mr. SAULSBURY] on official business. He is paired with the junior Senator from Rhode Island [Mr. COLT].

Mr. STONE. I have a pair with the senior Senator from Wyoming [Mr. CLARK], who is absent. I therefore withhold my vote.

Mr. MYERS. I transfer my pair with the junior Senator from Connecticut [Mr. MCLEAN] to the junior Senator from Indiana [Mr. TAGGART] and will vote. I vote "nay."

Mr. THOMAS. I transfer my pair to the junior Senator from Tennessee [Mr. SHIELDS] and vote "nay."

Mr. CURTIS. I have been requested to announce the following pairs:

The Senator from Idaho [Mr. BRADY] with the Senator from Florida [Mr. FLETCHER];

The Senator from New Mexico [Mr. FALL] with the Senator from West Virginia [Mr. CHILTON];

The Senator from West Virginia [Mr. GOFF] with the Senator from South Carolina [Mr. TILLMAN];

The Senator from Michigan Mr. [TOWNSEND] with the Senator from Florida [Mr. BRYAN];

The Senator from Utah [Mr. SUTHERLAND] with the Senator from Arkansas [Mr. CLARKE];

The Senator from Massachusetts [Mr. WEEKS] with the Senator from Kentucky [Mr. JAMES];

The Senator from New Hampshire [Mr. GALLINGER] with the Senator from New York [Mr. O'GORMAN]; and

The Senator from Vermont [Mr. DILLINGHAM] with the Senator from Maryland [Mr. SMITH].

The roll call resulted—yeas 22, nays 23, as follows:

YEAS—22.

Brandegee	Kenyon	Poindexter	Wadsworth
Chamberlain	Kern	Pomerene	Walsh
Cummins	Lodge	Sheppard	Warren
Curtis	Oliver	Sherman	Williams
Harding	Page	Smith, Mich.	
Jones	Pittman	Sterling	

NAYS—23.

Bankhead	Martin, Va.	Ransdell	Thomas
Burleigh	Martine, N. J.	Robinson	Thompson
Hardwick	Myers	Shafroth	Underwood
Hughes	Nelson	Smith, Ariz.	Vardaman
Johnson, Me.	Overman	Smith, Ga.	Works
Lane	Owen	Swanson	

NOT VOTING—51.

Ashurst	Dillingham	La Follette	Saulsbury
Beckham	du Pont	Lea, Tenn.	Shields
Borah	Fall	Lee, Md.	Simmons
Brady	Fletcher	Lewis	Smith, Md.
Broussard	Gallinger	Lippitt	Smith, S. C.
Bryan	Goff	McCumber	Smoot
Catron	Gore	McLean	Stone
Chilton	Gronna	Newlands	Sutherland
Clapp	Hitchcock	Norris	Taggart
Clark, Wyo.	Hollis	O'Gorman	Tillman
Clarke, Ark.	Husting	Penrose	Townsend
Culberson	James	Phelan	Weeks
Colt	Johnson, S. Dak.	Reed	

The VICE PRESIDENT. On the amendment of the Senator from New York to the amendment of the committee, the result of the vote is yeas 22, nays 23. Senator BECKHAM and Senator STONE are present and not voting. The roll call discloses the lack of a quorum.

Mr. BRANDEGEE. Mr. President, a parliamentary inquiry. The Senate has already decided, has it not, that not later than 6 o'clock this evening it will stand in recess until 11 o'clock to-morrow morning?

The VICE PRESIDENT. Yes; the motion was that not later than 6 o'clock the Senate will take a recess until 11 o'clock to-morrow morning.

Mr. BRANDEGEE. And that motion was agreed to before the roll was called?

The VICE PRESIDENT. That motion was agreed to before the roll call disclosed the lack of a quorum, so the Chair declares the Senate in recess until 11 o'clock to-morrow morning.

Thereupon (at 6 o'clock p. m.) under the order previously made, the Senate took a recess until to-morrow, Saturday, April 15, 1916, at 11 o'clock a. m.

HOUSE OF REPRESENTATIVES.

FRIDAY, *April 14, 1916.*

The House met at 11 o'clock a. m.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

Infinite Spirit, God our Father, whose loving kindness and tender mercies are without end, we thank Thee for the gifts Thou hast bestowed upon us. Strengthen our will, quicken our conscience, and guide us in the use of our talents that we may be worthy recipients, faithful servants to Thee and our fellow men after the similitude of the Master. Amen.

The Journal of the proceedings of yesterday was read and approved.

AMERICAN ACADEMY OF ARTS AND LETTERS.

The SPEAKER. When the Senate bill incorporating the American Academy of Arts and Letters was passed there was a similar bill, H. R. 4678, on the House Calendar that should have been laid on the table. Without objection, it will be laid on the table.

There was no objection.

BRIDGE ACROSS THE ALLEGHENY RIVER, WARREN, PA.

Mr. MILLER of Pennsylvania. Mr. Speaker, there is on the Speaker's table a bill (S. 5229) providing for the construction of a bridge across the Allegheny River in the borough of Warren, Pa. A similar bill has been reported by the Committee on Interstate and Foreign Commerce, and I ask to have the bill taken from the Speaker's table and laid before the House.

The SPEAKER. The Clerk will report the bill.

The Clerk read as follows:

An act (S. 5229) granting the consent of Congress to the county commissioners of Warren County, Pa., to construct a bridge across the Allegheny River in the borough of Warren, county of Warren, in the State of Pennsylvania.

Be it enacted, etc., That the consent of Congress is hereby granted to the county commissioners of the county of Warren, in the State of Pennsylvania, and their successors and assigns, to construct, maintain, and operate a bridge and approaches thereto across the Allegheny River

at a point suitable to the interests of navigation, in the borough of Warren, in the county of Warren, in the State of Pennsylvania, in accordance with the provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906.

SEC. 2. That the right to alter, amend, or repeal this act is hereby expressly reserved.

The bill was ordered to be read a third time, was read the third time, and passed.

The bill H. R. 13475 was laid on the table.

On motion of Mr. ADAMSON, a motion to reconsider the vote whereby the bill was passed was laid on the table.

THE TAX ON SUGAR.

Mr. KITCHIN. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill H. R. 11471, an act to amend an act entitled "An act to reduce tariff duties and provide revenue for the Government, and for other purposes," approved October 3, 1913, disagree to the Senate amendments, and agree to the conference asked for.

The SPEAKER. The gentleman from North Carolina asks unanimous consent to take the bill H. R. 11471 from the Speaker's table, disagree to the Senate amendments, and agree to the conference asked for. Is there objection?

There was no objection.

The SPEAKER appointed as conferees on the part of the House Mr. KITCHIN, Mr. RAINEY, and Mr. FORDNEY.

AGRICULTURAL APPROPRIATION BILL.

Mr. LEVER. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 12717, the Agricultural appropriation bill, and pending that I desire to ask unanimous consent that all gentlemen who speak under the five-minute rule on the bill may have leave to extend their remarks in the RECORD.

The SPEAKER. The gentleman from South Carolina asks unanimous consent that all gentlemen who speak on the bill under the five-minute rule have leave to extend their remarks in the RECORD. Is there objection?

Mr. MANN. I object.

The motion of Mr. LEVER was then agreed to; accordingly the House resolved itself into Committee of the Whole House on the state of the Union, with Mr. HAMLIN in the chair.

Mr. HAUGEN. Mr. Chairman, I yield 30 minutes to the gentleman from Oregon [Mr. HAWLEY].

Mr. HAWLEY. Mr. Chairman, it had been my intention to make some remarks on the California and Oregon land-grant problem. I had anticipated that the Committee on Public Lands would have reported the bill pending before it, but it has been unable to do so up to this time. I therefore ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Oregon?

There was no objection.

Mr. HAWLEY. Mr. Chairman, I yield back the balance of my time.

Mr. LEVER. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. HAMLIN, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 12717, the Agricultural appropriation bill, and had come to no resolution thereon.

H. SNOWDEN MARSHALL.

Mr. MOON. Mr. Speaker, by direction of the select committee appointed by the Speaker of the House under House resolution 193, to inquire and report on the charges of contempt against H. Snowden Marshall for violation of the privileges of the House, I submit the following report.

Mr. Speaker, in order that Mr. Marshall may have full opportunity to examine this report and that the membership may become acquainted with it, I ask unanimous consent that the report lie on the Speaker's table until it is called up at a later day by the select committee, and that it be printed.

The SPEAKER. The gentleman from Tennessee, chairman of the select committee, offers the report and asks unanimous consent that it lie on the Speaker's table and that the report be printed.

Mr. MANN. What is the object of laying it on the Speaker's table? It goes into the Clerk's hands if it is to be postponed and printed. How long is the report?

Mr. MOON. It is about 30 pages of typewritten matter, and then, of course, the evidence is attached as an appendix, and that is lengthy.

Mr. MANN. I thought if it was a short report it might be read, but I have no desire to have it read now.

Mr. FITZGERALD. I will suggest to the gentleman from Tennessee that the report be printed in the RECORD.

Mr. MOON. I will ask unanimous consent, Mr. Speaker, that the report be printed in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee? [After a pause.] The Chair hears none.

Mr. FITZGERALD. Will the gentleman state when he will call up the report?

Mr. MOON. In view of the charges and the voluminous amount of testimony and the fact that Mr. Marshall is district attorney and engaged in the performance of his duties and is pressed for time, I think we ought to wait 10 days or two weeks.

Mr. MANN. It will not be called up this week and probably not next week, will it?

Mr. MOON. I will say that it will not be called up inside of two weeks. If it is desired, the House can fix a day now.

Mr. MANN. We can do that later.

Mr. GARRETT. Mr. Speaker, will the evidence be also printed in the RECORD with the report?

The SPEAKER. No; just the report will be printed in the RECORD.

Mr. GARRETT. But the evidence will be printed in the document as a part of the report?

The SPEAKER. Yes.

The report is as follows:

[House Rept. No. 544, 64th Cong., 1st sess.]

H. SNOWDEN MARSHALL.

Mr. MOON, from the select committee appointed pursuant to H. Res. 193, submitted the following report:

The select committee of the House of Representatives was appointed under House resolution 193, which is as follows:

"[H. Res. 193, 64th Cong., 1st sess.]

"*Resolved*, That a select committee of five members be appointed forthwith by the Speaker to consider the report, in the nature of a statement, from the Judiciary Committee with reference to certain conduct of H. Snowden Marshall, and to report to the House of Representatives the facts in the case; the violations, if any, of the privileges of the House of Representatives or of the Committee on the Judiciary, or of the subcommittee thereof; the power of the House to punish for contempt; and the procedure in contempt proceedings, in case they find a contempt has been committed, to the end that the privileges of the House shall be maintained and the rights of Members protected in the performance of their official duties.

"The select committee shall have the power to send for persons and papers and shall submit its report to the House not later than April 14, 1916."

The report upon which this resolution was predicated and to which it refers is as follows:

"[House Rept. No. 494, 64th Cong., 1st sess.]

"ALLEGED OFFICIAL MISCONDUCT OF H. SNOWDEN MARSHALL.

"[Apr. 5, 1916.—Ordered to be printed.]

"Mr. WEBB, from the Committee on the Judiciary, submitted the following report (to accompany H. Res. 193):

"By direction of the Committee on the Judiciary, I beg leave to make the following report, in the nature of a statement, to the House of Representatives. On the 12th day of January, 1916, Hon. FRANK BUCHANAN, a Representative in Congress from the State of Illinois, arose, in his responsible position, on the floor of the House and impeached H. Snowden Marshall, district attorney for the southern district of the State of New York, charging the said H. Snowden Marshall with numerous malfeasances and misfeasances and with corrupt and improper behavior and conduct in office. Immediately after the reading of said charges Representative BUCHANAN offered, for the immediate consideration of the House, resolution 90, which provided, among other things, 'that the Committee on the Judiciary be directed to inquire and report whether the action of this House is necessary concerning the alleged official misconduct of H. Snowden Marshall,' etc. After debate on the resolution the House, upon motion of Mr. FITZGERALD, of New York, referred the resolution to the Committee on the Judiciary for its consideration and action.

"The Committee on the Judiciary immediately began the consideration of said resolution and called Representative BUCHANAN before it to make such statement and furnish such information concerning the truth of his impeachment charges, as set out in House resolution 90, as he was able to make and furnish. Thereafter, on the 27th day of January, 1916, by direction of the Judiciary Committee, the chairman thereof offered in the House of Representatives the following resolution:

"'[House resolution 110.]

"'*Resolved*, That the Committee on the Judiciary in continuing their consideration of House resolution 90 be authorized and empowered to send for persons and papers, to subpœna witnesses, to administer oaths to such witnesses, and take their testimony.

"'The said committee is also authorized to appoint a subcommittee to act for and on behalf of the whole committee wherever it may be deemed advisable to take testimony for said committee. In case such subcommittee is appointed, it shall have the same powers in respect to obtaining testimony as are herein given to the Committee on the Judiciary, with a sergeant at arms, by himself or deputy, who shall attend the sittings of such subcommittee and serve the process of same.

"'In case the Committee on the Judiciary or a subcommittee thereof deems it necessary it may employ such clerks and stenographers as are required to carry out the authority given in this resolution, and

the expenses so incurred shall be paid out of the contingent fund of the House.

"'The Speaker of the House of Representatives shall have authority to sign, and the Clerk thereof to attest, subpœnas for witnesses, and the Sergeant at Arms or a deputy shall serve them.'

"The said resolution was on said date unanimously agreed to.

"While further considering the said House resolution 90 and the said House resolution 110, on the 31st day of January, 1916, the Committee on the Judiciary authorized the chairman to appoint a subcommittee of three to execute the purposes of House resolution 110 to act for and on behalf of the full committee wherever it may be deemed advisable to take testimony for said committee, and on February 1, 1916, the chairman appointed Messrs. Charles C. Carlin, Warren Gard, and John M. Nelson as members of such subcommittee.

"Thereafter the said subcommittee organized and heard the testimony of certain witnesses in the Judiciary Committee rooms in the city of Washington. The subcommittee determined, for its further information and in carrying out the duties assigned it under the resolution of the House of Representatives, that it should hear the testimony of certain other witnesses in the city of New York, and on the 28th day of February, 1916, the said subcommittee, under subpœnas duly signed by the Speaker of the House of Representatives and attested by the Clerk thereof, caused certain witnesses to be brought before it, in the Federal post-office building in the city of New York, and continued the examination of witnesses upon said charges up to and including the 4th day of March, 1916.

"On the 3d day of March, 1916, there appeared in a New York newspaper an article containing, among other things, the following language:

"'It is the belief in the district attorney's office that the real aim of the Congress investigation is to put a stop to the criminal investigation of the pro-German partisans.

"On the 3d of March, 1916, the subcommittee called before it one Leonard R. Holme, who testified to the subcommittee that he wrote the article containing the foregoing language, but when asked whether or not he conferred with anybody in the district attorney's office before the article was written replied that he declined to give the source of his information. The chairman of the subcommittee then propounded this question to the witness: 'Did you confer with Mr. Marshall before you wrote this article?' To which the witness replied, 'I respectfully decline to answer the question, sir.' The chairman of the subcommittee then propounded the following question to him: 'Did you confer with anybody in Mr. Marshall's office?' To which the witness replied, 'I respectfully decline to answer that question, sir.'

"Whereupon, the Sergeant at Arms was directed by the chairman of the subcommittee to take charge of the witness and keep him in custody until the further order of the committee. At 4.10 o'clock p. m. of the same day, the chairman of the subcommittee again propounded the foregoing questions to Witness Holme, and the following proceedings were had:

"'Mr. CARLIN. Hr. Holme, the committee has directed me to order you to answer the question which was asked you. Mr. Stenographer, read the testimony of Mr. Holme.

"'(The entire previous testimony of Mr. Holme was read to the committee by the stenographer in the hearing of the committee only.)

"'Mr. CARLIN. Mr. Holme, I hand you this article in the sixth column of page 4 of the New York Times, dated Friday, March 3, 1916. The article is headed "Marshall refuses BUCHANAN evidence." I now call your attention to this paragraph of the article:

"'It is the belief in the district attorney's office that the real aim of the Congress investigation is to put a stop to the criminal investigation of the pro-German partisans."

"'I ask you from whom you got that information?

"'Mr. HOLME. That information, sir, is a deduction. I have known at the time these proceedings were begun at Washington, it was before the indictment of Congressman BUCHANAN, that there had been a considerable amount of talk around this building as to their nature. I am down here practically every day of my life, and I meet with a great many men who are connected with the district attorney's office and who are in this building in various other regular capacities, and I based that paragraph entirely upon my knowledge of the general gossip around the building and the general feeling in the building.

"'Mr. CARLIN. Why did you not state that, instead of saying it is the belief in the district attorney's office?

"'Mr. HOLME. Well, sir, it comes to much the same thing, does it not? The district attorney's office is a large organization.

"'Mr. CARLIN. Is that your answer?

"'Mr. HOLME. Yes, sir.

"'Mr. CARLIN. Did you base that part of the article upon a conference held with H. Snowden Marshall or any subordinate of his in the district attorney's office?

"'Mr. HOLME. I based that article on my general knowledge of the conditions surrounding this proceeding and the general opinion floating around the building.

"'Mr. CARLIN. You state that it is the general belief in the district attorney's office. Now, who in the district attorney's office expressed that belief?

"'Mr. HOLME. I don't think I could give you any definite names, because I have discussed this matter with a large number of different people at various times.

"'Mr. CARLIN. As a matter of fact, did anybody in the district attorney's office express that belief?

"'Mr. HOLME. Yes, sir.

"'Mr. CARLIN. Who?

"'Mr. HOLME. I can only remember a very few, and I respectfully decline, as a newspaper man, to express their opinions, which are often given to me in general conversation.

"'Mr. CARLIN. Was the belief expressed by Mr. Marshall or either of his assistants?

"'Mr. HOLME. I respectfully decline to answer, sir.

"'Mr. CARLIN. Mr. Stenographer, insert in the record this article which I hand you, and the date line of the paper.

"'Mr. GARD. I understand you to say, Mr. Holme, that this extract which has been read to you was written by you?

"'Mr. HOLME. Yes, sir.

"'Mr. GARD. And the extract is this:

"'"It is the belief of the district attorney's office that the real aim of the congressional investigation is to put a stop to the criminal investigation of the pro-German partisans."

"'You wrote that?

"'Mr. HOLME. Yes, sir.

"'Mr. GARD. And I understand also that you decline and refuse to answer questions as to whether you obtained that information from anyone in the district attorney's office of the southern district of New York?

"'Mr. HOLME. Yes, sir.

"'Mr. GARD. You decline to answer that?

"'Mr. HOLME. Yes, sir.

"'Mr. CARLIN. Now, then, Mr. Holme, I am directed by the committee to order you to answer that. Do you still decline?

"'Mr. HOLME. I do, respectfully, sir.

"'Mr. CARLIN. Then, I am directed to say to you, for the record, that this committee determines you to be in contempt of the order of the committee and of the House of Representatives of the Congress of the United States, and that for the present you will be released from the custody of the marshal until the committee, if it sees proper, shall proceed in the manner prescribed by statute in such cases. We want to be kind to you. We have no desire to be harsh with you. We realize to some extent your embarrassment. We have a duty to discharge, and we think under the circumstances we will discharge it in this way and release you from the custody of the Sergeant at Arms of the House.'

"On Saturday, the 4th day of March, 1916, the said H. Snowden Marshall, as district attorney for the southern district of New York, caused to be transmitted to C. C. CARLIN, chairman of said subcommittee, then in the performance of its duties, as required by the House of Representatives, the following letter:

"'DEPARTMENT OF JUSTICE,
"'UNITED STATES ATTORNEY'S OFFICE,
"'*New York, March 4, 1916.*

"'SIR: Yesterday afternoon, as I am informed, your honorable committee ordered the arrest of Mr. L. R. Holme, a representative of a newspaper which had published an article at which you took offense. The unfortunate gentleman of the press was placed in custody under your orders. He was taken to the United States marshal to be placed in confinement (I do not understand whether his sentence was to be one day or a dozen years). The marshal very properly declined to receive the prisoner. This left you at a loss, and I am advised that you tried to work your way out of the awkward situation by having Mr. Holme brought back and telling him that you were disposed to be "kind" to him and then discharged him for the purpose of avoiding unpleasant consequences to yourselves.

"'You are exploiting charges against me of oppressive conduct toward a member of your honorable body who is charged with a violation of law and of oppressive conduct on my part toward shysters in the blackmailing and bankruptcy business.

"'I may be able to lighten your labors by offering to resign if you can indicate anything I ever did that remotely approximates the lawless tyranny of your order of arrest of Mr. Holme.

"'The supposed justification of your order that Mr. Holme be placed in custody was his refusal to answer the question you asked as to where he got the information on which was based the article which displeased you.

"'It is not necessary for you to place anyone under arrest in order to get the answers to the question which you asked Mr. Holme, because I can and will answer it. I gave Mr. Holme information, part of which he published and from which he made deductions, so that if your honorable committee has a grievance it is against me and not against him.

"'What I told him was about as follows:

"'I said that your expedition to this town was not an investigation conducted in good faith, but was a deliberate effort to intimidate any district attorney who had the temerity to present charges against one of your honorable body.

"'I said that your whole proceeding here was irregular and extraordinary; that I had never heard of such conduct of an impeachment proceeding; that charges of this sort were not usually heard in public until the House of Representatives had considered them and were willing to stand back of them.

"'I pointed out to him that you, contrary to usual practice, had come here and had held public hearings; that among your witnesses you had invited every rogue that you could lay your hands on to come before you and blackguard and slander me and my assistants under the full privilege of testifying before a congressional committee.

"'I told him that you had called one of my junior assistants before you and had attempted to make it publicly appear that his refusal to answer your questions as to what occurred in the grand-jury room in the Buchanan case was due solely to my orders. I said that at the time you attempted to convey this public impression you knew that it was misleading, because I had been asked by you to produce the minutes of the grand jury and had been instructed by the Attorney General not to comply with your request, as you well knew. I showed him the telegram of the Attorney General to me and showed him a copy of my letter to you, dated February 29, 1916, in which I sent you a copy of the telegram of the Attorney General instructing me not to give you the grand-jury minutes.

"'I told him that you were traveling around in your alleged investigation of me with BUCHANAN'S counsel, Walsh and David Slade, in constant conference with you. I said that I believed that every word of the evidence, whether in so-called secret sessions or not, had been placed at the disposal of these worthies, and that I would be just as willing to give the grand-jury minutes to a defendant as to give them to your honorable subcommittee.

"'I told him that I did not share the views which seemed to prevail in your subcommittee on this subject. I said that I regarded a Member of Congress who would take money for an unlawful purpose from any foreign agent as a traitor, and that it was a great pity that such a person could only be indicted under the Sherman law, which carries only one year in jail as punishment.

"'I said that it was incomprehensible to me how your honorable subcommittee should rush to the assistance of an indicted defendent; how you had apparently resolved to prevent prosecution by causing the district attorney in charge to be publicly slandered.

"'I told him that I would not permit the prosecution of the persons whose cause you had apparently espoused to be impeded by you; I said that if you wanted the minutes of the grand jury in any case, you would not get them as long as I remained in office. You will observe from the foregoing statement that what Mr. Holme published may have been based on what I said. If you have any quarrel, it is with me, and not with him.

"'It is amazing to me to think that you supposed that I did not understand what you have been attempting to do during your visit here. I realized that your effort was to ruin me and my office by publishing with your full approval the complaints of various persons who have run afoul of the criminal law under my administration. Your subcommittee has endeavored by insulting questions to my assistants and others, by giving publicity and countenance to the charges of rascals

and by refusing to listen to the truth and refusing to examine public records to which your attention was directed, to publicly disgrace me and my office.

"'I propose to make this letter public.

"'Respectfully,

"'H. SNOWDEN MARSHALL,
"'*United States Attorney.*

"'Hon. C. C. CARLIN,
"'*Chairman Subcommittee of the Judiciary,*
"'*Committee of the House of Representatives,*
"'*323 Federal Building, New York, N. Y.*'

"At the same time or before this letter was sent to the subcommittee it was given to the newspapers and published by them.

"On the 9th day of March, 1916, the subcommittee aforesaid, through its chairman, Hon. C. C. CARLIN, submitted to the Committee on the Judiciary the foregoing letter of H. Snowden Marshall.

"On or about the 11th day of March, 1916, the following letter was received by the chairman of the Judiciary Committee and immediately laid before the full committee:

"'DEPARTMENT OF JUSTICE,
"'UNITED STATES ATTORNEY'S OFFICE,
"'*New York, March 10, 1916.*

"'DEAR SIR: Referring to my letter of March 4, addressed to the chairman of the subcommittee which has recently taken testimony in New York concerning my administration of my office, I notice from the press that some persons appear to have construed my statements as directed toward your honorable committee as a whole. I beg to advise you that the criticisms in that letter were addressed to the methods pursued by the subcommittee. I do not retract nor modify any of those criticisms. But I did not intend (nor do I think my letter should be so construed) to reflect in any way upon the Judiciary Committee, nor did I question the power of the House of Representatives to order such an investigation.

"'If you and the other members of your committee, for whom I have high respect, have gained the impression that my letter carried any personal reflection upon your honorable committee, it gives me pleasure to assure you that I had no such purpose.

"'Respectfully,

"'H. SNOWDEN MARSHALL.

"'Hon. EDWIN Y. WEBB,
"'*Chairman of the Judiciary Committee,*
"'*House of Representatives, Washington, D. C.*'

"The Judiciary Committee has carefully considered said letters in the light of congressional and judicial precedents as touching the prerogatives of the House of Representatives and its Members, and the committee has come to the determination that said letters, their publication and attendant circumstances, are of such nature that they should be called to the attention of the House. For obvious reasons, the committee deems it advisable to take this step rather than to report directly upon the facts and the law in the case. I am, therefore, directed by the committee to report the whole matter to the House of Representatives with the recommendation that a select committee of five be appoined by the Speaker to report upon the facts in this case; the violations, if any, of the privileges of the House or the Committee on the Judiciary or the subcommittee thereof; the power of the House to punish for contempt; and the procedure in contempt proceedings, to the end that the privileges of the House shall be maintained and the rights of the Members protected in the performance of their official duties."

The select committee appointed under House resolution 193 met for the hearing on Friday, April 7, 1916, at 10 a. m., and took the testimony of Representatives Webb, Gard, Nelson, and Carlin and directed the chairman to send the following letter to Hon. H. Snowden Marshall, of New York, and then adjourned to 10 a. m., Monday, April 10, 1916:

"APRIL 7, 1916.

"Hon. H. SNOWDEN MARSHALL,
"*United States District Attorney for the*
"*Southern District of New York, New York City.*

"DEAR SIR: Inclosed is H. Res. 193 and Report No. 494, which explain themselves. The select committee appointed by the Speaker of the House of Representatives are now engaged in the investigation of the matters referred to herein. We will be glad to have you appear before us, if you so desire, at the rooms of the Committee on the Post Office and Post Roads of the House of Representatives, in the Capitol Building, Washington, D. C., on Monday, April 10, 1916, at 10 o'clock a. m., and make such statement as you may desire before the committee touching this matter. As the time of the committee is limited in which to report, you will oblige us by advising by wire whether you desire to be present or not. This communication is made to you by order of the select committee.

"Very truly, yours,

"JOHN A. MOON,
"*Chairman Select Committee.*"

This letter was mailed to Mr. Marshall on the 7th of April, 1916. On April 8, 1916, the following reply was received by wire:

"NEW YORK, N. Y., *April 8, 1916.*

"Hon. JOHN A. MOON,
"*Washington, D. C.:*

"Your letter received. It will give me pleasure to appear before your committee at the time and place mentioned in your letter.

"H. SNOWDEN MARSHALL."

The committee met again at 10 a. m., April 10, 1916, pursuant to adjournment, when Mr. Marshall appeared and was given a stenographic copy of the statements of witnesses who had testified in the case, and was advised that he would be given an opportunity before making his statement to read the same and cross-examine the witnesses. Thereupon the committee adjourned to 1.30 p. m., April 10, 1916, this being deemed sufficient time by Mr. Marshall in which to examine the statements of the witnesses.

The select committee met again at 1.30 p. m., April 10, 1916. Mr. Marshall appeared and made a statement in writing and testified orally. He also subsequently submitted an additional statement on April 12, 1916, and some newspaper clippings. The statements and testimony of all the witnesses who appeared before the select committee are attached hereto as an appendix to this report. The newspaper clippings are not strictly relevant, but are filed. There was also filed as evidence for reference the hearings in the case of charges against H. Snowden Marshall, taken by a subcommittee of the Committee on the Judiciary in New York on February 28, 1916, and following. These hearings are material mainly in determining whether the subcommittee making the investigation was acting within the scope of its authority.

FINDING OF FACTS.

1. H. Snowden Marshall is and has been for several years past United States district attorney for the southern district of New York.

2. On the 28th day of December, 1915, the grand jury in the United States District Court for the Southern District of New York found an indictment against a Member of the House, Hon. FRANK BUCHANAN, and others, for the violation of a Federal statute. (We have not been furnished with a copy of this indictment and therefore can not incorporate it in this report.)

3. On December 14, 1915, preceding the finding of the indictment, Hon FRANK BUCHANAN, a Representative in Congress from the State of Illinois, impeached H. Snowden Marshall, the United States district attorney for the southern district of New York, of malfeasance and misfeasance in office. On January 12, 1916, said Representative BUCHANAN again presented to the House charges and impeached the said H. Snowden Marshall, United States district attorney for the southern district of New York, as follows:

"IMPEACHMENT OF H. SNOWDEN MARSHALL.

"The SPEAKER. The gentleman from Illinois [Mr. Buchanan] is recognized.

"Mr. BUCHANAN of Illinois. Mr. Speaker, I rise to a question of the highest privilege. By virtue of my office as a Member of the House of Representatives I impeach H. Snowden Marshall, United States district attorney for the southern district of New York, of high crimes and misdemeanors.

"I charge him with having conspired with persons, firms, and corporations, their agents and servants, to grant such persons, firms, and corporations the privilege of violating various criminal, neutrality, interstate commerce, or custom laws of the United States in the southern district of New York.

"I charge him with securing for persons or corporations great financial profit in consequence of the violation of the United States laws.

"I charge him with corruptly and collusively participating in such conspiracies.

"I charge him with corruptly neglecting and refusing to prosecute gross and notorious violations of various criminal, neutrality, custom revenue, and antitrust laws of the United States within said judicial district.

"I charge him with corruptly inducing and procuring grand juries to return into the district court for the southern district of New York of indictments charging crimes without there being evidence before said grand jury which would in any degree justify the finding and filing of such indictments.

"I charge him with being guilty of oppression in corruptly procuring indictments from the grand jury in said district charging reputable citizens with crime, although there was no evidence before the grand jury which would in the least warrant such charges.

"I charge him with corruptly conspiring with other persons to spread broadcast throughout the United States maliciously false newspaper publications and reports, emanating as official statements and purporting to describe results of investigations conducted by said United States attorney and his assistants, with the object of destroying friendly relations between the United States and one or more foreign governments.

"I charge him with unlawfully and feloniously abusing the legal process before the grand jury in said district of New York, the Secret Service, and the Bureau of Investigation and Inquiry of the Department of Justice in furtherance of such conspiracy aforesaid.

"I charge him with having knowledge, or the existence of circumstances from which knowledge is imputed to him, that large sums of money have been expended for or on behalf of foreign Governments and of various purveyors and manufacturers of war munitions for the purpose of influencing the actions of said United States attorney in furtherance of a conspiracy.

"I charge him with having corruptly neglected or refused to prosecute men who have made the port of New York, within said judicial district, a military or naval base for foreign belligerent powers.

"I charge him with corruptly neglecting and refusing to prosecute violations of Federal statutes prohibiting the loading and shipment of explosives on ships carrying passengers within said judicial district.

"I charge him with corruptly neglecting and refusing to prosecute violations of the foreign-enlistment act and laws of the United States within said district.

"I charge him with having corruptly used the powers of his office for the purpose of slandering and libeling peaceable and law-abiding people to their great injury.

"I charge him with having abetted, approved, acquiesced, and permitted unlawful and oppressive misues of subpœnas and other process before grand juries in said southern district of New York.

"I charge him with having deprived law-abiding citizens of their legal rights, privileges, and immunities.

"I charge him with aiding, abetting, and approving unlawful expenditures of public moneys in violation of the laws of the United States.

"I charge him with being guilty of attempts by private solicitation of influencing the official actions and opinions of judges in the southern district of New York while in the performance of their judicial duties.

"I charge him with having used the powers of his office to cause and procure a discrimination in the assignment of judges to conduct trials in said district, so as to discriminate against one or more resident judges.

"I charge him with having used the powers of his office to procure or assist in the procurement of judges to be imported into the southern district of New York from other districts for the trial of cases in said district by falsely representing the condition of judicial business within said district.

"I charge him with being guilty of private solicitation with intent to influence the official acts and decisions of judges imported as aforesaid.

"I charge him with having attempted to corruptly control decisions and official actions of one or more of such imported judges.

"I charge him with having procured the assignment of one or more imported judges for the conduct of trials in the said district for the purpose of preventing defendants in such cases from receiving a fair and impartial trial at the hands of resident judges.

"I charge him with being a party to a conspiracy participated in by his assistant district attorneys and other officials connected with the administration of justice in the said southern district of New York for the purpose of unlawfully manipulating and controlling the selec-

tion of grand and petit jurors in connection with cases in the courts of said districts.

"I charge him with having been guilty of acts by which the rights of the United States and that of individuals have been unlawfully prejudiced and the orderly and fair administration of justice defeated or obstructed in one or more instances.

"I charge him with having employed the powers of his office for the purpose of shielding and to prevent the exposure of unlawful and improper conduct of one James W. Osborne in relation to facts involved in civil litigation which was pending in the State court in the State of New York.

"I charge him with unlawfully protecting the said Osborne and others from prosecution for the violation of United States laws.

"I charge him with willfully and corruptly refusing and neglecting to prosecute gross and notorious violations of the United States statutes committed by said James W. Osborne and others in the city and State of New York within said district.

"I charge him with having prostituted the office of United States district attorney for the southern district of New York.

"I charge him with having used the powers of his said office as United States district attorney to corruptly and willfully defame, slander, and injure the good name and professional standing of law-abiding citizens of the United States, to their great injury, for the purpose of protecting the private individual interests of James W. Osborne.

"I charge him with having corruptly failed, neglected, and refused to prosecute persons who, while acting as witnesses for the United States in the trial of causes, committed the crime of perjury, subornation of perjury, and conspiracy in connection with the cases of United States against Rae Tanzer, United States against Frank D. Safford, and *United States* against Albert J. McCullough et al.

"I charge him with having used and employed the United States grand jury in the southern district of New York for the purpose of attempting to establish records which might be used in defense of James W. Osborne, H. Snowden Marshall, Roger B. Wood, and Samuel H. Hershenstein (the last two being assistant United States district attorneys under said H. Snowden Marshall), and not for the purpose of investigation of violations of the United States laws.

"I charge him with corruptly and willfully failing to remove certain of his assistant district attorneys who destroyed documentary evidence material in the trial of a pending case in the United States district court for the southern district of New York.

"I charge him with corruptly and maliciously causing to be instituted criminal proceedings against Rae Tanzer and others for the purpose of protecting James W. Osborne, a special United States district attorney and a personal intimate friend of said H. Snowden Marshall.

"I charge him with corruptly and willfully failing and refusing to present to the court the trial of cases material and important evidence and in concealing or assisting and acquiescing in the concealment or destruction of material and important evidence relating to pending cases in the United States district court for the southern district of New York.

"I charge him with being corrupt, grossly negligent, and unfit to retain the office as United States district attorney for the southern district of New York.

"I charge him with having willfully and persistently violated the laws of the United States in connection with the performance by him of the duties of such United States district attorney for said southern district of New York.

"I charge him with having corruptly and willfully withheld and failed to present before the grand jury material and important evidence in connection with alleged investigations instituted before said grand jury by said H. Snowden Marshall in relation to the cases of United States against Rae Tanzer and United States against Albert J. McCullough et al., and others.

"I charge him with having corruptly and willfully refused and neglected to take cognizance of unlawful conduct of his assistant district attorneys in connection with the performance by them of official duties as such assistant district attorneys.

"I charge him with corruptly participating in or acquiescing to the presentation to the court in trial of cases in the southern district of New York of alleged evidence which he knew to be untrue and manufactured, or in the manufacture of and attempt to manufacture such alleged evidence.

"I charge him with producing willful injury and wrong to litigants in said district court and to citizens of the United States by his unlawful and improper conduct.

"Mr. Speaker, I send up the following resolution to the desk to be read by the Clerk.

"The SPEAKER. The Clerk will report the resolution.

"The Clerk read as follows:

"'*Resolved*, That the Committee on the Judiciary be directed to inquire and report whether the action of this House is necessary concerning the alleged official misconduct of H. Snowden Marshall; whether he has conspired with persons, firms, and corporations, their agents and servants, to grant such persons, firms, and corporations the privilege of violating various criminal, neutrality, interstate-commerce, or custom laws of the United States in the southern district of New York; whether he has secured for persons or corporations great financial profit in consequence of the violation of the United States laws; whether he has corruptly and collusively participated in such conspiracies; whether he has corruptly neglected and refused to prosecute gross and notorious violations of various criminal, neutrality, custom-revenue, and antitrust laws of the United States within said judicial district; whether he has corruptly induced and procured grand juries to return into the District Court for the Southern District of New York indictments charging crimes without there being evidence before said grand jury which would in any degree justify the finding and filing of such indictments; whether he has been guilty of oppression in corruptly procuring indictments from the grand jury in said district, charging reputable citizens with crime, although there was no evidence before the grand jury which would in the least warrant such charges; whether he has corruptly conspired with other persons to spread broadcast throughout the United States maliciously false newspaper publications and reports emanating as official statements and purporting to describe results of investigations conducted by said United States attorney and his assistants with the object of destroying friendly relations between the United States and one or more foreign governments; whether he has unlawfully and feloniously abused the legal process before the grand jury in said district of New York, the Secret Service, and the Bureau of Investigation and Inquiry of the Department of Justice in furtherance of such conspiracy aforesaid; whether he has knowledge or whether there are in existence circumstances from which knowledge is imputed to him that large sums of money have been expended for or on behalf of foreign governments and of various purveyors and manufacturers of war munitions for the purpose of influencing the actions of said United States attorney in furtherance of a conspiracy; whether he has corruptly neglected and refused to prosecute men who have made the port of New York within said judicial district a military and naval base for foreign belligerent powers; whether he has corruptly neglected and refused to prosecute violations of the Federal statutes prohibiting the loading and shipment of explosives on ships carrying passengers within said judicial district; whether he has corruptly neglected and refused to prosecute violations of the foreign enlistment act and laws of the United States; whether he has corruptly used the powers of his office for the purpose of slandering and libeling peaceable and law-abiding people to their great injury; whether he has abetted, approved, acquiesced in, and permitted unlawful and oppressive misuse of subpœnas and other process before the grand juries in said southern district of New York; whether he has deprived law-abiding citizens of their legal rights, privileges, and immunities; whether he has aided, abetted, and approved unlawful expenditures of public moneys in violation of the laws of the United States; whether he has been guilty of attempts by private solicitation to influence the official actions and opinions of judges in the southern district of New York while in the performance of their judicial duties; whether he has used the powers of his office to cause and procure a discrimination in the assignment of judges to conduct trials in said district so as to discriminate against one or more resident judges; whether he has used the powers of his office to procure or assist in the procurement of judges to be imported into the southern district of New York from other districts for the trial of cases in said district by falsely representing the condition of judicial business within said district; whether he has been guilty of private solicitation with intent to influence the official acts and decisions of judges imported as aforesaid; whether he has corruptly attempted to control decisions and official actions of one or more of such imported judges; whether he has procured the assignment of one or more imported judges for the conduct of trials in the said district for the purpose of preventing defendants in such cases from receiving a fair and impartial trial at the hands of resident judges; whether he has been a party to a conspiracy participated in by his assistant district attorneys and other officials connected with the administration of justice in the said southern district of New York, for the purpose of unlawfully manipulating and controlling the selection of grand and petit jurors in connection with cases in the courts of said district; whether he has been guilty of acts by which the rights of the United States and that of individuals have been unlawfully prejudiced and the orderly and fair administration of justice defeated or obstructed in one or more instances; whether he has employed the powers of his office for the purpose of shielding and to prevent the exposure of unlawful and improper conduct of one James W. Osborne in relation to facts involved in civil litigation which was pending in the State court in the State of New York; whether he unlawfully protected the said Osborne and others from prosecution for the violation of United States laws; whether he has willfully and corruptly refused and neglected to prosecute gross and notorious violations of the United States statutes committed by said James W. Osborne and others in the city and State of New York within said district; whether he has prosecuted the office of the United States district attorney for the southern district of New York; whether he has used the powers of his said office as United States district attorney to corruptly and willfully defame, slander, and injure the good name and professional standing of law-abiding citizens of the United States to their great injury for the purpose of protecting the private individual interests of James W. Osborne; whether he has corruptly failed, neglected, and refused to prosecute persons who, while acting as witnesses for the United States in the trial of causes, committed the crime of perjury, subornation of perjury, and conspiracy in connection with the cases of United States *v.* Rae Tanzer, United States *v.* Frank D. Safford, and United States *v.* Albert J. McCullough et al.; whether he used and employed the United States grand jury in the southern district of New York for the purpose of attempting to establish records which might be used in defense of James W. Osborne, H. Snowden Marshall, Roger B. Wood, and Samuel H. Hershenstein (the last two being assistant United States district attorneys under said H. Snowden Marshall), and not for the purpose of investigation of violations of the United States laws; whether he has corruptly and willfully failed to remove certain of his assistant district attorneys who destroyed documentary evidence material in the trial of a pending case in the United States District Court for the Southern District of New York; whether he corruptly and maliciously caused to be instituted criminal proceedings against Rae Tanzer and others for the purpose of protecting James W. Osborne, a special United States district attorney and a personal intimate friend of said H. Snowden Marshall; whether he has corruptly and willfully failed and refused to present to the court the trial of cases material and important evidence and in concealing or assisting and acquiescing in the concealment or destruction of material and important evidence relating to pending cases in the United States district court for the southern district of New York; whether he is corrupt, grossly negligent, and unfit to retain the office as United States district attorney for the southern district of New York; whether he has willfully and persistently violated the laws of the United States in connection with the performance by him of the duties of such United States district attorney for said southern district of New York; whether he has corruptly and willfully withheld and failed to present before the grand jury material and important evidence in connection with alleged investigations instituted before said grand jury by said H. Snowden Marshall in relation to the cases of United States *v.* Rae Tanzer and United States *v.* Albert J. McCulloch et al. and others; whether he has corruptly and willfully refused and neglected to take cognizance of unlawful conduct of his assistant district attorneys in connection with the performance by them of official duties as such assistant district attorneys; whether he has corruptly participated in or acquiesced to the presentation to the court in trial of cases in the southern district of New York of alleged evidence which he knew to be untrue and manufactured, or in the manufacture of and attempt to manufacture such alleged evidence; whether he has produced willful injury and wrong to litigants in said district court and to citizens of the United States by his unlawful and improper conduct; whether he has been guilty of any misbehavior for which he should be impeached.

"'And in making this investigation the said committee is hereby authorized to send for persons and papers, administer oaths, take testimony, employ a clerk and stenographer, and is also authorized to appoint a subcommittee to act for and on behalf of the whole committee whenever and wherever it may be deemed advisable to take testimony for the use of said committee. The said subcommittee while so employed shall have the same powers in respect to obtaining testimony

as are herein given to said Committee on the Judiciary, with a sergeant at arms, by himself or deputy, who shall serve the process of said committee or subcommittee and shall attend the sitting of the same as ordered and directed thereby. The Speaker shall have authority to sign and the Clerk to attest subpœnas for any witness or witnesses.'"

This resolution (afterwards numbered 90) was on the same day referred by the House to the Committee on the Judiciary.

4. On the 27th day of January, 1916, the House passed H. Res. 110, which is as follows:

"[House resolution 110, 64th Cong., 1st sess.]

"*Resolved*, That the Committee on the Judiciary in continuing their consideration of H. Res. 90 be authorized and empowered to send for persons and papers, to subpœna witnesses, to administer oaths to such witnesses, and take their testimony.

"The said committee is also authorized to appoint a subcommittee to act for and on behalf of the whole committee wherever it may be deemed advisable to take testimony for said committee. In case such subcommittee is appointed it shall have the same powers in respect to obtaining testimony as are herein given to the Committee on the Judiciary, with a sergeant at arms, by himself or deputy, who shall attend the sittings of such subcommittee and serve the process of same.

"In case the Committee on the Judiciary or a subcommittee thereof deems it necessary it may employ such clerks and stenographers as are required to carry out the authority given in this resolution, and the expenses so incurred shall be paid out of the contingent fund of the House.

"The Speaker of the House of Representatives shall have authority to sign, and the Clerk thereof to attest, subpœnas for witnesses, and the Sergeant at Arms or a deputy shall serve them."

5. That Representatives CARLIN, GARD, and NELSON were appointed by the Judiciary Committee of the House a subcommittee to hear and report under the House resolution the facts as to the impeachment charges heretofore mentioned against H. Snowden Marshall, United States district attorney for the southern district of New York.

6. That while said committee were hearing testimony in New York City as to the truth of said charges, in accordance with the resolution and pursuant to authority given to them, that H. Snowden Marshall, the person against whom said impeachment proceeding was pending, without just cause published in the New York Times, a daily paper issued in the city of New York, and thereafter delivered to said subcommittee aforementioned, the following letter:

"DEPARTMENT OF JUSTICE,
"UNITED STATES ATTORNEY'S OFFICE,
"*New York, March 4, 1916.*

"SIR: Yesterday afternoon, as I am informed, your honorable committee ordered the arrest of Mr. L. R. Holme, a representative of a newspaper which had published an article at which you took offense. The unfortunate gentleman of the press was placed in custody under your orders. He was taken to the United States marshal to be placed in confinement (I do not understand whether his sentence was to be one day or a dozen years). The marshal very properly declined to receive the prisoner. This left you at a loss, and I am advised that you tried to work your way out of the awkward situation by having Mr. Holme brought back and telling him that you were disposed to be 'kind' to him and then discharged him for the purpose of avoiding unpleasant consequences to yourselves.

"You are exploiting charges against me of oppressive conduct toward a Member of your honorable body who is charged with a violation of law and of oppressive conduct on my part toward shysters in the blackmailing and bankruptcy business.

"I may be able to lighten your labors by offering to resign if you can indicate anything I ever did that remotely approximates the lawless tyranny of your order of arrest of Mr. Holme.

"The supposed justification of your order that Mr. Holme be placed in custody was his refusal to answer the question you asked as to where he got the information on which was based the article which displeased you.

"It is not necessary for you to place anyone under arrest in order to get the answers to the question which you asked Mr. Holme, because I can and will answer it. I gave Mr. Holme information, part of which he published and from which he made deductions, so that if your honorable committee has a grievance it is against me and not against him.

"What I told him was about as follows:

"I said that your expedition to this town was not an investigation conducted in good faith, but was a deliberate effort to intimidate any district attorney who had the temerity to present charges against one of your honorable body.

"I said that your whole proceeding here was irregular and extraordinary; that I had never heard of such conduct of an impeachment proceeding; that charges of this sort were not usually heard in public until the House of Representatives had considered them and were willing to stand back of them.

"I pointed out to him that you, contrary to usual practice, had come here and had held public hearings; that among your witnesses you had invited every rogue that you could lay your hands on to come before you and blackguard and slander me and my assistants under the full privilege of testifying before a congressional committee.

"I told him that you had called one of my junior assistants before you and had attempted to make it publicly appear that his refusal to answer your questions as to what occurred in the grand jury room in the Buchanan case was due solely to my orders. I said that at the time you attempted to convey this public impression you knew that it was misleading, because I had been asked by you to produce the minutes of the grand jury and had been instructed by the Attorney General not to comply with your request, as you well knew. I showed him the telegram of the Attorney General to me and showed him a copy of my letter to you, dated February 29, 1916, in which I sent you a copy of the telegram of the Attorney General instructing me not to give you the grand jury minutes.

"I told him that you were traveling around in your alleged investigation of me with Buchanan's counsel, Walsh and David Slade, in constant conference with you. I said that I believed that every word of the evidence, whether in so-called secret sessions or not, had been placed at the disposal of these worthies, and that I would be just as willing to give the grand jury minutes to a defendant as to give them to your honorable subcommittee.

"I told him that I did not share the views which seemed to prevail in your subcommittee on this subject. I said that I regarded a Member of Congress who would take money for an unlawful purpose from any foreign agent as a traitor, and that it was a great pity that such a person could only be indicted under the Sherman law, which carries only one year in jail as punishment.

"I said that it was incomprehensible to me how your honorable subcommittee should rush to the assistance of an indicted defendant; how you had apparently resolved to prevent prosecution by causing the district attorney in charge to be publicly slandered.

"I told him that I would not permit the prosecution of the persons whose cause you had apparently espoused to be impeded by you; I said that if you wanted the minutes of the grand jury in any case, you would not get them as long as I remained in office.

"You will observe from the foregoing statement that what Mr. Holme published may have been based on what I said. If you have any quarrel, it is with me and not with him.

"It is amazing to me to think that you supposed that I did not understand what you have been attempting to do during your visit here. I realized that your effort was to ruin me and my office by publishing with your full approval the complaints of various persons who had run afoul of the criminal law under my administration. Your subcommittee has endeavored by insulting questions to my assistants and others, by giving publicity and countenance to the charges of rascals, and by refusing to listen to the truth and refusing to examine public records to which your attention was directed to publicly disgrace me and my office.

"I propose to make this letter public.

"Respectfully,

"H. SNOWDEN MARSHALL,
"*United States Attorney.*

"Hon. C. C. CARLIN,
"*Chairman Subcommittee of the Judiciary*
"*Committee of the House of Representatives,*
"*323 Federal Building, New York, N. Y.*"

7. That on March 10, 1916, the said H. Snowden Marshall published, in reference to the said subcommittee heretofore named, the following letter:

"DEPARTMENT OF JUSTICE,
"UNITED STATES ATTORNEY'S OFFICE,
"*New York, March 10, 1916.*

"DEAR SIR: Referring to my letter of March 4, addressed to the chairman of the subcommittee which has recently taken testimony in New York concerning my administration of my office, I notice from the press that some persons appear to have construed my statements as directed toward your honorable committee as a whole. I beg to advise you that the criticisms in that letter were addressed to the methods pursued by the subcommittee. I do not retract nor modify any of those criticisms. But I did not intend (nor do I think my letter should be so construed) to reflect in any way upon the Judiciary Committee, nor did I question the power of the House of Representatives to order such an investigation.

"If you and the other members of your committee, for whom I have high respect, have gained the impression that my letter carried any personal reflection upon your honorable committee, it gives me pleasure to assure you that I had no such purpose.

"Respectfully,

"H. SNOWDEN MARSHALL.

"Hon. EDWIN Y. WEBB,
"*Chairman of the Judiciary Committee,*
"*House of Representatives, Washington, D. C.*"

These are the material facts in the case.

8. We conclude and find that the aforesaid letter written and published by said H. Snowden Marshall to Hon. C. C. CARLIN, chairman of the subcommittee of the Judiciary Committee of the House of Representatives, on March 4, 1916 (and copied herein in finding of fact No. 6; also in Report No. 494 copied herein), is as a whole and in several of the separate sentences defamatory and insulting and tends to bring the House into public contempt and ridicule, and that the said H. Snowden Marshall, by writing and publishing the same, is guilty of contempt of the House of Representatives of the United States because of the violation of its privileges, its honor, and its dignity.

9. We find that Mr. Marshall's testimony is an aggravation of his contempt.

COMMENT ON LAW AND FACTS.

Mr. Marshall denies any intention to insult or stand in contempt of the Judiciary Committee or the House of Representatives, but he practically concedes in his testimony his contempt for the subcommittee and his desire by these publications to bring the subcommittee into ridicule and disrepute. If this is not wholly conceded by him in his testimony, it is certainly very fully proven. He reaffirms in his testimony the views heretofore expressed by him in the letters referred to against the subcommittee, and declines to offer any apology or retraction of the offensive matter in the letters contained, but rather reiterates and reaffirms it and thereby aggravates his contempt. In our opinion it is immaterial to the determination of this case whether the defendants Buchanan and others are guilty, as charged in the indictment in the district court of New York, or not, or whether the impeachment charges against H. Snowden Marshall are true or not. Both may be guilty or both may be innocent, or one guilty and the other innocent, with effect on the findings in this case. Therefore the select committee has made no investigation nor does it express any opinion as to the merits of either of said cases. We are considering under the resolution whether or not the facts herein set forth constitute a contempt by a violation of the privileges of the House of Representatives on the part of H. Snowden Marshall. No legislative body consisting of a large number of members can move from one place to another to take testimony in cases where its power and authority or dignity is called into question. Its power in this respect must, therefore, necessarily be delegated to one of its committees or a subcommittee by a proper resolution, as was done in this case. This delegation of power to a subcommittee is lawful, and carries with it all of the authority belonging to the House in the execution of the immediate purpose for which the committee was called into existence.

Any conduct that would be a violation of the privileges of the House if directed against the House in the first place, would be a contempt against the House and a breach of its privileges when directed against one of its committees or subcommittees appointed by authority of the House to do a specific thing and acting within its delegated power and in the scope of its authority. Any other view would leave the House powerless to protect its honor and dignity and its constitutional rights. It would set at defiance the sovereignty of the people represented by the House. That the House as a representative body has the inherent power to protect itself from defamation and all slanderous and lawless conduct that would bring it into reproach and popular contempt, whether uttered or committed in the presence of the House or else-

where, has not been disputed since the case of Anderson *v.* Dunn (6 Wheaton, 204). Offensive, abusive, and defamatory language against a committee of the House acting within its authority is offensive, abusive, and defamatory against the House, and is just as dangerous to the integrity of that body as if it had been committed in its presence.

Mr. Justice Johnson, in delivering the opinion in the case referred to, Anderson *v.* Dunn, among other things, said:

"It is certainly true that there is no power given by the Constitution to either House to punish for contempts, except when committed by their own Members. Nor does the judicial or criminal power given to the United States, in any part, expressly extend to the infliction of punishment for contempt of either House, or any one coordinate branch of the Government. Shall we, therefore, decide that no such power exists? * * * But if there is one maxim that necessarily rides over all others, it is that the public functionaries must be left at liberty to exercise the powers which the people have intrusted to them. The interests and dignity of those who created them require the exertion of the powers indispensable to the attainment of the ends of their creation. Nor is a casual conflict with the rights of particular individuals any reason to be urged against the exercise of such powers. * * * That 'the safety of the people is the supreme law,' not only comports with but is indispensable to the exercise of those powers in their public functionaries, without which that safety can not be guarded. On this principle it is that courts of justice are universally acknowledged to be vested by their very creation with power to impose silence, respect, and decorum in their presence, and submission to their lawful mandates, and, as a corollary to this proposition, to preserve themselves and their officers from the approach and insults of pollution.

"*It is true* that the courts of justice of the United States are vested, by express statute provision, with power to fine and imprison for contempts; but it does not follow from this circumstance that they would not have exercised that power without the aid of the statute or not, in cases, if such should occur, to which such statute provision may not extend; on the contrary, it is a legislative assertion of this right, as incidental to a grant of judicial power, and can only be considered either as an instance of abundant caution or a legislative declaration that the power of punishing for contempt shall not extend beyond its known and acknowledged limits of fine and imprisonment.

"But it is contended that if this power in the House of Representatives is to be asserted on the plea of necessity, the ground is too broad and the result too indefinite; that the executive and every coordinate and even subordinate branch of the Government may resort to the same justification, and the whole assume to themselves, in the exercise of this power, the most tyrannical licentiousness.

"This is unquestionably an evil to be guarded against, and if the doctrine may be pushed to that extent it must be a bad doctrine, and is justly denounced.

"But what is the alternative? The argument obviously leads to the total annihilation of the power of the House of Representatives to guard itself from contempts, and leaves it exposed to every indignity and interruption that rudeness, caprice, or even conspiracy may meditate against it. This result is fraught with too much absurdity not to bring into doubt the soundness of any argument from which it is derived. That a deliberate assembly, clothed with the majesty of the people, and charged with the care of all that is dear to them; composed of the most distinguished citizens, selected and drawn together from every quarter of a great Nation; whose deliberations are required by public opinion to be conducted under the eye of the public, and whose decisions must be clothed with all that sanctity which unlimited confidence in their wisdom and purity can inspire; that such an assembly should not possess the power to suppress rudeness or repel insult is a supposition too wild to be suggested. And, accordingly, to avoid the pressure of these considerations, it has been argued that the right of the respective Houses to exclude from their presence, and their absolute control within their own walls, carry with them the right to punish contempts committed in their presence; while the absolute legislative power given to Congress within this District enables them to provide by law against all other insults against which there is any necessity for providing.

"It is to be observed that, so far as the issue of this cause is implicated, this argument yields all right of the plaintiff in error to a decision in his favor; for, nonconstat, from the pleadings, but that this warrant issued for an offense committed in the immediate presence of the House.

"Nor is it immaterial to notice what difficulties the negation of this right in the House of Representatives draws after it, when it is considered that the concession of the power, if exercised within their walls, relinquishes the great grounds or the argument, to wit, the want of an express grant, and the unrestricted and undefined nature of the power here set up. For why should the House be at liberty to exercise an ungranted, an unlimited, and undefined power within their walls, any more than without them? If the analogy with individual right and power be resorted to, it will reach no further than to exclusion, and it requires no exuberance of imagination to exhibit the ridiculous consequences which might result from such a restriction, imposed upon the conduct of a deliberative assembly."

In Nugent *v.* Beale (Smith's Digest of Decisions and Precedents, 601), the court says:

"The jurisdiction of the Senate in cases of contempt of its authority depends upon the same ground and reasons upon which the acknowledged jurisdiction of other judicial tribunals rests, to wit, the necessity of such jurisdiction to enable the Senate to exercise its high constitutional functions—a necessity at least equal to that which supports the like jurisdiction which has been exercised by all judicial tribunals and legislative assemblies in this country from its first settlement, and in England from time immemorial."

In Hinds' Precedents of the House of Representatives, volume 2, under the heading of Power to Punish for Contempt, pages 1046 to 1142, may be found the digest of the decisions sustaining the power of the House to determine what is contempt and to punish for the same. These decisions are made by the House and by the Senate and the Supreme Court of the United States. Reference is made also to Rawle on the Constitution, page 48, and Story on the Constitution, volume 1, section 847.

We find, therefore, that the House has full power to punish for contempt committed in its presence or not within its presence, by publication of matter that is defamatory against it or its committee lawfully constituted and acting within its authority. We find as stated that the privileges of the House in this case were breached by H. Snowden Marshall by the letter which he wrote to the subcommittee, heretofore referred to, and copied in Report No. 494 herein contained. This letter as a whole is insulting, defamatory, and a clear expression of contempt. The purpose for which it was written and printed was to defame—to bring into ridicule and contempt—the subcommittee of the Judiciary Committee having under investigation the impeachment charges against H. Snowden Marshall. It was as much a violation of the privileges of the House to have directed a scurrilous and offensive letter of this character against one of its committees as if it had been addressed directly to the House.

It is proper for us to say that Mr. Marshall was given every opportunity to retract or apologize or in some way modify his statements contained in the letter. Parts of the letter containing the most defamatory matter were read to him, and he was asked if he meant to still say that that was true. He reaffirmed and reasserted the same, only with the statement that it was intended to criticize the procedure of the subcommittee and was not intended as a contempt of the House. It is clear that if the House could tolerate such a construction of this letter and could tolerate such vile and defamatory language against one of its committees, it would be powerless to conduct impeachment trials or perform any other duty without living under the disgrace of the contempt that would necessarily come to a body so unmindful of its duties to the people as to permit such insult and injury.

SUMMARY.

Article II, section 4, of the Constitution says:

"The President, Vice President, and all civil officers of the United States shall be removed from office on impeachment for and conviction of treason, bribery, or other high crimes and misdemeanors."

A United States district attorney is a civil officer within the meaning of this section of the Constitution. (See Rawle on Constitution, 213; 1 Story on Constitution, 790; Bouvier Dictionary, p. 319 of vol. 1.)

The impeachment of a civil officer must be by the House of Representatives. (United States Constitution, Art. I, sec. 2.) Impeachments are judicial in their nature.

The committee or subcommittee of the House appointed to investigate the facts under an impeachment proceeding pending in the House, and proceeding within the scope of their authority to perform this duty in taking testimony, is acting for and in place of the House.

A contempt by word, act, publication, or otherwise of a committee having jurisdiction in such cases and acting within the same is a contempt of the House which appointed it, and may be punished as such.

In this case Mr. Marshall was and is a United States district attorney. He was impeached in conformity to the Constitution.

The subcommittee was appointed and had jurisdiction in the matter to make the inquiry it was engaged in.

Mr. Marshall's letter of March 4, 1916, heretofore referred to is defamatory and tends to bring the committee and House into contempt and ridicule. By the printing and publication of the same, Mr. Marshall violated the privileges of the House, was guilty of contempt, and is guilty of contempt of the House of Representatives until he purges himself thereof or is purged by punishment.

The power of the House to punish for contempt is not confined to a reprimand. Punishment may be inflicted in the discretion of the House for a period not longer than the duration of the Congress acting.

As to the method of procedure that should be followed in the House in trial of the said H. Snowden Marshall for the contempt which the committee finds that he has committed, we recommend the passage of the following resolution:

"*Resolved*, That the Speaker do issue his warrant, directed to the Sergeant at Arms, commanding him to take in custody, wherever to be found, the body of H. Snowden Marshall, of the State of New York, and to proceed forthwith to bring the said H. Snowden Marshall to the bar of the House of Representatives, to answer the charge that he, on March 4, 1916, in the city of New York, did violate the privileges of the House of Representatives of the United States by writing and causing to be published the following letter:

"'DEPARTMENT OF JUSTICE,
"'UNITED STATES ATTORNEY'S OFFICE,
"'*New York, March 4, 1916.*

"'SIR: Yesterday afternoon, as I am informed, your honorable committee ordered the arrest of Mr. L. R. Holme, a representative of a newspaper which had published an article at which you took offense. The unfortunate gentleman of the press was placed in custody under your orders. He was taken to the United States marshal to be placed in confinement (I do not understand whether his sentence was to be one day or a dozen years). The marshal very properly declined to receive the prisoner. This left you at a loss, and I am advised that you tried to work your way out of the awkward situation by having Mr. Holme brought back and telling him that you were disposed to be 'kind' to him, and then discharged him for the purpose of avoiding unpleasant consequences to yourselves.

"'You are exploiting charges against me of oppressive conduct toward a Member of your honorable body who is charged with a violation of law and of oppressive conduct on my part toward shysters in the blackmailing and bankruptcy business.

"'I may be able to lighten your labors by offering to resign if you can indicate anything I ever did that remotely approximates the lawless tyranny of your order of arrest of Mr. Holme.

"'The supposed justification of your order that Mr. Holme be placed in custody was his refusal to answer the question you asked as to where he got the information on which was based the article which displeased you.

"'It is not necessary for you to place anyone under arrest in order to get the answer to the question which you asked Mr. Holme, because I can and will answer it. I gave Mr. Holme information, part of which he published and from which he made deductions, so that if your honorable committee has a grievance it is against me and not against him.

"'What I told him was about as follows:

"'I said that your expedition to this town was not an investigation conducted in good faith, but was a deliberate effort to intimidate any district attorney who had the temerity to present charges against one of your honorable body.

"'I said that your whole proceeding here was irregular and extraordinary; that I had never heard of such conduct of an impeachment proceeding; that charges of this sort were not usually heard in public until the House of Representatives had considered them and were willing to stand back of them.

"'I pointed out to him that you, contrary to usual practice, had come here and had held public hearings; that among your witnesses you had invited every rogue that you could lay your hands on to come before you and blackguard and slander me and my assistants under the full privilege of testifying before a congressional committee.

"'I told him that you had called one my junior assistant before you and had attempted to make it publicly appear that his refusal to answer your questions as to what occurred in the grand jury room in the

Buchanan case was due solely to my orders. I said that at the time you attempted to convey this public impression you knew that it was misleading because I had been asked by you to produce the minutes of the grand jury and had been instructed by the Attorney General not to comply with your request, as you well knew. I showed him the telegram of the Attorney General to me and showed him a copy of my letter to you, dated February 29, 1916, in which I sent you a copy of the telegram of the Attorney General instructing me not to give you the grand jury minutes.

"'I told him that you were traveling around in your alleged investigation of me with BUCHANAN'S counsel, Walsh and David Slade, in constant conference with you. I said that I believed that every word of the evidence, whether in so-called secret sessions or not, had been placed at the disposal of these worthies, and that I would be just as willing to give the grand jury minutes to a defendant as to give them to your honorable subcommittee.

"'I told him that I did not share the views which seemed to prevail in your subcommittee on this subject. I said that I regarded a Member of Congress who would take money for an unlawful purpose from any foreign agent as a traitor, and that it was a great pity that such a person could only be indicted under the Sherman law, which carries only one year in jail as punishment.

"'I said that it was incomprehensible to me how your honorable subcommittee should rush to the assistance of an indicted defendant; how you had apparently resolved to prevent prosecution by causing the district attorney in charge to be publicly slandered.

"'I told him that I would not permit the prosecution of the persons whose cause you had apparently espoused to be impeded by you; I said that if you wanted the minutes of the grand jury in any case you would not get them as long as I remained in office.

"'You will observe from the foregoing statement that what Mr. Holme published may have been based on what I said. If you have any quarrel it is with me and not with him.

"'It is amazing to me to think that you supposed that I did not understand what you have been attempting to do during your visit here. I realized that your effort was to ruin me and my office by publishing with your full approval the complaints of various persons who have run afoul of the criminal law under my administration. Your subcommittee has endeavored by insulting questions to my assistants and others, by giving publicity and countenance to the charges of rascals, and by refusing to listen to the truth and refusing to examine public records to which your attention was directed, to publicly disgrace me and my office.

"'I propose to make this letter public.

"'Respectfully,

"'H. SNOWDEN MARSHALL,
"'*United States Attorney.*

"'Hon. C. C. CARLIN,
"'*Chairman Subcommittee of the Judiciary Committee*
"'*of the House of Representatives,*
"'*323 Federal Building, New York, N. Y.*"

"That the said H. Snowden Marshall, in writing and publishing said letter, was guilty of a breach of the privileges and a contempt of the House of Representatives, and that the said H. Snowden Marshall be furnished with a copy of this resolution, and a copy of the report of the select committee of the House of Representatives, appointed to investigate the charges made against him in the House of Representatives.

"*Resolved*, That when H. Snowden Marshall shall be brought to the bar of the House, to answer the charge of having violated the privileges of the House of Representatives, as afore set out, the Speaker shall then cause to be read to said H. Snowden Marshall the findings of fact and findings of law by the special committee of the House, charged with the duty of investigating whether or not the said H. Snowden Marshall had violated the privileges of the House of Representatives, or was in contempt of same; the Speaker shall then inquire of said H. Snowden Marshall if he desires to be heard and to have counsel on the charge of being in contempt of the House of Representatives for having violated its privileges. If the said H. Snowden Marshall desires to avail himself of either of these privileges, the same shall be granted him. If not, the House shall thereupon proceed to take order in the matter."

AGRICULTURAL APPROPRIATION BILL.

Mr. LEVER. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the Agricultural appropriation bill.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the Agricultural appropriation bill, with Mr. HAMLIN in the chair.

Mr. LEVER. Mr. Chairman, I yield such time as he may desire to the gentleman from Mississippi [Mr. CANDLER].

[Mr. CANDLER of Mississippi addressed the committee. See Appendix.]

Mr. LEVER. Mr. Chairman, I yield 30 minutes to the gentleman from Arkansas [Mr. JACOWAY].

Mr. JACOWAY. Mr. Chairman, when I went upon the Committee on Agriculture I was necessarily compelled to relinquish my other committee assignments. This was due to the fact that the Committee on Agriculture was designated as one of the few select committees of the House, and those composing the membership of one of these committees could not be a member of any other committee. I have never regretted my seeking membership upon this committee, which resulted in the loss of other committee assignments held by me.

THE WORK OF THE COMMITTEE ON AGRICULTURE.

When one comes to discuss the present Agricultural bill now before the House and realizes what it contains and takes into consideration that when these provisions are crystallized into statutes, and in the mind's eye views the beneficent results that will flow to every class of people, from the Golden Gate to the Atlantic, from the North to the South, he is impressed with the fact that any attempt in a limited period of time to intelligently discuss the bill as a whole could be likened unto an attempt to "grasp a huge ball upon which the human hand can gain no hold." For this reason, in the period allotted to me, at best I can only address myself to certain provisions of the bill that are transcending in importance. No bill is more important to the country than the Agricultural bill, which primarily has for its one great object the betterment of the millions of farmers who at last produces that boasted wealth of the American Republic.

THE MARKETING PROVISIONS OF THIS BILL.

It is estimated that last year the farmers of this country produced approximately $10,000,000,000 in farm products. The amount is so stupendous that it is unthinkable, and no mind is so acutely disciplined that it can even approximately know what these figures mean. There is but one way to accurately understand the sublime eloquence of these figures, and that is ascertained under the rule of comparison. I mention these matters to draw the conclusion that this great army of men who are virile and potential in the wealth they produce and upon whom at last are all those engaged in the multiplied and varied callings, avocations, and vocations in life dependent in the extreme, should receive at the hands of that Government for which they have wrought so wonderously and well every possible consideration that can legitimately fall in the category of those functions that come under the head of governmental assistance.

In some form or other, for some price or another, this $10,000,000,000 of farm products were disposed of; but the interrogatory that is ever propounded—and which has not and can not be satisfactorily answered to him that bore the heat of summer and the blasts of winter to produce it—is, Was it disposed of in an intelligent manner? From sources too numerous to detail this query has been answered in the negative—and why? Has this Government, which is our pride and boast, and whose achievements are heralded in history, song, legend, and verse, been derelict in its duty to the farmer? I answer in the affirmative; and, from my viewpoint, thus will the answer remain unchanged until the Federal Government by generous and wise appropriations and most intelligent methods inaugurates and carries to a successful consummation a system of marketing, comprehensive and far-reaching in detail, and exhaust every legitimate office within its power to find a market for that which is produced by the tillers of the soil.

On page 72 of this bill is an item occupying only three or four lines appropriating $136,600 for telegraphic tolls to find markets for that which is raised each year by the farmers of this country. This is but one of the items in the marketing features of this bill. In my judgment no section of this bill contains greater merit proportionately than these items. I have never been accused of being even in a small part a prophet, but my prediction to-day is that in a short while the day will come when these items will be written in the language of millions instead of thousands. When this is done, and the real producers of wealth can reasonably be assured that their products will command a living price and yield to them a fair remuneration for the labor expended to produce it, will the exodus from the farm to the city cease; farm life will become more attractive and agriculture will again come into her own; and into all the callings in which man is engaged will be breathed a richer and healthier breath of life.

INSTANCES OF BAD MARKETING.

We have heard much of the high cost of living, or, as some facetiously term it, the cost of high living. Would not a better term for these two expressions be found in the epigram, "The high cost of selling"? For instance, to illustrate: In the State of Oklahoma a farmer sold to a buyer for northern consumption 1,050 watermelons. The price received by all those interested in this transaction disclosed the fact that the farmer got per melon 5 cents, the buyer to whom they were sold received 30 cents, the railroad 7½ cents, and the retailer 30 cents; and the consumer paid all this cost, paying about 75 cents per melon.

The farmer got a price ridiculously too little, the railroad was overpaid, the buyer netted a good profit, and the consumer paid dearly for this delicacy. As has been well said, this form of marketing should be impossible. One of the lessons to be culled from the foregoing is to the effect that the farmer who planted the melon and who paid for the seed, who had his money in-

vested in the ground upon which the melon was grown, and who put his days of honest toil into the melon, and used his teams to haul it to the railroad, was ridiculously and discouragingly underpaid; the buyer assisted in robbing him; in a way the railroad was a party to the crime; and the poor consumer was the sad beneficiary of an archaic and disgraceful system that causes him to complain and become rebellious in company with the producer and causes both to wonder where the fault is. Let me also subscribe to the doctrine that it should be the burden of Congress to lessen the gap between the producer and the consumer, and when this is done a long way has been gone in solving this matter that is knocking at the doors of Congress for solution, and which at last is but the simplest of justice to the farmers of this country.

ANOTHER LAMENTABLE INSTANCE.

In round numbers the United States produces over a billion dollars in poultry and eggs each year—more money than is realized from the South's cotton crop. If the farmer could realize upon this in full he would be fortunate. But does he? No. Ten per cent, or $100,000,000, is lost to the farmer at the initial point of shipment, and an additional 30 per cent, or $300,000,000, is lost between the place from which it is shipped and the consumer, making a total of $400,000,000 out of a billion product. What is true of these commodities is proportionately true of every other farm product. Let me again say, and let us ever bear in mind that the gap up to the present time between the producer and the consumer is ruinously wide, and that a constant effort by Congress should be made to yearly lessen it. The unnecessary middle man should be eliminated. In most instances he is the drone in the human hive, constantly consuming off of him who is the real producer.

INNUMERABLE INSTANCES OF THIS CRIMINAL SYSTEM OF MARKETING COULD BE CITED.

In the year 1915 cantaloupes in August were shipped into Washington in such great quantities that commission merchants would not handle them at all. Then, again, in one single day in the same month, 58 carloads of peaches were dumped into St. Louis, which city in normal times can absorb about 14 or 15 carloads a day during the peach season. In speaking of Alberta peaches, it has been stated that last year approximately $60,000,000 of these peaches rotted in the orchards of Arkansas, when at the same time there were millions of people who desired and wanted these peaches, if, indeed, an intelligent system of marketing could have informed the producer and consumer of their respective wants and needs. Again, another glaring instance of bad marketing conditions in the United States, 116 carloads of apples were shipped into New York City, and this so depressed the market on apples that a shipment of apples in northeastern Pennsylvania netted a consignment of only about 17 cents a bushel after freight and commission charges had been paid. During the autumn of 1915 Virginia apple growers sold apples f. o. b. for the Glascow market for $1.25 per barrel. The barrels cost from 38 to 42 cents apiece. After the expenses of picking, sorting, grading, and packing are deducted there is left not more than 50 cents per barrel to pay for spraying, cultivation, overhead charges, and interest on the investment. Thus instances ad infinitum could be recited here to-day, but I will not encumber the RECORD nor trespass upon the time of the House to do so. The lessons I desire to present have been presented. Suffice it to say that these conditions can be found, I dare say, as relates to every farm product in every county and State of this Union. For these facts and figures I am indebted to Mr. Royal Meeker in an article contributed to the American and Economic Review of March, 1915.

THE STORY OF THE MIDDLE MAN—A SPLENDID INSTANCE OF SANE MARKETING.

When the Secretary of Agriculture, Mr. Houston, appeared before our committee last February, and was discussing the proposition of marketing, I took occasion to ask a question or so. In answering he made reference to the fact that California had evolved a most successful plan for marketing the citrus fruits, and upon investigating the matter I found, to my way of thinking, a splendidly written article by a Mr. Yoakum on the subject of marketing by California of the citrus fruits of that great State. As stated in that article—

A few years ago the citrus-fruit growers of California were a widely scattered, unorganized, and shiftless group of independent farmers. They were losing money steadily. The grower received only a very small percentage of the amount the ultimate consumer paid for the oranges or lemons of California. Some one conceived the idea of organizing all the big producers of that region into a sort of protective association. Soon the idea took hold and spread. It was diligently pushed forward by the big growers, and soon it spread to include about 65 per cent of the citrus crop. The result has been threefold. First, it has put the products of that region into every market of this country and has driven foreign fruits practically out of these markets. Second, it has made the citrus farmers of California one of the wealthiest groups of farmers in the world. Then it has given to all the people of the whole country better fruit at fair and reasonable prices. The markets are to-day supplied steadily, consistently, and certainly with the grades of fruit they need. Here and there other special farming groups have worked out similar plans. The apple growers of Oregon based their marketing campaign upon special care and skill in packing. They succeeded so well that Oregon apples in the hotels and on the trains in the very heart of some of the finest apple lands in the country, in central New York, in Michigan, in the Ozark country of Arkansas and Missouri. In this instance marketing became a science as exact and as exacting as the business of selling steel billets or farm machinery or any other product of a carefully and accurately organized industry.

I cite this instance to illustrate the extent to which organization can be carried in the selling of farm products.

Mr. Chairman, it is well known to-day that the people of the Federal Government, those who inhabit what is known as continental United States, have long since been engaging in a system of marketing that is archaic, and I might say almost criminally negligent. I am aware of the fact that much can be said upon this question. When we find that we are confronted with conditions that are lamentable, the necessary question that arises, the interrogatory that may be propounded is, What is the remedy? For several years I have been a Member of this body. I have paid decided attention to this, and attempted to get at the facts relative to the marketing system and to assist in evolving a remedy. From the reading in which I have indulged, that which I think is the remedy is incorporated in the deductions of him who said:

The first step to be taken is to organize the farmers into local cooperative associations. The object of these associations should be, first, to determine upon the crop or crops to be grown for shipment to market; second, to insist upon proper methods of growing the crops agreed upon; third, to standardize and guarantee the quality of the products shipped; fourth, to superintend the gathering, grading, and packing of the crops; fifth, to arrange for proper and sufficient means of transportation, handling, shipping, and terminal facilities; sixth, to bargain with railroads and other transportation companies for a freight rate that will be a livable rate for both the farmer and the transporter.

When these respective steps are taken and coordinated into a harmonious whole, into one great, effective, and intelligent system, I am firm in the opinion that the result we all seek will, in the main, be accomplished, and agriculture as a whole be lifted to a higher, a better, and happier status. [Applause.]

Mr. Chairman, almost daily we hear falling from the lips of the representatives of this great Government who sit in this Federal Congress encomiums upon the man who follows the plow and who uses the hoe. I wish to say in passing that I believe it is the honest endeavor of every man who has received a commission from a great people to represent his district intelligently and well, and I believe the tribute paid to the farmer by him comes from the heart and not from the lips out. [Applause.] I am somewhat acquainted with the literary accomplishments of the average Member of this House. I know that they have read extensively, thoughtfully, and well, but when I went to school I believed the proposition was laid down in rhetoric that sometimes a fact may be repeated in order that the proposition may be emphasized. In my judgment, one of the greatest men the South has ever produced is a man whose name is the household word in all sections—the great Georgian, Henry W. Grady. [Applause.] On one occasion, speaking of the dignity of agriculture and the part that the farmer plays, and commenting on the powerful factor that he is in the great equation of our national life, he in beautiful language said:

A few Sundays ago I stood on a hill in Washington. My heart thrilled as I looked on the towering marble of my country's Capitol, and a mist gathered in my eyes as, standing there, I thought of its tremendous significance and the powers there assembled and the responsibilities there centered—its Presidents, its Congress, its courts, its gathered treasure, its Army, its Navy, and its 60,000,000 of citizens. It seemed to me the best and mightiest sight that the sun could find in its wheeling course—this majestic home of a Republic that has taught the world its best lessons of liberty—and I felt that if wisdom, and justice, and honor abided therein, the world would stand indebted to this temple on which my eyes rested and in which the ark of my covenant was lodged for its final uplifting and regeneration.

In my judgment, Mr. Chairman, Grady stated at this time what he thought constituted national greatness. But later he amended his statement and drew a different deduction, and in language inimitable he said:

A few days later I visited a country home. A modest, quiet house sheltered by great trees and set in a circle of field and meadow, gracious with the promise of harvest—barns and cribs well filled and the old smokehouse odorous with treasure—the fragrance of pink and hollyhock mingling with the aroma of garden and orchard, and resonant with the hum of bees and poultry's busy clucking. Inside the house thrift, comfort, and that cleanliness that is next to godliness—the restful beds, the open fireplace, the books and papers, and the old clock that had held its steadfast pace amid the frolic of weddings, that had welcomed in steady measure the newborn babes of the family and kept company with the watchers of the sick bed and had ticked the solemn requiem of the dead; and the well-worn Bible that, thumbed by fingers long since stilled, and blurred with tears of eyes long since closed, held the simple annals of the family and the heart and conscience of the home. Outside stood the master, strong and wholesome and upright, wearing no man's collar, with no mortgage on his roof and no lien on

his ripening harvest, pitching his crops in his own wisdom and selling them in his own time in his chosen market; master of his lands and master of himself. Nearby stood his aged father, happy in the heart and home of his son. And as they started to the house the old man's hands rested on the young man's shoulder, touching it with the knighthood of the fourth commandment, and laying there the unspeakable blessing of an honored and grateful father. As they drew near the door, the old mother appeared; the sunset falling on her face, softening its wrinkles and its tenderness, lighting up her patient eyes, and the rich music of her heart trembling on her lips, as in simple phrase she welcomed her husband and son to their home. Beyond was the good wife, true of touch and tender, happy amid her household cares, clean of heart and conscience, the helpmate and the buckler of her husband. And the children, strong and sturdy, trouping down the lane with the lowing herd, or weary of simple sport, seeking, as truant birds do, the quiet of the old home nest. And I saw the night descend on that home, falling gently as from the wings of the unseen dove. And the stars swarmed in the bending skies—the trees thrilled with the cricket's cry, the restless bird called from the neighboring wood, and the father, a simple man of God, gathering the family about him, read from the Bible the old, old story of love and faith, and then went down in prayer, the baby hidden amid the folds of its mother's dress, and closed the record of that simple day by calling down the benediction of God on the family and the home.

And as I gazed the memory of the great Capitol faded from my brain. Forgotten its treasure and its splendor. And I said, "Surely here, here in the homes of the people, is lodged the ark of the covenant of my country."

These statements, Mr. Chairman, are as sublimely true as anything that was ever written in Holy Writ. When we stop to think of the multiplied millions of farmers scattered all over this country who have been the victims of an archaic, a disgraceful, and a criminal system of marketing the products of their labor, is it any wonder they make an outcry? Are they to be censured for sending petitions to Congress asking that in its wisdom Congress find some remedy for this evil? That this will be done, Mr. Chairman, I have no doubt. There has been established in the Agricultural Department a Bureau of Markets. At its head is a man for whom I entertain the greatest respect and in whose judgment I have an abiding faith, Mr. Brand. He is thorough, capable, painstaking, and, I believe, patriotic, and his heart is in his work. All through the many volumes that have been written upon this subject we find the index finger of progress pointing to a successful solution of this great problem. The farmers of this country to-day are respectfully demanding at the hands of this Congress a solution of this great problem, and when that is found, in my calm judgment, a better, a brighter, a happier, and a more progressive day will dawn for the people of the country. May I add further that when this Government inaugurates a system of good roads, a far-reaching rural-credits system, giving to the farmer money at a low rate of interest for a long period of time, and insures a reasonable market for that which the soil produces a period of development and substantial progress never experienced in this country will be seen on every hand, and all the people in all walks of life will share a lasting benefit.

In conclusion, allow me to say, God speed that day, to the end that soon will dawn the time when the relief the farmer seeks will be given him by the Federal Congress and he finds that his prayer has been answered and his dream come true. [Applause.]

Mr. HAUGEN. Mr. Chairman, I yield to the gentleman from North Dakota [Mr. YOUNG] such time as he may desire.

Mr. YOUNG of North Dakota. Mr. Chairman, I thank the gentleman from Iowa [Mr. HAUGEN] for his courtesy in yielding sufficient time for me to call brief attention to some letters just received in respect to the National Guard. They were written by men who have spent many years of unselfish service in the militia. All of them hold important positions in civil life. If the Army reorganization bill were before the House now I would like to read portions of these letters, and would do so to-day if the gentleman from Iowa [Mr. HAUGEN] were not already crowded with requests for time to discuss the bill now before the House. I must therefore content myself with printing them in the RECORD, but I urge all who are interested in building up an efficient fighting force to read these letters as they shall appear in the RECORD.

The CHAIRMAN. The gentleman from North Dakota [Mr. YOUNG] asks unanimous consent to extend his remarks in the RECORD by printing certain letters. Is there objection?

There was no objection.

The letters are as follows:

LETTER OF GEN. THARALSON.

NORTH DAKOTA NATIONAL GUARD,
Bismarck, April 11, 1916.

Hon. GEORGE M. YOUNG,
Washington, D. C.

MY DEAR MR. YOUNG: I am sorry to bother you, but I am interested in the militia bill now before Congress, and it is not a political question; it is too vital to be termed as such.

I notice in the Washington dispatches that Senator NELSON took particular pains to criticize the militia lobby, as he called it, and a couple of us in particular. I am not making an apology for being interested. I have been in the militia for nearly 27 years and know the needs as well as the condition of the guard, and you are getting more out of the guard than out of any branch of service in the United States. They work for nothing and pay their own board. What other body is doing as well?

The members of our State militia are as fine a body of men and officers as there is anywhere, and will compare favorably with any army, and with my long service I have had ample opportunity to compare them with the Regular Army, both here and in the Philippines, and our officers will show up favorably with the officers of the Regular Army of the same grade.

The members of the militia feel that they are in the service for patriotism only, as it is a detriment to every officer and enlisted man that is in it, both in a business and financial way. We, of course, admit that every man is given a uniform after he has enlisted. He pays nothing and gets nothing except the pleasure of going to drill each week, while the officers get $20 clothing allowance from the State every year after one year's service and is asked to furnish his own uniform and equipment and allowed to wear it if he attends drill and performs 80 per cent of ordered military duty, and are expected to attend camps, officers' schools, etc.

In the State of North Dakota during camp the magnificent sum of $1.75 per day is paid to a lieutenant, $2 to a captain, $2.25 to a major, and $3 to a colonel, and with this magnificent salary he is supposed to keep up his work for a year and have an equipment that is up to date. Can you imagine anything more unreasonable, and is it any surprise that our condition is not up to standard of the Regular Army, where both officers and men are paid liberally?

Last fall during the National Guard convention we picked an executive committee and, as far as the North Dakota Guard is concerned, we stand by that committee to a man. During the latter part of February the National Guard Association of our State had a meeting and by unanimous resolutions agreed to stand by the action of the executive committee of the National Guard Association. At this meeting we had the officers of the regiment, the noncommissioned officers of the staff, and three delegates from each company that had been elected by their respective companies, and in that way I think we had a very good expression of the whole guard.

While the Grain Growers' convention was in session January 19, 1916, they took up the subject of preparedness as follows:

"Whereas there is being urged an armament campaign and a vast expenditure for frenzied preparedness for war;

"Whereas there is being urged a larger standing army and a huge continental army; to expend millions to private firms for a bigger Navy;

"Whereas such an armament program, we fear, may plunge this Nation into needless wars and vast expense, and our citizens into great distress;

"Whereas the militia regiments of the various States were primarily organized to repel invasions and are as such fundamentally the nucleus of a volunteer army of the United States, and are thus by the proposal of a continental army to be cast aside as useless junk;

"Whereas we feel that there is a paid propaganda working throughout the Union to spend vast millions on increased Navy and war preparations: Be it

"*Resolved*, We, farmers and others in assembly in Fargo, N. Dak., January 19, 1916, do hereby petition our Senators and Representatives of Washington to be calm, and deliberate with care these proposals; that we ask Congress to assist the militia of the country to be equipped and increased as our ideal citizen soldiery; that we ask for an efficient Navy without the pork barrel; and that we demand the Government to build its own warships, and own and build its own factories for ammunition, guns, and other equipment for the maintenance of an Army and Navy."

I believe that with the representatives of the militia and the resolutions of the farmers we have a very good expression of the sentiment of the people of our State. The guard is not against the Army by any means; we know that should be increased, particularly in enlisted men, as the strength of the companies should be greater in times of both peace and war.

If the people are afraid of militarism they will never be afraid of an Organized Militia with some control in the State. What the people are afraid of is a big organized force, controlled from Washington, with no control in the State. The militia force is just the kind of force to prevent a war of aggression; such force will never be used in an unworthy cause, because the people in the State have direct control.

This is the reason the Constitution makers fixed it as they did. The militia is a constitutional force required by and provided for in the Constitution, and by the Constitution was made the main reliance of the country. The country has always done well under that system, and Congress will make a mistake if they abandon this constitutional force, or, I think, in assisting another force that is bound to put it out of business. I would like to see Congress put the Division of Militia Affairs in control of the militia and appropriate enough money to enable the militia to do business, and the results are bound to be good.

The continental army was repudiated, and I hardly think that section 56 of the Chamberlain bill is anything but the continental army in another form, and, as far as I am concerned, and I believe 95 per cent of the fathers in the State of North Dakota feel the same, they do not want their boys to join the continental or the Regular Army, and if the militia is to be the third in the line of defense then you are not going to have any militia, as they will not belong if their duties are to quell riots and break strikes. I believe that I am safe in saying that if you should ask any militiaman how long they would stay in the service provided they were not subject to call for service except during riots and strikes I do not think you would find any man would say that he would want any such service, and I do not believe that the militia should be used in local trouble, as in such a case you are likely to have to fight your friends and neighbors, which is the reason the militia is so unpopular with the labor unions.

As officers of the National Guard of North Dakota we have district judges, doctors, dentists, and men prominent in nearly every walk of life, and these men have only one idea in view and that is their country.

As far as the civilian camps are concerned, such as held in New York last year, they are of no value to anyone and will not bring an Army that is any use in time of need, as neither men over age or the very rich will be likely to be found in the trenches at any time.

If a man is to take two months away from his business in any one year, his employer, if he has one, will be likely to tell him that he can get along without him for the balance of the year.

I am perfectly willing to admit that the militia makes mistakes; they also make them in the Regular Army; they make them every-

where, and the only question in my mind, and I believe in the mind of every other citizen who is loyal to his country, is to get a system that will give the best protection for the least money. While our opinions may be divided on that, I think that records have proved that the National Guard is about the most economical of anything that has been given us up to this time, and conditions are too serious to cast aside the National Guard which has proven fairly good under pitiable conditions, having received no Federal support to speak of, and take up something that is not even feasible to men who have made a study of the subject.

I do not want you to think I am attempting to tell you what to do, *but simply* to give you our views and hope that you will take them in the same spirit that they are given.

The officers of the guard are not jealous, as charged, and men as a rule are not jealous of losing a job that brings them nothing but trouble, and we expect and ask nothing but partial pay for the work we perform, and personally I am old enough to escape army service should I so desire, and I expect to sever my connection with the guard during the next year or two, but I am interested in it, having spent the best part of my life in it.

With kindest personal regards, and hoping to see you when you come to the State, I remain,

Yours, very truly,

T. H. THARALSON.

LETTER OF COL. FRAINE.

Mr. YOUNG of North Dakota. Col. J. H. Fraine, in command of the First Regiment, says in part:

Perhaps no man in the State is better known as a "preparedness" crank than I am, and I assuredly want to see the most efficacious preparation we can get, but I don't think we should discard the tools we have until we are assured of being able to get some others somewhere.

If it is the intent to have compulsory military training in this country, and the Chamberlain bill will so provide, then I am for the so-called volunteer army, because then we can get it, but unless we have some compulsory provisions we can't get the men and therefore the plan will fail, and meanwhile the result to the guard will be that it will have been smothered to death and will also be out of existence.

LETTER OF MAJ. HENRY.

Maj. F. S. Henry, State land commissioner, says in part:

The National Guard of North Dakota, as well as in the United States, is against Senator Chamberlain's bill, especially section 56, and we feel it is a slap at the guard and in time will do away with our organization. It does not seem to me that the majority of the members of the Senate of the United States understand the real conditions. To my mind it is either a question of sink or swim and it is up to the Government of the United States at this time, we feel, that the guard be recognized and the young men who give their time in training themselves for efficient service should be given some encouragement. The officers of the National Guard are not asking for remuneration and do not insist on any favors in the Congress of the United States, but we do feel that the men, the young men especially, who attend drills four times a month during the year should be paid by the United States for this service, and every encouragement that can be given them should be done.

CAPT. RITCHIE'S LETTER.

Capt. David S. Ritchie, of Valley City, N. Dak., a prominent lawyer, says in part:

There is not a guardsman whom I know but who is whole-heartedly in favor of national preparedness. In fact, when you consider that the guardsmen put in years of service, give their time and their money for the sole purpose of acquiring, or endeavoring to acquire, a military knowledge in order that they may give to the Nation in time of need intelligent service, that they have given this time to the Nation without cost to it, is it not rather a crime to say to them that they are actuated only by selfish and mercenary motives when they honorably act to perpetuate and to increase the efficiency of their organization. There is not a guardsman whom I know but who realizes that in its present condition the National Guard does not represent an efficient military force, but there is not a guardsman, nor do I believe there is an officer, in the Regular Establishment who has in any way been associated with the guard but who realizes at present that the National Guard, under proper conditions, can be made into a unified, efficient military force. The first step necessary will be to federalize it. Make it subject to the control of proper Federal authority at all times. We feel that the question is one of federalization of the National Guard, and not one of maintenance of the officer, of several adjutant generals. We also feel that the National Guard should be given preference over a volunteer army or continental army, and this position is one which is not taken without reason. The advantages which the National Guard federalization plan of to-day holds over a volunteer-army plan will be found in the fact that the National Guard is now organized. You have the several military units with their full organization. It has officers and men which will form a nucleus upon which to build. Having these things, it only remains to federalize it and for Congress to provide for a uniform system of training and for uniform government and control. With such steps taken, having the frame of organization with which to work, the guard can be welded into a compact and efficient whole. The objection of to-day is that it is composed of 48 separate and distinct armies, and that would be overcome.

On the other hand, with the Federal volunteer army it would be necessary to start to perfect an organization beginning at the bottom and to first obtain the material with which to build. This, of course, will be a very serious matter. Another matter which should be taken into consideration is that in constructing your volunteer army—that is, in organizing it and giving to it the proper instruction—it will be absolutely necessary to use officers. Then the question is, Where are these officers to come from? Certain it is that there are not now sufficient officers in the Regular Establishment to properly officer the now existing organizations, so that it will mean a large increase in the commissioned personnel. To this we have no objection, but fundamentally we lay as a reason why the continental army could not be successful the fact, which may not be known to the Regular Army officer and which is probably not well known to anyone but a National Guard company commander, they they are going to have great trouble securing enlistments, for the reason that when a man enlists it will be necessary for him to take his training in camp each year, and this will result in the losing of a civil position. The men are hardly patriotic enough to enlist in the volunteer army in time of peace and by so enlisting lose their means of livelihood. At this point I wish to say that, as a company commander in the National Guard, I do not find that the young men themselves have any objection to enlisting and receiving training, but, on the other hand, rather desire to do so; but, as against this, we find their employers objecting, saying that it takes altogether too much of their time; and I know of a great number of instances where the guardsman has lost his position by reason of going to the camp of instruction. It might be well to insert in the bill some provision protecting the enlisted man in his position.

Now, then, if the officers detailed for instruction to the volunteer army, the money used, and the time given were detailed, used, and given for like purposes in the National Guard would not the National Guard be brought up to a proper state of efficiency? What we need as a guard is instruction, uniform organization, and Federal control, and I am satisfied, given these things, that we have sufficient gray matter to make ourselves proficient.

JUDGE HANLEY'S LETTER.

Capt. James M. Hanley, of Mandan, N. Dak., a judge of the district court, says in part:

In regard to the constitutional objections offered to the militia, these are greatly magnified. The militarism that the people fear is a large force controlled at Washington and not answerable to the people—that is, the State—and the Constitution makers undoubtedly had in their minds the thought—when they left part of the control of the militia in the States—that it was a safeguard against the force being used in a war of aggression or for any purpose of which the people did not approve. I think the Congress should hesitate before this constitutional force is abandoned; and, undoubtedly, the continental-army scheme, if adopted, would put the militia out of business.

Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from North Dakota asks unanimous consent to extend his remarks in the RECORD. Is there objection? [After a pause.] The Chair hears none.

Mr. HAUGEN. Mr. Chairman, I yield 20 minutes to the gentleman from Illinois [Mr. STERLING].

Mr. STERLING. Mr. Chairman, I regret that this bill has no provision for Government aid for the production of atmospheric nitrogen. The question of an adequate nitrogen supply is one of the utmost importance at this time. The problem presents two aspects, the military aspect and the agricultural, both of which stand out with such importance that I consider it the duty of the Government to do something to encourage industry along this line, and a failure to do so is a dereliction of duty.

A sufficient nitrogen supply is one of the most important elements in any program of preparedness which may be adopted. Whatever this Congress may do with reference to an Army and a Navy, all will be futile unless adequate steps are taken to supply the Government with gunpowder. Our great battleships might sail the seas and monster cannon tower above our fortifications, they are but mere toys, without explosives.

Congress may plan to train the young men of the country in the tactics of war and furnish them with uniforms and burnished guns, yet that would not constitute an Army unless the Government is prepared with an amply supply of powder. There is no other factor so absolutely essential in the composition of an Army as that.

Nitrogen is the essential ingredient in all explosives used in warfare, and at the present time it may be abundantly obtained from two sources. One is the natural deposits on the plains of Chile; the other is the atmosphere. For nearly 100 years the entire world has relied upon Chile for its main supply of sodium nitrate from which powder is made. There is no other place in all the world where it has been found in deposit in quantites available for commerce, either for military or agricultural uses. It is now well known that the Chilean deposits are not inexhaustible. Surveys show that at present rates of exportation from that country, the supply will cease before the end of the present century; and if the consumption increases in the future as it has for the past 10 years the supply will be exhausted by the middle of the century. The United States has looked to Chile for its nitrogen supply. In 1909 we imported 353,000 tons at the cost of more than $12,000,000, and these imports have increased from year to year until in 1915 we bought of Chile 577,000 tons of nitrate of soda at a cost of more than $16,000,000. The cost per ton has ranged from $28 to $36, exclusive of the cost of transportation and export duties imposed by the Chilean Government of $12.54 per long ton.

Mr. Chairman, I desire to place in the RECORD at this point a letter from Secretary Redfield, giving information concerning our trade in Chilean nitrates:

DEPARTMENT OF COMMERCE,
OFFICE OF THE SECRETARY,
Washington, March 24, 1916.

MY DEAR CONGRESSMAN: I have before me your letter of March 23 requesting information relative to the annual imports of Chilean nitrate into the United States, the prices per ton, and the Chilean export duty on nitrates.

In reply it affords me pleasure to transmit the following statement, which shows the imports of nitrate of soda into the United States from July 1, 1908, to January 31, 1916, with the import value per ton for the periods stated:

Period.	Long tons (2,240 pounds).	Values.	Average import value per ton.
Fiscal year ending June 30—			
1909	353,494	$12,583,417	$35.59
1910	550,495	16,874,602	30.65
1911	546,525	17,101,140	31.29
1912	481,739	15,431,892	32.03
1913	589,136	20,718,968	35.17
1914	564,049	17,950,786	31.82
1915	577,122	16,355,701	28.34
Six months ending Dec. 31, 1915	440,375	12,997,734	29.52
January, 1916	90,534	3,223,869	35.61

The average import price is based on the wholesale price in the principal markets of the country from whence imported at the time of exportation to the United States. It is exclusive of the Chilean export duty amounting to 3.38 gold pesos per 100 kilos, the equivalent of $12.54 per ton of 2,240 pounds. I regret that the department has no information respecting the actual prices paid during the period in question by domestic importers of nitrate of soda. The Chilean export duty on that article, about which you inquire, is given in the first sentence of this page.

Very truly, yours, WILLIAM C. REDFIELD,
Secretary.

Hon. JOHN A. STERLING,
House of Representatives, Washington, D. C.

European countries have drawn on the Chilean supply much more heavily than has the United States. England and France have been large users of nitrates from that source. Germany has relied on Chile prior to the present war for its supply of sodium nitrate, and has required more than any other nation, 80 per cent of which it has used for fertilizer.

Frank S. Washburn, of New York, president of the American Cyanamid Co., in an article by him on the subject of "Facts in the nitrogen case," states that Germany imported during 1914, up to the outbreak of the war August 1, more than 800,000 tons, and that her army captured at Antwerp 200,000 tons more, and that she had consumed during the first year of the war the entire amount of this vast supply in the manufacture of explosives. It is said that Germany alone has consumed during the war gunpowder at the rate of a million dollars per day. The allies combined, of course, have consumed a great deal more than that, and that all of the principal warring nations are now engaged in the production of nitrogen from the atmosphere, from which they get the nitric acid consumed by them in the manufacture of powder.

Thus it may be seen that the military aspect of the nitrogen problem is of wonderful importance. It seems to me it is of equal, if not of greater, importance in the consideration of our national defense than any other single question. If the time should come when we would be engaged in war with a foreign power, we would be helpless unless we were prepared with an ample supply of explosive-making material. We might be able to secure it from the mines of Chile. If, however, our enemy should drive our ships from the seas or our Navy should be engaged in other parts of the world or in defense of our coasts, we would be cut off from this supply, or if for any cause the Panama Canal should be out of commission and our ships would be required to carry our needed supply around that great southern continent, we would be placed at a great disadvantage in the conflict. I submit in view of the situation, as we can see it now in the light of the European war, it is not prudent for our Government to delay the hour when it makes itself wholly independent of the world for its supply of explosive-making material.

It is true that there has been developed in this country a source of nitric acid as a by-product in the production of coke. This source, however, is uncertain and fluctuating, and would barely produce enough of nitric acid to meet the demands for other than military and fertilizing purposes. The supply from that source, of course, is limited by the amount of coal used for coke production. Mr. Washburn estimates that to produce the minimum amount of nitric acid needed in times of war, which he places at 180,000 tons, from coal alone would require an investment of $100,000,000 in coke-oven plants and 27,000,000 tons of coal per annum. To provide ourselves with this necessity from that source in time of war would be at such an enormous cost that it could not be considered.

Let us consider briefly the agricultural aspect of the problem. This phase of the question is of equal importance with the military aspect, and much more constant. The nitrogen supply is already becoming one of utmost importance to the agricultural interests of the country, and growing more so each year. The three great soil essentials that concern the American farmer are potassium, phosphorus, and nitrogen. The chemist tells us that in a large part of the American soils devoted to food production potassium is found in enduring quantities, and that phosphorus may be supplied from the inexhaustible mountains of phosphate rock contained within the territorial limits. Then nitrogen remains as the limiting factor in food production, unless nitrogen may be obtained in enduring quantities and in usable form. The older settled lands of the world realize this more forcibly then do we, yet in America agriculture has already abandoned once productive fields in search of newer soils where nature's supply of nitrogen has not yet been impaired.

The farmer of the Middle West has commenced to realize the limitations of his soil in this respect and has stood off disaster by the production of legume crops which have gathered nitrogen from the air and stored it in the soil. But there is a limitation to that process. The production of legumes for the sole purpose of supplying nitrogen is expensive. It is well enough so long as nitrogen is produced in that way simply as a by-product in the making of legume feeds for live stock, but when he gets beyond that point and grows legumes for nitrogen alone he is paying a very high price.

It has been demonstrated that nitrogen as a fertilizer has had great influence in determining the productive cost of food. In England, where its necessity has been recognized for many years, the yield of wheat per acre has been nearly three times that in the United States, and Germany has produced on half the acreage of agricultural lands nearly twice as many bushels of wheat, oats, rye, and barley as has this country. On the experimental fields of Rothamstead, England, by the use of nitrate of soda the yield of wheat was increased from 12 to 36 bushels per acre, and in this country, at Briar Cliff farm in New York, the hay crop was increased from $15 to $28 by the application of sodium nitrate to the amount of $2.62 per acre. By experiments in the State of Indiana in 10 counties the yield of wheat was increased on an average of 11.6 bushels at a cost of $3.67 per acre, and in 37 experiments in the State of Illinois in 1913 the average increase was 5.2 bushels of wheat per acre, which increase was valued at twice the cost of the nitrogen fertilizer that was used.

It has been demonstrated beyond question that already the soils of America are in need of nitrogen, and that that need is increasing and will increase from year to year until American production of foodstuffs will be far less than it is to-day and the cost of living thereby proportionately increased unless the soil is restored to a more productive condition by the application of this plant food. Much discussion has been had in recent years regarding the high cost of living and many plans devised or suggested whereby it may be reduced. I have no doubt but what our transportation and trade systems have had much to do with this great increase in the prices of foodstuffs. The primary reason, however, lies in the fact that the growth of population has been much more rapid than the increase in the production of food. Population will continue to grow, but the day is near when production will cease to grow at all, but, on the contrary, will be diminished on account of the impoverished condition of the land.

It is plain that very soon the source on which we have relied for nitrogen will fail. The Chilean supply can not last but a few years, and as that supply grows less the price to the consumer is bound to increase.

For these reasons I urge the early consideration of Government aid for the production of nitrogen. I do not mean that the Government should undertake to engage in the business of nitrogen production on its own account. I do believe, however, that it ought to demonstrate to private enterprise that nitrogen can be produced from the atmosphere in such vast quantities as to supply the needs of the Government for military purposes and the farmers of the country for fertilizing purposes. Science has already proceeded far enough to demonstrate the fact that such a thing is entirely practical. But it is a new field, and private capital hesitates to venture until it can be shown that nitrogen may be produced in that way at a profit in competition with imports coming from Chile. We can not afford to wait until those deposits are entirely gone. We ought to see to it that the industry is sufficiently established before that time arrives, so that we may be able, independent of the world, to supply our Government and our people with an ample supply of life-giving and life-preserving nitrogen.

Scientists have weighed the atmosphere surrounding the earth and can tell us the weight of a given volume. We know that 79 per cent of that volume is nitrogen, and they say that there are 4,000,000,000,000,000 tons of it in the atmosphere and that above every square mile of the earth's surface rests 20,000,000

tons, or 7 tons to the square yard. Nature has placed it there for the use of man, and it remains now for him to deduct it in form for his many uses.

I do not pretend to have knowledge of what is the best plan on which to proceed. We all know that the first requisite is cheap power. At the present time it is certainly not practical to make nitrogen from the air by steam power; and wherever it has been made from that source, and is now being made, at a reasonable cost, it is by the use of hydroelectric power. Norway, with her immense water power, is successfully engaged in the fixation of atmospheric nitrogen. The only industry on this continent in that line at the present time is that of the American Cyanamid Co., in Canada, located there, as I understand it, because it could get cheaper water power on that side of the Niagara than on this side.

The first step, then, in the United States looking toward the development of this industry is cheaper water power. We have water power in vast abundance which I believe might be rapidly developed if the Congress of the United States would extend more liberal laws so as to encourage capital to invest in these enterprises.

There is now pending in this House a bill from the committee of which I am a member which it is believed will encourage the development of water power. It is folly for the Government to hedge its control of waterways about with stringent laws. They ought to be sufficiently liberal as to invite capital to develop this power to some useful purpose, to promote cheaper production along all lines of manufacture. There is no such thing as exhausting the water power contained in the waterways of the country, and the sooner they are made useful the sooner will their influence be felt in the cheaper cost of living.

Men of competent understanding have proposed plans for the use of water power in the production of atmospheric nitrogen. Some of them certainly are feasible, and the Government can only determine the most practical way by careful experiment.

Persons seemingly qualified to judge of the requirements of the Government in times of war have estimated that the Government should have available 180,000 tons of nitric acid per annum for military purposes or ready means whereby that amount could be secured quickly. A plant capable of producing so much would be maintained at a vast expense in times of peace. Mr. Washburn's plan, which I think has been suggested to some of the committees of this House, combines a private plant with a governmental plant, which in times of peace could be utilized in the manufacture of fertilizers. The following is the detailed statement of such a plan found in the paper by Mr. Washburn above referred to:

First. The Government is to develop 100,000 primary hydroelectric horsepower at any place which will serve the military and commercial purposes to which the power is to be applied. This would call for an installation of 125,000 to 130,000 horsepower capacity measured on the switchboard, which taken at an assumed installation cost of $100 per horsepower would amount to $12,500,000 to $13,000,000. The Government is to own the entire plant.

Second. Private capital is expected to construct at an estimated cost of $23,000,000, including working capital, a fertilizer plant, rent the requisite hydroelectric power for its operation from the Government and pay 3 per cent on the Government's investment for developing the same together with the cost of operating the power house. The fertilizer plant is to produce a high-grade, concentrated universal fertilizer equivalent in plant food constituents to 2,200,000 tons of standard 2–8–2 fertilizer goods.

Third. Private capital is to install at an estimated cost of $1,000,000 the buildings and special appliances necessary to introduce a subsidiary process, exclusive of the fertilizer processes, by which 20,000 tons of nitric acid per annum would be produced for the Government's peace-time requirements.

Fourth. The Government is to install at an estimated cost of $5,000,000 the buildings and special appliances necessary to introduce a subsidiary process, exclusive of the fertilizer processes, by which the plant will stand in absolute readiness to produce 90,000 tons of nitric acid per annum and have all the buildings and everything, except easily procurable articles of merchandise, in store on the premises necessary to complete the plant within three months for an additional 90,000 tons.

Fifth. The Government is to have nitric acid at all times in such quantities as it may desire at the cost to the manufacturer for furnishing it plus such additional amount as profit as the Secretary of War, in his judgment, may determine from time to time as reasonable.

Sixth. Provisions are to be made against exorbitant or discriminatory prices being charged for the fertilizer produced under this plan.

Seventh. Provisions are to be included by which 45,000 to 90,000 tons nitric-acid capacity shall be in readiness within 18 months at moderate increased expenditure if any at all.

I venture these remarks for the purpose of calling attention to the importance of this great problem of nitrogen production with a hope that they may help to arouse interest in the question. I am convinced that if the Government is to make itself independent in its nitrogen supply for military purposes and the agricultural interest placed in a position where they can command nitrogen fertilizer in the near future, the Government itself must make the start. [Applause.]

Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois? [After a pause.] The Chair hears none.

Mr. LEVER. Mr. Chairman, I yield to the gentleman from Wisconsin [Mr. REILLY] such time as he may wish.

[Mr. REILLY addressed the committee. See Appendix.]

Mr. LEVER. Mr. Chairman, I will ask the gentleman from Iowa [Mr. HAUGEN] to consume some of his time. I will close with another speech.

Mr. HAUGEN. I yield 10 minutes to the gentleman from Ohio [Mr. FESS].

The CHAIRMAN. The gentleman from Ohio [Mr. FESS] is recognized for 10 minutes.

Mr. HAUGEN. Mr. Chairman, how much time have I remaining?

The CHAIRMAN. The gentleman has eight minutes left.

Mr. LEVER. How much time have I left, Mr. Chairman?

The CHAIRMAN. The gentleman has 27 minutes left.

Mr. FESS. Mr. Chairman, I want to invite the attention of the House to two recent statements. One is from the Comptroller of the Currency and the other is from the society called the American Society of Thrift. The one is a governmental publication and the other is the publication of a voluntary association. The one came to my office this morning, and I am sure copies of it have been examined by many Members of the House. It states that the banking resources of the national banks of the country are nearly $14,000,000,000. That sum will exceed the banking resources of the famous Bank of England, the Bank of France, the Bank of Germany, of Russia, of Switzerland, of Japan, all combined. The resources in the national banks, according to this statement, are nearly $3,000,000,000, or nearly $1,000,000,000 more than the law requires. The surplus and undivided profits will reach over $1,000,000,000.

That is a remarkable statement of simply one branch of the banking business of the country. It does not include the vastly greater number of trust companies and private banking firms, which together supply only a fraction of the country's wealth. Now, keep that in mind as I read this contrast from this report of the American Society of Thrift. Sixty-six out of every 100 people of the United States die penniless. Twenty-five out of every 100 have been able to accumulate $1,300, so that they would have that amount when they died. Of course, this does not mean what they earned, but what they saved. Nine per cent had accumulated and saved $5,000. Two per cent had accumulated sufficient to be classed among the well-to-do, so that they lived off the income. Ninety-eight per cent live upon what would be classed the daily accumulation or wage or salary. And this is the most remarkable statement of all: Ninety-seven per cent of those who reached the age of 65 depend, in part at least, either upon relatives, friends, or some charitable movement for clothing, shelter, and food.

Gentlemen of the House, I have not been able to verify these figures. I have not had time nor convenience to do so. They are stated by the association as coming from the census reports of the Government, and I hesitate to quote them without having been able to go into a verification of them. However, they are startling in the mere fact that they have been published. They have been made the basis of many editorials of the press of the country. I dismiss the question as to whether they are true, and assume that there is some basis of fact for the statements. What is the cause? That is one of the pertinent questions which enlists public attention.

Mr. SLOAN. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Ohio yield to the gentleman from Nebraska?

Mr. FESS. I would like to yield, but I want to make a statement. I very much dislike to decline to yield. There is no discourtesy meant.

Mr. SLOAN. Oh, no.

Mr. FESS. The chairman of the committee made the statement that the tenantry system seemed to be increasing. I asked him the question whether that propertyless class was not also increasing in the towns. I am rather of the opinion that the class that owns no property is increasing both in the country and in the towns, although I can not verify it, not having the chance to go into the question. There are localities where well-to-do farmers move to the town and rent their farms. This increase of tenantry may not indicate an increase of any class. Many members of this committee, in speaking on the Agricultural appropriation bill, have spoken of conditions on the farm that ought not to be, and have suggested various remedies, so that I think I can safely say that many people in the country are inclined to lay the cause of this condition at the door of the Government, or at least would suggest that the

remedy is legislative enactment. One lays the cause to the lack of distribution, another to methods of transportation, and still others to monopolistic control of farm production. Naturally, men so convinced will look to the Government for remedies. I am not one of those who attribute the cause to the Government, and I will not agree altogether with those who think that its remedy is in legislation. We are now, and have been, suffering with overlegislation. It has almost become an epidemic among our people. However, I do think that suggestions made by those who have discussed this bill are rational and many of them constructive, and that probably those remedies will assist, but I do not think they will cure. A rural-credit system would assist. Better transportation to assist in marketing will assist. Governmental control of monopoly will also help. But regulation must not give way to strangulation. I have noticed that the tendency in legislation has been, and now is, paternalism. Anyone who will study the enactments of the last 50 years must be impressed with this tendency in Government, having the Government do for the community or the individual. A simple recital of the measures adopted in the last 20 years, or even the various bills introduced in this and the last Congress, tells the same story. I also notice that there is a rapid growth in socialism in the country. Nobody can close his eyes to that fact. Those voting the Socialist ticket do not, by a long way, measure the Socialist sentiment in the country. It is very apparent, and there are many people in the country who believe that socialism is the remedy for what they call this inequality.

I do not share in that conviction either. Equality will not be produced, neither will inequality be promoted by governmental decree. Human nature is not the result of laws of Congress. I believe that much of this inequality must be laid, first, to the lack of devotion or application to the utilization of one's energies. Good luck is not a law of success. Employment of talent, conservation of energy, and application to the work at hand are conditions of success. Much of this inequality is now and has been due to a lack of organized thrift. The country does not stimulate the maximum production of her people. This is especially true on the farm, as may be noted when we compare the yield of our acres with that of Germany. The same conclusion is noted in our system of industrial training. In the Province of Bavaria there are more vocational schools than throughout this entire country.

I believe that very much of this inequality is due to the wicked waste, not only of the individual but of the community, of the State, and of the Nation. On the farm this is noted by the treatment of the farm machinery, stock, gathering crops and various other items. I also believe that much of it is due to the false standard of high living which breeds extravagance that is serious. This is so apparent that it might be classed as a national characteristic.

Now, I speak with reference to young men I have watched in my own community, to say nothing of our young women. Somebody sets the standard. He can afford it because he may have been born with a silver spoon in his mouth; has little else to do but to spend money. Others come along who can not afford it. They want to wear the same clothing, they want to have the same indulgences, they want to spend their time in amusement, and every bit of it costs not only money but it costs energy. They make no connection between income and outgo. I think right there is a source of much of this propertyless ones in the community. Anyone who spends more than he receives will die not only penniless but the subject of charity.

I know this is not popular to say; I know people will take offense at this statement, but I think that this country is a country of open opportunity, and that there never was a time before where the young man with equal energy has such an opportunity to make good as to-day.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. HAUGEN. Mr. Chairman, I yield to the gentleman three minutes more.

Mr. FESS. I am grateful to the gentleman. A young man was walking out of a New England State, and he found that the night was overtaking him, and he could not get to his destination. He stopped at a farmhouse, asked the farmer if he could do some work to pay for his lodging, and said that he could not get to his place that night. The farmer said, "No; you do not need to do any work; you can come in here; you are welcome." The boy said, "No; if I can not find something to do to pay for my night's lodging, I will go on." The farmer was impressed and said, "Well, it is dark, but I will take a lantern and go out to the woodpile, and you can split up some wood." He held the lantern, and the boy split some wood and stayed with him that night and went on in the morning. That was the famous George Peabody, who became in later life the country's great philanthropist. He started with nothing. This story can be duplicated many times. It finds a place in the details of every department of American life.

I remember distinctly the story of a boy passing under an awning between boxes and barrels of groceries when a lady and gentleman passing by were obstructed. The boy was standing under the awning, and she said, "Get out of the road and let people pass." He stepped out into the rain. It attracted the attention of the gentleman, and he said, "Come in out of the rain, my lad." He stepped in, and the man put his hand on his head and said, "Where do you live?" "I have no home." "Where did you come from?" "Down town." "Where is your father?" "I don't know, sir." "Where is your mother?" "She is dead." "What are you doing here?" "I am looking for work." "What can you do?" He held up his hands and said, "Anything my hands can find to do." This man said, "Will you go with me?" The boy replied, "If you have anything for me to do." And he took him to his home. One night, talking by the fireside, he asked this boy whether he had any ambition or not, and the boy replied, "I would like to be a scholar and I would like to be a gentleman." And the man was wise enough to say to him, "Well, you can be both. You do not need to be well born; you do not need to refer back to your father or mother. You can be both; opportunity is open for you." [Applause.]

When that boy was one day cuffed by the proud woman, she called him a vagabond. That little orphan boy held his hands up and said to the woman, "Please don't call me a vagabond." She reminded him that he was a vagabond; that he had no home, no father, and no mother, and she said, "You are a vagabond." And he said, "No; a man told me that anybody that had two hands and a brain can do something, and I have both." That boy came to be one of the rulers of the country which gave him birth. The Government can do nothing more than to keep open opportunity to the citizen. While the citizen must learn that success must be with him who embraces the opportunity and who is willing to pay the price of close application to duty, frugal living, and a rational conserving of his powers. This is the cure of poverty; legislation will not reach it. [Applause.]

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. LEVER. Mr. Chairman, I yield 20 minutes to the gentleman from New York [Mr. LONDON].

Mr. LONDON. Mr. Chairman, on the 19th day of February of this year I introduced a resolution in which I ask for the appointment of a commission to prepare and recommend a plan for the establishment of a national insurance fund and for the mitigation of the evil of unemployment.

We had a most interesting hearing on the resolution before the Committee on Labor of the House. Men of all political faiths appeared in support of the resolution and urged the need of a comprehensive study of the subject.

Up to 1912 there was only one political party which grasped the importance of dealing with the problem of unemployment, with health insurance, and old age pensions from a national standpoint and as national conservation measures. In 1912, Mr. Roosevelt, in his anxiety to smash the old Republican Party, which in his opinion had survived its usefulness, was gathering together planks for a platform which should bring to his support all the discontented. He consulted a number of men who had made a study of social problems, among them a well-known Socialist, for planks dealing with the social problem. Among these planks we find some dealing with the problem of social insurance.

The phrases "social legislation," "social conscience," "social insurance," are rather new to America. There is no country in the world in which the spirit of individualism is so strong as in the United States. Individualism is the narrow application of the doctrine of self-help. "Help yourself, and never mind at whose expense," is the slogan of this philosophy. This kind of individualism assumes that every man can improve his condition and take care of himself and his family and can rise out of poverty and destitution by personal effort. Any effort on the part of the individual to invoke the aid of the community, and particularly of the law, is condemned as repugnant to the American idea. Before our very eyes men have risen from poverty to opulence, from positions of insignificance to positions of prominence. We have financiers who started as shipping clerks. We have lawyers, judges, statesmen, who started as office boys. And with these men as a practical example of what America and Americans can do, social legislation, social insurance, social problems, are to many utterly unintelligible expressions.

This Republic had its birth in a rebellion against an oppressive Government. Jefferson's theory that that government is best which governs least expresses perhaps better than all the books

on liberty the theory of American individualism. When this doctrine was proclaimed there were some men in America who were richer than others, but there were no extremely rich nor extremely poor. At least, everyone had a chance. The resources of the country were untouched. There were new lands to be occupied; opportunities were unlimited; a strong and energetic man was bound to succeed. It was a fair contest and a fair race, in which the man with ability survived.

No one will seriously argue that we have the same state of affairs to-day. Some industries have reached a stage of monopoly. No matter how able, how energetic, how self-reliant the individual may be, he can not hope to succeed in the race against a powerful aggregation of capital. He is no longer competing with an individual who is a little richer than he is. He is called upon to compete with an aggregation of power in the form of organized capital, a tremendous, overwhelming force beyond the power of any individual to successfully contend with, and surely beyond the power of the individual to overcome.

The doctrine of self-help must be revised in the light of this new phenomenon. Instead of the good, sound philosophy which spurred on every man to exert himself to the utmost for himself and his family, so that he might some day, through thrift and intelligence, reach a state of independence and be his own boss, there has come another kind of self-help. Many an able man finds that he can help himself only by placing himself in the service of organized capital. It has come to be the highest ambition, and this ambition is being fostered, to become a corporation manager, the editor of a paper backed by a powerful corporation, a corporation lawyer—in short, some kind of a corporation tool. And there is growing up a peculiarly servile and contemptible type of man, and the most contemptible of them all is perhaps the corporation lawyer.

Who is the great lawyer nowadays? Is it the man who has contributed a new thought to jurisprudence or a higher ethical conception? Is it the man who has through the channels of legal activity enlarged the liberties of the people? No. Our great lawyers are the men who have received big fees in the service of organized capital. They are the men who guide the destinies of corporations and promote their interests as against the interests of the people.

Mr. McCRACKEN. Mr. Chairman, will the gentleman yield?

Mr. LONDON. Yes.

Mr. McCRACKEN. Would the gentleman apply that to Mr. Brandeis?

Mr. LONDON. Mr. Brandeis is one of the few lawyers who have tried to make the profession of the law nobler. He has applied his talent to prove the constitutionality of a law regulating the hours of labor for women. He has tried to bring the spirit of life into the dead letter of the law. He has broken away from the old traditions of the corporation lawyer and has acted as the lawyer of the people, as the lawyer of the future.

Mr. HUDDLESTON. Will the gentleman yield?

Mr. LONDON. I will.

Mr. HUDDLESTON. Is not that fact the reason why Mr. Brandeis is being opposed for confirmation?

Mr. LONDON. That is the principal reason; and if not on his own merits Brandeis should be confirmed because of those who oppose him. [Applause.] When Taft and Choate and Root oppose a man, be sure that man represents a noble idea and noble principles. [Applause.]

But enough of this.

Modern industry is organized on such a gigantic scale that in most industries the individual capitalist must combine his capital with that of others in order to make his capital effective. It has become more and more difficult to fight single-handed the battle of life. While capitalist and capitalist are forced to join in corporations, worker and worker are irresistibly driven to join in unions, farmer and farmer into granges, and the most intelligent elements of all classes into the Socialist Party. It is this new kind of self-help which seeks to accomplish the salvation of the great masses through cooperation on the economic and on the political field that is forcing to the front these new notions translatable into the phrases "social legislation," "social conscience," "social insurance."

I intend to present to you a program of social insurance, which is part of the constructive program of the Socialist movement. Broadly speaking, the subject of social insurance can be subdivided into the following branches:

1. Unemployment insurance.
2. Sickness and disability insurance, which takes in sickness, industrial accidents, and occupational diseases.
3. Invalidity and old-age insurance.
4. Provision for widows and orphans.

In the ultimate analysis social insurance carries with it obligatory insurance against the hazards of unemployment, sickness, old age, and death.

Social insurance had its origin in Germany in the eighties. The Socialist movement had not only gained a foothold there, but threatened to engulf both the capitalist class and the Monarchy. Prior to that the Iron Chancellor had hoped to crush the rising movement of the Social Democracy by repressive measures. Socialist publications were suspended; their organizations were disbanded; the Social Democrat was declared an outlaw. These repressive measures failed.

A new policy was then adopted by the Iron Chancellor and the Imperial Government. The Imperial Government undertook to wean away the masses from the Social Democracy by a series of national measures calculated to mitigate the evil conditions in industry. A comprehensive program insuring the worker against old age, sickness, invalidity, and accidents, and which continuously held out the promise of more thoroughgoing improvements, was offered to the workers.

The Imperial Government has again failed to check the growth of the Social Democracy, which has become the largest party numerically in Germany, but it has contributed to the development of the most efficient, most intelligent, and most healthy working class of modern days. The German Imperial Government has been spurred on by the Social Democracy. Now the whole world talks of German efficiency.

Let us take up first the subject of unemployment insurance.

It has long been contended by the Socialists that our present method of production and distribution involves the presence of a large army of unemployed. It would stand to reason that if industry is to be maintained on a competitive basis, which is the ideal of the conservative, that there must be competition between worker and worker for a job. In order that employer and employer may compete they must be able to compete at the expense of the wageworker, because after all the principal cost of production is the wage paid to the worker. Competition between employer and employer involves competition between man and man for a job, and the constant presence of a number of men who are out of employment, of the jobless man seeking to replace the man who has a job. The Commission on Industrial Relations estimates that the industrial worker loses on the average one-fifth of his time because of unemployment. The commission proves that "even in normal times the number of unemployed is appallingly great."

It appears that from 7 to 15 per cent of all the members of unions are unemployed at some time during the year. We are all familiar with unemployment during periods of depression and during the acute stages of depressions known as crises. We all know that a crisis means unemployment. Thus from the somewhat uncertain figures as they are presented by the census of 1900, the number of unemployed in that year reached the startling figure of nearly six millions and a half. Statistics of unemployment were gathered in 1910, but they were probably so staggering that they were never tabulated, and they have never been made public. We have just emerged from a crisis during which there were almost as many unemployed as employed men. And the worst about it is that crises are of rather frequent occurrence—we have had them almost every 10 years. Because the evil of unemployment assumes a threatening character during each crisis, it does not mean that we are free from unemployment in normal times.

It will be readily conceded that every change or threatened change of the tariff disturbs industry and throws men out of work. It is a matter of history that protectionist industries, whenever a downward revision of the tariff was threatened or effected, have held out before the workers the prospect of shutting up the plants.

We all remember the solemn warning issued by the President, that all who would attempt to coerce their employees by threatening to shut down factories in resisting a downward revision of the tariff "would hang as high as Haman." The protectionist did not threaten, he only prophesied, but prophesied calamity with such insistence and with such emphasis that it had the effect of coercion. The protectionist did not hang as high as Haman, but a large Democratic majority in Congress was reduced almost to zero.

The man working in a protected industry, with nothing to fall back upon when separated from his job, can not afford to take any chances; and when he hears the political orator proclaim that a reduction of the tariff would be followed by joblessness, he is in nine cases out of ten likely to vote back into power the protectionist interests. If the worker had something to fall back upon it would not be so easy to intimidate him.

Our age has been characterized by the constant introduction of new machines and new appliances, of new methods of division of labor, of heretofore unknown systems of efficiency. While every new machine, every new invention, every method that simplifies work or increases the productivity of man inures to the ultimate benefit of mankind, it has the immediate effect of causing a constant shifting of labor, of separating men from their jobs. Ultimately a blessing, the introduction of a new machine or a new device is an immediate curse to the worker who loses his job. The object of introducing a new machine is to increase production and to economize on labor, and unless the introduction of a machine in a particular industry will result in a demand for the article commensurate with the increased productivity, there will be idle men pounding the sidewalks.

The full extent to which the productivity of labor is increased by the introduction of machinery can hardly be appreciated. I shall cite just a few instances. Thus, while it took 222 hours to turn out 10 pairs of men's fine-grade shoes by hand, it takes just 29 hours to turn them out by machine. The making of a watch movement, which requires 195 hours by hand, takes only 5 hours by machine. One dozen corsets, 210 hours by hand, 18 hours by machine. Newspapers, printing and folding 36,000 pages, 216 hours by hand, 1 hour by machine. Loading 100 tons of ore on cars, 200 hours by hand, 1 hour by machine.

It is a poor consolation to the breadwinner of the family ousted from his job to be told that in the long run mankind will benefit by the new machine.

In some industries unemployment is more constant than employment. This is particularly true of seasonal trades and of those trades that serve the whims and caprices of fashion. In the building trades, in the clothing trades, in the canning industry, in the lumber camps and sawmills, the busy season is quickly replaced by the slack. Only a small proportion of employees have work throughout the year in these industries. The resulting rivalry for a chance to be employed has a depressing effect upon the general level of wages.

It seems as if some industries could not exist at all under present conditions, so miserable are the wages therein and so short is the duration of employment, unless there were a large army of casual workers ready to take any kind of a job.

There has been an average of 15,000 bankruptcies every year, and every bankruptcy means a tragedy in the home of the employee.

The creation of a new market, the disappearance of the demand for an article by the substitution of another in its stead, the springing up of a new industry, the decay of an old one—all of these things have the effect of shifting the workers from their jobs.

Unemployment, then, is not an accident, not a rare thing, not an occasional thing, but an incident of industry. It can always be predicted, so far as seasonal industries are concerned. It is sure to come with the application of every invention. It is sure to follow a change of the tariff. Every fluctuation in the world of commerce, every depression, every crisis, every change brings in its wake unemployment.

And very often, while tens of thousands of men walk the streets of our large cities in search of work, you will hear the farmer imploring the city laborer to come and help him out in gathering the harvest.

Mr. BUCHANAN of Illinois. Mr. Chairman, will the gentleman yield?

Mr. LONDON. Yes.

Mr. BUCHANAN of Illinois. Is it not a fact that in many instances the amount of money that the laborer receives while employed in the harvest field is taken up in the charges of transportation to and from the place of work?

Mr. LONDON. Undoubtedly. The farmer will pay the city laborer $3 a day while he works, but after the rush is over the city laborer must fall back upon his own resources—which are nil—and finding himself without means of transportation, he only helps to glut the labor market. As somebody has recently expressed it, the city laborer is invited to the farm with a brass band, and is driven out with a club as soon as the harvest is in.

We can not meet the problem of unemployment with spasmodic relief or temporary public works, nor by relying upon the kindness of employers who, under competitive conditions, very often can not afford to be kind, nor upon vagrancy or poor laws. Unemployment is an ever-present hazard of industry, and must be dealt with as such.

The Department of Commerce sends out daily consular reports, giving information as to trade, manufacturing, and finance all over the world. A system of unemployment exchanges covering in a complete network the entire country could be made to perform the same function for the laborer. In order that it should be successful it must be organized on a national scale and by the National Government. It must be made sufficiently elastic to enable the widest possible cooperation with the labor unions, and municipal and State labor exchanges. The employment exchanges established by employers' associations are for the most part ordinary strike-breaking agencies.

A national system of unemployment exchanges will not of itself furnish jobs. It will furnish information, eliminate a great deal of waste, and centralize the labor market.

The 80 public employment exchanges scattered in about 20 States offer but scant assistance.

A majority of the civilized countries of Europe have come to recognize unemployment as a characteristic feature of modern industrial life. Of the various methods dealing with unemployment on a permanent basis, I will just say a word about the Ghent system. The system which has its name from the city of Ghent, in Belgium, the first city to introduce it, consists chiefly in subsidizing labor unions which pay out-of-work benefits. It is a purely voluntary system.

The boldest step in the direction of introducing a national system of unemployment insurance was taken in England in 1911. It may be worth while to give a brief outline as to how the English law works. The law was first made compulsory in reference to seven industries embracing about 2,400,000 workers. Each employer is required to pay into the insurance fund 10 cents—2½ pence—a week for every worker, one-half of which he deducts from the wages of each employee. These payments are made by affixing stamps to an insurance card. The cards are obtained by the workers at the post offices or from any one of the unemployment exchange offices. The State treasury contributes 3⅓ cents, so that employer, employee, and the Government each contribute to the insurance fund. At the end of the first year of the operation of the insurance law there was a surplus of $8,000,000. Six hundred thousand workers in industries to which the law was not made compulsorily applicable came voluntarily within the provisions of the law. The most remarkable thing about it all is that 30 per cent of the men who applied for aid out of the unemployment insurance fund received positions during the first week—England had a short time before that established a system of unemployment exchanges—and that only 1 per cent of the total applications for relief were rejected. As the law now stands, the worker is entitled to not more than 15 weeks' unemployment benefit during any one year, 7 shillings each week. Of course, the amount is very small as compared with the American standard of living, but, as was said at the hearing, it is just 7 shillings more than nothing.

To encourage trade unions to provide unemployment insurance the British act grants a subsidy to every union which pays a certain amount of out-of-work benefits. The entire act is based upon the fullest possible recognition of the trade-union as the agency which is best adapted to carry into effect the provisions of the law.

The unions practically act as agents for the fund. The individual member of the union makes his payments to and receives his benefits from the union, and the union is reimbursed from the national unemployment fund.

It goes without saying that it would be extremely unwise to adopt in toto any European system of unemployment insurance. It must be made to conform to the higher standards of American life; it must not be permitted to destroy the individuality of the worker; it must be founded upon the broadest possible cooperation with the labor unions. Instead of being compulsory upon the individual it must be made compulsory upon industry and upon the unit of industry—the employer. We are dealing with the effects of involuntary idleness, for which the individual worker is not and should not be held responsible.

Mr. HAUGEN. Mr. Chairman, I desire to yield the balance of my time to the gentleman.

Mr. CHAIRMAN. The gentleman from Iowa has five minutes remaining.

Mr. LONDON. I thank the gentleman.

We are dealing with the problem of unemployment on a national scale.

Mr. DAVIS of Texas. Will the gentleman permit a question?

Mr. LONDON. Yes.

Mr. DAVIS of Texas. Does not the gentleman think that if we could forbid monopoly of natural opportunities that that would solve a great deal of the unemployment in the country?

Mr. LONDON. Undoubtedly. I will come to that a little later. In the discussion yesterday the gentleman from Ohio [Mr. OVERMYER] said that we used one-fourth of the available land and that this one-fourth of the land we used yielded only one-half of what could be produced by intensive farming. In the course of his remarks he also said, "We have the land

and we have the brains." Yes; the trouble is we have the land but utilize only one-eighth of it, and we have the brains and do not seem to use any part of them. To come back to the subject of compulsory unemployment insurance.

Upon examination, unemployment insurance will not appear as novel as it appears to be at first sight. Look at our workmen's accident compensation legislation. For years the people of the United States were indifferent to the problem of the worker injured in industrial accidents. It seemed to be such an elementary proposition that a worker injured in the course of his employment should be compensated when disabled. It took years of agitation, and only after almost every country of Europe had introduced a method of compensating employees disabled in industry 31 States became reconciled to the principle that industry owes an obligation to the worker to at least partially compensate him for loss sustained by accident. The burden in these cases falls upon the industry itself, or upon the employer. In less than 10 years, 31 States have adopted the principle of workmen's compensation. I was amused when I received—after the adoption of the workmen's compensation act in New York—the announcement of the publication of a textbook consisting of six or eight volumes and upon which the author had spent many years of his life. The book dealt with the fanciful theories spun by corporation lawyers to defeat the claims of the workers for compensation. These volumes of the old-fashioned lawyer were so much waste paper now, because of the advance of social thought in America. He had been working away at old precedents and decisions while the minds of the people were working in the direction of a nobler method of dealing with the victims of industry.

Most of these compensation laws are defective and inadequate. In most jurisdictions they still distinguish between disablement due to an industrial accident and disablement due to occupational disease.

We now all understand that employers have been forced to insure themselves in a fund, out of which the injured workers shall be paid, has resulted in a reduction of the number of accidents and in better methods of safety. In the same way inclusion of occupational diseases will work in the direction of compelling employers to introduce the most sanitary conditions in industry, so that the health of the worker will become the concern of the employer.

It is not, then, a new theory that I am advancing when I seek to apply the principle which has been recognized in accident compensation to unemployment. Both are risks and incidents of industry.

While we provide for unemployment insurance we must not forget that the primary object is to minimize unemployment and to prevent it as much as possible. Let us make a start and we will find that some order may be introduced in industry.

Why not begin with the extension of public works? Why not force the lands now held for speculative purposes out of the hands of the absentee landlords and out of the grip of land sharks? Why not get busy conserving the natural resources? Conservation occupies a prominent place in the platforms of all political parties. It is a sad reflection on the statesmanship of America that we have been thus far unable to save millions of acres of land from inundation by floods; that we have permitted the forests to be destroyed; that the building of public roads in agriculturally and industrially backward sections of the country has not been organized on a systematic basis. Year in and year out river and harbor appropriations are made, all without plan, without order, without system. Work which is essential to the very life of the nation is conducted in a haphazard manner, to the great amusement of newspaper wits, who charge Congress with "pork-barrel" legislation.

I urge that simultaneously with insurance against unemployment there should be taken up the problem of organizing the public works of the country, such as the reclamation of arid lands, reforestation, the exploitation of our natural resources, work for the prevention of floods and inundations, for the reclamation of swamp lands, the building of public roads, canals, and similar undertakings. The present free and easy method of spending millions of dollars without any plan, with only local and temporary conditions in view, should be replaced by a permanent and national development scheme.

It is a conservative estimate that the unappropriated natural resources of the United States exceed $30,000,000,000 in value, an average of $300 for every man, woman, and child in the United States. But this is a commercial way of valuing things. The worth of the natural resources still in the possession of the Government of the United States is incalculably more than thirty billions. Who can estimate the worth of natural resources which, when utilized by the Nation and not thrown away in driblets to private owners, will give the means of life to millions of men and for generations to come? It would be like attempting to figure out in dollars and cents the value of the sun.

I have given so much time to the subject of unemployment that I will have to be brief in dealing with the other branches of the subject of social insurance—old age and sickness. Old age and invalidity insurance, just like accident and disability insurance, do not involve a new principle. It is rather the application and extension of an old principle. We have long ago become accustomed to treat with reverence the veterans of our wars who are in need. I ask you now to treat with the same consideration the veteran of industry who is in need. There is no substantial reason why a distinction should be drawn between the man enfeebled by old age who has been rendering useful service to the country in industry or in agriculture and the former soldier.

The morality of the Bible is supposed to lie at the basis of our moral system. Respect for the aged is a precept which is inculcated in every school child. Can we afford to repudiate one of the fundamental principles of our moral code by discarding the aged? And do not forget, please, that, so far as industry is concerned, men become superannuated before they become old.

It is not an unusual thing, but rather a frequent occurrence, to meet old professors, old teachers, and old statesmen, and the older they are the higher are they regarded by the community. It is not so in industry. The man becomes old for the purposes of industry when the ever-quickening processes of production make it impossible for him to compete in physical exertion with the younger man. The very term "superannuated" shows a cynical contempt for the dignity of a human being. It conveys the notion that the superannuated has had too many years of life, more than our anarchical system of society can utilize for purposes of exploitation.

If industry were conducted with some regard for human life and not exclusively for profit, an opportunity might be found for the superannuated to be useful in a service requiring less physical exertion and more suitable to the diminishing vigor of the man guilty of the crime of getting old.

The question what will become of the aged is no concern of the employer. All that the employer is concerned about is that his overhead charges will be increased if he maintains in his establishment a man who turns out less than others. Nor is the fact that some railroad companies and other large corporations have introduced old-age funds of much avail. When the private corportation establishes an old-age fund it practically says to the employee: "As long as you will be submissive during the days of your vigor and virility, when you are capable of demanding and enforcing your rights, and as long as our will will be law for you in your days of youth and strength, we will give you a little something when you reach the age of 50 or 60—after 15, or 20, or 30 years of continuous employment with us." This is not an old-age pension. This is a tuft of hay held out to a mule.

Other civilized countries have attacked this problem with the result that compulsory old-age insurance exists in Germany and France; old-age pensions in Denmark, Great Britain, France, Australia, and New Zealand; and a subsidized system of old-age insurance in Italy, Belgium, Servia, and Spain.

In England, when the old-age pensions law was adopted, it was found that the treatment of the old in the past had been so inhuman that fully one-half of the aged were entitled to pensions under the new system. I wonder if the statesmen of the United States will wait until a similar condition confronts us here?

Sickness insurance, covering every form of disability, whether due to industrial or to nonindustrial causes, is again a problem which is soluble only by the community as a whole. We have learned that society owes an obligation to compensate the worker against loss due to industrial accident. We are slowly coming to understand that occupational disease must be brought within the purview of compensation laws. Health insurance, which forms such a prolific source of profit to insurance companies and of waste to the insured should be organized on a national scale and as a national function. There is no reason why profit should be made out of misfortune. The poorest strata of society now pay to the various industrial insurance funds $1 in order to get back 40 cents. Insurance companies have come to be one of the great financial powers.

Insurance against loss by unemployment, sickness, invalidity, and old age must be undertaken by society and not left to private corporations.

I have given a brief outline of the subject of social insurance, which is part of the constructive program of the Socialist Party. I have not by any means exhausted the subject. I have only indicated the existence of the problem and have shown that

it is not insoluble. Accident insurance has been established throughout Europe and in 31 States of the Union. Compulsory sickness insurance has been introduced in about half of the countries of Europe, and voluntary subsidized sickness insurance in five or six other countries of Europe. Compulsory old-age insurance exists in two European countries. Old-age pensions and voluntary subsidized State systems of old-age insurance exist in 10 European countries, including Great Britain, France, and Germany. Unemployment insurance is rapidly spreading in large European cities and exists by national law in three countries of Europe. A beginning has been made in some countries in introducing widows' and orphans' pensions.

If the worker could afford to buy all these forms of insurance, to buy unemployment insurance, sickness insurance, old-age pensions, so as to make ample provision for his widow and orphans, one might be justified in contending that it should be left to the individual. But will anybody seriously claim that the great masses of the workers can afford to buy these forms of insurance?

The worker should not be asked to assume all the burdens, all the risks, all the hazards of modern industry, with its accidents, occupational diseases, life-sapping intensity, with its sudden rushes and its long slacks, with its constant fears and anxieties. And in the end the worker will pay for it all. I know that the struggle for bread will continue to be bitter, and that the emancipation of the masses can become a reality only with the abolition of the competitive system of society in which the propertyless are at the mercy of the class which controls the land and the means of production. It is not so much the economic advantage, although that will not be slight, which will accrue to the masses, as the introduction of a principle of ethics into industry, of a moral law into a sphere of life where the law of force rules to-day.

Human society should be something more than a mere aggregation of bipeds, each seeking to devour the other.

I urge the appointment of a commission to take up the task of organizing a thoroughgoing, nation-wide system of social insurance.

Mr. FESS. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Ohio asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. LEVER. Mr. Chairman, this completes the time on this side of the House, and unless the gentleman has some other time——

The CHAIRMAN. The gentleman has no more time.

Mr. LEVER. Mr. Chairman, I ask unanimous consent that the Clerk may be authorized to correct the totals.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that the Clerk may be authorized to correct the totals. Is there objection? [After a pause.] The Chair hears none. The Clerk will read the bill under the five-minute rule.

The Clerk read as follows:

DEPARTMENT OF AGRICULTURE.

OFFICE OF THE SECRETARY.

Salaries, Office of the Secretary of Agriculture: Secretary of Agriculture, $12,000; Assistant Secretary of Agriculture, $5,000; solicitor, $5,000; chief clerk, $3,000, and $500 additional as custodian of buildings; private secretary to the Secretary of Agriculture, $2,500; executive clerk, $2,250; executive clerk, $2,100; stenographer and executive clerk to the Secretary of Agriculture, $2,250; private secretary to the Assistant Secretary of Agriculture, $2,250; 1 appointment clerk, $2,000; 1 assistant in charge of information, $3,000; 1 officer in charge of supplies, $2,000; 1 assistant, $2,000; 1 inspector, $2,750; 1 inspector, $2,250; 1 law clerk, $3,250; 1 law clerk, $3,000; 1 law clerk, $2,750; 4 law clerks, at $2,500 each; 8 law clerks, at $2,250 each; 1 law clerk, $2,200; 6 law clerks, at $2,000 each; 3 law clerks, at $1,800 each; 3 law clerks, at $1,600 each; 1 expert on exhibits, $3,000; 1 telegraph and telephone operator, $1,600; 1 assistant chief clerk and captain of the watch, $1,800; 4 clerks, class 4; 12 clerks, class 3; 19 clerks, class 2; 23 clerks, class 1; 1 auditor, $2,000; 1 accountant and bookkeeper, $2,000; 1 clerk, $1,440; 1 clerk, $1,020; 7 clerks, at $1,000 each; 12 clerks, at $900 each; 1 clerk, $840; 15 messengers or laborers, at $840 each; 12 assistant messengers or laborers, at $720 each; 1 messenger or laborer, $660; 1 mechanical superintendent, $2,500; 1 assistant engineer, $1,400; 1 assistant engineer, $1,200; 2 assistant engineers, at $1,000 each; 8 firemen, at $720 each; 11 elevator conductors, at $720 each; 3 elevator conductors, at $600 each; 1 superintendent of shops, $1,400; 1 cabinet-shop foreman, $1,200; 4 cabinetmakers or carpenters, at $1,200 each; 3 cabinetmakers or carpenters, at $1,100 each; 9 cabinetmakers or carpenters, at $1,020 each; 3 cabinetmakers or carpenters, at $900 each; 1 electrician, $1,100; 1 electrical wireman, $1,000; 1 electrical wireman, $900; 3 electrician's helpers, at $720 each; 1 painter, $1,000; 5 painters, at $900 each; 5 plumbers or steam fitters, at $1,020 each; 1 plumber's helper, $840; 2 plumber's helpers, at $720 each; 1 blacksmith, $900; 1 tinner's helper, $720; 1 lieutenant of the watch, $1,000; 2 lieutenants of the watch, at $960 each; 50 watchmen, at $720 each; 4 mechanics, at $1,200 each; 1 skilled laborer, $1,000; 2 skilled laborers, at $960 each; 2 skilled laborers, at $840 each; 1 skilled laborer, $720; 1 janitor, $900; 22 assistant messengers, messenger boys, or laborers, at $600 each; 1 carriage driver, $600; 21 laborers or messenger boys, at $480 each; 1 messenger or messenger boy, $360; 1 charwoman, $540; 2 charwomen, at $480 each; 15 charwomen, at $240 each; for extra labor and emergency employments, $12,000; in all, $402,350.

Mr. MANN. Mr. Chairman, I reserve a point of order on the paragraph.

Mr. LEVER. Mr. Chairman, may I offer an amendment?

Mr. MANN. After the point of order is disposed of.

The CHAIRMAN. The gentleman from Illinois makes a point.

Mr. MANN. I reserve a point of order on the paragraph. I just wanted to make an inquiry about the private secretary to the Assistant Secretary of Agriculture. How is that place provided for now?

Mr. LEVER. The place has been provided for heretofore on the extra-labor roll of the Secretary of Agriculture, the $12,000 appropriation which is carried from year to year.

Mr. MANN. What do you mean by the extra-labor roll?

Mr. LEVER. You will find that at the very close——

Mr. MANN. The emergency-employment roll?

Mr. LEVER. Yes. It is in the last line of page 4.

Mr. MANN. How long has that been used to provide a private secretary to the Assistant Secretary of Agriculture?

Mr. LEVER. I can not tell the gentleman that, but I assume some little while. The theory is that this extra roll is to take care of clerks for a six months' period, temporary clerks, and things of that kind, but the theory has not been carried out.

Mr. MANN. Of course I know what the theory was. Whoever started it was guilty of a gross abuse of the appropriation. I will not say that the continuing of it is a gross abuse, because people very often automatically continue something where it is already in existence. I assume that this private secretary has been provided for a good while, but whoever paid a private secretary to the Assistant Secretary out of an emergency appropriation intended for temporary employment committed a gross abuse.

Mr. LEVER. Let me say to the gentleman that I think we shall be prepared to offer an amendment to this bill in the miscellaneous items which will cure the complaint of the gentleman, which I agree is a just complaint, so as to confine all these temporary employments to a period of six months only, as the theory is now.

Mr. MANN. I suppose they would employ a man for six months, and when the six months were up they would employ him for six months again. The only way, of course, is to have people honestly administer the law.

Mr. LEVER. That is very true.

Mr. MANN. Because there is no way of preventing executive officers who have some discretion from improperly exercising the discretion at some time.

Mr. LEVER. I understand that this private secretary heretofore has been carried as a clerk, but when Mr. Vrooman became Assistant Secretary they transferred this clerk and named him secretary to the Assistant Secretary.

Mr. MANN. He probably was in as a clerk before at $1,800.

Mr. LEVER. Yes; very likely.

Mr. MANN. And now they have provided for a private secretary, at $2,250, out of a fund that was appropriated for temporary employees. I had supposed that the practice had begun some years ago. I did not know that it had begun with the present Assistant Secretary of Agriculture. But it is a very bad practice, whoever it was that began it.

Mr. LEVER. I will say, however, that this individual has been transferred at the same salary that he was getting before the transfer. That is the case with all transfers, except where we have set it out and where we will be prepared to show it.

Mr. MANN. I have no doubt but that every executive officer has some pet, and that usually the private secretary is the pet, and if he can pay that secretary out of a lump sum he usually pays him a very good salary. I do not happen to know the private secretary.

Mr. LEVER. I do not know him myself.

Mr. MANN. I do not know whether he is efficient or not, but if he is, he probably earns his $2,250. But I do not believe in men acting that way about an appropriation.

Mr. LEVER. The gentleman from Minnesota [Mr. ANDERSON] has suggested an amendment to me which I have under advisement now, which we hope will be agreed upon and which will very much clarify this situation and improve it in the future.

Mr. MANN. I notice you have just as much of an emergency appropriation for temporary employment as you had for the present year.

Mr. LEVER. That is true. The emergency appropriation has really been increased $9,060, at the very urgent request of the Secretary himself. They say they need this appropriation to take care of emergencies which may happen that we can not foresee.

Mr. MANN. Then when we give it to them they use it for the purpose of appointing a private secretary.

Mr. LEVER. That is sometimes the case.

Mr. MANN. That is the case here; and then they say they must have an emergency appropriation. Every department of the Government gets some kind of an emergency appropriation, and most of them abuse it from time to time. I am not referring to the existing officials specifically. I think perhaps they are no worse than those who preceded them.

Mr. LEVER. The gentleman is making a general statement, and I concur in it.

Mr. Chairman, I offer an amendment on page 3, line 3, where there is one assistant engineer at $1,400. The members of the committee will remember that we used to have a chief engineer. That has been dropped, and the word "assistant" has no relation to anything, and I move to strike out the word "assistant."

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from South Carolina.

The Clerk read as follows:

Page 3, line 3, strike out the word "assistant."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. ANDERSON. Mr. Chairman, as I recall, that item was intended to read, "one chief engineer." It formerly read, "one assistant chief engineer," and my recollection is that the committee struck out the word "assistant" and made it "one engineer."

Mr. LEVER. No. We struck out the word "chief," I will say to the gentleman from Minnesota.

Mr. CLINE. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Indiana moves to strike out the last word.

Mr. CLINE. Mr. Chairman, I want to ask the chairman of the committee a question with reference to the number of law clerks employed in this section. I see this year we have 28 law clerks, at an expense of $61,400. Last year, if I correctly read the text, we had 27 law clerks, costing $58,400. I would like to inquire, Mr. Chairman, how these law clerks are distributed?

Mr. LEVER. Mr. Chairman, I will say to the gentleman from Indiana that the law clerks are under the solicitor of the department, but are carried upon the statutory roll of the Secretary's office. There has been an increase of only one law clerk on this roll, and he comes to this roll by way of transfer from the lump fund for the enforcement of the cotton-futures act.

Mr. CLINE. Does each bureau under this bill have one law clerk or more?

Mr. LEVER. No. The law clerks of the Department of Agriculture are concentrated on this roll.

Mr. CLINE. I understand; but is each bureau of the Department of Agriculture supplied with a law clerk?

Mr. LEVER. No. Some bureaus are; as, for instance, the Forest Service has a law clerk stationed at each of the forestry districts, some seven or eight. The balance of the law clerks are carried on the solicitor's roll and are under the control of the solicitor.

Mr. CLINE. Do they attend strictly to the law questions that arise under the bill?

Mr. LEVER. That is my information.

Mr. CLINE. To one not fully acquainted with it it would seem that from the fact that the bill is generally the same year after year, but few new questions would be apt to arise.

Mr. LEVER. The gentleman will realize that in recent years a great deal of new legislation has been given to the Department of Agriculture, as, for example, the cotton-futures act, and the migratory birds act, and the Weeks forestry act. Those matters involve a number of new questions.

Mr. CLINE. These bills do not embody very many disputed questions.

Mr. LEVER. Oh, yes; the Weeks law in the matter of clearing up titles and getting titles required the services of a board of law clerks.

Mr. CLINE. Do these 27 clerks have any duties to perform except to settle law questions?

Mr. LEVER. None whatever that I am informed of.

Mr. CLINE. I simply wanted to know how they were distributed.

Mr. MANN. Mr. Chairman, I move to strike out the last two words. Can the gentleman from South Carolina tell us how many increases there are in promotions or salaries carried in this bill, directly or indirectly?

Mr. LEVER. I will have that in a moment.

Mr. MANN. I notice the paragraph increases the amount appropriated $50,000 for employees generally over in the Agricultural Building. What is the reason for the increase in the number of laborers, elevator conductors, and so forth? What is the occasion for the increase; how has the department extended itself so as to need the additional laborers?

Mr. LEVER. The statement of the chief clerk before the committee was that on account of the transfer of the Office of Roads to the building opposite Willard Hotel, where they had two elevators, it was necessary to have an additional elevator conductor. As to the messengers, the statement was that two new buildings, or three, had been added since the last bill.

Mr. MANN. Does the Agricultural Department occupy the whole of the old building that was used by the Department of Commerce?

Mr. LEVER. I think so, The Office of Public Roads does so. The subcommittee examined that, but I did not.

Mr. MANN. I should think the Division of Roads had made a wonderful increase since it was taken from the Department of Commerce.

Mr. LEVER. As I recall, the Department of Commerce when located there had practically no one except the Secretary and a few clerks.

Mr. MANN. Oh, the gentleman does not recollect correctly. I was quite familiar with that myself.

Mr. LEVER. That was so when I went there.

Mr. MANN. Probably the gentleman only went to see the Secretary.

Mr. LEVER. It occupied three or four rooms.

Mr. MANN. They occupied the whole building. Now, the increase here is from $352,000, in round numbers, to $402,000.

Mr. LEVER. I have the statement now that the gentleman asked for. The summary is: Promotions, $9,860; new places; $40,580, transfer from lump sum without corresponding reductions, $11,470, making a total of $61,910.

Then by reductions: Places dropped, $9,460; decrease of salary, $660; total, $10,120, making a net increase, according to this statement, of $51,790; but that was not allowed in toto, so the increase is a little less than that—about $50,000.

Mr. MANN. I notice that as to the chief engineer you change his title. I suppose the office is precisely the same, but because you change the title you add $500 to the salary. Very likely it is needed; I do not know.

Mr. LEVER. As a matter of fact, the testimony before the committee was that this man would have more work to do than the old chief.

Mr. MANN. The old engineer worked his full time, and this one will not work any longer time now, and if he does he would want pay for overtime.

Mr. LEVER. This is an entirely different man; the old chief has been dropped and this is a new man brought in. I asked the question myself, if this man did the same work that the chief engineer used to do, and the answer was, "The same and a great deal more."

Mr. MANN. Oh, they always say that.

Mr. LEVER. That may be, but we have to take the testimony of the witnesses.

Mr. MANN. You have to take the testimony with a great many degrees of allowance. They have probably put some man in that somebody connected with the department wanted to take care of, and pay him $500 more than the man who had been in the service was getting. The man may be worth it, but I doubt it.

Mr. LEVER. The statement before the committee was that the mechanical work of the department has been completely reorganized and put under the charge of this man.

Mr. MANN. Yes; at a considerable increase of cost—reformed at an additional expense.

Mr. LEVER. No; there is no increase, except this $500.

Mr. MANN. Here you have one skilled laborer, at $1,000; two skilled laborers, at $840; one more at $700; and various other places; that is a part of the reform.

Mr. LEVER. These places do not apply to this particular proposition, but to the roll in general.

The Clerk read as follows:

Salaries, Office of Farm Management: One chief of office, $4,000; 1 executive assistant, $2,250; 2 clerks, class 3; 3 clerks, class 2; 6 clerks, class 1; 2 clerks, at $1,100 each; 1 clerk, $1,080; 1 clerk or photographer, $1,020; 8 clerks, at $1,000 each; 10 clerks, at $900 each; 4 clerks or map tracers, at $840 each; 3 clerks or map tracers, at $720 each; 1 lantern-slide colorist, $720; 1 messenger or laborer, $720; 1 messen-

ger, messenger boy, or laborer, $660; 3 messengers, messenger boys, or laborers, at $480 each; 1 laborer, $360; 4 charwomen, at $240 each; 1 library assistant, $1,440; 1 photographer, $1,400; 1 photographer, $1,000; 1 draftsman, $1,440; 1 draftsman, $1,200; 2 draftsmen, at $900 each; in all, $60,810.

Mr. MANN. Mr. Chairman, I reserve a point of order. I suppose these new places are mainly transfers from the lump-sum appropriation to the statutory roll?

Mr. LEVER. I will say that the Farm Management Office heretofore has not had a statutory roll, and this is the first time the statutory roll appears in the bill.

Mr. MANN. Oh, the gentleman is mistaken about that.

Mr. LEVER. I am mistaken; this is the second time it has appeared in this bill, and all of these new places here are transfers except one new clerk of class 2 and then one $740 clerk.

Mr. MANN. Is there any reduction in the lump-sum appropriation?

Mr. LEVER. The lump sum has been increased by the committee to do a certain line of work. The lump sum has been decreased wherever there has been a transfer made to the statutory rolls in accordance with the transfer, but there is an actual increase in the lump sum, due to other causes.

Mr. MANN. Mr. Chairman, I have no criticism of this; but I want to ask what this Office of Farm Management does?

Mr. LEVER. I want to read to the gentleman just what this office does.

Mr. MANN. Oh, I am sure the gentleman can tell us better than he can read it.

Mr. LEVER. I am going to read it, because I asked the question myself before the committee, and it brought it out very distinctly. This is Dr. Spillman's statement:

> I may say that the Office of Farm Management was founded on the idea that many farmers know a great deal about their business, and that of the 6,000,000 farmers in America all are experimenting more or less, and occasionally here and there discover something of importance. And it has been—and we hope always will be—the function of the Office of Farm Management to visit among the farmers and gather up their experience and interpret that experience for other farmers, believing that we can render valuable service in that way.
>
> Perhaps the central idea in the Office of Farm Management is to find out how much money the farmers are making, how they make it, and why they make it.

Mr. MANN. I suppose these employees are mainly social visitors?

Mr. LEVER. Yes.

Mr. MANN. They go to the farmers' houses and stay over night and gossip and have a choice line of stories to tell.

Mr. LEVER. Oh, I would not think so.

Mr. MANN. Are they selected by civil-service regulations based upon their story-telling capacity?

Mr. LEVER. Oh, I do not think the gentleman wants that to be taken seriously.

Mr. MANN. I have not any doubt that that is the most effective work they do.

Mr. LEVER. As I understand this work, it is under a competent man, Dr. Spillman. Their business is to visit in communities and make a general survey of the practical situation. They will find an entire community engaged probably in the same kind of agriculture, but they will find that a certain percentage of farmers are making regular returns upon their endeavors and some are not. They study these individual cases, and why this individual should be making money and his adjoining neighbor not making anything, and from that in many instances they are able to make suggestions which are very valuable. I look on this as a very valuable piece of work. It is a new piece of work.

Mr. MANN. They gossip with the farmer.

Mr. LEVER. Very likely they do, and a good deal of good information is gotten by gossip.

Mr. MANN. Finding the machines out in the rain, they tell him, "Why, don't you know that rust will destroy these machines after a while? You ought to build something and put them under cover." That is a remarkable statement, of course, and everyone does not know that. Do they ever publish anything resulting from this bureau?

Mr. LEVER. Oh, yes; they publish some farmers' bulletins, which are very valuable.

Mr. MANN. I religiously read every farmers' bulletin that is published, and I think they are sort of falling down over there on the farmers' bulletins. Perhaps that accounts for it.

Mr. LEVER. I confess to the gentleman that I do not have time to read them all.

Mr. MANN. I read all of them.

Mr. LEVER. The gentleman is to be commended.

Mr. MANN. Hoping to get information, and I sometimes do. Some of it I know is misinformation. I have not yet seen anything resulting from this service.

Mr. LEVER. The gentleman will understand that this service is really the field laboratory work of the Department of Agriculture as against investigational work which might be called the test-tube work, as they refer to it. They are trying to get information from bright, intelligent, progressive farmers, and after gathering that information they give it to other farmers for their use.

Mr. MANN. With all due respect to this bureau, and doubtless they do some good work, I should say that if ever there was created under the Government a lazy man's job this bureau has that place.

Mr. LEVER. Oh, I disagree with the gentleman.

Mr. COX. Mr. Chairman, I desire to renew the point of order if the gentleman from Illinois withdraws it.

Mr. MANN. I withdraw the point of order. I do not think there is anything subject to the point of order.

Mr. COX. I renew the point of order.

Mr. HAUGEN. Mr. Chairman, I wish to call the attention of the gentleman from Illinois to one further fact. One of the employees suggests:

> Why not let the department give short courses for Congressmen, particularly members of the House committee? Why not give them short, snappy illustrations of what the department is doing and why? That could be done in such a way that Congress would jump at it.

Here is another suggestion:

> We have thousands of colored lantern slides and thousands of reels of movies

And they suggest that these should be used to educate the ignorant Congressmen, and I am sure that when the gentleman from Illinois understands what this money is being used for he will raise no further objection to this worthy bureau of this department.

The CHAIRMAN. Does the gentleman from Indiana make the point of order?

Mr. COX. Mr. Chairman, I reserve the point of order in order to get information. I want to ask the chairman of the committee whether in this transfer from the lump-sum appropriation these salaries remain at the same amount they were fixed at under the lump-sum appropriation?

Mr. LEVER. Absolutely, except where we call attention to it.

Mr. COX. Is the lump-sum appropriation reduced?

Mr. LEVER. Undoubtedly.

Mr. COX. This Office of Farm Management—I believe the gentleman says Dr. Spillman is at the head of it?

Mr. LEVER. Yes.

Mr. COX. Is he the gentleman who testified before the committee that he went out into the State of Pennsylvania and laid that State out and investigated among the farmers, and told them how to increase their corn yield and where they could make more money and less money?

Mr. LEVER. I am inclined to think he is.

Mr. COX. Mr. Chairman, I want to say to the gentleman that I read Dr. Spillman's evidence and found it very entertaining, but that is about the only thing that I can say for it. Undoubtedly he is a man of ability, but I am unable to see where he brought out a single fact or a single circumstance that this bureau could put into use among the farmers that would enable them to increase their yield in corn, wheat, rye, barley, cotton, or anything else.

Mr. LEVER. The gentleman misinterprets the function of this entire Office of Farm Management. That office is not engaged in the work of telling people how to increase yields of various kinds of crops, but the work of this bureau is to go upon a man's farm and see the kind of agriculture in which he is engaged—how much oats are sowed, how much wheat, how many cattle he has, how many horses he has, and so on—and then to investigate and endeavor to find out from this man whether or not he is making a profit. He will find, for instance, that he is probably not making a profit, or, if a profit, a small one. Then he finds a neighbor of his who is likewise engaged in the same kind of agriculture, and he finds that he has a few more cattle or that he has planted a little bit more oats or has sown a few more acres of wheat, but that man is making a profit, as compared with the other man who is making less. Now, the difference between profit and loss——

Mr. COX. Is a question of bookkeeping.

Mr. LEVER. The difference between profit and loss may mean a difference in the number of acres on a given farm that should or should not be sown in any one kind of crop. Now, those facts are very valuable to have.

Mr. COX. As I recall Dr. Spillman's evidence, it was along this line, that he found quite a lot of farms in the counties in Pennsylvania where he inspected, some of them growing 20 per cent in corn, some of them growing 30 per cent in corn, some growing 10 per cent and some 15 per cent in oats, and so forth,

Mr. LEVER. And some making a profit and others not.

Mr. COX. And he undertook to find a reason why certain fellows, because they planted a certain percentage of corn, were making money. It looks to me that is a trival proposition. Any farmer who knows the A B C of farming ought to know when, how, and where he is making money. He ought to know how much corn he ought to plant. He ought to know whether he is making money on his corn crop or on his wheat crop or on his oats, or on all three of them. In my candid judgment, after reading the evidence, with all due deference to Dr. Spillman's ability, there is nothing in it. It is simply a place to give a lot of men a few fine jobs and from which no uniform benefit will come to the mass of the people.

The CHAIRMAN. Does the gentleman withdraw the point of order?

Mr. COX. I withdraw the point of order.

Mr. MADDEN. Mr. Chairman, I move to strike out the last word. I would like to ask the chairman of the committee whether he knows how many places this bureau visits a year, and whether they make a detailed report of the results of their visit?

Mr. LEVER. Mr. Chairman, I do not know about the number of places that they visit. It is almost impossible to find that out. I will say they are making investigations and surveys at all times, and they are gathering the results of their investigations and surveys and bringing them back to Washington, collating them, and in the course of time they will be issuing a statement as to what conclusions they find from these investigations.

Mr. MADDEN. What do they do with the draftsman in that bureau?

Mr. LEVER. The department has collected certain information relative to the shifting of agricultural industries in the United States. For instance, they find that wheat at one time was grown in a certain section of the country, and now it is not grown there, but is grown in another section. This draftsman is employed for the purpose of visualizing that information, setting it out on a map, which would be very interesting, not, perhaps to the layman, but to the economic student of agriculture.

Mr. MADDEN. What about this photographer? Does he photograph the crops as they are growing to show whether they are prolific or not?

Mr. LEVER. Just what that particular one does I do not know.

Mr. MADDEN. They have two here. I did not know what they were for.

Mr. LEVER. They have quite a number scattered through the department.

Mr. MADDEN. In this bill?

Mr. LEVER. As to this particular one I do not know just what he is doing.

Mr. MADDEN. The truth of the matter is——

Mr. LEVER. I know he is well employed in the bureau.

Mr. MADDEN. Is it not a fact that the men of this bureau just go to the farmer and get such information as the farmer gives——

Mr. LEVER. That is just the purpose of this bureau. It is not a bureau for the dissemination of information in particular, but a bureau for the gathering of information.

Mr. MADDEN. What do they do with the information after they gather it?

Mr. McKELLAR. Have they ever issued a bulletin?

Mr. LEVER. I think they have. They gather this information together and then they interpret it according to their judgment.

Mr. MADDEN. So that it will be available to the farmer in the shape of bulletins?

Mr. McKELLAR. They have never given out any bulletins at all up to date.

Mr. LEVER. I am not so sure of that. I will say to the gentleman that this is about the third or fourth year of this work.

Mr. McKELLAR. It seems to me that with this large appropriation they ought to be giving out some information to the farmers.

Mr. MADDEN. I understood the gentleman to say the lump-sum appropriation had been reduced.

Mr. LEVER. I said it had been reduced by way of the transfer. On the face it shows an increase here, because we have increased the amount for the lump-sum work.

Mr. McKELLAR. Of course the gentleman understands that unless we give out this information in bulletins to farmers the very getting of information by the bureau would be of no service whatever.

Mr. LEVER. There can be no disagreement between the gentleman and myself on that proposition.

Mr. MANN. Mr. Chairman, I move to strike out the last word.

There is another matter before the House for a moment to which I am sure no one will object. The gentleman from Iowa spoke of pictures in the department and possibly moving-picture illustrations for the benefit of Congress. At different times there have been applications for permission to take moving pictures of the House in session. At one time some of us gave our consent, as far as we were concerned, to some people taking moving pictures if they would put their cameras in the gallery, so that they would attract no attention, but they found they could not take a moving picture of the House owing to the lack of light. This morning the Clerk of the House saw me and stated that there was before the Clerk and the Speaker an application to take a moving picture of the House in session now. I asked what would be required now, and they brought some man to me who I suppose has charge of it, and he said they would have to put possibly half a dozen lights in the House—strong electric lights. I do not know, of course, but moving pictures have come, and, I guess, permanently in the United States, and not many people have a chance to see the House in session. I am not at all sure that they would be inspired if they saw a moving picture of it; but does anybody here have any objection to it?

Mr. LEVER. I will say to the gentleman from Illinois [Mr. MANN] that I will have absolutely no objection if he will have it taken while this bill is not on the floor, because I am afraid it would delay business.

Mr. MANN. It would last only a few minutes, and not delay at all. It is supposed to be a moving picture of the House proceedings. Of course, it might be possible that they would like to take a moving picture while we were calling the roll.

Mr. HOWARD. Is that a unanimous-consent request?

Mr. MANN. No.

Mr. HOWARD. Because I thought if it was intended to be done now, I would like a better attendance here.

Mr. MANN. That is not for now.

Mr. LEVER. It would enhance the value of this picture, it seems to me, if you would have it taken while the Agricultural Committee bill was on the floor.

Mr. MANN. The Clerk has never done anything of that kind without consulting both sides of the House, and I am asking now if anybody has any objection to it.

Mr. COX. Will the gentleman yield?

Mr. MANN. I will.

Mr. COX. Was not the same performance gone over in the Senate a year or two ago?

Mr. MANN. No; I think they had a mock session over there and took a moving picture of that mock session. There was decided objection made to it, and I think properly, possibly.

Mr. COX. I know I saw some rather drastic criticisms on what was done over there. I do not know just what it was. I doubt very much, Mr. Chairman, the wisdom and the propriety of this.

Mr. MANN. I have doubt about it myself, but I have come to the conclusion that I shall not object to it now.

Mr. COX. I shall object if it ever comes up in the way of a unanimous-consent request.

Mr. MANN. Oh, no; we would not do anything of that kind.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. CLINE. Mr. Chairman, I move to strike out the last word.

I want to make one observation in the discussion of this bureau. Here are 60 or 70 persons employed in this bureau at an expense of $60,000, and this employment has been in force for two or three years according to the chairman, and from the discussion that has been had on this subject for the last 10 or 15 minutes it is very difficult for me to understand where there has been any benefit derived from it. If the purposes of the operation of this bill is to get out and make individual visits to farmers and gather information, of course every man knows here that when he gets the information from a farmer the information that is applicable to the next farmer depends upon local conditions and the environments of the next farmer, or the farmer he proposes to give it to.

Mr. McKELLAR. Will the gentleman yield?

Mr. CLINE. Certainly.

Mr. McKELLAR. Does not the gentleman think the trouble with this particular bureau now is that it is not being conducted in a way that will benefit anybody, and ought it not to be if we would leave this appropriation here? I have no objection

to it at all, but, if we are to have it, does not the gentleman think we ought to have it so as to do the farmer some good?

Mr. CLINE. I will say to the gentleman that I am not objecting to the appropriation, but I want to see it made practicable. I want to see the bureau get something out of it that is practicable. The information so far is that there has not been a bulletin published from the information derived from anyone by this Bureau of Farm Management.

Mr. MADDEN. And the further information is disclosed in the discussion that men who are employed in the bureau have no knowledge of what will develop profitable farming; but, on the other hand, they are going around to the farmers and inquiring of them.

Mr. LEVER. The gentleman from Indiana is falling into the error that a great many men fall into who try to understand the Department of Agriculture. [Laughter.] The department is primarily an investigational body.

Mr. CLINE. I understand the gentleman.

Mr. LEVER. And we are going out to get information. Now, the gentleman wants to issue a large number of bulletins before we have information on the subjects under inquiry. He claims that we ought to be issuing bulletins to the farmers of the country. As a matter of fact, this office, as I recall now, has issued some bulletins. I remember a bulletin issued about some hay-growing experiments in South Carolina. It did not occur to me awhile ago.

Mr. CLINE. I am not finding fault about that; but I do say that 60 men working in a bureau for three years and spending in the neighborhood of $700,000 ought to give some evidence in results for the money that is paid out by this bureau.

Mr. FOSTER. Mr. Chairman, I am opposed to the amendment of the gentleman from Indiana to strike out the last word. I think this is a very good provision in this bill. It seems to me that the department ought not to be criticized for not getting out bulletins as soon as gentlemen think they ought to do it. The fact that these men go out and consult farmers and get information from them seems to me to make their employment worth a great deal.

I remember in Illinois a few years ago, where they were holding farmers' institutes, as they do in every county of the State, a man who was lecturing was trying to inform the farmers of what was going on in their line, giving such information as he had, and he told me this story: That he used to lecture on clover, before they had information about these plants storing nitrogen in the ground, and tell the farmer how much good the clover did to the land; how the roots went down into the ground and made the ground mellow and improved it in that way. He said he used to go out in the field and dig up a bunch of the clover and soak the roots in water and shake the dirt off of them and exhibit them to those attending the farmers' institutes. He said that on one occasion he was giving this exhibition and some one in the audience asked him, "What are those little knots on the clover?" He said, "I do not know, but I suppose it must be a disease of the clover plant"; and he said that back in the audience was a Pennsylvania German who rose and said, "My father used to say that those knots on the clover are what did the land good." He said to me, you see, we were learning something since that time. The old Pennsylvania farmer probably could not give the scientific reason for it, but he believed that there was something about those knots that did improve the land.

Mr. COX. Was he a Government employee on a salary?

Mr. FOSTER. I do not know about that. I am not going into that now. But it shows this, that even these Government employees may go out and get some information from the farmer, and I believe it is a good plan for them to do it. Then they get some ideas of the troubles and trials that the farmer has to contend with, and they are able to come directly in contact with the farmer, and I think that is a good thing.

Mr. MADDEN. Mr. Chairman, will the gentleman yield?

Mr. FOSTER. Yes.

Mr. MADDEN. I agree with the gentleman that they can get information from the farmers, but why employ men to go out and get information for the farmers when they have to get the information from the farmers? Why not employ the farmers at first hand?

Mr. FOSTER. That might be better.

Mr. COX. The farmer is not in the civil service.

Mr. FOSTER. I have no doubt but that, coming in contact with these farmers, they get some very useful information from them. The farmer is not entirely void of information that he might be able to give the Government. I think his experience has taught him a great many things that he has not learned in a scientific way, but he knows those things, and any man who has lived in an agricultural community can call to mind many very intelligent farmers in that community who have farmed in a scientific way, possibly without their knowing the scientific reason for it. But you can all realize that from the success they have had. They have done that themselves; they have studied it; they have not had any farmers' bulletins or scientific knowledge, but they were men of intelligence, and those men have been able to give information to these employees and those teaching agricultural subjects very important knowledge.

Mr. MADDEN. Of course they are men of intelligence.

Mr. LEVER. Mr. Chairman, I ask unanimous consent that all debate on the paragraph and amendments thereto close in 15 minutes.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. HAUGEN. Mr. Chairman, I appreciate the embarrassing position in which a Member of Congress, and particularly a member of the committee, is placed in pointing out things that may reflect upon the efficiency of the department. But, Mr. Chairman, in view of the fact that Congress has appropriated $207,000,000 in the last 10 years for the support of the Department of Agriculture, and in view of the fact that appropriations have jumped from $13,000,000, and now they are asking for $30,000,000, it seems to me that a Member should at least have the courage to rise from his seat and point out to the people and to the Members of Congress what this money is being used for and what results are attained.

Mr. McKELLAR. Mr. Chairman, will the gentleman yield?

Mr. HAUGEN. Yes.

Mr. McKELLAR. Why can they not get this same information from the farm demonstrators that the Government sends throughout the country? Would not that be a far more preferable method of getting this information?

Mr. HAUGEN. I have no quarrel with this branch of the department; but, Mr. Chairman, the department has been rather extravagant in its claims. It has pointed out certain achievements attained. We were told a few years ago by one of the department employees that they had ceased to give figures, because figures could not be found to describe the enormous magnitude of the achievements. We have been told, as the reason for the existence of this department, that four blades of grass now grow where only one or none grew before.

I have jotted down from the Statistical Abstract of the United States for 1914 some figures, and I find that the Government reports do not bear out the statements made by that department employee. I turn to page 126, and there I find that the yield of wheat from 1866 to 1875 was 11.9. In 1898 it went up to 15.3, and in 1914 to 16.6.

Here we come to the blades of grass. Hay, 1.50 short tons in 1908, dropped to 1.31 in 1913. Oats from 1866 to 1875 was 28.1. In 1897 it was 27.2. Rye was from 1866 to 1875, 13.6; in 1914, 16.8. Barley was from 1866 to 1875, 22.9; in 1900, 20.4; in 1914, 25.8. I find on page 113 that potatoes, exclusive of sweet potatoes, were 95.4 in 1907 and 90.4 in 1913. And so all along the line. The further we look the more discouraging it looks.

Now, Mr. Chairman, having failed in their effort to increase the yield, they come before this department and propose a remedy. Now, what warrants these appropriations? They tell us now that the trouble is in overproduction, the statistics of the Government show there has been no increase in yield. The only remedy proposed is simply to grow less. The distinguished gentleman from Wisconsin [Mr. REILLY] asked the question of Dr. Spillman, "What is the remedy?" He was then speaking of the overproduction of apples, and the reply was that the remedy is to grow fewer apples.

Here is what Mr. Spillman, Chief of the Office of Farm Management, had to say:

> Mr. SPILLMAN. They are pretty nearly doing that.
>
> The point I am making, gentlemen, is this: That to go out and teach the farmer how to grow 200 bushels of potatoes to the acre instead of 100 bushels does not solve the problem; to go out and teach him how to grow 50 bushels of corn to the acre where he is now growing 30 does not solve the problem. But that is the kind of teaching that most of us have been doing in the past, and I am as guilty as anybody. I have talked eloquently—as eloquently as I could—to get the farmer to grow more corn to the acre and to try to teach him how to grow two blades of grass where one grew before. But that does not solve the farmer's problem, gentlemen.
>
> Temporarily there may be underproduction, but taking the average of a long series of years there is a permanent and unavoidable overproduction of apples.
>
> Mr. REILLY. What is the remedy for that proposition?
>
> Mr. SPILLMAN. To grow fewer apples.

Mr. BOOHER. I should like to ask the chairman of the committee how many employees there are in the Bureau of Farm Management? Are there any more than are given on page 10 of the report of the committee?

Mr. LEVER. This is just the statutory roll; yes. I can give the gentleman the information later by looking it up.

Mr. BOOHER. I do not care about that. How many farm inspectors are there—the men who go out and interview the farmers and get information of the farmers? How many of those are there who are engaged in this work.

Mr. LEVER. I could not tell that except by figuring it up. It is all set out in this Book of Estimates.

Mr. BOOHER. Is there a single one of these inspectors that has any practical knowledge of farming, or have they simply passed a civil-service examination and been appointed because there is a salary attached to the place?

Mr. LEVER. No; I think I may say very positively to the gentleman from Missouri that every man engaged in this work under this Office of Farm Management can be very well characterized as a farm student, a student of farm economics.

Mr. BOOHER. They are all appointed under the civil-service rules, are they not?

Mr. LEVER. They pass a kind of civil-service examination—not such as would be taken by an ordinary clerk.

Mr. BOOHER. Are they required to have a knowledge of farming?

Mr. LEVER. Oh, yes.

Mr. BOOHER. An expert knowledge of farming?

Mr. LEVER. Yes; they have to stand an examination that is in keeping with the position they seek. Practically all of these men are graduates of agricultural colleges.

Mr. McKELLAR. I would like to ask the chairman a question, if I may interrupt the gentleman from Missouri.

Mr. BOOHER. Go ahead.

Mr. McKELLAR. How many farms have they investigated? This is a large appropriation. How many farms have been investigated by this bureau, and what are they doing?

Mr. LEVER. It is not so much a question of the number of farms they investigate, as of the number of communities and the farms therein.

Mr. McKELLAR. If they do not investigate a number of different farms in the different States of the Union, their mission wholly fails.

Mr. LEVER. I can not tell the gentleman how many farms they have investigated. They are making a general investigation of typical farms in different parts of the country.

Mr. COX. It is stated that they have investigated 600 in the State of Pennsylvania.

Mr. BOOHER. There is not a State in the Union but has its farm organizations scattered all over it—granges, farmers' unions, and farmers' congresses. In my district for the last four years they have had a farmers' congress, attended very largely by farmers from Kansas, Nebraska, Iowa, and Missouri. They are carrying on that work themselves. They get the best lecturers from amongst the best farmers whom they can get, and they remain in session sometimes for five days. It does seem to me you can get more information from a meeting of a county grange, and that a farmer who is interested in farm work and the improvement of farms can get more information by attending one of their own granges at the country schoolhouse in one evening than he will get in a whole year from this farm-management business, conducted by the Department of Agriculture. The idea of going out and telling a farmer how he can make a success of cattle feeding is to me preposterous. A man who has had any experience in the business at all knows how he can do that. He has got to go to the stockyards and buy his cattle right. He has got to feed them right, and he has got to buy his corn right. If he does not, he will get himself in a hole every time.

Mr. CHIPERFIELD. You bet your life.

Mr. HOWARD. It does not take an expert for them to know that.

Mr. BOOHER. No; it takes a little common sense mixed with good judgment of the business he is engaged in.

Mr. REAVIS. Mr. Chairman, I was somewhat surprised at the statement of the gentleman from Illinois [Mr. FOSTER] that a so-called governmental expert, out for the purpose of advising farmers as to farm management, knew nothing of the fertilizing qualities of nitrogen as gathered by the clover plant.

Mr. FOSTER. I did not say he was a Government expert. I said he was a man traveling through the country lecturing to farmers' institutes.

Mr. CHIPERFIELD. The fact that he is on the civil-service list is prima facie evidence against him, is it not?

Mr. FOSTER. I did not say he was a governmental expert.

Mr. REAVIS. It seems to me that these experts are of the most value to the farming communities when they get first-hand information from the farmers themselves and disseminate that information to farmers generally. One of the finest examples of a man quietly and modestly doing a great thing is furnished by a young Swiss farmer in my district, living about 30 miles from my home, Arnold Martin by name. He farms about 20 acres of land, and from the product of that 20 acres has sent his children through the State university in my State. A few years ago, upon a few acres of that land, he raised, so I am told, over a hundred bushels of corn to the acre. A governmental expert going to Pawnee County, in which Mr. Martin lives, was told of this young farmer and of his achievements, and he went to his home and learned that this young Swiss farmer furnishes the seed corn to the farmers living adjacent to him in order that his corn might not be polluted. I want to say to you further regarding his accomplishments that last year, from his farm exhibit, he took the first prize at the Iowa State fair, the Nebraska State fair, the Oklahoma State fair, and the Colorado State fair, and then showed his exhibit at the exposition in San Francisco and took the first prize there; and the representative of the Government of China, after viewing that exhibit, paid that young man a dollar an ear for his seed corn in order that he might plant it in China. [Applause.]

Mr. COX. Will the gentleman yield?

Mr. REAVIS. Yes.

Mr. COX. Did he get any of that superior knowledge from any employee operating under this paragraph of the bill?

Mr. REAVIS. I am coming to that. As soon as the efficiency of that young man was learned of by the Government he was placed in this department that you now criticize and was sent across the country giving the farmers practical information as to how he himself managed that farm. [Applause.] He would be in that employment now were it not for the fact that his farm methods have become so celebrated in the Middle West that he is constantly employed before granges and farm institutes, and last year alone that young man earned a very large income from his exhibit prizes, his addresses, and the sales of his exhibits that he had raised on the 20-acre farm. I say to you that there is no man in America of more service to this Nation in the line of agriculture than that young Swiss farmer who has shown the farmers of this Nation what can be done on 20 acres of ground. [Applause.] I am glad indeed that I am privileged to place his name in the records of this Congress, for he has done much.

The Clerk read as follows:

For studying methods of clearing off "logged-off" lands with a view to their utilization for agricultural and dairying purposes; for their irrigation; for testing powders in clearing them; and for the utilization of by-products arising in the process of clearing; in cooperation with the States, companies, or individuals, or otherwise, $5,000.

Mr. MANN. Mr. Chairman, I reserve a point of order on the paragraph.

Mr. BOOHER. Mr. Chairman, I would like to ask how long we are going to investigate powder for the purpose of blowing out stumps.

Mr. LEVER. The statement was made that this would be the last year of the appropriation; that they now want to assemble the facts and make up the report.

Mr. BOOHER. Have they given the country the information as to what kind of powder will blow a stump out the easiest?

Mr. LEVER. I presume they have; but the gentleman from Oregon is more familiar with that than I am.

Mr. BOOHER. I would like to ask him, then, if he or his people have got the stumps out?

Mr. HAWLEY. The purpose of this appropriation is to complete the investigation which the department has concluded and to work up the material and prepare it for publication and distribution.

Mr. BOOHER. This appropriation is not to blow out any more stumps, but to print the information they have got.

Mr. HAWLEY. There may be some investigation that they have not yet concluded, but the principal part of the money will be spent for publication and distribution of this information.

Mr. BOOHER. Has the gentleman any information as to when we will get this knowledge that the department has secured about the best powder to blow out stumps?

Mr. HAWLEY. During the coming year.

Mr. BOOHER. I have got some stumps that I want to blow out and I do not want to blow them out until I get the strongest powder. [Laughter.] Can the gentleman give me any information as to what would be the best powder?

Mr. MADDEN. I just heard the gentleman from Oregon say that the best way is to go to a dentist.

Mr. HOWARD. Will the gentleman from Missouri allow me?

Mr. BOOHER. I will yield to the gentleman.

Mr. HOWARD. I can give the gentleman some information about the stump business. If it is a small stump, take a half a stick of dynamite and put under it.

Mr. BOOHER. What is a small stump?

Mr. HOWARD. Ten inches in diameter and down. The gentleman must have enough fuse attached to it so that he can get out of the way before the explosion takes place. If it is a big stump, put in a stick of dynamite on one side and one on the other and cut your fuse so both sticks will go off at the same time. It cost me, on an average, $450 an acre to blow out a few stumps, so that when you get this information to the farmer he will not be able to blow his stumps out, and that is the way you are spending the money.

Mr. BOOHER. Every stump above 10 inches the gentleman calls a big stump.

Mr. HOWARD. Oh, no. Small, medium, and then it grows bigger and bigger until it gets to a large stump, and it then costs more and more to blow it out, and my nigger had to run faster and faster to get out of the way. [Laughter.]

Mr. HAWLEY. I will say that out in my country we do not call it a stump if it is only 10 inches through. We take those out with a corkscrew. [Laughter.]

Mr. MANN. Mr. Chairman, I withdraw the point of order and move to strike out the last word for the purpose of saying that I understand this is really a very important item, that it is quite necessary for the Government to make this investigation in order to take the stumps out of the Brazos and Trinity Rivers before the improvement. [Laughter.]

The Clerk read as follows:

WEATHER BUREAU.

Salaries, Weather Bureau: One chief of bureau, $6,000; 1 assistant chief of bureau, $3,250; 1 chief clerk, $2,500; 1 chief of division of stations and accounts, $2,750; 1 chief of printing division, $2,500; 3 chiefs of division, at $2,000 each; 8 clerks, class 4; 11 clerks, class 3; 23 clerks, class 2; 31 clerks, class 1; 22 clerks, at $1,000 each; 10 clerks, at $900 each; 1 foreman of printing, $1,600; 1 lithographer, $1,500; 3 lithographers, at $1,200 each; 1 pressman, $1,200; 1 printer or compositor, $1,440; 5 printers or compositors, at $1,350 each; 14 printers or compositors, at $1,300 each; 6 printers or compositors, at $1,080 each; 5 printers or compositors, at $1,000 each; 4 folders and feeders, at $720 each; 1 chief instrument maker, $1,440; 3 instrument makers, at $1,300 each; 1 instrument maker, $1,200; 2 skilled mechanics, at $1,200 each; 5 skilled mechanics, at $1,000 each; 1 skilled mechanic, $840; 1 skilled mechanic, $720; 6 skilled artisans, at $840 each; 1 engineer, $1,300; 1 fireman and steam fitter, $840; 4 firemen, at $720 each; 1 captain of the watch, $1,000; 1 electrician, $1,200; 1 gardener, $1,000; 4 repairmen, at $840 each; 6 repairmen, at $720 each; 4 watchmen, at $720 each; 17 messengers, messenger boys, or laborers, at $720 each; 6 messengers, messenger boys, or laborers, at $660 each; 31 messengers, messenger boys, or laborers, at $600 each; 88 messengers, messenger boys, or laborers, at $480 each; 5 messengers, messenger boys, or laborers, at $450 each; 37 messenger boys, at $360 each; 1 charwoman, $360; 3 charwomen, at $240 each; in all, $337,060.

Mr. MANN. Mr. Chairman, I reserve a point of order on the paragraph.

Mr. HOWARD. Mr. Chairman, I move to strike out the paragraph.

Mr. MANN. I have a point of order pending, but I do not object to the gentleman proceeding.

Mr. HOWARD. Mr. Chairman, my object in moving to strike out the paragraph is to abolish the Weather Bureau. Does the gentleman from Illinois want to consider his point of order now?

Mr. MANN. No; I want to strike out a part of the paragraph.

Mr. HOWARD. Mr. Chairman, the Weather Bureau business has been growing up by leaps and bounds. I see they have a lot of new legislation at this time. I have been studying the weather business a long time and have been watching it. We have a man down in Georgia by the name of Snyder who lives in the district of my colleague, Mr. WISE. This man has been competing with the Weather Bureau in Atlanta, Ga., on prognostications. All he has got in the world that I know anything about, or anybody else, is that he goes into the woods and gets a sourwood stick that has a fork, and he makes his prognostications with that forked stick. The Weather Bureau is costing $1,700,000 a year, and Snyder has given the Weather Bureau in Georgia cards and spades by his prognostications and is away in the lead. In other words, he hits it twice where they miss it three times. [Laughter.] That is about as near as anybody can get to it.

Now, let us take an ordinary, practical illustration of the efficiency of this bureau. They can get up here and talk to you about meteorological observations and the Caribbean Sea and one truck and another, but this Weather Bureau was inaugurated for the farmers, in my judgment, and for the shipping interests of the country. I remember here about three years ago one afternoon—and I reckon all of the older Members of Congress remember it—we were sitting in our usual calm, deliberate way of transacting the folks' business, and all at once a sort of tornado struck this town, and in a few minutes the wind was blowing so hard out here that it took four men to hold a blanket over a gimlet hole. It approached this town, blew down trees all over the city, unroofed houses, and killed some folks, blew down a building, and just for curiosity I went off and searched the records and these great weather prognosticators and general managers of the weather situation sitting over here drawing—well, I see he has increased his salary this year from five to six thousand dollars in this bill—these great weather prognosticators did not let a soul on the face of this earth here in Washington know about this storm that was coming in order to give them time to get into a well or a cellar or a cyclone pit or run out to the tall timber. They let that storm just slip up on us here without any warning, and just suppose for an instant that that storm had caused the dome of this Capitol to fall, had blown it down, look at what this great Nation would have suffered by killing such men as were in this House at that time! It is appalling to just think of it. An irreparable injury would have been done.

The truth of the business is they do not know anything about it; it is all guesswork. They said to-day it would be cold to-night, and if I were a betting man, I would bet 40 cents to a burnt ginger cake that it will be warm.

Mr. ADAMSON. Mr. Chairman, will the gentleman yield?

Mr. HOWARD. Yes.

Mr. ADAMSON. What about that great celebrated weather prophet of the forked sourwood stick?

Mr. HOWARD. Why, he predicts two weeks ahead. He will tell you in April what is going to happen in May. Mr. Chairman, an economy of a million dollars can be brought about in this Weather Bureau, and I can tell you how it can be done. The Government of the United States ought to employ in all the principal cities of this country a $1,200 clerk who knows the points of the compass.

The CHAIRMAN. The time of the gentleman from Georgia has expired.

Mr. HOWARD. Mr. Chairman, I ask unanimous consent to proceed for five minutes more.

Mr. LEVER. Mr. Chairman, I ask unanimous consent that all debate upon this paragraph and all amendments thereto close in 10 minutes.

Mr. MANN. I have a point of order pending on this paragraph.

Mr. HOWARD. I just want five minutes more.

Mr. LEVER. Make it 10 minutes.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that all debate on this paragraph and all amendments thereto close in 10 minutes. Is there objection?

Mr. MANN. Does that affect the argument as to the point of order?

The CHAIRMAN. It certainly would not. Is there objection?

There was no objection.

Mr. HOWARD. Mr. Chairman, I have a letter from a very prominent citizen in my district, and he sent me one of these Weather Bureau cards of prognostication. It stated what the weather was going to be on that day in Atlanta, Ga., and I wish I had it here, so that I could show it to you. On a certain day about a week ago that card stated that it was going to be fair and warmer, and on that very day, when they had posted that card all over the country, we had snow in Atlanta, Ga., and the sun never shone for half a minute during the whole day and all of our fruit was killed. Yet we are spending $1,777,000 in order to keep on the pay roll a lot of guessers. That is all they are—guessers. I know and you know that, for instance, if the wind is blowing from the northeast and it is freezing in New York right now, we can calculate the velocity of the wind, which can be done with a little bit of a machine—calculate the distance from New York to Washington—and any man that has as much sense as you can put in a thimble can predict that the barometer is going to fall in Washington. That is all it is, and that is all they are doing; and it is an absolute waste of the people's money.

Let us get to the real farmer. You will hear them say that the farmers get up and cover their garden truck, and all such things as that. I am talking about my district now, and there is not a farmer in my district that this appropriation helps, because when he gets the information of the day they prognosticate what is going to happen, that day has passed; and the truth of the business as to the efficiency of this bureau, so far as Georgia is concerned, is that it is of absolutely no benefit to the people. Why, I knew an old nigger named Uncle Lindsay Horton that my father owned and who lived with us for 30 years after the war, and Uncle Lindsay could go out and sort of turn his side to the wind and say, "Hit agwine to be rainin' befo' night," and I would put old Uncle Lindsay, if he were living, up against Chief Marvin or anybody else on guessing what the weather is going to be. It was instinct with him, and that is all it is with these fellows, and we are paying $1,777,000 a year for that; and they have a whole lot of stuff in here about preparedness. He says you have got to keep this new bureau, which I suppose

the gentleman from Illinois has made a point of order against, because it is a matter of preparedness. Well, my conscience, how many sins are going to be committed in the name of preparedness?

Mr. McKELLAR. Will the gentleman yield?

Mr. HOWARD. I will.

Mr. McKELLAR. Will the gentleman point out how it can be made cheaper and more economical?

Mr. HOWARD. I will tell the gentleman what he can do. You can get one man who can read temperatures and barometers, and put in a chief as an ornament, if you like, and employ some men in the cities in different sections of the country and pay them $1,200 a year and give them these orders: "When it is freezing in Indianapolis and the wind is blowing from the northwest, notify Cincinnati it is going to be cold." [Applause.] That is all it is necessary to do. Is not that plain enough, and is it not economical? Why do you want to spend $1,777,000 of the people's money to perpetuate and increase this thing that we all know is clairvoyancy, a greater portion of it? Extension! I say, instead of increasing it we ought to decrease it. I am in favor of putting Snyder in charge here with his sourwood limb, because——

Mr. LEVER. I have not any doubt of that at all.

Mr. HOWARD. Because he is competing successfully against the bureau and beating them at their own game.

The CHAIRMAN. The time of the gentleman has again expired.

Mr. LEVER. Mr. Chairman, the conclusion the gentleman from Georgia [Mr. HOWARD] has just reached, to my mind, is the reason for his attack upon the Weather Bureau. I am satisfied the gentleman states the exact truth and states the exact animus of his attack when he says if he had his way about it he would put Snyder and his sourwood stick in charge of this bureau.

Mr. HOWARD. Will the gentleman yield?

Mr. LEVER. I do.

Mr. HOWARD. I said that based absolutely upon the question of efficiency, because Snyder is more efficient than Marvin.

Mr. LEVER. As a matter of fact, Mr. Chairman, I believe that the present Chief of the Weather Bureau, who has been in the service some 25 years and is regarded by the professional world as a great scientist along the line of that work, is more competent to manage this great bureau than the gentleman's constituent, whom I do not know, but who the gentleman himself admits makes his prognostications by use of a sourwood stick in his hand. Somehow it looks like clairvoyance with a vengeance.

Now, Mr. Chairman, I would not take up the time of the committee to defend this bureau except for the fact that for the past six or eight months there seems to have grown up in this country a systematic attack upon the present service, and that attack can find its animus in certain individuals and certain so-called scientists who say that they can predict what the weather is going to be three or four months in advance of its happening. I do not believe they can do it. The Weather Bureau says they can not do it, and I am inclined to think these attacks on this service come for that reason and for that alone.

Now, I want to call the attention of the committee to what happened in Galveston in 1915. They had the most severe tropical storm that ever struck that city. The Weather Bureau notified the people of Galveston six days in advance of the coming of that storm. Just 20 years from the day before that time another great storm visited Galveston. This bureau was not so well equipped then as it is now. In the storm of 1893 3,000 human lives were lost and a million dollars of property was destroyed, although the storm in intensity was not nearly so great as the storm of 1915, in which 300 people lost their lives.

Mr. HOWARD. Will the gentleman yield?

Mr. LEVER. I do.

Mr. HOWARD. The gentleman knows the reason they did not do so was because the United States built a sea wall to protect them.

Mr. LEVER. The gentleman does not know any such thing, and I desire to take the testimony of the people of Galveston rather than the unsupported testimony of the gentleman from Georgia. Now, let us see what they said about it. This is a letter under date of August 30, 1915:

BOARD OF COMMISSIONERS,
Galveston, Tex., August 30, 1915.

Hon. CHARLES F. MARVIN,
Chief of Weather Bureau, Washington, D. C.

DEAR SIR: At a meeting of the board of commissioners of the city of Galveston held August 26, 1915, it was unanimously adopted that the thanks of the board of commissioners and the citizens of Galveston be extended, through you, to Mr. W. P. Stewart, local weather forecaster, for the very valuable and untiring services rendered in giving warning to the people of Galveston and vicinity of the approach of the storm of August 16, 1915.

Yours, respectfully,

JNO. D. KELLEY,
City Secretary.

—

TWENTY-EIGHTH INFANTRY,
Galveston, Tex., August 30, 1915.

From: The Commanding Officer.
To: Mr. W. P. Stewart, weather observer, Galveston, Tex.
Subject: Assistance rendered during the storm; especially to the Twenty-eighth Infantry.

1. I believe that thousands of persons in and near Galveston owe their lives to you and your efforts to give them notice of the approach of the storm and of its changes after its arrival.

2. The Twenty-eighth Infantry is especially indebted to you, as it was through your courtesy to Lieut. Hardin, permitting him to remain at your office during the storm and enabling him to communicate to us information that resulted in timely efforts to save lives and protect property.

3. I wish to thank you for the whole regiment, I would say rather for everyone who came within your protection.

E. H. PLUMMER,
Colonel Twenty-eighth Infantry.

—

[From the Galveston Tribune, Aug. 31, 1915.]

THE WEATHER MAN.

When the time comes, and it is very near at hand, for remembering with gratitude those who lent their aid toward lessening the loss of life from the recent tropical hurricane, the fact should not be overlooked that probably hundreds of lives were saved through the persistent and insistent admonitions of Local Forecaster W. P. Stewart and his corps of assistants. Warning after warning was sent to the people living outside the protection of the sea wall and that the loss of life on the island west of the city was so small is to be attributed to the earnestness with which the people were implored to leave their exposed homes and seek safety on the higher ground of the city. Those who disregarded the warning paid for their temerity with their lives.

It has been recounted in thrilling lines how the Weather Bureau at this point displayed its warning signals, sent danger rockets high into the skies, used motorcycle messengers and telephone lines in an effort to impress the people with the imminence of their danger in remaining exposed to the fofce of the oncoming hurricane. No lines of duty were regarded in the anxiety of the office force to reach every danger-threatened individual, nor were long hours of service or physical weariness permitted to halt for a moment the work engaging the attention of the men who alone appeared to have any adequate conception of the destructive nature of the wind hurrying in this direction. Whether there shall follow official recognition or not, the splendid work done by the local corps of the Weather Bureau will ever remain a stirring picture in the minds of the people of Galveston and this vicinity. Their splendid service has earned them a warm place in the affections of the people.

Another consideration is that the good work of the local Weather Bureau could not have been accomplished but for the whole service. From August 10, the day on which the first report of the hurricane was received, until it struck the Gulf coast, the United States Weather Bureau kept track of the storm, and shipping and other interests were kept posted. It was a case of good work on the part of the bureau from start to finish.

We are prone to give slack consideration to those matters with which long intercourse have made us familiar. The true need of street car service was never felt so keenly as during the few days subsequent to the storm, when the people were compelled to walk long distances between their homes and places of business. The light of the kerosene lamp never appeared so dim as when brought into mental comparison with the incandescent bulb, now glowless. The luxury of a tub bath becomes a near necessity when the paucity of city water forbids the use of the fluid for other purposes than drinking and cooking. The weather service furnished by the United States Government has been with us for more than 40 years, but its real utility has never before been so brilliantly, so forcibly, impressed upon us as it was during the few days preceding the arrival on the Texas coast of the recent storm. If the national weather department has done nothing more in return for the money expended in its maintenance than the service rendered in connection with this latest storm, it has paid for itself a thousandfold, it has established its right to perpetuation, it has shown itself to be an important part of our material progress.

But in the remarkable achievement credited the Weather Bureau in connection with the recent storm or previous meteorological abnormalities, this governmental utility has not performed all the functions that called it into existence. The United States Weather Bureau was not created nor is it maintained solely for the purpose of warning the people of the possible visitation of a storm. That the Weather Bureau performs a very important service in holding down the high cost of living is not generally recognized, but the frost warnings, the advance advices of approaching rains, the continuation of extended periods of drought, intimated by this bureau, are all of value to the farmer, and advantage being taken of the advance knowledge thus imparted has saved many a crop; and thus, indirectly it may be, saved the farmer from loss and at the same time averted a dearth of foodstuffs, operating to keep down the market prices. Should one care to investigate the field of operation of the National Weather Bureau, it would be found that numerous indeed were the good offices rendered, and deeply are the people indebted to that department.

—

[From the San Antonio Express, Sunday morning, Aug. 29, 1915.]

TO THIS TRIO OF THE HEROES OF PEACE MANY GALVESTONIANS OWE THEIR LIVES—W. P. STEWART, I. R. TENNEHILL, AND J. W. GEIGER, OF ISLAND CITY'S WEATHER BUREAU, SPREAD BROADCAST WARNING OF HURRICANES COMING SO PEOPLE FLED TO HAVENS OF SAFETY.

After the news story writers of great events have had their inning, there is always some one to glean the aftermath. The greatest field for news gathering that has opened in Texas in the last 15 years was the West Indian hurricane which visited Galveston August 16 and 17.

When the waves had subsided and a fairly open way had been made to the stricken city, this writer was sent to harvest the aftermath. After being told by evidently well-meaning people that he was taking his life in his hands, and that he should carry a bottle of water and a package of crackers, as the city was famine stricken, your correspondent

was agreeably surprised to find nothing more formidable than a soldier on sentry duty at Texas City, who examined his pass and courteously allowed him to board the boat.

The havoc created by the great hurricane at Texas City was so great and the devastation of the country around about so complete, that it presents rather the appearance of a wilderness than of a wreck. The news story of the disaster at that point has been fully told, and in many cases profusely elaborated upon. As to the number of deaths resulting from the storm at any point in its path, there is a question in the minds of everyone at this time as to the accuracy of the reports. This is probably true in the case of the men who prepared the reports. One thing is certain, however, and that is that no man can look upon the track of the storm and not feel that it is a miracle that the list of deaths is not a hundred times greater.

Estimates of the loss of property were made early in the stories of the storm. It is easy to see that these estimates were based upon the things visible at a casual glance. The big things that were readily seen. This writer believes, after a reasonably careful look at the territory from Velasco to Port Arthur, that $50,000,000 will not more than cover the property loss.

This estimate is based on the matter of figuring everything that has been lost, from the little express wagon that stood on the back gallery of some humble home to the crushing by the waves of the pavement of the wonderful sea-wall boulevard in the city of Galveston. From the driving far inland of some poor fisherman's tiny boat to the grinding of the keel of a great ocean liner as it grounded on the prairies at a point so far inland that $100,000 or more will be required to float it again. From the wrecking of a sewing machine, with which some poor woman made her living, to the chaos that exists in the big oil-refining plant at Texas City, or the crushing of a mammoth dock at Galveston. From the washing out of a board culvert between a country home and the graded county road to the demolition of the great Galveston causeway.

THE BIG PORT.

All these extremes exist, and every kind and variety of damage that the human mind can conceive exists between the extremes. The loss of cattle, horses, and mules in the storm is almost incalculable, and its exact figures will probably never be known. As regards the particular communities their losses are their own, as regards the State of Texas the aggregate loss is hers, and to it is added the irreparable loss of having her seaport, her great gateway to the balance of the world, blocked for an indefinite period.

This latter statement is made advisedly, because it is a well-known fact that up to the 17th of the current month there was only one recognized port on the Texas Gulf coast, and that port was Galveston. Only recognized ports do business, and ports are not recognized in a day, nor are docking facilities produced in an hour.

There are other deep-water ports in embryo on the Texas Gulf coast. Some are a commercial joke, made for rate purposes only, while others (Port Aransas, for instance) that have deep water, good harbors, and are only waiting for recognition to prepare ample docking facilities. The commercial interests of the Southwest can not be justly accused of having put all their money into one pocket by backing Galveston. That city is and for many years to come will continue the greatest seaport on the Texas coast. Where the expenditure of such enormous sums of money are required for the enterprise, it is wonderful progress for a country to open one such port in a generation or two. Other ports on the Gulf coast will follow, and the disaster to Galveston will hasten their recognition.

No one man of intelligence pits his wisdom against that of an army of thinkers, but there are many men in Texas who have been asking for the past week why Galveston has been disposed from the hour the storm subsided and the first pioneer newspaper reporter succeeded in making the perilous trip into the city to treat the hurricane and its results as if the people of that city were directly responsible for it? As if, in fact, they were guilty of some crime that should be suppressed and kept from the world. Houston has followed the same policy. These two cities are two of the greatest in Texas, or anywhere else for that matter, when it comes to having a citizenship of live wires and good slayers. They have started many things, but no one would accuse them of having started a West Indian hurricane and tolling it across the cities they have expended millions in building.

THE BARRIER AGAINST DEATH.

In the city of Galveston there are two factions. One faction insists this is the greatest storm in history, and rejoices in the fact that the sea wall saved the city. The other insists that the storm was not so great as that of 1900. All the people of that city are of one mind in stating to the world that the damage to the cty is comparatively trivial, and that a few weeks will see it back to normal. This, of course, is impossible, but no man with red blood in his veins can help loving the people of Galveston for making themselves believe it to be true and trying to convince the world that it is true.

The accepted estimates of the property loss in the storm of 1900 is $17,000,000, in round numbers. Leaving all the balance of the storm area out of the reckoning at this time, and confining the matter to the city of Galveston alone, it is extremely doubtful if any man capable of performing the service would undertake to repair the present actual damage of the city for $20,000,000. It is conservatively estimated that the damage to stocks of goods in the lower stories of wholesale and retail houses on the Strand and Market Street alone will reach $3,000,000 to $4,000,000. The people of Galveston up to this time are so full of thankfulness that the death list was confined to less than a score in the city, as against ghastly, grisly thousands in the 1900 storm, that they have not yet taken account of property losses. Men who had weathered both storms told this writer that had it not been for the sea wall there would not be brick or shingle left on Galveston Island to-day.

SEAS ENVY MAN'S SUCCESS.

The damage to the docks at Galveston was surprisingly light. Only one pier was destroyed completely, and the damage to others is comparatively light. Many vessels were damaged, some sunk and lost, and others went aground, while yet others weathered the storm in safety. Approaching the docks, one wonders if there has really been a great storm, as the evidences of such a calamity are not apparent. All of the machinery of the shipping industry is practically intact, and, by way of prophecy, the shipping industry is all the future Galveston can hope to be.

Immediately upon landing and starting uptown, the tracks of the demon of the sea became evident. The buildings on Market and Strand are strong and were built to withstand the buffeting of the seas. They are not much damaged, but their stocks, the treasures of their strongholds are in ruins. A little farther out, where the business section gives way to the lighter residence structures, the damage from the wind becomes apparent in wrecked roofs, broken houses, and heaps of débris.

Still, the ruin is not sufficient to warrant the belief in a story of a great storm. Not until the neighborhood of the sea wall is reached does one realize that "The seas turned green with envy at man's happiness and sought to drown the world."

A section of the city along the sea wall ranging in width from one to three blocks was battered into an unrecognizable mass of débris. All early reports of the calamity stated that all houses along the sea wall were gone. This was largely construed to mean the bathhouses and buildings outside the wall, but unfortunately that was not what was meant. A reliable citizen of Galveston said he was on the sea wall at 5 o'clock Monday evening, and the water at that time, the mean tidal height and not the breakers, was within 1 foot of the top of the seawall. From the damage done, indications are that at the height of the storm the tide was on a level with the top of the wall and the breakers went unobstructed into the city, crushing the houses as they came.

There are places where the seas tore up the heavy concrete pavement for a quarter of a mile or more and made the brick pavement of the boulevard look as if a giant plow had been run through it. Once the pavement was broken, the waves dug up the sand with which that part of the city had been filed in and carried it in fiendish glee up the streets, which it left a deposit ranging from 1 to 4 feet deep on the brick pavement of the principal thoroughfares of the city.

THE HEROES OF PEACE.

When one sees this and realizes the force with which this water, flying fairly in the face of the wind, struck the city and demolished hundreds of homes, he wonders how so few lives could have been lost.

There is an answer, but up to this time it has not been given in the public prints as fully and convincingly as it should have been. There was no one in these homes, except in the Galvez Hotel, which breasted the waves like a mountain of granite, yet did not come quite unscathed from the fray. The reason there was no one in these houses when the sea smashed them as so many eggshells is that three men had labored, and their labors had incited an army to deeds of bravery.

These three men were W. P. Stewart, local observer of the United States Weather Bureau, and his two assistants, I. R. Tannehill and J. W. Gieger.

For days the hurricane had been kept track of by the Government from the time it left the island of Dominica until it reached a position threateningly near the Texas coast. On Sunday morning warnings were sent out. By Sunday evening the hurricane signals were sent up, and the observers began working to warn all the coast of Texas. Up in their office at the top of the city, where the gods of the storm shrieked defiance at the ingenuity of man and threatened to tear the building in pieces and scatter it to the four winds of heaven, these three men labored 56 hours without sleep and with only the little food that some one thought to bring them from time to time. So great was the strain that they did not think how long they had been there, and when the storm passed they collapsed from fatigue. Had it not been for the insistent warning of these men and the heroic efforts of the strong men of the city under these warnings, the calamity of 1900 would have been repeated despite the sea wall.

WINDS SCREAM IN RAGE.

Not only did the grim monster of the deep stalk to the very doors of the city on the Gulf side and enter them to find their prey had escaped, but the same thing occurred on a larger scale on the bay side. For two days the sea, like a crafty general, had regiments, brigades, and divisions of white horse following one another at a furious pace from far out in the sea. As they approached the harbor they doffed their white caps as if paying obeisance to man's power, and then wound their sinuous, slimy way back through the channel into the bay, where they filled every nook and cove, and even marshaled their hosts far out upon the land that the sea had never claimed before in history.

Just when the mighty seas had broken into the doors of the city and finding the tenement empty and themselves despoiled of victory, another mighty cry went up. Far up in the clouds, at the top of the town, the little needle of the anemometer was writing another message. The wind was increasing from the northeast. It came on with a scream of rage and blew at a velocity ranging from 60 to 120 miles for six hours. As soon as the little needle began to write its message of warning the warning was sent to the people on the bay side of the city, and none too soon. As it was, many waded in water to their necks seeking safety in the great buildings in the heart of the city, and some lost their lives in the effort.

From this source came the greatest damage to the city. At the signal given by the whistling of the titanic winds, the pent-up hordes of waves came rushing from the bay, and, striking the unprotected bay front, demolished the light structures of the residence section and filled the downtown district with water to an average depth of 5 feet. That part of the residence city that fronted on the bay was composed chiefly of homes of the working class of people. Several blocks in width and reaching from the business district to the western limits of Galveston were swept away as a carefully wielded broom would remove the fallen leaves from a sidewalk. Further in toward the heavier and more substantial homes is a jagged line of wrecked houses that finally built into a breakwater that held the waves from crossing the island until the wind changed its course to the southeast, and in a measure relieved the pressure and saved the residence part of the town from annihilation.

THE SPIRIT OF GALVESTON.

While walking across this great swept section of sand this writer saw an old man standing looking at a broken sewing machine, a few cooking utensils, an old iron bed, and other scraps and fragments of household goods. Upon being accosted the man, who gave his name as James H. Slator, said, "This is what is left of my home." He gave the street and number of the place, but there was nothing in blocks of the place to indicate anything like a street line or that the land had ever been platted. It is true that none of these buildings were very valuable, but each represented a home of some sort, and in the aggregate represented much value.

This old man answered a question that has been asked many times since the storm, when people have asked if Galveston would be rebuilt. He looked at the ruin for a few moments and then said, "Yes; that's my home. I spent all I had building that cottage, and just as soon as the ground dries and I can get money to do it I shall build another in the same place."

That is the spirit of Galveston. Men who go down to the sea in ships constantly throw dice with fate. Galveston is a seafaring town,

and her people are thoroughly imbued with the spirit. Every broken piece of the pavement along the sea wall will be replaced; children will again play upon the great concrete seats that the angry waters hurled across the way in their fury. Thousands will bathe in the surf, and great ships will continue to come and go.

No people in America, save only those of the city of San Francisco, have developed such a spirit of determination as have the people of Galveston; and it remains to be seen whether the people of the Golden Gate will meet their second calamity with the determination and heroism with which Galveston has gone to work to rehabilitate the city.

To-day Galveston is stretched upon the beach licking her wounds, and before the sea water has been dried from her drenched mane this lion of the Texas coast is being attacked by the dogs of commercial prowess. Every port on the coast is offering aid to the stricken city and at the same time secretly hoping to profit by her misfortune. The great causeway, over which passed the produce of an empire to be sent to foreign countries and the imports from the uttermost corners of the earth, was destroyed. Much money and labor will be required to replace it. The most sanguine do not hope that this can be done soon. The railroads hope to have a trestle into the city soon, but Galveston as a port has outgrown single-track trestles. While she is repairing her damage other ports that have a mainland approach will fight for the supremacy. The honors lie between Texas City and Port Aransas. Texas City has been storm swept; Port Aransas has never been the victim of a storm in the history of tidal waves of great magnitude.

It can not seem wise to the commercial interests of the Southwest to have only one port on the Texas coast; and, whatever may be said, the recurrence of the same kind of a calamity within 15 years will put commerce to thinking of providing against the chance of having business tied up for want of shipping facilities.

It has been said, "The way to fame is like the way to heaven—through much tribulation." If that be true, then indeed should Galveston become a famous city.

GALVESTON'S HISTORY.

History says Galveston Bay and Island were discovered by Spanish explorers and were named in honor of Conde de Galvez, who happened to be governor of Louisiana at the time.

About the year 1817 Jean La Fitte, the Gulf pirate, who had a peculiar penchant for scuttling and sinking Spanish galleons after having put their crews to the knife or caused them to walk the plank, decided that Galveston Island would be a cozy spot for a base of operations. Accordingly he established a private town on the east end of the island, where the city of Galveston now stands. The citizenship was composed of marine highwaymen, and the pirate chieftan was supreme ruler. As a principality of pirates the town continued for something like three years. Being hard pressed by the United States ships of war on account of undue playfulness with an American vessel, La Fitte abandoned the island, and it was about 13 years before an effort was again made to build a town there. It is said that at one time the island was inhabited by a lone fisherman.

History is rather lacking in regard to the place until 1833, when President Burnet of the Republic of Texas, finding Santa Anna uncomfortably close on his trail with a force of Mexican "soldados," embarked his troops and took them down the bay to Galveston Island on a duck hunt. The republic had a navy, and about that time Galveston Island seems to have been its main base.

In 1836 Col. Michael B. Menard saw the island and liked it. He bought a league and a labor of land from the State for the munificent sum of $50, and located his grant on the eastern end of the island. This was the foundation of the real city of Galveston. Col. Menard organized an association called the Galveston City Co. All of the land titles in the city are held under titles from that company. It is said the company still exists, but practically all the land has changed title since then.

Galveston County was organized in 1838, but was so far removed from the other part of the State, both on acount of the bay that lay between it and the seafaring character of its people, that it was not represented in the councils of the State until the third Congress of the Republic of Texas was held at Houston in 1838. It appears that Houston was so close the people of the island thought it would not be a neighborly thing to fail to send a representative, so they sent one, Mosely Baker, as representative.

ALWAYS READY TO FIGHT.

It appears that the men of Galveston have always been willing when invited to a fight. The first regiment of Texas soldiers to join Gen. Taylor in the war between the United States and Mexico was composed of men from Galveston County.

The first railroad train run into Galveston across the bay in 1860. Prior to that time trains had been run from Harrisburg to Virginia Point and the balance of the journey made by boat. From that time until the jetties were completed in 1896 most of the ships were loaded in part by lighters, on account of the low water over the bar. Altogether something like $10,000,000 have been spent on the jetties and other harbor improvements by the Federal Government, and at present the channel has a depth over the bar of about 26 feet at mean low tide.

The census of 1900 gave the city of Galveston a population of 38,000. In the great tidal wave of that year the loss of life was variously estimated at 6,000 to 10,000. The city had become so important as a seaport, and the people were so heroic in their efforts that the rehabilitation of the city was phenomenal. Their work during the 15 years between the 1900 storm and the storm of this year, which is said to have been by far the greater storm of the two, reduced the death loss from thousands to not more than 50 at most, and while the property values have increased many fold, have reduced the property loss to a figure said to be below that of 1900 loss.

J. E. GRINSTEAD.

The CHAIRMAN. The time of the gentleman has expired.

Mr. LEVER. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD by publishing other resolutions from the citizens of Galveston on this subject.

The CHAIRMAN. Is there objection to the request of the gentleman from South Carolina? [After a pause.] The Chair hears none. Does the gentleman from Illinois make the point of order?

Mr. MANN. I do not know whether, debate having been limited, I can ask any question about it; otherwise I shall make the point of order.

Mr. LEVER. Oh, Mr. Chairman, I did not expect the limitation upon debate to do that.

Mr. MANN. Mr. Chairman, I make the point of order—I suppose that makes it in order—on one chief of bureau, at $6,000.

Mr. LEVER. Mr. Chairman, I concede the point of order, and if the gentleman will let me offer an amendment, I will now do so.

The CHAIRMAN. The point of order is sustained.

Mr. LEVER. Mr. Chairman, I offer the following amendment: On page 5, line 8, "one chief of bureau, $5,000," in lieu of the language in the bill at present.

The CHAIRMAN. The gentleman from South Carolina offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amend, on page 5, line 8, by striking out the words "one chief of bureau, $5,000."

The CHAIRMAN. The question is on agreeing to the amendment.

The question was taken, and the amendment was agreed to.

The CHAIRMAN. The Clerk will read.

Mr. HOWARD. A parliamentary inquiry, Mr. Chairman. What became of our amendment to strike out the whole paragraph? I did not withdraw it. I was advocating it vehemently over here.

The CHAIRMAN. The Chair thought that the gentleman formally stated that he was going to offer an amendment. The Chair did not really understand——

Mr. HOWARD. Of course, if the House votes out this paragraph, as I know it will, the following paragraph will go out with it.

Mr. MANN. Let it have a vote.

The CHAIRMAN. Without objection, the Chair will put the motion of the gentleman from Georgia to strike out the paragraph.

Mr. MANN. He made the motion.

The CHAIRMAN. The Chair is going to put the motion of the gentleman from Georgia to strike out the paragraph.

The question was taken, and the Chair announced that the noes seemed to have it.

Mr. HOWARD. Division, Mr. Chairman.

The committee divided; and there were—ayes 1, noes 51.

So the motion was rejected.

The Clerk read as follows:

General expenses, Weather Bureau: For carrying into effect in the District of Columbia and elsewhere in the United States, in the West Indies, in the Panama Canal, the Caribbean Sea, and on adjacent coasts, in the Hawaiian Islands, in Bermuda, and in Alaska, the provisions of an act approved October 1, 1890, so far as they relate to the weather service transferred thereby to the Department of Agriculture, for the employment of professors of meteorology, district forecasters, local forecasters, meteorologists, section directors, observers, apprentices, operators, skilled mechanics, instrument makers, foremen, assistant foremen, proof readers, compositors, pressmen, lithographers, folders and feeders, repairmen, station agents, messengers, messenger boys, laborers, special observers, displaymen, and other necessary employees; for fuel, gas, electricity, freight and express charges, furniture, stationery, ice, dry goods, twine, mats, oils, paints, glass, lumber, hardware, and washing towels; for advertising; for purchase, subsistence and care of horses and vehicles, the purchase and repair of harness, for official purposes only; for instruments, shelters, apparatus, storm-warning towers and repairs thereto; for rent of offices; for repairs and improvements to existing buildings and care and preservation of grounds, including the construction of necessary outbuildings and sidewalks on public streets abutting Weather Bureau grounds; and the erection of temporary buildings for living quarters of observers; for official traveling expenses; for telephone rentals and for telegraphing, telephoning, and cabling reports and messages, rates to be fixed by the Secretary of Agriculture by agreements with the companies performing the service; for the maintenance and repair of Weather Bureau telegraph, telephone, and cable lines; and for every other expenditure required for the establishment, equipment, and maintenance of meteorological offices and stations and for the issuing of weather forecasts and warnings of storms, cold waves, frosts, and heavy snows, the gauging and measuring of the flow of rivers and the issuing of river forecasts and warnings; for observations and reports relating to crops and for other necessary observations and reports, including cooperation with other bureaus of the Government and societies and institutions of learning for the dissemination of meteorological information, as follows:

Mr. MANN. Mr. Chairman, I reserve a point of order on the paragraph. I would like to ask the gentleman from South Carolina [Mr. LEVER] what it is proposed to do in the Caribbean Sea more than is now being done?

Mr. LEVER. Mr. Chairman, they have now in the Caribbean Sea about 11 or 12 stations from which they are getting daily reports as to the condition of the atmosphere. It is the purpose of the department and the purpose of the committee to give them sufficient appropriation to install about 12 other stations, which will not only enable them to have that many additional reports

but to have double daily reports from all the stations rather than daily reports from them. There seems to be a long stretch of territory, over 3,000 miles, in that tropical country in which they have only one station, and the distance is so great that a great many of the storm centers are lost. They do not come in contact with the weather observers.

Mr. MANN. Is it expected to put stations down along the Lesser Antilles on the one side in the Caribbean and Central America on the other side?

Mr. LEVER. Yes; that is the idea.

Mr. MANN. Does the gentleman know what would be the expense of those stations?

Mr. LEVER. The total expenditure for the Caribbean Sea work—the additional work that is carried in the bill—is $30,000, not including the building at Panama. We felt that this was a very important matter, and discussed it last year, but we were not satisfied then that we ought to recommend it; but the more the committee has thought about it the more it regards this as being extremely important. They take it, of course, that the Caribbean Sea is going to be used in the future a great deal more than it has ever been used in the past, and we thought in the interest of shipping and navigation and commerce we ought to get as nearly as we can accurate reports of the conditions of the weather in that section.

Mr. MANN. I should doubt very much whether a knowledge of the weather there would be of any great value to steamships going through the Panama Canal. It might be, but I doubt it. The only weather that they fear when coming out of Panama this way is a norther, which happens once in two or three years perhaps. They do not have any difficulty in knowing when they are coming.

Mr. LEVER. I will say to the gentleman, too, in addition to the service expected to be rendered to navigation it is thought by the committee that the commerce of the Gulf coast and the Atlantic coast can be greatly protected by having advance warnings of storms that may be set in that direction, just as in the case of Galveston.

Mr. MANN. Well, the Galveston case the gentleman cited he very much exaggerated—at least the people of Galveston did—at the request of the weather observer down there. Doubtless they did good work, and I do not criticize the Weather Bureau. I think it is a wonderful——

Mr. LEVER. It is a wonderful service.

Mr. MANN. I do, generally speaking, but I do not always so regard it.

Mr. LEVER. We remember the days when we have the colic, but we do not think of the days when we do not have the colic. That is the case with the Weather Bureau.

Mr. MANN. I know that every morning and every evening I look to see what the weather indications are, and I suppose that is unconscious proof that I do put some faith in it. If I did not, I would not take that trouble. However, that has nothing to do with this case. The Caribbean Sea, of course, does not extend all over the world. I have no doubt if you get information from South America or the islands along the eastern side of the Caribbean Sea it might help some, but it might help some also to get information from Africa and Asia. I do not know, and they probably do not know, how far we should go with this. The gentleman says "the committee," but, after all, that means the Weather Bureau.

Mr. LEVER. Of course the Weather Bureau recommended this last year. The committee disallowed it at that time, because they did not look into it, but they did look into it at this time and allowed it.

Mr. MANN. The trouble is that when we start into these experimental propositions we can not stop.

Mr. REAVIS. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Nebraska moves to strike out the last word.

Mr. REAVIS. I arise from the purpose of inquiring of the chairman of the Committee on Agriculture why the policy of the Weather Bureau to supply information and prognostications with reference to the weather during the winter months has been discontinued? The Weather Bureau has had a policy of notifying the interior, at least, of weather prospects for a week in advance as an aid to shippers. That has been practically, if not entirely, stopped during the winter months, when it is needed the most. Can the gentleman tell why that policy has been adopted?

Mr. LEVER. I can not give the gentleman that information. I really did not know that was the custom in that section of the country.

Mr. REAVIS. It was brought to my attention by shippers of cattle and apples in Nebraska that they had been subjected to severe loss by the stoppage of these reports.

Mr. LEVER. About the best that the Weather Bureau can do in the way of accurate forecasts in advance is 24 hours, and I should think that if they have discontinued that practice it is because they have felt they could not make it an accurate matter.

Mr. REAVIS. They do not discontinue it in the summer months, when there is no great necessity for it, but they have discontinued it in the winter months, when we need it most.

Mr. LEVER. I shall be glad to go into that matter and get the information for the gentleman which he desires.

Mr. REAVIS. I would be glad if the gentleman would.

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn. The Clerk will read.

The Clerk read as follows:

For the purchase of a site and the erection of a building at Cape Henry, Va., to be constructed under the supervision of the Chief of the Weather Bureau, plans and specifications to be approved by the Secretary of Agriculture, and for all necessary labor, materials, and expenses connected with this work, $22,500.

Mr. COX. Mr. Chairman, I reserve a point of order on the paragraph.

The CHAIRMAN. The gentleman from Indiana [Mr. Cox] reserves a point of order on the paragraph.

Mr. COX. Mr. Chairman, I do not know; perhaps the building may be necessary, but I am at a loss to understand why this department should be given the right to come to this committee and get an appropriation for the purpose of erecting a building when you have a Committee on Public Buildings here which does that kind of work.

Mr. LEVER. Mr. Chairman, I will say frankly to the gentleman from Indiana that without a doubt this item and the following item are subject to points of order. But it has been the custom for many years, ever since I have been a Member of Congress, I think, in matters of Weather Bureau buildings, to provide for them on the Agriculture appropriation bill, and to have them under the supervision of the Secretary of Agriculture. The committee thought that these two buildings were absolutely necessary. And, following the policy which we adopted some years ago, instead of covering this appropriation up in a lump fund, which we might have done, and which was done at one time, we set it out on the face of the bill so that the Members of the House might have accurate and detailed knowledge of the contents of the bill.

Now, if the gentleman will permit, at this time we have a Weather Bureau building at Cape Henry. It is a three-story, old, rickety, worn-out, wooden building. That building is located on property which belongs to another department of the Government.

Mr. COX. To the War Department?

Mr. LEVER. No; it belongs to the Lighthouse Service. That is a misstatement in the hearing. Now, in addition to that, we understand that the War Department is beginning certain improvements of its property down there, so that the present location of our Cape Henry building would not be suitable for the purposes for which it is now being used, and we desire to locate the new building at a site that will make it more useful in the performance of the function for which it is to be used.

Mr. COX. I do not want to do wrong or to injure the department, or to put it to any unnecessary trouble or expense, but if this building were to take its usual and ordinary course or channel by the Public Buildings Committee reporting the proposition here, would not the Department of Agriculture still have control of it, as it has now?

Mr. LEVER. That is probably true; but, of course, the gentleman understands that the probabilities are that there will be no public buildings bill at this Congress, and the committee regards this as in the nature of an emergency appropriation.

Mr. COX. That may be, but has the department already purchased a site, or contracted for one?

Mr. LEVER. No. The department has not purchased a site.

Mr. COX. Does the gentleman know anything about what the site is going to cost?

Mr. LEVER. The department thinks, and the testimony before the committee is, that the site will not cost more than $2,000.

Mr. COX. Does the committee believe that the site can be procured and the building constructed within the limit of this appropriation?

Mr. LEVER. Yes; the department estimated $25,000 for each of these items. We called in Dr. Marvin and asked him if he could not cut these items down $22,500 each, and after think-

ing it over for some time he said he thought it could be done if they would skim close to the surface.

Mr. COX. Then the gentleman believes, as the result of his investigation, that the site can be bought and the building constructed within this appropriation?

Mr. LEVER. I have no doubt of it. I know that Government buildings elsewhere have been erected at a cost of from $12,000 to $15,000.

Mr. COX. I have read the hearings in this case, and it seems to me they need the building. I am not going to make the point of order, after hearing the gentleman's explanation.

The CHAIRMAN. The gentleman from Indiana withdraws his point of order.

Mr. MANN. I renew the reservation of a point of order.

The CHAIRMAN. The gentleman from Illinois [Mr. MANN] reserves a point of order.

Mr. MANN. Is there not a large amount of land owned by the Government down there in connection with the lighthouse reservation and the new land for the Army?

Mr. LEVER. I understand that the Lighthouse Service has a reservation down there, and the War Department owns some property there; but my recollection is that a statement was made before our committee to the effect that it would probably be impossible to get a suitable site for this kind of building on the Government property.

Mr. MANN. What kind of building is it? You could not find a more suitable site for an office building, or for a country residence, or for a fort, or anything else, than right there on this cape.

Mr. LEVER. If the gentleman will let me say what I was about to say I think I can convince him that this situation is a little different. The Weather Bureau station at Cape Henry is not only a Weather Bureau station in the ordinary sense of that word, but it is also a station which must be equipped for taking observations of ships as they come in, in aid of navigation, and they want as clear a lookout as possible so that they can take their instruments and put them up on the top floor of the building, a three-story building.

Mr. MANN. Why, Mr. Chairman, I have been at this point, both by land and by sea. Standing where I am in this Hall I can see anybody who comes in at the door. I do not have to be up in the top of the building to see anyone who comes in here. Now, nobody can get into that inlet without anybody on the ground seeing the vessel, for a long distance, just as far as he can see, to the horizon. That reason is pure folly.

Mr. LEVER. I have never been there myself, and of course I am taking the statement of Dr. Marvin.

Mr. MANN. I have been on the ground several times and I have come into the inlet on boats several times. That is perfectly plain. Now, the lighthouse reservation, as I remember it, is quite a large reservation. I think they have a new lighthouse there. They used to have an old one back there, if I remember correctly from my service on the committee dealing with lighthouses. I do not remember how much ground we have recently purchased, but we made an emergency appropriation last year or the year before for the purchase of quite a tract of land there for the forts.

Mr. LEVER. Let me read this statement, which I think the gentleman will find interesting.

The firing of heavy artillery in practice work would be detrimental to the delicate instruments used by the bureau, and would interfere with the conduct of its regular work. So therefore we want to get as far away as possible, etc.

Mr. MANN. I should think, if that is the case, they would want to get away from Cape Henry entirely, because we are going to put there one of the greatest forts on earth, probably with 16-inch guns, and there will be no sense in putting up such a building at Cape Henry, which, two or three years from now, will be out of use, because they will be practicing with those new 16-inch guns.

Mr. LEVER. Let me read further from Dr. Marvin's statement:

Furthermore, the requirements of the vessel reporting work, which is one of the most important activities of the Government, necessitates the location of the building close to the shore line, so as to command the most unobstructed view of the fairway of vessels. There seems to be no question of the necessity of the Cape Henry building being located outside of the fortification site.

Mr. MANN. Personally I can not see any excuse for the Cape Henry weather station at all. They have a weather station at Norfolk, or ought to have one.

Mr. LEVER. The gentleman understands that this Cape Henry station is one of the termini of the telegraph lines going up to Norfolk, Cape Hatteras, and so on, in the interest of the service.

Mr. MANN. Oh, well, they do not need to come up that way. I make the point of order on the paragraph.

Mr. LEVER. I concede it.

The CHAIRMAN. The point of order is sustained.

The Clerk read as follows:

For the acquisition of a site and the erection of a building in the region of the Panama Canal, to be constructed under the supervision of the Chief of the Weather Bureau, plans and specifications to be approved by the Secretary of Agriculture, and for all necessary labor, materials, and expenses connected with this work, $22,500.

Mr. MANN. Mr. Chairman, I reserve a point of order on the paragraph.

The CHAIRMAN. The gentleman from Illinois reserves a point of order.

Mr. MANN. What do they expect to do down there—buy a site?

Mr. LEVER. We asked Dr. Marvin about that. He was not sure, and I do not think I am sure myself, that they can get a suitable site within the zone, although if we own Ancon Hill it seems to me that would be a good site. The committee discussed confining the location of the site to the Canal Zone, but the Chief of the Weather Bureau said that he would like to get the most suitable site, and, while it was very likely possible that he would locate within the zone, he did not want to confine himself or tie himself up so that he had to do that if he found he could get a better site elsewhere.

Mr. MANN. I think he had better go down there and have somebody study the situation a little bit. Of course we own practically all the land in the zone, or are trying to acquire it, anyhow. I do not know where they might locate it. They might stick a weather station off in the wilderness there. It is a wilderness for quite a considerable distance on both sides of the zone. I have been up the rivers on both sides of the zone.

Mr. LEVER. My own thought would be that Ancon Hill or the hill opposite the Culebra Cut—Gold Hill—would be a good site.

Mr. MANN. The ground is sliding into the canal on each side of Gold Hill or Contractors Hill. Why do they need such an expensive building as this for the Weather Bureau? What is there about it?

Mr. LEVER. Of course they feel that they ought to build this out of substantial material and make it a building that is in keeping with the dignity of the Government.

Mr. MANN. The dignity of the Government is all right. They build concrete buildings in Panama now, in the zone, in the main. That is substantial enough construction.

Mr. LEVER. I take it that if they put up a good concrete building and equip it, it will cost pretty nearly that much money.

Mr. MANN. That will depend on how large a building they construct.

Mr. LEVER. They need a considerable building for the Weather Bureau station in that country, I think.

Mr. MANN. They have erected a very large number of pretty good concrete buildings there in the new town of Balboa.

Mr. LEVER. I have not been to Panama recently and do not know what material they are using for their buildings.

Mr. MANN. They are using concrete.

Mr. LEVER. This station, in addition to its own work, is to be a kind of central point for the gathering of weather information from all the outlying stations from which the Government gets its reports.

Mr. MANN. There are no outlying stations there.

Mr. LEVER. We get a good many reports from other nations than our own. They are cooperating.

Mr. MANN. They would not get them there. They would not send weather reports to Panama from other nations. They might be in communication with headquarters here.

Mr. LEVER. Mr. Chairman, not only that, but I take it that they would gather communications from South and Central America. That is the statement of Dr. Marvin.

Mr. MANN. If they sent them to the United States, they would send them by wireless; they are completing an expensive wireless plant there.

Mr. McKELLAR. Will the gentleman from South Carolina yield for a question?

Mr. LEVER. If the gentleman from Illinois, is going to make the point of order, there is no use in consuming more time.

Mr. MANN. I thought we might inquire into it.

Mr. LEVER. Mr. Chairman, I ask to proceed for five minutes.

The CHAIRMAN. The gentleman asks unanimous consent to proceed for five minutes. Is there objection?

There was no objection.

Mr. McKELLAR. If the gentleman will allow me, I want to ask a question. Is there any weather bureau of any kind there now, any station of any sort?

Mr. LEVER. They have some reports from there, but we have no building.

Mr. McKELLAR. Is there any estimate in the hearings as to how much the building would cost?

Mr. LEVER. The appropriation is $22,500. The department estimated an appropriation of $25,000, to include the building and site, but the committee reduced the estimate to $22,500.

Mr. McKELLAR. Does not the gentleman think it might be well to postpone it until we know exactly what we do want and what we are going to get?

Mr. LEVER. I will say to the gentleman that I do not want to postpone it, but I realize that the paragraph is subject to a point of order.

Mr. TOWNER. Is it not true that one of the principal uses that it is expected the Government will make of this plant is the reporting of seismatic disturbances? Everyone understands that this is on the earthquake crevice or line in which the Pacific coast gets these earthquake disturbances, and they come from the south.

Mr. LEVER. I will say to the gentleman from Iowa that that was not urged as a reason for the appropriation, but I think it is a strong reason. It is very important to study these earthquake conditions.

Mr. TOWNER. It is on the earthquake crevice of the Pacific coast, and it is directly within the province of the Department of Agriculture to make a study of seismatic disturbances.

Mr. HAUGEN. I would like to inquire of the chairman what buildings on the island now are owned by the Government. That question was asked of the committee last year, and my recollection is that the department promised to furnish us with the information.

Mr. LEVER. We have received the information in the shape of a letter from the department. They say that while there are buildings down there that can be used, yet the department is not sure that the buildings will be suitable for this kind of work. That is the information we have.

Mr. MANN. If the gentleman will pardon me, a large share of the buildings down there were where the lake now is. There is a little settlement opposite Gold Hill, but most of the buildings that were of any value have been moved over to Balboa Heights at a less expense for moving them than it would have been to construct new ones and abandon the old ones. I think practically all of the buildings that are of value and are available are still in use, but the most of the buildings have disappeared.

Mr. HAUGEN. I have understood that there was a large number of buildings in the vicinity of Culebra Cut that are now on high ground.

Mr. MANN. There were a lot right across from Gold Hill, but some of those are now down in the canal.

Mr. McKELLAR. Mr. Chairman, I make the point of order against the item.

The CHAIRMAN. The point of order is sustained.

The Clerk read as follows:

Total for Weather Bureau, $1,770,760.

Mr. ANDERSON. Mr. Chairman, I suppose the total appropriation ought to be corrected.

Mr. LEVER. I got consent at the beginning of the consideration of the bill that the Clerk should correct the totals.

The Clerk read as follows:

BUREAU OF ANIMAL INDUSTRY.

Salaries, Bureau of Animal Industry: One chief of bureau, $5,000; 1 chief clerk, $2,500; 1 editor and compiler, $2,250; 1 executive clerk, $2,000; 1 executive clerk, $1,920; 5 clerks, class 4; 1 clerk, $1,680; 13 clerks, class 3; 2 clerks, at $1,500 each; 23 clerks, class 2; 2 clerks, at $1,380 each; 3 clerks, at $1,320 each; 1 clerk, $1,300; 1 clerk, $1,260; 45 clerks, class 1; 1 clerk, $1,100; 1 clerk, $1,080; 56 clerks, at $1,000 each; 2 clerks, at $960 each; 94 clerks, at $900 each; 1 architect, $2,000; 1 illustrator, $1,400; 1 laboratory helper, $1,200; 2 laboratory helpers, at $1,020 each; 1 laboratory helper, $840; 1 laboratory helper, $720; 2 laboratory helpers, at $600 each; 1 laboratory helper, $480; 1 instrument maker, $1,200; 1 carpenter, $1,140; 2 carpenters, at $1,000 each; 2 messengers and custodians, at $1,200 each; 1 skilled laborer, $1,000; 32 skilled laborers, at $900 each; 11 messengers, skilled labors, or laborers, at $840 each; 14 messengers, skilled laborers, or laborers, at $720 each; 4 laborers, at $660 each; 8 laborers, at $600 each; 3 laborers, at $540 each; 30 laborers, at $480 each; 1 laborer, $240; 3 messenger boys, at $600 each; 9 messenger boys, at $480 each; 8 messenger boys, at $360 each; 1 watchman, $720; 1 charwoman, $600; 1 charwoman, $540; 13 charwomen, at $480 each; 5 charwomen, at $360 each; 2 charwomen, at $300 each; 5 charwomen, at $240 each; in all, $398,470.

Mr. MOORE of Pennsylvania. Mr. Chairman, I move to strike out the last word. We have provision here for a very large number of clerks. In the Bureau of Animal Industry at one place there are 45 at $1,100, 56 clerks at $1,000, 94 clerks at $900, and so forth. I wish the gentleman from South Carolina would explain how many of these clerks are acting as stenographers.

Mr. LEVER. I can not tell the gentleman offhand. It shows on the statutory roll.

Mr. MOORE of Pennsylvania. Does the gentleman know what proportion of them are stenographers?

Mr. LEVER. I do not. This is one of the largest bureaus in the Agricultural Department.

Mr. MOORE of Pennsylvania. I know it is.

Mr. LEVER. It expends in the neighborhood of $5,500,000. It has the meat-inspection bureau, which has a permanent appropriation of $3,000,000.

Mr. MOORE of Pennsylvania. I may get the information I want under some other paragraph.

Mr. LEVER. I will say to the gentleman that the statutory rolls to which he has referred will show the character of the work the various clerks are doing. As to the scientific force of the bureau, if we had time they are all set out in great detail in the Book of Estimates.

Mr. MOORE of Pennsylvania. I am not questioning the work done by these clerks, but I would like to know how many are engaged in stenographic work, because I want to inquire as to the reason of their being so employed. Can the gentleman tell me whether any clerks in the Bureau of Animal Industry assigned as stenographers are engaged in taking notes of what Members of Congress say when they have business with the bureau?

Mr. LEVER. I think I know what the gentleman from Pennsylvania has reference to, and if he will permit me, I will say that this is the wrong tree. I will say this, that if a stenographer is doing that, unless he is ordered to do it by his chief he would be culpable and guilty of misconduct. If his chief ordered him to do it his chief would be guilty of misconduct, and I would not hesitate any more than the gentleman from Pennsylvania to condemn that practice.

Mr. MOORE of Pennsylvania. I appreciate what the gentleman says and I will reserve what I have to say for another paragraph. I entirely indorse the statement of the gentleman from South Carolina as to the clerks themselves. I would not find fault with any clerk for doing what he is ordered to do.

Mr. LEVER. Certainly.

Mr. MOORE of Pennsylvania. But if the head of a department authorizes a stenographer to take notes of the statements made by Senators and Representatives who have business with the bureau in the ordinary course of business, then it is a practice that seems to be reprehensible, and about which I intend to comment when we arrive at the proper paragraph.

Mr. LEVER. I agree with the gentleman very thoroughly, and he can not condemn it any more than I can.

The Clerk read as follows:

General expenses, Bureau of Animal Industry: For carrying out the provisions of the act approved May 29, 1884, establishing a Bureau of Animal Industry, and the provisions of the act approved March 3, 1891, providing for the safe transport and humane treatment of export cattle from the United States to foreign countries, and for other purposes; the act approved August 30, 1890, providing for the importation of animals into the United States, and for other purposes; and the provisions of the act of May 9, 1902, extending the inspection of meats to process butter, and providing for the inspection of factories, marking of packages, etc.; and the provisions of the act approved February 2, 1903, to enable the Secretary of Agriculture to more effectually suppress and prevent the spread of contagious and infectious diseases of live stock, and for other purposes; and also the provisions of the act approved March 3, 1905, to enable the Secretary of Agriculture to establish and maintain quarantine districts, to permit and regulate the movement of cattle and other live stock therefrom, and for other purposes; and for carrying out the provisions of the act of June 29, 1906, entitled "An act to prevent cruelty to animals while in transit by railroad or other means of transportation"; and for carrying out the provisions of the act approved March 4, 1913, regulating the preparation, sale, barter, exchange, or shipment of any virus, serum, toxin, or analogous products manufactured in the United States, and the importation of such products intended for use in the treatment of domestic animals; and to enable the Secretary of Agriculture to collect and disseminate information concerning live stock, dairy, and other animal products; to prepare and disseminate reports on animal industry; to employ and pay from the appropriation herein made as many persons in the city of Washington or elsewhere as he may deem necessary; to purchase in the open market samples of all tuberculin, serums, antitoxins, or analogous products, of foreign or domestic manufacture, which are sold in the United States, for the detection, prevention, treatment, or cure of diseases of domestic animals, to test the same, and to disseminate the results of said tests in such manner as he may deem best; to purchase and destroy diseased or exposed animals or quarantine the same whenever in his judgment essential to prevent the spread of pleuropneumonia, tuberculosis, or other diseases of animals from one State to another, as follows:

Mr. CALLAWAY. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD by inserting a letter from Col. Rodman, of the State of North Carolina, with reference to the Navy League.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. STERLING. Mr. Chairman, I move to strike out the last word. I would like to ask the chairman of the committee with reference to the enforcement of the quarantine law. Does the Federal Government undertake to regulate the shipment of live stock from one State to another?

Mr. LEVER. It does under the law; yes.

Mr. STERLING. Why is it, if the Federal Government has jurisdiction of that question, that the quarantine laws of the several States control? Some of the States have quarantine laws that prevent the importation of live stock from other States, under certain conditions.

Mr. LEVER. The gentleman from Illinois [Mr. STERLING] is a much greater lawyer than I could ever hope to be, and he knows that the quarantine regulations which the Federal Government imposes refer only to interstate shipment of live stock?

Mr. STERLING. Certainly.

Mr. LEVER. The Federal Government would have no power to go within any State and set up a quarantine district. That would have to be left to the State.

Mr. STERLING. I understand that, and that is the question I want to raise. For instance, one State prevents shipments of breeding stock from another under the quarantine law of that State. Why does the Federal Government permit that regulation of interstate commerce by one State as against another?

Mr. ANDERSON. But that is not a regulation of interstate commerce.

Mr. STERLING. It certainly is.

Mr. LEVER. If I get the gentleman's question correctly, it is this: That he complains that one State exercises the right to quarantine itself against another State. I am not a lawyer, but I take it that such a State exercises that right under its police power to prevent the importation into it of dangerous diseases and things of that kind, and that it has the right to do so under the Federal Constitution.

Mr. STERLING. Mr. Chairman, I understand the State has authority to pass laws of that kind and enforce them until the Federal Government has seen fit to take jurisdiction of the matter; but when the Federal Government has taken jurisdiction, or has assumed authority over a matter of interstate commerce, the laws of the State which undertakes to regulate it in any way become void. If I understand correctly, the Federal quarantine law gives the Federal Government the power and the Federal Government assumes the right to establish quarantine, and when it does so no State has any authority to prohibit the importation of live stock from another State. If I am right about that, it seems to me that the department——

Mr. MANN. Mr. Chairman, will my colleague yield?

Mr. STERLING. Certainly.

Mr. MANN. The gentleman is on the committee that used to have jurisdiction of these matters, and has undoubtedly looked that up. Does the gentleman think that if the Federal Government should provide that a man with the smallpox could travel from Indianapolis to Chicago that that would force the State of Illinois to admit smallpox into the city of Chicago or into the State?

Mr. STERLING. If the Federal Government should make quarantine laws controlling a matter of that kind, then the laws of the State would have to give way to the Federal law with reference to it.

Mr. MANN. That would permit the Federal Government, if it desired, to send contagious diseases into a State against the protest of that State.

Mr. STERLING. Does the gentleman think the Government would do that? Let us not assume that the Federal Government would seek to harm its citizens.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. MANN. Mr. Chairman, I ask unanimous consent that my colleague may have five minutes more.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent that his colleague may have five minutes more. Is there objection?

Mr. LEVER. Mr. Chairman, this is a matter which may draw out a very lengthy debate, and I am going to ask unanimous consent that all debate on this paragraph and all amendments thereto close in 15 minutes.

Mr. MANN. Oh, this is a very important question in relation to these diseases.

Mr. MADDEN. Has this anything to do with the foot-and-mouth disease?

Mr. LEVER. No. I was about to suggest to the gentleman from Illinois [Mr. MANN] that the foot-and-mouth disease item is the very last item in the bill, and I assume, when that item is reached, that there will be opportunity for full discussion of this entire question, and that is why I make the suggestion; and if my friend from Illinois [Mr. STERLING] would be willing to wait until we get to that item, I say to him very frankly that all gentlemen will have reasonable time to discuss it.

Mr. STERLING. I think this is the proper place to discuss this question.

Mr. LEVER. No; this is the general authority for all quarantine work, but the item in which the gentleman is particularly interested will be found on the very last page of the bill, and I think we will make time by holding fire until then.

Mr. STERLING. I trust I may have my time now. I may have something else to say when we reach that part of the bill.

Mr. LEVER. Oh, yes; the gentleman will have that.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois [Mr. MANN] that the time of his colleague [Mr. STERLING] may be extended for five minutes?

There was no objection.

Mr. LEVER. Mr. Chairman, I withdraw my request.

Mr. STERLING. Mr. Chairman, what I have to say on the subject relates to live-stock quarantine. The question propounded by my colleague [Mr. MANN] relates to diseases of human beings, but if the Congress should pass a law giving authority to quarantine in case of smallpox or any other disease, that law is supreme and exclusive so far as it relates to interstate commerce. If it only related to the public health, that would be a different question and controlled by a different principle. When the Federal Government raises a quarantine on live-stock disease, then that live stock ought to be allowed to go into any State of the Union, and the State law ought to give way.

When the Federal Government has assumed authority over a thing affecting interstate trade no other authority can prevail. For instance, in Illinois the foot-and-mouth disease prevailed for a time and the Federal Government imposed a quarantine to protect other States. As it from time to time raised the quarantine the stock in that territory was released and it should have been permitted to go anywhere; yet the States continued to discriminate against live stock shipped to those States from the territory where the quarantine had been raised. Now, I think no one will deny that when the Federal Government assumes jurisdiction over any matter relating to interstate commerce then the laws of the States must give way, and they have no right or authority to regulate it in any way. If any one question is made clear in the Constitution it is that the Federal Government shall have supreme and exclusive control over interstate commerce. It takes away from the States the right to levy imposts and gives it to the Federal Government. It gives to the Federal Government the exclusive right to regulate interstate commerce, intending thereby that interstate commerce between the States should be absolutely free, or at least giving the Federal Government the power to make it absolutely free if it sees fit to do so, and to prevent the several States from embarrassing commerce from one State to another. But the point I desire to make is this: I believe this bureau ought to see to it that where a quarantine has been raised in the territory in any State all of the States of the Union shall recognize that fact and give the people of that district the right to free trade between the States.

Mr. REAVIS. Will the gentleman yield?

Mr. STERLING. I yield.

Mr. REAVIS. I take it for granted that the gentleman is familiar with the ruling of the United States Supreme Court on both the coining of money and the fixing of the standards of weights and measures wherein the court determined in each case that the States had the right to coin money or the right to fix the standards of weights and measures until the Government, acting under its constitutional authority, assumed jurisdiction, and upon the Government acting the jurisdiction so assumed became exclusive.

Mr. STERLING. I think that is exactly correct. As another illustration of that principle, prior to the adoption by Congress of the employers' liability law, the law as to personal injuries in the States controlled, whether those injuries occurred in interstate commerce or intrastate commerce, but when Congress passed that law the laws of all the States relating to that subject, so far as they affected injuries that occurred in interstate commerce, had to give way and the Federal statute became the law of the land. There ought to be but one quarantine law in this country affecting interstate shipments, and that law should be in the Federal statutes, not the State.

The CHAIRMAN. The time of the gentleman has again expired.

Mr. LEVER. Mr. Chairman, in view of the statement I made awhile ago that all of these questions will be debated further when we reach the item, I ask unanimous consent that

all debate on this paragraph and all amendments thereto close——

Mr. MOORE of Pennsylvania. I should like to have a little time on this question of quarantine.

Mr. LEVER. How much, five minutes?

Mr. MOORE of Pennsylvania. Yes.

Mr. CULLOP. I should like to have two minutes.

Mr. LEVER. Mr. Chairman, I will say close in 12 minutes.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that all debate on this paragraph and all amendments thereto close in 12 minutes. Is there objection?

Mr. KING. Mr. Chairman, I would like to offer an amendment.

Mr. LEVER. Mr. Chairman, the gentleman from Illinois [Mr. KING] desires to offer an amendment, and I will make it 17 minutes.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that debate on this section and all amendments thereto close in 17 minutes. Is there objection? [After a pause.] The Chair hears none. The getleman from Indiana is recognized for two minutes.

Mr. CULLOP. Mr. Chairman, if I may have the attention of the chairman, I would like to make an inquiry in reference to these words:

And to enable the Secretary of Agriculture to collect——

Mr. LEVER. Where is the gentleman reading from?

Mr. CULLOP. Line 2, page 12:

And to enable the Secretary of Agriculture to collect and disseminate information concerning live stock, dairy, and other animal products.

I assume that also refers to the treatment under the clause just preceding that. Now I would like to ask the chairman if in the treatment of hog cholera the chief has gathered his statistics as the result of the treatment and made them public?

Mr. LEVER. He has gathered the statistics and they have been printed in the committee hearing.

Mr. CULLOP. But they have not been made available in any document out of the office for circulation?

Mr. LEVER. Mr. Chairman, I yield to my colleague Mr. RUBEY, who has had charge of this matter.

Mr. RUBEY. Mr. Chairman, the gentleman will find the information in the report of the Chief of the Bureau of Animal Industry, and also partially treated in the report of the Secretary of Agriculture.

Mr. CULLOP. Well, I regard that as a most important matter for circularizing the public with from my observation of the success that has attended one of the agents of the Government who had charge of one of the plants or experimental stations.

Mr. LEVER. I am very glad indeed to hear the gentleman testify to the good work. I think the chief will be in a position shortly to issue some publications, but I imagine he does not desire to do so until he has pretty thorough knowledge in regard to it.

Mr. CULLOP. I hope they will make it available as early as possible, as I regard it as an important matter.

Mr. MOORE of Pennsylvania. I move to strike out the last word.

Mr. Chairman, I would like to ask the gentleman from South Carolina [Mr. LEVER] if he can tell the House whether there is a quarantine now existing against carcasses coming from foreign countries?

Mr. LEVER. There is no quarantine that I know of against carcasses coming from other countries, but, as I understand it, carcasses are permitted to be imported into this country only from countries which have a national system of inspection which the officials of this country deem to be sufficient.

Mr. MOORE of Pennsylvania. My attention has been called to one or two peculiar phases of the foot-and-mouth-disease law, which I will bring up at the proper time. They involve the matter of the destruction of cattle after they reach the abattoir, rather an interesting question in view of the fact that it has been held that the owners of such cattle can not participate in the distribution of funds as in the case of cattle taken on the farm. Under the law, however, we admit cattle free, cattle on the hoof coming in from foreign countries, although a quarantine has been established against such cattle. This, to a certain extent, protects the western cattle, although the quarantine against live stock does not seem to prevail as against the carcasses.

Mr. LEVER. Of course, the gentleman has just stated that we do have this inspection against the live stock.

Mr. HAUGEN. Let me say to the gentleman that we also quarantine against cattle imported from tick-infested countries.

Mr. LEVER. I will read:

Under inspection and quarantine of imported animals are included inspections of animals from North American countries and countries other than North America, inspection and testing of animals in Great Britain intended for shipment to the United States, and supervision over importations of hay, forage, hides, hair, wool, and other animal by-products.

The purpose of such inspection and quarantine is to prevent the importation of animal diseases into this country.

Of course, we have a Mexican-border inspection against cattle tick.

Mr. MOORE of Pennsylvania. I do not want to take any political advantage of the situation, but it is rather fortunate, in view of the fact that we indulge in free trade in cattle as well as in meat, that the department should be in a position to establish a quarantine against live stock coming into this country. That rather saves the political face of the administration. But I have not, as I say, intended to take advantage of that fact just now. It is a matter of very great importance to the consumer that the department, which is active in the matter of the quarantine against live stock, should be no less active in a quarantine against carcasses coming in from such a country as the Argentine Republic, where the foot-and-mouth disease exists.

I have some information on this subject which is appropriate at this time, and I think the House ought to have it, particularly those of our colleagues who come from the interior of the United States and who are interested in live stock which comes to the eastern markets and enters into the export trade. This communication states:

We have been unable to secure from the department in Washington or any other source positive information on this subject, but it is generally understood and admitted that the foot-and-mouth disease is very prevalent in that country (the Argentine), and that while live stock is, under the tariff laws, admitted free of duty, the importation to the United States is prohibited under a quarantine embargo placed on account of the prevalency of foot-and-mouth disease, while the dressed meat from this same country is allowed free entry and during the past two years has been imported in large quantities.

Now, our western cattle raisers ought to be alive to this situation. It affects us in the cities, where we have to eat the meat. We ought to know whether it comes from cattle that may have died from the foot-and-mouth disease in a foreign country.

Mr. MCARTHUR. I would like to ask the chairman of the committee a question, if he will be so kind. In the enforcement of the quarantine provision, the general carrying on of this rule in the Bureau of Animal Industry, does that bureau recognize tuberculine health certificates issued by the health authorities of a State?

Mr. LEVER. I think they do consider such certificates satisfactory.

Mr. MCARTHUR. In connection with the point made by the gentleman from Illinois [Mr. STERLING], I will say that a number of the Western States have adopted rules, through their live-stock sanitary boards, prohibiting the importation of dairy stock from certain States in the Middle West. This is done because it is well known that the law has not been well enforced there. People out in the far West that have been buying dairy stock from a good many sections of the Middle West and East have found that the tuberculin-test certificates which accompany these cattle were, in many instances, bogus and fraudulent. I do not wish to make any reflection upon any particular State in this matter, because a lot of them come within the same classification——

Mr. STERLING. Will the gentleman yield for a question?

Mr. MCARTHUR. Yes.

Mr. STERLING. I know that in some States they require certificates before they will admit stock imported from a State veterinarian in that State. That produces a very great hardship on a person that is shipping from one State into another.

Mr. MCARTHUR. In the State into which the stock is being shipped?

Mr. STERLING. Yes. They would be relieved very much, it seems to me, if the Federal Government had charge of that whole thing. And when a Federal Government veterinarian issued a certificate to the man who was shipping the stock, that ought to be good anywhere, so that he could send the stock anywhere in the United States.

Mr. MCARTHUR. I quite agree with the gentleman on that point. I believe this entire matter ought to be handled by the Bureau of Animal Industry rather than by the State veterinarians in the various States, because in a great many States the work of investigating for tuberculosis is carried on by deputy veterinarians, many of whom are incompetent.

If this whole thing could be transplanted to the jurisdiction of the Bureau of Animal Industry in the Department of Agriculture, I do not think you would find any of those Western States rising up and putting a quarantine against stock im-

ported from any other State. What we want to see in my part of the country is the putting of this whole question under the Federal Government, so that the matter will not be hampered by the State veterinary surgeons or deputies in any State whatever.

Mr. LEVER. Of course, the gentleman understands that the bureau is acting under an act of Congress that was passed many years ago?

Mr. McARTHUR. I understand that, and I am in hearty sympathy with the work of the bureau. I do not think the appropriations for the bureau are sufficient, so as to carry on this work as it ought to be carried on. I am sorry that the appropriations are not larger.

The CHAIRMAN. Does the gentleman from Illinois [Mr. KING] desire to be recognized?

Mr. KING. No; I do not desire to offer an amendment at this time, Mr. Chairman.

The CHAIRMAN. The pro forma amendment is withdrawn. The Clerk will read.

The Clerk read as follows:

For inspection and quarantine work, including all necessary expenses for the eradication of scabies in sheep and cattle, the inspection of southern cattle, the supervision of the transportation of live stock and the inspection of vessels, the execution of the 28-hour law, the inspection and quarantine of imported animals, including the establishment and maintenance of quarantine stations and the alteration of buildings thereon; the inspection work relative to the existence of contagious diseases, and the tuberculin and mallein testing of animals, $532,780.

Mr. CULLOP. Mr. Chairman, if I can have the attention of the chairman of the committee, I would like to make of him an inquiry with reference to the experiments in treating the foot-and-mouth disease. Has the department been able to find out some remedy by which it could handle this disease successfully?

Mr. LEVER. Our Department of Agriculture has always taken the position that it could not afford to undertake to find a remedy for the foot-and-mouth disease. It has contended that the disease was so entirely contagious that to undertake to study it through the observation of animals affected would result in its dissemination, and therefore they have not, upon their own motion, attempted any such effort as that.

The department has had the results of the experience of the German Government, which has made a very extensive study of this disease, and which maintains a station on some island far removed from the mainland, on the sea somewhere.

Mr. CULLOP. I would like to ask the chairman if there has been a return of the disease in this country during the winter just passed?

Mr. LEVER. The quarantine against the foot-and-mouth disease was not lifted until within the last three weeks, when Christian County, Ill., was finally released from quarantine, and the disease in this country has disappeared.

Mr. CULLOP. Does the Government pretend to treat this disease in any way, or does it simply try to confine it in the territory where it appears?

Mr. LEVER. The Government policy is to quarantine and eradicate the disease by killing and burning or burying infected animals.

Mr. CULLOP. That is the only way it handles it or undertakes to treat it?

Mr. LEVER. Yes.

Mr. BOOHER. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Missouri moves to strike out the last word.

Mr. BOOHER. Mr. Chairman, is it not a fact that the foot-and-mouth disease has been abroad in this country for the last 25 years?

Mr. LEVER. I do not so understand. There have been about six outbreaks of the foot-and-mouth disease in this country, the first occurring back in the seventies.

Mr. BOOHER. Is it not a fact that this is the same kind of foot-and-mouth disease that affects sheep?

Mr. LEVER. The foot-and-mouth disease does attack sheep.

Mr. CULLOP. And hogs.

Mr. BOOHER. Does not the western farmer and sheep raiser treat the foot-and-mouth disease successfully, and has he not done it right along in the last 25 years?

Mr. LEVER. I do not know that that is true, but if it is it has not reached the knowledge of the experts of the bureau, or the department does not follow that treatment.

Mr. BOOHER. That is the trouble. As I understand it, the foot-and-mouth disease among sheep is treated by the sheep owner gathering his flock up and putting all those free from the disease out on a range by themselves, and those in which he discovers any symptoms of the disease he puts in a separate flock and treats them for two or three weeks and cures them, absolutely. They do not slaughter the sheep. They do not go out and indiscriminately kill a man's flock of sheep, but they cure it. It seems to me it would pay the experts in foot-and-mouth disease bureau in the Department of Agriculture to try the remedy that is used by the sheepmen of the West. If they have not heard of it, it is time they did hear of it and put their knowledge of it into effect.

Mr. CULLOP. From the qualified success they have had in Indiana I am satisfied that they ought to avail of the knowledge and experience of the sheep raisers to whom the gentleman from Missouri refers.

Mr. LEVER. I will say to the gentleman that while I do not know the condition in the Western States with reference to the prevalence or the existence of the foot-and-mouth disease in sheep, I think it likely that the disease to which the gentleman refers is not in fact the true foot-and-mouth disease. I recall a disease called "stomatitis," which is closely akin to the foot-and-mouth disease; so much so, that it takes the most highly trained expert to tell the difference between the two.

Mr. BOOHER. Let me say to the chairman of the committee that some years ago I happened to be at the Department of Agriculture, and I was shown there some samples of the foot-and-mouth disease in sheep. The head of the bureau said to me that it was a disease easily cured. During this past summer I had the pleasure of talking with one of the largest sheep owners in this country who had had the foot-and-mouth disease among his sheep, and he told me it would be nonsensical to slaughter these animals indiscriminately; that with a certain kind of wash that he used it was easy to cure.

Mr. LEVER. Of course the gentleman knows that the foot-and-mouth disease can be cured, but the effect of the disease, if it became generally spread over this country, upon the live-stock industry would result in such tremendous loss that the officials of the department feel it is better to spend money out of the Treasury and kill a few hundred cattle and bury them and get rid of the disease in that way than to take the risk of the loss that would come to the beef and cattle and sheep and hog industry if the disease should become general throughout the country.

Mr. KINKAID. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Missouri yield to the gentleman from Nebraska?

Mr. BOOHER. No; I do not yield to anybody just yet.

The CHAIRMAN. The gentleman from Missouri declines to yield.

Mr. BOOHER. The foot-and-mouth disease is no more destructive than hog cholera. Is not that the most contagious disease amongst animals?

Mr. LEVER. The gentleman knows I am not an expert on that subject; and if the gentleman says it is, I will take his statement for it.

Mr. BOOHER. I understand, but I am trying to get information. Does the gentleman know of any instance in which the Agricultural Department has gone out and indiscriminately slaughtered all the hogs in the community?

Mr. LEVER. No. Let me again say that this whole item of the foot-and-mouth disease is carried on the last page of the bill, and I am very anxious that the discussion of it should center around that item. I will say very frankly to my friend that I have collected a great deal of information on that item, which I have not here with me. It is in my office, and if gentlemen of the committee will wait until we reach that item we can have a more intelligent discussion of it; and I promise a full opportunity for all to be heard, and we will gain time by it.

Mr. BOOHER. I will withdraw the request for additional time.

Mr. MOORE of Pennsylvania. I move to strike out the last word. In view of the statement I made a little while ago of the importation of meat from the Argentine Republic, I would like to ask the gentleman whether there is any information before the committee as to the effect of the foot-and-mouth disease on the carcass, whether it carries into the meat and whether it is prejudicial to the health of those who eat it?

Mr. LEVER. I probably have that information in my data on the foot-and-mouth disease, but I have not got it with me this afternoon.

Mr. MOORE of Pennsylvania. The gentleman has some information on that?

Mr. LEVER. I am inclined to think I have.

Mr. MOORE of Pennsylvania. Let me say for the information of the gentleman that in the hearings before the Ways and Means Committee some time ago, with reference to the importation

of meat into the city of New York, it was stated by an expert, a lady who had a good deal of information on the subject, that there was a State inspection of imported meat, but we had very little information as to whether the meat was so diseased as to be prejudicial to the public health.

Mr. LEVER. I will be glad to give the gentleman information on that at the proper time.

Mr. MOORE of Pennsylvania. If the meat that comes in free—I am not stating this for the purpose of starting a political discussion—if the meat derived from an animal in the Argentine Republic that has foot-and-mouth disease comes into our ports and is sold to the people here, it has a very great advantage over western beef, that is subject to all sorts of American inspection. I hope the gentleman will inform us as to that.

Mr. KING. With the permission of the distinguished chairman, I will answer the gentleman.

Mr. LEVER. I will be glad if the gentleman will do so.

Mr. KING. Dr. Melvin takes the position that the foot-and-mouth germ does go into dressed beef, and he says there was a case where 900 cattle were shipped from Peoria, Ill., after the quarantine was put on, and went to the Union Stock Yards in Chicago, over 150 of which cattle were suffering from the foot-and-mouth disease, and that they went into the packing house of Philip Morris & Co., where they were slaughtered, and the meat was sent out through the country, probably some of it reaching Philadelphia, and, according to Dr. Melvin, the foot-and-mouth germ was transmitted in that dressed beef. Whether the gentleman from Pennsylvania got any of it I do not know.

Mr. MOORE of Pennsylvania. That is an important statement. I commend it to the gentleman from South Carolina [Mr. LEVER], because I think we ought to have more information on it. There is a quarantine against cattle on the hoof coming into the United States, but, apparently, there is no quarantine against the carcass coming into the United States after the animal is slaughtered.

Mr. LEVER. I shall be glad to give the gentleman the information when we reach that item.

MESSAGE FROM THE PRESIDENT OF THE UNITED STATES.

The committee informally rose; and Mr. FLOOD having taken the Chair as Speaker pro tempore, a message from the President of the United States, by Mr. Sharkey, one of his secretaries, announced that the President had approved and signed bills and joint resolution of the following titles:

On April 11, 1916:

H. R. 8466. An act to relieve J. Lawrence Latham, postmaster at Eupora, Webster County, Miss., of the payment of cash and funds stolen from the post office;

H. R. 13769. An act to authorize the Secretary of War to supply tents for temporary use of the sufferers from the recent conflagration in Paris, Tex., and for other purposes;

S. J. Res. 80. Joint resolution authorizing the Secretary of War to receive for instruction at the United States Military Academy, at West Point, René W. Pintó y Wentworth, a citizen of Cuba;

S. 585. An act conferring jurisdiction on the Court of Claims to hear, determine, and render judgment in claims of the Sisseton and Wahpeton Bands of Sioux Indians against the United States;

S. 922. An act for the relief of Mary E. Nicolson;

S. 1809. An act to create an additional judge in the district of New Jersey;

S. 3391. An act to amend an act entitled "An act for the relief of Indians occupying railroad lands in Arizona, New Mexico, or California," approved March 4, 1914;

S. 3977. An act to authorize the Shamokin, Sunbury & Lewisburg Railroad Co., its lessees, successors, and assigns, to construct a bridge across the Susquehanna River from the borough of Sunbury, Northumberland County, Pa., to Monroe Township, Snyder County, Pa.;

S. 3978. An act to authorize the Catawissa Railroad Co., its lessees, successors, and assigns to construct a bridge across the West Branch of the Susquehanna River from the borough of Milton, Northumberland County, Pa., to the borough of West Milton, Union County, Pa.;

S. 4190. An act authorizing the Yankton County Bridge Co., a corporation, to construct and maintain a bridge or bridges and approaches thereto across the Missouri River at a point between Yankton County, S. Dak., and Cedar County, Nebr.; and

S. 4671. An act to exempt from cancellation certain desert-land entries in Riverside County, Cal.

April 12, 1916:

S. 707. An act for the relief of Beverly E. Whitehead.

April 13, 1916:

S. 5016. An act to authorize the reconstruction of an existing bridge across the Wabash River, at Silverwood, in the State of Indiana.

AGRICULTURAL APPROPRIATION BILL.

The committee resumed its session.

The CHAIRMAN. Without objection, the pro forma amendment is withdrawn, and the Clerk will read.

The Clerk read as follows:

For all necessary expenses for the eradication of southern cattle ticks, $632,400, of which sum $50,000 may be used for live-stock demonstration work, in cooperation with the States Relations Service, in areas freed of ticks, and of this amount no part shall be used in the purchase of animals for breeding purposes: *Provided, however,* That no part of this appropriation shall be used in the purchase of materials for or in the construction of dipping vats upon land not owned solely by the United States, except at fairs or expositions where the Department of Agriculture makes exhibits or demonstrations; nor shall any part of this appropriation be used in the purchase of materials or mixtures for use in dipping vats except in experimental or demonstration work carried on by the officials or agents of the Bureau of Animal Industry: *And provided further,* That of the total amount appropriated by this paragraph $75,000 shall be immediately available.

Mr. MANN. Mr. Chairman, I reserve a point of order against the paragraph.

The CHAIRMAN. The gentleman from Illinois reserves a point of order.

Mr. GARRETT. Mr. Chairman, I ask unanimous consent to print in the RECORD a speech delivered by Hon. CARTER GLASS, of Virginia, at the Jefferson banquet held in this city last night.

The CHAIRMAN. The gentleman from Tennessee asks unanimous consent to print in the RECORD a speech delivered by Hon. CARTER GLASS at the Willard Hotel last night. Is there objection?

Mr. MANN. Reserving the right to object, who is going to ask to have the other speeches printed?

Mr. GARRETT. I do not know.

Mr. MANN. I take it that either in this body or the Senate some one will ask to have the President's speech printed, in which he called the Republican Party provincial. It would be a good deal of a joke to make a request in this House to print a speech of the President in which he said that the Republicans were provincial. I shall not object to this request.

Mr. KELLEY. Reserving the right to object, may I ask the gentleman from Tennessee what has become of the recent speeches of the President that were going to be printed as a document?

Mr. MANN. They have been printed. They have just come out.

Mr. FOSTER. They were printed as a document some time ago.

Mr. MANN. No; very recently.

Mr. FOSTER. A couple of weeks ago, at least.

Mr. MANN. I got them on my table two or three days ago, and I get these things as soon as they are printed.

Mr. GARRETT. Is there is to be any objection, I will withdraw the request.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. LEVER. The gentleman from Illinois [Mr. MANN] has reserved a point of order against the paragraph from lines 3 to 19, inclusive. If the gentleman will permit me to anticipate him, I suspect that his point of order goes to the last two lines.

Mr. MANN. In reference to the deficiency appropriation?

Mr. LEVER. Yes. I am going to move to strike out that proviso. When the committee put it in the bill it was thought that the bill might become a law very much sooner than now appears likely. I think the proviso is not necessary now, because the probabilities are that this bill will not become a law before the last of May or the first of June, and, if the gentleman will permit me, I will move to strike out those lines.

Mr. MANN. And reduce the amount?

Mr. LEVER. No; not reduce the amount, because they can very well use the money, anyhow.

Mr. MANN. I should think if they put in $75,000 for this year, which they are not going to use, they ought to be willing to take the ordinary increase for next year. I have no objection to making such appropriations as this division can properly use, because they are doing exceedingly good work.

Mr. LEVER. Let me say to the gentleman that the proviso was not in the original estimates of the department sent to the committee.

Mr. MANN. I understand that.

Mr. LEVER. But the Secretary later called attention in a letter to the desirability of having this $75,000 available for use in preparation for the wise expenditure of the appropriation

provided for in the item, and the committee, acting upon that request, gave that amount.

Mr. MANN. I am calling this to the attention of the House partly for the purpose of informing the Secretary. The Secretary ought to know that the proper way to get a deficiency appropriation is by making an estimate which goes to the Committee on Appropriations.

We have already passed three deficiency appropriation bills. They might have had this item in one of those, had the money, and had it partly spent by this time, if they knew enough to follow the regular procedure. It is in the hope that they will learn that I am making these few remarks. [Laughter.]

Mr. LEVER. I am glad that the gentleman is doing it, because I think it will unload my bill in the future. Mr. Chairman, I move to strike out, on page 13, line 17, after the colon, the following:

And provided further, That of the total amount appropriated by this paragraph $75,000 shall be immediately available.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

On page 13, line 17, after the word "industry," strike out the rest of the paragraph.

The amendment was agreed to.

Mr. COX. Mr. Chairman, I move to strike out the last word. I want to say that I am in thorough sympathy, as is the gentleman from Illinois, with the work that they are doing; but I want to ask, Has the chairman of the committee any idea or estimate of when this work will be completed?

Mr. LEVER. I am glad the gentleman from Indiana has asked the question. We provide in the appropriation for the eradication of the cattle tick an increase of $194,000 in round numbers. The amount provided is $632,400, of which $50,000 is to be used for another purpose. The States cooperate with the Federal Government in this work and have appropriated during the past year about $950,000, and it is the estimate of the department that with this appropriation and with the States continuing to cooperate, as they are doing now, this work ought to be completed in six or seven years.

Mr. COX. I wish the gentleman would explain how the $50,000 item is expended.

Mr. LEVER. I shall be glad to do that. When an area is cleared of tick, it is the hope and purpose of the department to go in with special men and stimulate the live-stock industry. I think I can best illustrate the method and character of this work by reading a telegram as to what is being done in South Carolina, in counties which have been freed of the cattle tick. Within the last two or three weeks we have begun to establish central creameries for the manufacture of butter. Men go out and collect the cream from the farms and bring it to the creamery, and the individual is credited with a certain amount. We have established four such creameries in South Carolina. They have made a wonderful progress and are doing a great work. The action of the Department of Agriculture is to supervise it in cooperation with the States Relations Service. Here is a telegram which I received from Dr. Long:

CLEMSON COLLEGE, S. C., *April 3, 1916.*

Hon. A. F. LEVER, *Washington, D. C.:*

Four creameries organized in South Carolina within last 12 months—one at Rockhill, Spartanburg, Darlington, Clemson College. Clemson College creamery is now receiving cream from 900 cows; has paid out in last year to farmers over $40,000. Darlington creamery, just started three months ago, receiving cream from 550 cows; has paid out in last two months $5,000 to farmers for cream. The four creameries will pay out $250,000 to the farmers within the next 12 months. All butter manufactured under the State brand, known as the Palmetto State, and marketed through one agency, who has agreed to give 1 cent per pound over the market for output of all creameries. He gives bond to protect the payments for butter. Haven't exact figures on the Spartanburg and Rockhill creameries. Patrons at Clemson creamery, 246; Darlington, 139.

W. W. LONG.

Now, that is one type of work they are doing in the tick-freed area. Another type of work is this: In the last year we have been feeding cattle in certain counties in the State under the direction of men stationed there. We have established three or four stock sale yards. We had a sale a few days ago at Rockhill. These cattle are fed under the direction of the department, and people take their stock there and buyers come from other States to purchase the cattle. Probably there will be 500 or 1,000 steers marketed on a sales day. It is the first time in the history of this country that the seller of the article and the buyer of the article, in this case cattle, are brought together before the cattle are moved from possession of the individual who owns them. They are going to undertake to establish some cheese factories in the mountain districts of South Carolina and North Carolina, in the tick-freed area. The statement before the committee is that they have established two or three in North Carolina, and they have done remarkably well.

They have one at Cove Creek, up in North Carolina, and the report is that the milk would not have brought the farmers more than $300 without the factory, but that they have received for the cheese more than $1,500, and that a large part was clear gain. That is in the mountain country, where the farmers can not get their products to market on account of the bad roads. They have gone there and established a few demonstration cheese factories, and the testimony before the committee is to the effect that the work in the mountain sections has been an inspiration.

Mr. COX. It looks to me as if they were doing a good work.

Mr. DILLON. Mr. Chairman, I move to strike out the last two words. I would like to ask the gentleman from South Carolina how establishing a creamery affects the reduction of the cattle tick.

Mr. LEVER. The gentleman has not read the paragraph.

Mr. DILLON. I understood that that was the question of the gentleman from Indiana.

Mr. COX. This relates to the country after the tick has gone.

Mr. LEVER. Fifty thousand dollars of this appropriation is to be used in the character of work that I have described, and the balance is for the eradication of the tick.

Mr. DILLON. Can the gentleman tell the committee what is being done in the elimination of the cattle tick. The item has been in the bill a great many years, and I would like to know when it is to be completed.

Mr. LEVER. I answered that question a few moments ago. Since the work has been begun an area containing more than 4,000,000 cattle has been relieved from quarantine. The total area still under quarantine is 453,761 square miles, 274,780 square miles having been freed of ticks and released. During the past year 49,639 square miles were freed and released. So that since the work began we have freed about 30 per cent of the area, leaving about 60 per cent yet to be completed.

Mr. DILLON. When this work was first commenced there was a quarantine that took in the entire section?

Mr. LEVER. There is still such a quarantine except where it has been lifted by this work.

Mr. DILLON. And through the process of work you have eliminated portions of the section?

Mr. LEVER. Exactly. The gentleman understands, of course, that the existence of a quarantine against these cattle reduces the market value of the cattle anywhere from $3 to $6 a head on each steer sold?

Mr. COX. That is, it will lower their price?

Mr. LEVER. Yes.

Mr. HASTINGS. Is that confined to the Southern States?

Mr. LEVER. This applies to the Southern States entirely. The tick can not live in the Northern States.

Mr. BOOHER. Mr. Chairman, will the gentleman yield?

Mr. LEVER. Yes.

Mr. BOOHER. I want to ask the gentleman what is meant by this States "relation service"? Does the State put up a like amount with the Government in this work?

Mr. LEVER. The gentleman understands that we have a bureau in the department known as the States relation service, which does demonstration work, which is contributed to both by the Federal and the State Governments. The work under this $50,000 appropriation is done in cooperation with that service.

Mr. BOOHER. Will the State put up a like amount—$50,000?

Mr. LEVER. The States will put up next year more money for this entire work than the Federal Government will appropriate.

Mr. BOOHER. Individuals build a creamery, and then the Government goes down there and spends $50,000 in the creamery and cheese-making establishments in order to make a profitable business out of it for the owners of the concern?

Mr. LEVER. Oh, no.

Mr. BOOHER. Does the department get any part of the profits?

Mr. LEVER. Of course not; and they ought not to have any part of them.

Mr. BOOHER. Does the gentleman think they ought to go down there and do the work and spend $50,000 for the benefit of individuals or corporations?

Mr. LEVER. The gentleman knows that we are spending in this bill millions and millions of dollars for doing just this sort of thing, namely, to teach the people, and that is what this item is for. The Government, of course, does not establish a creamery, it does not furnish the horse and wagon, it does not furnish the milk cans and the like of that. All it does is to go into a community and organize the farmers to do this work themselves.

Mr. BOOHER. They have dairy building companies, cheese building companies, all over the country that do that. They go out and construct a building and instruct the farmers how to sell their milk and how to make cheese and butter.

Mr. LEVER. That is probably true, but there might be a situation in the gentleman's State like this: Somebody might discover that you could grow cotton of certain kind in the gentleman's district.

Mr. BOOHER. They do raise a good deal of cotton in the lower part of Missouri.

Mr. LEVER. Yes; but it might be found that they could grow a certain kind in the gentleman's district, but that it would take a good deal of teaching and encouraging to get the people to go into the cotton-raising business, and that is the situation in reference to this work.

Mr. BOOHER. In other words, it is to encourage the people to sell their cream and milk for cheese and butter?

Mr. LEVER. That is right. It is teaching the better method to the farmers.

The CHAIRMAN. The time of the gentleman from South Carolina has expired.

Mr. McLAUGHLIN. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Page 13, line 7, strike out the word "for" and the words "breeding purposes" in line 8.

Mr. McLAUGHLIN. Mr. Chairman, my reason for offering this amendment is that in a similar provision made in this bill a year or two ago——

Mr. LEVER. Mr. Chairman, will the gentleman yield?

Mr. McLAUGHLIN. Yes.

Mr. LEVER. I am willing to accept that amendment.

Mr. McLAUGHLIN. I wish to say only a word about it, if the gentleman will permit.

Mr. LEVER. Certainly.

Mr. McLAUGHLIN. The provision contained those words, and the officials in the department, while obeying the letter of the law, abused the spirit of it. They went out and bought animals for every purpose in the world except for breeding purposes.

I have not been in favor of this provision relating to the $50,000. I can understand very well how the gentleman from Missouri [Mr. BOOHER] should ask the questions he has, and I appreciate the fact that he was not satisfied with the answers given by the gentleman from South Carolina [Mr. LEVER]. All the work that is contemplated, all the work that is to be done, all that has been done with this kind of appropriation, is the simplest, commonest kind of work that can be done by anybody without any instruction or assistance whatever, and if any assistance were needed it is ready at hand in those very communities and in that very part of the country, from the county agents employed there in almost every county, to pay whom the Federal Government has expended millions of dollars and for their payment in the future appropriations have been provided carrying millions of dollars. In my humble judgment there is no need whatever for the employment of these men. It seems to me absolutely ridiculous to send one man into a county to assist farmers in the ordinary farm work, which should be the preparation of their soil, the selection of their seed, the cultivation of their crops, the harvesting of the crops, and so on, and it is ridiculous to send a man into that county to teach a man how to buy a bull or how to breed and get young stock or how to feed his cows—things that an ordinary farmer ought to know.

If he does not know it, there is the county agent, paid out of Federal money, who can tell him, and if the agent is not competent to give this simple information he ought to be discharged. This is just a sample, Mr. Chairman, of the manner in which the Federal money is spent for this, that, and the other particular work, doing things for the farmers that they ought to do and are abundantly able to do for themselves.

Mr. GREEN of Iowa. Will the gentleman yield?

Mr. McLAUGHLIN. I will.

Mr. GREEN of Iowa. Would the gentleman do away with all of this demonstration work?

Mr. McLAUGHLIN. No; I think that much of this demonstration work is very valuable, indeed; but when Federal money has been provided for the employment of an expert agent to go into the county he ought to know enough to tell the farmers there how to feed a bunch of cattle.

Mr. GREEN of Iowa. Then, what is it the gentleman would dispense with? I did not quite understand.

Mr. McLAUGHLIN. I would continue—of course we must continue—the appropriation under the Lever Act, a law prepared by and the passage of which was secured by the very able gentleman, the chairman of the Committee on Agriculture, a law which when it matures will provide $4,580,000 a year, and all but $480,000 of that must be duplicated by the States before the States can receive a dollar from the Federal Treasury, or nearly if not quite $9,000,000 annually.

Mr. COX. Will the gentleman yield?

The CHAIRMAN. The time of the gentleman has expired.

Mr. McLAUGHLIN. May I proceed for five minutes more in order to answer questions?

Mr. LEVER. Mr. Chairman, I ask unanimous consent that all debate on this paragraph and amendments thereto close in 10 minutes.

Mr. MOORE of Pennsylvania. Mr. Chairman, I would like to have five minutes on this paragraph.

The CHAIRMAN. The gentleman from South Carolina has submitted an amended unanimous-consent proposition; that is, that all debate on this paragraph and amendments thereto end in 10 minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. McLAUGHLIN. I yield to the gentleman from Indiana.

Mr. COX. I understood the gentleman to say a moment ago that part of this $50,000 had been expended to buy all kinds of animals, except for breeding purposes. Now, how has it been expended in the way of buying animals? What has been purchased with it?

Mr. McLAUGHLIN. I said money similarly appropriated. I do not know how the money has been spent in the matter of buying animals in this tick-eradication area, but there was a similar appropriation made to assist the farmers in the State of Louisiana, where the sugar-cane industry was ruined by the Underwood tariff law, and a large amount of money was appropriated to send agents down there to teach the farmers something about farming, and the provision was put in the bill that no part of the money should be used for buying animals for breeding purposes, but they used a lot of that money for buying animals for other purposes. They did not violate the law; none of it was used to buy animals for breeding purposes, but such use was in violation of the spirit of the law.

Mr. COX. Does the gentleman know whether or not any part of this fund has been so expended?

Mr. McLAUGHLIN. I do not know, but I know it has been in the hands of the people who violated the spirit of the other law, and my amendment was offered for the purpose——

Mr. McKENZIE. Will the gentleman yield?

Mr. McLAUGHLIN. I will.

Mr. McKENZIE. The gentleman's purpose is to prevent the absolute purchase of any animals?

Mr. McLAUGHLIN. Let the agents, if they must, go down there. If we must send one man to teach them how to put in oats and another how to put in wheat and another how to take cream to a creamery and another how to breed animals, and so on, let us provide the money and send the men down there for all those things. That is ridiculous enough, but it seems to me we ought to stop at buying animals for them to raise and experiment on. If I could have my way, I would strike out all of that; but I have told this story before and the House would not strike it out. I made my effort in the committee, and the committee refused to strike it out, and I am simply telling my story again and calling attention to a few words I think may possibly lead to misuse of money if they remain. I hope the amendment I have offered will be adopted.

Mr. KING and Mr. MOORE of Pennsylvania rose.

The CHAIRMAN. The gentleman from Pennsylvania [Mr. MOORE].

Mr. MOORE of Pennsylvania. Mr. Chairman, I shall probably vote for this item, because it has been carefully thought out by the committee; but the remarks made by my colleague from Michigan [Mr. McLAUGHLIN] induce me to make this comment upon the item: It seems to be in the nature of those discussed the other day during the consideration of the river and harbor bill, which were denominated by some of our brethren of the House as of the "pork-barrel" variety. Here we have an item which proposes to dedicate to the farmer for the eradication of the cattle tick $632,400 at one fell swoop, a very large and imposing sum of money, for improving the health and comfort of the cattle of the land.

Now we ought to do all we can to make the cattle more comfortable than they are. We ought to do a little more than we do, perhaps, toward the employment of experts and extra clerks and traveling agents of the Government to find out and record just where the tick strikes the cow, and just why it is that the cow kicks. All this we ought to know, and we ought to know it and understand it to a scientific nicety, even if it does cost $632,400.

Mr. McARTHUR. Does not the gentleman know that the cattle tick is a very serious disease and has caused widespread loss in many sections of the country?

Mr. MOORE of Pennsylvania. I assume that. And so is the mosquito a very great annoyance to the human animal, but we have never been able to get a dollar in this bill for the eradication of the mosquito. It prevails to just as alarming an extent as does the cattle tick, and its influence is far more widespread both as to cattle and to human beings.

Mr. McLAUGHLIN. Will the gentleman yield?

Mr. MOORE of Pennsylvania. I yield to the gentleman from Michigan, who raised this interesting question.

Mr. McLAUGHLIN. The gentleman has forgotten that one of the reasons given by the engineers for the improvement of the Cold Spring Inlet in New Jersey was that the mosquitoes would be eradicated.

Mr. MOORE of Pennsylvania. That may be, and still——

Mr. McLAUGHLIN. And if that was put in the river and harbor bill for killing the mosquitoes, there ought to be no kick on this.

Mr. MOORE of Pennsylvania. And I call the gentleman's attention to the fact that whereas we spent $50,000,000 for improving the rivers and harbors and removing the mosquitoes of Michigan, we have not spent anything for the eradication of the mosquito along the Atlantic seaboard.

Mr. SLOAN. Will the gentleman yield?

Mr. MOORE of Pennsylvania. How much time have I remaining, Mr. Chairman? I have something important to say.

The CHAIRMAN. Two minutes.

Mr. MOORE of Pennsylvania. I yield to the gentleman.

Mr. SLOAN. The gentleman from Pennsylvania is complaining about $632,000 for the eradication of the cattle tick. Does the gentleman remember that is only about one-fourth of the gold that this House has provided for gargling the mouth of the Delaware creek in the river and harbor bill?

Mr. MOORE of Pennsylvania. Bread cast upon the waters will return manyfold, and every dollar——

Mr. SLOAN. I do not think there will be any room in the Delaware River after you get all that appropriation.

Mr. MOORE of Pennsylvania. One dollar spent on the Delaware River means $20 returned in revenue. But, gentlemen, while you spend $632,400 for the elimination of the cattle tick that is so annoying to the herd, let me call to the attention of the House the fact that that abominable rivers and harbors bill that was so cut up and caricatured the other day, to save some money for the cattle tick and other things, appropriated for Maine, New Hampshire, Vermont, Massachusetts, Connecticut, Rhode Island—all of New England—about one-half for all their rivers and harbors, that we are now appropriating for the eradication of the cattle tick. It is a most interesting commentary upon the wise deliberation and the fair and discriminating judgment of this House, that when it comes to the importance of the rivers and harbors of New England, carrying 50,000,000 tons of commerce, we can give them a total of $385,000 only; but when we take up the important subject of the eradication of the southern cattle tick we find it easy to appropriate $632,400.

The CHAIRMAN. The time of the gentleman has expired.

Mr. SULLOWAY. Will the gentleman yield?

Mr. MOORE of Pennsylvania. I have no more time.

Mr. SULLOWAY. I notice you have not. What you said about New Hampshire is not so.

Mr. MOORE of Pennsylvania. New Hampshire is a part of New England, but New Hampshire did not receive consideration in the rivers and harbors bill; that is right.

Mr. KING. I would like to make an inquiry of the chairman of the committee. Of course, I know nothing about the subject of the cattle tick, but I do know a little about the question of the foot-and-mouth disease. I saw that in the city of Chicago during the epidemic the packers maintained two alleys there, one know as "free alley" and one as "quarantine alley," and every animal that came from a restricted area, even though there was no disease covering the whole area, and even though that animal was just as good as one coming across the line, the packers put it in quarantine alley and bid it in for 20 per cent less than animals coming from another county.

Mr. LEVER. At six or ten dollars a head.

Mr. KING. At six to ten dollars a head. Does the gentleman know whether a cattle-tick area, or alley, is maintained by the packers in the city of Chicago or not?

Mr. LEVER. I do not know that to be a fact. I do know this to be a fact, however, that every animal coming from a tick-infested area is set off in pens labeled "quarantine."

Mr. KING. And if an animal has only been infected with cattle tick a little while and happens to get into quarantine, is he worth less for meat purposes and hides, and does he not get into the same refrigerator, and is he not sold to a consumer for the same price as a well animal?

Mr. LEVER. It may be true, but it actually costs, in the working out of that system you have in Chicago, $6 to $10 a head.

The CHAIRMAN. The time of the gentleman has expired. The question is on the amendment offered by the gentleman from Michigan [Mr. McLAUGHLIN].

The question was taken, and the amendment was rejected.

Mr. LEVER. Mr. Chairman, I think the committee is voting under a misapprehension. I am perfectly willing for the amendment to be adopted, to strike out the words "for breeding purposes."

The CHAIRMAN. The committee has already acted upon it, and that action will stand, unless the gentleman wants to ask unanimous consent to return to it.

Mr. McLAUGHLIN. Mr. Chairman, I have made my remarks; I think it ought to be stricken out; but if the House thinks otherwise, let it go.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

For all necessary expenses for investigations and experiments in dairy industry, cooperative investigations of the dairy industry in the various States, inspection of renovated-butter factories and markets, $272,470.

Mr. POU. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from North Carolina moves to strike out the last word.

Mr. POU. I make this motion, Mr. Chairman, for the purpose of asking unanimous consent to have published in the CONGRESSIONAL RECORD an interview with the Secretary of the Navy, Josephus Daniels, published in the New York World of Sunday, March 26.

The CHAIRMAN. The gentleman from North Carolina [Mr. POU] asks unanimous consent to extend his remarks in the RECORD by printing an interview with the Secretary of the Navy, Josephus Daniels, published in the New York World. Is there objection?

There was no objection.

Mr. GREEN of Iowa. Mr. Chairman, I move to strike out the last two words.

The CHAIRMAN. The gentleman from Iowa [Mr. GREEN] moves to strike out the last two words.

Mr. GREEN of Iowa. I do this, Mr. Chairman, for the purpose of asking the chairman of the Committee on Agriculture a question with reference to this paragraph that he was speaking of a short time ago, concerning experiments with creameries. Is that to be done with the money appropriated under the previous paragraph or under the money appropriated by this paragraph?

Mr. LEVER. The work I spoke of a moment ago would be done with the money appropriated under the previous paragraph. The work under the item that the gentleman is now referring to would be pursued where the tick is not prevalent, anywhere in the United States.

Mr. GREEN of Iowa. Does the gentleman mean to say that the money appropriated by this previous paragraph is used in establishing and promoting dairies?

Mr. LEVER. No. I meant to say what I did say a moment ago, if the gentleman was listening.

Mr. GREEN of Iowa. I will say to the gentleman that I was listening. The gentleman was talking about the establishment of dairies and creameries.

Mr. LEVER. I will say to the gentleman that I was saying that only as an illustration of the character of the work being done under the item above in the encouragement and promotion of live-stock growing in those areas from which the tick had been eradicated. They do other work. They encourage the growing of hogs and of horses and of other kinds of live stock. I used that creamery work as a pat illustration.

Mr. GREEN of Iowa. I understand the gentleman now. But in the connection in which he used it before I misunderstood him.

Mr. LEVER. Yes.

Mr. GREEN of Iowa. Now, I want to go a little further in reference to this paragraph. Under this paragraph, are investigations carried on like those with reference to dairying and creameries, referred to a short time ago?

Mr. LEVER. I do not know as to dairying, except as I have seen notices of it in the newspapers; but the work under this item is to encourage the dairy industry in the United States and to promote it as much as possible; and in connection with their work, of course, they study the conditions of the creameries and the dairies throughout the country. Now, whether or

not this report to which the gentleman refers was made under this particular item, I confess I am unable to say.

Mr. GREEN of Iowa. My question was asked simply with a view to a further inquiry, and that was whether the gentleman could inform me as to how extensive this investigation was. This report, as the gentleman will remember, made a very serious attack against conditions prevailing in our creameries.

Mr. LEVER. I recall it.

Mr. GREEN of Iowa. Alleging that the conditions were very insanitary, and that the manner of carrying on the dairies was very insanitary, and that the milk that was conveyed to the creameries was in such a condition that it was likely to spread disease.

Mr. LEVER. As I recall, the newspaper statements referred to were made six or eight years ago?

Mr. GREEN of Iowa. I am not able to state accurately.

Mr. LEVER. It is safe to say, without refreshing my memory on it, that there has not been made in recent years any very comprehensive investigation of the dairy industry of this country with a view to getting the facts which are alleged in this report.

Mr. GREEN of Iowa. Then the gentleman will agree with me that that report does not fairly represent the conditions prevailing in the various creameries, as a rule, at the present time?

Mr. LEVER. I am not familiar with that report, but I do not hesitate to say this, that I do not believe that any report emanating from any bureau of the Government should attack a great industry unless that department has been especially authorized to make a specific investigation with a view of developing a certain line of facts. Now, I imagine that the report to which the gentleman refers was made incidentally to something else and not as the main purpose of the investigation.

The CHAIRMAN. The time of the gentleman has expired.

Mr. GREEN of Iowa. Mr. Chairman, I ask unanimous consent to proceed for three minutes further.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. GREEN of Iowa. I quite agree with the gentleman. I objected seriously to this report, because I thought it did not reflect the true conditions.

Mr. LEVER. May I say also to the gentleman that if we are to have an investigation of the dairy industry—and I do not know whether we ought to have one or not, because I have not looked into it—I feel that we should select from the greatest experts on the subject in this country men who will be especially charged with making an investigation. I do not believe that an investigation of that tremendous scope and importance to an industry ought to be carried on by any single bureau of this Government.

Mr. GREEN of Iowa. I agree with the gentleman there also. And I will say in that connection that I have received a number of petitions based on this report asking that a comprehensive investigation be made of the dairying and creamery industries. I come from a district which has a large number of cooperative creameries in it. I know that the report which I have referred to does not fairly represent the conditions that prevail with reference to those creameries, and such a report is very injurious to a very important industry.

Mr. KING. Mr. Chairman, will the gentleman yield for a question?

Mr. GREEN of Iowa. Yes.

Mr. KING. Has the gentleman any information as to whether or not that report was made in the interest of the packing industry or the slaughtering industry?

Mr. GREEN of Iowa. I do not know that it was, but I have a strong suspicion.

Mr. MANN. The gentleman is easily buncoed.

Mr. HAUGEN. Mr. Chairman, if the gentleman will refer to the hearing the other day before the Committee on Rules he will find that the attorney that appeared before that committee let the cat out of the bag and showed clearly that the investigation was made at the instigation of the packing industry of the country.

Mr. GREEN of Iowa. That is about what I anticipated would be discovered. The packing interests are connected very closely with the great central creameries that collect their cream from a long distance; and that, as I believe, is mainly responsible for the bad condition of any butter or cream that gets to market, because it is carried so far, without any sanitary precautions, that it naturally becomes fermented or injured in hot weather.

Mr. HAUGEN. And, let me say to the gentleman, if he will refer to the hearings before the committee he will also find that the cottonseed industry of the South is owned and controlled by large interests, such as the packing houses, and if he will investigate a little further he will find that cottonseed oil enters into the production of oleomargarine.

The CHAIRMAN. The gentleman's time has again expired.

Mr. HAUGEN. May I have one minute more?

Mr. GREEN of Iowa. I ask that the gentleman may have one minute more in order that he may finish his statement, which is very interesting and informing.

The CHAIRMAN. If there be no objection, the time of the gentleman will be extended one minute. Is there objection?

There was no objection.

Mr. HAUGEN. The gentleman will also find on investigation that, according to the statement made, I believe by Mr. Brund, or some one who appeared before the committee, the cotton seed kills hogs and that cottonseed oil enters into the production of oleomargarine. Cotton seed kills cattle also if fed in overdoses.

And here we are confronted with the proposition to strike down the very industry that has made this country what it is in order to save a few pounds of cotton seed to the South, in the interest of concerns which, if the statement made before the committee is true, are owned and controlled by the packing houses, and this is for the purpose of saving the cottonseed industry, to make it possible to feed the cottonseed oil to the babies and the people of this country—that which kills hogs and cattle.

Mr. GREEN of Iowa. I am greatly obliged to my friend for his statement.

Mr. LEVER. Mr. Chairman, I should like to get unanimous consent to limit the debate on this paragraph.

Mr. SLOAN. I would like 10 minutes.

Mr. RUBEY. I would like a little time myself.

Mr. HEFLIN. I would like 5 minutes.

Mr. LEVER. Then, Mr. Chairman, I ask unanimous consent that debate on this paragraph and all amendments thereto close in 20 minutes, 10 minutes to go to the gentleman from Nebraska [Mr. SLOAN], 5 minutes to the gentleman from Alabama [Mr. HEFLIN], and 5 minutes to be divided between the gentleman from Missouri [Mr. RUBEY] and myself.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that debate on this paragraph and amendments thereto close in 20 minutes, the time to be divided as he has indicated. Is there objection?

There was no objection.

Mr. MCARTHUR. I should like to ask the gentleman one question, not to be taken out of the time. Will the gentleman state the amount of the financial loss to this country by reason of the cattle tick during the year 1915?

Mr. LEVER. It is variously estimated at an amount ranging from $40,000,000 to $60,000,000 annually.

Mr. MCARTHUR. Is it not also true that the cattle tick is in the nature of a grubworm that works under the hide?

Mr. LEVER. No; that is not a fact. The cattle tick is more in the nature of an ordinary tick, except that it carries infection—carries the Texas fever.

Mr. SLOAN. Mr. Chairman, I had intended to discuss this question at a later date, but the discussion having been precipitated as it has and having gone thus far, I desire to say that in the report of the Bureau of Animal Industry for 1912 a broad and sweeping charge was made against the dairy and creamery interests of this country. In my opinion the charges made were not warranted by the facts then existing or the scope of the investigation. The report assailed the product of the dairies and creameries of this country on the basis of a lack of cleanliness, sanitation, and wholesomeness.

Little attention was paid to that charge until quite recently, when the gentleman from Maryland [Mr. LINTHICUM] presented to this House a resolution asking for the appointment of five Members of this body to investigate the conditions of our dairies and creameries. Copies of this resolution were sent broadcast throughout the United States to health officers, women's clubs, and various other organizations. In this resolution were subtle statements that would seem to indicate that our dairies and creameries are not sanitary and that their products are not wholesome. On April 11, 1916, a hearing was had on that resolution before the Rules Committee of this House. I challenge the attention of Members to the evidence there presented. I trust it will soon be published.

I do not care at this time to say anything about the controversial features already sprung in this debate as to other industries interested in assailing the dairy interests. The question is not whether there is a quarrel between the oleo interests, the packing interests, or whatever they may be, and the dairy interests of this country. As citizens of this country and Representatives from the dairy States such as my own, we are in-

terested in producing a wholesome product for the consumption of the American people.

In the evidence presented gentlemen will find the basis of the charge to be as follows: Some time during 1912, in a period of just a few weeks, two or three young men were sent out by the Bureau of Animal Industry to investigate the dairy and creamery interests of this country. The investigation covered 144 creameries and cream-buying stations. We were unable to ascertain how many stations were creameries and how many were the ordinary cream-buying stations. There are 6,000 creameries in the United States and there are upward of 40,000 cream stations.

These 144 units, whatever they were, were confined to only 6 States out of the 48. Yet, on the examination of those 144 units, whatever they were, confined to six States, where creameries and stations were condemned—in part, in some cases because the buildings were not painted and did not have proper walks around them, and for other trivial reasons as well as some stronger ones—the conclusion was drawn that "94.5 per cent of the creameries are insanitary to a greater or less degree." That statement is no more definite yet as damaging to the reputation of this great industry as was the old statement made of a woman that "she was no better than she should be." Damaging, yes; but who can answer it?

The ratio of those examined to those which must rest under this sweeping charge is 144 to 46,000, or about one-third of 1 per cent. On that basis, figuring the sun spots in their relation to the whole surface of the great orb of day, would have discredited "Old Sol" as a reliable luminary centuries ago.

Again, after examining 1,554 lots of cream out of the millions of lots handled every week in the United States, the report said, "61.5 per cent of the cream used is dirty or decomposed, or both." This relates to all cream handled in creameries. Using a similarly narrow basis, one would travel through any State of this Union, close his eyes until he looked in on the penitentiary, and then condemn the citizenship of that State indiscriminately.

I do not suppose there is a perfect creamery in the United States or the world, any more than there is a perfect House of Representatives, however nearly this one approximates it. Yet the creamery, in so far as it lacks attainment of perfection, is "more or less insanitary." By the introduction of the Linthicum resolution, presented to this House and scattered broadcast throughout the United States, the dairy and creamery interests of the country have been subjected to a very serious blackwash.

Before the Rules Committee, after a mass of evidence had been presented by the proponents of the resolution, somewhat voluminous but not very convincing, Mr. Creasy, of Pennsylvania, who is secretary of the National Dairy Union, made a clear and concise statement. Prof. McKay, who is secretary of the American Association of Creamery Butter Manufacturers of the United States, and who, by the way, is the best-posted man on butter, cream, milk, and all dairy products in the United States, as well as the best-posted man in the United States as to the dairy and creamery conditions in the other dairy countries of the world, made a complete and succinct statement, which shows that there is no food industry in the United States or in the world that has gone forward so fast in the last few years in purifying its products and perfecting its methods than the dairy and creamery interests of the country. Seventy-five per cent of all of the dairy and creamery products that go into interstate commerce is pasteurized, and proper pasteurization is being followed out by all good creameries of the United States. The bad creameries throughout the country are being rapidly eliminated.

It can be further shown that in every dairy State of this Union they have wholesome dairy and creamery laws providing for the inspection and supervision of the dairies and the creameries. There is invested in them, or in nearly all of them, the power to suppress unsanitary plants whether they be cream station, a dairy, or creamery.

Further than that, it was shown by Mr. Creasy that it is the policy of the dairy people of this country to develop dairy interests along lines of health—pure food—and that tangible evidence can be presented of the general purity of the dairy and creamery products of the country.

If the amount of appropriation here named—$272,000—is expected to cover a fair investigation of the dairy and creamery interests in this country and to put the stamp of approval or disapproval on them, it would better not be in this bill. The evidence presented by the Bureau of Animal Industry, the members present during that hearing, as well as others, that to enter upon an investigation of the 6,000 creameries and 40,000 cream stations in the United States and the million of dairies would require millions of dollars. The creamery and dairy interests of the country, I understand, do not oppose an investigation which would be full, complete, and fair.

The following is the statement made by Dr. George L. McKay, together with copies of letters presented by him to the Rules Committee:

STATEMENT OF DR. G. L. M'KAY.

I am secretary of the American Association of Creamery Butter Manufacturers. I have prepared a short statement here concerning our members and I have several documents here, but I do not propose to take up your time in reading them to you, but I will merely submit them. I have letters here from two of the leading dairy scientists of this country on this question, Dr. Russell, of the University of Wisconsin, and Dr. Harding, of the University of Illinois. I have letters then from different food commissioners of the country, giving the sanitary conditions of the creameries as they exist in their States. They do not correspond with the reports given out by the Department of Agriculture. I will read this statement; it is very short:

"As the secretary of the American Association of Creamery Butter Manufacturers, I deem it wise to make a statement at this time in behalf of the purity and cleanliness of the American butter I have spent the greater part of my life in dairy educational work. For 17 years I was at the head of the department of dairying at Iowa State College. In 1901 I was sent abroad to study dairy problems by the Department of Agriculture at Washington, D. C. A similar trip was made in 1913 in behalf of the association, which I represent. Therefore I am very familiar with dairy conditions in the leading dairies of the world.

"The American Association of Creamery Butter Manufacturers is an educational organization and was brought about for the purpose of improving the quality of the American butter. Approximately our members made about one-fourth or one-fifth of the creamery butter manufactured in the United States. Our creamery men all pasteurize their cream for butter making with the exception of one. Inspection of our creameries is made by my assistant and myself. Prof. Bouska, my assistant, is a trained chemist and bacteriologist. After taking his college degree in this country he spent some time studying abroad, so he is eminently fitted for his work and is thoroughly posted on up-to-date sanitary methods as related to food products.

"His reports in connection with my own, covering the entire creamery situation of our members, indicate that there are not more than 2 per cent of our creameries lacking in real up-to-date sanitary equipments. In the 2 per cent referred to everything is kept scrupulously clean, but the construction of the buildings and the equipment are not as modern as they should be. Many of our creameries are superior to any found in other countries, and I can say without hesitancy that the butter manufactured by our members is as pure, if not purer, than that produced in any other country. This is due to the sanitary methods used in manufacturing and the efficiency of pasteurization as practiced by our members. Samples taken from the average run of butter produced in some of our leading creameries and examined at Wisconsin, Purdue, and Cornell Universities, showed an efficiency in pasteurization, as 99½ per cent of the germs found usually in milk and cream were destroyed. The butter thus examined showed up absolutely pure. Therefore the report emanating from the Department of Agriculture in 1912 can in no way apply to the creameries of the members of our association.

"I am pleased to be able to make such a favorable report. From my own general observation, I would say that the creamery business of the United States, from a sanitary standpoint, is conducted on a very high plane. Creameries of the United States may not all have walks around the buildings or all be painted, as indicated by the questions sent out by the Department of Agriculture. If creameries have good drainage, and vats, churns, pipes, and all equipments that come in contact with cream and butter are kept clean, the creamery certainly should be classified as sanitary regardless of absence of paint and walks. The word 'sanitary' is a misnomer as it relates to butter made from pasteurized cream. Butter made from properly pasteurized cream excludes the possibility of it carrying disease germs. So it is unquestionably a practically neutral health proposition.

"G. L. MCKAY, *Secretary.*"

I have letters here which it will not be necessary for me to read, from the different dairy commissioners, from Iowa, where they say there is less than 3 per cent of the dairies that are insanitary, and I have letters from Missouri, from Kansas, from Indiana, and from Wisconsin.

"In answer to your communication of April 4 will say, in a brief way, that the conditions described in Congressman LINTHICUM'S resolution are not prevalent in the State of Wisconsin. There may be some isolated cases of the conditions he mentions, but under the Wisconsin law the entire cheese and butter industry is under State supervision as to its cleanliness and sanitary conditions. The most difficult problem confronting us at the present time is the delivery of good raw material to the creameries, which, however, is well taken care of by this department.

"GEO. J. WEIGLE, *Commissioner.*"

INDIANA STATE BOARD OF HEALTH,
DEPARTMENT OF FOOD AND DRUGS,
Indianapolis, March 21, 1916.

GEORGE L. MCKAY,
Secretary American Association Creamery Butter Manufacturers,
2037 Continental and Commercial Bank, Chicago, Ill.

MY DEAR PROF. MCKAY: My inspector, Mr. Bruner, has been making a careful study of Indiana dairy and creamery conditions, and the reports up to date have just been tabulated. They show that creameries manufactured last year 8,486,881 pounds of butter; 96.7 per cent of this butter was made from pasteurized cream. The only plants that do not pasteurize are the small ones.

Out of 17 large milk plants, selling last year 3,802,416 gallons of milk, 98.6 per cent was pasteurized.

Ninety-four and five-tenths per cent of the ice cream was made from pasteurized cream.

Eighteen cream stations shipped their products in every instance to plants which pasteurized. One plant was condemned and closed and the proprietor was prosecuted and convicted for insanitary conditions.

The score on 101 dairy-products plants is as follows:
Creameries: Excellent, 1; good, 15; fair, 11; poor, 1.
Ice-cream factories: Good, 18; fair, 16; poor, 4.

Milk depots: Excellent, 1; good, 7; fair, 8; bad, 1.
Cream stations: Fair, 17; poor, 1.
The milk depot scored "bad" was prosecuted and put out of business.
The plants scored "fair" were generally well kept from a sanitary viewpoint, but were deficient in lighting or ventilation, were overcrowded, or not well-equipped with machinery, or did not pasteurize the raw material.
I inclose a copy of a syndicated story recently sent out by me.
Very truly, yours,

H. E. BARNARD,
State Commissioner of Food and Drugs.

"BUTTER IS STILL GOOD FOOD.

"The papers are full of stories about bad butter. A resolution has been introduced in Congress which details with great minuteness the insanitary condition of the creameries of the country. If we were so foolish as to believe all we read, it would take a mighty courage to eat a slice of bread and butter. The real fact is that much more good butter is being made than bad butter. The Government report which so severely criticizes the conditions under which butter is made was issued in 1912, and since that time the butter industry has been wonderfully improved.

"The food inspectors in Indiana, which is an important dairy State, have just reported a survey of the dairy industry. They found that 96.7 per cent of the butter was made from pasteurized cream, and so was a real food and not a disease carrier. They found that 94.5 per cent of the ice cream was made from pasteurized cream and milk, and that the only plants that did not pasteurize were the little local plants, which were able to get fresh raw material direct from the dairy. They found that 98.6 per cent of the milk supply was pasteurized, that the only plants which did not sell pasteurized milk were small local plants. But they found one plant in such unsatisfactory condition that it was condemned and closed and the proprietor arrested and convicted for making unsanitary and unwholesome food.

"What is true of Indiana dairy products is true of the dairy products of other States. The milk situation and the butter business is not ideal. It never will be. The business is too large and is carried on by too many untrained men ever to be ideal. But it is improving constantly, and it is foolish to fear disease whenever one sits down to the table and reaches for the butter dish or cream pitcher. The fear of food is a hundred times more injurious that the food itself."

—

UNIVERSITY OF ILLINOIS,
COLLEGE OF AGRICULTURE AND
AGRICULTURAL EXPERIMENT STATION,
April 6, 1916.

Mr. GEORGE L. MCKAY,
Continental & Commercial Bank Building,
Chicago, Ill.

MY DEAR MCKAY: While the word "sanitary" is often used in a very strange sense, and is sometimes used apparently without any sense at all, I have understood that thoughtful people use it with reference to those features which to some appreciable extent affect the health of the individual or of the community.

We can perhaps better appreciate the possible sanitary significance of butter if we consider in detail the various elements which make up butter and cream.

In addition to the water, which is present in varying amount but has no sanitary significance, the fat is perhaps the most outstanding element of composition. As you know, the fat undergoes very little, if any, chemical change either in cream or in butter until it is very old. The rancidity which ultimately develops is an important matter from the commercial point of view, but has no sanitary significance, partly because the products of rancidity are not known to exert any unfavorable influence upon health and largely because the products are so obvious and unpleasant that the rancid butter is not readily consumed.

The sugar is, of course, readily attacked by germ life and broken down, forming mainly acid, which, again, is quite obvious and has important commercial relations, but, so far as I am aware, is entirely without health significance in connection with butter, though the buttermilk is generally recognized as a nutritious and to some extent a therapeutic drink.

The remaining elements of the cream and butter may be conveniently grouped under the head of curd. The decomposition which this nitrogenous material suffers in the case of cream and butter gives rise to many compounds, some of which have pronounced flavors or odors.

In extreme cases such cream or butter is referred to in common speech as "rotten." The decomposition which is going on compares very closely in character, though is rarely as extensive, as that taking place in the ripening of Limburger cheese and other of the soft cheeses. While these changes very sharply affect our sense and to many people are quite disagreeable, thereby having important economic bearings, I am not aware that we have any evidence to indicate that the health of the consumer is in any way impaired by the consumption of such material. Personally I am rather fond of Limburger cheese, while I do not like the flavor of bad cream, largely, I believe, because of the admixture of fatty decomposition products which are quite offensive.

If this analysis of the situation is correct, and I believe it is substantially so, we have then no occasion for applying the term "sanitary" to the decomposition products occurring in butter as the result of bacterial attack on the fat, sugar, or curd, and these taken together make up what we know as butter.

Butter, therefore, would be of no sanitary significance whatever, except in the very general significance which results from its usefulness as a food, but for the fact that it may become the mechanical carrier of disease germs. These may enter at any time between the production of the milk and the consumption of the butter. Careful studies have shown that raw cream very commonly carries the germs of bovine tuberculosis and occasionally may carry the germs of typhoid fever, scarlet fever, diphtheria, septic sore throat, and less frequently the germs of a number of other minor diseases.

The science and practice of butter making has fully developed the fact that by properly pasteurizing the cream, or the milk before the cream is removed, many of these germs which may have found their way into the milk or cream will be completely destroyed without impairing the value of the cream for butter making. As you know, this process is being carried out in practice upon a large scale, so that practically all of the butter made in the State of Illinois is now so handled. Butter, therefore, made from properly pasteurized cream can be looked upon as not open to any objection from the standpoint of sanitation except for the possibility of contamination from human beings carrying these germs between the time at which the cream is pasteurized and the time at which the butter is consumed by the individual. While such butter is not absolutely and entirely safe because of the possibility of its being contaminated by the one or two men who have been in contact with it to a slight extent during the churning and packing process and the grocery clerk who has retailed it, it is in this respect practically on a par with any food product which is later to be consumed without being prepared for consumption by the process of cooking. Until the public shall have reached the point where it desires butter which has been boiled just before being served it will not be possible to furnish it with a more sanitary product than our properly pasteurized butter is now.

Yours, truly,

H. A. HARDING.

—

THE UNIVERSITY OF WISCONSIN,
COLLEGE OF AGRICULTURE AND
AGRICUTURAL EXPERIMENT STATION,
Madison, April 6, 1916.

Prof. G. L. MCKAY,
Secretary American Association
Creamery Butter Manufacturers, Chicago, Ill.

MY DEAR PROF. MCKAY: In reply to your letter asking in regard to the transmission of disease by butter made from cream that has been thoroughly pasteurized, I would say that most of the work that has been done in the study of pasteurization has been along the lines of market milk.

It has been shown beyond all doubt that the method of pasteurization, which is most widely used at the present time in the treatment of market milk, destroys all of the pathogenic organisms which may be present in the milk. The process used consists in the heating of the milk to a temperature of 145° F. for a period of 20 to 30 minutes. Experiments conducted both under laboratory conditions and under practical conditions have shown the efficiency of this process.

It is generally admitted that a higher temperature for a much shorter period of time is practically as efficient as the use of the lower temperature for a longer period of time. If the milk or cream is brought to a temperature of 170°, even for a very short period, it is believed that the vitality of any disease-producing organisms it may contain will be destroyed. Thus, if butter is made from cream that has been treated by either of these processes, it should be perfectly free from living pathogenic organisms.

There are no data, so far as I am aware, to show that butter has ever been concerned in the distribution of typhoid fever or of diphtheria even when the butter is made from unpasteurized cream. If the milk contained tubercle bacilli, it is quite certain that they would be found in the butter and that they would not be destroyed by the ordinary process of butter making, namely, the souring of the cream and the salting of the butter. It is possible that butter made from raw cream might be instrumental in producing tuberculosis in man, but it is certain that its importance in this regard is very small indeed, especially when compared with that of milk itself.

The general condition of creameries with reference to cleanliness would probably have very little, if any, influence upon the healthfulness of the butter. This, however, is no reason why our creameries should not be kept in as cleanly a condition as possible, because the æsthetic side of foods is of very considerable commercial importance.

Yours, very truly,

H. L. RUSSELL.

—

THE BOARD OF AGRICULTURE,
DAIRY AND FOOD DIVISION,
Columbus, Ohio, March 22, 1916.

Mr. GEORGE L. MCKAY,
2037 Continental & Commercial Bank Building, Chicago, Ill.

DEAR SIR: I have before me your favor of the 17th inclosing copy of the request of J. CHARLES LINTHICUM relative to sanitary conditions of creameries.

I note that they claim 94½ per cent of the creameries of the country are unsanitary to a greater or less degree. By getting this 94½ per cent they have taken in, it seems to me, a very large scope, while I believe from reports we have received from our inspectors making investigations of the creameries in Ohio, that 75 per cent will pass the requirements of the State law.

If an inspector goes into a creamery when they are running full force there are undoubtedly some minor things that may not look as sanitary as they ought to be, but they can not be avoided considering the amount of work they are doing.

I do not believe that the conditions in Ohio will show that 61½ per cent of the cream used is unclean or decomposed. It seems to me that this report certainly has been exaggerated very much, unless conditions are a great deal worse in other localities and other States than they are here in Ohio.

A statement of this nature going out to the public is certainly very detrimental to the honest creamery man who is endeavoring to put a clean, wholesome product on the market. I can not understand the motive of this unless there is some move back of it to discredit the creamery work in order to give the oleomargarine people a better hold and make larger sales of their goods.

It seems to me that the creamery men of the country should pass resolutions giving the true conditions as found and present them to this committee.

Any service I can render will be gladly given.

Very respectfully,

T. L. CALVERT,
Chief of Division.

—

KANSAS STATE AGRICULTURAL COLLEGE.
Manhattan, Kans., April 5, 1916.

Mr. GEORGE L. MCKAY,
Suite 2037 Continental & Commercial Bank Building, Chicago.

MY DEAR MCKAY: Yours of the 4th just received.

I am pleased to say at this time that 95 per cent of the creameries in this State score first. I am inclosing herewith a copy of the score card used in grading the creameries. We consider that a plant scoring 85 per cent or better, is a first-grade creamery.

I might add that 90 per cent of the butter manufactured in Kansas is handled in creameries scoring above 93 per cent.

I have just completed gathering data on the creameries, and am plased to state of the creamery butter manufactured within the State of Kansas 98 per cent is made from pasteurized cream.

We have 85 creameries operating within the State. Seventeen of the smallest ones do not pasteurize, while the remaining 68 pasteurize all cream and milk used in the manufacture of butter.

If you desire any further data relative to this work, I shall be greatly pleased to forward same. The above data can be substantiated by names and figures if necessary.

With kind personal regards, I am,

Very truly, yours,

GEO. S. HINE,
State Dairy Commissioner.

MICHIGAN AGRICULTURAL COLLEGE,
East Lansing, Mich., March 24, 1916.

G. L. MCKAY,
Secretary American Association Creamery Butter Manufacturers, 2037 Continental & Commercial Bank Building, Chicago, Ill.

MY DEAR SECRETARY MCKAY: Recently there has been brought to my attention a statement written in 1912 to the effect that proximately 95 per cent of the creameries of this country are insanitary, that approximately two-thirds of the cream used in the manufacture of butter is either unclean or decomposed, or both, and that three-fourths of the cream used in the manufacture of butter is not pasteurized.

I am unable to speak with authority on this subject for conditions existing outside of the State of Michigan. I have, however, been engaged in the dairy business in the State of Michigan for the past 12 years, and have come in contact with all creamery conditions as they have existed and are existing at the present time. The statement as published could never have been considered as applying to the State of Michigan. It is so far removed from the actual conditions in vogue, even in 1912, that anyone at all acquainted with Michigan creameries could not have considered it in a serious manner.

The first two statements as to the condition of creameries and the cream itself are certainly gross misrepresentations. As to the matter of pasteurization, may say that the amount of cream pasteurized is increasing every year. A large portion of that used in the State of Michigan is being pasteurized at the present time, and I look to see the practice universal in the comparatively near future.

Yours, very truly,

A. C. ANDERSON,
Professor of Dairy Husbandry.

STATE OF IOWA,
DAIRY AND FOOD COMMISSION,
Des Moines, April 7, 1916.

Hon. G. L. MCKAY,
Chicago, Ill.

MY DEAR MR. MCKAY: We have yours of the 4th and are pleased to be able to advise you that we are certain that not 3 per cent of the creameries in Iowa are not in a sanitary condition.

Practically every creamery in the State is inspected by assistant commissioners as often as every six months, and in many instances more frequently than that.

Where the buildings are old and dilapidated and can not be kept in good shape they have been condemned and new ones have replaced them. This is why there are possibly 3 per cent of them that are not in good shape now. Many of this small per cent will be rebuilt within the next year.

Wherever we have found that they are not in a sanitary condition, notice has been given, and on the second call inspections have been made, and in some instances penalty assessed. This is where we have found people that, through carelessness or negligence, have not cleaned up.

We know that practically all of the centralizers are in good condition, as we give them the same attention that we do the small creameries.

Yours, truly,

W. B. BARNEY,
Commissioner.

The following is the statement made by Mr. Creasy:

STATEMENT OF MR. WILLIAM T. CREASY, SECRETARY OF THE NATIONAL DAIRY UNION.

Mr. CREASY. As the secretary of the National Dairy Union, I do not come here to object to or resist the passage of a resolution which will have the purpose of ascertaining important facts relative to the production and handling of American dairy and creamery products in a wholesome and sanitary manner. Nor do I, in behalf of those whom I represent, object to the appointment of a committee from the membership of the House not antagonistic to the producers of this country. We would be gratified if members of this committee were men who knew something of the problems of dairy production, handling, and marketing. Especially will we not object if this investigation is made so broad, searching, and comprehensive that this, in many respects the most important industry of the country, be disclosed not only in its actual conditions but its standing among the similar industries in other nations of the earth. Further, we would be pleased if this investigation would show the relative care, sanitation, and wholesomeness of this industry's products in comparison with those of other industries whose representatives are assailing ours.

We are convinced from the enterprise and energy being exercised by a large portion of the dairy industries that there has been accomplished during the last five or six years a great advancement and improvement in sanitation and wholesomeness of the dairy products from the point of first production through the handling, distribution, and marketing of the final product, so that to those not antagonistic or prejudiced an investigation would be entirely unnecessary were it not for the following two important facts:

First, there appears in the Annual Report of the Department of Agriculture for the year 1912, contributed by the Bureau of Animal Industry, at page 334, the following remarkable statement:

[From Report of the Bureau of Animal Industry, 1912.]

"CREAM INVESTIGATIONS AND THE NEED OF CREAMERY INSPECTION.

"Investigations have been made of the sanitary conditions of creameries and cream-buying stations, also of the quality of the cream received and the methods used in its manufacture into butter, and the conditions under which cream is produced and prepared for market.

"A special examination of 144 creameries and cream-buying stations, located in six different States, showed that only eight, or about 5.5 per cent, were absolutely satisfactory from a sanitary standpoint.

"An examination of 1,554 lots of cream, after being delivered to the creameries and cream-buying stations, showed 113, or 7.3 per cent, to be of first grade; 484, or 31.1 per cent, of second grade; and 957, or 61.5 per cent, of third grade. The third grade consists of cream that is dirty, decomposed, or very sour. High acidity in ordinary cream indicates either age or bad conditions surrounding its production, handling, or storage.

"An inquiry covering 715 creameries, located in six States, showed that only 196, or 27.4 per cent, pasteurize their cream, while 519, or 72.6 per cent, do not pasteurize.

"The results of these investigations may not represent with absolute accuracy the creamery industry as a whole, but they are certainly not far out of the way. While some creameries are in good sanitary condition, receive good cream, practice pasteurization and other approved methods, and turn out a high-grade product, the number of such creameries is very small. Our investigations reveal the fact that 94.5 per cent of the creameries are insanitary to a greater or less degree; that 61.5 per cent of the cream used is dirty or decomposed, or both; and that 72.6 per cent of the cream is not pasteurized, but is made into butter to be consumed in a raw state. In other words, millions of gallons of cream that has been allowed to stand in the barn, in the cellar, or in the woodshed until it is sour or decomposed is sent to the creamery, and without even being pasteurized is made into butter. Butter is usually consumed in the raw state and may carry pathogenic organisms for a long period of time, but aside from the danger of pathogenic infection consumers should not be expected to eat a product from an insanitary place and made from material that is unclean and decomposed.

"We have been studying this subject for some years and are fully convinced that the welfare of the public, as well as of the dairy industry, demands that something be done to correct these unwholesome conditions. The best remedy is believed to be a system of inspection such as is recommended in an earlier part of this report under the heading 'Needed legislation.'"

Remarkable for two reasons—first, the very narrow and limited basis of fact; second, the broad sweep and unwarranted conclusion. Your attention is called to the fact that the investigation was confined to 6 States out of 48—to 144 creameries and cream-buying stations, there being now 6,000 creameries and probably 40,000 cream-buying stations in the United States. The man who saw a swallow and declared it was summer had nothing on the remarkable author of this extraordinary report. There was an examination of 1,554 lots of cream, said by the department to have covered a period of three months, which, compared with the many millions of commercial lots of dairy products handled in that period, gives the investigation all the stability of an inverted cone.

The second extraordinary fact referred to is the comprehensive and elastic conclusion drawn where it says: "Our investigations reveal the fact that 94.5 per cent of the creameries are insanitary to a greater or less degree." That conclusion might be drawn as against any line of industries, because it says to a greater or less degree. If we assume the maximum, let us inquire: Greater than what? Greater than 99 per cent or greater than 1 per cent? Less? Less than what? Less than 1 per cent or less than 50 per cent? To scientific minds this statement means nothing definite. To the average mind, given in all the solemnity of a Government report, it is liable to be considered appalling.

The second extraordinary fact is the resolution, almost sensational in its terms, which has not only been filed in the ordinary way in Congress but has been scattered broadcast throughout the country, and wherever sent has served to reflect upon the purity and wholesomeness of the dairy products produced and handled in this country.

It is to meet these two extraordinary and prejudicial documents alone that the investigation should be entered upon.

I am convinced that if this committee will grant an adjournment of this hearing for a period of about 30 days witnesses will be produced from different States and communities of the country who will establish the following facts:

First. That in dairy States of the Union there are, many of recent origin, but all working at this time, effective laws governing the supervision and inspection of dairies and creameries, and in practically every case the laws are being effectively enforced.

Second. We will show that of the commercial dairy products more than 60 per cent are pasteurized, and that pasteurization is steadily increasing in every part of the country.

Third. That the large majority of dairy and creamery products which enter into interstate commerce we believe amounting to 75 per cent is pasteurized.

Fourth. We are convinced that no industry in this country having to do with the production and handling of human food has made an advancement in purity and sanitation equal to that of dairy and creamery products during the last five years.

Fifth. That the state of purity and wholesomeness of commercial creamery and dairy products in this country is further advanced than almost any country of the world.

Sixth. We expect to show, to some extent at least, the antagonism and unwarranted attacks made by other industries upon this industry, which involves to the producers of this country a billion dollars per year, and an industry upon which the continued fertility of our now fertile soils and the renewal of our depleted soils in this country largely depends.

Seventh. We will at this time, as I merely suggest now, show that this is an industry to which there should be directed the most far-seeing statesmanship for the purpose of conserving and upbuilding rather than injuring and destroying.

To this end, and calling your attention to the fact that here in the National Capital, on the 5th and 6th of May next, there will be gathered representatives from the industries of dairy products from throughout the States of the Union, men informed and skilled in their professions, who will be ready to appear before this committee and give testimony, I ask that further hearing hereon be suspended until a convenient date, from the 5th to the 10th of May.

In conclusion will say that yesterday, April 9, we asked the chief of the dairy division for a list of the 144 creameries mentioned in the report. This was refused, for the reason that the information is considered of a confidential nature. On further inquiry at this department it was stated that the investigation, which found 94.5 per cent of the 144 creameries insanitary, was ordered in April, 1912, and completed July 1, 1912, the work being done by two inspectors in three months. Hence, it follows that five inspectors could examine these same creameries in less than a month, and this would show the conditions of these creameries at the present time. This would give the committee and the public much-needed information which would be of great value in carrying on the investigation. We believe the Dairy Division will do this and can have the information for this committee at its next hearing, of from May 5 to 10.

The dairy and creamery industry of this country amounts to nearly $1,000,000,000. It is perhaps the most vital of all the industries touching the future productivity of our soil. It is important to the hundred million consumers:

First, that their wants be supplied.

Second, that the products be wholesome and palatable.

The dairy and creamery products of my own State annually aggregate about $40,000,000. We have the largest two creameries in the United States, each having its origin in my district. I can speak with some personal knowledge of the progress of the dairy and creamery interests of our State, which solved the credit system of our farmers and did more than any other factor in reducing the farmers' transactions to a cash basis. More than 20 years ago, when in the State senate, I introduced and pressed to passage one of the earliest and most effective oleomargarine laws. Since which time, not only in the development of the industry, but in the legislation enacted, and the enforcement thereof following, Nebraska has been one of the foremost States of the Union.

To these ends dairy and creamery organizations are impressing upon and demanding of their members up-to-date methods of producing, grading, transportation, and marketing. The legislatures of the several States have been passing rigid supervision laws, with ample powers conferred upon the law enforcing officers to check abuses and terminate objectionable practices.

Pasteurization is increasing from year to year and is enforced generally in city and State. What dangers there may be are becoming understood and are being rapidly reduced to a minimum. Unless Congress sees fit to enter upon a complete and searching investigation with a purpose of following it up with a general investigation of creamery, dairy, and farm, which would mean several millions of dollars expended every year and the employment of many thousand men, affirmative action should not be taken upon this resolution. The mere dallying with the subject would retard advancement. Upon the other hand, proper and complete investigation and supervisory action thereafter would be welcomed by the producers of the country.

Mr. HEFLIN. Mr. Chairman, I am the friend of the dairy interests, and this side is the friend of the great dairy interests in this country, and I am of the opinion that there are a few on that side besides my good friend from Iowa who are the friends of the dairy interests. The gentleman who has just spoken, the gentleman from Nebraska [Mr. SLOAN], is a friend of the dairy interests, and has been very fair in his speech.

I agree with him that if any dairy concern in this country is not run upon a sanitary plan, if it is run in an uncleanly way and a way that will spread tuberculosis among helpless children in this country and unprotected adults, I think the Government ought to see to it that it is run upon wholesome lines, and I think the food-supplying concerns that will not invite and stand rigid inspection are not the right kind, and they need looking after.

But, Mr. Chairman, what I rose particularly to speak about was the misinformation that the gentleman from Iowa [Mr. HAUGEN] gave to the House a moment ago. He was talking about cottonseed oil killing hogs and cattle. The gentleman is entirely mistaken. He meant cottonseed meal and not cottonseed oil. If cottonseed meal is fed too long to a hog it is not good for him, and the reason is that cottonseed meal is such a rich food that it is not good to feed the hog regularly; but if you take the hog off of this food for 10 days or so and then put him back again, it will fatten him better than anything in the world except corn meal. If you will mix grain with cottonseed meal it can be used indefinitely. Cottonseed oil is one of the most wholesome foods in the world.

Mr. MANN. Will the gentleman yield?

Mr. HEFLIN. Yes.

Mr. MANN. Can anybody afford to feed hogs on cottonseed oil?

Mr. HEFLIN. Not at the present price. Cottonseed oil is good for human beings. It is 73 cents a gallon now. Cottonseed oil is made into cottolene, and that is lard used in the making of biscuits, and I have eaten them. They are as white as snow, and make just as good biscuits as can be made in the world. Cottonseed oil is a fine and wholesome food, and there is great demand for it as food in various forms.

Mr. CANNON. Will the gentleman yield?

Mr. HEFLIN. I will yield to the gentleman from Illinois.

Mr. CANNON. I want to ask the gentleman if cottonseed oil or cottolene can be used as well as lard in making a substitute for butter?

Mr. HEFLIN. Cottolene is used as lard, but cottonseed oil is used in the manufacture of oleomargarine, and that is used sometimes in place of butter, and if people in this country desire to eat oleomargarine in preference to eating butter, it is a free country and they are entitled to do so. The gentleman would not have Congress pass an act to say to me that if I prefer oleomargarine to butter I shall not exercise my right and gratify my taste.

Mr. CANNON. I think no such law has been enacted. It is true, I think, that a quarter of a cent a pound tax is placed on the white oleomargarine, and if it is colored to a pale yellow it is 10 cents a pound.

Mr. HEFLIN. Ten cents a pound on the yellow and a quarter of a cent a pound on the white. If people want to eat that, let them eat it. Every man to his own taste in this matter. I am not in favor of permitting people to sell oleomargarine for butter, but knowing oleomargarine to be a good and wholesome food, I am opposed to any unjust restrictions being placed around its use just as I am opposed to any unjust restrictions being placed around the sale of butter as a food product in this country. [Applause.]

Mr. HAUGEN. Mr. Chairman, I had no intention of injecting the oleomargarine question into this matter.

The CHAIRMAN. The Chair will state to the gentleman that the committee has fixed the time for debate on the paragraph and amendments thereto by unanimous consent.

Mr. HAUGEN. And all the time has been consumed?

The CHAIRMAN. Five minutes remain, in the control of the gentleman from South Carolina [Mr. LEVER], and the Chair understands he was to yield that to the gentleman from Missouri [Mr. RUBEY].

Mr. LEVER. Mr. Chairman, I yield two minutes of the time to the gentleman from Iowa and the balance of it to the gentleman from Missouri.

Mr. HAUGEN. Mr. Chairman, I had no intention of injecting this oleomargarine question into the discussion. I have no quarrel with the gentleman from Alabama [Mr. HEFLIN]. I concede that everyone has the right to manufacture oleomargarine and everyone has the right to eat it. What we object to is that they are selling it for butter, that which it is not. As long as they sell it for what it is, we have no quarrel with them, but, according to official reports, some 6,000 dealers sold some 63,000,000 pounds out of a total product of 83,000,000 pounds, in violation of the laws of 31 States. I will not detain the House longer, but simply ask unanimous consent to insert extracts from the hearing in support of what I stated a moment ago relative to cottonseed meal.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. HEFLIN. Mr. Chairman, the gentleman does not mean to state that they are selling oleomargarine and calling it butter? They are selling oleomargarine that is colored yellow, something like butter.

Mr. HAUGEN. The Government report shows that 63,000,000 pounds out of a product of 83,000,000 pounds were sold in violation of the laws of 31 States, and that led up to the legislation that we have.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

The matter referred to by Mr. HAUGEN is as follows:

Mr. ROMMEL. The man who is feeding his hogs on a ration in which there is some cottonseed meal is likely to go out into the pen in the morning and find one or more hogs dead. We have found in our study that there is never a case where a hog dies from cottonseed-meal poisoning where there have not been symptoms; but they have been so slight that the average farmer would overlook them.

The CHAIRMAN. Symptoms of what?

Mr. ROMMEL. Of cottonseed poisoning. A pig never dies from cottonseed-meal poisoning unless he has previously shown signs of sickness; but they may be such signs as only a careful observer would notice. That, of course, makes it out of the question to feed cottonseed meal to hogs. If you are going to have some of your hogs die on your hands it will knock out your profits.

Then, the disease may take another form. The pig may become sick and may not die for a long time. In cases like that a change of feed will effect a cure. In these chronic cases, the first indication of sickness is the roughness of the coat of the hog; the coat gets harsh, and the hair begins to curl up, and the pig is plainly unthrifty. By and by he begins to stagger in the hind legs, and possibly there may be a little characteristic thumping of the flanks. Anyone who knows the disease of little pigs called "thumps" will recognize that; it is the same thing; it is a rapid, characteristic movement of the diaphragm that causes the flanks to thump. The pig may go along in this way for a long time and become emaciated and eventually may die.

In those acute cases resulting in death that I have witnessed there is no sign whatever of paralysis. The pig may show no signs of being sick, except indications that would be noticed on keen observation. He is seized with a very sudden attack; there is marked shortness of breath; the pig is in great pain and squeals, and, if the attack does not pass off, he may die in 28 to 30 minutes. Death results from cardiac failure and suffocation.

Mr. HAUGEN. Is that due to an overdose, or is there safety in giving that feed to hogs in a limited quantity?

Mr. ROMMEL. I have not found it so.

Mr. STEELE. You would not recommend it as feed for hogs?

Mr. ROMMEL. No, sir.

Mr. HAUGEN. Mr. Chairman, may we have an expert on cotton seed for a few minutes? I am more interested in that subject than anything that comes before the committee. Have you an expert here who has knowledge of the cottonseed industry, Mr. Brand?

Mr. BRAND. He is not here, but we have one who has knowledge of it, who has spent his whole life in that work.

Mr. HAUGEN. Has he any information as to the owners and operators of the cottonseed industry of the South?

Mr. BRAND. We have a great deal of information on that subject.

Mr. HAUGEN. Have you any knowledge in the matter?

Mr. BRAND. I would say that information is knowledge. We have very complete records of the apparent ownership of certain cottonseed industries. I suppose Mr. HAUGEN is looking back of that subject to those who were reputed to be interested in the cottonseed industry of the South. I do not think they deny a part of that allegation. I believe they have a large interest in it.

Mr. HAUGEN. To what extent?

Mr. BRAND. I can not tell you. I do not know whether it is a matter of public record.

Mr. HAUGEN. Well, you have some knowledge of it?

Mr. BRAND. No; we have no knowledge of the exact ownership of that industry. A few big corporations, like the Pennsylvania Railroad and the United States Steel Corporation, publish the exact distribution of their stock and control, but there are only a few of them, and we have no method of forcing that sort of information from the people.

Mr. HAUGEN. But I understood you to say that a large amount of stock is owned or controlled by the packing houses?

Mr. BRAND. I said that the packing-house interests admit a very large interest in these concerns whose products they use in the manufacture of their products.

Mr. HAUGEN. You have some one who has given that matter some attention?

Mr. BRAND. We have a specialist, but he is not here, as it was not expected that he would be called.

Mr. RUBEY. Mr. Chairman, I do not desire to enter into this controversy this afternoon in regard to oleomargarine, but I do want to say this: There is a resolution pending before the Committee on Rules, asking for the appointment of a committee of this House to investigate the dairy industry. I do not object to the introduction of the resolution, but there is a preamble to that resolution to which I do object. That preamble characterizes the dairy industry of this country in a way that is wholly without foundation. It quotes from a report of the Bureau of Animal Industry made in 1912, and that report ought never to have been made. It was made after an investigation, they say, which embraced only 6 States out of the 48, which extended over a few months, and included only 140 creameries. Upon that slight and insignificant investigation the Bureau of Animal Industry based its statement that 95 per cent of the creameries of the country were in an insanitary condition, and that sort of information is made a part of the preamble of a resolution and is sent broadcast over this land. That is the thing to which I object. [Applause.] I desire to take these few minutes to make this statement on the floor of the House, and to give notice that at the proper time, if this resolution should be reported to the House, I shall take the opportunity to present my views at length upon the proposition.

Mr. LEVER. Mr. Chairman, I move the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair Mr. HAMLIN, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 12717, the Agricultural appropriation bill, and had come to no resolution thereon.

HOUR OF MEETING.

Mr. LEVER. Mr. Speaker, I ask unanimous consent that when the House adjourns to-day it adjourn to meet at 11 o'clock to-morrow.

The SPEAKER. The gentleman from South Carolina asks unanimous consent that when the House adjourns to-day it adjourn to meet at 11 o'clock a. m. to-morrow. Is there objection? [After a pause.] The Chair hears none.

ORDER OF BUSINESS.

Mr. MANN. Mr. Speaker, yesterday there was reported from the Committee on Patents two bills, one extending the patent of the badge of the Daughters of the American Revolution and one extending the patent of the Daughters of the Confederacy. The latter bill was placed on the House Calendar, whereas the former bill was placed on the Private Calendar. Evidently both bills should go to the same calendar, and I ask unanimous consent that Senate bill 4889, the one relating to the badge of the Daughters of the American Revolution, may be transferred from the Private Calendar to the House Calendar.

The SPEAKER. Without objection it is so ordered.

There was no objection.

Mr. MANN. I would suggest possibly we might take up and pass both bills, if the gentleman is willing.

Mr. OGLESBY. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill S. 4889, and then I ask unanimous consent for the immediate consideration of the bill H. R. 12481, or I might couple the two together. Those are the bills to which the gentleman from Illinois has just referred.

The SPEAKER. The gentleman from Illinois asks unanimous consent for the immediate consideration of these two bills. This is not unanimous-consent day, but the Chair will put the motion.

Mr. MANN. I may say the reason for making the request is that the Daughters of the American Revolution meet in the city here——

Mr. FINLEY. Mr. Speaker, I would like to have the bills reported.

The SPEAKER. The Clerk will report both bills by title.

The Clerk read as follows:

S. 4889, to permanently renew patent No. 21053, and H. R. 12481, granting an extension of patent to the United Daughters of the Confederacy.

The SPEAKER. Is there objection to the present consideration of both of these bills? [After a pause.] The Chair hears none.

The SPEAKER. The Clerk will report the first bill.

The Clerk read as follows:

An act (S. 4889) to permanently renew patent No. 21053.

Be it enacted, etc., That a certain design patent issued by the United States Patent Office of date September 22, 1891, being patent No. 21053, is hereby permanently renewed and extended, with all the rights and privileges pertaining to the same as of the original patent, being generally known as the badge of the Daughters of the American Revolution, title thereto being hereby vested in the board of management of the National Society of the Daughters of the American Revolution and their successors in office.

The committee amendments were read, as follows:

Page 1, line 6, strike out the word "permanently."

Page 1, line 7, after the word "extended," insert the words "for a period of 14 years from and after the passage of this act."

Page 1, line 11, after the word "Revolution," strike out the words "title thereto being hereby vested in the Board of Management of the National Society of the Daughters of the American Revolution and their successors in office."

The question was taken, and the amendments were agreed to.

The bill as amended was ordered to be read a third time, was read the third time, and passed.

Mr. OGLESBY. Mr. Speaker, I ask unanimous consent that the title of the bill may be amended by striking out the word "permanently" after the word "to" in the first line.

The SPEAKER. Without objection, the title will be so amended.

There was no objection.

The SPEAKER. The Clerk will report the next bill.

The Clerk read as follows:

A bill (H. R. 12481) granting an extension of patent to the United Daughters of the Confederacy.

Be it enacted, etc., That the Commissioner of Patents be, and he is hereby, authorized and directed to grant an extension of patent covering the insignia of the United Daughters of the Confederacy to that organization during and for such period of time as the United Daughters of the Confederacy may be in existence as a national organization.

The committee amendment was read, as follows:

Strike out all of lines 3 to 8, on page 1, just read, and insert in lieu thereof the following:

"That a certain design patent issued by the United States Patent Office of date November 8, 1898, being patent No. 29611, is hereby renewed and extended for a period of 14 years from and after the passage of this act, with all the rights and privileges pertaining to the same as of the original patent, being generally known as the insignia of the United Daughters of the Confederacy."

The SPEAKER. This amendment just read is in the nature of a substitute.

The amendment in the nature of a substitute was agreed to.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. OGLESBY, a motion to reconsider the votes by which the two bills were passed was laid on the table.

PENSIONS.

Mr. ADAIR. Mr. Speaker, I call up the bill (H. R. 14484) and ask unanimous consent that it be considered in the House as in the Committee of the Whole House on the state of the Union.

The SPEAKER. The gentleman asks unanimous consent that the bill be considered in the House as in the Committee of the Whole House on the state of the Union. Is there objection? [After a pause.] The Chair hears none. The Clerk will report the bill by title.

The Clerk read as follows:

A bill (H. R. 14484) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent children of soldiers and sailors of said war.

Mr. ADAIR. Mr. Speaker, I ask unanimous consent that the first reading of the bill be dispensed with.

The SPEAKER. Is there objection to the request of the gentleman from Indiana? [After a pause.] The Chair hears none.

The Clerk read as follows:

A bill (H. R. 14484) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent children of soldiers and sailors of said war.

Be it enacted, etc., That the Secretary of the Interior be, and he is hereby, authorized and directed to place on the pension roll, subject to the provisions and limitations of the pension laws—

The name of Thomas Klugh, late of Company B, Eighty-fourth Regiment Indiana Volunteer Infantry, and pay him a pension at the rate of $40 per month in lieu of that he is now receiving.

The name of Leonidas C. Kilgore, late of Company A, Fortieth Regiment Indiana Volunteer Infantry, and pay him a pension at the rate of $50 per month in lieu of that he is now receiving.

The name of John T. Hetherlin, late of Company A, Fifth Regiment Pennsylvania Reserve Infantry, and pay him a pension at the rate of $30 per month in lieu of that he is now receiving.

The name of Malinda Cannon, widow of Isaac W. Cannon, late of Company D, Fourteenth Regiment Missouri Volunteer Cavalry, and pay her a pension at the rate of $20 per month in lieu of that she is now receiving.

The name of Albert Peterson, late of Company H, First Regiment Indiana Volunteer Heavy Artillery, and pay him a pension at the rate of $30 per month in lieu of that he is now receiving.

The name of Benjamin F. Richardson, late of Company G, One hundred and thirty-sixth Regiment Indiana Volunteer Infantry, and pay him a pension at the rate of $30 per month in lieu of that he is now receiving.

The name of Martha V. Baker, widow of William P. Baker, late of Company C, Seventh Regiment Missouri State Militia Cavalry, and pay her a pension at the rate of $12 per month.

The name of Samantha E. Clark, widow of John F. Clark, late of Company F, Fifty-fourth Regiment Indiana Volunteer Infantry, and pay her a pension at the rate of $20 per month in lieu of that she is now receiving.

The name of Perry Brimberry, late of Company C, Forty-seventh Regiment Illinois Volunteer Infantry, and pay him a pension at the rate of $24 per month in lieu of that he is now receiving.

The name of Pauline R. Wolf, former widow of Hermann Rohde, late of Battery F, Second Regiment Missouri Volunteer Light Artillery, and pay her a pension at the rate of $12 per month.

The name of Charles F. Anderson, late of Company E, Eighth Regiment Iowa Volunteer Cavalry, and pay him a pension at the rate of $36 per month in lieu of that he is now receiving.

The name of Orlando C. Limbocker, late of Company E, First Regiment Iowa Volunteer Cavalry, and pay him a pension at the rate of $30 per month in lieu of that he is now receiving.

The name of Mariah W. Smith, former widow of Robert J. Wilson, late of Company K, Two hundred and seventh Regiment Pennsylvania Volunteer Infantry, and pay her a pension at the rate of $12 per month.

The name of Mary A. Cardinal, widow of Joseph Cardinal, late of Company G, Second Regiment Wisconsin Volunteer Cavalry, and pay her a pension at the rate of $20 per month in lieu of that she is now receiving.

The name of Charles Beavers, late of Company D, Ninety-first Regiment Pennsylvania Volunteer Infantry, and pay him a pension at the rate of $30 per month in lieu of that he is now receiving.

The name of Malona J. Jones, widow of Marquis D. Jones, late of Company D, Seventh Regiment Iowa Volunteer Cavalry, and pay her a pension at the rate of $20 per month in lieu of that she is now receiving.

The name of Mary E. Beal, widow of Charles B. Beal, late of Company G, Thirtieth Regiment Maine Volunteer Infantry, and pay her a pension at the rate of $20 per month in lieu of that she is now receiving.

The name of Lewis Holley, late of Company I, Sixteenth Regiment Connecticut Volunteer Infantry, and pay him a pension at the rate of $40 per month in lieu of that he is now receiving.

The name of Mary Jane Strong, widow of Maston C. Strong, late of Company G, Fifty-third Regiment Ohio Volunteer Infantry, and pay her a pension at the rate of $12 per month.

The name of James Parmer, late of Company I, Thirty-fourth Regiment Missouri Volunteer Infantry, and pay him a pension at the rate of $40 per month in lieu of that he is now receiving.

The name of Alexander Draper, late of Company D, Tenth Regiment Iowa Volunteer Infantry, and pay him a pension at the rate of $40 per month in lieu of that he is now receiving.

The name of Elizabeth Lamere, widow of William M. Lamere, late of Company A, One hundred and sixty-fourth Regiment New York Volunteer Infantry, and pay her a pension at the rate of $12 per month.

The name of Edward F. Phelps, late of Company C, Eighth Regiment Michigan Volunteer Cavalry, and pay him a pension at the rate of $36 per month in lieu of that he is now receiving.

The name of Levi Coon, late of Company E, Fifty-third Regiment Indiana Volunteer Infantry, and pay him a pension at the rate of $24 per month in lieu of that he is now receiving.

The name of Francis M. Cain, late of Company L, Third Regiment West Virginia Volunteer Cavalry, and pay him a pension at the rate of $24 per month in lieu of that he is now receiving.

The name of Frederick D. Owen, late of Company H, Forty-fifth Regiment Illinois Volunteer Infantry, and pay him a pension at the rate of $40 per month in lieu of that he is now receiving.

The name of William Trolove, late of Company F, Eleventh Regiment Kentucky Volunteer Infantry, and pay him a pension at the rate of $36 per month in lieu of that he is now receiving.

The name of Charles A. Edwards, late of Company K, Thirteenth Regiment Kentucky Volunteer Infantry, and pay him a pension at the rate of $40 per month in lieu of that he is now receiving.

The name of Harriet C. Gillespie, former widow of William T. Stevenson, late commissary sergeant, Fifth Regiment Pennsylvania Volunteer Heavy Artillery, and pay her a pension at the rate of $12 per month.

The name of Elmira L. Stiles, widow of Mortimer Stiles, late of Company B, Thirteenth Regiment Indiana Volunteer Infantry, and pay her a pension at the rate of $12 per month.

The name of Henry Mey, late of Company C, Twenty-seventh Regiment Wisconsin Volunteer Infantry, and pay him a pension at the rate of $40 per month in lieu of that he is now receiving.

The name of William A. Bibbs, alias Albert Markham, late of Company G, One hundred and eighth Regiment United States Colored Infantry, and pay him a pension at the rate of $30 per month in lieu of that he is now receiving.

The name of Katherine Glaser, widow of Mathias Glaser, late of Company F, Eleventh Regiment Ohio Volunteer Infantry, and pay her a pension at the rate of $12 per month.

The name of Franklin T. Randall, late of Company K, One hundred and seventy-ninth Regiment Ohio Volunteer Infantry, and pay him a pension at the rate of $30 per month in lieu of that he is now receiving.

The name of Savilla Milligan, widow of Beverly W. Milligan, late of Company B, Fourteenth Regiment Illinois Volunteer Infantry, and pay her a pension at the rate of $24 per month in lieu of that she is now receiving: *Provided*, That in the event of the death of Fay Milligan, helpless and dependent child of said Beverly W. Milligan, the additional pension hercin granted shall cease and determine: *And provided further*, That in the event of the death of Savilla Milligan the name of said Fay Milligan shall be placed on the pension roll, subject to the provisions and limitations of the pension laws, at the rate of $12 per month from and after the date of death of said Savilla Milligan.

The name of William H. Hudson, late of Company K, One hundred and forty-sixth Regiment Illinois Volunteer Infantry, and pay him a pension at the rate of $30 per month in lieu of that he is now receiving.

The name of Mary M. Duffy, former widow of Lawson Duffy, late of Company E, Ninth Regiment West Virginia Volunteer Infantry, and pay her a pension at the rate of $12 per month.

The name of Woodman S. Sample, late of Company E, Sixty-first Regiment Pennsylvania Volunteer Infantry, and pay him a pension at the rate of $50 per month in lieu of that he is now receiving.

The name of Horatio R. Hutchinson, late of Company F, One hundred and seventh Regiment New York Volunteer Infantry, and pay him a pension at the rate of $36 per month in lieu of that he is now receiving.

The name of William W. Blachly, late of Company H, Ninth Regiment Indiana Volunteer Infantry, and pay him a pension at the rate of $40 per month in lieu of that he is now receiving.

The name of Isaac Sloan, late of Company A, Forty-fifth Regiment Kentucky Volunteer Mounted Infantry, and pay him a pension at the rate of $40 per month in lieu of that he is now receiving.

The name of Matilda Buffham, widow of George Buffham, late of Company F, Thirty-ninth Regiment Wisconsin Volunteer Infantry, and pay her a pension at the rate of $12 per month.

The name of Rebecca Phipps, widow of John Phipps, late of Company A, Thirty-fourth Regiment Indiana Volunteer Infantry, and pay her a pension at the rate of $20 per month in lieu of that she is now receiving.

The name of Joseph Dryden, late of Company H, One hundred and eighty-second Regiment Ohio Volunteer Infantry, and pay him a pension at the rate of $36 per month in lieu of that he is now receiving.

The name of Adeline Temple, widow of Joseph Temple, late of Company D, Sixty-third Regiment New York Volunteer Infantry, and pay her a pension at the rate of $12 per month.

The name of Helen Conrad, widow of Otto Conrad, late a landsman, United States Navy, and pay her a pension at the rate of $12 per month.

The name of Fannie A. McNear, widow of Thomas McNear, late of Company E, First Battalion, Maine Sharpshooters, and Company E, Twentieth Regiment Maine Volunteer Infantry, and pay her a pension at the rate of $20 per month in lieu of that she is now receiving.

The name of America J. Austin, former widow of Theoren Austin, late of Company G, Eleventh Regiment Indiana Volunteer Infantry, and pay her a pension at the rate of $12 per month.

The name of William L. Ford, late of Company E, Seventh Regiment Indiana Volunteer Infantry, and pay him a pension at the rate of $30 per month in lieu of that he is now receiving.

The name of William R. Williams, late of Companies D and E, Fourth Regiment Kentucky Volunteer Infantry, and pay him a pension at the rate of $40 per month in lieu of that he is now receiving.

The name of Collins Washburn, late of Battery F, First Ohio Light Artillery, and pay him a pension at the rate of $40 per month in lieu of that he is now receiving.

The name of Edward A. Davenport, late first lieutenant and commissary Ninth Regiment Illinois Volunteer Cavalry, and pay him a pension at the rate of $40 per month in lieu of that he is now receiving.

The name of Henry Hallman, late of Company M, Fifth Regiment Pennsylvania Heavy Artillery, and pay him a pension at the rate of $27 per month in lieu of that he is now receiving.

The name of Melinda Hubert, widow of Nelson Hubert, late of Company D, Third Regiment Massachusetts Heavy Artillery, and pay her a pension at the rate of $12 per month.

The name of Lucy A. Hopkins, widow of Thomas H. Hopkins, late of Companies A and K, Second Regiment Illinois Volunteer Cavalry, and pay her a pension at the rate of $12 per month.

The name of William Muer, late of Company H, Forty-sixth Regiment Pennsylvania Volunteer Infantry, and pay him a pension at the rate of $50 per month in lieu of that he is now receiving.

The name of Charles Hasty, late of Company F, Second Regiment New York Volunteer Cavalry, and pay him a pension at the rate of $40 per month in lieu of that he is now receiving.

The name of Samuel Morrow, late of Company H, One hundred and fifty-seventh Regiment Ohio Volunteer Infantry, and pay him a pension at the rate of $24 per month in lieu of that is now receiving.

The name of Silas Hunley, late of Company C, Second Regiment West Virginia Veteran Infantry, and Company K, Fourth Regiment West Virginia Volunteer Infantry, and pay him a pension at the rate of $50 per month in lieu of that he is now receiving.

The name of Adeline Lampman, widow of Isaac Lampman, late of Company G, Ninety-eighth Regiment New York Volunteer Infantry, and Company I, Twenty-sixth Regiment New York Volunteer Cavalry, and pay her a pension at the rate of $12 per month.

The name of John Maquet, late of Company F, Second Regiment Ohio Volunteer Heavy Artillery, and pay him a pension at the rate of $36 per month in lieu of that he is now receiving.

The name of Helen M. Lind, widow of Robert J. Lind, late of Company A, First Regiment Ohio Volunteer Heavy Artillery, and pay her a pension at the rate of $20 per month in lieu of that she is now receiving.

The name of Samantha J. Wood, widow of David R. Wood, late of Company C, Nineteenth Regiment Kentucky Volunteer Infantry, and pay her a pension at the rate of $20 per month in lieu of that she is now receiving.

The name of Mary F. Wilkinson, widow of William Wilkinson, late of Company E, Third Regiment Massachusetts Militia Infantry, and pay her a pension at the rate of $20 per month in lieu of that she is now receiving.

The name of Myra A. Putnam, widow of John F. Putnam, late commissary sergeant Seventeenth Regiment Maine Volunteer Infantry, and pay her a pension at the rate of $20 per month in lieu of that she is now receiving.

The name of Anna M. Kesselring, widow of Adam Kesselring, late of Company C, Fourth Regiment Missouri Volunteer Cavalry, and pay her a pension at the rate of $12 per month.

The name of John W. Flook, late of Company H, Twentieth Regiment Indiana Volunteer Infantry, and pay him a pension at the rate of $36 per month in lieu of that he is now receiving.

The name of Mary A. Caulk, widow of Jacob Caulk, late of Company B, First Regiment Maryland Volunteer Infantry, and pay her a pension at the rate of $12 per month.

The name of Charles Copenspire, late of Company K, One hundred and sixtieth Regiment New York Volunteer Infantry, and pay him a pension at the rate of $36 per month in lieu of that he is now receiving.

The name of Daniel V. Hamilton, late of Company B, Thirty-first Regiment Ohio Volunteer Infantry, and pay him a pension at the rate of $30 per month in lieu of that he is now receiving.

The name of James Johnson, late of Company K, Sixty-seventh Regiment New York Volunteer Infantry, and pay him a pension at the rate of $30 per month in lieu of that he is now receiving.

The name of Abashabe Nolen, widow of Reuben Nolen, late of Company K, One hundred and forty-fourth Regiment Indiana Volunteer Infantry, and pay her a pension at the rate of $20 per month in lieu of that she is now receiving.

The name of Catherine Bangs, widow of William C. Bangs, late of Company I, Thirteenth Regiment Missouri Volunteer Cavalry, and pay her a pension at the rate of $24 per month in lieu of that she is now receiving.

The name of Henry R. Thomas, late of Company I, One hundred and ninety-seventh Regiment Ohio Volunteer Infantry, and pay him a pension at the rate of $30 per month in lieu of that he is now receiving.

The name of Noble Bryant, late of Company H, Sixth Regiment Kentucky Volunteer Infantry, and pay him a pension at the rate of $36 per month in lieu of that he is now receiving.

During the reading of the bill the following occurred:

Mr. ADAIR. Mr. Speaker, I desire to offer a committee amendment. I move to amend, page 12, line 2, by striking out "$12" and inserting in lieu thereof "$20."

The question was taken, and the amendment was agreed to.

Mr. SWITZER. Mr. Speaker, I desire to offer an amendment.

On page 12, line 3, the spelling of the name "Maquet" is "Maguet." I move to substitute the letter "g" for the letter "q."

The question was taken, and the amendment was agreed to.

Mr. CRISP. Mr. Speaker, I offer the following amendment.

The SPEAKER pro tempore (Mr. RUBEY). The gentleman from Georgia offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 20, line 24, strike out "$12" and insert "$20." (Pension of Orilla F. Porter.)

Mr. CRISP. Mr. Speaker, I have no complaint whatever to make of the Committee on Invalid Pensions. They have a rule that in first granting a pension to a widow they will not grant more than $12 a month. I talked with the acting chairman of this committee, the gentleman from Indiana [Mr. ADAIR], before I offered this amendment. He did not feel authorized to accept it, but I want to lay the facts before the House. This widow married the soldier in 1863, and therefore she is a war widow. She lived with the soldier until the spring of 1892, and in June, 1892, obtained a divorce from him. In October of the same year the widow remarried the soldier and lived with him up to to his death, in 1911. The soldier was drawing a pension at the time of his death of thirty-odd dollars. Upon his death the widow applied to the Pension Office for a pension, and the Office, under the strict letter of the law, rejected her, holding that she was a widow of the marriage of 1892, subsequent to the act of 1890, and was not entitled to a pension.

This woman is 78 years old. She is feeble. She has no property and is dependent on her neighbors for support. At best she has but a short while to live. I apprehend if it was not for the rule of the committee the committee would have been glad to have granted this pension at $20 a month.

Mr. SHERWOOD. Mr. Speaker, the committee will agree to the amendment. [Applause.]

Mr. CRISP. I thank the committee.

The SPEAKER pro tempore. The question is on agreeing to the amendment.

The question was taken, and the amendment was agreed to.

The SPEAKER pro tempore. The Clerk will read.

The Clerk concluded the reading of the bill.

The SPEAKER (after having resumed the chair). The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read a third time, and passed.

On motion of Mr. ADAIR, a motion to reconsider the vote by which the bill was passed was laid on the table.

Mr. VINSON. Mr. Speaker, I desire to call up the bill H. R. 14576 and ask unanimous consent that it be considered in the House as in the Committee of the Whole House on the state of the Union.

The SPEAKER. The Clerk will report the bill.

The Clerk read as follows:

A bill (H. R. 14576) granting pensions and increase of pensions to certain soldiers and sailors of the Regular Army and Navy, and certain soldiers and sailors of wars other than the Civil War, and the widows of such soldiers and sailors.

The SPEAKER. The gentleman from Georgia [Mr. VINSON] asks unanimous consent that this bill be considered in the House as in the Committee of the Whole. Is there objection?

There was no objection.

Mr. VINSON. Mr. Speaker, I ask unanimous consent that the first reading of the bill be dispensed with.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none. The Clerk will read the bill for amendment.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Interior be, and he is hereby, authorized and directed to place on the pension roll, subject to the provisions and limitations of the pension laws—

The name of Mary E. Bacon, widow of Harvey S. Bacon, late of Company K, Fifty-first Regiment Iowa Volunteer Infantry, War with Spain, and pay her a pension at the rate of $12 per month.

The name of Alexander M. Rainey, late of Companies E, Second, and D, First, Recruiting Battalion, Second Regiment Oregon Mounted Volunteers, in Indian war, and pay him a pension at the rate of $30 per month in lieu of that he is now receiving.

The name of Frank C. Lamp, late of Troop I, Fifth United States Cavalry, Regular Establishment, and pay him a pension at the rate of $17 per month in lieu of that he is now receiving.

The name of Sarah Dwyer, widow of Morgan Dwyer, late of Company F, Third Regiment United States Infantry, Regular Establishment, and pay her a pension at the rate of $12 per month.

The name of John F. W. Kuchenbecker, late of Company G, Second Regiment Wisconsin Volunteer Infantry, War with Spain, and pay him a pension at the rate of $12 per month.

The name of Sankey Gray, late of Company L, Eighth Regiment United States Infantry, War with Spain, and pay him a pension at the rate of $17 per month in lieu of that he is now receiving.

The name of Philip Bernhard, late of Troop H, Sixth Regiment United States Cavalry, Regular Establishment, and pay him a pension at the rate of $12 per month.

The name of Ellen Kearns, widow of Thomas Kearns, late of Company I, Twenty-third Regiment United States Infantry, Regular Establishment, and pay her a pension at the rate of $12 per month.

The name of John N. Parker, late of Company C, Third Regiment United States Volunteer Infantry, War with Spain, and pay him a pension at the rate of $12 per month.

The name of John C. Clark, late of Company E, Seventh Regiment United States Infantry, and pay him a pension at the rate of $17 per month in lieu of that he is now receiving.

The name of R. Roy Hamby, late of Company H, Sixteenth Regiment Pennsylvania Volunteer Infantry, War with Spain, and pay him a pension at the rate of $12 per month.

The name of Harvey C. Van Meter, late of Company F, Thirty-second Regiment United States Volunteer Infantry, War with Spain, and pay him a pension at the rate of $8 per month.

The name of Samuel Tygret, late of Company L, Fourth Regiment United States Infantry, War with Spain, and pay him a pension at the rate of $17 per month in lieu of that he is now receiving.

The name of Frank R. Porter, late of Troop A, Eleventh Regiment United States Volunteer Cavalry, War with Spain, and pay him a pension at the rate of $24 per month in lieu of that he is now receiving.

The name of Julia M. Hill, widow of Frank M. Hill, late of Company H, Second Regiment Massachusetts Volunteer Infantry, War with Spain, and pay her a pension at the rate of $12 per month, and $2 per month additional on account of each of the two minor children of the said Frank M. Hill until they reach the age of 16 years.

The name of Martin H. Gavin, late of Company E, Fifteenth Regiment United States Infantry, War with Spain, and pay him a pension at the rate of $17 per month in lieu of that he is now receiving.

The name of Mary A. Powell, widow of David J. Powell, late of Company I, Forty-seventh Regiment United States Volunteer Infantry, War with Spain, and pay her a pension at the rate of $12 per month.

The name of Nora E. Singleton, widow of Lewis C. Singleton, late of the Signal Corps, United States Army, War with Spain, and pay her a pension at the rate of $12 per month.

The name of Ambrose A. Clarke, late of Company I, Third Regiment Missouri Volunteer Infantry, War with Spain, and pay him a pension at the rate of $12 per month.

The name of Frank B. Pauley, late of Company B, Fifth Regiment Missouri Volunteer Infantry, War with Spain, and pay him a pension at the rate of $30 per month in lieu of that he is now receiving.

The name of Mary McKelvey, widow of William S. McKelvey, late of Hospital Corps, United States Army, War with Spain, and pay her a pension at the rate of $12 per month, and $2 per month additional on account of each of the four minor children of said William S. McKelvey until they reach the age of 16 years.

The name of Thomas F. Muldoon, late of Company G, Sixth Regiment Massachusetts Volunteer Infantry, War with Spain, and pay him a pension at the rate of $12 per month.

The name of Alice T. McClaughry, widow of John G. McClaughry, late adjutant and first lieutenant, Third Regiment Illinois Volunteer Infantry, War with Spain, and pay her a pension at the rate of $12 per month, and $2 per month additional on account of each of the two minor children of the said John G. McClaughry until they reach the age of 16 years.

The name of Christ Nelson, late of Company D, Thirteenth Regiment Minnesota Volunteer Infantry, War with Spain, and pay him a pension at the rate of $24 per month in lieu of that he is now receiving.

The name of Eliza L. Norwood, widow of William W. Norwood, late of Company I, Third Regiment United States Dragoons, War with Mexico, and pay her a pension at the rate of $20 per month in lieu of that she is now receiving.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. VINSON, a motion to reconsider the vote by which the bill was passsed was laid on the table.

ENROLLED JOINT RESOLUTION SIGNED.

The SPEAKER announced his signature to enrolled joint resolution of the following title:

S. J. Res. 24. Joint resolution authorizing the Librarian of Congress to return to Williamsburg Lodge, No. 6, Ancient Free and Accepted Masons, of Virginia, the original manuscript of the record of the proceedings of said lodge.

EXTENSION OF REMARKS.

Mr. SLOAN. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. The gentleman from Nebraska asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

ADJOURNMENT.

Mr. VINSON. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 15 minutes p. m.) the House, under its previous order, adjourned until to-morrow, Saturday, April 15, 1916, at 11 o'clock a. m.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. DENT, from the Committee on Military Affairs, to which was referred the bill (S. 4876) to provide for an increase in the number of cadets at the United States Military Academy, reported the same with amendment, accompanied by a report (No. 543), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. COADY, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (H. R. 13419) authorizing the sale of the lighthouse reservation at Scituate, Mass., reported the same without amendment, accompanied by a report (No. 545), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. DEWALT, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (H. R. 12282) to establish a Coast Guard station on the coast of Louisiana in the vicinity of Barataria Bay, reported the same without amendment, accompanied by a report (No. 546), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

He also, from the same committee, to which was referred the bill (H. R. 6903) providing for the establishment of life-saving stations on Tybee Island, coast of Chatham County; on Warsaw Island, coast of Chatham County; on Osabaw Island, coast of Bryan County; on St. Catherines Island, coast of Liberty County; on Blackbeard Island and on Sapelo Island, coast of McIntosh County, all in the State of Georgia, reported the same with amendment, accompanied by a report (No. 547), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. COADY, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (H. R. 13233) authorizing the Secretary of Commerce to exchange lands belonging to the United States at the mouth of Crum River, Pa., for other lands adjacent thereto, for the purpose of removing thereto the Schooner Ledge Range Front Light, so that it may be on the range of the channel of the Delaware River, and further authorizing the Secretary of Commerce to remove said range light from its present location to the property acquired by the exchange, reported the same with amendment, accompanied by a report (No. 548), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. GANDY, from the Committee on the Public Lands, to which was referred the bill (H. R. 6430) to amend an act entitled "An act to establish a court of private land claims and to provide for the settlement of private land claims in certain States and Territories," approved March 3, 1891, and the acts amendatory thereto, approved February 21, 1893, June 27, 1898, and February 26, 1909, reported the same with amendment, accompanied by a report (No. 549), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, private bills were severally reported from committees, delivered to the Clerk, and referred to the Committee of the Whole House, as follows:

Mr. GRAHAM, from the Committee on the Judiciary, to which was referred the bill (S. 3560) to validate a certain title whereon the purchase money has been paid on a private sale by order of the United States district court for the middle district of Pennsylvania, at No. 83, June term, 1910, sitting in bankruptcy, reported the same without amendment, accompanied by a report (No. 542), which said bill and report were referred to the Private Calendar.

Mr. GANDY, from the Committee on Indian Affairs, to which was referred the bill (H. R. 10869) for the relief of the Mission Farm Co., Peter Volondra, and others, reported the same with amendment, accompanied by a report (No. 550), which said bill and report were referred to the Private Calendar.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

A bill (H. R. 11350) granting an increase of pension to Thomas H. Ivers; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 13058) granting a pension to Henry Humphries; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 13678) granting an increase of pension to Carrie Porter; Committee on Pensions discharged, and referred to the Committee on Invalid Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills and resolutions were introduced and severally referred as follows:

By Mr. SWEET: A bill (H. R. 14615) authorizing the establishment of a plant at or near Dubuque, Iowa, for the manufacture of munitions and implements of war; to the Committee on Military Affairs.

By Mr. STEENERSON: A bill (H. R. 14616) for the relief of settlers who purchased land under the act of February 20, 1904; to the Committee on the Public Lands.

By Mr. RAKER: A bill (H. R. 14617) to make April 13 of each and every year a public holiday in the District of Columbia, to be known as Jefferson Day; to the Committee on the District of Columbia.

By Mr. KAHN: A bill (H. R. 14618) to create the grade of aviator in the Signal Corps of the United States Army; to the Committee on Military Affairs.

By Mr. TAVENNER: A bill (H. R. 14619) to provide for the development and operation by the United States Government of water power under its control; to the Committee on Interstate and Foreign Commerce.

By Mr. STEENERSON: A bill (H. R. 14620) to extend the provisions of section 2455 of the Revised Statutes, as amended, relating to the sale of isolated tracts of the public domain, to ceded Chippewa Indian lands in the State of Minnesota; to the Committee on the Public Lands.

By Mr. SWEET: A bill (H. R. 14621) appropriating money for the improvement of the Mississippi River and the Dubuque ice harbor at Dubuque, Iowa; to the Committee on Rivers and Harbors.

By Mr. HOOD: A bill (H. R. 14622) for the purchase of a site for a public building at Clinton, Sampson County, N. C.; to the Committee on Public Buildings and Grounds.

Also, a bill (H. R. 14623) for the purchase of a site for a public building at Morehead City, Carteret County, N. C.; to the Committee on Public Buildings and Grounds.

By Mr. STEELE of Iowa: A bill (H. R. 14624) providing for the purchase of a site and the erection of a public building thereon at Sheldon, Iowa; to the Committee on Public Buildings and Grounds.

Also, a bill (H. R. 14625) providing for the purchase of a site and the erection of a public building thereon at Storm Lake, Iowa; to the Committee on Public Buildings and Grounds.

Also, a bill (H. R. 14626) to provide for the purchase of a site and the erection of a public building thereon at Spencer, Iowa; to the Committee on Public Buildings and Grounds.

By Mr. ABERCROMBIE: A bill (H. R. 14627) to prohibit the issuance of licenses, permits, revenue stamps, or receipts for special taxes authorizing, licensing, or permitting the sale of spirituous, vinous, or malt liquors in certain cases; to the Committee on Ways and Means.

By Mr. GUERNSEY: Resolution (H. Res. 201) directing the Committee on Printing to inquire into the sale by private parties of the document entitled "Messages and Papers of the Presidents," and for other purposes; to the Committee on Printing.

By Mr. SANFORD: Concurrent resolution (H. Con. Res. 29) authorizing the printing and binding of additional copies of Hinds' Precedents of the House of Representatives of the United States for the use of Members of the Sixty-fourth Congress; to the Committee on Printing.

By Mr. McLEMORE: Joint resolution (H. J. Res. 199) opposing the withdrawal of the United States troops from Mexico and authorizing and directing the President to send such reinforcement as may be necessary to accomplish the purposes of the expedition; to the Committee on Foreign Affairs.

By Mr. EDMONDS: Joint resolution (H. J. Res. 200) proposing to amend the Constitution of the United States to authorize uniform laws on the subject of marriage and divorce, and to provide penalties for enforcement; to the Committee on the Judiciary.

Also, joint resolution (H. J. Res. 201) proposing to amend the Constitution of the United States to authorize uniform laws on the subject of marriage and divorce, and to provide penalties for enforcement; to the Committee on the Judiciary.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills were introduced and severally referred as follows:

By Mr. ANDERSON: A bill (H. R. 14628) granting a pension to Oliver W. Moore; to the Committee on Invalid Pensions.

By Mr. AUSTIN: A bill (H. R. 14629) granting an increase of pension to Thomas D. Bearden; to the Committee on Pensions.

By Mr. CARAWAY: A bill (H. R. 14630) to quiet title in certain citizens to certain lands lying within the meander line on the St. Francis River, and being parts of lots and tracts of land lying in Craighead County, Ark.; to the Committee on the Public Lands.

By Mr. DIES: A bill (H. R. 14631) for the relief of J. B. Fleming; to the Committee on Claims.

Also, a bill (H. R. 14632) for the relief of R. L. Jennings; to the Committee on Claims.

By Mr. EAGAN: A bill (H. R. 14633) granting an increase of pension to Nelson Ransier; to the Committee on Invalid Pensions.

By Mr. FAIRCHILD: A bill (H. R. 14634) granting an increase of pension to Simeon A. Freer; to the Committee on Invalid Pensions.

By Mr. FERRIS: A bill (H. R. 14635) granting a pension to Alexander Seals; to the Committee on Invalid Pensions.

By Mr. FOSTER: A bill (H. R. 14636) granting an increase of pension to Jesse B. Rich; to the Committee on Invalid Pensions.

By Mr. GRAY of Indiana: A bill (H. R. 14637) granting a pension to George W. Carroll; to the Committee on Pensions.

By Mr. HEATON: A bill (H. R. 14638) granting a pension to Michael P. Foley; to the Committee on Invalid Pensions.

By Mr. HELVERING: A bill (H. R. 14639) to remove the charge of desertion from the record of William H. Dooley; to the Committee on Military Affairs.

By Mr. KEATING: A bill (H. R. 14640) granting an increase of pension to Elijah Marsh; to the Committee on Invalid Pensions.

By Mr. LAFEAN: A bill (H. R. 14641) granting an increase of pension to Sarah Kissinger; to the Committee on Invalid Pensions.

By Mr. LONGWORTH: A bill (H. R. 14642) granting a pension to Eliza J. Conover; to the Committee on Invalid Pensions.

By Mr. McGILLICUDDY: A bill (H. R. 14643) granting an increase of pension to Frank C. Andrews; to the Committee on Pensions.

By Mr. MAGEE: A bill (H. R. 14644) providing for refund to the Haberle-Crystal Spring Brewing Co. of a sum paid in excess of a certain special excise tax; to the Committee on Claims.

By Mr. MONTAGUE: A bill (H. R. 14645) for the relief of the legal representative of P. H. Aylett; to the Committee on Claims.

By Mr. MOSS of West Virginia: A bill (H. R. 14646) granting a pension to Harvey M. Wilson; to the Committee on Invalid Pensions.

By Mr. MOTT: A bill (H. R. 14647) to amend the military record of James P. Kirby; to the Committee on Military Affairs.

By Mr. NICHOLLS of South Carolina: A bill (H. R. 14648) granting a pension to J. Horace Keeter; to the Committee on Pensions.

Also, a bill (H. R. 14649) granting a pension to Thomas M. Baswell; to the Committee on Pensions.

Also, a bill (H. R. 14650) granting a pension to George E. Turpin; to the Committee on Pensions.

Also, a bill (H. R. 14651) granting a pension to William O. Stover; to the Committee on Pensions.

Also, a bill (H. R. 14652) granting a pension to Joseph L. Rollins; to the Committee on Pensions.

Also, a bill (H. R. 14653) granting a pension to Fred. H. Penland; to the Committee on Pensions.

Also, a bill (H. R. 14654) granting a pension to Thomas H. Emory; to the Committee on Pensions.

By Mr. POWERS: A bill (H. R. 14655) granting an increase of pension to William Girdler; to the Committee on Invalid Pensions.

By Mr. SCOTT of Pennsylvania: A bill (H. R. 14656) granting an increase of pension to Pius W. Wonner; to the Committee on Invalid Pensions.

By Mr. SLOAN: A bill (H. R. 14657) granting an increase of pension to Daniel Corcoran; to the Committee on Pensions.

By Mr. STEELE of Iowa: A bill (H. R. 14658) granting an increase of pension to John H. Peck; to the Committee on Invalid Pensions.

By Mr. THOMPSON: A bill (H. R. 14659) granting an increase of pension to Otis Hull; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14660) for the relief of Mrs. Martha J. Couchman; to the Committee on Claims.

By Mr. WILLIAMS of Ohio: A bill (H. R. 14661) to correct the military record of Edward Carter; to the Committee on Military Affairs.

By Mr. YOUNG of North Dakota: A bill (H. R. 14662) granting an increase of pension to Louisa Fleming; to the Committee on Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. BAILEY: Protest of F. B. McFeaters, E. F. Griffith, H. Stanley Pringle, J. T. Higgins, J. H. Layman, R. H. Wissinger, A. W. Dolaway, Charles S. Moore, Thomas G. Ford, John Houri, J. L. Woodside, W. H. Miller, Joshua Bracker, C. E. Griffith, C. L. Irwin, Samuel Page, Fred Beals, C. D. Blyler, Elmer Lantz, D. C. Druyca, A. W. Eichelberger, William Grove, Asbury F. Grove, Joe A. Beers, W. H. Ulerick, and William R. Ullery, all of Johnstown, Pa., against the passage of House bills 491 and 6468, denying admission to the mails to certain publications; to the Committee on the Post Office and Post Roads.

By Mr. COPLEY: Petition of sundry citizens and organizations of the State of Illinois, favoring national prohibition; to the Committee on the Judiciary.

By Mr. DILL: Petition of Mr. E. F. Knapp and other citizens of Park Rapids and Colville, Wash., protesting against the passage of House bills 6468 and 491; to the Committee on the Post Office and Post Roads.

Also, petition against House bills 491, 6468, and 652, to amend the postal laws; to the Committee on the Post Office and Post Roads.

Also, petition of Mr. E. F. Knapp and other residents of Park Rapids, Wash., protesting against the passage of House bill 652; to the Committee on the District of Columbia.

Also, petition of I. O. Brown, of Spokane, Wash., and others, protesting against the passage of House bills 491 and 6468; to the Committee on the Post Office and Post Roads.

Also, petition of E. Fuller and other citizens of Colville, Wash., protesting against the passage of House bill 652, for Sunday closing in the District of Columbia; to the Committee on the District of Columbia.

By Mr. EAGAN: Petition of G. A. Hollinger, of North Bergen, N. J., against passage of House bill 13048, to create a juvenile court in the District of Columbia; to the Committee on the District of Columbia.

By Mr. ELSTON: Memorial of Richmond Chamber of Commerce, favoring location of new naval academy at Richmond, Cal.; to the Committee on Naval Affairs.

By Mr. ESCH: Memorial of La Crosse Board of Trade, favoring the establishment of a United States shipping board; to the Committee on the Merchant Marine and Fisheries.

By Mr. FLYNN: Memorial of Fifth Avenue Association on National Defense, favoring adequate national defense; to the Committee on Military Affairs.

Also, petition of the Anti-imperialist League, Boston, Mass., favoring passage of the Philippine bill; to the Committee on Insular Affairs.

By Mr. FOSTER: Petition of citizens of Waltonville, Mount Vernon, Bluford, and Mount Carmel, Ill., in support of House bills 270 and 712; to the Committee on Ways and Means.

By Mr. FULLER: Petition of Arminta Wilson and others, favoring House bill 463, to increase widows' pensions; to the Committee on Invalid Pensions.

By Mr. GARDNER: Memorial of Major How Post, Woman's Relief Corps, of Haverhill, Mass., favoring passage of widows' pension bill, known as the Ashbrook pension bill; to the Committee on Invalid Pnsions.

By Mr. HAWLEY: Petition in connection with House bill 13918 and other legislation for the disposal of the Oregon & California Railroad land-grant matter; to the Committee on the Public Lands.

By Mr. HUMPHREY of Washington: Petition of sundry citizens of the State of Washington, against bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

Also, petition of sundry citizens of the State of Washington, against compulsory Sunday observance day in the District of Columbia; to the Committee on the District of Columbia.

By Mr. KETTNER: Petitions of J. W. Goodwin and 97 other residents of San Diego; of I. C. Davis and 23 others, of Escondido; of D. C. Mendenhall, San Diego; of Mrs. Ed. Steele, San Diego; of Mrs. Mary Wilkerson, San Diego; and 1 other of San Diego, all in the State of California, protesting against House bills 6468 and 491, to amend the postal laws; to the Committee on the Post Office and Post Roads.

Also, petitions of I. C. Davis and 17 residents of Escondido; of Mrs. Mary Wilkerson and 1 other resident of San Diego; of Mrs. R. Haddon, San Diego; of D. C. Mendenhall, San Diego; of Mrs. H. E. Highle, San Diego; and of Mrs. E. Brown, San Diego, all in the State of California, protesting against Senate bill 645, to provide for the closing of barber shops in the District of Columbia on Sunday, or any other like religious measure; to the Committee on the District of Columbia.

Also, petition of George W. Vogler, of Ocean Beach, Cal., protesting against House bill 8348, making Columbus Day a legal holiday in the District of Columbia; to the Committee on the District of Columbia.

Also, petition of San Diego Chamber of Commerce, Ed. F. Stahle, executive secretary, San Diego, Cal., favoring House bill 5806, providing for opening up the nearest ample supply of high-grade coal for the use of our Navy and merchant marine in southwestern Pacific waters; to the Committee on Railways and Canals.

Also, petition of the United Commercial Travelers of America, A. E. Clark, secretary, San Diego, Cal., favoring inspection of creameries; to the Committee on Rules.

Also, petition of Robert P. Reagan, A. H. Gould, E. Zenkner, Helen Zenkner, Gustav Kranz, Franklin P. Jacobus, G. A. Eaton, Marie S. Eaton, and Henry Lohman, all of San Diego, Cal., favoring strict neutrality; to the Committee on Foreign Affairs.

By Mr. LAFEAN: Memorial of the Fifth Avenue Association on National Defense, urging prompt action on national defense as recommended by the General Board of the Navy and the General Staff of the Army; to the Committee on Military Affairs.

Also, petition of the Commercial Exchange of Philadelphia, opposing the enactment into law of House bill 10405, grain grades act; to the Committee on Agriculture.

By Mr. LOUD: Petition of J. C. Batement and 7 other citizens of Hope, Mich., against bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. McKENZIE: Petition of citizens of Dixon, Ill., against bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. MAGEE (by request): Petition of R. N. Wallace and others, of Syracuse, N. Y., against House bill 13048, to create a juvenile court in the District of Columbia; to the Committee on the District of Columbia.

By Mr. MAPES: Petition of 51 citizens of Ottawa, Kent, and Muskegon Counties, Mich., against bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. MATTHEWS: Resolution adopted by the Ladies' Literary Society of Napoleon, Henry County, Ohio, favoring a movement to take the administration of Indian affairs out of politics and establish a nonpartisan commission for the administration of Indian affairs; to the Committee on Indian Affairs.

By Mr. MILLER of Pennsylvania: Petitions of 252 citizens of Seneca, 25 people of Oil City, 60 people of Oil City, 1,027 people of Oil City, Woman's Christian Temperance Union of Oil City, 40 people of Oil City, 12 people of Oil City, 50 people of Oil City, and 50 people of Oil City, all in the State of Pennsylvania, favoring national prohibition; to the Committee on the Judiciary.

Also, petitions of 620 people of Warren, Pa., opposing passage of House bill 6468; to the Committee on the Post Office and Post Roads.

By Mr. NEELY: Petition of citizens of Ohio County, W. Va., protesting against House bills 491 and 6468; to the Committee on the Post Office and Post Roads.

By Mr. NOLAN: Petition of Woman's Club, Lodi, Cal., favoring bill for national park service and appropriation for Yosemite National Park; to the Committee on the Public Lands.

By Mr. RAKER: Petition of citizens of Standish, Cal., against passage of compulsory Sunday-observance bill for the District of Columbia; to the Committee on the District of Columbia.

By Mr. RANDALL: Memorial of Woman's Christian Temperance Union of Fernando, Cal., favoring national prohibition; to the Committee on the Judiciary.

Also, memorial of First Methodist Episcopal Sunday School of Pasadena, Cal., favoring prohibition in the District of Columbia; to the Committee on the District of Columbia.

By Mr. SINNOTT: Petition of 43 citizens of Portland, Oreg., against bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. STINESS: Petitions of 70 people of Portsmouth and 850 people of Providence, R. I., favoring national prohibition; to the Committee on the Judiciary.

Also, petition of Fearless Club, of Providence, R. I., favoring the bills in the interest of superannuated employees in the Postal Service; to the Committee on the Post Office and Post Roads.

Also, petition of Rhode Island Chapter, American Institute of Architects, favoring the passage of Senate joint resolution 92, regarding site for a central power plant in the District of Columbia; to the Committee on the District of Columbia.

Also, memorial of Washington Park Yacht Club, of Providence, R. I., protesting pending bills regulating the operation of motor boats; to the Committee on the Merchant Marine and Fisheries.

By Mr. WILLIAMS of Ohio: Petition of 43 citizens of Spencer, Ohio, favoring national prohibition; to the Committee on the Judiciary.

SENATE.

SATURDAY, *April 15, 1916.*

(Legislative day of Friday, April 14, 1916.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the House had passed the bill (S. 4889) to permanently renew patent No. 21053 with amendments, in which it requested the concurrence of the Senate.

The message also announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H. R. 12481. An act granting an extension of patent to the United Daughters of the Confederacy;

H. R. 14484. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent children of soldiers and sailors of said war; and

H. R. 14576. An act granting pensions and increase of pensions to certain soldiers and sailors of the Regular Army and Navy, and certain soldiers and sailors of wars other than the Civil War, and to widows of such soldiers and sailors.

ENROLLED JOINT RESOLUTION SIGNED.

The message further announced that the Speaker of the House had signed the joint resolution (S. J. Res. 24) authorizing the Librarian of Congress to return to Williamsburg Lodge, No. 6, Ancient Free and Accepted Masons, of Virginia, the original manuscript of the record of the proceedings of said lodge, and it was thereupon signed by the Vice President.

HOUSE BILLS REFERRED.

H. R. 8351. An act to accept a deed of gift or conveyance from the Lincoln Farm Association, a corporation, to the United States of America, of land near the town of Hodgenville, county of Larue, State of Kentucky, embracing the homestead of Abraham Lincoln and the log cabin in which he was born, together with the memorial hall inclosing the same; and, further, to accept an assignment or transfer of an endowment fund of $50,000 in relation thereto, was read twice by its title and referred to the Committee on the Library.

H. R. 12481. An act granting an extension of patent to the United Daughters of the Confederacy was read twice by its title and referred to the Committee on Patents.

The following bills were severally read twice by their titles and referred to the Committee on Pensions:

H. R. 14484. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent children of soldiers and sailors of said war; and

H. R. 14576. An act granting pensions and increase of pensions to certain soldiers and sailors of the Regular Army and Navy, and certain soldiers and sailors of wars other than the Civil War, and to widows of such soldiers and sailors.

DAUGHTERS OF THE AMERICAN REVOLUTION.

Mr. CLAPP. I ask unanimous consent that the Chair lay before the Senate the amendments of the House of Representatives to the bill (S. 4889) to permanently renew patent No. 21053.

The VICE PRESIDENT. The Chair lays before the Senate the amendments of the House of Representatives, which will be read.

The amendments were, in line 6, to strike out "permanently"; in line 7, after "extended," to insert "for a period of 14 years from and after the passage of this act"; in line 9, after "Revolution," to strike out all down to and including "office," in line 12; and to amend the title so as to read "An act to renew patent No. 21053."

Mr. CLAPP. I move that the Senate concur in the House amendments.

The motion was agreed to.

NATIONAL DEFENSE.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States.

The VICE PRESIDENT. The Secretary will call the roll.

Mr. BRANDEGEE. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The absence of a quorum was disclosed when the roll was called last evening and a recess taken.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Gore	Oliver	Smoot
Bankhead	Gronna	Overman	Sutherland
Borah	Hardwick	Page	Tillman
Brandegee	Hollis	Pittman	Vardaman
Burleigh	James	Ransdell	Wadsworth
Chamberlain	Kenyon	Sheppard	Warren
Clarke, Ark.	Kern	Sherman	Weeks
Cummins	McCumber	Simmons	Williams
Dillingham	Martine, N. J.	Smith, Ga.	
Gallinger	Myers	Smith, Mich.	

Mr. KERN. I desire to announce the unavoidable absence of the senior Senator from Florida [Mr. FLETCHER], the junior Senator from Maryland [Mr. LEE], the senior Senator from West Virginia [Mr. CHILTON], and the junior Senator from Indiana [Mr. TAGGART]. These Senators are paired. This announcement may stand for the day.

The VICE PRESIDENT. Thirty-eight Senators have answered to the roll call. There is not a quorum present. The Secretary will call the roll of absentees.

The Secretary called the names of absent Senators, and Mr. CLAPP, Mr. HUSTING, Mr. LODGE, Mr. NELSON, Mr. NORRIS, Mr. POMERENE, Mr. ROBINSON, Mr. SAULSBURY, Mr. STERLING, and Mr. THOMPSON answered to their names when called.

Mr. BECKHAM, Mr. CULBERSON, Mr. McLEAN, and Mr. BRADY entered the Chamber and answered to their names.

The VICE PRESIDENT. Fifty-two Senators have answered to the roll call. There is a quorum present. The Secretary will proceed to call the roll on the amendment of the Senator from New York [Mr. WADSWORTH], the yeas and nays having been ordered.

Mr. BORAH. Mr. President, before the roll call proceeds I wish to ask the author of the amendment a question, if I may.

The VICE PRESIDENT. The Chair does not see how, when the roll call is proceeding, there can be any discussion of the question.

Mr. BORAH. I do not understand that anyone has answered on the roll call this morning.

The VICE PRESIDENT. The Senate took a recess on a roll call last night.

Mr. HARDWICK. Mr. President, a parliamentary inquiry.

The VICE PRESIDENT. The Senator from Georgia will state it.

Mr. HARDWICK. When a roll call discloses the absence of a quorum the roll call itself amounts to nothing; there is not a quorum present.

The VICE PRESIDENT. It is the opinion of the Chair that in the present situation the roll call must proceed. The previous call disclosed on the vote the lack of a quorum. In accordance with an order made precedent to that time the Senate recessed at 6 o'clock until 11 o'clock to-day. The Chair believes that that leaves nothing in order except to proceed at once with the yeas and nays.

Mr. BORAH. I have no desire——

Mr. MYERS. I suggest that by unanimous consent the Senator from Idaho may be heard.

Mr. BORAH. I do not desire to do that. I was laboring under the impression that when the roll call disclosed the absence of a quorum that ended that part of the proceedings and that the roll call this morning would be a new proceeding.

Mr. GALLINGER. Mr. President, I venture to say that the ruling of the Chair is in accordance with the custom of the Senate, and I think the Chair ruled exactly right.

The VICE PRESIDENT. The Secretary will proceed with the calling of the yeas and nays.

The Secretary proceeded to call the roll.

Mr. BECKHAM (when his name was called). I am paired with the senior Senator from Delaware [Mr. DU PONT] and I withhold my vote.

Mr. GALLINGER (when his name was called). I have a general pair with the senior Senator from New York [Mr. O'GORMAN], but on this bill I am privileged to vote, and I vote "yea."

Mr. STERLING (when his name was called). I am paired with the Senator from South Carolina [Mr. SMITH] and therefore withhold my vote.

Mr. TILLMAN (when his name was called). I transfer my pair with the Senator from West Virginia [Mr. GOFF] to the Senator from Maryland [Mr. LEE] and vote "nay."

Mr. WILLIAMS (when his name was called). I transfer my pair with the senior Senator from Pennsylvania [Mr. PENROSE] to the Senator from Tennessee [Mr. LEA] and vote "yea."

The roll call was concluded.

Mr. GRONNA. I inquire if the senior Senator from Maine [Mr. JOHNSON] has voted?

The VICE PRESIDENT. He has not.

Mr. GRONNA. I have a general pair with that Senator, and therefore withhold my vote. If permitted to vote, I would vote "yea."

Mr. DILLINGHAM. I observe that the senior Senator from Maryland [Mr. SMITH] has not voted, and, having a pair with that Senator, I refrain from voting.

Mr. BRADY. I have a general pair with the senior Senator from Florida [Mr. FLETCHER]. He is not present, and I withhold my vote. I would vote "yea" if at liberty to vote.

Mr. BECKHAM. I transfer my pair with the senior Senator from Delaware [Mr. DU PONT] to the Senator from Nebraska [Mr. HITCHCOCK] and vote "yea."

Mr. STONE (after having voted in the negative). I will have to withdraw my vote, having a general pair with the senior Senator from Wyoming [Mr. CLARK].

Mr. HARDWICK. I am paired with the Senator from Kansas [Mr. CURTIS]. I transfer that pair to the Senator from Tennessee [Mr. SHIELDS] and vote "nay."

Mr. GALLINGER. I wish to announce that the Senator from New Mexico [Mr. CATRON] is paired with the Senator from Oklahoma [Mr. OWEN];

The Senator from New Mexico [Mr. FALL] with the Senator from West Virginia [Mr. CHILTON];

The Senator from Michigan [Mr. TOWNSEND] with the Senator from Florida [Mr. BRYAN]; and

The Senator from Ohio [Mr. HARDING] with the Senator from Alabama [Mr. UNDERWOOD].

The result was announced—yeas 33, nays 23, as follows:

YEAS—33.

Ashurst	Jones	Pittman	Thompson
Beckham	Kenyon	Poindexter	Wadsworth
Burleigh	Lippitt	Pomerene	Walsh
Chamberlain	Lodge	Ransdell	Warren
Clapp	McCumber	Sheppard	Weeks
Cummins	Martine, N. J.	Sherman	Williams
Gallinger	Norris	Smith, Mich.	
Husting	Oliver	Smoot	
James	Page	Sutherland	

NAYS—23.

Bankhead	Gore	Nelson	Swanson
Borah	Hardwick	Overman	Thomas
Brandegee	Hollis	Robinson	Tillman
Clarke, Ark.	McLean	Saulsbury	Vardaman
Colt	Martin, Va.	Simmons	Works
Culberson	Myers	Smith, Ga.	

NOT VOTING—40.

Brady	Fletcher	Lane	Shafroth
Broussard	Goff	Lea, Tenn.	Shields
Bryan	Gronna	Lee, Md.	Smith, Ariz.
Catron	Harding	Lewis	Smith, Md.
Chilton	Hitchcock	Newlands	Smith, S. C.
Clark, Wyo.	Hughes	O'Gorman	Sterling
Curtis	Johnson, Me.	Owen	Stone
Dillingham	Johnson, S. D.	Penrose	Taggart
du Pont	Kern	Phelan	Townsend
Fall	La Follette	Reed	Underwood

So Mr. WADSWORTH's amendment to the amendment of the committee was agreed to.

Mr. SUTHERLAND. Mr. President, I offer the amendment which I send to the desk.

The VICE PRESIDENT. The amendment proposed by the Senator from Utah to the substitute reported by the committee will be stated.

The SECRETARY. The amendment to the amendment is as follows:

On page 132, line 18, strike out the words "one thousand seven hundred and eighty-four" and substitute therefor the words "two thousand one hundred and four."

On page 132, line 19, strike out the words "two thousand five hundred and sixteen" and substitute therefor the words "three thousand one hundred and fifty-six."

On page 132, line 21, strike out the word "four."

On page 132, line 22, strike out the words "thousand one hundred and eighty-six" and substitute therefore the words "five thousand two hundred and twenty-five."

On page 132, line 23, strike out the words "twelve thousand five hundred and sixty-two" and substitute therefor the words "fifteen thousand six hundred and seventy-five."

On page 133, line 7, strike out the words "increase the number of" and substitute therefor the words "decrease the number of."

On page 133, strike out lines 8, 9, 10, 11, and 12 and substitute therefor "sergeants to 1,784, the number of corporals to 2,516, the number of privates, first class, to 4,186, and the number of privates to 12,562, as reserves become available."

Mr. SUTHERLAND. Mr. President, I shall not have time to discuss this proposed amendment very fully in the 10 minutes which I am allowed. The effect of it is to increase the number of the personnel of the Coast Artillery to the maximum provided by this bill instead of the minimum; in other words, to establish the maximum number at once instead of leaving it to the President to increase the number from the minimum to the maximum, as he may see fit.

It seems to me that the necessity of the amendment is perfectly obvious upon the consideration of some perfectly well-established facts. We have to-day coast fortifications upon the two coasts which have cost us $41,000,000; they are among the very best fortifications in the world. We have in those fortifications 530 guns and one hundred and twenty-eight 12-inch mortars; but we have not enough men in the service to man more than one-fourth of the guns. The opinion of the military authorities, as I understand, is that we should provide under this bill for manning one-half of the guns upon these fortifications, leaving it to the State coast artillery reserve forces to take care of the other half; but, as a matter of fact, there are not organized in the States to-day enough men to take care of one-fourth of the guns.

So, if we increase the number of men as my amendment proposes, namely, to 30,000, we shall still fall short of having enough men in the regular force and in the State militia to man all the guns. The increase which is suggested by my amendment will still bring it far short in percentage of the various increases which are now made for the other branches of the service. For example, the present Cavalry strength is 14,148. This bill provides a minimum number now of 25,000, which is an increase of 76 per cent. In the Field Artillery the present force is 5,541. The bill proposes the minimum increase to 18,039, or an increase of 225 per cent.

The Infantry at present numbers 35,339. It is proposed to increase that number to 85,952, or an increase of 143 per cent. The Coast Artillery at present numbers 19,019 and the minimum increase proposed by this bill is but 24,887, or an increase of only 31 per cent. If the amendment which I have proposed is adopted, it will increase it to 30,000, or an increase of only 57 per cent, as compared with an increase of 76 per cent of the Cavalry, 225 per cent of the Field Artillery, and 143 per cent of the Infantry.

It has always seemed to me that one of the most important branches of the military service is the Coast Artillery. In the first place, they serve in connection with the Navy in what may be considered the first line of defense if this country should be attacked from any foreign source. In addition to that, the coast artilleryman, in my judgment and according to my information, is the best equipped man for general service in any of the military forces of the country. He is not only trained as a coast artilleryman, but he is trained in such a way that he may be used effectively in the Infantry forces, he is trained in such a way that he can be used, of course, immediately in the Field Artillery, if it becomes necessary, and his training is of such a character that he can be utilized to operate a machine gun, the handling of which has come now to be a very highly expert branch of the service.

The effect, therefore, of the amendment is in reality to strengthen the entire land forces, because in time of need the men who form a part of the Coast Artillery may be utilized, as I have indicated, in any branch of the service. I very much hope that the chairman of the committee may see his way clear to accept the amendment.

Another thing that is accomplished by the amendment is that, without providing even then as many men as we need, we shall have provided for the immediate training of these 30,000 men; and the President is authorized, as he may be advised, to decrease the number from the maximum to the minimum, instead of, as under the pending bill, increasing from the minimum to the maximum. The effect of that is that whenever a man is retired from the maximum number, he immediately goes into the reserve, and is still available in time of need; in other words, the amendment allows the training of these men at once; which is a highly important matter. Then, as in the wisdom of the President the force may be decreased, these men immediately go into the reserve, so that there are always trained men who can be utilized in case of need.

Mr. BORAH. May I ask the Senator from Utah a question?

Mr. SUTHERLAND. Certainly.

Mr. BORAH. As the bill now provides, it is left with the discretion of the Commander in Chief, the President, as to whether or not he will call for the minimum or the maximum number?

Mr. SUTHERLAND. He may add to the minimum and increase it to the maximum.

Mr. BORAH. Up to the number which the Senator has fixed as the maximum?

Mr. SUTHERLAND. Yes.

Mr. BORAH. Then the difference between the bill and the Senator's amendment is that the amendment makes it obligatory upon the President to make the increase at once?

Mr. SUTHERLAND. Yes. I want the maximum force because, as I have said, even then we shall not be manning more than half our guns with the regular forces.

Mr. BORAH. What I am seeking to get at is this: Is not the number of men he needs in training a thing which can be left to the Commander in Chief?

Mr. SUTHERLAND. I think it is better for us to provide for that, because it seems to me self-evident that we shall need the men. If they are not needed after they are trained, the President can say so, and they can then retire to the reserve to be utilized as I have indicated.

Mr. BRANDEGEE. Will the Senator allow me to ask him a question?

Mr. SUTHERLAND. Yes.

Mr. BRANDEGEE. What is the total number of men in the Coast Artillery provided for by the Senator's amendment?

Mr. SUTHERLAND. It is 30,000.

Mr. BRANDEGEE. And what number is provided for at present in the pending bill?

Mr. SUTHERLAND. The pending bill provides for 24,887, which is an increase of about 5,000.

Mr. BRANDEGEE. Mr. President, has the Senator from Utah concluded?

Mr. SUTHERLAND. Yes.

Mr. BRANDEGEE. Then may I have the floor, Mr. President?

The VICE PRESIDENT. The Senator from Connecticut is recognized.

Mr. BRANDEGEE. Mr. President, I would be heartily in favor of the amendment of the Senator from Utah [Mr. SUTHERLAND], or of any amendment of a similar nature, if it were not for one circumstance. I am somewhat embarrassed in knowing whether to vote for it now or not, if the Senator presses it to a vote at this time, simply for this reason: The Senator from Oregon [Mr. CHAMBERLAIN] has a committee amendment pending proposing, if I understand it, to increase the minimum of the total personnel of the Army to 180,000 men, to which I have proposed an amendment increasing that number to 250,000 men. Of course, that involves certain increases of the units into which the forces are divided, and there is a provision in my amendment to provide for that so that it may be done without conflict or disorganization of the units.

The amendment offered by the Senator from Utah goes part way toward accomplishing the purpose which my amendment would accomplish; but inasmuch as the greater includes the less, and the ordinary rule in parliamentary practice, as I understand it, is to state the greatest number first and then if that is disapproved of to go on down to the lesser number, as the legislative body may decide, I think we would proceed more intelligently and more satisfactorily if we could defer voting upon the amendment of the Senator from Utah until we have voted upon the broader question involving the largest increase. I will ask the Senator if he can not take that view of it and withhold his amendment until the larger question has been submitted to the Senate? I can not offer my amendment now, as the Senator will see, because my amendment stands as an amendment to the amendment proposed by the Senator from Oregon.

Mr. SUTHERLAND. Let me ask the Senator from Connecticut whether he thinks that the adoption of the amendment which I have proposed can in any manner interfere with the bringing about of what the amendment of which he is in favor seeks to accomplish? In other words, is it not a step in the direction of what the Senator wants?

Mr. BRANDEGEE. My ignorance of the details of the composition of the Army and the various branches into which it is divided makes me somewhat uncertain as to that. If the Senate should decide to raise the total personnel of the Army to 250,000 or to 200,000, I am unable to state to the Senator now whether in the process of adding that number of men to the Army the Coast Artillery would have the number which the Senator has

designated in his amendment or a much greater number. They might be able to get a greater number, for all I know.

Mr. SUTHERLAND. That can take care of itself when the time comes; but I suggest to the Senator that the increase which I have suggested will be less than the proportion which would be allowed to the Coast Artillery under either of the proposed amendments, whether the increase be to 180,000 men or to 250,000 men.

Mr. BRANDEGEE. If that is so, Mr. President, and if the Senator does not consider that a vote for the Senator's amendment binds the Senate permanently to the lesser number——

Mr. SUTHERLAND. Certainly not.

Mr. BRANDEGEE. I have no objection to its being considered now.

Mr. THOMAS. Mr. President, unless I am misinformed, the amendment offered by the Senator from Utah [Mr. SUTHERLAND] proposes to increase the Coast Artillery division to the maximum recommended by Gen. Weaver, who is at the head of that branch of the Army, and upon that assumption I wish to say a word in its behalf.

I know very little at first hand, Mr. President, about the Artillery branches of the Army, but we are all impressed with the fact that the European war is largely a war of artillery. That branch of the service is the paramount one. Now, we are all, Mr. President, conjured every day to consider the defenseless character of our coast, the ease with which a landing force could despoil it, and the consequent necessity of speedy legislation tending to safeguard it.

So far as that is concerned, I do not regard this chatter as of much importance. It is merely a part of that general propaganda intended to frighten the people of the United States into a condition of hysteria and then capitalize it for the benefit of those urging an abnormal increase of the military and naval forces of the country; but, Mr. President, the fact is that we have a splendid system of Coast Artillery; our harbor fortifications are said by those who know to be the best in the world. We have expended millions of dollars in their construction at the most desirable places upon both of our coasts. We have, however, a very inadequate force to man that arm of the service, and, in the event of hostilities, we would at the outset find ourselves very seriously handicapped.

Theoretically, the plan has been to provide 50 per cent of the force necessary to man the guns upon our coast fortifications by the Regular Army, the remaining 50 per cent to be supplied by the National Guard in case of emergency. I have no doubt that that plan is a workable one if actually adopted; but, Mr. President, we have never supplied the Coast Artillery with the required 50 per cent. It seems to me to be an obvious fact that the erection of these fortifications and their equipment with the very best artillery of the day, while an important step, is a useless one, unless we supply a sufficient number of men to make this artillery, effective in times of danger. Without "the man behind the gun" the latter is of no consequence, without the force that is effective to manipulate the guns, we might as well have sunk the money we have expended in their construction and erection in the bottom of the sea.

Mr. President, a force of men designed to man and to operate these guns can not be created in a moment. The service is a highly technical one; it requires training and experience; and I do not think I say too much when I assert that it requires a higher grade of training and experience than does any other branch of the military service. Yet we are supplying an inadequate force to perform this grave duty, and relying for 50 per cent of the required force in times of peace upon the National Guard, the remainder to be hurriedly assembled and used to complete the number of men furnished by the Regular force should occasion require. That is not good business; it is not common sense. This amendment is designed to meet a situation that is immediate, and which, if postponed, may possibly result in embarrassment, if not danger.

I hope, therefore, that this amendment will be adopted. I wish the chairman of the committee would accept it. It is the well-matured plan of that department of the Army; and I am sure those of us who listened to Gen. Weaver's statement to the committee regarding its necessity must have been convinced of the soundness of his position. If we are to have enough men to man these guns, if they are to be trained and educated so as to render effective service, now is the time to furnish them. I confess I would rather see a well-equipped, thoroughly efficient small Regular Army, if we are compelled to make a choice, than a large force neither well equipped nor well disciplined.

In the event of trouble, to hurriedly assemble the number of men needed for efficient service for these guns, and then to depend upon them for their successful operation, without any previous training, is to invite disaster. I predict, Mr. President, that if an emergency should arise requiring us to rely upon these fortifications, and the hurriedly assembled force behind them should be found inadequate or undisciplined, the censure deservingly cast upon us by popular opinion, and the indignation aroused because of such conditions, would justly center upon us the responsibility for disaster if that should come.

I think that this amendment should be accepted.

Mr. WARREN. Mr. President, I agree entirely with the Senator from Connecticut [Mr. BRANDEGEE] that the amendment offered by the Senator from Utah [Mr. SUTHERLAND] should wait until the committee has submitted its amendments to the bill, and until we have decided what shall be the maximum strength of the Army. To adopt that amendment now means that if hereafter the limit of numbers should be raised to 225,000, this is fixed, and the others are enlarged out of proportion. On the other hand, if a motion is made and carried to reduce it to 140,000, as has been intimated, or 150,000, then this extra number of Coast Artillery reduces the other arms by just this increase.

The evils that have been heretofore complained of in the organization of the Army have largely arisen from piecemeal legislation. I have hoped, and fondly hoped, that after all this time has been spent, and all this evidence taken, and the committee have given it weeks and months of study, we might at least have enough confidence in those who have given their time to consider first the committee's bill, and enlarge or reduce it in proper proportion, but not do it in a piecemeal way.

I am not going to express the judgment that this amendment would increase this arm too much; but it certainly is out of proportion until we have decided on a larger number of men for the entire Regular Army of the United States.

Mr. THOMAS. Mr. President——

Mr. WARREN. I yield to the Senator from Colorado.

Mr. THOMAS. I should like to ask the Senator if he thinks that the committee bill furnishes a sufficient force, an adequate force, for our present coast fortifications?

Mr. WARREN. I will say to the Senator that, in my judgment—and I am frank to express it—we do not increase any branch of the Regular Army enough.

Mr. THOMAS. I am not speaking of the Regular Army, but of this particular branch.

Mr. WARREN. I decline to amputate the Coast Artillery from the Regular Army. Of course the educated rank and file of the Coast Artillery have duties to perform which those from the other arms can not well do; but the protection of the batteries, the work that is done to supply them, can be just as readily done by any other arm as the Coast Artillery.

The Coast Artillery is greatly scattered. We do not expect that every gun on every coast is going to be fired at once, and continuously, day and night. We have headquarters positions along on the coast and we have means of transportation which enable us to mass them at any one point. It strikes me that the number we have given for the Coast Artillery is a full proportion, in regard to the wants of the country, to that of the Regular Army and the balance of the force.

Of course, as the Senator knows, our coasts are many thousands of miles in length. I am unwilling now to go to the expense of furnishing three reliefs for every gun in every post all over the United States, because I do not expect that we are ever going to be attacked in that manner.

Mr. THOMAS. Mr. President, I quite agree that a simultaneous use of all of our Coast Artillery is practically unthinkable. Nevertheless I believe that if we are going to make a disproportion anywhere—and I am rather of the opinion that that will be the result after we get through our deliberations on this bill—we had better protect this, our second line of defense, and have the men there in sufficient numbers to operate the guns if the exigencies require.

Mr. WARREN. Mr. President, I still insist that we had better treat this as a whole. I am not saying that we should not have this number or that I oppose having the number; but I do ask why action on the matter can not be delayed until we have fixed the maximum of our Army, as far as this body is concerned, so as to know "where we are at."

Mr. SMOOT. Mr. President, I submitted an amendment similar to the one under consideration to the chairman of the committee some days ago and asked that he have the committee give consideration to it.

I am in hearty sympathy with the amendment. I believe it ought to be adopted by the Senate. In order that the Senate may know just what the present bill as reported to the Senate does by way of increases in each arm of the Army, I want to call attention to the increases, and you will see that the percentage of increase in our Coast Artillery is only one-seventh of what it is in the Field Artillery.

In other words, Mr. President, the present strength of the Cavalry is 14,148. The bill increases it to 25,000. The percentage of increase is 76.

Our present Field Artillery strength is 5,541. The bill increases it to 18,039, which is an increase of 225 per cent.

The present strength of the Coast Artillery is 19,019. The bill increases it to 24,887, or an increase of only 31 per cent.

The present strength of our Infantry is 35,339. The bill increases it to 85,952, or an increase of 143 per cent.

Mr. President, if we accept the amendment, the percentage of increase for the Coast Artillery will only be 57. If we reduce the Army to 140,000, the lowest number suggested, then the increase of the Coast Artillery, if we adopt the amendment offered, will be less of an increase than in almost any other division of the Army.

Mr. WARREN. Mr. President, will the Senator from Utah yield for a question?

Mr. SMOOT. Yes; I yield to the Senator.

Mr. WARREN. Does not the Senator remember, however, that the Coast Artillery has been almost trebled, or perhaps quite trebled, since the other branches have been increased, which makes some difference in computing the percentages now? Furthermore, is the Senator quite sure that the addition of 10 regiments to 15 makes an addition of 76 per cent?

Mr. SMOOT. Is the Senator speaking of the Cavalry?

Mr. WARREN. The Cavalry.

Mr. SMOOT. I am quite sure——

Mr. WARREN. It is a matter of mathematics. The Senator can figure it out when he gets time.

Mr. SMOOT. I have figured it, and I have taken the figures which the bill provides; and I think if the Senator will figure it out he will find that the percentage of increase for the Cavalry is 76 and for the Field Artillery 225.

Mr. WARREN. May I ask another question? Does the Senator think we have increased the Field Artillery too much?

Mr. SMOOT. No; I am not objecting to that. In fact, I am perfectly willing to further increase it.

Mr. WARREN. Does the Senator think we are increasing any of the arms too much?

Mr. SMOOT. No; I am not asking for a decrease of any arm of the Army.

Mr. WARREN. Then may I ask one more question? Would it in any way endanger the amendment to let it rest until we provide what the maximum shall be?

Mr. SMOOT. Mr. President, I have no objection, if the Senator offering the amendment does not object, to letting it rest and letting the committee pass upon it; but I claim this: If the Senate of the United States should vote ultimately for a reduction from a maximum of 180,000 in the Army to 150,000, then the Coast Artillery ought to be increased 5,112 men, as provided for by the amendment of the Senator from Utah, my colleague.

Gen. Weaver, in his testimony in the hearings, gives the reasons for this increase much better than I can, and, I suppose, just as forcibly as any other Senator can possibly do. I find the following in his testimony:

> Gen. WEAVER. The point that I was next going to take up is that the 50 per cent required of the States should include about 711 officers and 17,329 enlisted men.
>
> The CHAIRMAN. That is the State proportion?
>
> Gen. WEAVER. Yes; to man one-half of the guns and mortars in the United States proper.
>
> Senator DU PONT. They have never come forward, have they?
>
> Gen. WEAVER. I am coming to that right now. Of the seven hundred and odd officers and the 17,000 men, the latest reports we have show that the States have at the present time supplied only about 400 officers and about 7,000 men, so that they are three hundred and odd officers and about 10,000 men short of their quota. As perhaps bearing upon all of the personnel questions that are up for discussion, I have a table here which gives what is required under the 50 per cent plan which I have just enunciated and that recommended by the War College Division of the General Staff, that recommended by the Chamberlain bill, that recommended by the Hay bill, that recommended by the War Department draft, and that now authorized by law. I think this would be of value, perhaps. It gives the personnel in tabulated form, side by side, and covers all the features of it quite fully.

I ask that any Senator who is interested in this particular question will secure a copy of the hearings and see those figures side by side, as given by Gen. Weaver. He will find the table on page 536 of the hearings.

Mr. President, I believe that the increase, as provided in the amendment, should be made in the first part of section 22, as reported to the Senate, and also the provision authorizing the President of the United States to increase the number should be to decrease the number, as provided in the amendment offered by my colleague. Whether the Senate wants to vote upon it now, or whether it goes over for the committee to consider, I sincerely trust that the amendment will be adopted, for I consider the Coast Artillery the second line of defense of our country, and it seems to me it ought to be strengthened by increasing the number, as provided in the pending amendment.

Mr. BORAH and Mr. STERLING addressed the Chair.

The VICE PRESIDENT. Under the 10-minute rule the Senator occupying the floor must take charge of his 10 minutes.

Mr. SMOOT. I yield to the Senator from Idaho or to the Senator from South Dakota.

Mr. STERLING. I simply wish to ask the Senator from Utah a question.

Mr. BORAH. Very well.

Mr. STERLING. That is, whether he can state specifically how much of an increase the minimum provided in the bill is over the present organization?

Mr. SMOOT. It is 31 per cent; and with the increase asked for by the amendment of my colleague, if granted, it would be 57 per cent over the present strength of the Coast Artillery.

Mr. STERLING. I see. Then take the first amendment suggested by the Senator from Utah, the Senator's colleague. The number—1,784 sergeants—is an increase of 31 per cent over the existing organization.

Mr. SMOOT. Mr. President, there may be a little difference in the increase in case of sergeants or privates; but taking the whole increase of 5,112 men, it is an increase of 31 per cent over the present strength of the Coast Artillery. If the Senator's amendment be adopted, then the increase over the present strength of the Coast Artillery would be 57 per cent, as against 76 for the Cavalry, 225 for the Field Artillery, and 143 for the Infantry.

Mr. WARREN. Mr. President, if the Senator wishes that 76 per cent to go in, I think he will find it is 66 per cent, and I presume he will want to correct it.

Mr. SMOOT. I will ask the Senator if the present strength of the Cavalry is not 14,148?

Mr. WARREN. It is 15 regiments, and we are increasing it to 25.

Mr. SMOOT. I am speaking of the actual number of men that are in the Cavalry to-day; and that is 14,148.

Mr. WARREN. The actual number is in the same proportion. If you add 10 to 15, you have added 66 per cent. Ten is 66⅔ per cent of 15.

Mr. SMOOT. That is true if the Cavalry is full, but I am figuring on the actual number now in the service.

Mr. WARREN. It will not be full under this new plan unless war strength is called for.

Mr. NELSON. Mr. President, it occurs to me that there is one good, strong reason in favor of this amendment, and that is in order that men may be drilled effectively for the Coast Artillery service they must be located where the coast artillery is. The training must take place where the guns are in order that the men may become accustomed to that method of Artillery service.

Now, while the National Guard can easily supplement our Infantry and easily supplement our Field Artillery and perhaps our Cavalry, it is more difficult to furnish men for Coast Artillery, for the reason that in the nature of the case the State militia has not the opportunity or facility to drill men in the Coast Artillery as they ought to be drilled in that service. In other words, to become effective artillerymen in the Coast Artillery the men must be brought right alongside of the guns in the batteries and receive their training there, because in no other way can they become competent drilled men to handle coast artillery; and you can see how difficult it is in many cases for the State militia to get such training.

Mr. WARREN. Does not the Senator know that the militia are in a great many cases in States along the coast, where they have artillery and, as a matter of fact, do drill with guns?

Mr. NELSON. That is true in some cases. With States on the border that may be true, but take it in all the interior States—take it in Minnesota and in Wisconsin and all those great States in the Mississippi Valley—I do not apprehend that there is any training of militia in the matter of Coast Artillery practice.

For these reasons, Mr. President, I am heartily in favor of this amendment, because, as I conceive it, it is the only way in which we can get trained, good men for the Artillery service.

Mr. JONES. Mr. President, I do not pretend to know very much about the details of this matter, but I can not agree with the Senator from Wyoming that we ought to put off what we do on this amendment until we determine the size of the Regular Army. I think the determination of what we should do in this case has very much to do with determining the ultimate size of the Regular Army.

I simply want to say that I think the suggestion made by the Senator from Idaho [Mr. BORAH] the other day is one that we ought to follow. The first line of defense in this country from our geographical situation is the Navy, and we ought to deter-

mine first what sort of naval defense we are going to have and then determine what sort of a land force we ought to have to support it.

Next to the Navy comes our Coast Artillery. It is the second line of defense. It is the first line of our land defense, and when it is determined we can more wisely determine our additional land force. It is on that theory I believe we ought first to determine what coast defense we shall have.

I am in favor of the amendment offered by the Senator from Utah, because I believe our coast defense ought to be brought up to a high state of efficiency and for the reasons very largely set out by the Senator from Colorado [Mr. THOMAS] and the Senator from Minnesota [Mr. NELSON]. We have spent millions for these defenses already. The defenses so provided are not sufficiently manned. Without men they are practically worthless. The men to man them must be specially trained, and it is the best kind of preparedness to have these defenses properly manned. Instead of giving any opinion I may have in reference to that matter, I am going to read into the RECORD statements made by Gen. Weaver, who is certainly competent to give an opinion with reference to these matters. He is certainly an expert that those who depend especially upon expert opinion would be willing to follow. He is the head of the Coast Artillery, I understand. On page 363 of the hearings he says:

We have since educated the personnel along specialized lines, and it stands to-day, we believe, without a rival in the world for efficiency.

That goes to the qualification of the force we now have. There are a great many people in the country who seem to think we have a very poor personnel for our coast defenses, and his words ought to be quite reassuring.

In line with the statement made by the Senator from Minnesota as to the requirements with reference to men to man the Coast Artillery defenses, let me read what he says, at page 389:

There is another thought that I think you ought to have in mind, and that is this: When war comes the coast line becomes immediately the threatened line. There is no time to train men for this service. The attack might come before the declaration of war. If you will look into it you will see that it is a highly technical class of training that is required of the personnel; you can not improvise men for this service.

Then, for the peace of mind of those who are fearful as to the character of our coast defenses and who might not be willing to take the statement of the Senator from Colorado that they are the best in the world, I want to read what Gen. Weaver said.

Mr. THOMAS. I made that statement on the testimony of Gen. Weaver.

Mr. JONES. I understood that; but it did not appear in the RECORD, and some who think we ought to follow only expert testimony might not know this. I know the Senator from Colorado, as a member of the committee, could qualify as an expert, but some might not recognize him as an expert in this matter.

Mr. THOMAS. On the contrary, I know nothing about it except at second hand.

Mr. JONES. But a good many would not know that if the Senator had not so stated it. Gen. Weaver says, on page 395:

We have the best coast defense in the world.

That, of course, is the language of the Senator from Colorado, and I wanted to show that he had fully recognized expert authority for that statement.

Mr. MCKELLAR. Gen. Weaver, as I understand you, the only thing you want that is desirable now is an increase in the number of officers and men in your corps?

Gen. WEAVER. We have the best coast defenses in the world, and with the new constructions which are contemplated, I think they will be fully adequate.

Mr. MCKELLAR. And effective for any purpose of defense?

Gen. WEAVER. Any naval officer coming against our coast defenses would hesitate to come within the reach of our guns.

Mr. MCKELLAR. Now, as I understand it, the War Department recommends an increase of about 5,000 men and you recommend an increase of about 15,000?

Gen. WEAVER. About 11,000. That is my personal recommendation. I understand, of course, the general policy and the law, but I did not think I would be performing my duty to this committee or my duty at large if I did not indicate exactly what the deficiencies are.

Gen. Weaver, of course, recognizes the theory upon which Congress acts in reference to these matters, and that the recommendation of the department is often based upon the appropriation that they think probably can be secured, but he recognizes the importance of this to such an extent as to say that it is his duty to recommend what there ought to be, whether we provide for it or not. He knows what we actually need, whether we provide for it or not.

Mr. MCKELLAR. If we conclude to carry out your recommendations and give you the 11,000 men, then, as I understand you, you would have a perfect system of coast defense that you think would be adequate for any purpose?

Gen. WEAVER. Yes; and the United States would be performing what amounts almost to an agreement with the States, of manning its half of the guns. We can not with any good grace ask the States to man their half when the United States is not manning its half.

Mr. President, I should like to incorporate in my remarks without taking the time to read it a quotation from page 396 and also page 397 from Gen. Weaver with reference to this matter.

The VICE PRESIDENT. Without objection, it is so ordered.

The matter referred to is as follows:

Gen. WEAVER. The guns now mounted and those contemplated will give us an entirely satisfactory defense.

Mr. MCKELLAR. You do not take any stock in this idea that the ships of foreign nations carry guns of long enough range to silence your guns?

Gen. WEAVER. No. Of course, you understand, our guns were mounted along in the nineties, and they belong to that period. Since then guns of longer range have been developed, and there are now guns on warships that could stand off beyond the reach of our guns and fire at our batteries—not at the things we are protecting behind, but at the batteries—without our being able to reach them in reply; but when they fire at very long ranges their fire is not so effective, so we are not very much afraid of them.

In order to meet the new conditions we have a surplus of old guns, and we are mounting these on carriages that will give a high angle of fire. We will then be able to reach farther than can the enemy's guns.

Mr. MCKELLAR. At a range of 21 miles, say——

Gen. WEAVER. They could not attack us at long range and fire at us without getting within the range of our guns.

Mr. MCKELLAR. The fire from your coast defense guns is, of course, by reason of more accurate range finding, very much more accurate than their fire toward you?

Gen. WEAVER. Yes; our firing is quite accurate.

Mr. MCKELLAR. How accurate are you, General?

Mr. TILSON. Have you seen the figures presented by Mr. GARDNER on the target practice?

Gen. WEAVER. Yes, sir.

Mr. TILSON. In a general way, those are correct?

Gen. WEAVER. They are correct, yes. Our percentage was 37 per cent out of some 700 rounds. That is, we hit the target at an average range of 8,000 yards more frequently than once in three shots, which I think is very good.

Mr. GORDON. How does that compare with other nations?

Gen. WEAVER. We have not any complete data, but we know what their methods are. We do not hesitate to say they are not in the same class with us. Our practice this year requires firing at over 10,000 yards, and the reports up to date indicate that at that range we are getting 27 per cent of hits. That is one hit in practically three shots.

Now there [indicating a mark on a sheet of paper] is the size of a target as it appears to the eye at 10,000 yards. If you will put it on the table and try to put your pencil point on it, giving the hand a fairly quick motion, you will find it difficult to do as well as one hit in three trials. We are putting our projectiles on the target more accurately than you can put your pencil point on that mark.

* * * * * * *

Mr. MCKELLAR. I want to ask you, General, with our present condition, is our condition of preparedness for defense deplorable?

Gen. WEAVER. Except in the matter of personnel, it is not.

Mr. MCKELLAR. It is in excellent condition, with the addition of a few officers and men, such as have been recommended by the department and by you?

Gen. WEAVER. Yes, sir. My feeling is this: As I survey the field, I do not see how you can get more efficient protection in the first instance than can be obtained by providing for this personnel. We have all the material in place.

* * * * * * *

Mr. QUIN. You are familiar with the American Navy, of course. With the Navy as it stands to-day, could any foreign navy attack you?

Gen. WEAVER. It could not, unless it first defeated our Navy. They can not come here in numbers, except on a large number of transports convoyed by warships. Such a fleet of transports would never attempt to cross the ocean until after the great naval fight had been fought; that is, until after it had gained the command of the seas. There must be considered as antecedent to anything of that kind the decisive naval fight which determines the command of the seas.

Mr. QUIN. And if they did demolish our entire fleet, you could still entertain the gentlemen a good while, could you not?

Gen. WEAVER. The enemy could not bombard any of our large cities. Wherever we have fortifications they could not come.

Mr. JONES. According to Gen. Weaver all of our important coast points are adequately defended, if properly manned. Man them properly and the Navy will be left just that much freer to protect the unprotected coast line and prevent the landing of invading forces.

Mr. President, I have proposed an amendment—that is, I have had it printed—with reference to the travel pay of soldiers when they are discharged. I have had prepared a statement setting out the reasons for this quite fully by a gentleman who is thoroughly familiar with the facts and the viewpoint of the private soldier. In order that it may be available when the amendment comes up for consideration I ask that I may have the privilege of printing it in the RECORD, and I hope that Senators will find time to examine it before the amendment comes up for action.

The VICE PRESIDENT. Without objection, it is so ordered.

The matter referred to is as follows:

The purpose of this amendment to bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States is to add a new section, as follows:

"SEC. —. That hereafter an enlisted man when discharged from the service, except by way of punishment for an offense, shall receive 4 cents per mile from the place of his discharge to the place of his application for enlistment or the place of his enlistment, enrollment, or original muster into the service, at his option: *Provided*, That for sea travel on discharge transportation and subsistence only shall be furnished to enlisted men."

This will displace the act of August 24, 1912 (37 Stat., 575), pertaining to transportation of enlisted men of the Army on discharge, reading as follows:

"Provided, That hereafter when an enlisted man is discharged from the service, except by way of punishment for an offense, he shall be entitled to transportation in kind and subsistence from the place of his discharge to the place of his enlistment or to such other place within the continental limits of the United States as he may select, to which the distance is no greater than from the place of discharge to place of enlistment; but if the distance be greater he may be furnished with transportation in kind and subsistence for a distance equal to that from place of discharge to place of enlistment, or, in lieu of such transportation and subsistence, he shall, if he so elects, receive 2 cents a mile, except for sea travel, from the place of his discharge to the place of his enlistment."

The necessity for this action is first briefly summarized herein and then set forth at length and in detail.

The act of August 24, 1912, was passed in the belief that an economy could be effected by resorting to transportation in kind and subsistence without adversely affecting the service. Neither belief was well founded, it appears, for the estimated economy has not become actual for reasons which the act itself could not control, and the direct result of the operation of this act has been to lose to the service high-grade men whom it is desired should continue in the service and to repel better class men who otherwise would be attracted to Army service.

Transportation in kind with subsistence for enlisted men on discharge was tried out under the provisions of section 1290 of the Revised Statutes. It was not found to be an economy over 4 cents per mile, and the act of May 26, 1900 (31 Stat., 210), discontinued transportation in kind and substituted the payment of 4 cents per mile to the soldier at the time of his discharge. Four cents per mile has been the approximate cost of second-class travel and subsistence for many years. One item of expense might increase or another decrease, but the average remained the same.

The average cost to the Government of second-class tickets plus upper berth in tourist car where operated, with added cost of 50 cents per meal during the time of travel, throughout the United States is 3 cents per mile. If to this is added the difference in cost between second-class and first-class rail tickets and that between tourist and Pullman sleepers, where tourist cars are not operated, the cost per mile will be greatly increased. If we add to this the expense properly chargeable to it, of official and clerical cost of issuing transportation requests, accounting and settling therefor, the present expense to the Government under the act of August 24, 1912, will aggregate the 4-cents-per-mile rate originally paid, and which, in the interests of an improvement in the service, it is desired to restore.

The operation of the act of August 24, 1912, has been very objectionable to the enlisted men of the Army, and its adverse effect upon the better class of enlisted men, who are the most entitled to consideration, has been to cause them to lose confidence in the service and the promises of the Government to such extent that they not only leave the Army service themselves but advise their friends and associates not to enter it. The result has been to lower the morale and decrease the efficiency of that branch of the service, because of the increasing difficulty of getting men of the better type for Army enlistment.

The provision for mileage on discharge for the Navy enlisted men is 4 cents per mile, as proposed to reenact for the enlisted men of the Army. Marines are paid off under Army Regulations; and the most striking comparisons of the effect of the 4 cents per mile of the Navy with the transportation in kind of the marine is thus afforded, leading to the not unmerited charge of class legislation. A sailor of the Navy is enabled to reach his home on discharge within his travel allowance. The marine is left stranded short of his actual destination, with the necessity of raising money to enable him to pay fare to his home from the point where transportation in kind furnished by the Government terminates.

DESIRABLE RECRUITS NOT PLENTIFUL.

It will require but casual investigation to develop and emphasize the fact that men of desirable characteristics, with qualifications for service, are not attracted by the alluring posters and advertisements of the Army recruiting officers or by the blandishments of the recruiting sergeant on watch outside in sufficient numbers to justify the belief that it would be possible, except in the event of actual war or imminent possibility thereof, to secure, in addition to present authorized requirements, within the time limit prescribed anything like the number of men called for in defense measures now being considered by Congress who could even physically stand the tests applied to applicants for enlistment in the land forces of the United States.

CONDITIONS IN THE YEAR 1915.

The Adjutant General will doubtless confirm that, except for such brief periods as that now existing, when temporarily there is possibility of immediate active service, there is an increasing difficulty in securing the required number of young men of right type and character for Army enlistment. His report of the work for 1915, as published, records that in order to secure 48,813 enlistments required to fill existing gaps in the service it was necessary to examine 179,019 applicants, of which number 130,206 were rejected for failure to come up to the requirements.

UNDESIRABLES ELIMINATED AFTER ENLISTMENT—50 PER CENT OF NUMBER SERVING THROUGH.

The report of The Adjutant General further records that during the year 1915 the number of men discharged from the Army by reason of "Expiration of term of service" were 27,986; that during the same period there were discharged for disability, sentence of courts-martial, or by order, 9,451 men; and that the number of desertions from the colors were 4,457. It is apparent therefore that the number of men who were physically unfitted for service or whose mental or moral attitude rendered them unsuitable as soldiers, and who were either eliminated in the manner described or who eliminated themselves by desertion during the year 1915, after the United States had incurred the expense of recruiting and endeavoring to train them, aggregated 13,908 men, or very approximately 50 per cent of the number of men who finished their period of service with the colors, with "Service honest and faithful."

NO REFLECTION ON RECRUITING OFFICERS.

This showing for the year 1915 is no reflection on the character of work performed by recruiting officers. They have no scale upon which they can accurately weigh the mental and moral tendencies of individuals. It is, however, a most striking commentary on the average of character of applicants for enlistment at Army recruiting offices under present inducements for service. It is a source of constant wonderment to those who know the enlisted men of the Army intimately that with practically nothing but the leaden existence of routine to offer as inducement, recruiting officers have been able to cull for the service so many men of sterling worth and quality from the mass of questionable humanity—the flotsam of society—which in desperation proffers itself for Army enlistment.

LONG-SERVICE MEN HIGH-GRADE MEN.

It has been my privilege to recently receive the opinion of a man who is a close student of human nature and who has had opportunity to observe and study the Army at close range for more than a decade. From the angle of a decided interest in the welfare of the enlisted man, he has been able to penetrate the mask of their reserve, be the recipient of their confidences, and permitted to sympathize with them in their troubles. I know therefore that he is competent authority and that his views are worthy of every consideration, and I have therefore no hesitancy in accepting his statement with every confidence that his opinion is correct and his estimate well founded when he says that "Men of the Army who are well along in the second or later enlistment periods are usually men of high grade, far above the average. Men who are not in the Army because of its pay or emoluments or for any other reason than that the Army has afforded them in the past the outlet for tendencies and characteristics which those of us who have had opportunity to observe all admire in the men who are rated as 'good soldiers' by their officers."

DO EXPERT WORK OF EXCELLENT CHARACTER.

These men are of the type that "make good" in civil pursuits. They are filling positions in the service requiring expert knowledge of mechanical, electrical, and civil engineering and occupying other places requiring technical knowledge of specific subjects. With the possibility of retirement ahead of them after years of faithful service, they estimated that their sacrifice of personal opportunity in civil life would, in measure, be minimized, and so followed their bent and molded their wills to the discipline of the service, and were satisfied with what it offered, and had a keen satisfaction in the performance of their work until the legislation of recent years unsettled their belief in the ultimate intent of the Government to fulfill its promise, including retirement, held out as inducement at the time of their first enlistment.

GOOD MEN LEAVING THE SERVICE.

Unfortunately for the service, many men of this class and type—the thinking men of the ranks—through lack of confidence in the future, engendered by recent enactment of Congress, which have limited, scaled down, or cut out entirely privileges enjoyed by the Army as a right for years past, have reached the conclusion that no one in particular is interested in the welfare of the enlisted man, and that he had better "cut" the service before it is too late in life to establish himself properly on the "outside." Men of this class are truly the "man behind the gun"—the mainstay of the service—and the Army can not afford to lose them, for as they leave, under present conditions, their places are taken by men less desirable, and the morale is accordingly lowered and our national security correspondingly lessened, which view is concurred in generally by officers of the line serving with troops.

"CLASS DISTINCTION" NOT BAR TO BETTER TYPE ENLISTMENTS.

It has been suggested that the greatest bar to obtaining proper enlistments is "class distinction" within the Army. That is not true. Furthermore, "class distinction" was not created and is not maintained by the Army, but by the people, and it will necessarily continue until we, the people, effect an entire change of front in our attitude toward the enlisted men of the service, individually and as a class.

THE REGULAR ARMY SOLDIER A VOLUNTEER IN EVERY SENSE.

We fail to give due consideration to the fact that the citizen of the United States who, in time of peace, gives to his country a "service honest and faithful" as an enlisted man in the Regular Army, that he may become properly trained for the exigency of war, or as the more certain preventative thereof, is in every sense of the word a "volunteer" and as much entitled to credit and the plaudits of the crowd as that other citizen whose patriotic emotions at the time of his country's need prompt him to offer himself at such time for purely temporary service.

THE REGULAR VOLUNTEER MAKES THE GREATEST SACRIFICE.

It is the regular volunteer who makes the greatest sacrifice on the altar of his country, but we are apt to consider him as a "mercenary," a mere hireling, devoid of all patriotic impulses, who should be satisfied with the worst we have to offer, and we hold him in contempt and the term "soldier," one of opprobrium, until such occasion as has recently arisen in Mexico, when we temporarily realize that it is the regular volunteer who is called upon to bear the brunt of engagement and who cheerfully and bravely does his duty with commendable enthusiasm and who yields up his life that the authority of our Government may be upheld and the lives and property of our citizens respected.

HE HOLDS OUR TEMPORARY COMMENDATION.

And then, eager to do him honor, we term him "hero" and follow his mortal remains to their last resting place and strew fragrant flowers upon the "colors" with which we drape his bier. He gave his life for his country. But we soon forget and resume our wonted attitude of distain toward the soldier as a class, largely because of his willingness to serve us faithfully for the meager pay and allowances we so grudgingly grant. And we compare the cost to us of his voluntary service with that of other countries of a compulsory service, which affords the individual no option from military duty nor right of protest against the wage he receives therefor—a system, however, which we are unwilling to adopt for ourselves.

EFFICIENCY REDUCED AS RESULT OF RECENT ENACTMENTS.

We have in recent years curtailed the pay of the enlisted man, abridged his privileges and lowered his self-respect in the interests of a false and futile economy, which, while it has not materially decreased the expense incidental to the enlisted personnel of the Army, has decreased its efficiency out of all proportion to other benefits, actual or theoretical, and, as was stated by a noncommissioned officer serving in his eighteenth year, the result of such legislation has "tended to fill our Army with men of mediocre qualifications, not to be depended upon in time of stress."

SMALL ARMY MUST BE EFFICIENT.

Doubtless some slight importance may attach in the minds of some to "class distinction" as preventing the enlistment of desirables. It should be remembered, however, that "class distinction" will not be lessened by making the lot of the enlisted men less desirable, neither will such action stimulate enlistments of men with capacity for special service, the kind and type of men whom it is essential we should have as the nucleus of a proper defense for our country, and the more espe-

cially in that we are inclined to limit the regular volunteers to a comparatively small force.

ADVERSE LEGISLATION RESPONSIBLE.

Investigation as to the causes which prevent securing the full quota of enlistments from the desirable class will reveal that the chief difficulties are the direct or indirect outcome of legislation of recent years, aimed at the enlisted man as a class, and that subsequently thereto practically every young man of stamina who had completed his first term of service and returned home became a self-constituted committee of one to warn his friends against the Army.

RECRUITS FROM COUNTRY COMMUNITIES MOST SATISFACTORY.

The greater percentage of satisfactory recruits, as pertains to physical qualifications and true patriotism, are those secured from rural communities remote from the large centers of population. Hardly a community of this character but has in the past furnished one or more recruits for Army service. The young man of good standing in a community of this character, who returns home after discharge with a category of just causes for complaint, based on his own experiences with the Government in its failure to keep faith with him, will successfully prevent the securing of further recruits for the Army in that immediate vicinity. Firmly imbued with the idea that he has not been accorded a "square deal" in the final settlement of his contract with the Government, other unimportant things become magnified in his consideration of them, and he becomes the press agent of adverse conditions as relates to the Army, and with endless detail portrays its disadvantages, and the young men who are his associates, possessed of that longing for military service which is inherent in every red-blooded youth, hang upon his words and accept his advice to "tackle the Navy, but let the Army alone."

THE OBSTACLES TO PROPER RECRUITING.

Thus are built up for the recruiting officer obstacles to recruiting men entirely efficient, which are insurmountable under a normal peace condition, and which help to lower the average of the quality of men available for the Army under any voluntary enlistment plan and involves a wasted expense in recruiting and attempting to train men of low grade who are sooner or later rejected as unfitted for service, greater than the estimate of saving expected by the legislation which has resulted in the adverse attitude of the better class of enlisted men toward the Army.

GOOD MEN SHOULD BE RETAINED IF POSSIBLE.

Nearly every desirable man who leaves the Army at the end of his first enlistment period lifts his right hand and promises himself "never again," and yet those are the only type of men this country can afford to enlist. Men who are strong, virile, clean-lived, and who were attracted to the Army by the fact that it appeared to offer opportunities for the development of activities for which they were exceptionally well suited by habit of life and disposition of mind.

NAVY REENLISTMENTS, 85 PER CENT; ARMY REENLISTMENTS, 34.30 PER CENT.

With but a comparatively small Regular Army, the importance of retaining the most desirable men in the service will become apparent. You can not successfully train reserves otherwise. The smaller the Regular Army the greater the necessity for efficiency.

The Chief of the Bureau of Navigation of the Navy, in his annual report for the fiscal year 1915, comments that as the result of favorable legislation for the benefit of the enlisted men of the Navy, reenlistments for the year had risen to 85 per cent of the number of men who were by reason of the character of their discharge, entitled to reenlist.

The report of The Adjutant General of the Army records that Army reenlistments were 34.30 per cent, which includes the reenlistment of 2,600 privates, attracted by the bonus pay of $45, the equivalent of three months' pay, granted only the privates who had finished their first enlistment period and who reenlisted within three months thereafter. Investigation from every angle reveals the fact that Navy legislation as relates to the enlisted man has been of a character to attract the better class of men, while the Army legislation has repelled men of the better type as they came to a knowledge of its operation.

THE SOLDIERS' COMPLAINT.

The underlying causes responsible for the attitude of the better class of discharged soldiers toward the Army are concrete and easily defined. They have for the greater part to do with legislation which adversely affected their pay allowances, and about which they were in no manner consulted. This legislation which segregated the enlisted men of the Army from other defense units as the object of presumable economies, and which also adversely affects the Marine Corps, as the enlisted men of that organization are governed by Army regulations in such matters, covers a period of years and culminated with the act of August 24, 1912 (37 Stat., 576).

I will make no attempt here to catalogue all the grievances of the enlisted man, but desire to direct attention only to those which have been particularly instrumental in bringing about the condition which has tended to negative the earnest work of recruiting officers in their efforts to secure for the Army a high grade of recruits.

CURTAILMENT OF PRIVILEGE OF SPECIAL ASSIGNMENT ON REENLISTMENT.

The enlisted man's privilege of assignment of reenlistment to certain organizations, with the right to be forwarded at Government expense, was curtailed in the interest of economy and limited to applicants who had been last discharged as noncommissioned officers, and where the travel did not exceed 1,000 miles. He did not seriously object to that. His innate sense of justice prompted him to realize that it was a legitimate economy.

NO OBJECTION TO DISCONTINUING CASH PAYMENT FOR SEA TRAVEL.

When by act of May 26, 1900 (31 Stat., 210), the cash payment of milcage for sea travel to and from our island possessions was eliminated and replaced by transportation in kind and subsistence he considered that to be a legitimate economy. He could not comprehend why the Government had been willing to pay him 4 cents per mile for the sea travel and then bring him home in a transport in addition. The right type of enlisted man is fair-minded, and his idea of a "square deal" is that it should be square for both parties.

DOUBLE TIME TOWARD RETIREMENT FOR FOREIGN SERVICE ELIMINATED—FOREIGN SERVICE PAY ON "RATINGS" ELIMINATED.

We changed that provision of law under which an enlisted man serving outside the continental limits of the United States was awarded two years toward retirement for each year of such service by eliminating the "double-time" allowance, and at the same time we took from him that portion of his "foreign-service pay" as formerly allowed on "ratings," such as "observer," "gun pointer," etc. There was for these curtailments but a rumble of discontent.

CONTINUOUS-SERVICE PAY DECREASE.

We decrease the amount of his "continuous-service" pay by changing the period of enlistment with the colors from three to four years, without making provision to equalize the allowance over the longer period, which robbed him of one year's "continuous-service pay" every fourth year, which added another cause for mistrusting our ultimate intent.

TRAVEL ALLOWANCES FORMERLY SUFFICIENT TO ENABLE DISCHARGED SOLDIER TO REACH HOME.

Under all provisions of law, from 1802 down to the year 1912, a soldier on discharge had been granted travel allowances sufficient in cash to enable him to travel comfortably from the place of his discharge to his home, or at least to the place where he had applied for enlistment and been enrolled, provided only his discharge had not been by way of punishment for an offense.

THE WORDING OF THE LAWS.

The laws governing travel allowances during the period mentioned are quoted as follows:

ACT OF 1802, MARCH 16.

Act approved March 16, 1802:

"Whenever any officer or soldier shall be discharged from the service, except by way of punishment for any offense, he shall be allowed his pay and rations, or an equivalent in money, for such term of time as shall be sufficient for him to travel from the place of discharge to the place of his residence, computing at the rate of 20 miles a day."

This section was repeated in the acts of January 11, 1812, and January 29, 1813, was continued in force under the general provisions of section 7 of the act of March 3, 1815, and is contained in a modified form in sections 1289 and 1290 of the Revised Statutes. Section 1290 relates to enlisted men, and is as follows:

SECTION 1290, REVISED STATUTES.

"SEC. 1290. When a soldier is discharged from the service (except by way of punishment for an offense) he shall be allowed transportation and subsistence from the place of his discharge to the place of his enlistment, enrollment, or original muster into the service. The Government may furnish same in kind, but in case it shall not do so, he shall be allowed travel pay and commutation of subsistence for such time as may be sufficient for him to travel from the place of discharge to the place of enlistment, enrollment, or original muster into the service, computed at the rate of one day for every 20 miles."

ACT OF MAY 26, 1900.

The act of May 26, 1900 (31 Stat., 210), provided—

"That hereafter * * * as enlisted man when discharged from the service, except by way of punishment for an offense, shall receive 4 cents per mile from the place of his discharge to the place of his enlistment, enrollment, or original muster into the service; that for sea travel on discharge, to or between our island possessions, * * * transportation and subsistence only shall be furnished enlisted men."

ACT OF MARCH 2, 1901.

The act of March 2, 1901 (31 Stat., 902), provided that—

"* * * An enlisted man when discharged from the service, except by way of punishment for an offense, shall receive 4 cents per mile from the place of his discharge to the place of his enlistment, * * *. That for sea travel on discharge * * * transportation and subsistence only shall be furnished to enlisted men."

ACT OF JUNE 12, 1906.

The act of June 12, 1906 (34 Stat., 247), provides that—

"For the purpose of determining allowances for all travel under orders, or for officers and enlisted men on discharge, travel in the Philippine Archipelago, the Hawaiian Archipelago, the home waters of the United States, and between the United States and Alaska, shall not be regarded as sea travel and shall be paid for at rates established by law for land travel within the boundaries of the United States."

THE 4-CENT MILEAGE ALLOWANCE FOR TRAVEL A LEGITIMATE ECONOMY.

It is matter of common knowledge that the rate of 4 cents per mile was arrived at and decided upon by Congress as a matter of legitimate economy which worked no hardships on enlisted men at the time of their discharge from Army service. The provisions of section 1290 of the Revised Statutes for the payment of "travel pay"—which was pay at the regular rate—one day for each 20 miles, in the case of noncommissioned officers, provided a travel allowance in excess of actual requirements to enable him to reach home in average comfort.

4 CENTS THE MINIMUM OF ACTUAL COST OF ECONOMICAL TRAVEL.

The 4-cent rate per mile, under the provisions of the act of May 26, 1900 (31 Stat., 210), represents, it is understood, the commutation of the allowances for subsistence, and the base pay of the private soldier, as computed under the provisions of section 1290. However that may be, under all varying conditions of cost of travel, and of subsistence on trains en route, the 4 cents per mile has, from 1900 to the present time, represented approximately the lowest possible cost per mile of economical second-class travel, which included sleeping-car accommodations and wholesome meals, sufficient in quantity, en route.

SUFFICIENT TRAVEL ALLOWANCE A RIGHT FROM TIME IMMEMORIAL.

A sufficient travel pay to enable him to reach his home in average comfort had been the right of the enlisted man from time immemorial. It had been equitably calculated to be 4 cents per each mile of distance from the place of his discharge to the place of his enlistment. The Government had entered into contract with him that in return for a "service, honest and faithful," for a period of three years, we would, in addition to other things, pay his transportation at such rate via the shortest usually traveled route.

TRAVEL ALLOWANCE CURTAILED.

By act of Congress of August 24, 1912 (37 Stat., 576), we arbitrarily decreed that thereafter enlisted men discharged from the Army, except by way of punishment for an offense, should be furnished with "transportation in kind" (which was estimated and placed in the record, though not in the act, as consisting of a second-class railroad ticket, an upper berth in a tourist car, and 50 cents per meal during the actual time estimated to complete the journey), or he might elect to receive 2 cents per mile in lieu thereof.

ENLISTED MEN CONFIRMED IN BELIEF THAT CONGRESS NOT THEIR FRIEND.

When we did this the cup of the woes of the enlisted man of the service overflowed, and the growing suspicion that the "Government had no use for a man who enlisted in the Army" which had been forming in his mind, became a certainty, proven to his entire satisfaction by the course of events. As it appeared to him, he had kept his agreement to the letter, while the Government had broken faith. No amount of plausible argument could move him from that conclusion. He accepted the settlement because there was no alternative. His resentment was none the less apparent, and this crowning act to the accumulated grievances of the enlisted man, because of our neglect of his interests, was the most potential factor in molding the opinions which have prevented recruiting for the Army the desired number of men of the class essential to its continued maintenance at a high standard of efficiency.

ACT OF AUGUST 24, 1912, PARTICULARLY OBJECTIONABLE.

Any doubt as to the conditions here stated or their relation to the recruiting question will be dispelled by inquiry directed to the enlisted men of long service. Individually and as a class they do not hesitate to express that the act of August 24, 1912, as relates to the payment of mileage is the most objectionable as well as the most unjust legislation that has ever been aimed at the enlisted men of the Army and Marine Corps. The better posted of the men, especially those assigned to accounts, believe that there is no saving to the Government in the furnishing of "transportation in kind" and subsistence over the former method of paying 4 cents per mile, and that seems borne out by investigations.

The wording of the objectionable enactment of August 24, 1912 (37 Stat., 576), is as follows:

"Hereafter when an enlisted man is discharged from the service, except by way of punishment for an offense, he shall be entitled to transportation in kind and subsistence from the place of his discharge to the place of his enlistment, or to such other place within the continental limits of the United States as he may select, to which the distance is no greater than from the place of discharge to place of enlistment; but, if the distance be greater he may be furnished with transportation in kind and subsistence for a distance equal to that from place of discharge to place of enlistment, or, in lieu of such transportation and subsistence, he shall, if he so elects, receive 2 cents a mile, except for sea travel, from the place of his discharge to the place of his enlistment."

RECRUITS ENLISTED AT CENTRAL DEPOTS.

As a matter of recruiting efficiency, the admirable plan was adopted of carrying all applicants for Army enlistment to central recruiting depots, where more thorough physical, mental, and medical tests of applicants could be made, in order to eliminate the greatest possible number of undesirables prior to actual enlistment. Men so collected were recruited at points sometimes 300 miles remote from the recruiting depots, but were not enlisted until they had passed the final examinations at the recruit depots.

ENLISTED MEN NOT RETURNED TO PLACE WHERE ACCEPTED, OR EQUIVALENT DISTANCE.

As the provision of the act of August 24, 1912, was for the issuing of transportation in kind for a distance equal to that from the place of discharge to place of enlistment only, it becomes apparent that men who enlisted in the Army or Marine Corps were confronted with the possibility, and not only the possibility, but the actual fact, of being left stranded a matter of several hundred miles short of the point where application had been made for enlistment, necessitating the raising of additional funds to enable him to get back as far as the point where the Government had received him for enlistment.

CORRECTED BY DECISION OF COMPTROLLER OF TREASURY.

This practice was followed, in conformity with the act of August 24, 1912, from the date of its passage to February 26, 1916, when the Army Regulations were to have been amended in accordance with the decision of the Comptroller of the Treasury to the effect that the place where a man was accepted for enlistment should be regarded as the place of his enlistment within the meaning of the laws governing the payment of travel allowance on discharge.

PROVISION INSUFFICIENT TO PAY EXPENSES TO ACTUAL HOME.

It is seldom that a man is enlisted in the Army, Navy, or Marine Corps at the place which is actually his home. He must, therefore, in most instances, arrange for additional railroad fare and expenses over that provided by the Government at the time of his discharge.

NAVY TREATMENT BETTER THAN ARMY AND MARINE CORPS IN TRAVEL ALLOWANCE.

The enlisted man of the Navy, who receives 4 cents per mile of travel, can, by skimping his stomach or going without the comforts of a sleeping car for the entire journey, as the result of such economy save enough from his travel pay to pay this additional cost of transportation and subsistence. For the enlisted man of the Army or of the Marine Corps to reach his home, beyond the point of his acceptance, it is necessary for him to deplete the meager store of cash he has saved during his enlistment period from what was left of his pay after necessary expenditures had been made from it.

Enlisted men of the Army whose travel pay on discharge is limited to a cash commutation of 2 cents per mile can never be brought to a realizing sense of obligation for our having denied them the reasonable minimum amount of travel and subsistence allowances paid in other branches of the Government service—the 4 cents per mile—which would have permitted them the option of route and destination, with saving sleeping car fares by doubling up together or sitting up, which would in part at least, have paid for the additional cost of reaching their homes. Men discharged on the North Pacific coast since August 24, 1912, have been obliged to pay varying sums running up as high as $25, to enable them to reach their homes from the point where the transportation in kind furnished by the Government terminated.

OPERATION OF ACT UNFAIR TO MARINE.

When two men enlist at the same time and place, serve on the same ship, are discharged at the same time and place, and, as under the present laws, one of them, the sailor from the Navy, is given 4 cents per mile, which enables him to reach home if economical, and the other, the marine, is left stranded short of his destination, could we "Tell it to the marines" with such convincing argument that they would believe that the treatment accorded the marine in the matter of mileage allowance on discharge was on a par with that accorded the enlisted man of the Navy?

FOUR-CENT ALLOWANCE SHOULD BE RESTORED AS AN ACT OF JUSTICE.

We have been fair to the enlisted man of the Navy, and we have received a wonderful equivalent in efficiency and esprit de corps born of contented service. Let us be equally fair to the enlisted men of the Army and Marine Corps, at least in this one particular, by restoring the travel allowance on discharge, to the minimum allowance in other branches of Government service, 4 cents, and thus aid in building up all arms of our defensive system by improving the quality of the enlisted personnel.

AN ECONOMY INTENDED BY THE ACT.

It was the evident impression of Congress that by the change in the manner of granting transportation on discharge to enlisted men a very considerable economy would be effected, and this impression was based on statement showing specific examples of estimated cost to the Government of second-class transportation, which included the deductions for land grant west of Chicago, upper berths in tourist cars, and $1.50 per day for meals, with no time allowance for late trains and missed connections. For points east of Chicago the statement was based on second-class fares which have been since eliminated, passenger fares in that territory having been raised by authority of the Interstate Commerce Commission.

ECONOMY EXPECTED FROM LAND-GRANT DEDUCTIONS.

It was originally proposed that transportation only to the point of enlistment should be furnished. As all the western recruit depots were located at points which enables the Government to take advantage of land-grand deductions, had that arbitrary plan been followed by Congress a saving on that account might have resulted. This plan was eliminated before presentation to Congress and an attempted equity substituted, which provided for the furnishing transportation to any point of equal distance, and not infrequently, therefore, since the act became effective, the cost to the Government has been in excess of the 4 cents per mile originally allowed.

TOURIST SLEEPERS NOT ALWAYS AVAILABLE.

In the consideration of the provisions of the measure, it was assumed that the Government would only incur the expense for second-class transportation and tourist sleepers. Due consideration was not given to the fact that tourist sleepers are only available between certain limited points, and often only on certain days, and that in entire sections of the United States no tourist sleeping cars are operated.

FIRST-CLASS TICKET AND STANDARD BERTH TO BE FURNISHED WHERE TOURIST NOT AVAILABLE.

General Orders No. 14, War Department, issued February 19, 1913, contain instructions for the guidance of officers issuing transportation in kind to enlisted men on discharge. They are based on decisions of the Comptroller of the Treasury interpreting the meaning of the act of August 24, 1912, in the matter of transportation in kind and sleeping-car berth, and reads as follows:

"1. When discharged soldiers elect to take transportation in kind and subsistence to place of enlistment they will be entitled to the following allowances to such place, viz:

"(a) Transportation rail, second class if available; if second class not available, first class.

"(b) Sleeping-car accommodations, touring-car berth if available, and upper berth if practicable; if not, a lower berth. If tourist car not available, an upper berth in standard sleeper may be furnished if practicable; if not, a lower berth. No sleeping-car accommodations will be furnished in any instance when a night's journey is not involved or when the distance does not exceed eight hours' travel."

THE COST OF STANDARD BERTH ELIMINATES POSSIBILITY OF ECONOMY.

It will be observed, therefore, that there are many routes of travel over which discharged soldiers select transportation, via which it would be impossible to furnish tourist berth. In such cases it is necessary to furnish first-class railroad ticket and standard Pullman berth, the cost of which is greatly in excess of the estimates which considered only second-class railroad tickets and upper berths in tourist sleepers.

COST TO GOVERNMENT WILL APPROXIMATE ORIGINAL 4-CENT ALLOWANCE.

Under increased cost of passenger fares in various parts of the country since this law became effective, it will undoubtedly be ascertained that the average cost to the Government of second-class transportation, an upper berth in tourist care, and $1.50 per day for commutation of rations, as actually furnished in discharged soldiers, will aggregate 3 cents per mile. If first-class transportation and standard sleeper is furnished in all cases where second class is not available, account lack of tourist-car service (which precatice is not followed at all points), the cost to the Government will be greatly augmented. If we add to these estimates the cost of issuing the transportation requests for railway and sleeper tickets, and the additional clerical force employed in the various departments in accounting and making settlements in connection with such transportation requests, it will be found that it will so nearly equal the 4 cents per mile originally paid, and still paid in the Navy, as to leave no doubt as to our duty to "restore the land marks" by providing the payment of 4 cents per mile, and thus place all enlisted men of our defense system on exactly the same footing in the matter of a cash transportation on discharge that will enable them to reach their homes in a befitting manner.

APPARENT ECONOMY DUE TO CHANGE IN METHOD OF APPORTIONING RECRUITS.

The published reports of the cost of travel allowances to men on discharge for the year 1914, the first year of the operation of the present law in which the full figures were segregated, indicated an apparent less cost per capita than for the year 1912, which would seem to indicate an economy. The economy will for the greater part be accounted for by change in practice, which resulted in the payment during 1914 of shorter mileage allowances on discharge than during 1912. Men who were discharged on the north Pacific coast, for example, during the year 1912, had been recruited from points as far east as Columbus, Ohio. Practically all of them were from the recruit depots of Columbus Barracks, Ohio, and Jefferson Barracks, near St. Louis. Subsequent to 1909 The Adjutant General formulated better methods of apportionment, which resulted in great economy in the matter of travel pay on discharge, in that posts were supplied from recruit depots when practicable, which reduced the average haul on both recruits and discharged soldiers. Under this arrangement, men who were discharged in 1914 at north Pacific coast points were recruited largely at Fort McDowell, Cal., and Fort Logan, Colo., with none further remote than Jefferson Barracks, Mo. This was a perfectly legitimate economy, approved by enlisted men as well, which eliminated in many instances from one-third to two-thirds the actual mileage haul, and effected a saving of the

cost of transportation for an equal mileage haul at the time of discharge.

ACT OF AUGUST 24, 1912, CLASS LEGISLATION.

The act of August 24, 1912, is class legislation, as pertains to the subject of transportation of enlisted men on discharge, in that it discriminates against enlisted men of the Army and Marine Corps as compared with the Navy, in the interests of a proposed economy which has not become actual. Its effect has been to breed a feeling of discontent within the ranks of the enlisted men that has finally resulted in such adverse advertising of the Army among civilians generally that the difficulty of securing desirable recruits in time of peace has become one of the chief arguments used against providing for any considerable immediate increase in that branch of the service.

ENCOURAGE THE RIGHT KIND OF MEN TO ENLIST.

It is of vital importance that the "man behind the gun" shall be of the highest grade obtainable. We put into his care and keeping property costing hundreds upon millions of dollars. Why should we not exercise the same care to encourage the enlistment of the right type of careful, conscientious men to look after the details of its proper preservation that we would exercise in the employment of men to handle our personal property or business interests?

TRANSPORTATION IN KIND TRIED AND DISCARDED BY ACT OF MAY 26, 1900.

Let me direct attention to the fact that under section 1290 of the Revised Statutes the Government had the option of issuing transportation in kind and subsistence to soldiers on discharge in lieu of a commutation thereof as provided in the statute. It was not at that time found to be an economy, and was made a "dead letter" by practice before it could seriously affect the attitude of the enlisted men of the service, and through this medium the efficiency of the service itself. After due investigation by Congress the option of transportation in kind, with subsistence, was eliminated by the act of May 26, 1900, which fixed the travel allowance of a soldier on discharge at 4 cents per mile, except for sea travel, an undoubted economy with respect to land travel over the cost of transportation in kind plus cost of accounting and making settlement therefor.

IMPORTANT AS PROVIDING A PROPER DEFENSE UNIT.

The Regular Army represents our first line of defense on land. It is incumbent on us, therefore, to take such reasonable action as will invite to the service the type of men of whom heroes are made when the necessity for action arises. The mere principle of this question of travel allowances on discharge and the invidious comparison with other branches of the defense service have produced the condition described.

We have tried out the act of August 24, 1912, with results as set forth, a sure indication that it has failed in the accomplishment of the purpose intended by Congress. Let us therefore right this wrong to the enlisted men of the service by following the precedent of the act of March 2, 1901 (31 Stat., 902–903), and make it a provision of law:

That hereafter an enlisted man when discharged from the service, except by way of punishment for an offense, shall receive 4 cents per mile from the place of his discharge to the place of his application for enlistment, or the place of his enlistment, enrollment, or original muster into the service, at his option: *Provided*, That for sea travel on discharge transportation and subsistence only shall be furnished to enlisted men.

Mr. BRANDEGEE and Mr. WEEKS addressed the Chair.

The VICE PRESIDENT. The Senator from Connecticut has already spoken on the amendment.

Mr. BRANDEGEE. If the Chair will pardon me, I asked the Senator from Utah a question in his time. I do not care to be recognized, particularly if some one else wants the floor.

The VICE PRESIDENT. The Chair understands that the Senator from Connecticut not only interrupted the Senator from Utah with a question but he talked four minutes on it.

Mr. BRANDEGEE. It was in the time of the Senator from Utah.

The VICE PRESIDENT. The Senator from Massachusetts.

Mr. WEEKS. Mr. President, the bill which we are considering is an Army reorganization bill. One reason why it is necessary to have an Army reorganization bill is because in the past we have proceeded in a piecemeal manner increasing one corps and not increasing another, so that there has always been a lack of homogeneous action. Possibly the committee has not acted wisely in this case, but I think the result of this deliberation is that we will have a homogeneous military force of the size provided if the bill is passed in the form in which the committee reports it.

It is always hazardous to accept amendments on the floor of the Senate, because very frequently they do not even carry out the purpose and wishes of those who present them. As an example, take the amendment which we adopted yesterday relating to the dental force. It was amended by the Senator who offered the amendment, but before doing so I happened to look up in the Army Register to see what the result would have been in the case of promotions for which his original amendment provided. I found that a dentist, for example, would become a major in one-half the time that a Cavalry officer of the Ninth Cavalry, now serving in Mexico, would become a major. In other words, it would have exalted the dentists in comparison to the fighting force in the proportion of 2 to 1.

It is not necessary to utter any approval of the high character of our Coast Artillery, either of matériel or of personnel, and it is not necessary to make any denial of the desirability of having a sufficient force, as I understand what the Chief of Artillery desires. It is the policy of the department that there shall be sufficient officers and men in this force to completely man our coast artillery in our foreign possessions and furnish one-half of a sufficient force to man the coast artillery in continental United States; and this bill furnishes, if the States provide what they should, sufficient for that purpose, if my understanding is correct.

Mr. SUTHERLAND. May I ask the Senator a question? The present number provided by the bill is 24,887, and all of the authorities agree that it requires 30,000 men to man one-half the guns after taking care of the insular possessions. About that there can not be the slightest doubt. Then the State artillery reserve is 10,000 short of taking care of the other half.

Mr. WEEKS. If the Senator is correct in that statement, I would not object to the adoption of the amendment; but my understanding was that we had provided enough for the one-half force, but the State had not provided their proportion. They have done so in the case of the State of Massachusetts. We have a thoroughly qualified Heavy Artillery regiment which is ready to supplement the regular force so that every fort on the Massachusetts coast could be full manned with forces that are now there.

Mr. SUTHERLAND. Mr. President——

Mr. WEEKS. I yield to the Senator.

Mr. SUTHERLAND. I call the Senator's attention to page 536 of the Senate hearings, where a table is printed in the testimony of Gen. Weaver. Gen. Weaver says——

Mr. WEEKS. I shall be glad to look at that.

Mr. SUTHERLAND. I would like to have that go into the RECORD without reading.

Mr. WEEKS. I ask that it go into the RECORD in connection with my remarks.

The matter referred to is as follows:

Senator DU PONT. They have never come forward, have they?

Gen. WEAVER. I am coming to that right now. Of the seven hundred and odd officers and the 17,000 men, the latest reports we have show that the States have at the present time supplied only about 400 officers and about 7,000 men, so that they are three hundred and odd officers and about 10,000 men short of their quota. As perhaps bearing upon all of the personnel questions that are up for discussion, I have a table here which gives what is required under the 50 per cent plan which I have just enunciated and that recommended by the War College Division of the General Staff, that recommended by the Chamberlain bill, that recommended by the Hay bill, that recommended by the War Department draft, and that now authorized by law. I think this would be of value, perhaps. It gives the personnel in tabulated form, side by side, and covers all the features of it quite fully.

* * * * * * *

Coast Artillery organization as required, as now authorized by law, and as proposed in Chamberlain bill, Hay bill, War Department draft, and the War College Division, General Staff.

REQUIRED UNDER 50 PER CENT PLAN.

Major general	1
Brigadier generals	5
Colonels	25
Lieutenant colonels	25
Majors	76
Captains	365
First lieutenants	367
Second lieutenants	367
Total officers	1,231
Sergeants major, senior grade	32
Sergeants major, junior grade	65
Master electricians	42
Master gunners	64
Engineers	73
Assistant engineers	207
Electrician sergeants, first class	100
Electrician sergeants, second class	100
Firemen	109
Radio sergeants	96
First sergeants	267
Supply sergeants	267
Mess sergeants	
Sergeants	2,136
Corporals	3,204
Cooks	534
Mechanics	534
Musicians	534
Privates	21,483
Total enlisted, exclusive of bands	29,847

Mr. WEEKS. What I wish particularly to say, Mr. President, is that all these amendments in my judgment should be considered by the committee. The argument that has been made by the senior Senator from Utah about the proportional increase should have no bearing whatever on what should be done for any part of our Military Establishment. We have, for example, increased the militia forces something like 210 per cent.

It is my judgment if a large part of the money that is provided to pay these forces were used in the Regular Establishment we would get a very materially better net result, but because we are increasing the National Guard in greater proportion than we are increasing the Heavy Artillery or the Infantry or the Cavalry should have no weight whatever in in-

creasing this particular branch of the service. What we should have is such a force as is recommended by those who are in responsible authority. When we take any other course we are likely to make mistakes.

Mr. SMOOT. Mr. President——

The VICE PRESIDENT. Does the Senator from Massachusetts yield to the Senator from Utah?

Mr. WEEKS. I yield.

Mr. SMOOT. I take it for granted the Senator has read the testimony of Gen. Weaver, in which he states that it will require 30,000 men to man the guns and also that he has figured just exactly what the bill provides for, and the Coast Artillery falls short of that by 5,112 men.

Mr. WEEKS. Mr. President, that has just been called to my attention by the junior Senator from Utah. I would be glad to look that matter up, but my understanding is that when I voted for this particular proposition there were sufficient men if the States would furnish their proportion to supply the requirements of the Coast Artillery. If that is not so, I shall be glad to increase the number, but I think we ought to know definitely in committee and from the Chief of Artillery rather than to vote without sufficient knowledge on the floor of the Senate.

We are going to have exactly this kind of a proposition from every branch of the service. I know some of these active young officers who are importuning Senators to do this and to do that. Many of them have been before the committee. They have a perfect right to do what they are doing, but if we are going to depend and act on their testimony without taking into consideration the whole scheme as a broad one, then we are not going to have left a homogeneous military bill when we have placed it on the statute books. There should be careful consideration given in the committee to any such amendment as this before it is adopted.

Mr. CHAMBERLAIN. Mr. President, I hope the amendment suggested by the Senator from Utah will not be adopted. This matter did receive the very earnest consideration of the committee in connection with the other branches of the service. As has been so plainly stated by the Senator from Massachusetts [Mr. WEEKS], in the reorganization of the Army the committee has attempted to give it homogeneity and to make each branch of the service fit into every other branch.

It is hardly a proper way to estimate these increases in any branch of the service by percentages. In the legislation that has taken place from time to time, usually in the form of riders on appropriation bills, some particular branch of the service might have been under the reorganization scheme enlisted up to its full force. Therefore there need not necessarily be an increase in that particular branch. So the committee in undertaking to get at a proper standard for each of these branches has fixed the number of men for the Coast Artillery.

Let me call the attention of the Senate to this fact: Under the law as it is to-day there were 170 companies in the Coast Artillery Corps, embracing a total enlisted strength of 19,321. The committee in the reorganization plan raised the number of companies from 170 to 263. Gen. Weaver was satisfied with that increase in the number of the companies. The only objection he makes now, and it is substantially the objection that is made by the Senators who argue for an increase, is that the personnel was not large enough. The companies are sufficient, Gen. Weaver says, but the personnel ought to be increased.

We have increased the personnel, the enlisted strength, from 19,321, as at present constituted, to 24,897. That is the peace strength; the minimum strength. That is the estimate made under the terms of this bill. The maximum strength is 30,009 men, practically the number the Senator from Utah insists should be embraced in this bill. In other words, the Senator insists now that the Coast Artillery Corps should be increased to war strength without any regard to the other forces of the country, and as to what the needs of the other branches of the service may be. If there is going to be an increase here to place the Coast Artillery at its maximum strength, then the number must be taken from some other branch of the service to make that number good.

Mr. SUTHERLAND. May I ask the Senator a question?

Mr. CHAMBERLAIN. Yes.

Mr. SUTHERLAND. Is it not true that it will require the 30,000 men to man the coast fortifications—to man the guns on the coast fortifications—to the extent of 50 per cent?

Mr. CHAMBERLAIN. I will just read the Senator the report. I do not like to be interrupted, because I have only 10 minutes, and I want to get this matter before the Senate as clearly as I can. If the Senator will refer to the report of the Chief of the Coast Artillery for 1915, he will find, on page 4, the following:

Defenses constructed and appropriated for.	Officers.	Men.
Regular Coast Artillery required for all mines, guns, and mortars in canal and insular ports	291	6,800
Regular Coast Artillery required for all mines and for one-half of the guns and mortars in the United States	940	23,047
Total Regular Coast Artillery required	1,231	29,847
Militia Coast Artillery required for one-half of the guns and mortars in the United States	711	17,329
Grand total, Regulars and militia, required	1,942	47,176

Under the Senator's plan of increase you practically cut out one-half of the National Guard, and we have provided for an increase in the National Guard. We have fixed the Coast Artillery so that it will be brought up to the maximum strength and be given all the men that Gen. Weaver asks for. But Gen. Weaver has been very insistent that this should be maintained at its full strength all the time, and the committee has considered that proposition. They have gone into it fully and undertaken to coordinate all of these different branches of the service.

Mr. President, I want now to call the attention of my friend from Colorado [Mr. THOMAS], who is a member of the committee, and who differs with the committee about this proposition—and, I am sorry to say, on many other propositions involved in the bill—to the fact that the Coast Artillery Corps is not a coast defense; it is a harbor defense. There are 27 Coast Artillery districts in this country. Take Oregon, for instance—and I am familiar with the situation there. We have a Coast Artillery company at the mouth of the Columbia River. It defends the mouth of the Columbia River, and yet there are a dozen places along the coast that are entirely unprotected. Therefore, there is no coast defense, so far as those places are concerned. An enemy could land at Coos Bay; it could easily land at other points and go inland if they desired to do so. In the final analysis the harbor defenses that I speak of must be defended from the rear against an invading force by a mobile army. So if there is going to be an increase it is more essential to increase the mobile army than it is to increase the permanent stationary force. I differ very radically from Senators who think that the Coast Artillery is a coast defense. It is a harbor defense, and some of the officers of the Army have very plainly shown that in some instances the tendency of it is to weaken the mobile army, because if there is an invading force—I do not know that we are going to have an invading force—but if there is, the mobile Army, in the last analysis, must go forward and defend the Coast Artillery defenses.

Mr. President, the object of this amendment is to place the Coast Artillery Corps at full strength until a sufficient reserve is created, when the strength will be reduced, instead of providing that it shall be at reduced strength, as is the rest of the Army, and so to create a reserve and fill it up in time of emergency.

The Coast Artillery is not the second line of defense. The Navy is the first line of defense, and, it seems to me, that the second line of defense is the mobile army. All the function that the Coast Artillery Corps plays in defense is to protect not the coast line but the particular harbor where it is stationed.

Mr. President, I hope that the amendment will be voted down.

Mr. SUTHERLAND. Mr. President, before the Senator from Oregon takes his seat I desire to ask him a question. I call the Senator's attention to the testimony of Gen. Weaver, from whose report the Senator read, at page 536 of the record before the Senator's own committee and under the column headed "Under the 50 per cent plan," and I ask him whether in detail he has not estimated the different officers and men that are required, and if that estimate does not total 29,847 under the 50 per cent plan?

Mr. CHAMBERLAIN. That is exclusive of the militia force.

Mr. SUTHERLAND. Oh, certainly; exclusive of that force; but that is required to man one-half of the guns of continental United States. The 24,000 men for which the Senator's bill provides will not man one-half of the guns.

Mr. CHAMBERLAIN. I read from Gen. Weaver's report, which was made in 1915. The Senator is reading from a statement made by Gen. Weaver before the committee. I do not know that there is any radical difference between the two statements, for I have not had time to compare them.

Mr. SUTHERLAND. I do not know that there is any difference; but the fact is that Gen. Weaver did state in positive terms—and he gives the details which justify the statement—that under the 50 per cent plan 29,847 officers and men are

required. That is entirely aside from the number furnished by the State artillery reserve.

Mr. CHAMBERLAIN. That is at the maximum strength.

Mr. SUTHERLAND. I do not care what it is called; but it requires approximately 30,000 men to man one-half of the guns upon the plan recommended by the service.

Mr. CHAMBERLAIN. I call the Senator's attention to the report which was filed by the committee at the time the bill was presented. On page——

The VICE PRESIDENT. The Senator's time has expired.

Mr. WORKS. Mr. President, like the Senator from Oregon [Mr. CHAMBERLAIN], I represent in part one of the Pacific coast States, and my people, of course, are interested in sharing in whatever defense may be provided by this legislation; but the Senator from Oregon is perfectly right in saying that the so-called coast defenses are not coast defenses at all. In order that there should be protection to the State of California, you would have to have a line of coast defenses from one end of the State to the other to be effective. Troops can be landed almost anywhere on the Pacific coast; at least along that part of the coast fronting the State of California. I do not know how it may be farther up the coast; I am not familiar with the coast in that locality; but any money that may be expended, in addition to what is proposed, to increase the coast defenses in California would amount to very little; it would probably be throwing money away if it is intended for that purpose. For that reason, because it would not be beneficial in any practical sense, I am opposed to the amendment which will increase the burden of taxes in order to maintain a so-called coast defense that would be practically useless, except to protect the harbors or points where coast defenses for the protection of cities have been provided.

Mr. BRANDEGEE. Mr. President, is the amendment proposed by the Senator from Utah [Mr. SUTHERLAND] subject to amendment?

The VICE PRESIDENT. It is.

Mr. BRANDEGEE. Then I send to the Secretary's desk an amendment to the amendment, and desire to make some remarks upon it.

The VICE PRESIDENT. The amendment to the amendment proposed by the Senator from Connecticut will be stated.

The SECRETARY. It is proposed to add, at the end of the proposed amendment of the Senator from Utah [Mr. SUTHERLAND], the following:

Provided, That the increase in personnel hereby provided shall not take effect until approved by the General Staff of the Army.

Mr. BRANDEGEE. Mr. President, after making a few remarks, I may withdraw the amendment, but I desire to say while I have the floor, that, although I may not press the amendment to a vote, I do think that in a technical matter of this kind, involving questions of strategy, involving questions of the probability and the proportionate probability of the use of the various arms of our service, it is very desirable to have the opinion of the educated and technical men, on whom we have spent the Government's money for the purpose of making them efficient along this line.

While in a general way I am in favor of increasing all the branches of the service, and to me personally it is perfectly plain that it ought to be done, I do not think though I am unadvised about it officially, that the Coast Artillery Corps needs strengthening any more than do the other branches of the service.

I expect, if this amendment comes to a vote, that I shall vote for it. I believe that the additional personnel herein provided could be taken away from the guns, if they were not at the points of danger, and could be made available in the mobile line of the Army at other points.

But, to illustrate the position in which it puts those of us who are not technical men, nor experts versed in the art of war, here is a two-page amendment purporting to strike out "1,700" and to insert "2,000" on such and such a line of the bill and attempting to scatter amendments in various places, the amendments being indicated only by lines and numerals. Nobody can tell, without reading the amendment in connection with the substitute reported by the committee, what it does; nobody here knows, without complete explanation, how many additional corporals, how many additional sergeants, and how many additional privates it provides for, or how much it would increase the total. I hardly think that is an intelligent way to prepare a great measure like this, involving the national defense. I wish that amendments such as this could be referred to the committee and the experts of the War Department summoned before the committee to give testimony about them.

Mr. President, the Coast Artillery is a very necessary branch of the service; but if this country were to be invaded, it is not to be assumed that the invader would select the strongest points and the best defended places for the purpose of making a landing. There has been a very interesting suggestion advanced, which would tend to make the coast-defense system a mobile defense instead of a stationary one. I have heard the plan very highly spoken of by some officers of the coast-defense branch of the service. It involves the mounting of guns upon cars, which could be moved from point to point where their presence might be demanded. It seems to me it is a proposition worthy of the serious consideration of the department and of the committees of Congress. There could be built at very small expense concrete emplacements at various strategical points on both the Atlantic and Pacific coasts, and the guns could be moved there, with the skilled gunners, at any time a given point was threatened. It can be done; I am quite sure the plan is feasible; and it would save millions of dollars to this Government in comparison with the present plan of continuing to erect permanent emplacements and maintaining permanent guns. Such a plan would enable us to be prepared to defend different points with a much less personnel than would be required under the other system. However that may be, I simply cite it, because it occurs to me that it is difficult for us to act upon proposals of this kind offered on the floor, which may operate in ways that we can not foresee. However, as I have said, I am so strongly in favor of doing something that will make our Army available for the purpose for which I understand it is organized and maintained that, so far as I am concerned, I shall not oppose the amendment of the Senator from Utah, but, on the contrary, if it comes to a vote, I shall vote in favor of it. I now withdraw the amendment which I sent to the desk.

Mr. CHAMBERLAIN. Question!

Mr. REED. Mr. President, I want to make an inquiry as to the parliamentary situation. Is there an amendment now pending?

The VICE PRESIDENT. The amendment of the Senator from Utah [Mr. SUTHERLAND] to the substitute reported by the committee is now pending. The question is on that amendment.

Mr. SUTHERLAND. I ask for the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. BRADY (when his name was called). I have a general pair with the senior Senator from Florida [Mr. FLETCHER]. I therefore withhold my vote.

Mr. STERLING (when his name was called). I am paired with the Senator from South Carolina [Mr. SMITH] and therefore withhold my vote.

Mr. TILLMAN (when his name was called). I transfer my pair with the Senator from West Virginia [Mr. GOFF] to the Senator from Maryland [Mr. LEE] and vote "nay."

Mr. WEEKS (when his name was called). I have a general pair with the senior Senator from Kentucky [Mr. JAMES]. As he is absent, I withhold my vote.

Mr. WILLIAMS (when his name was called). Repeating the announcement made upon the last roll call as to the transfer of my pair, I vote "nay."

The roll call was concluded.

Mr. BANKHEAD. I desire to announce the unavoidable absence of the junior Senator from Tennessee [Mr. SHIELDS].

Mr. COLT (after having voted in the negative). I inquire whether the junior Senator from Delaware [Mr. SAULSBURY] has voted?

The VICE PRESIDENT. He has not.

Mr. COLT. Not knowing how he would vote on this amendment, I withdraw my vote.

Mr. THOMAS. I desire to announce the unavoidable absence of the junior Senator from Kentucky [Mr. BECKHAM]. He is paired with the senior Senator from Delaware [Mr. DU PONT].

Mr. WALSH (after having voted in the negative). I announce that my colleague [Mr. MYERS] is absent from the Senate on official business.

I notice that the senior Senator from Rhode Island [Mr. LIPPITT] did not vote. I have a pair with that Senator. I transfer it to the junior Senator from South Dakota [Mr. JOHNSON] and will allow my vote to stand.

Mr. CURTIS. I have been requested to announce the following pairs:

The Senator from New Mexico [Mr. CATRON] with the Senator from Oklahoma [Mr. OWEN];

The Senator from New Mexico [Mr. FALL] with the Senator from West Virginia [Mr. CHILTON];

The Senator from Michigan [Mr. TOWNSEND] with the Senator from Florida [Mr. BRYAN]; and

The Senator from Vermont [Mr. DILLINGHAM] with the Senator from Maryland [Mr. SMITH].

The result was announced—yeas 27, nays 30, as follows:

YEAS—27.

Ashurst	Hollis	McLean	Smith, Ariz.
Borah	Husting	Nelson	Smith, Ga.
Brandegee	Johnson, Me.	Oliver	Smoot
Burleigh	Jones	Page	Sutherland
Clapp	Kenyon	Poindexter	Thomas
Cummins	Lodge	Reed	Wadsworth
Hardwick	McCumber	Sherman	

NAYS—30.

Bankhead	Gronna	Pittman	Thompson
Chamberlain	Hughes	Pomerene	Tillman
Clark, Wyo.	Kern	Ransdell	Vardaman
Clarke, Ark.	La Follette	Shafroth	Walsh
Culberson	Lane	Sheppard	Warren
Curtis	Martine, N. J.	Simmons	Williams
Gallinger	Norris	Stone	
Gore	Overman	Swanson	

NOT VOTING—39.

Beckham	Fletcher	Martin, Va.	Smith, Md.
Brady	Goff	Myers	Smith, Mich.
Broussard	Harding	Newlands	Smith, S. C.
Bryan	Hitchcock	O'Gorman	Sterling
Catron	James	Owen	Taggart
Chilton	Johnson, S. Dak.	Penrose	Townsend
Colt	Lea, Tenn.	Phelan	Underwood
Dillingham	Lee, Md	Robinson	Weeks
du Pont	Lewis	Saulsbury	Works
Fall	Lippitt	Shields	

So Mr. SUTHERLAND'S amendment to the amendment of the committee was rejected.

Mr. REED. I offer the amendment which I send to the desk.

The VICE PRESIDENT. The amendment to the amendment will be stated.

The SECRETARY. It is proposed to strike out all of section 108 as proposed by the committee, found on page 188 of the bill, and in lieu thereof to insert the following:

SEC. 108. Pay for National Guard officers.—Commissioned officers on the active list belonging to organizations of the National Guard participating in the apportionment of the annual appropriation for the support of the National Guard shall receive compensation for their services (except during periods of service for which they may become lawfully entitled to the same pay as officers of corresponding grades of the Regular Army) as follows, not to include longevity pay: Captains and officers above the rank of captain, $500 per year; first lieutenants, $300 per year; second lieutenants, $250 per year. Regulations, to be prescribed by the Secretary of War shall determine the amount and character of service that must be rendered by officers to entitle them to said pay: *Provided*, That only line officers and officers of the staff corps and departments on duty with organizations of the line shall receive pay.

Mr. REED. Mr. President, I hope I can enlist the earnest thought of the Senate for a few moments to this amendment. Stated very briefly, the situation is this:

The House, in its bill, provided pay for all officers of the militia up to the rank of captain, and beyond the rank of captain pay for all officers in active duty, the pay beyond the rank of captain being limited so that it could not exceed $500 per year, being the stipend paid to captains of militia. The Senate amendment strikes out the provision which provides for any pay for militia officers above the rank of captain. The effect of the Senate amendment is this:

First, that the officers of the militia above the rank of captain in the line and in active service obtain no pay whatsoever.

The secondary effect is that of course the officers, when mustered into the service, will be subject to a disability.

Mr. President, I understand that the reason actuating the Senate committee in striking out the pay of officers above the rank of captain was that they had conceived the idea that the officers above the rank of captain perform no actual work. That, Mr. President, is an absolute mistake of fact. There is no man who has ever served in the militia who does not know it to be a gross error of fact. The cold truth about the matter is that the captain of a company or the lieutenant of a company acting in the line generally is obliged to employ only about the same amount of time as the ordinary private, perhaps an additional hour or two a week; but the regulations to-day are such that they require from the majors, lieutenant colonels, colonels, and the general commanding so many reports and so many duties that these men put in from four to five or even ten times the amount of time required of the captain of a company.

I placed in the RECORD on yesterday the absolute evidence of this fact. There has been nothing placed in the RECORD or stated upon the floor to the contrary, and I affirm it to be a fact that these officers above the rank of captain do a great deal more work than the captains or lieutenants of companies.

The evidence is in the RECORD, as I have stated. It is positive and it is clear, and the regulations governing the militia absolutely impose upon these higher officers duties which make heavy inroads upon their time. The general in command of the National Guard of my State is an accomplished lawyer, and I do not at all exaggerate the fact when I say that he gives to the National Guard nearly one-half of his time. There is a colonel in my State, a man of wealth and large affairs, who actually sleeps at the armory, who employs stenographers to attend to his military correspondence at his own expense. He spends hundreds of dollars of his own money every year. He does this in order to maintain his organization at the highest point of efficiency.

Recently regulations have been adopted which require all officers of the National Guard to undergo the most rigid examinations and further require them to attend schools of instruction which are held by Army officers.

Mr. President, disguise it as we may, the effect of the Senate amendment is to kill the efficiency of the National Guard. You might just as well expect to keep up a voluntary organization without any head as to expect to maintain the National Guard at a point of high efficiency and yet deny any compensation to those officers who must constitute the brains and the energy that keep the National Guard going.

I want to illustrate: The commanding general in my State—and I do not claim that he is better than the commanding generals of other States—regularly visits the headquarters of the regiments of that State. He examines reports daily. He employs a stenographer whose business it is to keep up correspondence. He has done this largely from his own pocket. If he did not do as I have stated the organization would disintegrate. An organization in every instance is bound to disintegrate if there is not a head for the organization.

Mr. President, these militia organizations at the present time, if never before in the history of this country, ought to be carefully conserved and looked after. We may need the militia within 30 days; and the militia organizations, if they go out officered by their own officers, will go to a man. They went in my State 100 per cent strong in the Spanish War. They have been our safeguard at every crisis of this country's history.

I do not know how much time I can occupy in reading, but I want to call attention to the fact that in the War of 1812, as stated in Senator LODGE'S history, the organization of the Regular Army—

was markedly inefficient and the service most unpopular. The chief officers were Revolutionary veterans who had outgrown their usefulness, and their incompetency led to several disasters in the early stages of the war.

Speaking of the militia, he had this to say with reference to the Battle of Niagara:

The campaign on the Niagara frontier was renewed under the direction of Gen. Jacob Brown, an able commander of the New York Militia.

And that was one of the few battles of the War of 1812 our soldiers won.

The same author adds:

Throughout the war great reliance was placed on the militia, and it may be truly said that this branch of the service bore the brunt of the contest and contributed far more to the success of the war than did the Regular Army.

Of course in the War of 1812 it was the militia under Jackson that finally won the great fight that gave luster and glory to what had otherwise been a most disastrous war upon the land.

I have not time to read excerpts from the same work on the War with Mexico. Substantially the same conditions existed in that war as in the War of 1812.

The same author states that in the Civil War the first call of the President was for 75,000 of the militia of the States to serve for three months to suppress the rebellion; that "the response of the Northern States was prompt and generous"; and that "two days after the publication of the proclamation the Sixth Massachusetts passed through New York on its way to Washington."

It is a further fact that Gen. McClellan, although a West Point graduate, had gone out of the service, was commissioned by the governor of Ohio as a major general of militia. The author of this history states:

He set to work at once to organize and equip the troops, and was thus engaged when he received instructions to go to the aid of the West Virginia loyalists.

The same author states that in the Spanish-American war—

The various National Guards were prepared for mobilization at a moment's notice. Scores of provisional regiments were raised and offered to the governors of the various States, so they could be called out as soon as the expected call for volunteers occurred.

The VICE PRESIDENT. The time of the Senator from Missouri has expired.

Mr. REED. Mr. President, I desire to speak for 10 minutes on the bill. I have that privilege.

The VICE PRESIDENT. Not under the unanimous-consent agreement.

Mr. REED. I do not want to cavil with the Vice President; but as I read the unanimous-consent agreement, it provides for 10 minutes on the bill and 10 minutes on an amendment.

The VICE PRESIDENT. Yes; but how would the Senator from Missouri expect the Chair, with a bill running as this bill is, to know or keep any record as to when a Senator is speaking on the bill or when he is speaking on an amendment? The Chair is not responsible for the unanimous-consent agreement.

Mr. REED. I do not expect the Chair to do anything more than to charge to me the 10 minutes I have taken, and if I now speak 10 minutes on the bill I can not again speak on the bill.

The VICE PRESIDENT. The Chair will leave it to the determination of the Senate. Is it the judgment of the Senate that Senators may, while amendments are pending, speak on the bill? [Putting the question.] The noes seems to have it. The noes have it.

Mr. REED. Mr. President, all I have to say about it is that I can not help—and I say it respectfully—regarding it as a plain denial of the rights reserved under this unanimous-consent agreement. Under it any Senator has a right to speak 10 minutes on an amendment, and that ends his right to speak on that amendment; but there is in the unanimous-consent agreement an express provision that any Senator can speak 10 minutes on the bill, and under the rules of the Senate a Senator has the right to employ his time when and how he pleases.

I have presented the matter as well as I can, however, and I have nothing further to say.

The VICE PRESIDENT. The Chair does not want to take advantage of any Senator. The Chair believes, however, that the plain unanimous-consent agreement is that the speaking goes on upon each amendment until the bill is finally in shape for passage, and then that each Senator may speak 10 minutes upon the bill.

Mr. CHAMBERLAIN. Mr. President, some days ago the Senator from Maryland [Mr. LEE] made some question as to the figures which were included in the report of the committee as to the cost of the National Guard. I have called upon the Secretary of War for a statement in reference to that matter; and I desire to print in the RECORD, for the convenience and information of the Senate, the letter I addressed to the Secretary of War, his answer thereto, and the reports made in conformity with the request of the committee.

The VICE PRESIDENT. In the absence of objection, that will be done.

The matter referred to is as follows:

APRIL 3, 1916.

Hon. NEWTON D. BAKER,
Secretary of War.

MY DEAR SIR: The figures given in Tables XI and XII of the report of the Senate committee on the bill S. 4840, reported to the Senate (S. Rept. No. 263, pt. 1), have been questioned on the floor of the Senate as to their accuracy, and a study of the detailed tables on which these general tables were based leads to the belief that there was some data not given therein which should have been included. Will you kindly have the data checked and supply me with new data, showing the information asked for with regard to the Organized Militia and the Volunteers in paragraph 7 of my letter of March 4, 1916; that is, "An estimate of the annual appropriations for each supply department during each of the next four years to supply the annual contingents of the National Guard and the Volunteers with the full equipment and other material now issued to the Organized Militia, considering both forces as coming to full authorized strength in the fourth year and not counting on any reserve material that may now be accumulated"?

Also a separate estimate of the annual current cost of the Organized Militia and of the Volunteers, exclusive of the data asked for above.

I understand that the item of pay for the National Guard for field exercises during summer encampments was not included in the estimate of the Quartermaster Department, and that there was some mistake in the estimate of the Ordnance Department.

In the estimates I am now asking for I wish that both forces be estimated for as though they were regular forces, and that the cost of the bill should be figured by each of the departments under all the items that will be necessary to put the bill into full operation.

I have seen a copy of the memorandum on which the departments made their estimates, and if they will follow exactly the same procedure as outlined therein, adding to the first year's increment of the Volunteers and to the third year's increment of the National Guard one division of Infantry, the resulting figures will be, for the four years, approximately 260,000 for each mobile force, or approximately the total number provided for each. There should be added to each of the second, third, and fourth increments of the National Guard 40 companies of Coast Artillery at 80 men per company.

Yours, very sincerely,

———.

WAR DEPARTMENT,
Washington, April 7, 1916.

Hon. GEORGE E. CHAMBERLAIN,
Chairman Committee on Military Affairs,
United States Senate.

MY DEAR SENATOR: In compliance with your request of the 3d instant, I send you herewith the new estimates prepared by the Division of Militia Affairs, Quartermaster General, Surgeon General, Chief of Engineers, Chief of Ordnance, and Chief Signal Officer.

Very truly, yours,

NEWTON D. BAKER,
Secretary of War.

(Inclosures.)

MEMORANDUM FOR THE SECRETARY OF WAR.

WAR DEPARTMENT,
THE ADJUTANT GENERAL'S OFFICE,
April 8, 1916.

The tables furnished by the staff bureaus, which tables are herewith, have been examined in this office and, so far as can be seen, appear to be correct. It is to be noted that the table submitted by the Quartermaster General, headed "Summary of cost of the Regular Army, National Guard, and Volunteers, Senate bill 4840, Sixty-fourth Congress, first session," covers such items of cost as pertain solely to the Quartermaster Corps.

H. P. MCCAIN,
The Adjutant General.

APRIL 10, 1916.

Hon. NEWTON D. BAKER,
Secretary of War.

DEAR SIR: I am returning herewith certain estimates of the Quartermaster Department asked for in my letter of April 3. An inspection of them shows that there is some mistake, inasmuch as the cost of the volunteer force is almost as large as that for the National Guard, whereas it is known that the armory pay alone for the National Guard is somewhere in the neighborhood of $18,000,000, where there is no such item for the volunteer force. In addition to that the volunteers are charged with several million dollars for transportation, horses, etc., which do not appear in the estimate for the National Guard.

Inasmuch as the question of cost is a very important one, I wish that you could have an estimate made up for the National Guard covering exactly the same items that are included in the statement of cost for the volunteer force.

Yours, very sincerely,

———.

WAR DEPARTMENT,
Washington, April 13, 1916.

Hon. GEORGE E. CHAMBERLAIN,
Chairman Committee on Military Affairs,
United States Senate.

DEAR SIR: In reply to your letter of the 10th instant, I send you herewith new tables prepared by the Quartermaster General, who states that the estimated cost of the National Guard is greater than as heretofore reported, for the reason that it includes necessary expenses, such as transportation of the troops from home stations to summer encampments and return to home stations, hire of wagons and teams for each organization during period of encampment, hire of mounts for all organizations for which mounts are authorized, purchase of water, removal of garbage, etc., and pay of troops during 24 days of summer encampments, which were not included in previous reports.

Very truly, yours,

NEWTON D. BAKER,
Secretary of War.

Statement of annual current cost and cost of permanent equipment for the National Guard as provided in Senate committee amendment to House bill 12766, Sixty-fourth Congress, first session, submitted in compliance with letter from chairman Senate Committee on Military Affairs, Apr. 3, 1916—Covers a total of 17 Infantry divisions, 2 Cavalry divisions, and 243 companies of Coast Artillery—Total force approximately, 278,000.

Appropriations.	First year.	Second year.	Third year.	Fourth year.	Fifth year and thereafter.
Quartermaster Corps:					
Pay—					
Armory pay	$10,930,218.00	$12,944,272.00	$16,250,540.00	$18,618,641.00	$18,618,641.00
24 days summer encampments	3,315,770.72	3,920,687.72	4,927,688.99	5,648,059.05	5,648,059.05
Total pay	14,245,988.72	16,864,959.72	21,178,228.39	24,266,700.05	24,266,700.05

Annually after fourth year:	
New equipment	$4,400,000
30 days' training	16,800,000
	21,200,000

Mr. CHAMBERLAIN. Mr. President, in reference to the amendment of the Senator from Missouri [Mr. REED], I hope that amendment will not be favorably acted upon. I am not going to discuss the merits or the demerits of the officers of the National Guard; but I have been a member of the National Guard myself, and served as captain for three or four years, and I know from personal experience that the officers who do the work of training of the National Guard are the captains, lieutenants, and first sergeants.

It is true that there are times when the higher officers, such as the majors, the lieutenant colonels, the colonels, and sometimes higher officers, do perform service; but almost all of the training of the National Guard is in the armories, where they can not organize into battalions or regiments or divisions; so that in the very nature of things, whatever work the higher officers may be called upon to do is in the nature of office work. It is not the work of training that the captains and lieutenants do.

Mr. REED. Mr. President——

The VICE PRESIDENT. Does the Senator from Oregon yield to the Senator from Missouri?

Mr. CHAMBERLAIN. I should like to be courteous to my colleagues, but——

Mr. REED. It involves a question of fact about which I want to ask the Senator. Does the Senator mean to say that these higher officers of the National Guard do not hold schools of instruction for the other officers night after night?

Mr. CHAMBERLAIN. They may do it occasionally.

Mr. REED. And make out reports that take hours of time every week?

Mr. CHAMBERLAIN. They may do that occasionally, but that will be the exception and not the rule.

Mr. REED. It is not the exception in my State.

Mr. CHAMBERLAIN. The Senator's State may be sui generis in that respect, but in many States they do not do it, and the work of training these young men is done by captains and lieutenants. We provided for pay of those men. The Senator has adopted the figures which the Senate committee has reported, but I say for captains and lieutenants the figures are higher than the House provides, for the House provides for the pay of captains and lieutenants and higher officers as well. A smaller amount is provided for the pay of captain and lieutenant than is provided in the bill of the Senate committee.

Mr. President, the committee took under consideration this whole question. We have appropriated, as will be seen by the reports which I have already filed, and which have just been printed, $45,000,000 a year for the National Guard. This is larger than the figures that were in the first report that was filed by the committee. The figures have been made and filed with the committee in answer to a letter that is published in compliance with my request just made. So $45,000,000 per annum approximately is appropriated for the National Guard after the end of five years.

Mr. President, if we provide for pay of officers above the grade of captain, it adds nearly a million dollars to the expense of the National Guard, and the committee has not seen fit to increase the expenditure as large as that, because it did not feel that the Government would be getting a sufficient equivalent for the amount of money expended.

There has been no personal feeling entering into this matter. The committee have felt that, having made this immense appropriation for the purpose of trying to federalize and make a dependable force of the National Guard, the patriotism of the men and officers ought to help a little without pay, as has been done in the past. What animated the committee was, first, the question of the men being paid who did the actual work of training; second, the question of economizing in matters that did not seem to be essential to creating a more efficient and dependable force in the National Guard.

I hope, Mr. President, that the Senate will vote down the proposed amendment of the Senator from Missouri.

Mr. POMERENE. Mr. President, some days ago I offered an amendment to the bill having the same purpose in view, and I hope that this amendment will be adopted.

The Senator from Oregon has referred to conditions in Missouri as being sui generis. I beg to differ from him. I know something of what is being done in Ohio on this subject, and I know that the officers above the rank of captain are devoting a vast deal of time to the various companies which are under their control. That has been the experience in Ohio for many years; and while the Senator from Oregon speaks of the necessity for economy, I agree with him in the general proposition, but I can not agree with him in the suggestion that when a man rises to the rank of a captain he shall be entitled to $500 per year for his services, and when he gets above the rank of captain that, though he may be devoting as much time to the work of the military organization as the captain himself, he shall not be entitled to any compensation whatsoever.

If it is a question of economy that we are looking after, it may be that there might be wisdom in reducing the amount which is to be paid to some of these officers; but certainly there is no justice in providing that captains shall be entitled to $500 per year and those with rank above shall not be entitled to any compensation. A colonel, for instance, has a number of companies to look after. They may be located a distance of 50 miles or more from his place of residence. He is obliged to take the time to visit these different companies and to give attention to their work of organization, discipline, and training. I know of colonels, particularly in the Ohio National Guard, who are devoting their time and service to the National Guard, to the exclusion almost of their own private affairs.

That being so, it seems to me that we are doing nothing more than right if we adopt the amendment which has been proposed by the Senator from Missouri.

Mr. BORAH. Mr. President, I ask to have inserted in the RECORD without reading, because I do not want to take the time in my time to read it, what is known as the Bulletin of the National Guard, dated April 10, 1916. The portion of it which I desire to have inserted in the RECORD is marked by lead-pencil marks, so that it will not be necessary to insert the editorial matter, or, rather, the news comment.

The VICE PRESIDENT. Without objection, it is so ordered. The matter referred to is as follows:

[From New York Times, Thursday, Apr. 13, 1916.]

The bulletin, which is dated April 10, says:

"Bulletin to the National Guard Association: The following information is furnished regarding the progress of the military bill in the Senate:

"Two of the amendments suggested by the executive committee of the National Guard Association have been considered. The first was an amendment to section 6, providing for a National Guard section in the General Staff, to consist of five National Guard officers, etc. This amendment was passed. The second proposed to strike out section 56, known as the Volunteer Army section of the bill, but embracing the continental scheme as originally proposed by former Secretary of War Garrison. This amendment was defeated. The friends of the National Guard who undertook to strike out this section from the bill still feel that this may be accomplished. The bill is now being considered by the Senate, acting as a Committee of the Whole. Later the bill will come before the Senate for formal consideration and to confirm the action taken by the committee. It is then proposed to again move to strike out section 56. The first vote was so close and there were so many Senators absent who would have supported the proposal to strike the section out that it is felt that reverse action may be still obtained.

"As you are probably aware, the present Senate bill provides pay for only captains, first lieutenants, and second lieutenants of companies. The Senate committee advanced the suggestion that as these were the only officers who actually drilled when not in the field and on full pay, and that as the pay for enlisted men was made upon the basis of drills, pay need not be provided for other officers. Unfortunately this view, which seems plausible to the uninformed, has been accented by many in the Senate who are friendly to the National Guard. The fact is that this provision accords with many other provisions of the Senate bill and the ideas of those who have gulded the preparation of the Senate bill, which is that the National Guard should not be encouraged or even permitted to furnish officers for higher grades than those of the company.

PROVIDES PAY FOR OFFICERS.

"We first proposed to our friends that effort be made to substitute section 76 of the Hay bill for sections 108, 109, 110, and 111 of the pending bill. This would be very much preferable to the adoption of the provisions of the present bill. Senator REED, of Missouri, will, however, introduce a substitute section for section 108 of the Senate bill, which will read as follows:

"'SEC. 108. Pay for National Guard officers: Commissioned officers on the active list belonging to organizations of the National Guard participating in the apportionment of the annual appropriation for the support of the National Guard shall receive compensation for their services (except during periods of service for which they may become lawfully entitled to the same pay as officers of corresponding grades of the Regular Army) as follows, not to include longevity pay: Captains and officers above the rank of captain, $500 a year; first lieutenants, $300 a year; second lieutenants, $250 a year. Regulations to be prescribed by the Secretary of War shall determine the amount and character of service that must be rendered by officers to entitle them to said pay: *Provided*, That only officers (line) or officers of the Staff Corps and departments on duty with organizations of the line shall receive pay.'

"This provision would be very much more favorable to the National Guard than would section 76 of the Hay bill, for, while the pay to officers above the grade of captain would be the same, the higher and other officers are included who would not draw pay under the Hay bill, but who should do so. It will be noted also that the provision authorizing the Secretary to make rules as to the duty to be performed by officers to entitle them to pay does not permit such rules to reduce the pay below the rate named, while under section 76 of the Hay bill the following phrase, which occurs, viz, 'Regulations to be prescribed by the Secretary of State shall determine the amount and character of service that must be rendered by officers to entitle them to the whole or specific parts of the maximum pay hereinbefore authorized,' is undoubtedly intended to provide a means by which the regulations to be prescribed may be so fixed as to make it impossible for field or other senior officers to obtain the full pay authorized for their grades.

"It is recommended, therefore, that your Senators be urged to support the amendment to section 108 of the Senate bill which will be offered by Senator REED, of Missouri, as being more fair and equitable to the National Guard and still providing no higher rate of pay than contemplated under the Hay bill.

"By the rule adopted Saturday afternoon the consideration of the military bill went over until Wednesday next at noon. The general debate will then continue until Friday, when a 10-minute rule will apply to all speeches and one speech to each amendment. It was agreed that the final vote on the bill and all amendments will be taken Tuesday, April 18.

"It is trusted that all receiving this bulletin, and particularly the adjutant generals of the States, are regularly receiving the CONGRESSIONAL RECORD, and thus keeping advised as to the debate on the bill. It is recommended that this be done. The attitude of Senator CHAMBERLAIN toward the National Guard, as brought out in the debate, has been somewhat surprising, but is explained, perhaps, by the influences with which he has been surrounded during the preparation of his bill. The National Guard representatives here have been attacked in a most unreasonable manner on the floor of the Senate by Senator CHAMBERLAIN and others, which has not been a pleasant experience, but has not had the effect of scaring us away, as was doubtless intended.

"The biased metropolitan press has endeavored to make much of this talk of a National-Guard lobby, and continued references to the charges made by Senator CHAMBERLAIN occur. To meet this your committee has addressed a letter to Senator BLAIR LEE of Maryland, which appears in the CONGRESSIONAL RECORD of Saturday, April 8, and copy of which is inclosed. The publication of the substance of this letter in State papers is recommended, so as to overcome the ill effect of the lobby charge, as it remains unanswered.

"It is very important that there be a few National Guard officers here after Wednesday who can go direct to their Senators with proposals or recommendations which we may find it necessary to make.

"For the executive committee.

"J. CLIFFORD R. FOSTER,
"*Chairman.*

"For your information.

"GEORGE ALBERT WINGATE,
"*Member Executive Committee.*"

VIGOROUS DENIAL OF A LOBBY.

After he had urged the guard leaders to be in Washington and approach personally their Senators, Gen. Foster sent the letter to Senator LEE denying lobbying. The letter said:

"The charge that the National Guard is represented in Washington by a lobby, and that it is seeking by improper means to influence the action of Congress with regard to pending military legislation, would not, perhaps, call for comment if the statement had emanated from a less important source. As that charge has been made, it seems proper that this committee make a statement with regard to that matter. Inquiry suggests itself as to what constitutes a 'bold' or 'insidious' lobby.

"We may, without disadvantage, I think, compare the activities of the National Guard committee with those of other organizations interested in the same legislation. What the 'bold lobby' of the National Guard has done has already been stated. Here are some of the things it has not done:

"Those composing it have not sought to interview or called upon any Senator or Representative except when specially invited to do so.

"No printed matter has been gotten out or circulated.

"No headquarters is maintained, no publicity agent is employed, and no propaganda put forth."

Mr. BORAH. Mr. President, the Senator from Ohio [Mr. POMERENE] has just called attention to the fact that the officers of the National Guard in his State devote a great deal of attention to the service of the National Guard at much sacrifice of time and practically without compensation. I think according to reports on file they have been fairly well compensated thus far.

I find according to the report of the War Department that at the Ohio national rifle match, 1911, $13,892.07 was expended on the State rifle team, all of whom were officers.

In the period from July 22, 1911, to September 23, 1912, an officer, a colonel, drew pay to the amount of $1,411.18.

In the period from July 1, 1911, to September 15, 1912, another officer, also in the same State, a colonel, drew pay to the amount of $1,610.95.

In the period from July 30, 1911, to September 1, 1913, a third colonel in the State drew pay to the amount of $1,299.37. So these large amounts out of appropriation or apportionment to the State of Ohio for that year practically went to the officers, and there is no report as to any portion of this going to the enlisted men.

I call attention to some other disposition.

Mr. POMERENE. Mr. President——

Mr. BORAH. I yield to the Senator.

Mr. POMERENE. Does the Senator mean by that statement that this money has been misappropriated?

Mr. BORAH. Since the Senator asks the question it requires a candid answer. Yes; that is just exactly what I mean.

Mr. POMERENE. That is a pretty serious charge, if it be true.

Mr. BORAH. I make it without any hesitation whatever. The record of the War Department will show that this nearly $8,000,000 which we have been appropriating for the National Guards has been shamefully and disgracefully wasted, and some of it has actually been embezzled.

Mr. POMERENE. If that be so, there is a remedy for all such wrongs as that, and we have here——

Mr. REED. What about the War Department?

Mr. POMERENE. Has this been done with the knowledge of the War Department and has the War Department taken no steps to correct this evil, assuming that the evil exists?

Mr. BORAH. I do not know where the responsible line is as between the War Department and the National Guard. It is wholly immaterial to me for the purpose for which I am presenting this. I know a certain large amount of money, $8,000,000 a year, has been apportioned to the States of the Union for the benefit of the National Guard, and if the Senator from Ohio and other Senators will examine into what has gone with the $8,000,000 a year they will hesitate to put $50,000,000 into the same place. I have not come across in my public service a more indefensible waste of the public money than the official records disclose as to this National Guard fund under the Dick law.

Mr. POMERENE. Mr. President, it seems to me that we have auditors in the War Department, and if any of this money has been wrongfully expended there ought to be some manner——

Mr. BORAH. Mr. President, I desire to proceed, because I think I can give the Senator some information which will cause him to reflect upon this matter a little. I have felt all the time that we were proceeding in this matter recklessly and without the facts before us.

Camp of instruction, Alabama, 1912: Troops in attendance never in excess of one regiment; duration, 20 days. Amount paid to members of staff departments of its State who were not members of the regiments participating, $2,822.12.

Camp of instruction, Delaware, 1912: Troops in attendance, 4 companies. Total payments to officers, $1,937.81; to enlisted men, $625.60.

Camp of instruction, Mississippi, 1912: Enlisted men participating were never at any time in excess of 200; total payments to officers of staff departments only, $1,999.45. Duration of encampment, 20 days.

Total funds disbursed in Montana during latter part of 1911 to end of 1912 was $11,893.77. Of this amount $9,754.47 was paid to officers and $694.44 to enlisted men.

Texas, 1911: A general officer drew Federal pay to the amount of $1,286.93.

In Arizona, the amount of Federal funds expended from July, 1911, to June 30, 1912, was $8,414.40. Of this amount $2,070.96 was expended for officers' schools and $4,998.93 for the State rifle team, of which 12 out of a total of 18 members were officers. During this period only six enlisted men received pay from Federal funds.

Alabama: Total Federal funds devoted to expenses—including pay—of rifle team in 1911, $12,669.28, of which $9,881.28 was paid to officers and $489.39 to enlisted men. At camp of instruction in 1912 the total pay of officers was $3,317.47; enlisted men, $544.70; civilians, $1,762. At this camp the total sum of $5,624.17 was paid for the instruction of 48 officers and 99 enlisted men for a period of 22 days.

In Texas the quartermaster embezzled $30,000. There are other similar instances. The records of the War Department further show that there is now a total shortage of property issued to the National Guard of $1,352,761. In many States the shortages are so great that if charged against the appropriation there would be nothing going to the States. This large amount is wholly unaccounted for—lost, wasted, and in some instances embezzled. Now, in the face of these facts we are restless to give them fifty millions instead of eight millions.

Mr. POMERENE. Do I understand the Senator to say that these expenditures were illegal?

Mr. BORAH. Technically they might have been within the law except the instance where there was a plain, open, and notorious embezzlement and the man left the country. What I mean to say is the manner in which this fund has been disposed of, the manner in which it has been taken charge of by the officers and used by the officers exclusively, in the manner the record discloses, is perfectly shameful, and it can not be defended upon any theory on earth except a political exigency. As a matter of the conscientious use of public money, it is, in my judgment, most reprehensible.

Mr. POMERENE. May I ask the Senator what the report was from which he was reading?

Mr. BORAH. I was reading figures and facts disclosed by the reports and records of the War Department, subject to the call of any Senator who wishes to see them.

Mr. POMERENE. Has there been any effort made by legislation or by the administrative department to correct these irregularities?

Mr. BORAH. I do not know, Mr. President, and I am not now seeking to fasten the particular responsibility. I am looking after the man who got the money when I am asked to transfer some more money to him. I am asked to appropriate in this bill from forty to fifty million a year for the benefit of the same class of men who have thus recklessly, wastefully, shamefully spent millions already. When I am asked to do that, I look up the record and I find the record as given. Now, others may do as they please, but I will feed no such waste as this.

Mr. POMERENE. If there have been any irregularities, of course, they should be corrected. I was addressing my remarks to the provision of this bill. If there has been any money wrongfully expended in the past——

Mr. BORAH. I think the Senator will have to defend his officers in his own time. I think it is a job that can not be done in 10 minutes and divide the time with me.

Mr. POMERENE. I shall be very much surprised if there is any officer in the Ohio National Guard who has violated the law in any respect whatsoever.

Mr. BORAH. I have no doubt the Senator will be surprised. It is wholly immaterial whether there was a technical violation of the law or not. We are here under the guise of national preparation purporting to appropriate large sums of money from the already overburdened taxpayers upon the theory that this organization, this institution, is an elementary part of national defense, when we have here the record for the last eight years under the Dick law, which shows that they have been wastefully and shamefully appropriating to themselves practically in effect the money which has been given to them. I do not say a technical crime has been committed, but morally it is intolerable. I say it is time that this body should stop to reflect, that in preparing this country for war we are not giving the people of this country what they suppose they are getting by the dollars which they will have to pay. We are filling this bill from beginning to end with pure political appropriations from the Treasury of the United States, and we could not do it, we could not proceed a step, if it were not under the guise of national preparation. You could not bring the bill here which we have for the National Guard in time of peace when the people had their attention riveted on it. You could not proceed with it to a successful end as you are about to do now. You are taking advantage of the people's interest and wastefully using the money not for preparation but for politics.

The VICE PRESIDENT. The Senator's time is up.

Mr. SMITH of Georgia. Mr. President, my own view is that the National Government should not pay anything to these officers, except when ordered out by the Government or doing work required by the Government; that they ought to stay practically as they are now with reference to their relations to the State and Nation. Whether this is good politics or bad politics, if it is right we should not fear to do it. If a proposition of that sort is submitted, removing the effort in this bill to change the status of the guards, I shall vote for it, but in the meantime I move to run the figure "2" through the amendment of the Senator from Missouri. Where he has $500, I move it be made $250; where he has $300, I move it be made $150; and where he has $250, I move that it be made $125.

Mr. REED. Mr. President, tirades against the National Guard coming from any source, however dignified, will not wipe out the great fact of history that the National Guard have in every instance responded when called upon; that they have served with efficiency and bravery; that from the members of the militia have come officers who have served with honor and distinction in every war in which our country has been involved. Neither does intemperate attack avoid the truth, always apparent, that we must have some organized force in the country outside of the Regular Army unless we are ready to increase the Regular Army so that it will number from 250,000 to 500,000 men.

I challenge the figures of the Senator from Idaho [Mr. BORAH]. I have not had an opportunity to examine them, but I say if those figures are true in the sense they were employed by the Senator, then somebody in the Regular Army ought to have been long ago court-martialed for permitting the misappropriation and misuse of funds. I say that if those figures fairly represent the case, then some of the civilian officers of the Federal Government ought to be dismissed for having failed to perform their duty.

I apprehend there may have been a thief in the National Guard. So, sir, there have been thieves in the Regular Army. There have been thieves and scoundrels in the pulpit. There have been some men in the United States Senate who were sent to jail. I am unwilling that reflection should be cast upon a body of men who are giving their time and labor, up to this time, without pay unless, at least so far as my voice shall go, I repudiate the aspersions thus cast upon honorable men.

Mr. President, we all know what the battle line is here. There is scarcely an officer in the Regular Army who does not want the Regular Army increased to an enormous extent. There are but very few officers in the Regular Army who would not willingly kill off every attempt to create a citizen soldiery. What they want is the professional soldier. What they want is a vast permanent military establishment. What they demand is increased pay for themselves and that the money shall go to an organization of which they are life members. They also want the opportunity for rapid promotion, as has been suggested by the Senator from Mississippi [Mr. VARDAMAN]. Perhaps all this is but natural. I have no desire to be harshly critical. I have no doubt they proceed in good faith.

Mr. President, it is easy enough to understand why the pay for militia officers above the rank of captain is cut off in this bill. A lobby organized among the Cavalry officers of the Regular Army selected two of its own men to come here and look after the interests of the Cavalry, and those two men are named in the report of the chairman of this committee as "the military advisers of the committee." The evidence of the truth of my charge I put in the RECORD yesterday.

Mr. CHAMBERLAIN. Mr. President, may I make just one correction there? I know the Senator wants to be fair. Maj. Connor has never been in the Cavalry, but in the Engineer Corps.

Mr. REED. I was in error as to Maj. Connor. I was speaking from recollection and confused Maj. Connor with another. I am glad the Senator from Oregon called attention to the error.

Now, Mr. President, I know that the chairman of the Military Committee meant to do the right thing, but I say that when that committee was advised by men who were interested in destroying the National Guard it is well to look

carefully into the committee's work. When we say to every officer of the National Guard, "If you go one step above the rank of captain, you shall not have a cent of pay, and you shall be put in such a position that when your organization is ordered into active service you will be relegated to the rear," we kill the National Guard. The military experts who believe in a Regular Army and not in a National Guard knew that when they got that kind of provision put into this bill. If the bill passes as it is, you have killed off the only civilian army we have. I mean when I say civilian army the only military arm organized among civilians that constitutes an army of strength at this hour.

I appeal to Senators: If our troops in Mexico should be cut off to-morrow, if they should be surrounded and in danger of slaughter, whether they would not expect the President to call out the National Guard, whether they would not expect the National Guard, inefficiently equipped as it is now, unsustained as it has been in the past, to be on the trains within 24 hours moving to the border of Mexico. I say they would be there to a man. I do not claim that they would fight as well as Regulars at first, because they are lacking somewhat in training, but they would be there with their bodies, with their stout hearts, with their high courage, and inside of four months of time they would be the equal of the Regular soldiers, and they would be the equal because they are, on the average, superior in point of intellect and general training to the enlisted man of the Regular Army.

I hope we are not by this bill going to destroy our present army of real trained citizen soldiers and render doubtful, if not impossible, the existence of such an army in the future.

Mr. LODGE. Mr. President, I think it is very unfortunate to have the National Guard presented here as the enemy of all other branches of the military defense of this country. I have a great respect for the National Guard. I have great respect for the National Guard of my own State. They have sent me no letters or telegrams asking me to vote out the provisions for the volunteers. They have sent me no letters or telegrams of any kind asking me to do anything to injure the other provisions of the bill for supporting the defense of the United States by land. They desire, if they had their own way, to be completely federalized and mustered into the service of the United States. They are an excellent National Guard. I have the profoundest respect for them. They are now and always have been for the national defense just as they were when the Sixth Massachusetts forced their way through Baltimore to defend the Capitol of the United States.

I am very grateful to them, Mr. President, because they come forward and are ready to defend the country. I am very grateful to the young men who go to the Plattsburg camps; I am very grateful to the men who are ready to volunteer and give their time that they may be able to come to the defense of the country whenever they are needed.

But, Mr. President, we have also a Regular Army which has been made the subject of wanton attack here on this floor. I for one am now and always have been very grateful to the Regular Army.

The Senator from Idaho [Mr. BORAH] has shown from official reports that the money spent under the Dick bill has been largely given to officers of the militia while the enlisted men have had little or nothing. He has not charged that it was spent illegally. He simply shows that it has gone. And what is the reply? That these figures are due to some wickedness of the Regular Army.

Then, Mr. President, we have also heard cheap sneers about gold lace and all that sort of thing. When I hear such unworthy flings at the Regular Army I am reminded of Kipling's lines, which everybody knows, probably, written some time ago about the British soldier, where he said:

Then it's Tommy this, an' Tommy that, an' "Tommy, 'ow's yer soul?"
But it's "Thin red line of 'eroes" when the drums begin to roll.

Who is fighting your battles now in Mexico? The Regulars. Who is holding your border in Mexico? The Regulars. Who has never failed you on any battle field? The Regulars. Who led your armies in the Civil War to victory on both sides? The Regular officers; the graduates of West Point.

Mr. President, when Senators talk about aspersions on the National Guard I, for one, think we have had enough of aspersions on the Regular Army. I am grateful to them. I honor them. I respect them. When we are providing for the national defense is it not possible that we should be fair to every branch of the service? Is it not possible to deal with the National Guard without slandering the Regular Army? They are Americans, too, although scattered over the continent. They have no votes and no politics, and they are doing their duty to-day as they have always done it. Can we not discuss this bill without attacking the American soldier who is fighting our battles and giving his life for us at this very moment?

Mr. THOMAS. I shall take advantage of this discussion to say for the National Guard of my State that no member of it, either officer or private, has corresponded with me either to solicit my support of or my influence against any part of this bill or any other bill. I think that is most creditable and patriotic, and I believe much of the acrimony of this debate would have been avoided had the guard in other States followed the example of my own.

It is not my purpose, Mr. President, to reflect upon the National Guard nor the Regular Army, nor indeed upon the motives of my associates in supporting or opposing the amendments to this bill; but I am opposed, especially since the exhibit presented here by the Senator from Idaho [Mr. BORAH], to increasing disbursements to the officers of the National Guard from the Federal Treasury. I think the Senator from Georgia [Mr. SMITH] was exactly right when he declared the proper policy was to pay them nothing. The theory of compensation in military affairs—the true theory—should be to pay the man who is required to give all of his time to that business. Necessarily he must look to the Government for his livelihood. We, therefore, support the Regular soldier and pay him a salary. We also pay the Regular officer a salary. This is as it should be, and beyond it we can not safely go.

The militia, Mr. President, both privates and officers, is made up of the citizenry of the country. Military training and military organization are episodes in their lives. It does not comprise their occupation. The generals and the colonels—certainly the generals of the National Guard—receive salaries from their States. It is my impression also that the officers of lower rank, certainly in some of the States, are likewise compensated. These gentlemen are in other vocations of life. They do not and should not depend upon these salaries for a livelihood.

The Senator from Ohio [Mr. POMERENE] stated a few moments ago that some of the officers of his State who are to be provided for by the amendment now under consideration, sometimes neglected their own affairs in order to give proper attention to their military duties, which, of course, presupposes that they have private affairs. We made a mistake, I think, in providing Federal compensation for any of these officials. If we had adhered to the old rule, the only logical rule, of compensating only the men who give all of their time to military duty and whose vocation is along military lines, we should not have been confronted with the pending dilemma; but do not let us solve it by increasing the public burden.

We have made heretofore due provision for the officers who, speaking generally, do the actual work. There may be exceptions. Why should we increase the burdens of this bill to the extent of a million dollars a year by providing salaries for those who hold higher commands in the National Guard and possess other and ample means of livelihood?

Mr. WORKS. Mr. President, I have been opposing the provisions of this bill, the objects of which are to federalize the National Guard. I have done it because I think it is in plain and open violation of the Constitution of the United States.

The National Guard of my State is made up in large part of some of our very best citizens. I am not intending by any course I am taking here, or by anything that I may say, to attack the National Guard as such. My own judgment about them is that they are a State organization, and that their duties should be kept strictly within the State.

I have no doubt in the world that if the National Guard of California were called upon as provided in the Constitution, they would respond promptly, and to a man, and that they would make excellent soldiers. They are patriotic citizens, who are acting in good faith as members of the National Guard, and they would respond to any legitimate and proper call to the service of the United States. I believe that they should be kept within those limits; and it is for that reason, and for that reason only, that I have opposed some of these provisions, and expect to continue to do so as such amendments are offered.

Mr. CUMMINS. Mr. President, the amendment offered by the Senator from Missouri [Mr. REED], important as it is, sinks into insignificance when compared with the importance of the charge made by the Senator from Idaho [Mr. BORAH]. As I understand, he says that the appropriations that have been made by Congress from year to year since 1908 have been, by the officers of the National Guard, shamelessly misappropriated and misspent. If they have been shamelessly misappropriated and shamelessly misspent, the officers who are responsible for that course are dishonest men, and they ought not longer to receive the confidence of Congress or of the people.

If these men, who have been intrusted by the authorities of their States with the performance of these high duties, have

betrayed their trust and have stolen and misappropriated—because in moral effect there is no difference between the words "stolen" and "misappropriated"—they ought to be brought to account, and no single dollar should be committed to their care if the charge made by the Senator from Idaho is sustained. That is his view; it is his opinion that because these thousands of officers throughout the United States have been misappropriating the money which has been given into their care by Congress, therefore they should not be given more money; that having dealt unfaithfully with $8,000,000, they ought not to be given the opportunity to deal unfaithfully with $45,000,000.

Without at all questioning the sincerity of the Senator from Idaho or the accuracy of the report he has in hand—for I have not seen the report—I do not believe that the officers of the National Guard are dishonest. There are, I assume, the same frailties among the officers of the guard that you will observe in the Senate of the United States or in any other body of men; but I do not believe they are dishonest men. If the money has been expended as provided by Congress, they have but performed their duty. I am not familiar with the way in which it has been expended. If it has been expended in violation of the command of Congress, then they are dishonest men, and I think we could not do better than to halt this bill at this point and ascertain whether or not the officers of the militia of the United States are the kind of scoundrels that may be inferred from the report that has been read.

I know some of these men—a few of them it is true. I know those in my State, and a higher-minded, more intelligent, more faithful, more unselfish body of men never devoted themselves to the public service than the officers of the National Guard. I am shocked beyond measure to hear the charge that has been made against them.

I am not asserting that any of the tables that were given by the Senator from Idaho are not true; I do not know. I have simply had no opportunity to learn. It is the first time in all my experience that I have ever heard the officers of the guard charged with dishonor or with dishonesty; and I think we ought to know whether they have taken the money of the country and have spent it for purposes other than those directed by Congress. I do not believe it. Other Senators here will know of their own guard. I know of the National Guard of Iowa.

I will stake my whole life upon the fidelity with which the adjutant general of the State of Iowa, under the command of the governor, has spent the money which has been intrusted to his care by the Secretary of War or by the Secretary of the Treasury. It will be most unfortunate if this bill is considered and disposed of upon the hypothesis that the officers of the National Guard are not good citizens of the United States.

Mr. SHAFROTH. Mr. President, I should like to ask the Senator from Iowa a question before he takes his seat. Is there not a board in the State of Iowa similar to the board which we have in the State of Colorado, which passes upon all of the expenditures made by the officers of the National Guard, and do not those expenditures have to receive the approval of that board which, in the State of Colorado, is the governor of the State?

Mr. CUMMINS. There is such a board in Iowa. The governor of the State is the commander in chief of the army in Iowa, and he, together with the executive council, passes upon the accounts of the adjutant general. The adjutant general is a sworn officer of the United States; he becomes the disbursing officer of the United States, and expends all the money that is appropriated by the Federal Government for the use of the National Guard in Iowa.

Mr. SHAFROTH. Then, if these expenditures were wrong, it would involve even the governors of the States, would it not?

Mr. CUMMINS. It would in our State. I do not know how it would be in other States.

Mr. SHAFROTH. It would in the State of Colorado; I am sure of that.

Mr. POMERENE. Mr. President, I am just a little surprised at the course this debate has taken. The question for consideration before the Senate is, Shall the plan which has been proposed by the Senate Military Committee be so modified that officers of the National Guard over and above the rank of captain will be entitled to receive the same pay that a captain receives, or will they be compelled to render their services gratuitously? That is the question which is before us. We have been dealing a good deal in crimination and recrimination in this debate. Charges have been made against certain Senators, because they happened to differ from certain other Senators, that they are perhaps playing to the galleries or taking their position because of the political effect that it may have. I for one deny the charge and resent the insinuation.

It is stated that $8,000,000 are appropriated annually for the National Guard. I have not yet had the time to investigate in order to ascertain exactly what the figures are. I am told that the original Dick bill provided for an appropriation of $2,000,000 per annum, and I have that bill before me. I am also told that, in addition to this sum, by subsequent legislation another appropriation of $2,000,000 was made, making the total appropriation for the National Guard $4,000,000. I do not say that that is correct, but that is the information I have on the subject.

And now my good friend the Senator from Idaho [Mr. BORAH] refers rather scathingly to some of the officers of the Ohio National Guard. I know personally a good many of those men. They have never come to me—not one of them—in any other spirit than that in which I should be approached by any man who was interested in any piece of legislation which was occupying the attention of the Senate. I challenge the correctness of the statement which has been made, that any one of these officers has been guilty of any violation of the law. I shall not have a plea of guilty entered for any one of them because he has been indicted.

These men are of good reputation in their respective communities. They are men of the best character, who have been intrusted year in and year out with responsible positions in connection with the National Guard in the State of Ohio as well as in private life. If they have been guilty of any wrongdoing, I have no word in defense to make for any offense committed; but I submit that the Senate of the United States should not decide a question of legislation here, because, forsooth, there may be some one somewhere who has got some money to which he may not be entitled.

In Ohio, as I am told, the private in the National Guard is paid $1 per day, whereas the Federal authorities pay 43 cents per day. I am not here to condone any wrongdoing, if there has been any; but I am not here to sit in silence when an accusation in very general terms is made against the entire National Guard, even if there may be some wrongdoing on behalf of one or more members of the National Guard.

I have not said one word in disparagement of the Federal Army, neither shall I; and I am not going to indorse the statements which may be made in wholesale fashion against the National Guard. Burke, I believe it was, said, "You can not indict a whole nation"; and, good lawyer though my distinguished friend from Idaho is, he can not indict the entire National Guard because of some wrongdoing, whether it be on the part of officers in the Federal Army or on the part of officers in the National Guard. If there has been wrongdoing, it is time for a house cleaning. Let us not be controlled in our legislation now because there may have been some violation of law, some indiscretion in administration it may be; but let us bend ourselves to the purpose of adopting legislation here which may be for the good of the entire country, without attempting to cast reflections either upon the National Guard or upon the Army or upon Senators who may be taking one side or the other of this question.

I do not question the motives of any Senator who has spoken on either one side or on the other of this measure, and I shall not do so; but it seems to me that the debate can pursue a peaceful and orderly course without dealing in any crimination or recrimination.

Mr. BORAH and Mr. STERLING addressed the Chair.

The PRESIDING OFFICER (Mr. ROBINSON in the chair). The Senator from Idaho.

Mr. BORAH. Does the Senator from South Dakota wish to speak?

Mr. STERLING. I want to address the Senate for a few moments.

Mr. BORAH. I will yield if the Senator desires to speak.

The PRESIDING OFFICER. The Senator from South Dakota.

Mr. STERLING. Mr. President, a few days ago I received a letter from a constituent of mine who evidently had misunderstood my position in regard to the National Guard. I think he saw by the RECORD that I had voted for section 56—that section of the bill providing for the volunteer army—and, without looking or inquiring further, he came to the conclusion that I was opposed to the National Guard; and so he says in his letter:

> I write to express my hearty appreciation of your vote against the National Guard.

I wish to quote a part of my reply to the gentleman who thus misunderstood my vote. I wrote to him as follows:

> I fear you do not quite understand my position in this matter. I did not vote against the National Guard, but did vote for the volunteer-army provision in the pending Army bill. Some of the National Guard people were opposed to the volunteer-army plan, but not all by any means, and I have heard no word of protest against the volunteer army from any of the National Guard officers or men in South Dakota. My opinion is that the National Guard can be made a most effective military force in the event of war, and in case of the mobilization of

the armed forces of the United States I would be in favor of giving the National Guard first place after the Regular Army.

Now, Mr. President, I feel that I would be derelict in duty unless I made some protest against the wholesale charges made by the Senator from Idaho [Mr. BORAH] against the National Guard as I know it and as I know the men composing it. They have not been in evidence here during the pendency of this legislation working against the volunteer army. It was my good fortune to have as a law partner for 10 years the present adjutant general of my State. We are on the most friendly terms, but he has not written me one word against the volunteer army. On the other hand, I have a letter here from a former adjutant general of my State in which, while he speaks most approvingly of the provision for the volunteer army, he does not say a word to detract from the National Guard of the State as now constituted.

I think I know something of the National Guard in my State and of the spirit which has animated the enlisted men and the officers of that organization. I never have heard one charge of wrongdoing against them or one hint or suggestion that there had been any misappropriation of funds apportioned to the National Guard in my State. I know, Mr. President, that these officers and these men have sacrificed both in time and money to keep up the National Guard so that it might be an effective instrument in the hands of the Federal Government, if ever the Federal Government should need its services; that the animating motive, for the most part, as has been expressed by others in this Chamber, for enlistment on the part of officers and men in the National Guard, has been the thought that at some time they might be of service, not particularly to the State in the enforcement of the laws of the State, but that they might be ready for the service of the Federal Government in case of need.

The Senator from Idaho makes a general charge about the relative amount of money received by the officers and the enlisted men of the National Guard; but, Mr. President, that does not go to show or to prove for a moment that the officers have appropriated money that belonged to the men, and which did not belong to the officers. There is no showing here, nor do I think that the Senator from Idaho can show, that the men have ever failed to receive all the Federal money which belonged to them under the law.

I regret, Mr. President, very much to see these attacks upon the National Guard. My contention is that, as between the volunteer army and the National Guard, the National Guard, because of its older organization, because of its spirit, because of its longer training, would be the more efficient of the two in case of actual or threatened war; and, for that reason, I have favored a distinct provision in the pending bill to the effect that, in case of a call for the armed forces of the United States for service, aside from the Regular Army, the National Guard should have first place in mobilization and in service in the field.

Mr. BORAH. Mr. President——

The PRESIDING OFFICER. The Senator from Idaho.

Mr. BORAH. Mr. President, we have a National Guard in the State of Idaho, so called—"State militia" is the proper name and the name under which it has always gone until the desire arose to federalize the State militia. My personal relation with the State militia of my State is not unfriendly at all; in fact, I have been in very intimate communication with them for the last seven or eight days. I know a number of them, and I presume, in a casual way, I know them all; but I know a number of them intimately. I could do the same thing as the Senator [Mr. STERLING] who has just taken his seat and as other Senators have done, for, so far as I know, the personnel of the National Guard or the State militia of my State is above reproach. I do not know of any one of them that I would distrust personally, and I have no personal feeling in this matter at all. I could engage in the same fulsome eulogy on "our boys" which we have heard here ad nauseam. But that would not change my belief that the State militia as a military force is ineffective; neither would it change the facts now on record as to the manner in which the "Dick fund" has been wasted. I do not believe, in the first place, that we can do what we are attempting to do legally, and, in the second place, I do not believe that under the kind of training which they are given they will ever make soldiers in the sense that we will need soldiers if any real peril should come to us.

Mr. President, the Senator who has just taken his seat [Mr. STERLING], the Senator from Iowa [Mr. CUMMINS], and the Senator from Ohio [Mr. POMERENE] say that I have made a general charge. I have done nothing of the kind; I have made a specific charge. I have called attention to specific figures, to specific years, to a matter of record. It is not a generalization at all; it is not an attack upon men in such a general way that they do not know what the charge is which I have made. I have stated that the money which has been appropriated under the Dick law has been shamelessly used; has not been used in such a way as it should have been used if the men who were using the money had been the taxpayers who were paying it. Now, instead of these able Senators referring to general charges I invite their attention to a specific public record and ask them do they approve this record?

For instance, you have 18 men in a camp for a few days; 12 of them are officers and 6 of them are enlisted men. They draw several thousand dollars. Six hundred and some odd dollars go to the enlisted men and eight or nine thousand dollars to the officers. That is not technically a crime, but morally it is; and I assume full responsibility here upon the floor of the Senate, until these figures are corrected and made to appear untrue according to the reports of the War Department, for the statement that it is a shameless use of the public money. I challenge Senators to the record and ask them for their defense. It will not do to go off into eulogies. I have given you certain figures. Do you deny them?

If the Senator who has just taken his seat and the Senator from Iowa want to attack the Senator from Idaho, let them disprove the figures which I have given here to the Senate; let them show that the record from which I have quoted is an error, and that it is not a fact. When they shall have done so, I am not too proud or too cowardly to apologize upon the floor of the Senate and before the people for having misled, to a certain extent and for a limited time, some of my associates upon the floor. I have improvised nothing; I have relied on the public archives. And I think Senators would do more credit to their intellectual candor if they would seek to deal with the record facts rather than regret wholesale charges. If the charges are wholesale it is because the wasting of the money has been wholesale. I say to you the deeper you delve into the last eight years the less you will feel disposed to expose the facts here upon the floor of the Senate; the more you follow the details as to the money lost, the money and property wasted, lost, and embezzled, the less you will care to have the matter discussed in detail here upon the floor of the Senate.

You say to me that this is something new to you. It should not be anything new; it is a matter of public record. It has been called for and furnished to me, and I present it here on the floor of the Senate.

Now, my friends, I do not think we can wholly escape responsibility by saying that some civil officer has been guilty of misconduct if these men have not been prosecuted. The Senator from South Dakota [Mr. STERLING] expresses regret that the Senator from Idaho has made these charges; it would do more credit to the able Senator if he would express regret, rather, that the records exist. Would the Senator have the Senator from Idaho conceal the record facts? We have a responsibility ourselves, and we are appropriating large sums of money under conditions which, in my judgment, in view of the past are unwarranted. I am perfectly willing to state all the facts I know concerning the proposition and to take the responsibility, whatever it may be, for it.

Mr. REED. Mr. President, will the Senator yield for a question?

The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from Missouri?

Mr. BORAH. I do.

Mr. REED. The Senator has referred to the large amount of money expended at some military camp where there were only 18 men, 12 of whom were officers. Does the Senator want to leave the impression with the Senate that that is a typical military camp; that that is a fair example of the kind of camps that are held; that it is not a fact that generally there are hundreds and frequently thousands of these men in camp?

Mr. BORAH. Mr. President, I do not desire to indulge in invidious comparisons, but I do think there are a few States which have commendable State militia. From my investigation I have ascertained that there are three or four States where there seems to be no cause for criticism. It seems to me that they are doing their duty, and they are not at all subject to criticism, and I have not criticized them. I have made no such general statement. I have called attention to specific instances, and named the State and named the year and named the time, and there are more of them—plenty more of them. I have not named them all. But there are exceptions to that, and I do not know that the State of Missouri would suffer if the facts were presented here—I do not believe that it would—or the State of New York.

Mr. REED. The question I am asking is not that. The Senator spoke of this one instance of a camp with only 18 men present. I wanted to ask him if he wanted the Senate to understand that that is the ordinary military camp, and whether it

is not true that in these military camps there are hundreds, and frequently thousands, of men mobilized?

Mr. BORAH. In some of the States that would be true; but taking it as a whole, about 50 per cent of the State militia attend these camps throughout the country.

Mr. REED. About 50 per cent?

Mr. BORAH. About 50 per cent.

Mr. REED. That runs it into hundreds or thousands itself, and answers my question. Now, I want to ask the Senator this further question: He speaks of no money going to the privates. Is not that true because there has not been any provision in the law for the payment of privates at all?

Mr. BORAH. Mr. President, as I understand, this money goes directly to the officers of the National Guard. It is distributed to them and, of course, it depends largely upon their honor and upon their sense of right and of their relationship and duty to the enlisted man as to what they shall do for the enlisted man.

Mr. REED. Will the Senator pardon another question?

Mr. BORAH. In just a moment. But there is not any defense on earth in morals—there may be technically, but there is not any use in trying to cover it over with nice language—there is not any defense in morals to the record which is disclosed here as to the manner in which great numbers of the officers of the National Guard use this money.

Mr. REED. I want to ask the Senator if it is not true that an analysis of these figures will show that this money which was paid to certain officers was in fact used for the mess for the men and for the expense of putting up tents, and that it simply appears charged to the officer, whereas it was expended for the benefit of the camp? I want to ask if that is not the probable explanation of all of it?

Mr. BORAH. That would be an explanation which the Senator could make, but whether it is based upon facts or not I leave to the Senator to say. I could imagine the Senator from Missouri defending a man charged with embezzlement and making that a very successful defense.

Mr. REED. Oh, no, Mr. President; if the Senator will pardon me, what I mean is this: Here is money appropriated for the benefit of the National Guard, for the benefit of a camp. They go into camp. The food is bought to feed the men. The money actually goes through the hands of the quartermaster. It is therefore charged to the quartermaster; but he did not take it and use it or embezzle it. He employed it for the purpose of feeding the men in camp.

The PRESIDING OFFICER. The time of the Senator from Idaho has expired.

Mr. REED. I am sorry; I think I have imposed on the Senator's time.

Mr. BORAH. Is my time up?

The PRESIDING OFFICER. It is.

Mr. REED. I think the Senator ought to be allowed at least to answer that question.

Mr. HUSTING. Mr. President, I have listened to this debate for a couple of weeks, and I regret to say that most of the discussion has seemed to revolve around the question of whether a given course of action is a favor to one branch of the Army or the other.

I have not taken any part in this discussion heretofore; but because of the character of the debate one who sits in his seat and merely votes is put in a position whereby his vote upon every one of these questions, in the light of the debate and the questions that are raised and the charges and countercharges bandied from one side to the other, stands as taking part in the indictment of the Regular Army and championing the militia, on the one hand, or countrariwise, standing as a champion of the Regular Army and indicting the militia, on the other.

When section 56 was up we were told that that provision was aimed at the National Guard; that if that were passed it would mean that those who helped to pass it were taking part in the destruction and annihilation of the National Guard. I voted to retain section 56 in the bill, believing that under all the circumstances and conditions now obtaining it was a good and proper thing to do. Now we are called upon to vote upon a measure whereby, if we vote in favor of this amendment, we are to be charged with aiming a blow at the Regular Army or unduly championing the cause of the National Guard.

I rise merely to say this in my own behalf for the sake of explaining votes that have already been cast and for the purpose of explaining votes that are going to be cast. As far as I am concerned, I am going to try to vote, and have tried to vote, in the light of what appears to be the best thing for the United States. I do not think we should vote for a measure because it is a sort of favoritism to the National Guard. The question, it seems to me, ought to be whether it is good for the United States. On the other hand, a vote ought not to be cast because it is a good thing for or an evidence of favoritism to the Regular Army, but because it is a good thing for the country. I wish no vote I have cast or that I will cast on the amendment and passage of the pending measure to be considered an indorsement of the charges made against the Army or the National Guard. I do indorse the good things that have been said of both the National Guard and the Regular Army. I should like to have my vote construed only as my expression of opinion or judgment of what I believe is the best for the country. I hope I may be able to vote upon the pending measure with the thought only of the country and entirely divorced from the idea of favoring or, on the other hand, of discriminating against the Regular Army or the National Guard.

I want to say, as far as the National Guard of my State is concerned—and it does not need any defense at my hands, because I think it stands as the foremost organization of its kind in the United States—that I have never received a letter or a telegram from any member of it, nor was I ever interviewed directly or indirecly by any member of it, in behalf of any measure coming up before this body; nor have I received any criticism from any member of the National Guard for voting to retain section 56 in this bill. I want to say that the National Guard of Wisconsin is a splendid body of able and patriotic men and officered by men of great ability and zeal.

While it is true that the Senator from Idaho does not indict the National Guard of Wisconsin, yet his charges are so broad that unless specific organizations are exempted from them his criticisms might well lie against the National Guard of Wisconsin. I for one want to place upon the record my repudiation of anything said by the Senator from Idaho which in any way might reflect on the National Guard of Wisconsin.

It may be true that the Senator from Idaho gave specific instances of misconduct on the part of officers of the National Guard, and did not intend any reflection upon Wisconsin's guard, but if such specific instances have any relevancy to the issue here involved the only relevancy that I can see is that those charges against the National Guard were meant to apply as an argument against the adoption of the amendment of the Senator from Missouri [Mr. REED]. In other words, I understood the criticism to be expressed in the Senate for this purpose and no other—that because of any specific instances of misconduct on the part of some officers of the National Guard the Senator drew the inference that such misconduct was typical of the action of other members of the National Guard, and therefore—and I think the Senator from Idaho said so—no money should be voted for this organization. I can see no force in the charge unless the Senator meant in a general way to charge mismanagement and misconduct on the part of the National Guard.

All that I have to say about that is this: If the officers of certain organizations of certain States have misconducted themselves, other States, where officers have not misconducted themselves, but who have made splendid records for the organization, should not be put in the same class, or be punished or penalized because the officers of other organizations did not do their full duty. In other words, I do not know why an officer in the Wisconsin National Guard who has done his duty in every respect should be put in the same category with officers of the guard or some other State who, the Senator claims, have not done their duty. If there are any such—and I do not know whether there are or not, I believe and hope not—I say that a member of the National Guard of Wisconsin should not be put under the same cloud that has been cast over some other, nor should such officer in any way suffer or be penalized for what somebody else in some other State—with whose misconduct he had absolutely nothing in common—has done or expected to do in the premises.

In regard to this amendment, I assume that the committee in its wisdom thought it best to pay from the Treasury of the United States those of the rank and below the rank of captain in the National Guard a certain sum of money. Assuming that that is a good policy—and I say I am not sufficiently informed upon that subject to know whether it is good or not, but I am willing to take the committee's word for it; they have studied the question—I say, then, that I have not had sufficient information to satisfy me that those above the rank of captain should be required to donate their services gratis in the Army any more than any other soldier should do so.

We know these men. I know that in my State they are not rich men and they can not afford to serve gratis any better than any other soldier can in the Regular Army or the militia. I can not understand the fairness or justice in saying, because we want to be economical, that therefore we will pay some and expect the others to carry the load by doing their work for

nothing. In other words, I can not see the justice or fairness of saying to some men, "We have got enough to pay everybody until we get to you, but when we get to you the Treasury is exhausted, and you will have to serve without pay." I can see no logic in the argument that we can vote money to pay soldiers for services in the National Guard until their efficiency raises them above the rank of captain and then "reward" their faithful and efficient service by cutting off their pay. I do not think you can attract soldiers and rouse their ambitions by such treatment as that.

I say, assuming it to be a good policy to have captains and those below in rank in the guard paid by the United States, there can be no good argument advanced or any good reason given why men promoted above a captaincy should not receive at least the pay of the rank from which they have been promoted.

Mr. HARDING. Mr. President, I do not rise to discuss the pending amendment, but I do wish to put into the RECORD a bit of information which I know the distinguished Senator from Idaho [Mr. BORAH] would want me to put there. I am sure he has no desire to misrepresent the conduct of the National Guard of Ohio.

Mr. BORAH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Ohio yield to the Senator from Idaho?

Mr. HARDING. Certainly.

Mr. BORAH. Permit me to say that I not only have no desire to misrepresent them, but I have not misrepresented them. It is a matter of fact, a matter of record. If the record is wrong, that is another proposition; but I have not misrepresented anybody, because I have read the record.

Mr. HARDING. Mr. President, if the Senator will allow me, I perhaps was not happy in my choice of words. There are times when a partial truth may be stated and still convey an unjust impression. I do not question the accuracy of the statement made to the Senate by the Senator from Idaho, but the Senate would be lacking in information if I did not put into the RECORD a brief bit of information which ought to accompany his statement.

As I understand it, the pay of the officers of the National Guard is the same whether they are paid under State or under Federal authority, or out of State or Federal funds. So in the State of Ohio, where we have a very fine organization of the National Guard, we pay the officers out of the Federal allowance, because it is eminently fair to do so, and it makes no difference in the expenditure; and by that process we conserve our State appropriation for the guard, and, under the State law, we are enabled to pay the enlisted men a higher rate of compensation.

In other words, under the law of Ohio an enlisted man in the guard gets at least a dollar per day for his services in camp. Under the Federal law his compensation is, at the very highest point, only 48 cents per day. So, by applying the Federal funds to the payment of officers and applying our State funds to the pay of the enlisted men we are enabled to pay the enlisted men more than twice what would ordinarily be paid. As the result of that policy, I think we have in Ohio the finest section, or one among the finest sections, of the National Guard in all the United States. I think I can say, and I am proud to say in this connection, that the guard is so well organized in Ohio that if a national need were to be expressed this day the officers of the guard of Ohio could mobilize 8,000 men for the service of Uncle Sam within 24 hours.

I think it ought to be said, too, in this connection, that in all the years I have known the National Guard in Ohio there has been no suspicion of any manipulation of funds. There has been no scandal in the management of the guard. I can recall, only three or four years ago, there was a determined effort on the part of a certain faction of the citizenship of Ohio to put the National Guard out of existence. It was seriously proposed to withdraw the $90,000 per year that we appropriate of State funds for the maintenance of the guard. Unfortunately for many of the citizens of the State, we were visited that year by a very disastrous flood in the Scioto, the Muskingum, and the Miami Valleys; and in the trying situation that attended it we found there was but one organization in Ohio capable of ministering to the distress and satisfying the anxiety of the people of our State. The splendid work of the guard under those trying circumstances so modified public opinion in the State of Ohio that we would not now sacrifice or now neglect that organization under any circumstances.

I did not mean to speak of that, however, Mr. President. I only wanted the Senate to know that the reason why the payment of Federal funds does not show in its application to the enlisted men in Ohio is solely because out of our State funds we can pay the enlisted men a higher rate of compensation than we could out of Federal funds; and the payment of the officers out of Federal funds makes no difference to either the State or the Nation.

Mr. BRADY. Mr. President, it is seldom that I differ from my distinguished colleague on matters of national policy or regarding laws that should be enacted by the Congress, and our difference of opinion relative to the pending measure, and especially that part of it affecting the National Guard, is simply a different viewpoint as to the results that will be obtained by enacting this measure into law and thus placing the National Guard in closer touch with the Federal Government. Those who know my colleague as well and favorably as I do must realize that any arguments he advances regarding this or any other question are inspired by patriotic motives and honesty of purpose.

I believe the National Guard can be made more efficient and more useful under the provisions of the bill we are now considering. I will not discuss this bill at length, owing to the fact that I have been ill and unable to give as much thought and consideration to the same as I had hoped to do and I have felt that under the circumstances I would not attempt to discuss the bill, contenting myself with what little assistance I have been able to render in the Senate Committee on Military Affairs. However, I feel that I should say a few words relative to some of the provisions of the bill, and especially relative to the National Guard. As a member of the Senate Committee on Military Affairs I have been furnished with all of the testimony taken at the hearings before the committee, and with the reports made by both the Senate and House committees. I therefore feel that I have reasonably good knowledge of the provisions of both the Senate and House bills. Neither of these bills is perfect, but I believe that the Senate bill lays the best foundation for a proper preparedness for national defense.

It is admitted by everyone who is advised as to the real conditions that our country is to-day totally unprepared for war, or for defense in case of invasion, and it seems to be the wish of a very large majority of our people that these conditions be remedied and that we prepare for adequate national defense. At the same time it is well known that the citizens of this Nation will never permit our Government to become top-heavy in a military way. All the people desire is safe and sane legislation along lines that will place our country in a position to defend her citizens and her rights at a reasonable and equitable cost, and the people of this country are not objecting to a reasonable defense course but, on the contrary, are willing to give of both money and personal service whatever the real exigencies of the situation may require.

There are just about as many different opinions as to what should be done in this regard as there are different Members of the Senate and House, but the Committee on Military Affairs of the Senate in the work it has done has been guided in the preparation of its bill by the advice and counsel of the best military talent we have in the United States. In reporting the bill to the Senate the chairman of the committee says:

> The committee has been guided in the preparation of its bill by the advice of practically all the most prominent officers of the Regular Army and National Guard, in addition to that of eminent civilians who have interested themselves in the subject of preparedness. In addition to this the committee had before it and considered the tentative drafts of the so-called Hay, Chamberlain, and War Department bills, selecting therefrom whatever was thought best and most applicable to the Nation's needs, and the bill as now reported is believed to represent, as far as practicable, the consensus of opinion of the best available judges on military matters.

I think this statement covers the ground very fully, and while the bill, as I have stated above, is by no means perfect, yet it lays the foundation and paves the way for an Army large enough for the reasonable defense of our country and not so large as to permit us to drift into militarism.

World conditions have changed so much within the last two years that it is absolutely necessary for our Nation to adjust itself to these changed conditions. I believe that for adequate defense we will need a regular standing Army of 250,000 men, all of the National Guard force provided for in the Senate bill, and the encouragement of the training-camp movement in every possible way. Instead of having petty jealousies between the Regular Army, the National Guard, and the training camps, let patriotism prevail and let us work in harmony as a united Nation not for aggression but for the defense of our country on land and sea.

As executive of my State I came in close contact with the personnel and practice of our National Guard. There never lived a more patriotic, self-sacrificing, and efficient body of men than I found the National Guard of Idaho to be, and I believe it is only fair to assume that the same conditions exist in every State in the Union. By federalizing the National Guard and bringing them in closer touch with and under greater control of the National Government, with uniform discipline, their scope of usefulness will be extended and increased and they will

become one great national force, so far as constitutional limitations will permit. With regard to these constitutional limitations, it is very evident that there is a very wide difference of opinion among men learned in the law as to just what these constitutional rights and limitations are, and, while not a lawyer, the report from the Committee on Military Affairs of the House contains a statement from the military council of the State of Missouri which to me is a conclusive argument in favor of the federalization of the National Guard and justifies the action taken by the Committee on Military Affairs of both the Senate and House, and I ask to have this statement inserted at this point in my remarks.

The PRESIDING OFFICER. Without objection, that may be done.

The matter referred to is as follows:

POWER OF THE FEDERAL GOVERNMENT TO ORGANIZE, DISCIPLINE, GOVERN, AND USE THE NATIONAL GUARD UNDER THE CONSTITUTION.

I. POWER OF CONGRESS TO PRESCRIBE THE ORGANIZATION, ARMAMENT, AND DISCIPLINE OF THE MILITIA.

Section 8 of Article I of the Constitution of the United States reads as follows:

"Congress shall have power: To raise and support armies; to make rules for the government and regulation of the land and naval forces; to provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions; to provide for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the United States, reserving to the States, respectively, the appointment of the officers, and the authority of training the militia according to the discipline prescribed by Congress; to make all laws necessary and proper for carrying into execution the foregoing powers."

Section 2 of Article II:

"The President shall be Commander in Chief of the Army and Navy of the United States and of the militia of the several States when called into the actual service of the United States."

Section 10, Article I:

"No State shall, without the consent of Congress, * * * keep troops * * * in time of peace."

The Constitution contemplates two classes of land forces. One a full-paid force of professional soldiers, commonly denominated the Regular Army, and the other a force consisting of all other able-bodied male citizens, trained or untrained, who could be called upon to defend the country and enforce its laws in any emergency requiring a larger force. This latter force consists of all citizens liable to military duty but who follow peaceful avocations and devote their time to civilian pursuits. This great body, constituting the real physical strength of the country, is termed the militia. The untrained portion of it is called the unorganized militia, and that part of it which is organized is called in the several States the National Guard. It will be noted that the right to organize, arm, equip, and maintain a militia is not one of the reserved rights of the States, but that the organization, armament, discipline, government, and use of such force for national purposes is vested solely in Congress. The power of Congress to organize, arm, and discipline the militia and to govern such part of them as may be employed in the service of the United States, reserving only to the States the appointment of the officers and the authority of training according to the discipline prescribed by Congress, is so clearly declared in the Constitution that it would seem the meaning of the constitutional words require no explanation. If there be those who have doubts upon the subject, let them read the case of Houston *v.* Moore (5 Wheat., l. c. 21), in which Mr. Justice Washington, speaking for the Supreme Court of the United States, said:

"Congress has power to provide for organizing, arming, and disciplining the militia; and it is presumable that the framers of the Constitution contemplated a full exercise of all these powers. If Congress had declined to exercise them, it was competent to the State governments to provide for organizing, arming, and disciplining their respective militias in such manner as they might think proper. But Congress has provided for all these subjects, in the way which that body must have supposed the best calculated to promote the general welfare, and to provide for the national defense."

And again, on page 16:

"The manner in which the militia is to be organized, armed, disciplined, and governed is fully prescribed; provisions are made for drafting, detaching, and calling forth the State quotas when required by the President. The President's orders may be given to the chief executive magistrate of the State or to any militia officer he may think proper; neglect or refusal to obey orders is declared to be an offense against the laws of the United States, and subjects the offender to trial, sentence, and punishment, to be adjudged by a court-martial, to be summoned in the way pointed out by the articles and rules of war; and the mode of proceeding to be observed by these courts is detailed with all necessary perspicuity."

If any doubt could be entertained as to the sweeping powers of Congress under the Constitution to organize and discipline the militia, this decision forever sets such doubts at rest. The power to prescribe the organization means that Congress may not only require the various units to be the same as those of the Regular Army, but it can prescribe the number of officers and men in each unit and their physical and mental qualifications. Congress can require that the physical qualification of officers and men shall be the same as that of the Regular Army; it can provide that all officers of the National Guard shall be examined touching their mental and military qualifications, and the standard may be made the same as that required for commission as officers in the Regular Army. The effect of this would be practically to give the State merely power to nominate, because with power in Congress to fix the standard this standard must be met. Congress has power to prescribe the system of disciplining the militia. The discipline can by law be made the same as that of the Regular Army, and the States must train the guard in accordance with this system of discipline. A careful reading of this clause of the Constitution and of the construction placed upon it by the Supreme Court in the case of Houston *v.* Moore (5 Wheaton, 1) makes it clear that Congress has unquestioned power to organize the militia according to any system it desires and to discipline it according to any system of discipline it sees proper. And while to the States is left the selection of the officers, this does not, of course, affect the control of Congress over the militia, even in time of peace, nor does it impair its efficiency; certainly not when such officers can be required to meet the standard of efficiency required by the Federal authorities. Senators and Representatives in Congress are lawmakers for a national body, and yet their fidelity and efficiency for the national good can hardly be questioned because they are selected by the States.

Save and except the appointment of officers reserved to the States, but one power remains in the States, and that is to train the militia according to the discipline prescribed by Congress. What does this mean? It means that while the State shall superintend the actual drill and instruction of the National Guard, such instruction must be according to the discipline prescribed by Congress; that is to say, the method of drill and instruction and the observance of all things which go to make up military discipline must be according to Federal standards. To use a homely illustration, the case is as though the Federal Government should say to the States, "You must educate your children in certain schools; you may name the teachers, provided such teachers possess the qualifications we prescribe; these teachers may instruct your students, provided they use our textbooks, the course of study we prescribe, the length of hours of recitation we elect, examine them according to our requirements, and mete out such punishment for their delinquencies as we designate." It would seem that under these conditions the school would be rather largely controlled by the Federal head master.

It will be seen that the so-called weakness of the militia system is not the weakness of the system at all, but whatever deficiency exists in organization, personnel, or discipline is due wholly to the failures of Congress to exercise its rights and legislate along lines which will give the militia the unquestioned Federal status contemplated by the Constitution and make it the efficient force which, with proper legislation, it can be made.

The officers of the General Staff of the Army who have appeared before one of the congressional committees recently have criticized the National Guard because the different States have different regulations, systems of selection of officers, etc. This is in part true, but it is true only because Congress has failed to exercise its full power in the premises. As before stated, it possesses the most far-reaching power and authority over the militia, and certainly the National Guard is not to be condemned for not doing the things complained of when Congress has taken no sufficient steps to provide for the exercise of its constitutional powers over the Organized Militia. The Secretary of War speaks of the National Guard of the several States as 48 separate armies. It is true that there are 48 military subdivisions, all comprising the one National Guard, exactly as there might be 48 or any number of subdivisions of any army comprising the entire organization. The effect of these statements is to make it appear that the militia of the various States is entirely dissimilar in armament, equipment, and organization. This is not true, and if it was true the answer to such statement is that Congress should, by the exercise of the legislative powers conferred upon it by the Constitution, conform these 48 so-called separate armies to the same system of armament, equipment, organization, and discipline. If Congress passes appropriate laws in which it exercises its full rights under the Constitution, the National Guard of the United States can be made an effective force, the different parts of which will articulate with each other and with the general plan, and when this is done the fact that they happen to be stationed in the territory of the several States would not make them any more separate and distinct armies than are the several divisions of the Regular Army stationed in the different territorial departments of the country. In all these arguments, the power of Congress over the militia is entirely lost sight of and the National Guard is criticized for what Congress and the War Department have failed to do. The Secretary of War complains because some of the States have not organized sufficient auxiliary troops—that is to say, Artillery, Cavalry, and Signal Corps troops, etc. This complaint is based upon facts, but it should not be lodged against the National Guard, because the remedy lies with Congress. Congress has the right to say, or to vest the Secretary of War with power to say, what States shall organize auxiliary troops and in what proportion such auxiliary troops shall be distributed among the States. Let them do with the various States as was done with Rhode Island. In that case the War Department said to the State of Rhode Island that its militia ought to be Coast Artillery troops, and all Infantry troops of that State were accordingly transformed into Coast Artillery.

II. POWER TO REQUIRE ITS USE FOR FEDERAL PURPOSES.

There being no question, therefore, of the right of Congress to provide for the organization and discipline of the National Guard by suitable laws which will make it a thoroughly efficient force, organized in exact conformity to that of the Regular Establishment, with an enlisted and commissioned personnel meeting Federal requirements, trained according to the system of discipline prescribed by Congress and constituting, therefore, a reserve army thoroughly organized, equipped, officered, trained, and ready for immediate service, it may be inquired under what circumstances this force is available for national purposes. The words of the Constitution are:

"To provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions."

The primary purpose of maintaining any force is to defend the country against invasion, but in view of the timidity with which some of the opponents of a real citizen soldiery seemingly shrink from the contemplation of the use of the National Guard unless a large hostile army is actually marching through the country, it will be interesting to note the manner in which the Supreme Court of the United States has met and dispelled these fears.

In the case of Martin *v.* Mott (12 Wheaton, 29) Mr. Justice Story, speaking for the court, said:

"It has not been denied here that the act of 1795 is within the constitutional authority of Congress, or that Congress may not lawfully provide for cases of imminent danger of invasion, as well as for cases where an invasion has actually taken place. In our opinion, there is no ground for a doubt on this point, even if it had been relied on, for the power to provide for repelling invasions includes the power to provide against the attempt and danger of invasion, as the necessary and proper means to effectuate the object. One of the best means to repel invasion is to provide the requisite force for action before the invader himself has reached the soil.

"The power thus confided by Congress to the President is doubtless of a very high and delicate nature. A free people are naturally jealous of the exercise of military power; and the power to call the militia into actual service is certainly felt to be one of no ordinary magnitude. But it is not a power which can be executed without a correspondent responsibility. If it be a limited power, the question arises, By whom

is the exigency to be judged of and decided? Is the President the sole and exclusive judge whether the exigency has arisen, or is it to be considered as an open question, upon which every officer to whom the orders of the President are addressed may decide for himself and equally open to be contested by every militiaman who shall refuse to obey the orders of the President? We are all of opinion that the authority to decide whether the exigency has arisen belongs exclusively to the President, and that his decision is conclusive upon all other persons. We think that this construction necessarily results from the nature of the power itself, and from the manifest object contemplated by the act of Congress. * * * If the power of regulating the militia and of commanding its services in time of insurrection and invasion are (as it has been emphatically said they are) natural incidents to the duties of superintending the common defense and of watching over the internal peace of the confederacy, these powers must be so construed as to the modes of their exercise as not to defeat the great end in view."

Clearly, then, under the wording of this article of the Constitution and the interpretation of the same placed upon it in the Supreme Court, Congress has power to provide for calling forth the militia for the purposes therein mentioned and to punish its members for failure to respond to the call. There can be no question of the absolute right of Congress to make laws requiring the militia to serve in case of Federal call, and any member of the same failing to respond to such call can be punished in such manner as Congress may provide. It is significant in this connection—that is, calling out the militia—the President need not direct his order to the governor of the State, but can direct it in the first instance to the commanding officer of the militia troops he desires to call for. To quote the language of Judge Washington in Houston *v.* Moore (5 Wheaton, l. c. 16), holding valid a statute providing for calling forth the militia:

"Provisions are made for drafting, detaching, and calling forth the State quotas, when required by the President. The President's orders may be given to the chief executive magistrate of the State or to any militia officer he may think proper; neglect or refusal to obey orders is declared to be an offense against the laws of the United States and subjects the offender to trial, sentence, and punishment, to be adjudged by a court-martial, to be summoned in the way pointed out by the Articles and Rules of War."

This would seem to dispose of the argument that the militia is not a dependable force, because its membership would not respond if the President, under the authority vested in him by Congress, ordered them so to do.

But it is argued that the President could not under the Constitution use the National Guard for service in a foreign country in case it was desired not only to repel invasion but to invade foreign territory. The underlying purpose in the program for preparedness should, of course, be the defense of the country from the assaults of a hostile power. Our situation is such that such assaults can only seriously menace us if an invasion is attempted by the hostile power. Indeed, at all of the hearings before the House committee, the officers from the General Staff of the Army have pointed out what ought to be done to properly defend against these possible invasions, and so serious have they made the danger to be apprehended from such attacks it is quite apparent our first consideration should be to provide against the same, rather than to organize for purposes of aggression, either on this continent or abroad. In case of war with a foreign country it may be apprehended that if such country is of sufficient size to make it necessary for us to use a large force and the war is to be a serious one, such power would contemplate sending some of its forces, in large or small numbers, into our territory. In short, certainly a part of its campaign would contemplate an invasion of this country in some form. Let us suppose that the President should mobilize the National Guard on, say, the Mexican or Canadian border; that having mobilized this force to resist invasion he concludes that it is the purpose of the enemy to send troops into this country in large or small numbers, and that in his discretion he decides that the invasion can best be repelled by meeting the invaders on their own territory before they reach ours, under such circumstances would it be questioned that he has the right to order the National Guard across the boundary line for this purpose? It would seem there can be but one answer to this question. And the Supreme Court of the United States gave a sufficient answer in the language of Mr. Justice Story, in Martin *v.* Mott (12 Wheaton, loc. cit. 29), when it said:

"In our opinion there is no ground for a doubt on the point, even if it had been relied on, for the power to provide for repelling invasions includes the power to provide against the attempt and danger of invasion, as the necessary and proper means to effectuate the object. One of the best means to repel invasion is to provide the requisite force for action before the invader himself has reached the soil. * * * We are of the opinion that the authority to decide whether the exigency has arisen belongs exclusively to the President, and that his decision is conclusive upon all other persons. We think that this construction necessarily results from the nature of the power itself, and from the manifest object contemplated by the act of Congress. If the power of regulating the militia and commanding its service in time of insurrection and invasion are (as it has been emphatically said they are) natural incidents to the duties of superintending the common defense and of watching over the internal peace of the confederacy, these powers must be so construed as to modes of their exercise as not to defeat the great end in view."

Again, if the question of the right of the President to order the National Guard outside the bounds of the United States be regarded as other than a purely academic one, under the power to raise and maintain armies Congress can provide for the drafting of any or all of the citizens of the country, and the power to draft carries with it the power to say who shall be drafted. Congress can by legislation provide that when war is imminent the President shall have power to draft into the military service all persons of military age who have passed the physical examination prescribed for officers and enlisted men of the Regular Army, who have had military training in the National Guard and who have been armed, equipped, and trained at Federal expense. The power to draft has been specifically upheld by the Supreme Court, and the power of Congress to so draft the National Guard will not be seriously questioned. It is not an objection to the draft of the National Guard in this way to say that they are likewise members of the State militia. It will not be contended for a moment that if Congress should decide in 1916, as it decided in 1863, to raise troops by conscription, the fact that a man of military age and sound of body would be exempt from Federal service because he was a member of the militia. Under conscription there are no exemptions, except those made by the act of Congress.

Some who oppose the use of the National Guard as the real bulwark of our reserve military strength profess to hinge their objection upon the ground that the Constitution forbids its effective use for national purposes, basing their views upon an opinion given by Attorney General Wickersham on February 17, 1912. This opinion has been so generally misquoted and its application to the question in hand so grossly misrepresented that it is thought proper to mention it here. The opinion, which will be found in Opinions of Attorneys General, volume 29, page 322, was given by Mr. Wickersham in response to a question from Secretary of War Stimson, which question so answered he quotes in the opinion as follows:

"Whether or not under existing laws the President has the authority to call forth the Organized Militia of the States and send it into a foreign country with the Regular Army as a part of an army of occupation, especially should the United States intervene in the affairs of such country under conditions short of actual warfare?"

This question had reference, of course, to the use of the militia for the purpose of occupying Mexico at a time when the United States was not at war with the people or Government of that country. The opinion holds, in effect, that in the situation suggested in the question of the Secretary of War; that is, where we are at peace with a foreign country, in his judgment the President would not have the right to send the militia into such country with which we are at peace for the purpose of occupation. It is hardly necessary to say that the question as to whether or not the militia can be ordered into a foreign country with which we are at peace for purposes either of conquest or of policing it, is quite different from the question as to whether or not the militia can be used against a country with which we are at war. In the case suggested by the Secretary of War, should Congress decide to intervene between the Mexican factions in an effort to restore order and we were and continued to be after the announcement of such purpose on friendly terms with both factions, perhaps the proper procedure would be that said to have been contemplated by the War Department, to wit, to mobilize the National Guard on the Mexican boundary and then enlist it as volunteers under the provisions of the volunteer bill, it being well known in advance that the National Guard would volunteer to a man for service of this kind. But it is interesting to note that the opinion of the Attorney General does not conflict with the views above given; indeed, the right to send the militia into foreign territory under conditions which would actually exist if Congress decided either to declare war on Mexico or intervene in its affairs, is conceded in this language of the opinion, which will be found on page 324:

"The term 'to repel invasion' may be, in some respects, more elastic in its meaning. Thus, if the militia were called into service of the General Government to repel an invasion, it would not be necessary to discontinue their use at the boundary line, but they might pursue and capture the invading force, even beyond that line, and just as the Regular Army might be used for that purpose. This may well be held to be within the meaning of the term 'to repel invasion.'

"Then, too, if an armed force were assembled upon our border, so near and under circumstances which plainly indicated hostility and an intended invasion, this Government might attack and capture or defeat such forces, using either the Regular Army or the militia for that purpose. This, also, would be but one of the ways of repelling an invasion."

It is respectfully submitted that a careful reading of the Constitution and the interpretation placed upon the powers it grants to Congress by the Supreme Court of the United States in the cases of Houston *v.* Moore (5 Wheaton) and Martin *v.* Mott (12 Wheaton) leaves no room for question as to the absolute power of that body to organize, arm, discipline, and control the National Guard according to its own standards, and to provide for its use within or without the country under any and all circumstances which will ever require the use of a force to supplement the Regular Establishment. Every argument against the use of the militia as a defensive force is based upon the Wickersham opinion, and yet when this opinion is read it will be found to affirm every proposition herein contended for. The trouble is that those who would know the law did not read the opinion, but took it for granted that the reply to a question predicated upon conditions which we all know as a practical proposition would never exist, answered the question which was in the public mind, whereas such live question was not asked or answered at all. The peculiar phraseology of the question propounded by the Secretary of War calling for an opinion upon an abstract proposition of law, based upon highly improbable, if not an impossible, state of facts, certainly indicated a purpose not altogether compatible with perfect frankness.

The militia system has enabled Switzerland to preserve her neutrality and Australia to send more than a hundred thousand troops to the Dardanelles, the splendid efficiency of which has been commented upon by friend and foe alike. The military system of these countries is identical with that of our militia system, save and except service there is compulsory, while here it is voluntary. Switzerland is composed of a number of Cantons, which are civil subdivisions corresponding to our States. Under the Swiss system each Canton raises and trains its own force and selects the officers therefor. The Cantons furnish the equipment and meet the other expenses of maintenance and are reimbursed therefor by the General Government. The regular army of Switzerland consists of one brigadier general, a small general staff, and a supply department. The Swiss Government prescribes the system of training, but the Canton trains its own troops. The Australian system is the same. Australia is composed of a number of Provinces corresponding to our States. Each Province raises its own troops and selects the officers thereof. The authority of the General Government over the militia of the Provinces is exactly the same as that of Congress over the militia. Australia has no regular army. As stated, in both these countries militia service is compulsory, while here it is voluntary. In Australia military drill and instruction is given in the public schools.

Mr. BRADY. Mr. President, it seems to me that a careful reading of the foregoing statement answers any and all of the arguments which have been advanced against the constitutionality of federalizing the National Guard.

In the discussion of this bill we have heard much about the Swiss system and the Australian system. Both of these systems have many advantages and are well worth studying. However, what we need and what we should adopt is an American system. The social, commercial, and industrial conditions of the United States are different from those of any other country in the world, and for this reason we will have to have a military system that is peculiarly American, and when we adopt a system that is purely American—all our own—it will be one which will produce a good soldier in time of war and a good citizen in time of peace. Therefore, Mr. President, let us start now the great task that world conditions have thrust upon us and enact into law

this bill, imperfect, incomplete, and unfinished, yet the product of the honest endeavor of honest men in a serious attempt to place our country in a position to protect our flag and the rights of our people. I regard the passage of this bill as simply laying the foundation for a great structure that will grow and develop as time goes on into a finished and better one, which will give us an industrial army in times of peace that will be equaled only by our defensive army in times of war.

I am opposed to a large standing army, and believe that the passage of the pending measure will result in giving to the country a reasonable number of trained men who can be depended upon and called upon in case of war; and that in the meantime each arm of the Army will deal honestly and fairly with the Government and the people.

For these reasons I shall vote for the pending amendment and the bill.

Mr. BRANDEGEE. Mr. President, the Senator from Idaho [Mr. BRADY], who has just taken his seat, states that this bill will give us a great, firm foundation for this Army. I have serious doubts whether that statement will prove to be true. I agree with the senior Senator from Idaho [Mr. BORAH] that the process which the bill describes as federalizing the State militia is very likely to break down and that the expectation of the members in the States, whether you call them State militia or National Guard, that they will become anything different after the bill is passed from what they are now, in contemplation of law, if they have such an expectation, is bound to be defeated.

Mr. President, I do not think that any lawyer who reads the opinions which have been given upon this proposition to "federalize" the National Guard by the Judge Advocate General of the Army, printed in the RECORD at pages 6802 to 6810, can believe that the State militia can become "Federal soldiers" after the passage of this act.

I have not the slightest feeling against the State militia, whether it is called that or the National Guard. I have not the slightest feeling against the Regular Army. I do not think that anyone who believes that a clause in a bill will not accomplish what it is assumed to accomplish and calls attention to it should be considered as hostile to it. If the Judge Advocate General is correct in his opinions on this proposition to "federalize" the militia of the several States, the militia are doomed to be disappointed in their expectations. If the United States Government relies upon what the bill calls a "federalized" militia to give the Government as complete control of the militia of the several States as it has of the Regular Army, in times of peace, or to put the militia in training in time of peace or to send it out of the country, then the National Government will be disappointed and the very purpose of this bill to provide a strong national defense will have failed.

Mr. President, all the State militia officers are not trying to defeat section 56 of the Chamberlain bill, which would provide, I think, an army under the exclusive control of the President of the United States. I want the Secretary in my time to read a letter which I send to the desk from the adjutant general of my State, which came to me entirely unsolicited.

The PRESIDING OFFICER. The Secretary will read as requested.

The Secretary read as follows:

STATE OF CONNECTICUT,
MILITARY DEPARTMENT,
ADJUTANT GENERAL'S OFFICE,
Hartford, April 7, 1916.

Hon. F B. BRANDEGEE,
United States Senate, Washington, D. C.

MY DEAR SENATOR BRANDEGEE: I note by the papers that you spoke for and voted for the retention of section 56 of the so-called Chamberlain bill. I feel that your position is an absolutely correct one, knowing just exactly where we stand in Connecticut on this preparedness question, and what my sentiments and the sentiments of all the officers of the National Guard of Connecticut are, who have always taken the stand that they wished to be federalized and they wished to be in a position to be of value to their country, and when called upon to be efficient for any service which may be required of them anywhere.

This is also, I believe, the sentiment of the enlisted men of the National Guard of this State.

Now, then, if with this sentiment and all that the good old State of Connecticut is doing to foster it in the way of encouragement by building armories and furnishing money for their maintenance the National Guard of Connecticut can not stand up and hold its own against the volunteer army, then I say it should fall because it isn't worth maintaining.

I feel that you are right, Senator.

Sincerely, yours,

G. M. COLE,
Adjutant General.

Mr. BRANDEGEE. I send to the desk another letter from an officer of the Connecticut National Guard in relation to the question of militia pay which is very germane to this amendment. I ask to have it read.

The PRESIDING OFFICER. The Secretary will read as requested.

The Secretary read as follows:

SEVENTH COMPANY COAST ARTILLERY CORPS,
CONNECTICUT NATIONAL GUARD,
Stamford Conn., April 7, 1916.

Senator FRANK B. BRANDEGEE, *Washington, D. C.*

DEAR SIR: I note in the New York Tribune of this morning that you were among those voting in favor of the volunteer army provision of the Chamberlain bill, and from the account I judge that those so voting are opposed to the militia-pay bill. If that is the case, I desire to commend your attitude.

While the passage of the militia-pay bill would be of pecuniary benefit to myself, I feel that it can not accomplish the result intended. Many officers whom I know and who were formerly in favor of the bill now have come to this opinion.

I think every officer who will give his honest opinion will say that our only hope of an efficient system of reserves must be based upon compulsory, universal service, and a greater power in the War Department to control the selection of officers. When this is done it will then be proper to talk about pay. There should be some remuneration, other than that for camp service, to compensate officers and men for many expenditures necessitated by the service, but which at present the State does not take over. I do not think that the pay feature should be as large as that contemplated by the militia-pay bill.

With some slight experience as a member of the Connecticut Legislature, I can understand how it may be that the various conflicting interests are so opposed that either no act may be passed at this session of Congress on this matter or that one in the nature of a compromise might result. I feel that it is the patriotic duty of Congress to take the bull by the horns and do the right thing regardless of what the pacificists or the advocates of militia pay or otherwise may want.

The country wants to be prepared. It will not accept in silence any halfway measure. As an officer of the National Guard I believe that our militia system is all wrong as a means of national defense and no amount of pay is going to remedy the situation.

Members of Congress need not worry about being knifed at the next election by militiamen who do not approve of their attitude. If they will come back the way Senator O'GORMAN did, and if they will look the situation squarely in the face they will find that they will have the support of a great many more people who are not in the guard than the opposition of those who are.

I trust that you will appreciate that this is not a personal criticism, but the contrary rather as well as an attempt to set forth the opinions of the writer which are struggling for utterance.

Very truly, yours,

WILLIAM M. FOORD,
1st Lt. Conn. C. A. C.

Mr. BRANDEGEE. Now, I read a single extract from another letter in relation to this matter. This officer rather takes exception to being called a member of the State militia because he says they are the National Guard, and he says:

It is very true there are constitutional limits to the State militia, so called. The National Guard of Connecticut very much dislikes to be bound by this limitation.

Mr. President, that is at the root of this bill. It is an attempt to make these militiamen think by names and by statutes passed by Congress that their status under the Constitution of the United States is changed. It is not changed at all. When they are called the National Guard their standing remains exactly as it was before, and the President is the Commander in Chief of the militia of the several States only when they are called into the service of the United States. This is prescribed by the Constitution of the United States and can not be changed by any statute we may pass.

Mr. HARDWICK. Mr. President, I wish to give notice now and have it entered of record that when the consideration of this bill is reached in the Senate I shall move to strike out section 56 of the bill and to insert in lieu thereof an amendment in the nature of a substitute.

Mr. LEWIS. Mr. President, I desire to address myself for a moment to the amendment looking to the compensation of certain officers of the National Guard—those exceeding the rank of captain. It is known here on the floor of the Senate that I opened the warfare on section 56, that I am one of those who have espoused the interests of the guard and have opposed the assaults upon either their dignity or their rights.

I manifested my interest in this matter by a confession, which I repeat. I am a retired officer of this organization and now an officer of the Spanish War Veterans. I have been such for a long time, and I therefore am not without some prejudices. That prejudice necessarily is in favor of the guard and is in favor of any benefit which I could aid in conferring upon them consistent with their rights.

Mr. President, I am still at a loss to understand this continued assault upon the National Guard as an organization, and how it should come from eminent men such as the distinguished Senator from Idaho [Mr. BORAH] and those who follow his lead I am at greater loss to understand.

Sir, let us recall the valorous service of the guard in the Spanish-American War and reflect how that the general who now commands the forces on the border of Mexico, Gen. Funston, was himself an officer of the guard; that he obtained his reputation commanding the guard, whose splendid services, particularly those from Kansas, gave glory to the Nation in the

contest against the mutiny in the Philippine Islands. Sir, let us revive the names of those who led a volunteer guard—and among those how can we overlook, sir, that there is to-day in the Republican Party an eminent leader who got his reputation, after being an Assistant Secretary of the Navy, by becoming an officer of the Volunteers who came to the colors under the name of "Rough Riders." Leading these volunteers Col. Theodore Roosevelt achieved his reputation, which enabled him afterwards to be governor of New York, Vice President and President of the United States, and to-day to occupy a place in the Republican Party where I might paraphrase that expression from Cæsar, "Ye gods, he doth bestride them like a huge colossus, and they are compelled to peep about his huge legs to find for themselves an abiding place." [Laughter.]

Mr. ASHURST. Mr. President, I should like to have the Senator from Illinois give his authority for his statement that the distinguished gentleman belongs to the Republican Party?

Mr. LEWIS. I must respond that the only information I have upon that subject is that which we lawyers usually have respecting titles. Whenever property yields to every command of a person, we assume that he must be the owner. [Laughter.]

Now, Mr. President, we can not overlook the situation in Mexico. Without assuming to pass judgment upon the manner in which the campaign in Mexico is being conducted, nor assuming to offer my judgment against those who are in command, for all of whom I have great respect, I do here prophesy that the moment will come when the course must be taken that we send our Army in increased strength into Mexico rapidly to reenforce those who are present, that this reenforced number may move to surely execute the object which we assumed when we entered there—the punishment of Villa and his followers who murdered our citizens. But in order to have this force follow in sufficient number it will be necessary that the National Guard of those States surrounding that border be called out for border duty. Those on the border are to-day acclimated in the semitropic States where they live, equipped by their experience, and particularly competent by virtue of their knowledge of the situation.

Then why should such a body that we are on the eve already of pressing into the service for the national welfare be discriminated against here in this bill?

Sir, it is asked, Why should the National Government pay; it is the business of the States? I answer, It is the States which are paying the National Army officers. Every dollar these national officers are paid through the National Government comes from the States of the National Government. What form of justice is there that the States shall pay the officers of the National Army out of the money of the States, yet shall not pay the officers of the State-organized army who do the service of the National Government? That, sir, we can not justify. I contend that they shall be paid for the service they give, and I respectfully reiterate that here in this body we should not indulge in these discriminations against one arm of our national defense that even now, under the conditions which surround us, are in so much demand and so necessary to the welfare of the undertaking which we have entered upon in Mexico.

Mr. President, in support of this amendment let me recall the words of President Lincoln when there was an attempt made to have him favor one set of officers against another. We recall that his expression was, "Let there be no discrimination among heroes." As for myself as between the distinguished place held by the National Guard, the army of the State, and that held by the distinguished officers of the National Army in the Army of the United States, I am content to apply the observation history gives from the Sampson-Schley controversy, "There is glory enough for all."

I support the amendment.

Mr. LEWIS subsequently said: Mr. President, I do not desire to speak to the present amendment, but to make a statement that the RECORD may not be confused. Senators around me say that a few moments ago when I supported the amendment for the salary of officers I referred to myself as an officer. I desire to have it understood that while it is true I was an officer of the guard, a commanding officer of what is known as the Spanish-American force, of which I am an officer now, this is in nowise comprehended in the bill, and in nowise will any officer in the command in which I am a fellow get any compensation. I am anxious to have that fact clear.

The PRESIDING OFFICER. The question is on the amendment of the Senator from Georgia [Mr. SMITH] to the amendment of the Senator from Missouri [Mr. REED].

Mr. SMITH of Georgia. Mr. President, I think I will withdraw that amendment.

The PRESIDING OFFICER. The Senator from Georgia withdraws the amendment to the amendment.

Mr. LA FOLLETTE. Mr. President, I listened with close attention to the observations of the Senator from Idaho [Mr. BORAH]. He named the States in which the payment of money to the militia organizations were largely absorbed by officers and where the enlisted men received but little or nothing. His statements were based upon an official communication furnished by the War College. He has been criticized for giving the Senate the information. He is to be commended for it.

I did not feel called upon to make a defense for the National Guard of Wisconsin, because Wisconsin was not among the States against which he leveled his criticism. Sir, the Wisconsin Guard requires no defense. It has won high distinction for itself. I am not certain that it stands at the head of the National Guard of the Nation, but I do know that it has a very high place in that rank.

While I am on my feet I am going to suggest that possibly some legislation which was adopted many years ago in Wisconsin had something to do with the advancement of the National Guard of that State. I think the criticism made by the Senator from Idaho as to the value of the militia as an arm of defense, while it might apply to some States and possibly to many, would not apply in any State where the commanding officers of the National Guard have not been subject to change from time to time by the changes in the political administration of the State.

Some 16 years ago I was elected governor of Wisconsin. At that time I had no fixed notions about the National Guard. My attention had been absorbed in other things pertaining to State matters. But shortly after coming into the executive office I chanced upon the record and ranking of the National Guard of Wisconsin. Although the adjutant general at that time was affiliated in the politics of my State with those who were very unfriendly to me, after an examination of that record and after reading some correspondence with the War Department in reference to it I called Adjt. Gen. Boardman into my office and asked him to remain at the head of the National Guard of the State. He did so. During my incumbency of the office of governor I recommended to the legislature the adoption of the Regular Army provisions regarding the tenure of office of the head of the National Guard. Pursuant to those recommendations legislation was enacted adopting the Regular Army regulations and taking the National Guard of Wisconsin forever out of politics. Adjt. Gen. Boardman remained in that position at the head of our guard until he reached the retiring age of the Regular Army officers.

I ascribe to that legislation no small part in achieving and maintaining the high character and efficiency of the Wisconsin National Guard.

Mr. President, I have received but one communication with regard to legislation affecting the National Guard. I have here an article written by the present adjutant general of the Wisconsin Guard bearing upon the questions affecting the status of the militia, discussed yesterday and likely to recur as this bill is further considered. It is worthy the careful consideration of the Senate, and I ask to have it read in my time.

The PRESIDING OFFICER. Without objection, that will be done.

The Secretary proceeded to read.

During the reading of the document,

The PRESIDING OFFICER. The time of the Senator from Wisconsin has expired.

Mr. CLARK of Wyoming. Mr. President——

The PRESIDING OFFICER. The Senator from Wyoming.

Mr. CLARK of Wyoming. I ask that the remainder of the document be read in my time.

The PRESIDING OFFICER. Without objection, that will be done. The Chair hears none.

The Secretary resumed the reading of the document, and having read for 10 minutes,

The VICE PRESIDENT. The time of the Senator from Wyoming has expired.

Mr. REED. Mr. President, I desire to make an inquiry. Will the remainder of the document which the Secretary has been reading go into the RECORD?

The VICE PRESIDENT. Yes.

Mr. LA FOLLETTE. I understand, Mr. President, that the document will be printed from the point where the reading ceased, so that it will appear all together?

The VICE PRESIDENT. It will appear all together.

The entire document referred to is as follows:

THE NATIONAL GUARD A NATIONAL ARMY LOCALLY RAISED.

There is no institution of American government so generally misunderstood or so persistently misrepresented as its militia, especially the Organized Militia, more commonly known as the National Guard.

The militia, whether one body including all able-bodied citizens of military age, as originally provided by Congress, or organized and reserve, as later classified by the same authority, is the national force intended under the Constitution for use in every great national emergency. The control by individual States—each of the militia organized within its borders—is limited to such minor particulars as will better enable the State to use these troops in time of peace to supply the place of those which it is otherwise forbidden to keep.

It is to be remarked here that many years after the adoption of the American Constitution Switzerland and Australia, by the fuller exercise of even lesser powers than those conferred upon the Congress over the militia, and with essentially the same particulars of peace-time control reserved to their respective Cantons and Provinces as to the States of the Union, have created trained citizen armies which are now upheld as models.

The powers of the Congress over the militia are set forth in the following constitutional provisions:

The Congress shall have power—

"To raise and support armies; to make rules for the government and regulation of the land and naval forces; to provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions; to provide for organizing, arming, and disciplining the militia and for governing such part of them as may be employed in the service of the United States, reserving to the States, respectively, the appointment of the officers and the authority of training the militia according to the discipline prescribed by Congress; to make all laws necessary and proper for carrying into execution the foregoing powers."

It is further provided by Article II: "The President shall be Commander in Chief of the militia of the several States when called into the actual service of the United States."

And in section 10 of Article I: "No State shall, without the consent of Congress, * * * keep troops * * * in time of peace."

These are plain words, and their combined purport is clear. Congress, in the exercise of its unqualified power to organize the militia, may include in that force all citizens, or may select from the entire citizenry, by voluntary enlistment or by whatever other equitable method or combination of methods it may choose, a sufficient number of men to constitute a national army capable of being trained to meet every military exigency of the United States.

The Congress may prescribe the number and the kind of military units that shall make up this force, how many officers and men, and of what qualification, shall compose each unit, and may allot to and require from each State its fair proportion of the national militia army. This power of Congress does not stop short of conscription, if this is necessary to procure a sufficient militia, whether for constitutional use or for the training that will make such use effective.

It is not material that the appointment of militia officers is reserved to the respective States. Congress, whether as a matter of organization or of discipline, may acquire that, as in the Regular Army, a certain standard of military ability and knowledge shall be also necessary to qualify for a commission in the militia, and may appoint the method by which the possession or attainment of this standard shall be ascertained.

The equally unrestricted power of Congress to discipline the militia carries with it the right to prescribe whatever kind or period of training is reasonably necessary to fit these troops to accomplish the national purpose for which they are intended.

Nor does it matter if the authority to train, each its own militia in time of peace, is also reserved to the States when Congress, under the Constitution, may prescribe what that training shall be, both in kind and extent. This privilege, with that of appointing the officers, supplies for each State an army for peace time uses which instantly becomes exclusively national upon the call of Congress through its agent, the President, who thereupon becomes the sole Commander in Chief.

Those who framed and favored the Constitution and those who opposed its adoption put no other construction on its militia provisions. There prevailed at that time, however, unwarranted then or later, even greater repugnance and opposition to a large standing army than now obtains. The Regular Army of the United States in 1790 consisted of 1,273 officers and men. In 1792 the First Congress enacted the first compulsory training and service law of this country, which directed the enrollment in the militia of practically all able-bodied male citizens over 18 and under 45 years of age.

It is in no sense derogatory to the Regular Army to state that this Congress, the great majority of whose Members had participated in the Federal and State conventions which adopted the Constitution, by this legislation plainly evidenced their opinion that, under the Constitution, the militia was intended to be constituted the great national army.

Few men had greater experience with and knowledge of the hasty levies of Revolutionary times than Alexander Hamilton, yet in the Federalist (No. 22) supporting the militia provisions of the Constitution, he says:

"To render a (standing) army unnecessary will be a more certain method of preventing its existence than a thousand prohibitions on paper."

In the same article he advocated the organizing and disciplining by Congress, under the Constitution, of selected corps of militia, first because of the futility of attempting to organize all citizens and further on account of the hardship, then at least considered unnecessary, and the financial loss that would be occasioned if Congress required from the whole citizenry the amount of training necessary to make them well disciplined soldiers.

Patrick Henry, before the Virginia convention of 1788, said:

"Your militia is given up to Congress; all power will be in their own possession."

And, quoting the Constitution:

"By this, sir, you see that their control over our last and best defense is unlimited."

In other forms, the like uncontradicted assertions appear in the records of debates of every State convention of the time.

George Washington, in a presidential message to Congress in 1795, stated:

"In my opinion, Congress has power by the proper organization, disciplining, equipment, and development of the militia to make it a national force, capable of meeting every military exigency of the United States."

President Madison recommended to Congress the calling to field training, at public expense, of commissioned and noncommissioned officers of the militia.

President Monroe, in a message to Congress in 1823, said:

"As the defense and even the liberties of the country must depend in time of imminent danger on the militia, it is of the highest importance that it be well organized, armed, and disciplined throughout the Nation."

These doubted neither the constitutional status of the militia as the principal national army nor the constitutional power of Congress to require of the militia all things that are necessary to make it efficient as such national force, nor did they doubt the power of Congress to enforce whatever requirement necessary for this efficiency it might prescribe.

There is another and legally more authoritative interpreter of the Constitution—the Supreme Court of the United States.

Every decision of this court which treats of the militia provisions of the Constitution is directly or by inference favorable to the broad and effective interpretation given to them by their makers, and in part quoted above.

The case of Houston *v.* Moore (5 Wheaton) fully upholds the right of Congress to organize, arm, and discipline the militia in such manner and to such extent as it shall deem best calculated to promote the general welfare and to provide for national defense; and holds, further, that Congress, through its agent, the President, for purposes enumerated in the Constitution, may call forth all or any unit of the militia, and may punish, as adjudged by a court-martial, any militiaman who fails to respond to such call.

The opinion rendered for the court by Mr. Justice Story in the leading case of Martin *v.* Mott (12 Wheaton, 29), rendering nugatory an earlier and contrary decision of the Supreme Court of Massachusetts, deserves the serious attention of every American citizen.

In part, Justice Story says:

"It has not been denied here that Congress may not lawfully provide for cases of imminent danger of invasion as well as for cases where an invasion has actually taken place. In our opinion, there is no ground for a doubt on this point, even if it has been relied on, for the power to provide for repelling invasions includes the power to provide against the attempt and danger of invasion as the necessary and proper means to effectuate the object. One of the best means to repel invasion is to provide the requisite force for action before the invader himself has reached the soil. * * * We are all of opinion that the authority to decide whether the exigency (for calling forth the militia) has arisen belongs exclusively to the President, and that his decision is conclusive upon all other persons. We think that this construction necessarily results from the nature of the power itself and from the manifest object contemplated by the act of Congress."

Under the interpretation and ruling established by this decision, high power and grave responsibility rest with the President.

If in his opinion invasion is gathering head at whatever point beyond the confines of this country and he shall determine that this danger is best overcome at its source, he has the power to call forth the militia to Federal service and to order these troops, equally with the Regular Army, either within or without the United States, wherever the threatened invasion can best be repelled or the danger of it removed.

The militia, under the Constitution, is provided as the great national Army, whose chief purpose and reason for existence is to repel invasions, and the power of Congress over it must be so construed as to best enable the accomplishment of its appointed purposes.

It is not common sense that the law which created such a force for such an end should halt it at the border of the country defended to await the gathering of strong enemy forces which threaten invasion and to invite their attack at points undefended or lightly guarded.

The limitation "to repel invasion" assures only that the militia may not be initially used to wage a war purely aggressive.

With this exception the militia may be called forth and used, to quote the words of George Washington, to meet every military exigency of the United States.

The power to organize all citizens if so great an army is deemed necessary, the power to require and direct the training that is needed to make this army well disciplined, and the power to command its services in every great national emergency save a war of aggression, and in this also if, in the judgment of the President, the enemy threatens invasion—what greater or other power have the rulers of any civilized nation over their citizen armies.

Even lesser powers, as has been stated, have enabled Switzerland and Australia to provide amply for security, and the German Emperor, in reality, has no greater over the federated armies of the German Empire.

That the militia army of the United States is not now the well-organized, well-disciplined force, commensurate in size with the requirements for national defense, which is contemplated by the Constitution, is due to the failure of Congress to adequately exercise its sweeping powers for the purpose.

For the Congress has not only the power to organize, arm, and discipline the militia, but also to make all laws that are necessary and proper to carry this power into execution.

If in its judgment national security is so best conserved, the Congress may require of the militia all things that are required of the Regular Army save routine service in peace and war service, initially for aggression.

The United States has suffered much from lack of trained armies.

It has suffered as well from a multiplicity of armies, Regular, Volunteer, and militia—the one in many particulars directly antagonistic to the others.

As the Regular and the Volunteer Armies, when coexistent, detracted, the one from the strength and efficiency of the other, so will all three, Regular, militia, and Volunteer react against each other if the third army is now created, whether for training or for actual service.

Unity of form and organization, like terms of enlistment and conditions of service, are at least desirable military features.

The Constitution, in the intent of its makers, provided for but two armies, a standing army ample for all the occasions of peace, and the great national army of the militia.

Volunteer armies were the creation of a later time, necessitated only by the failure to organize, arm, and discipline the militia, and if this failure be now remedied, will be justifiable hereafter only in a war of aggression.

What at this juncture is most serious and even vital is this: The Organized Militia has endured for years against misrepresentation and popular misconception of its true status and appointed purpose. Their own belief that they were national troops and for national service has kept its members steadfast and increasingly earnest to become well disciplined.

Nothing has so tended to keep down their number as the popular impression, industriously fostered, that they were not available for such service nor could be made fit for it; that they were soldiers for passing show whose possible gravest duty was to quell internal disorders.

The disastrous effect can well be surmised if there is now attempted to be organized within every district from which the militia draws its recruits, a separate and rival force which, in popular opinion at least, will have precedence for national use.

It may not always be wise to exercise in profound peace a right justified by custom only in extreme crises. The Imperial Constitution of Germany does not permit the German Emperor, even in war, to so raise troops in any confederated State of the Empire save his own kingdom.

If with the execution of this project the Organized Militia is also required to more than double its present strength, the very probable result will be two weak organizations where the Organized Militia, unhampered and granted the aid proposed for both, would have procured all the recruits that could have been secured by both; and division and discord will become rife where unity is the prime military consideration.

The States of the Union by express irrevocable constitutional contract are held to the militia system as to no other.

This system provides for their own military requirements in peace. Their departments of military administration are subservient to the lawful orders of Federal authority.

That class of the militia known as "Organized," measurably the selected corps advised by Hamilton, forms no inconsiderable nucleus of troops, organized and at least partially trained.

Its units have the advantages of definite permanent station and strong affiliation with their respective States and local communities—the basic characteristics of every national army that has ever been successfully recruited and maintained.

The Congress has over the militia, Organized or unorganized, in all essentials, the same powers of organizing, arming, disciplining, and developing that it has over any volunteer army.

If the great national army of defense, disciplined by training for its purposes, is to be had by voluntary enlistment, it will be had most certainly, most quickly, and most economically by exclusively developing the militia as recommended by Washington, and especially the Organized Militia, the selected corps originally advised by Hamilton and later recommended after an exhaustive investigation by a committee of the Nineteenth Congress.

In all that has been written, there is no word meant in opposition to or detraction from the Regular Army of the United States.

The calling forth of the militia army or any part of it is limited by the Constitution to national exigencies. The nature of that army is such and the responsibility of calling it forth so heavy that the exigency preceding such a call should not only be national, but also very grave.

The Regular Army should not only be constantly maintained at a strength sufficient to care for all the military concerns of peace, but this strength should be such as to render the Army reasonably capable of meeting minor exigencies of the character which, unrepressed, would necessitate the calling forth of the militia army.

Whether it will prove possible to procure by voluntary enlistment these greater Armies, both Regular and Organized Militia, depends upon a better understanding by American citizens in general, and, consequently, by the legislators whom they elect, of the true effect and merit of such enlistment. Their thought is now so perverted or heedless as to cause grave injustice to those who are enlisted, whether as Regulars or as militia.

Upon injustice and unfairness, nothing may have enduring foundation and growth.

The law is, that every able-bodied male citizen of this land, 18 to 45 years of age, owes it military service. It was and is equally within the power of the law to impose this service upon whatever citizens, however feeble.

Had there been no provision for a Regular Army, or if none enlisted therein, the turmoil attendant upon the levy of citizens to preserve public order, peace, and security would have been incessant and a very present apprehension at all times in the mind of every man.

He who does so enlist helps to relieve all citizens from this burden of trouble and anxiety. That this fact is well-nigh forgotten is but strong proof of the good service that has been rendered by the men of the Regular Army.

But their common reward too often has been slight and even disdainful regard, and their wage for periling body and life in a soldier's hazards and to possible war, is far less than that of those of like ability and circumstance whom their enlistment permits to follow uninterruptedly the gainful pursuits of peace.

When the exigency has arisen with which the Regular Army can not cope, the fulfillment of their liability to military service is one long step nearer to all male citizens of military age. The one remaining recourse before the confused levy and organization of untrained citizens is the second voluntary army, the Organized Militia. These troops have also by oath assumed the burden of military training and of possible war in advance and in the place of their fellow citizens. Reasonable security lies in their greater numbers and thorough training.

Yet in great degree the same slight regard is put upon the militiaman as on the regular. The parent too often withholds consent and approval of enlistment, the employer discriminates either by refusing the leave necessary for training or by discharge and nonemployment of militiamen.

The public and their legislators overlook that in any nation where compulsory service is not enforced, while the soldier is paid, the greater part of his maintenance cost represents merely the necessary cost of his equipment and training. Such annual cost per soldier in England for instance, is above $500 and in Germany under compulsory service, most economically administered, well above $200.

As the militiaman approaches a like standard of equipment and proficiency there has been spent in time, effort, or money, the like value. His oath of service puts his body and life in peril of possible war in the interest of his fellow citizens. He could not, as now, be expected to spend from his own time and money the major share of the cost of his necessary training.

If these things may be comprehended by the people of American communities and the injustice and unfairness substantially remedied, it may well be possible to raise sufficient armies without compulsory service, but otherwise, not.

O. H. HOLWAY,
Adjutant General of Wisconsin.

Mr. GRONNA. Mr. President, I have been unable to attend the sessions of the Senate so as to participate in the discussion or to get the benefit of the discussion on this very important measure.

While I am in favor of educating and training the young men of our country as officers, I am one of those who are opposed to a large standing army. I believe it is little less than criminal to ask the young men of our country to spend the very best days of their lives in idleness in the barracks of a standing army. I am, however, in favor of encouraging the National Guard. I believe that the Federal Government should do something for that organization. Mr. President, there is one thing we can do, and that is not to throw any obstacles in their way.

I do not desire to take the time of the Senate to discuss this matter now, but I have before me a letter written to me by the adjutant general of my State. It is needless for me to say that he is a man of high character, of standing, and of ability. He has distinguished himself as a soldier, and I wish to have read in my time his letter.

The VICE PRESIDENT. Without objection, the Secretary will read as requested.

The Secretary read as follows:

NORTH DAKOTA NATIONAL GUARD,
ADJUTANT GENERAL'S OFFICE,
Bismarck, April 11, 1916.

Hon. A. J. GRONNA, *Washington, D. C.*

MY DEAR MR. GRONNA: I am sorry to bother you, but I am interested in the militia bill now before Congress, and it is not a political question; it is too vital to be termed as such.

I notice in the Washington dispatches that a certain Senator took particular pains to criticize the militia lobby, as he called it, and a couple of us in particular. I am not making an apology for being interested. I have been in the militia for nearly 27 years, and know the needs as well as the condition of the guard, and you are getting more out of the guard than out of any branch of service in the United States. They work for nothing and pay their own board. What other body is doing as well?

The members of our State militia are as fine a body of men and officers as there is anywhere, and will compare favorably with any army; and with my long service I have had ample opportunity to compare them with the Regular Army, both here and in the Philippines, and our officers will show up favorably with the officers of the Regular Army of the same grade.

The members of the militia feel that they are in the service for patriotism only, as it is a deteriment to every officer and enlisted man that is in it, both in a business and financial way. We, of course, admit that every man is given a uniform after he has enlisted He pays nothing and gets nothing except the pleasure of going to drill each week, while the officers get $20 clothing allowance from the State every year after one year's service, and is asked to furnish his own uniform and equipment and allowed to wear it if he attends drill and performs 80 per cent of ordered military duty, and are expected to attend camps, officers' schools, etc.

In the State of North Dakota during camp the magnificent sum of $1.75 per day is paid to a lieutenant, $2 to a captain, $2.25 to a major, and $3 to a colonel, and with this magnificent salary he is supposed to keep up his work for a year and have an equipment that is up to date. Can you imagine anything more unreasonable, and is it any surprise that our condition is not up to standard of the Regular Army, where both officers and men are paid liberally?

Last fall during the National Guard convention we picked an executive committee, and, as far as the North Dakota guard is concerned, we stand by that committee to a man. During the latter part of February the National Guard Association of our State had a meeting, and by unanimous resolution agreed to stand by the action of the executive committee of the National Guard Association. At this meeting we had the officers of the regiment, the noncommissioned officers of the staff, and three delegates from each company that had been elected by their respective companies, and in that way I think we had a very good expression of the whole guard.

While the grain growers' convention was in session January 19, 1916, they took up the subject of preparedness, as follows:

"Whereas there is being urged an armament campaign and a vast expenditure for frenzied preparedness for war; and

"Whereas there is being urged a larger standing Army and a huge continental army to expend millions to private firms for a bigger Navy; and

"Wherens such an armament program, we fear, may plunge this Nation into needless wars and vast expense and our citizens into great distress; and

"Whereas the militia regiments of the various States were primarily organized to repel invasions, and are as such fundamentally the nucleus of a volunteer Army of the United States, and are thus, by the proposal of a continental army, to be cast aside as useless junk; and

"Whereas we feel there is a paid propaganda working throughout the Union to spend vast millions on increased Navy and war preparations: Therefore be it

"Resolved, That we, farmers and others, in assembly in Fargo, N. Dak., January 19, 1916, do hereby petition our Senators and Representatives at Washington to be calm and deliberate with care these proposals; that we ask Congress to assist the militia of the country to be equipped and increased as our ideal citizen soldiery; that we ask for an efficient Navy without the pork barrel; and that we demand the Government to build its own warships and own and build its own factories for ammunition, guns, and other equipment for the maintenance of an Army and Navy."

I believe that with the representatives of the militia and the resolutions of the farmers we have a very good expression of the sentiment of the people of our State. The guard is not against the Army by any means. We know that should be increased, particularly in enlisted men, as the strength of the companies should be greater in times of both peace and war.

If the people are afraid of militarism, they will never be afraid of an Organized Militia with some control in the State. What the people are afraid of is a big organized force controlled from Washington, with no control in the State. The militia force is just the kind of force to prevent a war of aggression. Such force will never be used in an unworthy cause, because the people in the State have direct control.

This is the reason the Constitution makers fixed it as they did. The militia is a constitutional force, required by and provided for in the Constitution, and by the Constitution was made the main reliance of the country. The country has always done well under that system, and Congress will make a mistake if they abandon this constitutional force or, I think, in assisting another force that is bound to put it out of business. I would like to see Congress put the Division of Militia Affairs in control of militia and appropriate enough money to enable the militia to do business; and the results are bound to be good.

The continental army was repudiated, and I hardly think that section 56 of the Chamberlain bill is anything but the continental army in another form, and, as far as I am concerned—and I believe 95 per cent of the fathers in the State of North Dakota feel the same—they do not want their boys to join the continental or the Regular Army; and if the militia is to be the third in the line of defense, then you are not going to have any militia, as they will not belong if their duties are only to quell riots and break strikes. I believe that I am safe in saying that if you should ask any militiaman how long they would stay in the service provided they were not subject to call for service except during riots and strikes I do not think you would find any man would say that he would want any such service; and I do not believe that the militia should be used in local trouble, as in such a case you are likely to have to fight your friends and neighbors, which is the reason the militia is so unpopular among the labor unions.

As officers of the National Guard we have district judges, doctors, dentists, and men prominent in nearly every walk of life, and these men have only one idea in view, and that is their country.

As far as the civilian camps are concerned, such as held in New York last year, they are of no value to anyone, and will not bring an army that is any use in time of need, as neither men over age nor the very rich will be likely to be found in the trenches at any time.

If a man is to take two months or more away from his business in any one year, his employer, if he has one, will be likely to tell him that he can get along without him the balance of the year.

I am personally willing to admit that the Militia make mistakes; they are also made in the Regular Army; they make them everywhere; and the only question in my mind, and I believe in the mind of every other citizen who is loyal to his country, is to get a system that will give the best protection for the least money. While our opinions may be divided on that, I think that records have proved that the National Guard is about the most economical of anything that has been given us up to this time, and conditions are too serious to cast aside the National Guard, which has proven fairly good under pitiable conditions, having received no Federal support to speak of, and take up something that is not even feasible to men who have made a study of the subject.

I do not want you to think I am attempting to tell you what to do, but simply to give you our views and hope that you will take them in the same spirit that they are given.

The officers of the Guard are not jealous, as charged, and men as a rule are not jealous of losing a job that brings them nothing but trouble; and we expect and ask nothing but partial pay for the work we perform, and personally I am old enough to escape Army service should I so desire, and I expect to sever my connections with the Guard during the next year or two; but I am interested in it, having spent the best part of my life in it.

With kindest personal regards, and hoping that I may see you when you come to the State, I remain,

Yours, very truly, T. H. THARALSON.

During the reading of the letter,

The VICE PRESIDENT. The time of the Senator from North Dakota has expired.

Mr. GRONNA. I ask that the remainder of the letter be printed in connection with my remarks.

The VICE PRESIDENT. Without objection, that will be done.

After the reading of the letter,

Mr. WEEKS. Mr. President, there seems to be a great difference of opinion among the National Guard forces of the different States about this question of a volunteer army. I think we have in Massachusetts as competent a militia force as there is in any State in the Union. The Commonwealth has spent as much as $700,000 a year in recent years on a force aggregating about 7,000 men. We have nearly $6,000,000 invested in property entirely for the benefit of the militia force; yet our men in Massachusetts, almost without exception, if not entirely so, desire the establishment of the volunteer army, and propose, as far as they can, to transfer into the volunteer army if it is established. To carry out that purpose an enabling bill was introduced in the Massachusetts Legislature, a copy of which I put in the RECORD some days ago. That bill passed the Massachusetts senate early this week and it passed the house of representatives yesterday. I wish, in my own time, to read from the New York Sun an account of the proceedings which took place when this bill passed:

BOSTON, MASS., *April 14*.

Massachusetts, through its legislative bodies, declared to-day in no uncertain terms for national preparedness.

At the close of a long debate, bristling with patriotism, the house suspended the rules and passed the bill to permit of the federalization of the Massachusetts Militia. This is the first action of this kind taken by any State in the Union.

The declaration was made amid cheers and prolonged applause that "The sons of Massachusetts are ready to act to-day."

Opposition centered about the fact that the $6,000,000 worth of military property owned by the State should not be turned over to the National Government free of charge.

I am informed by leading National Guardsmen of Massachusetts that it is the purpose of the organization in our State to transfer to the volunteer army without delay if provision for it becomes a part of the law.

Mr. BORAH. Mr. President——

The VICE PRESIDENT. Does the Senator from Massachusetts yield to the Senator from Idaho?

Mr. WEEKS. I do.

Mr. BORAH. I should like to ask the Senator a question. Does the Senator understand that that will leave the State of Massachusetts without any State militia?

Mr. WEEKS. If all the State militia transfer to the volunteer army, it would.

Mr. BORAH. And the Senator from Massachusetts approves of the proposition of destroying entirely the State militia of his State?

Mr. WEEKS. Mr. President, I stated the other day, in some brief remarks which I submitted to the Senate, that substantially the only purpose for which the National Guard could be used was in connection with strike and riot duty. I do not consider that a proper duty for the National Guard to engage in. I believe that every State, as I said then, should establish a State constabulary, which should be used for that purpose. If that were done, many men who are now prejudiced against the State militia or against any similar force would go into it, as they do not do now. Personally I do not think the State of Massachusetts gets any benefit from its State militia to-day, except along those lines and the possibility occasionally of a great fire, when the militia may be called on to protect property.

Mr. BORAH. Mr. President, suppose the transfer takes place and the State militia disappears and becomes a part of the national force, and that some other than the present incumbent of the governor's chair should be elected governor of that State and should appoint an adjutant general, and that adjutant general should proceed to organize a State militia, could he do so?

Mr. WEEKS. Well, Mr. President, I do not know about that; I have not followed the proceedings in the legislature closely enough to know whether that could be done or not.

Mr. BORAH. Undoubtedly he could do so, and he never could be prevented from doing so until the Constitution of the United States is amended.

Mr. BRANDEGEE. Mr. President, will the Senator from Massachusetts allow me to ask him a question?

Mr. WEEKS. Certainly.

Mr. BRANDEGEE. Does the Senator think that the National Guard of his State would go into the Volunteer Army under section 56, if the amendment is agreed to, limiting the service of that Army to 30 days?

Mr. WEEKS. I do not think that the sentiment of the National Guard of Massachusetts would be that any limit should be placed on their service. I think it would be entirely opposed to that; and, furthermore, I think I ought to say that the question of pay has not in any shape been brought to the attention of my colleague or myself by the Guard of Massachusetts. I myself served 10 years in the National Guard of Massachusetts, and during 6 years of that time I commanded an organization of 600 or 700 men. During that time every man in that organization signed over to the organization, to be used for military purposes, every cent of pay he received for any duty which he was called upon to perform. The question of going into the service for pay at that time, from 1890 to 1900, had no effect whatever on enlistments, and I do not think any man ever thought for a moment whether or not he was to receive money for his service.

Mr. CHAMBERLAIN. Question!

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from Missouri [Mr. REED] to the amendment reported by the committee.

Mr. BRANDEGEE. I ask that the amendment be stated, Mr. President. I thought the Senator from Georgia had offered an amendment to the amendment of the Senator from Missouri.

The VICE PRESIDENT. The Senator from Georgia has withdrawn his amendment.

Mr. BRANDEGEE. Then, I will not ask to have the amendment stated.

Mr. REED. I ask for the yeas and nays on the amendment.

Mr. GALLINGER. I ask that the amendment be stated.

The VICE PRESIDENT. The Secretary will state the amendment.

The SECRETARY. It is proposed to strike out section 108 as proposed to be amended by the committee and in lieu thereof to substitute the following:

SEC. 108. Pay for National Guard officers: Commissioned officers on the active list belonging to organizations of the National Guard participating in the apportionment of the annual appropriation for the support of the National Guard shall receive compensation for their services (except during periods of service for which they may become lawfully entitled to the same pay as officers of corresponding grades of the Regular Army) as follows, not to include longevity pay: Captains and officers above the rank of captain, $500 per year; first lieutenants, $300 per year; second lieutenants, $250 per year. Regu-

lations, to be prescribed by the Secretary of War, shall determine the amount and character of service that must be rendered by officers to entitle them to said pay: *Provided*, That only line officers and officers of the staff corps and departments on duty with organizations of the line shall receive pay.

Mr. LA FOLLETTE. Mr. President, I move to strike out the last word. I do that merely to secure some time in which to ask a question. I should like to inquire of the Senator from Missouri, or of the chairman of the committee, if any estimate has been made as to the total amount which this proposed amendment would carry as an added appropriation to this bill?

Mr. REED. I have not made the estimate; but the language contained in this amendment is substantially the language contained in the House bill, except under the language of the House bill there were certain officers above the rank of captain not engaged in active service who would have obtained pay. This amendment is drawn in such manner that none of those who are not engaged in active service will get pay. The amount of money required can not be a very large sum. I proceeded upon the theory that the House had made its own estimates. My amendment is really a restoration of the House proposition, except that it will cut out some of those officers who are not actively engaged in military duties.

Mr. CHAMBERLAIN. Mr. President, may I correct one statement of the Senator?

Mr. REED. Certainly; if I have made an error, I shall be glad to be corrected.

Mr. CHAMBERLAIN. Under the House bill the pay given to the officers was smaller.

Mr. REED. That is, officers below the rank of captain, however.

Mr. CHAMBERLAIN. Well, the House bill provides:

And the same pay shall be paid to every officer of higher rank than that of captain, a first lieutenant $240 per year, and a second lieutenant $200 per year.

So it will be seen that the amount fixed by the Senator from Missouri is larger than that fixed in the House bill.

Mr. REED. Mr. President, so that the matter may be clear, I will say that I have adopted the language of the Senate amendment as to the pay that captains and lieutenants are to receive, the Senate committee having increased the amount as to first lieutenants from $240 to $300, and as to second lieutenants from $200 to $250. I let that remain. Now, the Senate committee amendment cuts out all officers above the rank of captain, who were included in the House bill. I undertake to restore that, but I adopted the language that is found in the amendment after pretty careful consideration, in order to cut out certain men that would have been included in the House language, namely, those officers above the rank of captain who really do nothing. There are some such officers—staff officers, and so forth.

Mr. LA FOLLETTE. Mr. President, I withdraw the amendment.

The VICE PRESIDENT. The question is on the amendment of the Senator from Missouri [Mr. REED] to the amendment of the committee. The yeas and nays have been requested and seconded. The Secretary will call the roll.

The Secretary proceeded to call the roll.

Mr. TAGGART (when Mr. KERN's name was called). My colleague [Mr. KERN] is unavoidably absent.

Mr. OWEN (when his name was called). I transfer my pair with the Senator from New Mexico [Mr. CATRON] to the Senator from North Carolina [Mr. SIMMONS] and will vote. I vote "yea." I wish to announce that the Senator from North Carolina [Mr. SIMMONS] is absent on business of the Senate, and if present would vote "yea."

Mr. THOMAS (when his name was called). I have a general pair with the senior Senator from North Dakota [Mr. MCCUMBER]. I transfer that pair to the junior Senator from California [Mr. PHELAN] and will vote. I vote "nay."

Mr. TILLMAN (when his name was called). I transfer my pair with the junior Senator from West Virginia [Mr. GOFF] to the junior Senator from Maryland [Mr. LEE] and will vote. I vote "nay."

Mr. WALSH (when his name was called). I announce the absence of the senior Senator from Virginia [Mr. MARTIN] on business of the Senate. I have a general pair with the senior Senator from Rhode Island [Mr. LIPPITT], who is absent. I transfer that pair to the senior Senator from Virginia [Mr. MARTIN] and will vote. I vote "yea." I am advised that the senior Senator from Virginia, if present, would likewise vote "yea."

Mr. WEEKS (when his name was called). I have a general pair with the senior Senator from Kentucky [Mr. JAMES] and therefore withhold my vote. If I were at liberty to vote, I should vote "nay."

Mr. WILLIAMS (when his name was called). Repeating the explanation made upon the former roll call, I vote "nay."

The roll call was concluded.

Mr. BECKHAM. I transfer my pair with the senior Senator from Delaware [Mr. DU PONT] to the senior Senator from Nebraska [Mr. HITCHCOCK] and will vote. I vote "nay."

Mr. MARTINE of New Jersey. I rise to announce the absence of the junior Senator from Tennessee [Mr. SHIELDS] on public business. Were he present he would vote "yea."

Mr. MYERS. I inquire whether the junior Senator from Connecticut [Mr. MCLEAN] has voted?

The VICE PRESIDENT. He has not.

Mr. MYERS. I transfer my pair with that Senator to the junior Senator from Tennessee [Mr. SHIELDS] and will vote. I vote "yea."

Mr. LODGE (after having voted in the negative). I have a general pair with the senior Senator from Georgia [Mr. SMITH]. That Senator, I believe, has not voted.

The VICE PRESIDENT. He has not.

Mr. LODGE. I withdraw my vote.

Mr. CLARKE of Arkansas (after having voted in the negative). May I inquire whether or not the junior Senator from Utah [Mr. SUTHERLAND] has voted?

The VICE PRESIDENT. He has not.

Mr. CLARKE of Arkansas. Then I wish to withdraw the vote I cast.

Mr. CLAPP (after having voted in the affirmative). I am paired with the senior Senator from North Carolina [Mr. SIMMONS]; but I understand he has released me on this matter, so I will allow by vote to stand.

Mr. CURTIS. I have been requested to announce the following pairs:

The Senator from New Mexico [Mr. FALL] with the Senator from West Virginia [Mr. CHILTON];

The Senator from West Virginia [Mr. GOFF] with the Senator from South Carolina [Mr. TILLMAN];

The Senator from Michigan [Mr. TOWNSEND] with the Senator from Florida [Mr. BRYAN]; and

The Senator from Vermont [Mr. DILLINGHAM] with the Senator from Maryland [Mr. SMITH].

The result was announced—yeas 41, nays 14, as follows:

YEAS—41.

Ashurst	Johnson, Me.	Page	Sterling
Bankhead	Jones	Pittman	Swanson
Burleigh	Kenyon	Poindexter	Taggart
Clapp	La Follette	Pomerene	Thompson
Cummins	Lewis	Reed	Underwood
Curtis	Martine, N. J.	Robinson	Vardaman
Gronna	Myers	Shafroth	Wadsworth
Harding	Norris	Sheppard	Walsh
Hardwick	Oliver	Sherman	
Hollis	Overman	Smith, Mich.	
Husting	Owen	Smoot	

NAYS—14.

Beckham	Clark, Wyo.	Lane	Warren
Borah	Gallinger	Nelson	Williams
Brandegee	Gore	Thomas	
Chamberlain	Hughes	Tillman	

NOT VOTING—41.

Brady	Fletcher	McLean	Smith, Ga.
Broussard	Goff	Martin, Va.	Smith, Md.
Bryan	Hitchcock	Newlands	Smith, S. C.
Catron	James	O'Gorman	Stone
Chilton	Johnson, S. D.	Penrose	Sutherland
Clarke, Ark.	Kern,	Phelan	Townsend
Colt	Lea, Tenn.	Ransdell	Weeks
Culberson	Lee, Md.	Saulsbury	Works
Dillingham	Lippitt	Shields	
du Pont	Lodge	Simmons	
Fall	McCumber	Smith, Ariz.	

So Mr. REED's amendment to the amendment of the committee was agreed to.

Mr. REED. Mr. President, I offer the amendment which I send to the desk.

The VICE PRESIDENT. The amendment to the amendment will be stated.

The SECRETARY. It is proposed to insert a new section near the end of the bill, just before the last section or the repealing section, as follows:

SEC. —. That as soon as practicable the Secretaries of War and of the Navy shall divide the continental United States into not less than 6 nor more than 12 districts. Said districts shall be laid out and apportioned in such manner as the Secretary of War shall deem most convenient for carrying out the purposes of this section. Said districts shall not necessarily be coterminous with any State or States. The districts thus created may be readjusted and new districts created from time to time in the discretion of the Secretary of War: *Provided*, That the total number of such districts shall not exceed 12.

There shall be established in each of said districts either a military training school or a naval training school, the number of each to be determined by the Secretaries of War and of the Navy, in accordance with the public needs. Said schools shall, whenever practicable, be located contiguous to established military or naval posts. The Secretaries of War and of the Navy may, in their discretion, cause both military and naval training at one or more of said schools.

The Secretaries of War and of the Navy shall prescribe the physical entrance examination to be passed by all students. They shall also, subject to the provisions of this act, prescribe a course of study in military and naval science and in the ordinary branches of learning and manual and vocational training. The Secretaries of War and of the Navy shall detail from the Army and Navy proper instructors in the several branches to be taught and may employ such civilian instructors as are necessary.

The students at said schools shall be known as United States reserve military cadets, or United States reserve naval cadets, as the case may be.

Said cadets shall be furnished by the Government the necessary books, quarters, uniforms, equipment, sustenance, and a stipend of $50 per annum.

Said cadets shall, before being permitted to enlist, present the written consent of their parents or guardians to such enlistment. The term of enlistment of said cadets shall be for 10 years, 4 years of which shall be for active service as cadets in said schools and 6 years for service in the Reserve Army of the United States.

All male persons over 14 years of age and less than 20 years of age who shall pass the required physical and mental examinations and who are of good moral character shall be entitled to enlist and become cadets in said schools as aforesaid, and when so enlisted shall not be discharged except for good cause shown and under such regulations as may be prescribed by the Secretaries of War and of the Navy. The mental examination shall, as nearly as possible, be the equivalent of that required for graduating from what are commonly known as the first-class grammar schools of the various cities of the United States: *Provided*, That if said schools at any time become overcrowded the Secretaries of War and of the Navy may raise the grade of examination required or adopt proper selective regulations so as to limit the number of cadets within the capacity of said schools. The cadets at said schools shall attend the school of the district in which they resided at the time of appointment, but may for good cause shown be transferred to another school. Each of said schools when established shall, as nearly as practicable, be capable of accommodating 500 cadets.

The graduates of said schools shall receive diplomas issued by the Secretaries of War and of the Navy, and the holders of such diplomas shall be entitled to enter the Military Academy of West Point or the Naval Academy of Annapolis and shall be entitled to preference over all other applicants for appointment: *Provided*, That the said Secretaries shall make regulations which, if the number of cadets so graduating and desiring to enter said Military or Naval Academy is greater than the prescribed number of cadets for each of said academies, shall give the preference among said graduates to those who possess the best physical and mental qualifications.

The cadets graduated from said schools shall be subject to call at any time by the United States Government for a period of six years after their graduation and shall be eligible to appointment as second lieutenants, but shall not by reason of said graduation be entitled to a commission as officers. They shall likewise be entitled to enlist in the Regular Army of the United States and shall, where qualified, be preferred as noncommissioned officers.

Mr. REED. Mr. President, I know that the Senate is weary of discussion and may be growing very weary of amendments. We have taken up, however, nearly a week's time in discussing the single question of the establishment of a plant to manufacture one of the chemicals necessary in the manufacture of powder. I want to try and get the attention of those Members of the Senate who are present to the question of manufacturing officers for a volunteer army or an army of the militia which may be necessary in time of actual war.

If this country ever comes to grips with a first-class power, we will not mass our men by the thousands or by the hundreds of thousands, but by the millions. I have heard some remarks here to-day about criticism of the Regular Army. It may be that something I said could have been so construed, but I did not intend, and do not now intend, to say a word in criticism of the established Army and Navy of the United States.

I recognize the fact that West Point and Annapolis are two great schools. I recognize the fact that the course of training therein prescribed is of a very high character. I also recognize the justice of giving the young men who graduate in those two schools the right to commissions either in the Army or Navy. These, however, are schools intended to provide officers who are to devote their entire lives to military service. They are not intended to supply officers sufficient in numbers to meet the requirements of a great war.

If we at some time find it necessary to put an army of a million or 5,000,000 men in the field, how are we to officer such an army from the graduates of West Point or Annapolis? It is absolutely impossible, and a moment's consideration will convince all candid men of the fact.

So far as I am concerned, I believe in an established army. I am willing to vote for a generous increase in a standing army. Nevertheless, I say to-day what has been so often said upon this floor, and so often said in the past—that when this country comes to the real grip of war its main dependence must be in the citizenry of the country. Just in proportion as we disseminate military knowledge among that citizenry, just in proportion as we bring to it the skill and the learning that is necessary in order to make an efficient force, just in that proportion we strengthen the Nation and make it invincible in times of war.

Mr. President, the schools provided for in this amendment are intended to furnish that kind of education. It is not intended in these schools to educate men who will follow the military profession as a life work. It is intended by this amendment to make these schools available to every boy possessing what is commonly known as a grammar-school education and who at the same time is physically fit and who is over 14 years of age. It is proposed that his term of enlistment shall be for 10 years; that he shall put four years of that time in active service in the schools; that the remaining six years he shall go into the reserve list and shall be subject to call, at any time within the whole period of his 10-year enlistment, into active service.

It is proposed to furnish free education to these boys. The reason for regional schools is to make it possible for the boy to attend without having to go an enormous distance from his home. It is proposed to put within the grasp of a large number of boys the opportunity to secure better than a high-school education, so that the son of the laboring man, the son of the mechanic, the orphan boy from the orphans' home, and all other classes of our youth can obtain the liberal education I have outlined and at the same time secure a thorough military training.

I say, with all the earnestness of which I am capable, that if a system of schools of this kind is established we can turn out every year from five to ten thousand young men who will be qualified to take command of a company in case our country is engaged in a great war. They will come in great numbers, because the liberal education they will obtain will compensate them for the military obligation they must assume.

Mr. President, it may be said that this system of schools will cost some money. I grant it; but I assert it to be true that every boy within the borders of the United States is entitled to the opportunity to secure at least a high-school education. I assert it to be true that no money properly expended in education is ever wasted. Instead of waste, it is the highest and most remunerative form of investment.

I make the further point that it does not make any difference what division of the Government pays for the maintenance of schools. If we start with the proposition that a boy is entitled to an education, then the expense of that education must be borne by the public; and whether it is paid by a township or a county or by a State or by the Nation, the cost, in the last analysis, must in every instance come from the citizens of the Republic.

Mr. President, another reason why I am very insistent upon this amendment is this: In these schools the students will actually enlist. They will actually be under the command of United States officers. They will actually obtain a real military discipline. They will learn that which is greater and more valuable than the mere manual of arms, than the mere foot movements, than the mere tactics; they will gain that discipline of mind which is essential to the creation of a good soldier.

I do not speak in derogation of military colleges under private management. I do not speak in derogation of those efforts which have been made to have a sort of system of national military school through the medium of land-grant colleges. I do say, however, that experience shows that while these schools have all done good, they have failed in teaching that rigid discipline and obedience which are necessary to those who are thereafter to command men.

The VICE PRESIDENT. The time of the Senator from Missouri has expired.

Mr. VARDAMAN. Mr. President, I realize that the strength of this Republic consists in the moral qualities and intellectual acquirements of the individual citizen. The great battles of the past have been fought by the man whose labor feeds and clothes the world and maintains the nations' commerce in time of peace, and the battles that are to be fought in the future will be fought by the same character of man. I realize the advantages of proper early training. I understand fully that—

> 'Tis education forms the common mind:
> Just as the twig is bent the tree's inclined—

but I really think we are going a long way in the matter of military preparation. It seems to me to have become a kind of plutocratic fad.

The plan proposed by the Senator from Missouri [Mr. REED] will furnish an excellent opportunity for a boy to educate himself, but I am afraid it will be a very expensive system. Of course men are not given education. They educate themselves. We hear a good deal of talk about self-made men. There is no other sort who amount to anything in the world. Whether their early lives are spent in poverty or in affluence, the men and women who accomplish anything in this world are largely self-developed. I am heartily in favor of every wise and proper influence or agency that works for the spiritual and mental uplift of mankind.

If this Government is to establish schools for the purpose of developing the soldier, however, I submit that a more economical plan can be provided than the one embraced in the amend-

ment of my friend the able Senator from Missouri [Mr. REED]. I should greatly prefer that the college or the school be established in the State, maintained partially by State taxation, and then let the Federal Government contribute to the conduct and management of the school by furnishing, if need be, instructors. The plan of the able Senator from Missouri is going a little bit further than the exigencies of the hour demand or the condition of the National Treasury will warrant. If we are going to make any provision for military education along the lines proposed in this amendment, I really think it would be very much better to confine it, as I said a moment ago, to schools that are established by the States and maintained in part by the States and then let the Federal Government render its help by contributing soldiers to instruct in the art and science of war.

I do not think it would be prudent for Congress to adopt at this time a measure of such magnitude and far-reaching consequences. Of course, if we are to become a government of the sword; if in the future all great questions are to be determined by the arbitrament of arms, and the United States has got to fight its way in the settlement of all questions; if force, rather than reason and righteousness, shall be the determining factor, then there will be ample time, I think, for us to make this departure. God forbid that the time for such a departure shall ever come.

I think it would be unfortunate, Mr. President, if the amendment should be adopted.

Mr. THOMAS. Mr. President, the Senator from Missouri referred to the fact that his amendment if adopted will carry with it a very considerable expenditure for its development and operation, but he did not give an estimate of the amount necessary for that purpose. I should like to inquire of him whether he has made any estimate, and if so, what it is, of the annual added expenditure which his amendment would impose upon the Treasury.

Mr. REED. In answer to the Senator I will say that, in the first place, I have been able to make the only one that I think can be made, and that is to inquire into the cost of education, clothing, and maintenance of a certain military school of the highest class. The military school I have been able to inquire about is the Culver School, in Indiana, which, I think, perhaps, is one of the very best in the country. The annual expense approximates $500 a year a student. They have, however, a plant already established, which, of course, once established, is paid for.

Mr. THOMAS. Mr. President, the plant would, of course, require the construction of at least one school.

Mr. REED. Will the Senator permit me to add——

Mr. THOMAS. In just a moment. It will require the construction at least of one system of school buildings for each of the proposed districts in addition to the cost of maintenance.

Mr. REED. I wanted to add to what I have said that the school in Indiana is, as I understand it, a school of a very high class, where expense has not been spared. My own opinion is that the Government would establish these schools and maintain them at even less cost.

Mr. THOMAS. In my judgment the Culver School is one of the finest institutions in the world. I am convinced that the amount of money required to establish and maintain these schools would amount to many millions a year. While I do not underestimate the importance of education, and no one does that, I may refer to the millions which are annually spent by the States, respectively, for the education of their youth, and to the high character of the schools which they support. These are ample, and I am not impressed with the importance or even the necessity at this time of going into a supplementary course of national education, which once began will expand into vast and enormously expensive proportions. I affirm that if we embark upon this experiment the burden ultimately placed upon the Treasury will be as great as that required for the maintenance of the National Guard.

Mr. HARDWICK. I wish to ask the Senator a question. Can the committee give us any estimate as to what the system of military instruction in the colleges, carried in sections 42 to 55 of the bill, will cost?

Mr. THOMAS. The committee, I think, can not; and I am sure that is going fully as far as it is wise for us to go at present with the extension of technical military instruction.

Mr. HARDWICK. Can not the Senator tell me the cost?

Mr. THOMAS. No; I shall have to refer you to the chairman of the committee.

Mr. HARDWICK. I thought perhaps the Senator from Colorado could give me the information.

Mr. THOMAS. My duties during the meetings of the committee were divided, as far as my poor health would then permit, between the Committee on Military Affairs and the Committee on Public Lands, giving preference to the latter on account of the local importance of measures pending before it. Hence I am not as familiar with the details of the bill's construction as I should be.

Mr. HARDWICK. I did not ask the question critically. I merely wanted information.

Mr. THOMAS. I understand the Senator merely wanted an estimate; but assuming that the expense necessary for carrying out the plan which the bill embodies is considerable, it must be remembered that the proposed amendment is a supplement to it, not a substitute for it. There must be a limit somewhere to these expenditures, and as far as I am able to observe, no limit is in sight. We have several days in which to consider other amendments requiring appropriations to make them operative, yet instead of confining the expenditures within reasonable limits for this contemplated addition to the Army and Navy, we are adding unneeded burdens, which will confront us with an annual expense budget far beyond the estimated half billion dollars. Let us halt somewhere and inquire what more we can afford.

Mr. WILLIAMS. Mr. President, I have a good deal of sympathy with the purposes which the junior Senator from Missouri has in view, but I think that he is going about it in the wrong way. I think the method selected by him is too expensive and that it is unnecessary. We already have in existence 48 State universities, some of them equal to any universities in America, equal in practical work to Harvard, or Yale, or Princeton, or the University of Virginia. I will leave out the latter because it is a State university.

Now, Mr. President, all that is necessary to accomplish the purpose which the Senator from Missouri has in view is that the United States shall furnish each of those institutions three or at the utmost four professors who can be detailed from the Army just as most of the professors at West Point are. The four topics taught by these officers detailed would be as follows: One of them would be tactics, drill, and target practice, as the ordinary Army officers now detailed to the agricultural and mechanical colleges teach these. Then they could go further and send another man to teach military history and strategy, still another to teach military engineering and ordnance, and those three would by the addition of the curriculum of the State university make practically out of each State university a West Point.

Mr. REED. Mr. President——

Mr. WILLIAMS. One moment, please. Because everything else taught in West Point is taught at those State universities except these things which I have designated. Now I will yield for a question to the Senator from Missouri.

Mr. REED. Does not the Senator know that has been attempted for years and years in this country? I want to ask him which one of those schools has risen to a West Point? Which one of those schools has really ever turned out a disciplined body of men?

Mr. WILLIAMS. I do not know that it has been attempted, and as a matter of fact it has not. There has been a detail of one officer to teach nothing in the world except drill; that is all he pretends to teach; and the agricultural and mechanical schools have turned out magnificent battalions of men. The best trained force we have in this country to-day outside of the Regular Army consists of the men who have been turned out from the agricultural and mechanical colleges. But they have been taught nothing of course except company drill, battalion drill, and skirmish drill, and a little target practice. The Government does not even furnish them with the ammunition necessary for target practice.

Mr. President, if the Government will designate three men of the rank of colonel or major or above, retired officers or officers in the active service, perfectly competent to teach these three things—first, drill and tactics and target practice, that is taught now; second, military history and strategy; and third, military engineering and ordnance, and there might be added perhaps another professorship; then let the boys who want to go into that force volunteer for it and enlist for three years, binding themselves when they do it to go into the reserves for five or six years longer—my word for it you will find a splendid training school in each State university for officers of the volunteer army in time of war, which is the object which the Senator from Missouri has in view.

It may be asked why I have not introduced an amendment of that sort. My reply to that is that I do not think this is the proper place for it. I want it considered upon its own merits, and later on I do propose at some time to draw up an independent bill covering that question fully, providing for the professorships and providing for a certain amount of money to be expended in the way of rifles, cannon, and ammunition for the use

of those schools each year. It will not take a large amount, and the officers detailed will cost the Government of the United States nothing. The professors already are employed to teach the other things that are taught at West Point and they are being paid by the State and will continue to be paid by the State.

I have selected the State universities because there the boy has already received a high-school education and is therefore possessed of intellectual training and ability which enables him to learn to be an officer very soon. So when he leaves there he will be perfectly competent to be a second lieutenant or even a first lieutenant or even a captain in the volunteer army of the United States in times of war.

It seems to me that the amendment offered by the Senator from Missouri had better come as a separate bill to be considered as I propose that my idea shall. It seems to me that it is unduly expensive, unnecessarily expensive, and will involve absolutely new plants over the country, with the buildings that are necessary and with the other professorships that are unnecessary, because the State universities already furnish them English, modern languages, literature, the various branches of applied science, chemistry. It might be changed there a little in order that they should go into chemistry of ammunition as well as the sort of chemistry now taught.

I hope at some time in the future Congress may pass a bill of that sort. As I said when upon my feet the other day, when merely referring to this measure, the idea is not original with me. As far as I know it originated with Mr. Jefferson of Monticello, who suggested it to the State of Virginia; but the State of Virginia did not adopt it. He suggested it in connection with the State university which he founded for that State.

Mr. CHAMBERLAIN. Mr. President, I sympathize with the purpose of the amendment the Senator from Missouri has proposed to the bill, but I am in entire accord with the Senator from Mississippi when he says that it is not a part of any reorganization Army scheme.

Mr. HARDWICK. Will the Senator yield to me for just a moment?

Mr. CHAMBERLAIN. I yield.

Mr. HARDWICK. For only a short question. There are 11 sections of the bill which provide for military training. How did they get in the bill?

Mr. CHAMBERLAIN. I am afraid we are going to get lots of things in the bill that ought not to be there. The committee has had a gigantic struggle to keep things out of it.

Mr. HARDWICK. But it is in the bill.

Mr. CHAMBERLAIN. It is in, and it ought to cover every reasonable request that anybody could make.

Mr. HARDWICK. Therefore this subject is properly in the bill.

Mr. CHAMBERLAIN. I am not so sure that it is, but it is there; and we have a good many things in the bill that I am sorry could not be kept out. In crystallizing the sentiment of a large committee concessions had to be made on all sides. I think the provision which was put in and to which the Senator from Georgia refers ought to cover the reasonable demand of anyone with respect to the training of young men.

The section to which the Senator refers provides for the training of officers in the schools of the country and meets very nearly the suggestion which the amendment of the Senator from Missouri contains. Besides that we have doubled the number of young men in the Military Academy. There is a probability that the number of young men in the Naval Academy will be increased. Provision is made in the bill now for the training of young men in the different educational institutions all over the country. So, taking it altogether, it seems to me there will be enough of education along these lines for young men.

Mr. REED. Will the Senator permit me a question, not in any controversial spirit at all? How large an army could we officer from the graduates from West Point, assuming that its capacity is increased to the point named in the bill, approximately?

Mr. CHAMBERLAIN. I would not undertake to say. The report of the committee shows how many officers are necessary to officer the Army as far as the maximum strength of 250,000.

Mr. REED. And your military establishment at West Point would be just about able to supply officers for an army of that size?

Mr. CHAMBERLAIN. Practically that is true.

Mr. REED. Then what would you do if you had to have 5,000,000 men on the battle line?

Mr. CHAMBERLAIN. I answer that question by telling the Senator that we will meet an emergency of that kind when it comes. The fact is the country will not stand for it at this time. The committee has had to consider all these things in connection with this bill.

Now, the Senator provides for 12 districts of at least 500 men in each district school; that is 6,000. If the Senator is going to estimate that 6,000 to cost $500 each, which is about the cost of young men at Culver, I think, that makes about $3,000,000 the first year. Now, how much will have to be added to that for the buildings? If they cost anything like they do at West Point, it will cost a vast amount of money to establish those institutions. Equipment and ordnance and all have to be furnished.

Mr. REED. The Senator will admit he does not bat an eye at $25,000,000 to start out with the continental army.

Mr. CHAMBERLAIN. Nor $45,000,000 for the National Guard, and the Senator votes for that part of the bill without batting an eye.

Mr. REED. I do.

Mr. CHAMBERLAIN. I am not quarreling with the Senator about that at all. I want to do what will place our country in a reasonable condition to defend itself, and whatever money is necessary to do it is not an expenditure; it is an investment.

Mr. REED. I agree with that. Therefore I think the Senator ought not to shy at $3,000,000 a year or $10,000,000 a year.

Mr. CHAMBERLAIN. The Senator from Oregon does not shy very much at anything.

Mr. REED. I do not mean to say that disrespectfully. The Senator must not misunderstand me. He knows the esteem in which I hold him, and I am sorry if my words were susceptible of that construction. But why should we hesitate? If the utmost capacity of West Point is to supply officers for an Army of 250,000, they are to be employed, if the Senator has his way, in a standing army of that size, and if we know there are possibilities which would call upon us for from 3,000,000 to 5,000,000 men, why not educate some men capable of taking charge of the surplus?

Mr. CHAMBERLAIN. I should like to allow the Senator to interrupt me, but I have very little time. Let me say to the Senator that this bill provides for the education of officers in the schools of this country, but I am willing to admit, in frankness, that we shall not have enough officers of the Army in case of a great war such as they are now having in Europe. Further than the provision which is made in the bill, let me say, that other educational institutions in this country, out of a patriotic sense of duty, are doing the very work which the Senator now proposes. Take Princeton, for instance, which has gone ahead now and made military training a part of its curriculum, allowing applicants for degrees to count their service in the military arm of the school as a credit toward the degree. Not only has Princeton adopted it in the last few days, but other large educational institutions have done so. That is without any expense to the Government of the United States at all; it is an elective system. I believe that with the efforts that the colleges and other private institutions are making, together with the training that is being had in the agricultural institutions, we might have a sufficient number of officers for almost any emergency that might arise.

I realize the importance of officers; there is no one who realizes it more than do I, but I do not think that this provision ought to be added as a part of the bill now, in view of the fact that the committee has gone a long way to provide for the training of young officers for the Army in the educational institutions of the country. Such a provision as that proposed would simply encumber the bill and, Mr. President, I think would not work out satisfactorily.

Mr. HARDWICK. Mr. President——

The VICE PRESIDENT. The Senator from Georgia.

Mr. HARDWICK. I want to inquire of the Senator from Oregon—and I do it in my own time so as not to take up his time—if he can give us any estimate as to the cost of the military training in the colleges which is provided and carried in sections 42 to 55, inclusive, of the bill?

Mr. CHAMBERLAIN. The committee did not make any estimate as to that, Mr. President; but I assume that, inasmuch as the plant would have to be erected by the Government of the United States, it would cost possibly in the neighborhood of $200 per man; but I do not know.

Mr. HARDWICK. That is a mere guess?

Mr. CHAMBERLAIN. It is a mere guess; I do not know.

Mr. HARDWICK. I wish to say, Mr. President, to the Senate that a rather remarkable situation is presented in connection with this matter. Sections 42 to 55 of the Chamberlain bill, the Senate bill, are also embodied in the House bill, and yet, so far as I can ascertain, neither one of the committees, that of the House of Representatives or of the Senate, or the War Department, or anyone else, seems to have any idea or to

have furnished any estimate as to the cost. I can not ascertain myself as to what they estimate it is going to cost.

Mr. HUGHES. What difference does it make?

Mr. HARDWICK. The Senator inquires, in an aside, what difference does it make? I do not know whether it makes any difference to other Senators or not; but I want to make this suggestion to the members of the committee: Why is it that it is urged that you can not support a proposition presented by a Senator not on the committee, on the ground that we can not tell what it would cost, when it does not appear that we can tell what a proposal submitted by the committee will cost? What is the difference?

Mr. President, regardless of what any other Senator thinks, I think we ought to have a little more definite information about what this plan proposed in the bill, and which is carried in both the House bill and the Senate bill, is going to cost before we vote on it. I think, moreover, that the plan proposed by the Senator from Missouri [Mr. REED] is really a substitute, in its very nature, for the plan proposed by the War College, which is embraced in these two bills; and I am going to vote for the amendment proposed by the Senator from Missouri, because I believe, after some study of the question, that it is a better plan than that suggested in the bill or proposed by the War College. I do so, also, with the hope that, when this matter goes to conference, the conferees will carefully weigh the two plans, both being involved in the conference, and take the best one. I am going to support it on that idea. I am not deterred from supporting it by the fact that we can not tell exactly what it will cost, because I do not think we can tell what the plan of the committee will cost, either. I think, if Senators will compare the two plans, they will conclude that the plan suggested by the Senator from Missouri will give us a better corps of officers and will give us more of them, and probably at no greater expense, although I admit that I am entirely in the dark on that question.

Mr. JONES. Mr. President——

Mr. HARDWICK. I yield to the Senator from Washington.

Mr. JONES. If the Senator will permit me, I desire to suggest that if the House provision is adopted it can not be changed in conference.

Mr. HARDWICK. That may be true, and that is one difficulty about the situation. If we adopt these 14 sections, from section 42 to section 55, inclusive, both Houses of Congress are going to put exactly 14 sections into this bill, about the cost of which neither of them, so far as I can discover, has the slightest information. I may be in error about that—I make that suggestion rather tentatively—but I have been unable to discover, and I can not find from inquiry, what it is going to cost. So I do not think that the objection urged by the Senator from Colorado to the proposition of my friend from Missouri is very sound in view of the situation that confronts us.

It would be a good deal better to put this amendment in also and let them both go to conference and there determine exactly what each of them would cost; weigh them against each other, and see which is better. It is on that theory that I expect to vote for the plan proposed by the Senator from Missouri.

Mr. CUMMINS. Mr. President, I think it will be found to be true that a great many people who are abstractly for preparedness will shrink a little when the cost of preparedness is thoroughly driven in upon them. I have not risen, however, to discuss the amendment of the Senator from Missouri, except to this extent: Early in the session I introduced two bills, one of them intended to reorganize the National Guard and the other to establish a series of reserve or Federal reserve schools. The Military Committee gave me an opportunity to be heard upon both of those bills. Without claiming any originality whatever, so far as the National Guard reorganization is concerned, I believe it is true that most of the suggestions in my bill in that respect are now found in the committee bill; but the other was for some reason or other not considered by the committee.

Mr. REED. Mr. President——

Mr. CUMMINS. I yield to the Senator from Missouri.

Mr. REED. I want to say that I was told that the Senator from Iowa had prepared an amendment providing for military training schools. I tried to find it, but did not succeed. I hope that I have succeeded in drawing one that conforms sufficiently to his ideas so that he can support it.

Mr. CUMMINS. Not at all. The Senator from Missouri has not occupied the ground of my proposal in its details, and I rose to say that I think my proposal is better than that of the Senator from Missouri; but I shall be compelled to wait until the proper time and advocate it as best I can. I intend to offer it as an amendment to this bill. It provides, if I may gives its outlines very briefly, that the Secretary of War shall take not less than six of our useless Army posts—Army posts which have been constructed at vast expense and which are of no value whatever for the purpose of quartering the Regular troops—that he shall convert them into what I call Federal reserve schools, with an average attendance at each of 400 pupils; that they shall undergo a course of four years' instruction, the dominant note of which shall be military training and education; that upon graduation each of these students shall be commissioned as a second lieutenant, without pay and without service until called to the colors by the President. He is under obligation to come if that call is made at any time before he is 40 years of age, but he goes from the school into the civil avocations of life.

One of the purposes of my amendment, one thing I had in view, was this: The great complaint made against the National Guard is the alleged inefficiency of its officers, their want of training, and it was my purpose to prepare a body of men in civil life who would be eligible to appointment as officers of the National Guard. The obligation which each of these students should take would include the acceptance of service in the National Guard, if properly appointed or elected thereto.

I mention these things because the argument of the Senator from Missouri is simply unanswerable. We need these men; we need them from every standpoint; and those of us who really believe in preparedness, in having a body of men in this country who can command troops in the event of war, ought to find it a little difficult to oppose an expenditure of this sort.

Mr. REED rose.

Mr. CUMMINS. Just a moment. I have not had any estimate made with regard to the cost of maintaining these schools. Under my amendment the Government pays for everything except clothing; it does not supply the students with clothes, and it will cost the Government about $700 a year for each student.

The expense of converting these unnecessary Army posts into schools will not be great. There is one in Iowa that cost probably $2,000,000. It has not had a soldier in it for four years, save a caretaker, and I predict that it will never have another soldier, because I myself can not imagine why soldiers of the Regular Army should be quartered at that point.

Mr. REED. Mr. President, if the Senator will permit me to make a very brief suggestion, I wish to say that the amendment which I have prepared absolutely will admit of the use of these abandoned Army posts—indeed, it is provided that the schools shall be located as near as possible to Army posts. It is not expressly in the amendment that the Government shall use them, but, if the Senator wants that inserted, he can have it. I do not see much difference between the Senator's proposal and mine except in the matter of detail. If we could get the principle into this bill, so that it would go to conference, there would be something to work out. I thank the Senator.

The VICE PRESIDENT. The question is on the amendment of the Senator from Missouri [Mr. REED] to the amendment reported by the committee.

Mr. POMERENE. Mr. President, just as I entered the Chamber a moment ago some reference was made, I believe, to sections 42 to 55 of the Chamberlain bill, so called, and it was made in connection with the amendment proposed by the Senator from Missouri [Mr. REED]. I am not prepared to support this amendment, and I shall very briefly state my reasons for my position.

It provides for the establishment of a number of schools, and necessarily the cost of establishing these schools is going to be something very considerable. In the sections from 42 to 55 of the bill are incorporated the provisions of a bill which I introduced, known as Senate bill 3946, which was prepared for the purpose of establishing a reserve officers' training corps. Under the provisions of that bill the land-grant colleges, which now receive substantial sums from the Government, will be entitled to the privileges of the bill; also State colleges and other colleges which are already established and which will agree to conform to those provisions. There are two divisions of this training corps provided for, one the senior and the other the junior. The purpose of the bill is to place at these different colleges officers of the Army who can teach military science and tactics, and they are also required to supervise the course of study which shall be prescribed by the War Department. This bill was the product of the brains of a good many of the educators of the country.

Mr. HARDWICK. Mr. President, will the Senator yield for a question.

Mr. POMERENE. Yes.

Mr. HARDWICK. The bill to which the Senator refers is identical with the bill that the War College suggested in 1914, is it not?

Mr. POMERENE. I do not know of a bill by that name. I became interested in this bill, in the first place, through the president of the Ohio State University, Dr. Thompson, who has given a great deal of attention to this subject, and the officer, Capt. Converse, who is now detailed by the Federal Government at that university.

Mr. HARDWICK. If the Senator will pardon me again, to make a brief suggestion, he will find, I think upon examination, that word for word, even as to punctuation, the bill to which he has referred is exactly the same thing, so far as its provisions are concerned, as the War College bill.

Mr. POMERENE. I think the Senator's statement is a little broad, because the bill, as I introduced it, has been changed somewhat, and it was slightly changed when it was incorporated in the so-called Hay bill in the House of Representatives; but it may be that the general principles contained in the bill are substantially the same as those in the bill to which the Senator from Georgia refers.

It has seemed to me that in these established colleges and universities, most of which now have a certain amount of military training, we will be able, with a minimum of cost and with a minimum amount of delay, to establish institutions which would be fully equipped for the training of officers. I think that it may be fairly said that our military forces are more wanting in trained officers than they are in any other particular. We realize very fully that one of the defects, for instance, in the system now prevailing in Great Britain has been their utter lack of officers who could be used for the purpose of training the soldiers; and I have thought that, as this bill has been given such very careful attention, there would be no objection whatsoever to it; and I trust that my friend from Georgia will a little later modify his views on the subject and not insist upon the adoption of the amendment which he offered some time ago.

Mr. REED. Mr. President, will the Senator yield for a question?

Mr. POMERENE. Yes.

Mr. REED. What is the inducement to these students to enter the military service provided for in the sections of the bill to which the Senator is now referring? What is there to induce them to do it?

Mr. POMERENE. Well, Mr. President, there must be at each one of these schools or universities at least 100 students who are willing to take this training. They are pursuing their course of study. As applied to the Ohio State University, I think the situation is substantially this:

They have now about fifty-five hundred students in that college, and probably twenty-five hundred of them are taking military training. They have a very large number of students in their engineering course. There are a good many students in this university—and I use it not because it is the Ohio State University, but because I think it is typical of many of the State universities—who are interested in military training. They are anxious to have better facilities than they now have, and if these additional privileges were to be granted them, I think many of them would be quite willing to join this reserve officers' training corps, and for the prescribed number of years after that be subject to the direction of the Government.

Mr. REED. That is what I am asking. What are the additional advantages that they will obtain?

Mr. POMERENE. They will be allowed certain commutations. Those are very small. They will have all the privileges that might be accorded in a pretty good military institution, and their course of study would be so shaped that they could be prepared for the walks of both military and civil life. I think that is what we need, rather than to have a purely military institution.

Mr. REED. I do not want to take the Senator's time, but I am very much interested in this matter. Is it not true that in order to get into the military branch a man must be able to attend the college?

Mr. POMERENE. Oh, yes.

Mr. REED. There he pays his own expenses. When he enters the military branch, he does not get any additional advantage except such as flows from military education?

Mr. POMERENE. As I understand the provisions of the Senator's amendment, the student would be sustained at the expense of the Government.

Mr. REED. That is the difference; he would be educated at the expense of the Government.

Mr. POMERENE. Yes; but that would compel us to establish at the present time not less than 6 and not more than 12 of these institutions. I presented some time ago another bill which bears on this subject. I have not thought it wise to offer it as an amendment to this bill, and I do not think I shall, because I was hoping that it would be considered by the Committee on Military Affairs as well as the Committee on Naval Affairs. In brief, it was intended to meet this situation:

We are increasing the attendance at both the Military and the Naval Academies. They do not now have the necessary accommodations for these contemplated increases; and it was thought, particularly by officers of the Navy with whom I have talked, that if the first year's study for both the Military and Naval Academies could be provided for at a third institution it would be a benefit to all and at the same time would relieve the situation at West Point and at Annapolis.

The VICE PRESIDENT. The time of the Senator from Ohio has expired.

The question is on the amendment of the Senator from Missouri [Mr. REED] to the amendment of the committee.

Mr. REED. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Beckham	Hughes	Pittman	Taggart
Burleigh	Husting	Pomerene	Thomas
Chamberlain	Johnson, Me.	Reed	Thompson
Clapp	Jones	Shafroth	Underwood
Cummins	Lane	Sheppard	Vardaman
Curtis	Lodge	Smith, Ga.	Warren
Dillingham	Martine, N. J.	Smith, Mich.	Williams
Gore	Nelson	Smoot	
Hardwick	Oliver	Sterling	
Hollis	Page	Swanson	

The VICE PRESIDENT. Thirty-seven Senators have answered to the roll call. There is not a quorum present. The Secretary will call the names of absent Senators.

Mr. ROBINSON and Mr. OVERMAN entered the Chamber and answered to their names.

Mr. CHAMBERLAIN. Mr. President, in view of the fact that there is not a quorum present, and it might be difficult to get one this evening, I move that the Senate adjourn until Monday at 12 o'clock.

The motion was agreed to; and (at 4 o'clock and 47 minutes p. m., Saturday, April 15, 1916) the Senate adjourned until Monday, April 17, 1916, at 12 o'clock meridian.

HOUSE OF REPRESENTATIVES.

SATURDAY, *April 15, 1916.*

The House met at 11 o'clock a. m.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

We bless Thee, our Father in heaven, from our heart of hearts that we are privileged to live in this age of the world's history, with its accumulated wisdom and knowledge, its discoveries and inventions, its literature and art, its high ideals and religious attainments, and we most fervently pray that we may strive diligently to apply our wisdom, our knowledge, our energy to the things of the now, that we may prove ourselves worthy of the splendid opportunities which beckon us onward and upward to higher and nobler achievements, and departing leave the world a little better than we found it. In the spirit of Him who taught us the way and the truth and the life. Amen.

The Journal of the proceedings of yesterday was read and approved.

ORDER OF BUSINESS.

Mr. KITCHIN. Mr. Speaker, I ask unanimous consent that next week the business in order on Calendar Wednesday be transferred to and be in order on Thursday instead of Wednesday.

The SPEAKER. The gentleman from North Carolina [Mr. KITCHIN] asks unanimous consent that the business on next Calendar Wednesday be transferred to the succeeding day—Thursday.

Mr. FOSTER. Mr. Speaker, would there be any objection to dispensing with it altogether?

Mr. KITCHIN. Some matters ought to be taken up on Calendar Wednesday.

Mr. MANN. That would come up later.

Mr. KITCHIN. And we want this Agricultural bill to proceed without being broken into. Perhaps by doing that we could finish it without interruption.

The SPEAKER. Is there objection?

There was no objection.

AGRICULTURAL APPROPRIATION BILL.

Mr. LEVER. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House on the state of the

Union for the further consideration of the bill H. R. 12717, the Agricultural appropriation bill.

The motion was agreed to.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 12717, the Agricultural appropriation bill, with Mr. HAMLIN in the chair.

The CHAIRMAN. The Clerk will report the bill by title.

The Clerk read as follows:

A bill (H. R. 12717) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1917.

The CHAIRMAN. The Clerk will proceed with the reading of the bill for amendment.

The Clerk read as follows:

For construction of buildings at bureau experiment station at Bethesda, Md., and bureau experiment farm at Beltsvills, Md., $23,600.

Mr. MANN. Mr. Chairman, I reserve a point of order on the paragraph.

The CHAIRMAN. The gentleman from Illinois reserves a point of order on the paragraph.

Mr. MANN. What buildings do they propose to construct?

Mr. LEVER. Mr. Chairman, on the 31st of last March the sheep barn at Beltsville, Md., caught fire and was entirely consumed. That barn cost originally $8,000. They have an appropriation out of this fund of $2,000, and the increase of $6,000 is asked for in this item to replace that barn.

That covers that part of it. In addition to that it is desired to erect three additional silos for the dairy work and for the farm work generally there, and also one silo shed, which is to cost about $300, and a reservoir to hold something like 100,000 gallons of water. That will cost $1,200. They have no water protection there at all, and a great many rather important scientific investigations are going on at Beltsville, as the gentleman knows.

Mr. MANN. The appropriation last year was $6,750. This year it is $23,600. That is an increase of nearly $17,000.

Mr. LEVER. Yes. I will say that it is the intention to spend $10,000 out at Bethesda, which is the field station of the Bureau of Animal Industry, in the replacement of two large barns which are old and have been there for a good many years and have become entirely insanitary, so much so that a large part of the barns is not now used, because the department says it is dangerous to put infected animals in there, because they can not properly guard against the spread of disease. In addition they want to build out there one hay barn, which will cost $600. They want to build also an incinerator, which will cost $2,500, to take care of the dead stock. That accounts for the increase in that item.

Mr. MANN. Well, I presume it is all right, but it seems like rather a large sum to appropriate at this time for new buildings on a couple of farms—new buildings at a cost of $23,600, when we have not much money to spend for new things.

Mr. LEVER. The same thought suggested itself to me when Dr. Melvin was before the committee, and I pressed him rather strongly on the proposition and asked him if he regarded it as an emergency proposition, and he said he did.

Mr. MANN. I suppose that grows out of the fact that in the investigations of the bureau as to dairies they find all the barns in the country insanitary, and they want to construct two here that are sanitary. It would be rather expensive, however, for the average farmer to construct new barns at such a rate of expenditure.

But I withdraw the point of order, Mr. Chairman.

The CHAIRMAN. The gentleman from Illinois withdraws the point of order.

Mr. HELM. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. HELM. I move to strike out the first proviso, on page 14, beginning on line 7 and continuing down to the words "purposes," in line 9. Would that be in order?

The CHAIRMAN. That paragraph has been passed. It would not be in order.

Mr. HELM. Is the bill being read by paragraphs or by sections?

The CHAIRMAN. By paragraphs.

Mr. MANN. The gentleman can ask to return to it.

Mr. HELM. Mr. Chairman, I ask unanimous consent to return to the paragraph beginning on page 13, line 24, and extending down to line 14, on page 14, for the purpose of offering an amendment.

The CHAIRMAN. The gentleman from Kentucky [Mr. HELM] asks unanimous consent to return to the paragraph beginning on line 24 of page 13 and extending to line 13, page 14, for the purpose of offering an amendment. Is there objection?

Mr. LEVER. What is the purpose of the gentleman?

Mr. HELM. I want to move to strike out the first proviso.

Mr. MANN. We read it so quickly that I think the gentleman ought to be permitted to move to return to it.

Mr. LEVER. Would not the gentleman be satisfied with five minutes.

Mr. HELM. I will have to.

Mr. LEVER. With the understanding, Mr. Chairman, that 10 minutes only shall be consumed on that, I have no objection.

Mr. MANN. I would not do that. This is for the breeding of horses. You can cut off debate whenever you want.

Mr. HELM. I move to strike out, Mr. Chairman.

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from Kentucky [Mr. HELM].

The Clerk read as follows:

Amend, on page 14, by striking out the proviso beginning on line 7 and ending with the word "purposes," in line 9, which reads as follows: "*Provided*, That of the sum thus appropriated $25,000 may be used for experiments in the breeding and maintenance of horses for military purposes."

The CHAIRMAN. The gentleman from Kentucky is recognized for five minutes.

Mr. HELM. Mr. Chairman, the district of Kentucky which I represent is very largely interested in the breeding of horses. It is what is known as the blue-grass section of the State, where the horse rises to its best types and highest development. I am thrown in contact daily when at home with men who own the sires of some of the best horses in the United States. That is their home. You find them there, the best in the United States. Now, the Government proposes to come in and interfere with a well-established, thoroughgoing business enterprise. Of course every man within the sound of my voice understands that the development of these high-grade, standard-bred, and thoroughbred horses requires a very considerable investment. In the first place, there is the get of the horse. Some of these sires stand as high as $1,000 a season for the service. The Government proposes now to place a stallion in a locality where these high-grade horses are developed, and there is no charge. Necessarily that beats down that business.

Mr. McKENZIE. Mr. Chairman, will the gentleman yield?

Mr. HELM. Yes.

Mr. McKENZIE. Is it not a fact that the Committee on Military Affairs has been taking care of this matter heretofore, and that at the present time there are stallions purchased and placed around in different sections of the country for the purpose of developing Cavalry horses that will be better than the horses which can be bought commercially?

Mr. HELM. This is that provision. If it belongs anywhere, its proper place is in the Army bill. It does not belong in this Agricultural bill at all. Now, conceding that this is a desirable type of horse for Army purposes, in the district of 11 counties, which I represent, in the heart of Kentucky, there is one of these Army horses stationed. I suppose in these same counties there are perhaps 100 or, perhaps, 200 noted sires, each coming from a distinguished breed or strain of horses. Now, would you rather have 1 or would you rather have 200? I would like to have the chairman of the Committee on Agriculture inform the Committee of the Whole, if he can, how many colts have been foaled under this particular provision?

Mr. LEVER. If some one will figure it up as I give the figures. There have been 93, 126, 264, 376, 182, and 220.

Mr. HELM. In the United States?

Mr. LEVER. Yes.

Mr. HELM. Now, see what you are proposing. You are saving at the spigot but you are undermining the entire thoroughgoing business proposition. Here are how many colts altogether?

Mr. LEE. The total is 1,261.

Mr. HELM. Twelve hundred and sixty-one in the United States. Why, Mr. Chairman——

The CHAIRMAN. The time of the gentleman has expired.

Mr. HELM. I ask unanimous consent for five minutes more.

Mr. LEVER. I ask unanimous consent that the debate on this item close in 15 minutes, the gentleman from Kentucky [Mr. HELM] to have 5 minutes and the gentleman's colleague [Mr. KINCHELOE] 5 minutes.

Mr. HAUGEN. I may want five minutes.

Mr. LEVER. I will yield to the gentleman my time.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that the debate on this paragraph and amendments thereto close in 15 minutes, the time to be used as indicated by him. Is there objection?

There was no objection.

The CHAIRMAN. The gentleman from Kentucky [Mr. HELM] is recognized for five minutes more.

Mr. HELM. Twelve hundred colts in the United States. I may be putting it a little high, but I suppose there are that many foaled in the county of my residence this spring. I suppose that is a reasonably safe statement.

Mr. COX. Mr. Chairman, will the gentleman yield?

Mr. HELM. Yes. I ask the gentleman to be as brief as he can.

Mr. COX. Do I understand the gentleman to say that the sire of these horses is placed free of charge?

Mr. HELM. Yes. The Government stations one of these sires in my home county. They pay a farmer so much for the care and attention. Now, the Government exercises an option to take the colt within a certain number of years. Will the chairman of the committee tell me what that is?

Mr. LEVER. The option is that the Government will take the colt at $150 as a 3-year-old, unless the farmer is willing to pay the stud fee of $25.

Mr. HELM. Do you see that! Now, that is a ridiculous proposition, gentlemen. The idea of a 3-year-old horse, the descendant of the type of stallion that they put into a farmer's hands—to buy him at $150 when he is 3 years old is absolutely preposterous and ridiculous. The type of horse that you want and that the farmer raises is more apt to sell at 3 years old for a thousand dollars or twelve hundred dollars. Some of them go up to twenty-five hundred or three thousand dollars. If it is a colt by a type of horse that the Government wants, and if the dam is an animal that is fitted for these purposes, you see that it is a ridiculous proposition for the farmer to raise the colt by such a sire as that for three years and then get only $150.

Mr. CHIPERFIELD. Are these colts mostly thoroughbred colts? In other words, are the stallions bred to thoroughbred mares?

Mr. HELM. Now, that brings you to the consideration of a subject that is a little difficult to handle. Some men just bring this, that, or the other kind or type—the fellow that has a scrub—you understand what I mean.

Mr. LEVER. If the gentleman from Kentucky will yield, I will tell him the character of the stallions.

Mr. HELM. Oh, I understand about the character of the sires. I am talking about the dams that are the mothers of the colts.

Mr. CHIPERFIELD. Will a thoroughbred colt make a good Cavalry horse?

Mr. HELM. A thoroughbred horse—the best in the world, after he has been subjugated. Why, you can not beat him for a Cavalry horse, for speed and endurance; but a cross between the thoroughbred and the standard bred, the trotter and the racer, is the perfect type of a Cavalry horse, in my opinion. Of the two types, the thoroughbred is unquestionably a horse of endurance and speed, and if you cross the thoroughbred with the standard bred, you get the muscle, and there you have the perfect type.

Mr. McKENZIE. Gen. Aleshire, in his testimony before the Committee on Military Affairs on the point just brought out by the gentleman from Illinois [Mr. CHIPERFIELD], stated:

> The plan contemplated that no mare should be bred to any of these stallions that was not certified as being a suitable mare to produce the kind of horses that were wanted, and if she had any sickness or defects of any sort that would operate against the animal as a brood mare, she would not be allowed the service of the horse.

Mr. HELM. That in practice is not carried into effect. Here is an opportunity for a man with a scrub mare to get the use of a good horse free of charge, and that is the sum and substance of it.

Mr. CANDLER of Mississippi. Mr. Chairman, will the gentleman yield?

Mr. HELM. Yes.

Mr. CANDLER of Mississippi. Is the gentleman's objection to this provision solely upon the ground that it is an interference on behalf of the Government with private enterprise?

Mr. HELM. My objection is that it is not a business proposition. You can not make it stand up as a practical business proposition. It has been tested and tried out, and it does not stand up; it does not get the results that you undertake to get.

The CHAIRMAN. The time of the gentleman from Kentucky has again expired.

Mr. KINCHELOE. Mr. Chairman, I am a little surprised at some of the statements of my colleague [Mr. HELM] about this proposition. I will say, for the benefit of the committee, that my colleague represents a district where they breed thoroughbred horses into the purple. They are bred for the purpose of derbies, they are bred for the purpose of harness and running horses. If it takes the character of stallion that the gentleman intimates it would, the horse business in his district under the provisions of this bill would be materially aided. There is not one Cavalry horse out of a million that is a thoroughbred horse. It would break this Government to undertake to get enough thoroughbred horses for the Cavalry of this country. But they have these splendidly bred stallions under the provisions of this bill to breed to cold-blooded mares, mares that are not thoroughbred. There are two or three of these stallions in my district. When the farmer brings his cold-blooded mare, as we say, to one of these stallions the Government has the option within three years of paying $150 for the get, but the owner of the mare has the option of paying the season of $25 and keeping the colt. Suppose he does keep the colt. You are building up a character of horse in breeding that appeals to the Government when they need them for Cavalry purposes to buy them after they are grown, or, if they want to sell it and the Government wants to buy the three-year old at $150, it has the right to do so under this bill. In other words, a thoroughbred stallion bred to a cold-blooded mare produces a get that makes the best Cavalry horse in the world, and it is done at a nominal expense by putting these stallions over the country so that they can serve these mares and obtain the get that is characteristic of a genuine Cavalry horse.

As I say, if you have a Cavalry horse that is a thoroughbred horse and you undertake to lay down the rule that all Cavalry horses shall be thoroughbreds, you will break the Government in doing it. If you buy the character of horse that is bred in my friend's district for Cavalry horses, you will break the Government, because the character of horses that are bred there that are 3 years old bring from two to three thousand dollars apiece, and why? They are not only bred in the purple by the sire, but in the purple by the dam. The purpose of this provision of the bill is to take the thoroughbred sire and breed to a cold-blooded mare in order to get a Cavalry horse that makes the best that can be produced. It would be a great mistake to knock out this provision of the bill. You would not only stop the breeding of the character of horse that is desired, but these stallions have already been purchased and are now all over this country in service.

If you knock out the $25,000 appropriation the only option the Government has is to sell these studs and absolutely stop this character of breeding. In view of the splendid results that have been brought about by reason of these stallions over the country breeding to the character of mares I have described, I think it would be a serious mistake to knock out the item.

Mr. HELM. Mr. Chairman, will the gentleman yield?

Mr. KINCHELOE. Yes.

Mr. HELM. The gentleman speaks of the splendid results that have been produced. How many of these colts have been purchased by the Government?

Mr. KINCHELOE. I do not know; and for the purposes of this bill I do not care.

Mr. LEVER. Oh, the work has not been going on more than three years.

Mr. KINCHELOE. I do not care whether the Government buys one of them or not. The process produces the character of horse that is needed in this country, so that if a war should come they can be then bought up by the Government after they are grown [applause], and they make the best horses in the world for that purpose. It is not a question of whether the Government buys them at three years old—by exercising its option. It is a question of breeding the character of horse all over this country that is needed in time of war, so that you will have them available. I hope that the provision will not be stricken from the bill.

Mr. LEVER. Mr. Chairman, this item was put into the Agriculture appropriation bill some three years ago by the Senate, and retained in conference. The work is only three years old. The results so far have not been sufficient to ascertain whether or not it is a good work. The Committee on Agriculture does not have any pride in the item at all. We are perfectly willing to have the House vote upon it. Some of us on the committee are in favor of the proposition and others are against it. We have held it in the bill because it seemed to have been the desire of Congress from time to time, as expressed in the last three years, that this character of work should be carried on by the Department of Agriculture.

Mr. COX. Mr. Chairman, will the gentleman yield?

Mr. LEVER. Yes.

Mr. COX. Does the Government obligate itself to take these colts at the end of three years where they be crippled or decrepit?

Mr. LEVER. The Government has an option to take these colts at 3 years old at $150, provided the owner does not exercise his option and pay $25 for the stud fee.

Mr. COX. I can readily see now where a colt may be foaled that is blind or otherwise unsound.

Mr. LEVER. The Government would not exercise its option in that event.

Mr. COX. It would not have to exercise its option?

Mr. LEVER. Oh, no.

Mr. COX. The Government can flatly refuse to accept such a colt?

Mr. LEVER. Certainly.

Mr. COX. And make the owner of the mare pay the service fee of $25?

Mr. LEVER. I do not know what arrangement they would make in a case of that kind. That question has not arisen. As a matter of fact I imagine that the owner would have to take his colt.

Mr. COX. And pay the $25?

Mr. LEVER. Very likely so.

Mr. ANDERSON. Will the gentleman yield?

Mr. LEVER. I will.

Mr. ANDERSON. If I understand the motion of the gentleman from Kentucky it is to strike out the proviso——

Mr. LEVER. Yes.

Mr. ANDERSON. Of course if that is done that leaves all the stallions with nothing to maintain them, and if we do away with that item some provision must be made for the disposal of those stallions.

Mr. LEVER. That is undoubtedly true and I am going to direct the attention of the committee to that fact.

Mr. EDWARDS. How many stallions have we now?

Mr. LEVER. We have 37 stallions now in this particular line of work. Of couse the Government has some stallions located in Colorado at the horse-breeding station there, and at Brattleboro, Vt., I believe, the Morgan-horse station.

Mr. EDWARDS. How many horse-breeding stations has the Government throughout the country?

Mr. LEVER. The Government has only two real horse-breeding stations, one in Kentucky and one in Colorado.

Mr. HELM. How many horses have been purchased by the Government?

Mr. LEVER. I am not able to state to the gentleman. I know of one very fine horse that was recently donated to the Government.

Mr. HELM. Is it not a fact that that is generally the case, and that they are generally superannuated animals whose owners think that their services are at an end?

Mr. LEVER. I take it that a horse of the character of Navarre is superannuated for the purpose of racing.

Mr. CANDLER of Mississippi. They are patriots who have given these horses to the Government to help improve the stock of the country.

Mr. FERRIS. Mr. Chairman, this seems to be a question of Kentucky having too much competition in the breeding of good horses. I will say that in our State, which has not progressed as far in horse raising as Kentucky, we would be happy to have this station. Not only that, but last summer there was considerable agitation at El Reno over the possibility that something of this sort would be brought out there, and the working out of this provision was called very forcibly to my attention by one of the officers at Fort Sill, Okla.

Mr. LEVER. I will say to the gentleman from Oklahoma this: I think there is no special objection to this provision in the bill, but the only thing that Congress has to do is to see that it does not grow beyond its initial purpose and that there is no reckless extravagance in the spending of this money.

The CHAIRMAN. The time of the gentleman has expired, all time has expired, and the question is on this paragraph and all amendments thereto. The question is on the amendment offered by the gentleman from Kentucky.

The question was taken, and the amendment was rejected.

The Clerk read as follows:

For investigating the disease of hog cholera, and for its control or eradication by such means as may be necessary, including demonstrations, the formation of organizations, and other methods, either independently or in cooperation with farmers, associations, State or county authorities, $360,000: *Provided*, That of said sum not less than $175,000 shall be available for expenditures in carrying out the provisions of the act approved March 4, 1913, regulating the preparation, sale, barter, exchange, or shipment of any virus, serum, toxin, or analogous product manufactured in the United States and the importation of such products intended for use in the treatment of domestic animals: *And provided further*, That of said sum not less than $35,000 shall be available for researches concerning the cause, modes of spread, and methods of treatment and prevention of this disease.

Mr. HELVERING. Mr. Chairman, I desire to offer an amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 15, line 3, strike out the figures "360,000" and insert "410,000."

Mr. HELVERING. Mr. Chairman, I have offered this amendment for the purpose of asking this additional appropriation in order that the districts in which this work has been carried on may be surrounded by other districts, which will prevent the spread of the disease in those districts where this work has been carried on. In Marshall County, in the State of Kansas, and in several counties in other States of the Union, counties have been designated as places where this eradication of hog cholera will be carried on. I wish to call attention to the fact that this work is carried on in conjunction with the State and with the State agricultural colleges. The Department of Agriculture here in Washington sends a representative of this department to those counties. The agricultural college in that State sends a representative and the State Live Stock Sanitary Commission sends a representative to look after the work in those selected districts. I want to read the experience resulting from the work carried on in Marshall County in my State, and I read from a letter received from the president of the Hog Cholera Eradication Association of Marshall County. He addressed this letter to me, under date of March 28, as follows:

MARSHALL COUNTY HOG CHOLERA ERADICATION ASSOCIATION,
Marysville, Kans., March 28, 1916.

Hon. GUY T. HELVERING,
Washington, D. C.

DEAR CONGRESSMAN: I desire to give you a synopsis of the Government hog cholera demonstration work that has been conducted in Marshall County, Kans. The Government began work here in July, 1914, and organized the county so that one farmer had charge of each 4 square miles in the county.

The first duties performed were to take a survey showing the number of hogs in the county on each farm and the number that died from cholera. This survey was taken every year, and the figures are as follows:

Year.	Raised.	Lost.
1912	65,294	3,853
1913	72,036	7,230
1914	65,592	3,432
1915	101,207	561

The Government work here has been an unqualified success, especially under the management of Dr. Murphy. Their annual report shows that during the year 1915 they visited nearly 900 farms in the county and traveled over 11,000 miles in the automobile. From the census figures it will be seen that the number of hogs in the county has increased over 38,000 during 1915, as the direct result of the practical absence of hog cholera and the assurance that the farmers have of keeping hogs without the danger of loss from hog cholera. In the adjoining counties surrounding Marshall County and near the border, in order to protect the farmer in Marshall County, with the assistance of the State authorities, they organized 17 cholera control communities.

Nearly 200 hog cholera educational lectures, illustrated with stereopticon views, have been held in every schoolhouse in Marshall County and within 6 miles of the border in the surrounding counties.

Farmers in the adjoining counties are clamoring to have this Government work extended to cover their sections. Farmers in 12 other counties in the State are beseeching not only the Government but the State authorities to have the work extended.

Hogs are being raised successfully on over 200 cholera-infected farms in Marshall County which have been cleaned and disinfected under the State supervision, notwithstanding that the hogs on these farms have not received or needed serum protection. Confidence has been completely restored, and hog raising without the need of serum has been fully established.

We believe that this work is one of the best efforts that the Government has ever done to assist the farmer in his work, and I would be glad if it could be extended over the entire State.

Yours, truly.

ANDREW SHEARER, *President.*

This shows conclusively the work which has been done by these Government experts. In order that I might have at first hand information from the farmers, I addressed letters to the farmers, and I want to read extracts from one or two of those letters. The letter to which I wish to call attention is one addressed to me by Harry Smith, Home City, Kans., who had hogs treated by the Government experts.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HELVERING. Mr. Chairman, I ask unanimous consent to proceed for five minutes.

The CHAIRMAN. The gentleman asks unanimous consent to proceed for five minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. BOOHER. Mr. Chairman, will the gentleman permit me to ask him a question?

Mr. HELVERING. Yes.

Mr. BOOHER. Is it not a fact many years, one year after another, you did not have hog cholera in Marshall County or any other county in your State?

Mr. HELVERING. I will say to the gentleman that since Marshall County has become settled as it is now, and since the hog cholera became prevalent, as it did along in 1900 and 1901, we have not been able to control it satisfactorily each year.

Mr. BOOHER. Do you mean to say they have hog cholera every year in your section?

Mr. HELVERING. We have had it ever since——

Mr. BOOHER. Are there not years when they do not have hog cholera in the community?

Mr. HELVERING. Not since I have been observing the condition in our county.

Mr. BOOHER. I have never known a community being afflicted with it year after year and year after year. There would be years when there would not be any of it at all.

Mr. HELVERING. I will say, in answer to the gentleman's question, that in 1901 the cholera became very prevalent in Marshall County, and has continued in my State ever since. In 1914, when this work commenced, as I have stated, there were something like 7,000 hogs lost by the disease.

Mr. BOOHER. Did the Government furnish the serum that was used on Mr. Smith's farm? I refer to the letter read by you.

Mr. HELVERING. Yes.

Mr. BOOHER. The Government saved him, then, $500; that is, treated 50 head of hogs without any cost to him at all?

Mr. HELVERING. Yes; that is true.

Mr. BOOHER. In the counties adjoining Marshall County the farmers bought their own serum and went to all that expense?

Mr. HELVERING. What I am trying to explain to the gentleman is this, that the farmers have been imposed upon so many times and so long by spurious serum that had no effect that this work was antagonized on the part of many farmers at first, until it was clearly demonstrated by the application of the proper serum that this disease could be controlled.

Mr. BOOHER. May I ask another question?

Mr. HELVERING. Yes.

Mr. BOOHER. Would it not be better to take this $160,000 provided in this bill for this demonstration work and put it in laboratory work, and permit these Government experts to investigate the serum and the other toxin that is used, so that all the people might have the benefit of it instead of one county in all the hog-raising States of this country?

Mr. HELVERING. I want to say to the gentleman that there is $175,000 appropriated in this bill for the very work which he has mentioned, and $35,000 additional for investigation. But what we desire to do is to make this one county a sample county, showing what can be done if properly protected and properly handled, and in order to do this we want to protect this county in which the experts have been working from being encroached upon by the counties around it. And I am informed by Dr. Hess, who has charge of the field work, that the $150,000 which is appropriated for the field work is simply to take care of the counties which have the work and will not protect them from the counties around.

Mr. BOOHER. Will the use of this serum in one year protect the hogs of another year?

Mr. HELVERING. The following year?

Mr. BOOHER. Yes.

Mr. HELVERING. I do not think it is a permanent preventive.

Mr. BOOHER. One injection of this serum into the animal lasts only three months. You have got to keep this thing up always.

Mr. HELVERING. Not if it is entirely eradicated.

Mr. CULLOP. If the gentleman will permit me there, the officer in charge of this demonstration work educates the farmer so that he can keep cholera off of his farm, and the farmer now can get this toxin for the purpose of treating his hogs by paying the cost to the Government for making it.

Mr. LEVER. The Government does not make it.

Mr. CULLOP. It is made at Ames, Iowa, and other places. Or he can get it from the agricultural college of a State, and the cost of administration is all there is to it.

Mr. HELVERING. Now, Mr. Chairman, I desire to say in these counties surrounding these experiment counties it is not intended that the Government pay for this serum. The department informs me they will protect the counties around these individual counties by furnishing the doctors to explain the situation to the farmers and protect them, but the farmer must pay for his own serum.

The CHAIRMAN. The time of the gentleman from Kansas [Mr. HELVERING] has expired.

Mr. HELVERING. Mr. Chairman, I would like to ask unanimous consent to extend my remarks by printing extracts from the few letters that I have indicated, and also print in full the letter of the president of the association of Marshall County, Kans.

The CHAIRMAN. The gentleman from Kansas asks unanimous consent to extend his remarks in the RECORD as indicated. Is there objection? [After a pause.] The Chair hears none.

The following are extracts from letters referred to:

EXTRACTS ON THE SUBJECT OF HOG-CHOLERA ERADICATION.

J. E. Benson, Vermillion, 148 hogs: "The treatment received from the Government officers is just fine. My herd of hogs improved greatly since they were vaccinated. The place is plumb cleared of hog cholera."

Irving Nauman, Frankfort, 50 hogs: "In regard to the work done in this county, I must say that it has been very satisfactory, and I hope that it continues the same." He further states that he thinks it better to give treatment before the hogs become ill, and after the herd is immune to afterward vaccinate all pigs when they weigh about 50 or 60 pounds.

C. D. Tompkins, Vermillion, 20 hogs: "The Government doctors are doing good work. I believe they saved part of my hogs and think this work should be encouraged." In his opinion there should be a bigger bounty on crows, as he believes they scatter the cholera more than anything else.

S. W. Tilley, Irving, 106 head: "We were very much pleased with the treatment we received from the Government men with our hogs. We had an outbreak of cholera and out of 106 head we saved 100 head." He thinks that if the raisers could be insured good serum and permitted to do their own work they would be in fine shape hereafter, as the disease gets such a foothold at times before the doctors can get around.

H. A. Floyd, Vliets, 30 hogs: "I should say in my case it was very satisfactory. I lost 7 out of 30 head that were vaccinated, and all that died had the fever."

F. W. Heath, Vermillion, 14 hogs: "I think that if the vaccinating is done in time it is all right, but it ought to be as soon as the first hog shows signs of sickness. I had my hogs vaccinated and lost only one hog. I am very well satisfied with the work that was done for me."

L. W. Davis, Vermillion, 29 hogs: "I had the cholera last fall in my hogs, lost two, and then called in the Government men. They came in about 16 hours after I called them. Nearly all pigs had the fever, but we vaccinated them and I did not lose any more, so you see I ought to be well satisfied, and I am, and I believe this movement will be a great help to Marshall County."

E. F. Casebeer, Axtell, 14 hogs: "As to my opinion of vaccination, would say that when one knows that his hogs have been exposed to real, genuine cholera, and will vaccinate at the right time, with good serum, that he can save a large per cent of his hogs. But where hogs are sick and dying with diseases other than cholera I believe vaccination to be a detriment. For that reason I do not think that wholesale and promiscuous vaccination will ever be practical, and, furthermore, one is always running a chance of getting worthless serum."

M. Cutshall, Frankfort, 20 hogs: When the experts reached his place one-half of his hogs were sick. All were treated. He then says: "Some of those that were sick when they treated them got well and some of those that were apparently well died. In all, I lost nine head. Old sows did not get sick at all. I have reason to believe that if hogs were treated or vaccinated before they got sick that it is a good preventive."

Harry Smith, Home City, 50 hogs: "The Government experts treated 50 head of hogs for me in November, 1914. Ten of these had cholera; some had a high fever, some not so high. Of these 50 head I never lost a single one that they treated. I can truthfully say that the Government experts saved me $500. I have not had a sick hog on the place since the treatment. I am fully convinced that the Government has saved thousands of dollars in the last nine months in Marshall County for the farmers. Hereafter, if my hogs show any signs of cholera, they get a dose of serum, if I can possibly get it."

Andrew Kjelberg, Vermillion, 49 hogs: "As to results on this farm, would say that we have two different places where we keep hogs. One of these herds took sick about the 20th of November last. The eradication office was not notified before the 29th, when an examination was made and the hogs were found to be sick with the cholera. These hogs were then treated on the 30th of November, but, owing to the advanced stage of the disease only 7 head were treated. Out of these 7, 5 of them recovered, and 1 out of the other 32 that were not given the treatment. The other herd, having been badly exposed, were also given the treatment the same day and not one was lost out of this herd of 50, which is, I think, a very good showing in favor of the work, as the hogs showed signs of being affected with the cholera."

Willis Hull, Bigelow, 36 hogs: "I recommend that if cholera has been on the farm the preceding year, or is in the neighborhood, it is a wise plan to treat the hogs. Hogs that have been treated you can put them in the lot with a bunch of sick hogs and they will not miss a feed. I tried that experiment here at home. I do not think that it is advisable to treat a bunch of healthy hogs—that is, if the cholera is not close."

S. R. Heisey, Frankfort, 16 hogs: "I felt, just as did the majority around here, that vaccinating for cholera should be done before the disease appears in the herd. But after having my herd successfully treated by the Government experts last October I am convinced that the work of the treatment of hog cholera is carried on in the best and most practical manner, and if continued for some time longer will result in great good, not only to the farmers of Marshall County but also to the surrounding country."

J. D. Anderson, Beattie, 63 hogs: "Much of good could be accomplished if the Government doctors would treat all hogs that are directly exposed, instead of waiting until they are sick, as they are doing in this county." He then goes on to explain that he lives lower down on the creek from five farmers each of whom had had hog cholera on their places. On account of the creek receiving direct drainage from these farms, and he was below all of them, he requested the doctors to treat his herd, and they refused on the ground that they could not give treatment until cholera invaded his herd. "As a consequence, out of 77 hogs treated, I saved 43" He favors the double treatment, and further states that out of 32 head given this treatment by the Government experts he saved every one.

W. H. Snodgrass, Frankfort, 38 hogs: "As to the treatment of the eradication of hog cholera, I believe it to be all that is claimed for it. I am satisfied that hogs treated by the Government experts here in Marshall County are immune. The experts are doing great work here. At first they met with some opposition, but now they have the cooperation of this community."

Levi Denny, Frankfort, 36 hogs: "In my opinion, Marshall County has, by the help of the Government experts, made progress in the eradication of hog cholera. In this county the experts did not work on unaffected herds, as they had more calls than they could attend to from

affected herds. Their work for us was highly satisfactory, and the only thing needed is a more efficient following up for cleaning up infected premises. As to the per cent saved, I do not now remember; they saved about 75 per cent of mine. There are herds infected here that the owners will not report, and they did not give any help or encouragement to the organization. How can we clean up the county without the authority and the help to treat all infected herds in the county?"

Mrs. Maggie Cobb, Vliets, 7 hogs: "The Government experts have done good work in hog-cholera eradication. The work is a very valuable proposition and will be of great benefit in the future as in the past."

G. H. Nelson, Vermillion, 35 hogs: "I think the work of the hog-cholera eradication is a good thing if properly carried on. I had about 30 head vaccinated, and out of that herd I lost 6. These 6 all had high fever when vaccinated except 2. I think that the vaccination should be done before hogs are too far gone. The rest of my hogs lived and thrived and were sent to market."

Henry Anderson, Axtell, 67 hogs: "I had about 65 head of hogs treated. Out of them were 12 head of old hogs. Twenty-three of the whole bunch died. Two of these were old hogs. I think 6 young and 2 old had th fever at the time of treatment. These 8 hogs all died. I have lived on the farm, right here in Kansas, for 40 years, having raised hogs every year. Have had the hog cholera three times. Twenty years ago I had the disease, two years in succession, and the last time was in 1914. My idea is this: That I would rather have my hogs vaccinated when hog cholera is around and not have to wait till the disease is in the bunch. These Government men would not work on a bunch of hogs unless they were off of feed. I think when the men are in a locality where hog cholera is they ought to stay there and work, sick or not sick. This is just a little of my experience in hog business. Of course vaccination is more or less new to us in Marshall County."

F. T. Howell, Frankfort, 26 hogs: "My hogs were in good health until I thrashed, and it is a question to me whether cholera was brought to me in thrashing or the hogs ate too much wheat and that started them to dying. One got sick in about three or four days after I thrashed. After the wheat was binded there was quite a lot spilled in scooping, and they ate all they wanted. I had been keeping them on a green pasture and shorts and meal slop, and wheat might have been too strong for their stomachs. As to the vaccination of hogs, I think it is a good thing if they can be treated while they have a normal temperature, but after they are sick I think it is time and money wasted. All of my hogs that were treated that had a normal temperature were all right and did fine. All those that were sick died."

J. W. Johnson, Vliets, 27 hogs: "I lost 105 hogs in six weeks in 1913 and 12 in 1914. Had 9 of the 12 treated by the Government men while sick, but they died. Had 15 well hogs treated, and they never took sick. Now, then, the most complaint all over the county is that they will not treat the hogs before they take sick. After they are sick they might as well throw the serum in the river for all the good it will do. It kills them quicker, as I have not heard of one single hog get well after treated, but I have not heard of one hog die after treatment that was well when treated. They complain that they have not enough serum. Is there no way to enlarge the serum plant at Ames or build one in Kansas? Any place, so that they can have all they need when needed. There is no question but that they are doing some good in Marshall County, but could do ten times as much good if their hands were not tied and they had all the serum they needed. And the educational work is worth the money for those who will follow it; but there is where we all fall down, as I think sanitation is 99 per cent of prevention of any disease. But if you could see the condition of the hog lots and pens in Kansas to-day you would not blame us, as the mud is knee-deep all over Marshall County, with 6 inches of snow on top."

Mr. MOORE of Pennsylvania. Mr. Chairman——

The CHAIRMAN. Is the gentleman for or against the amendment?

Mr. MOORE of Pennsylvania. I am against the amendment.

Mr. LEVER. Pending that, Mr. Chairman, I want to inquire how much time we have consumed on this. Does the gentleman from Pennsylvania desire time?

Mr. MOORE of Pennsylvania. Five minutes.

Mr. LEVER. Does the gentleman from Iowa also desire time?

Mr. HAUGEN. Mr. Chairman, I suggest to the chairman that we let the time go on for a few minutes and see how we get along. This is a very important matter. I may want 5 minutes and I may want 15 minutes.

Mr. LEVER. The gentleman's suggestion is a very good one.

Mr. HAUGEN. I have an amendment to offer, and I would like time in which to discuss it.

Mr. RUBEY. Mr. Chairman——

The CHAIRMAN. Is the gentleman from Missouri opposed to the amendment?

Mr. RUBEY. I am.

The CHAIRMAN. Then the Chair will recognize the gentleman from Missouri first.

Mr. RUBEY. Mr. Chairman, I desire to discuss just for a moment the amendment offered by the gentleman from Kansas and call his attention to the fact, which he possibly does not know, that we have left over from the appropriation which we made in 1914 $45,000. In that year we made an appropriation of $500,000, a continuing appropriation, and there is now in the Treasury $45,000 of that amount, and that added to the appropriation which we propose here, of $360,000, will give the department $405,000 to work on during the coming year.

Mr. HELVERING. As a matter of fact, there is only $150,000 of that which is for field work.

Mr. RUBEY. One hundred and sixty thousand and $45,000, making $205,000 for field work.

Mr. HELVERING. I was informed at the department that that would give no chance to protect those counties from the surrounding counties.

Mr. RUBEY. The work will be carried on during the coming year in the discretion of the Secretary of Agriculture. I have his communication here in regard to that, but I will not take the time to read it. He says county demonstration work will be carried on during the coming year in the same way that it has been carried on for the past three years, but not necessarily in the same counties. It may be put into other counties and into other States and into other parts of the same States, so as to give communities that have not had it heretofore an opportunity to see this demonstration, so that they can be shown what can be done toward the eradication and control of hog cholera.

I believe it is unnecessary to increase the appropriation at this time. We have given what the department has asked. We have given even more than the department asked. We gave them $500,000 in 1914, and the department has left of that sum now $45,000, showing that it has been impossible for them to use that money in such a way as would justify them in the use of it. They want to use it and we want them to use it to the best advantage in order that they may accomplish the best results possible by the expenditure of the money. They are doing a splendid work, and we want to continue that work, but we do not want to give them money that they do not need and can not use to advantage.

Mr. BAILEY. Mr. Chairman, will the gentleman yield?

Mr. RUBEY. Yes; I yield.

Mr. BAILEY. I just wanted to ask what have been the results of the work thus far done? Has there been a very considerable decrease in hog cholera?

Mr. RUBEY. I will give the gentleman the figures in the 15 counties where the demonstrations have been carried on during the last three years. In 1913, with more than 1,000,000 hogs raised, 179,225 died, or 17 per cent. That was in 1913. In 1914, with 1,121,229 hogs raised, 59,862 died, or 5.3 per cent. In 1915 there were raised in those 15 counties 1,278,741 hogs, an increase over both of the preceding years, and yet that year there died only 23,565, or 1.8 per cent.

Mr. BAILEY. That is certainly a fine showing.

The CHAIRMAN. The time of the gentleman from Missouri has expired. All debate on this amendment has been exhausted.

Mr. HAUGEN. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Iowa [Mr. HAUGEN] moves to strike out the last word.

Mr. HAUGEN. Mr. Chairman, here we have a striking example of the fact that when once an appropriation is made it never can be stopped. Hog cholera was noted and the serum for its cure was discovered some 15 or 20 years ago. Millions of dollars have been expended by the Federal Government and by the States in the attempt to stamp it out. So far we have no additional information; nothing is suggested except this serum that has been experimented with and demonstrated for 15 long years.

As stated by the gentleman from Missouri [Mr. RUBEY], $500,000 was appropriated in 1914. I believe $235,000 was appropriated last year. The estimates of the department this year are $185,000. But, mind you, gentlemen, that estimate was made at the time we had foot-and-mouth disease in this country, and a number of employees of this division of the department were assigned to the foot-and-mouth disease work; but suddenly the foot-and-mouth disease disappeared. And here comes a supplementary estimate bringing the total up to $360,000. Not because of any new cases of hog cholera, but, by a strange coincidence, the supplementary estimate comes at the heels of the eradication of the foot-and-mouth disease.

Are we to infer from that that these people, riding in automobiles, drawing salaries ranging from $1,000 to $2,000 a year, and drawing, in addition, from $1.50 to $5 a day for subsistence, are to be taken care of rather than the hog cholera? Why, the distinguished gentleman from South Carolina [Mr. LEVER] called attention to the average earnings of the farmer. Think of it! The farmer, with his family, with an average of 4.6 persons, gets $142 in cash every year as the earnings of a family of 4.6 persons; in addition, $260 for food and fuel and house rent. These people receive each $30.87 cash for a year's work, to provide themselves with groceries, clothing, and other necessaries to maintain life. Are they to be taxed with a portion of the $175,000 to give joy rides to certain very excellent people in the employ of the Government and at a time when, according to estimates submitted by the department, there is no need for the appropriation?

Now, gentlemen, if the purpose is to assist the farmer, why not do the practical thing? Why not deal with the farmer in this instance as you did in the case of this blackleg vaccine? Why not manufacture it and distribute it free of cost, or, if not free of cost, at the cost of manufacture?

Mr. RUBEY. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. HAUGEN. I yield to the gentleman, but I have not much time.

Mr. RUBEY. Is it not a fact that the gentleman from Iowa does not believe that this serum will have the effect of preventing the hog cholera?

Mr. HAUGEN. Mr. Chairman, we have been experimenting with this serum for 15 years, and probably more than that. Many people of this country believe that if it is properly applied it will in many instances——

Mr. RUBEY. I am asking for information.

Mr. HAUGEN. And I am answering the gentleman's question. If properly applied it will in many instances cure or prevent the cholera. Others believe that more hogs have been killed than have been cured. Others believe that the expense incurred, taking into consideration the stunting of the hogs and the expenses of treatment, is greater than the saving.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. MOORE of Pennsylvania. Mr. Chairman, I ask unanimous consent that the gentleman from Iowa may proceed for five minutes more.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. HAUGEN. As I started to say, Mr. Chairman, many splendid eulogies have been showered on the farmers, and we have those beautiful declarations in the party platforms respecting the farmer, and we have spellbinders declaring from the stump their great love and admiration for those excellent people. Now, then, if we are to assist them, rather than to provide for automobiles and for these joy rides and these salaries for employees of the department, and $1.50 or $5 in addition as subsistence, and appropriate $360,000, let us do something practical. Let us do something that will be of service and benefit. Let us manufacture this serum. Let us appropriate $150,000 or $200,000 for the construction and equipment of a laboratory. When that money is once appropriated, when that plant is once constructed and equipped, the appropriation will cease, as the plant will be self-sustaining, and we shall have for once disposed of this large appropriation, one of very many.

I propose to offer when the time comes an amendment that I offered here a number of times before, that a certain amount of money be set aside for the construction and equipment of this plant, and that the serum manufactured may be sold at cost. I believe by so doing we can accomplish something. If this serum has any value whatever, it must be a potent serum. Its efficacy depends upon its potency; and we find that at the present time the only complaint from the department is as to the nature of the serum that is being sold. We are appropriating here $175,000 for the supervision of the private plants, and yet we find that the foot-and-mouth disease is being spread through the use of this serum. As I say, if the serum has any value whatever, it depends upon its potency, and in my opinion the only way you can guarantee a potent serum is by this Government manufacturing it under its own supervision, and let it then distribute it; if not free of cost as is being done in other instances, then let it distribute it at cost. That is all I have to say at this time.

Mr. MOORE of Pennsylvania. Mr. Chairman——

Mr. LEVER. Now, may I submit a request for unanimous consent that debate——

Mr. MANN. Several gentlemen want to be heard. I should like to remind the gentleman from South Carolina that we used two or more days on a cotton proposition here——

Mr. LEVER. That was on Wednesdays.

Mr. MANN. I know, but Wednesday is just as good as any other day.

Mr. SLOAN. Holier than any other day.

Mr. MANN. Now, when we have a cholera proposition——

Mr. LEVER. I will let the debate drift along for awhile.

The CHAIRMAN. The gentleman from Pennsylvania [Mr. MOORE] is recognized for five minutes.

Mr. MOORE of Pennsylvania. Mr. Chairman, the speech of the gentleman from Iowa [Mr. HAUGEN] was an inspiration. When that sort of speech is indulged in in this House, it is a happy augury for the future. The time will yet come, if it continues, when we of the city and the country will understand each other better.

But, Mr. Chairman, this question of "pork" is extremely appropriate just now. [Laughter.] Some of the gentlemen from the seat of this new pork trouble have recently inveighed against rivers and harbors, but we now hear a voice in opposition to more "pork" in the center of the country, where it seems to be used, not for the eradication of a disease, but for the employment of various agents, who, in the last analysis, "ride around in automobiles," and who after they have had probably 15 or 20 years of Federal service, will probably come to Congress petitioning for pensions on the ground that they ought not to be turned out of the service, to starve in their old age.

Mr. McLAUGHLIN. Will the gentleman yield?

Mr. MOORE of Pennsylvania. I yield to the gentleman from Michigan.

Mr. McLAUGHLIN. Does the gentleman fear that this hog cholera will attack the pork in the river and harbor bill? [Laughter.]

Mr. MOORE of Pennsylvania. Now, just listen to the laughter. Are we laughing at the State of Michigan, which, having taken $50,000,000 of pork out of the river and harbor bill, now desires to see that no other State shall be considered? That is the situation. Having obtained its pork, Michigan does not desire to see any other State obtain any pork for itself. [Laughter.] I am going to give the gentleman from Michigan a real definition of pork. It is an original definition. I gave it to the River and Harbor Congress. Pork, if the gentleman will permit me, is not that which you get for your own river or for your own particular hog cholera, but it is what the other fellow gets for his. [Laughter.] The longer you think about it the more you will find that that is about the essence of the agitation on the subject of "pork."

The gentleman who spoke a few moments ago [Mr. HAUGEN] comes from the State of Iowa, which I understand has been or is the seat of the hog-cholera trouble. Kansas, Nebraska, and some other States around about that section of the country are also involved. Their hogs are inclined to cholera, and they need serum and things, in order that the farmers may send to the great cities a pure food product which we in turn consume, without danger of infection. I glory in the fact that the gentleman from Iowa [Mr. HAUGEN] is strong enough and bold enough, in the face of an irresistible country constituency, to say that we ought to stop spending money for pork, if in the last analysis a hog-cholera appropriation means the employment of high-salaried scientists to "ride around in automobiles" to tell the farmer what he ought to do.

There is one proviso in this paragraph that I do not quite understand. As I read it, it confirms the statement made by my distinguished friend from Iowa [Mr. HAUGEN]. It is the last proviso—

And provided further, That of said sum not less than $35,000 shall be available for researches concerning the cause, modes of spread, and methods of treatment and prevention of this disease.

Leave it to the man who is already in on the "pork barrel" to devise a new method of expenditure, and you will find it in just such a proviso as that. The whole paragraph, which at one time, I think, carried $600,000 for meeting a hog-cholera emergency, and which has been reduced to $360,000, although the gentleman from Kansas [Mr. HELVERING] would like to increase it to $410,000—this paragraph provides for investigating the disease of hog cholera; it provides for the control or eradication, by such means as may be necessary, including demonstrations; that is, telling the farmer how to do it, riding up to the place of the man who works on the farm and telling him how to treat his hogs. The investigator provided for in this $35,000 proviso is all covered apparently in the paragraph. The last proviso is not necessary, but we must find a new method of spending $35,000. That keeps the thing going.

Mr. FERRIS. Mr. Chairman, I am not sure that I would pit my judgment on matters relating to agriculture against the judgment of the Committee on Agriculture, but I do feel perfectly safe in putting it up against the judgment of the gentleman from Pennsylvania [Mr. MOORE], because he and I are on a par in such matters. I want to say, however, that during the vacation last summer we were all at home a good many months, and I took occasion to visit several hog farms around in my county and in my State, and I found that this serum was of real value and real service to the farmers, and the difficulty of which they complained was that they had to pay extortionate prices for it; that they had to go to Oklahoma City—some 90 miles away—to get it, and they hoped some way might be devised so that they would not have to pay so much for it or go so far away to get it. I will say that I am not so very paternalistic in my views, and I do not believe that the Federal Government ought to run around serving the farmer on a silver platter with all the various panaceas for ills, because I believe that destroys the initiative of the farmers. I do not believe it does them much, if any, substantial good; but if some way could be devised by the Agricultural Committee so that they could prevent extortion and could get this serum to the farmers more cheaply and more economically, that is the thing that would be of benefit to the farmer.

Another complaint was made, and I give it to the committee for what it is worth, because I have not given attention to it here in the House at all. That was that the Agricultural Department was spending too much money on tick eradication and for the benefit of the big cattlemen, so called, who were more able to take care of themselves, and that not enough was being spent on the fellow who had a few pigs and a few hogs, who was usually destitute of any means to look after himself or provide himself with all such necessities.

I do not make the complaint myself, nor do I vouch for it, but I confess I was impressed somewhat at the time by the facts presented. The hog industry is a very important one. There is no longer any doubt about the real effectiveness of this serum. Therefore I am glad to see it growing. I am glad to see the Government giving it attention. I have also wondered if the chairman of the committee or the committee itself could not in some way reach the Agricultural Department and put a little more steam behind the hog-cholera proposition.

Mr. LEVER. Will the gentleman yield?

Mr. FERRIS. Certainly.

Mr. LEVER. I will say that if the gentleman will recall, this item has been in the bill only about three years, and this committee has put considerable steam into it to the extent of about $3,000,000.

Mr. FERRIS. I am not criticizing the committee; I have nothing but commendation for the committee. The men who raise hogs say that this serum is a preventive—it is a razor that will shave—and if they can get a brand of this serum at a reasonable rate, they can make money out of raising hogs. It is a matter of deep concern to the farmers. It is so important. I am so glad the committee is dealing with it. It is a matter of concern to the consumer too. Meat is so high in price that we can scarcely pay for it or afford to longer have it. I do not see how a man with a large family on a small wage can sit down in front of a piece of ham or a piece of beefsteak when they have to pay such exorbitant prices. While my good friend from Pennsylvania was delivering his somewhat paternalistic remarks about pork I thought I would rather say something in commendation for the committee in helping the farmer to produce more meat and therefore get it to the consumer more cheaply. [Applause.]

Mr. MOSS of Indiana. Mr. Chairman, and gentlemen of the committee, the question of hog cholera is one to which I have given close attention as a farmer, and I take considerable pride in the connection that I have had with the growth and development of this legislation. I think perhaps the gentleman from Nebraska [Mr. SLOAN] and myself deserve credit for bringing this question prominently before the House after the Agricultural Committee had actually refused to give it attention or to report any appropriation for a campaign of education by the Department of Agriculture.

Mr. HAUGEN. Will the gentleman state what year that was?

Mr. MOSS of Indiana. In 1912–13; the bill which carried the very first appropriation that was made for hog-cholera demonstration work by using serum as an agent of control. The gentleman from Iowa [Mr. HAUGEN] knows that this appropriation was put in the Agricultural bill by an amendment which was offered from the floor of the House after the gentleman from Nebraska [Mr. SLOAN] appeared before the Agricultural Committee asking for an appropriation for this purpose and the committee had refused the request. I was at that time chairman of the Committee on Expenditures of the Agricultural Department, and the gentleman from Nebraska [Mr. SLOAN] was a member of that committee. Following the refusal of the Agricultural Committee to act I called Dr. Melvin and Dr. Dorset before our committee, and with the assistance of the gentleman from Nebraska [Mr. SLOAN] developed this subject very fully. It was the information secured by the hearings before my committee that aroused the country to a full realization of the importance of this work and secured the appropriation by Congress, which was necessary to start the work along the present lines of demonstration.

In the beginning, Dr. Dorset, of the Department of Agriculture, discovered a method of control of hog cholera by vaccinating the hog with virus and with serum—the so-called double method of treatment. The distinguished doctor patented this process and gave the people of the United States the free use of the process. It was found on investigation that the Government, though it had conducted many expensive investigations which led to the discovery of serum and its usefulness as an agent of control, had not attempted any demonstration work to popularize the method, and hence the farmers secured no practical benefit from Dr. Dorset's great labors.

The several State experiment stations took hold of the work and did what they could to introduce it. Our State—the splendid State of Indiana, with its usual foresight and initiative—erected a station for the production of serum.

The gentleman from Iowa [Mr. HAUGEN] is now offering an amendment to this bill that the United States shall manufacture serum and sell it at cost to the people of our Nation. Mr. Chairman, Indiana is a pioneer State in this work. For many years we have maintained a splendid State station for the production of serum and have sold it to the farmers of our State at cost. But even with this splendid service on part of the State no general interest could be built up among the farmers of our State.

I regret to say that among the farmers of our country, taking them as a large productive class, a great many are not as alert and well educated along lines of economical management as are business men. Before the new method could come into general use it was necessary to have some demonstration work by the General Government. It was this phase which was overlooked by the Agriculture Committee in their failure to appropriate to start this work. I do not wish to criticize the Committee on Agriculture. Under its present chairman and with its present membership it is one of the strongest committees of the House, and one which always is liberal in its appropriations for any purpose which can be proven to be worthy. It is my confidence in this committee which shall cause me to vote against the amendment offered by the gentleman from Kansas to increase the amount carried in this item.

As a result of the investigation had by my committee, we secured an appropriation in 1913 of $75,000, available after July 1 of that year, to demonstrate the efficiency of Dr. Dorset's method to control hog cholera. This work has been under way less than three years. What have been the results? I have the official figures from Hendricks County, in my district. The work in this area did not begin until September 11, 1914, and hence has been in actual operation less than two years. I will give the official report for this period and the comparative data for the three years immediately preceding. The result is impressive and most abundantly vindicates this work.

UNITED STATES DEPARTMENT OF AGRICULTURE,
BUREAU OF ANIMAL INDUSTRY,
Danville, Ind., April 7, 1916.

Hon. RALPH W. MOSS,
Washington, D. C.

DEAR CONGRESSMAN: Your letter of the 4th instant received and contents noted.

Will say that the first duty was to take a survey and get an organization. This was done by sending cards to the 2,500 farmers in Hendricks County, and the results of this information is tabulated on the sheet herewith. It is evident from the farmers' reports that three years prior to our coming they had lost on an average of 18 per cent of all the hogs raised, and that after opening this station for active operation on September 11, 1914, and treating hogs for the balance of the year, the death rate dropped to 6 per cent of all the hogs raised in 1914, and with the whole year's work in 1915 it dropped to 3 per cent, including hogs where local veterinarians treated. You will notice a large increase in the number of hogs raised, 21,250, in 1915 over any preceding year. This is due to this fact: We asked a great number of farmers if they had more hogs this year, 1915, than they had last year, 1914, and every one answered in the affirmative. We asked them to give us their reason for raising more hogs, and they replied by saying, "We had less cholera and a small death rate where you treated in our neighborhood last fall after you came than we had had for a number of years, and we understand that you are to be here another year, 1915, so I saved an extra gilt or two for brood sows." This is the way that we account for the increase in hogs in 1915, 21,250, over any preceding year. It is always safe to judge the future by the past. They had lost an average of 18 per cent of all the hogs raised for three years prior to our coming. They no doubt would have lost 18 per cent of all the hogs raised in 1915, which would have been 19,297, but they did lose 3,216. We made a saving, then, of 16,081. Add to this the increase which was 21,250, making a total of 37,331, at $10 per head, we have $373,310 saved in sick herds. Knowing the amount of serum used, the number of hogs treated, and our fixed scale per pound whereby we administer serum, the average market value of the hogs when treated exceeded $10, and this did not include a great many valuable brood animals. We must figure that the unit base of the United States is the individual; and that the investment that the Federal Government has given to this unit basis, or the farmer, shows a saving or an earning upon every dollar invested by the Federal Government $28 in pork to the farmer. You no doubt know that we treat in nothing but herds affected with hog cholera. As above stated, there are 2,500 farmers in this county, and 247 got the entire investment from the Federal Government except the knowledge disseminated to them through our campaign of education. We have held in this county since our coming 89 educational meetings, stereopticon and chart lectures, and had present 9,020. Of all the herds treated in 1915, 70 per cent of the farmers said that they had not attended any of our educational meetings. We feel that from this campaign of education that we carried on in 1914 and 1915, that a great number of the 2,253 men kept their hogs from having cholera by following our advice. It is easy enough to estimate the good in dollars and cents in the herds where we have treated, but that is but a small per cent of the great amount of good done here. The modes of carrying cholera are well understood by the farmers in general in this county, and the results of this educational campaign will last for years.

Trusting that the above data will be satisfactory to you, and that you will be able to use same to your advantage, I remain,

Very respectfully,

G. N. WICKWIRE,
Inspector in Charge.

Hog-cholera control in Hendricks County, Ind., from Sept. 11, 1914, to Dec. 31, 1915.

	1911	1912	1913	1914	1915
Hogs raised	66,439	66,259	77,211	85,955	107,205
Hogs lost	11,436	13,532	12,908	5,199	3,216
Per cent loss	17	20	17	6	3
Infested farms	509	603	575	461	247

But these gains are in reality but a small part of the entire value of this demonstration work. We have educated the public and have popularized this method of control and brought it into general use. This has resulted in private capital and private enterprise going in the business of manufacturing and selling serum to the farmers of every section of our country. The Government is confining its demonstration, it is true, to small areas; but private initiative is carrying the same methods into all our territory, so that everybody—both producers and consumers—are benefiting alike from this demonstration work.

These figures compare closely with those submitted by Mr. HELVERING, of Kansas, and thus confirms their entire accuracy. The loss from cholera in this area fell from an average of 17 per cent of the entire number of hogs grown to 3 per cent within less than two years. At the same time the number of hogs grown increased from 85,955 in 1914 to 107,205 in 1915. The same results are true if all the areas under control by the Government be combined. The general results are that wherever these demonstrations have taken place the loss by hog cholera has fallen off on an average from 17 per cent down to 2 or 3 per cent, and at the same time the number of hogs in that same area has increased 25 or 30 per cent. Thus we have to-day perhaps 100 private plants in the United States producing hog serum. We have educated the public and the practitioners of veterinary science until there is scarcely a farmer in the United States who is not well acquainted with this method of control.

Now, for every farmer to whom the Agricultural Department gives free serum in this demonstration work there are ten thousand who pay for it out of their own pockets; and for every hog that is protected by this work of the Government of the United States there are many thousands protected by farmers at their own expense. No man can stand on the floor of the House and point to a dollar in any appropriation bill which yields so great a return to the people of the United States. All I wish to ask of the Congress of the United States is to continue this necessary work long enough to demonstrate two things: First, that pure and potent serum, proper sanitation, and skilled supervision make it possible to grow hogs profitably and to escape the ravages of hog cholera. When that result is finally determined I shall consent to striking this appropriation from this bill; but we can not do it in three years. It has been stated truly by Judge BOOHER, of Missouri, that some years hog cholera is worse than others. I had one expert tell me that it comes in cycles of seven years; that in any locality you would find hog cholera a great deal worse than it had been in other years.

The CHAIRMAN. The time of the gentleman from Indiana has expired.

Mr. MOSS of Indiana. Mr. Chairman, I would like five minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. MOSS of Indiana. This experiment has been running three years, and it has had the effect to stimulate the private manufacture of serum until we now have approximately 100 plants. It has stimulated and encouraged the use of serum until farmers are buying liberally from private sources and are hiring veterinary surgeons to give this treatment to their herds. In every area that is protected the production of hogs has been largely increased and the loss largely decreased.

Now, as to the proposition advanced by my friend from Iowa [Mr. HAUGEN] that the Government manufacture serum, I want to call his attention to the fact that in Indiana, where we have been producing serum by our own State, we have been unable to meet the demand, and the great majority of our farmers are forced to purchase from private manufacturers. If the State can not supply the demand, I do not believe the Nation will be more successful. In the end, if this method is to be generally introduced, we must encourage private capital to enter the field and to produce this remedy.

Mr. HAUGEN. Will the gentleman yield?

Mr. MOSS of Indiana. I will.

Mr. HAUGEN. The gentleman has taken credit for this legislation, but I wish to call his attention to the fact that an item was carried in the bill for 15 years—carried in a lump-sum appropriation—and I think it carried $600,000, and every dollar available for hog cholera. Now, I wish to ask the gentleman is it not a fact that the appropriation made for the joy riders was stricken from the bill a year ago largely at the suggestion of the gentleman from Indiana?

Mr. MOSS of Indiana. I did not quite catch the gentleman's question.

Mr. HAUGEN. Is it not a fact that the appropriation made for the joy riders to lecture to empty seats was stricken out of the bill a year ago at the suggestion of the gentleman from Indiana?

Mr. MOSS of Indiana. I am glad to say that "the gentleman from Indiana," so far as he has had any influence over the appropriation of public money has never favored the expenditure of a dollar that the public did not get 100 cents in return. [Applause.] On such questions I am glad to say that I generally find myself, either in committee or in the House, standing by the side of the gentleman from Iowa.

The question of private manufacture and sale of virus and serum brings the question of control or supervision so as to guarantee not only the potency, but also the purity, of these fluids. Our unfortunate experience with virus which contained the germs of the foot-and-mouth disease brings that question up at the present time. Can farmers be assured that they will be sold serum from private plants in this country which will be pure and potent? If the gentleman from Iowa had set himself to this task, which is one worthy of his concededly great ability, I would have been glad to assist him in any possible manner. If that can be guaranteed by the Department of Agriculture, then we have no need whatsoever for any great central plant in the United States.

How did it happen that we got contaminated virus? It came like a thief in the night. There was no one who suspected the presence of the foot-and-mouth disease in the United States at that time. This disease attacks hogs. Virus is taken from a hog that is sick from cholera. It happened that certain hogs were attacked by foot-and-mouth disease and cholera at the same time. As no one had reason to suspect foot-and-mouth disease the error was easily made and virus was taken from hogs sick with cholera and which had also at the same time the foot-and-mouth disease, and in that way virus was obtained which was infected with the germs of foot-and-mouth disease. That could not have happened if the Department of Agriculture had known of the presence of the foot-and-mouth disease in the United States. I am glad to be able to say that by a very careful study lasting less than a year the Department of Agriculture has an infallible method of testing the serum and can at once tell whether it is pure or impure. If that be true, and I believe it is, then the Department of Agriculture has absolutely swept aside all real difficulty of private manufacture of virus and serum, and all we have to do is to give them the power of general regulation and supervision over the manufacture and sale of serum. We have no need to appropriate huge sums to erect Government plants, as is proposed by the gentleman from Iowa. If the committee is supported in its wise and patriotic recommendations, we will speedily settle this most difficult question, and I shall look for this appropriation to pass from the Agricultural appropriation bill within less than five years from the present date. I should say that an experiment running 8 or 10 years would be sufficient to settle the whole question and that it is not a matter which is going to hang on during the lifetime of any living man; but adopt the proposal of the gentleman from Iowa and you will enter upon a new field of governmental activity, which will constantly grow and which can never end.

Mr. Chairman, I shall close by asking permission to revise and extend my remarks in the RECORD by placing therein the figures given to me from the hog-cholera station in Hendricks County, Ind., for I would like to show that splendid progress which this work has made in my State, which only confirms what my friend from Kansas has said, and is another one of the many evidences that this money has been well spent. [Applause.]

Mr. SLOAN. Mr. Chairman, the gentleman from Pennsylvania [Mr. MOORE] now having acquired for his district all of the hog products distributed under the river and harbor appropriation bill would like to prevent any distribution elsewhere. Having grabbed the biggest ham he proposes to deny the farmers of the Middle West even a spareribb. [Laughter.] The gentleman from Pennsylvania, of course, is a remarkable man. He has just flushed or rinsed out the creek known as the Delaware that runs in front of his door with an appropriation of something over $2,700,000 from the National Treasury.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. SLOAN. Not just now. I have too good a subject to dispose of, and I want to finish it.

Mr. MOORE of Pennsylvania. I want to furnish transportation to get the farmers' products to the markets. I am for the farmer.

Mr. SLOAN. And he now announces through his organ, the Philadelphia Inquirer, the fact that, having obtained this munificent appropriation, Philadelphia is now ready to receive a new post-office building. After this Government has invested $6,115,143.49 from time to time in a public building and site in that city they would like to have a new post-office building. They are now ready to receive one, we are told. Yet the gentleman from Pennsylvania [Mr. MOORE] rises in holy horror at the thought of the farmers having this pittance allowed to them. Note the modest statement from the Inquirer:

TIME FOR A NEW POST-OFFICE BUILDING.

The time has arrived when Philadelphia should have a new post-office building, and Postmaster Thornton urges the business men of the city to send a delegation to Washington to present the claims of the city to the proper congressional committee.

Calling attention to the history of the legislation, I fear the ranking member on the Committee on Agriculture on the minority side has not his dates on straight.

Mr. HUDDLESTON. Mr. Chairman, does the gentleman intimate that all of the hogs are not on the Iowa farms?

Mr. SLOAN. As a matter of pride, I am not prepared to admit that all of the hogs are in Iowa.

Mr. HUDDLESTON. I mean in the West.

Mr. SLOAN. Oh, we have some very promising shotes in other parts of the United States. [Laughter.] They may develop some wonderful hams and shoulders. I say this on account of the way they take the generous donations in the river and harbor appropriation bill to wash out the little streams in the lower Atlantic and Gulf States. [Laughter.]

Mr. Chairman, Dr. Dorset discovered about 10 years ago—in 1906, I think—the serum, which was then the first effective remedy or preventive this country found with which to combat the greatest constant economic loss agriculture has had in America for the last 50 years. Yet for six or seven full years, if I have the dates correctly—from 1906 to 1913—not a single dollar was specially appropriated by this Government to put in operation and press upon the attention of the people this serum, that we now know to be effective.

Mr. DOOLITTLE. Mr. Chairman, will the gentleman yield?

Mr. SLOAN. Yes.

Mr. DOOLITTLE. Will the gentleman tell us why no appropriation was made?

Mr. SLOAN. I do not know. I was not in Congress until 1911; but this I do know: Coming in as a new Member and a minority Member, and having some time on my hands and having regard for the great economic loss that was going on in the States in my section of the country, the great Northwest, I put in a great deal of time studying this particular problem. After I had studied it and gathered together all of the facts that I could from all sources, both as to loss and the history of the disease, and the question of whether this remedy would be effective, I went before the Committee on Agriculture, which at that time had a different chairman from the one who now presides over its deliberations. He was one of the most lovable characters I ever met, one of the best men we ever had in the House, but, unfortunately, he had a rigid prejudice against this proposition. When I went before that committee and asked for an appropriation for this purpose it was denied.

The CHAIRMAN. The time of the gentleman from Nebraska has expired.

Mr. SLOAN. Mr. Chairman, I ask unanimous consent that I may proceed for 10 minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. SLOAN. When the proposition was wholly denied I asked leave to bring Dr. Melvin and Dr. Dorset before the committee to give testimony as to these investigations which had been made and the facts I had to present. I was refused that privilege. The gentleman from Indiana [Mr. Moss], who early took a deep and active interest in this matter, was at that time chairman of the Committee on Expenditures in the Agricultural Department, and of which I was a member. We induced that committee to take up the subject and took the testimony of Dr. Melvin and Dr. Dorset. Having obtained that evidence and it having been printed and having gone to the country, we took it before the Committee on Agriculture and were again met by a rebuff from the then chairman. But I want to say as a matter of justice, looking at this enterprise, which the Government has entered upon and which is well on the way to success, that credit to a large extent should be given to the present chairman of that committee, the gentleman from South Carolina [Mr. LEVER], who at that time was the ranking majority member on that committee. He rose in his place and insisted that that committee should make an appropriation for the purpose of fighting hog cholera. [Applause.]

Further credit is due to a number of Members then on the committee and who are still members of that great standing committee and who are doing a great work in behalf of agriculture for the whole country. And, to be more explicit, pleading economy, he suggested $30,000. We thought that was not enough. My bill called for $100,000. Finally the committee announced if there would not be a fight on the floor of the House the committee would grant $45,000. It went through in that form in the House. A member of the committee, a Member from my own State, was directed to present the amendment in the House. The amendment was presented formally, it became a part of the Agricultural bill, passed, and went to the Senate. The Senate raised it to $100,000. In conference it was reduced to $75,000, and $75,000 was the first money that was ever appropriated for that specific purpose to combat the hog cholera.

Mr. RUBEY. If the gentleman will permit, I will state that the date of the approval of the bill was March 4, 1913.

Mr. SLOAN. Whatever the date may be; probably that is the date. I accept the gentleman's statement if he has looked it up. Now, the proposition was to go into the great swine-producing States and establish areas where they would have an opportunity to demonstrate the efficacy of this serum when properly administered; and further not only to demonstrate but to develop the methods of combating—because it is not alone a matter of applying the serum, but it is a matter of proper quarantine against its spread. That is one of the most difficult features. And so in four States there were stations established. In my own State they did not get under way the first year—1913—but they selected an area composed of one small county and half of a large county, and in those two counties, now, for two or three years they have established areas, and the results are beyond expectations.

True, it looks as if the Government was clearing up hog cholera over these particular areas. But if that were the only purpose it would not be fair, because every county in the United States would be entitled to the same privilege as the counties selected. But that is not the real value. The real value is this: The Government, in whom people have confidence, places a man in charge who is given control of an area, and and he works out the various problems. There are a great many, not alone the administering of the serum, but working out problems showing what the effect of the administering the serum had upon the young, whether it will injure them, and what effect, if any, will it have upon the second generation. All of those things had to be worked out, and they are being worked out very satisfactorily in our State. The next year we made a more generous appropriation, providing for demonstrations in 16 States. The figures presented by Mr. HELVERING, of Kansas, show the result. But those figures do not show the large result. The large result lies in the fact that demonstrations in a central point are being made, and, the United States leading the campaign, it drives into activity the State authorities. Every veterinarian throughout the State becomes interested because there are inquiries about it and demands for his action. He learns these methods. He keeps in close touch with the activities of these various areas. Every veterinarian in all those States is interested in doing this work most effectively.

Mr. PAGE of North Carolina. Will the gentleman yield for a question?

Mr. SLOAN. I do.

Mr. PAGE of North Carolina. The gentleman states this experiment station was inaugurated, one or more, in the State of Nebraska.

Mr. SLOAN. In one area. A demonstration area, rather than one of experiment.

Mr. PAGE of North Carolina. In one or two counties.

Mr. SLOAN. Yes.

Mr. PAGE of North Carolina. To what extent does the State of Nebraska appropriate for the help of this work of educating the people in the matter of serum and its application and the stop of the spread of the hog cholera? Has the State made any appropriation?

Mr. SLOAN. It has. I think a year ago I submitted a statement of the contributions of the various States. But I will say the State of Nebraska has appropriated and expended three or four times as much as the Government has expended in Nebraska. It has become cooperative and is very successful. For instance, Nebraska the year past reduced its loss, which has been for 10 years an average of nearly 8 per cent, to 5 per cent, which is a very large factor when we come to consider the very large annual loss.

Mr. BOOHER. Will the gentleman yield?
Mr. SLOAN. I will.
Mr. BOOHER. That reduction of the percentage of loss in the gentleman's State, was it caused from the fact the gentleman has in one of his counties this demonstration work or because the disease was not so bad in the State that year?
Mr. SLOAN. First the county or the two counties within the area almost entirely knocked out hog cholera, so far as that factor would tend to reduce it. A large part, however, was the general activity that was inspired by this working area throughout the State. We have a number of county agents, and those county agents became very active in working it out and following out and explaining to up-to-date farmers and others interested the proper methods to be pursued. I know what is in the mind of the gentleman from Missouri. I want to state this: One county adjoining Gage, which is in the area, has perhaps the largest loss this last year that it has had in a great many years because it refused to follow the suggestion and lead of the Government and State authorities working in the Gage County area.
So I am satisfied of this, that Nebraska, had it not been for this plant and these activities that were started, would have had instead of a decrease an increase to report to the country.
Mr. BOOHER. I dislike to take the gentleman's time, but I would like to ask him another question. Does not the gentleman think it would be better to use all this money in laboratory work and inspection of serum plants and serum and virus throughout the country, so that the people may have better serum and better virus? Would not that be better than this demonstration work?
Mr. SLOAN. I do not think so. You are working to save the farmer, but you are also working for the larger result of making uniform the production of pork, so that the consumer will ultimately get the benefit of it.
Mr. MANN. I would like to ask the gentleman what are these experiment stations? What is the purpose of them and what is the procedure?
Mr. SLOAN. The Bureau of Animal Industry, in the Department of Agriculture, makes, through the advice and cooperation with the governor or other authorities of the State, the selection of an area. That is usually a county, and that county is taken as a laboratory for demonstration of the means and methods of clearing the area of hog cholera. So, having worked along the lines that are approved, and being able to present results that are satisfactory, they can say, and say with authority, to the other counties and communities throughout the State: "This is the course that we followed in the application of the serum; this is the course we followed in preventing it from being carried from one place to another; this is the course we followed with reference to old hogs and young hogs and hogs under various conditions, and these are the results."
The CHAIRMAN. The time of the gentleman has expired.
Mr. MANN. Mr. Chairman, I ask unanimous consent that the gentleman may have five minutes more.
The CHAIRMAN. The gentleman from Illinois asks unanimous consent that the gentleman from Nebraska may have five minutes more. Is there objection?
There was no objection.
Mr. SLOAN. The results have been really marvelous.
Mr. MANN. The gentleman refers to them as experiment stations.
Mr. SLOAN. If I used the word "experiment," I did not intend it. It is "demonstration."
Mr. MANN. The gentleman used the word "experiment" a number of times.
Mr. LEVER. I think he used it in reference to the matter of serum at stations.
Mr. MANN. It is not experiment.
Mr. LEVER. It is demonstration.
Mr. SLOAN. So far as the serum is concerned that is past, but so far as the effects are concerned it is a matter of some experiment.
Mr. CULLOP. I would like to inquire of the gentleman if it is not quite as important to educate the farmer as to how to treat the disease and keep the animal from getting it as to treat the animal after he has the cholera?
Mr. SLOAN. It certainly is. I have stated the result. It is the result that the American people are after. You have your high-priced meat, beef and mutton, but the real poor man's meat is pork. It furnishes him the meat in bulk. It furnishes gravy, a substitute for butter, and it furnishes on the poor man's table more of the means of subsistence than any other class of meat or food.
Mr. HELVERING. Is it not a fact that from all over the State of Nebraska—I know it is in Kansas—come requests through these demonstrators in the country for information as to how they shall proceed in the work they are doing?
Mr. SLOAN. That is true, because I have kept in close touch with this demonstration area all the time since it was inaugurated, and I know that is the case. I know this, that, outside of the demonstration, these men who are at work are daily advising with veterinarians and the farm agents and the farmers themselves, so that the veterinarians and farmers and farm agents are becoming efficient in the matter of combating hog cholera, so that results are coming and better results will continue to come if this Congress will give the means and the opportunity to continue in the work.
Mr. HASTINGS. Will the gentleman tell us how many of these demonstration stations there are in the United States?
Mr. SLOAN. I understand that there are 16, in 16 different States.
Mr. DOOLITTLE. Will the gentleman yield?
Mr. SLOAN. I will.
Mr. DOOLITTLE. Does the gentleman think the amount provided in the bill is sufficient for the coming year?
Mr. SLOAN. If it were left to me I would increase the amount. But still it is a rather generous sum, and, all things considered, the hog raisers of this country will have to be reasonable in demands on the Government.
Mr. LEVER. May I call the gentleman's attention to this fact, that the appropriation carried in this bill is $175,000 more than was estimated for by the department and $105,000 more than is being used by the department? I think the committee has been very liberal.
Mr. GARNER. And in that connection I would like to ask, if it carries more than the department thinks can be used is it not likely to be wasted?
Mr. MOSS of Indiana. In that connection, it ought to be said that the department is not entirely friendly to continuing the experiments in areas which have been selected. I think the gentleman from Nebraska will bear me out in this statement.
Mr. MANN. I would like to ask the gentleman whether this appropriation, if it goes into this bill, is not to be used for demonstration work but is for the purpose of providing a test laboratory for serum?
Mr. SLOAN. I do not understand that this item that I have been talking about is for that purpose.
Mr. HAUGEN. Not a dollar is intended for a laboratory.
Mr. MANN. It is available for that purpose, and that is what the Secretary asks it for, and I have no doubt that is what it will be used for.
Mr. HAUGEN. Oh, no.
Mr. MANN. How can you spend $175,000 to carry out the act with reference to serums except to establish a station that the Secretary estimates will cost $150,000 a year for maintenance? How else can you spend the money?
Mr. HAUGEN. Here is what the bill says——
Mr. MANN. Oh, I understand what the bill says. That is what is intended.
The CHAIRMAN. The time of the gentleman from Nebraska has expired.
Mr. SLOAN. I ask unanimous consent, Mr. Chairman, to extend my remarks in the RECORD.
The CHAIRMAN. Is there objection to the gentleman's request?
There was no objection.
Mr. MOSS of Indiana. I make the same request, Mr. Chairman.
The CHAIRMAN. The gentleman from Indiana asks unanimous consent to extend his remarks in the RECORD. Is there objection?
There was no objection.
Mr. LEVER. Mr. Chairman, I want to find out if we can not reach an agreement as to closing up the time. Does the gentleman from Iowa want 5 or 10 minutes?
Mr. HAUGEN. I would like to discuss my own amendment, but I do not want time on this amendment. I want five minutes on my own amendment.
Mr. LEVER. I ask unanimous consent, Mr. Chairman, that all debate on the paragraph and the pending amendment be closed in 40 minutes. The gentleman from Missouri [Mr. RUBEY] says to me he may need 10 minutes. I will modify my request, Mr. Chairman, by making it 50 minutes. I hope, Mr. Chairman, that we may then proceed. I do not want to unduly rush this debate, but we want to make progress.
The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that all debate on this paragraph and the pending amendment close in 50 minutes. Is there objection?
There was no objection.
Mr. CLINE rose.

The CHAIRMAN. The gentleman from Indiana [Mr. CLINE] is recognized for five minutes.

Mr. CLINE. I do not know, Mr. Chairman, that I shall take the entire five minutes. However, in the language so often used by my distinguished friend the gentleman from Pennsylvania [Mr. MOORE] "in the last analysis," certain facts are well established. If I remember the hearings on this bill, Dr. Dorset and Dr. Melvin both testified that good serum, such as the Government puts out, would last as a good serum for a year. The testimony also discloses the fact that the vicious serum that was sold throughout the country was manufactured by private concerns.

Now, if that be true, it seems to me that the Government ought in some way to take charge of the manufacture and have supervision over the manufacture and distribution of serum. Hog products and beef products, Mr. Chairman, constitute one of the largest, if not the largest, export item of this country, amounting to $150,000,000 annually.

Mr. RUBEY. Mr. Chairman, will the gentleman yield?

Mr. CLINE. Certainly.

Mr. RUBEY. I will say for the information of the gentleman that a bill has been prepared and reported by the Committee on Agriculture providing that the Secretary of Agriculture shall have complete authority to investigate and regulate every factory of serum where the product goes into interstate commerce in the United States.

Mr. CLINE. Well, that bill ought to pass, in my opinion. Mr. Chairman, if that is done, it will, of course, take out of the market improper serum.

Another question, raised by the gentleman from Iowa [Mr. HAUGEN]——

Mr. ALEXANDER. Mr. Chairman, will the gentleman yield at that point for a moment?

Mr. CLINE. Certainly.

Mr. ALEXANDER. I represent one of the very largest agricultural districts, I think, in the United States, where the hog and cattle industries are the leading agricultural industries, and our farmers are afraid to use the serum to-day, because they fear it will give the animals disease rather than prevent it.

Mr. CLINE. That will be overcome if the Government undertakes the manufacture of serum and puts its O. K. on the serum that is put out on the market by private manufacturers.

Now, in reference to what the gentleman from Iowa [Mr. HAUGEN] has said regarding the expense of administering this serum, I want to call attention to the fact that in my section of the country the farmers are absolutely posted on this question. Every veterinarian in that country knows how to administer that serum, and has taken short courses, for instance, in Perdue University, in my State, to become acquainted with the best methods of administering this preventive.

It is also disclosed by the hearings that the serum manufactured by the Government is not only a cure but a preventive of the disease. If that is true, it is one of the strongest arguments why the manufacture and distribution of the serum should be placed in the hands of the Government, so that if a farmer could purchase a quantity sufficient to last him a year at cost price he would be amply provided with protection against the hog cholera.

The CHAIRMAN. The time of the gentleman from Indiana has expired.

Mr. McLAUGHLIN rose.

The CHAIRMAN. The gentleman from Michigan [Mr. McLAUGHLIN] is recognized for five minutes.

Mr. McLAUGHLIN. Mr. Chairman, I wish to say, with reference to the amendment offered by the gentleman from Kansas [Mr. HELVERING] increasing by a considerable amount this item of appropriation, that the committee gave a great deal of time to this matter, with no disposition whatever to limit the amount except as it could be properly used by the department, and we believe the amount we have recommended, $360,000, is all the department needs, and all it can use profitably.

As the gentleman from Missouri [Mr. RUBEY] said, there is about $45,000 now in the Treasury as a part of an old appropriation available for use in addition to the $360,000 appropriated here, if that amount be appropriated.

Now, as to the work that has been carried on, about 15 counties in the United States were selected, and special work was done within those counties. They have been demonstration areas. The work has been intensified there. The experts of the Bureau of Animal Industry have worked in each county in cooperation with the officials of the State, carrying on the work, and a part of that work was to give the best kind of instruction to the officials of the State, so that when the Department of Agriculture has done what it ought to do, when money from the Federal Treasury has been appropriated to a reasonable amount and the proper officials in the States have been given instruction in this way, they may be able themselves later on to go through the State and do the work for the State just as well as the work could be done in cooperation with the officials of the department.

In many of the counties of the State there are county agents, and the money for their employment is provided under the Lever law, which is a graduated law, the amount available for the work being larger as years go by until the law matures. Under those appropriations, in a very few years county agents will be employed throughout the country and there will be farm agents in almost every county. Almost every county in each State will be supplied; and it seems to me that after the officials of the Bureau of Animal Industry have gone into a State and carried on for a year this intensive work in one county, and after the officials of the State, working in cooperation with them, have had an opportunity to learn all the secrets of the business, and just how to carry it on, they ought to be able, in cooperation with and with the assistance of the county agents, to do this work without the further assistance of the officials of the Department of Agriculture.

The sum of $175,000 is recommended in this clause of the bill for additional and better inspection of factories in which serum is made, a very important and necessary work; and I believe if the work is properly carried on, the danger of the manufacture and use of impotent or impure serum will largely be removed, and when the education is extended the county agent can use the serum safely, and later the farmers themselves can use the serum safely. The amount provided by the bill is, in my judgment, large enough; the amendment ought to be defeated.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BOOHER. Mr. Chairman, I am as much in favor of this appropriation as any man on this floor. I think I was among the first to introduce a bill asking the Committee on Agriculture to make an appropriation of $250,000 for this work. I am not in favor of the division of the funds, as has been set out in this bill. I think it is time to stop this demonstration work and to use the money for the purpose of the most thorough inspection of every serum plant in the United States where the serum goes into interstate commerce, and where it is only to be used in the State the State ought to provide for such an examination of the serum plant and such an examination of the manufactured product that when the man who wants to use it goes and buys it he will know he is getting a pure material. That will be of far more benefit to the people at large than the taking of one county in a State and demonstrating there year after year how to use this serum.

Mr. CULLOP. Will the gentleman permit an interruption?

Mr. BOOHER. Yes.

Mr. CULLOP. Most of the States have laws requiring their veterinary service to inspect these serums and to prohibit from sale any that are not up to the standard. We have such a law in Indiana.

Mr. BOOHER. Nearly every hog-raising State has a manufacturing plant at the State agricultural college. They have it in Iowa and we have it in Missouri, and I am informed that they have it in Ohio. Now, they examine their serum, and it is supposed to be perfect; but, in addition to the examination made by the State authorities, I would have a thorough examination made by competent men representing the Government when that serum is to go into commerce for the country.

Hog cholera does not come every year. I have had more or less acquaintance with it for 46 years. Sometimes in a large community every hog in one neighborhood will die and other surrounding farms will not lose a single hog during that epidemic. During another year it attacks another community, and so it goes, but scarcely ever two years in the same community in succession. It is a good deal like smallpox. If the vaccine is good, you will not have smallpox. If your serum is good, you will not have hog cholera.

The idea is that this money ought to be spent for the express purpose of getting pure serum. There are four serum manufacturing plants in my district, and all four of them are under the jurisdiction of the national inspection service; and I want to say to you that they are inspected, and the Government had a hard time with one or two of those fellows to get them to do right, but they finally saw they had to do it or go out of business. That is what you want everywhere in the country.

There are so many farmers here who know all about this that I feel at some loss to talk about it, but I do not believe that three-fourths of the gentlemen who have spoken, with all their investigation of this subject, know how to administer this serum

or which end of the hog it is administered to. They do not know the difference between virus and serum.

Mr. OVERMYER. But you do think that when they are talking about pork, as the gentleman from Pennsylvania [Mr. MOORE] did yesterday, it is about time that the swine are getting some of the pork.

Mr. BOOHER. I am in favor of the pork that is made out of the carcass of a hog, and I am not in favor of the yellow journals of this country or the men who talk about pork in a river and harbor bill.

Now, gentlemen, the hog product of this country is not decreasing. Notwithstanding we have hog cholera nearly every fall in different sections of this country, the hog product is not decreasing. In my district is the fourth largest packing industry and live-stock industry in this country. I picked up my home paper this morning and glanced over that item, and in the city of St. Joseph, at the stockyards there, since the 1st day of January, 1916, they have slaughtered 663,278 hogs. Just a year ago in the same time they had slaughtered 537,018 hogs, showing an increase for the corresponding period in 1916 of 126,260 hogs. And what is true at St. Joseph is true of Omaha, is true of Kansas City, and is true of Chicago.

The CHAIRMAN. The gentleman's time has expired.

Mr. REAVIS. Mr. Chairman, I want to say a word with reference to this appropriation, and what I say is largely founded upon personal experience. The lack of knowledge and the ignorance that obtain throughout this country with reference to the remedy provided by this serum and virus occasions a great deal of objection to its use. For the purpose of explaining that, I want to state to the committee something of the manner of its use. Demonstrations have shown conclusively that the best time for the administration of the remedy is when the pig weighs about 60 pounds.

There are two separate elements that go into the remedy. One is called the virus, the other the serum. One of these inoculates the pig with hog cholera. The other is in the nature of a preventive, which in some measure overcomes the effects of the virus that creates the disease in the pig. The two remedies are introduced simultaneously by hypodermic injection. The result is that the animal gets a mild case of hog cholera, but by reason of the serum, which counteracts the virus, it is not fatal nor really serious. After its recovery, which takes a week or 10 days, that pig is for life immune from hog cholera.

The trouble in the first instance was that neither the veterinarians nor the farmers knew the proper proportion of the two remedies to give, and in many cases they gave more of the virus than the serum would overcome, and the hog died of cholera. In other instances they did not give a sufficient quantity of virus as against the serum to inoculate the hog with cholera, and as a result it was not immune. Because of the failure occasioned in this way hogs continued to contract hog cholera after the remedy had been administered, and the farmers set up the cry that there was nothing to the remedy.

There are many people in the world who do not believe that the world moves. There are many people who are opposed to vaccination for smallpox and for typhoid. There are many people who resent any change or any new remedies. There are a great many people who have seen practical demonstrations of what they call the inefficiency of the remedy, and it has given many farmers of the Middle West the opinion that the remedy is not efficient.

The demonstrators provided for by the appropriations go to the area and teach the farmers not only within the immediate area but farmers of the vicinity, first, the proper amount of the two remedies to use. Next they teach the farmers by results that the remedy is efficient, and when they convince these farmers that it is efficient the prejudice against it is removed.

You will find in every community some one or some farmer who says that there is nothing to the remedy; that it has been proved to be valueless and he will not use it. Your answer is that if you want your hogs to die, do not use it. But that is not the danger. The farmer who does not use it, even though his herd is small, will bring cholera into the whole neighborhood and endanger the herds of all the other farmers in that community.

The demonstrators are doing two things: First, clearing the area in which they work of the dreaded disease, and next, showing the farmers that this remedy is efficient. The chart shown the other day by the gentleman from Nebraska [Mr. STEPHENS] shows that hogs are the only meat animals in America that have increased in numbers, and one reason that the number of hogs and the quantity of pork in this country has advanced instead of decreased, as have cattle and sheep, is that there has got out into the United States a remedy for hog cholera. [Applause.]

Mr. CULLOP. Mr. Chairman, I agree with the gentleman from Nebraska, who has just taken his seat, as to the treatment and precautionary action to be taken in reference to the spread of the disease of hog cholera, and the importance of it, and that it is probably worthy of greater consideration than most of the people of the country conceive. Every year the farmers of the United States are losing, on an average, $65,000,000 worth of hogs from death by hog cholera alone. This is an enormous sum. There is probably no other legitimate business in the country which each year sustains as great a loss as the farmers do from the hog cholera without becoming bankrupt. And yet, notwithstanding this enormous loss, the farmers continue the business of hog raising.

Now, it is not only important for the manufacture of serum for the cure of the disease, if cure is possible, but it is most important to educate the farmers how to prevent the disease from being disseminated in localities where it occurs, and that can only be done by a circulation of literature treating the subject, or by men who are experts in the treatment of the disease going among the people lecturing in order to educate them how to handle the disease when it breaks out, and how to eradicate it. The result of the work so far done clearly demonstrates it can be done. But interest among farmers must be aroused so they will take advantage of the means afforded in order to cooperate with the Government in carrying on the splendid work it is doing in this regard.

One farmer in a neighborhood who is opposed to the treatment proposed, who has no confidence in the success of the treatment, may be the cause of having inoculated every herd in his neighborhood with the disease of hog cholera. Many farmers have been so outrageously imposed on by fake remedies on the markets that they are discouraged, and have but little faith in all proposed remedies.

Now, the treatment used by the Government has been successful, as the reports of the Government clearly demonstrate. I am going to take an instance in my own State—the State of Indiana. I will take the county of Hendricks, where a demonstration station has been carried on for more than a year. In 1912 in that county they raised 63,259 hogs. There died from hog cholera alone 13,532 hogs. The loss was 204 to every 1,000 raised from the disease of cholera alone. In 1913 in that county they raised 72,211 hogs, and there died from hog cholera alone 12,908, a loss per 1,000 of 178.

They commenced the demonstrating work there under Dr. Wickwire on September 3, 1914. During the year 1914 in that county they raised 85,955 hogs. The number that died from hog cholera was 4,065, or a loss per 1,000 from hog cholera alone of 42.

Here was a saving of 66⅔ per cent as the result of the demonstrational work carried on in that county by Dr. Wickwire, the gentleman who had charge of this demonstration station. In that county he saved by his work of education and treatment $200,000 to the farmers of Hendricks County. [Applause.]

Now, in view of this fact, does anyone doubt the advisability of not only continuing the work but also expanding it? Does not the result of this work clearly establish its importance and establish its value to the public?

It is not the treatment of the afflicted swine which is so essential, but the organization of the farmers to prevent against its outbreak and the eradication of it when it occurs. If interest can be aroused among farmers so they will organize to prevent the occurrence of the disease—its spread when it does occur—this can best be accomplished by the dissemination of literature, public lectures, and practical demonstration. They have in many localities become skeptical on this matter because of the fake remedies which have been placed on the markets—remedies with no merit whatever. This difficulty, however, has been practically eliminated by legislation which prevents the sale of such products; and now this difficulty, which has embarrassed this work, has been obviated—we hope it has been entirely so. All remedies placed on the market should be inspected and tested, and such only as have merit should be permitted to be sold; all others should be prohibited, and if any such are sold the parties guilty of so doing should be severely punished.

Conditions regarding the meat supply of the country are such that every reasonable effort available should be employed to conserve the supply in order to protect the country against a meat famine. The supply of meat product does not increase yearly, but the population to consume the supply does increase yearly; and hence the necessity for the encouragement of the industry is apparent. If the dangers incident to the industry are removed, or even lessened, the supply will necessarily increase and the industry grow, because of the profits necessarily accruing to those who engage in it. The importance of this matter, therefore, can not be treated otherwise than serious, as it is a question in which all are vitally interested.

Mr. DAVIS of Texas. Mr. Chairman, there is a great deal of the hog industry as well as the cattle and other industries in Texas. I have mixed around over the world and seen a good deal of distress growing out of hog cholera. I remember a number of years ago staying all night at a modest farm home in Illinois, the county where Springfield is situated. I remember the next morning the gentleman of the house and his laborers hauled out the last of 22 big, fine specimens of hogs which had died of cholera, and under the law of the State as I recollect it, they had to cremate them.

And I remember the good farm wife stating that that meant that her boy had to be called home from college, because those 22 hogs represented, as the man said, all of his surplus corn and cash, it having been fed to his hogs, and now they were in the cremation pit. I remember staying all night in another place in Illinois, about two years later, when three farmers who had pooled themselves together in a hog-feeding process, and I saw them haul off the last of 62 hogs with similar consequences. I remember staying all night in Collin County, Tex., about 17 years ago and seeing the good farmer haul to the cremation pit, or to the ditch where they were to be buried under the rules in that State, the last of thirty-odd big fine hogs. Sixty-odd million dollars of wealth goes into the death pits through hog cholera in a year, and yet our friend, the gentleman from Iowa [Mr. HAUGEN], moans and groans over the hog death and seems to be opposed to trying to cure it, because they still die. My God, we have been trying to cure the diseases of humanity for 6,000 years, and yet they still die, but we do not give up the doctors because humanity still dies.

Mr. HAUGEN. Mr. Chairman, will the gentleman yield?

Mr. DAVIS of Texas. Yes.

Mr. HAUGEN. I stated that we have a number of people who have experimented and demonstrated and that many people believe in the efficiency of the serum and that others do not. The only difference between the gentleman and myself is that the gentleman favors the joy ride, while I propose to set aside $150,000 for the construction, equipment, and maintenance of a plant, and thereby make it possible for the farmer to procure a potent serum.

Mr. DAVIS of Texas. I am not in favor of giving up a gracious good remedy simply because somebody rides in an automobile. My doctor comes to see my family in an automobile, but I am not raising any row about it. I believe the remedy ought to be applied. I believe it is one of the very best methods, and the hope of this situation is in preventing the disease rather than in curing it. I am one of those who believe that as long as there is an ignorant or uneducated boy in a community there is an element of danger in that community. I am one of those who believe that as long as there is a fellow in the community who refuses to treat his hogs, and allows them to contaminate the other hogs in a community, there is an element of danger there, and I want to make these demonstrations so complete that even the wayfarer, though he come from Iowa, will understand and realize the truth of it.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. HELVERING. Mr. Chairman——

Mr. MANN rose.

The CHAIRMAN. For what purpose does the gentleman from Illinois rise?

Mr. MANN. I desire to offer an amendment, but I shall be glad to defer to the gentleman from Kansas. He has already had 10 or 15 minutes, but I like to listen to him.

Mr. HELVERING. Mr. Chairman, I shall try to confine my remarks to five minutes. The gentleman from Iowa [Mr. HAUGEN] has mentioned on several occasions the joy rides taken by the experts sent out by the Department of Agriculture to these various counties. I do not know whether the fact that service given by men who go from place to place in an automobile in less time than it would take to go otherwise is joy riding or not, but I do know this, that more farmers have been served in Marshall County, Kans., because these experts are able to ride over the county in a Ford automobile and not being compelled to use a team and wagon. The fact is that I have known these men in Marshall County to be out late at night, to be out in all kinds of weather, in order to visit the farmers, and it is no joy ride, because when they get to the farm they go into the hogpen and instruct the farmer how to disinfect the pen and how to keep it sanitary, and they go in and corral the hogs and treat them with this serum. As a matter of fact, the gentleman from Missouri [Mr. BOOHER] intimated that possibly in Marshall County, where this great showing was made, it was an accident that the hog cholera did not come there last year. That is the very reason for my offering this amendment—to continue that work there to show that the work itself has been profitable and that it will bring the result it is recommended to bring.

Mr. DOOLITTLE. Mr. Chairman, will the gentleman yield?

Mr. HELVERING. Yes.

Mr. DOOLITTLE. Is it not a fact that there is a demand that the work that has been carried on in Marshall County be extended to the surrounding counties both by the demonstrators in Marshall County and the farmers and the stock raisers in the adjoining counties?

Mr. HELVERING. I will say, in answer to the gentleman's question, that from all over the State they get requests that Dr. Murphy, in charge of the eradication work in Marshall County, be sent to those various counties to lecture and inform them of the methods used in doing such good work in Marshall County, and it is the desire of the men in charge of the work in Marshall County to surround that county with counties where the work will be carried on under the direction of these doctors and where the farmers themselves will purchase the serum. We can not do that, as I understand it, with the appropriation which is now carried. The gentleman from Missouri [Mr. RUBEY] referred to the fact that $45,000 was left out the previous appropriation, and that was an appropriation of $500,000, $455,000 having been used, while, if this amendment of mine carries, the appropriation will be only $410,000, or $45,000 less than that of last year.

Mr. NORTON. Mr. Chairman, will the gentleman yield?

Mr. HELVERING. Yes.

Mr. NORTON. In the gentleman's State how is the serum manufactured; by the State or by private individuals?

Mr. HELVERING. The serum that we use in Marshall County is brought from Ames, Iowa.

Mr. NORTON. From the agricultural college?

Mr. HELVERING. Yes.

Mr. NORTON. That is manufactured under the supervision of the Government officials?

Mr. HELVERING. Yes. In further answer to the question of the gentleman from Kansas [Mr. DOOLITTLE], I want to say that if this work can be carried on another year in this county, surrounded by these counties, which have quarantine regulations, we can then fully demonstrate whether or not this work has been accidental, and whether the great production of hogs in Marshall County was a matter of accident, whether this work has really been good for the farmer and the country generally. The gentleman from Missouri [Mr. BOOHER] referred to the increased slaughter of hogs at St. Joe, Mo. Marshall County is tributary to St. Joe, and it is possible that 35,000 of these hogs, or one-third of the increase, came from that county alone, because the increase in the hog production in that county has been from 62,000 in 1912 to over 100,000 last year. [Applause.]

Mr. MANN. Mr. Chairman, what is pending now, may I ask?

The CHAIRMAN. The amendment offered by the gentleman from Kansas [Mr. HELVERING].

Mr. MANN. To increase the amount. Has debate been exhausted on that?

Mr. RUBEY. I understand there are 15 minutes time remaining.

Mr. MANN. Mr. Chairman, I would like to be recognized.

Mr. Chairman, this appropriation is an increase from $160,000 to $360,000 in reference to hog cholera. That is a considerable increase, and it may be that it can be wisely expended.

Mr. RUBEY. Will the gentleman yield?

Mr. MANN. I will.

Mr. RUBEY. Last year there was left $185,000 of the old appropriation. Of that $140,000 was used in connection with $160,000, making $300,000 used last year.

Mr. MANN. Yes. For somewhat different purposes, though practically the same thing. Of the amount this year, $175,000 is to be available for expenditures for the purpose of carrying out the act of 1913 in reference to serum. Last year there were $50,000 available for that purpose under the appropriation. There is no way they can expend $175,000 that I can conceive of under that act unless it is to be expended in the maintenance of a serum-testing station. I have no objection to that. The Secretary of Agriculture in his annual report says:

> It is probable that an adequate testing station could be provided for about $50,000. If several were found to be desirable a suitable appropriation for each would have to be made. The cost of maintaining a station capable of testing the entire output of commercial serum in the United States probably would not exceed $150,000 annually.

If this testing station is to be established, according to the statement of the Secretary in his annual report, it ought to provide $50,000 for the establishment and possibly $150,000 for the maintenance. That would be $200,000. The bill does not carry that much money for that purpose.

Mr. RUBEY. Will the gentleman yield?

Mr. MANN. I will.

Mr. RUBEY. The matter of the establishment of a factory by the Government has been abandoned.

Mr. MANN. Oh, I am not talking about a factory.

Mr. RUBEY. For Government serum.

Mr. MANN. I am not talking about a factory where they manufacture serum.

Mr. RUBEY. But the Government testing-station idea has been abandoned.

Mr. MANN. There is no method, in my judgment, by which you can expend $175,000 to carry out the act of 1913 concerning the regulation of serum except by the maintenance of a testing station. How can you do it?

Mr. RUBEY. I will in my own time explain that.

Mr. MANN. The gentleman means to be courteous to me; I am asking.

Mr. RUBEY. Certainly.

Mr. MANN. I have waited a long time to get an explanation of it, and nobody has given an explanation. Now I am asking the gentleman to tell me.

Mr. RUBEY. I did not desire to be discourteous.

Mr. MANN. I know that.

Mr. RUBEY. The idea of the department is this: There are now in the United States 87 factories that are licensed to manufacture this serum. It is proposed to put men at each one of these factories and to have the serum manufactured under Government supervision. The men placed at these factories will see to it that the hogs to be used in testing the serum are healthy and that they are kept under the absolute control of the Government inspectors while the test is going on. The expenditures that are to be made in this work are set out by the Secretary of Agriculture in detail in a communication to the chairman of our committee.

Mr. MANN. Then instead of having one of these testing stations you are practically going to have a testing station at each manufacturing establishment?

Mr. RUBEY. At each manufacturing establishment there will be a representative of the Government to supervise the testing of the serum.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HAUGEN. Mr. Chairman, I ask that the gentleman be given further time. He is asking for information and he is entitled to the information sought.

The CHAIRMAN. The gentleman from Iowa asks unanimous consent that the time of the gentleman from Illinois may be extended five minutes. Is there objection?

Mr. MANN. How much time is left?

Mr. RUBEY. There are 10 minutes. The gentleman can have 5 minutes.

Mr. MANN. I will take time later if necessary.

Mr. RUBEY. Does the gentleman from Iowa desire time?

Mr. HAUGEN. No. I was just asking if the gentleman from Missouri had finished his explanation.

Mr. RUBEY. Yes.

Mr. HAUGEN. Then if I may be permitted, I do not wish to take up the time of the gentleman from Illinois except to say that the plan indicated in the Secretary's report has been abandoned. It was found expensive; that it would require the purchase, I believe, of some 16,000 hogs to carry out the plan suggested in the Secretary's report. The first estimate made for this year was $185,000, as before stated; later a supplemental estimate was submitted; it calls for an appropriation of $360,000, and the bill states for what purposes.

Mr. MANN. All right, Mr. Chairman; I am sorry they did not provide for the test stations where the examination of the serum would be made by careful scientists instead of by the mere inspectors at the different manufacturing establishments. I am quite willing, so far as I am concerned, they shall make the effort in the way contemplated by the bill, though I do not believe it will be effective. There is a large amount of this serum now that is worthless, although we now try—and I think the department does its best—to regulate and examine the serum that is sent out.

Mr. LEVER. Will the gentleman yield for a question?

Mr. MANN. I will; but I want to get on another subject. I yield, however.

Mr. LEVER. I was just about to say, in connection with the testing plant to which the gentleman referred a moment ago, that the Committee on Agriculture has reported a bill which will enable the department to have testing stations at all of these serum-manufacturing plants, and to see that no serum or virus is shipped into interstate commerce at all except such as has undergone the test of the department.

Mr. MANN. That is what is contemplated by this appropriation, but it will not work out.

Mr. LEVER. The bill goes a good deal further than this.

Mr. MANN. Oh, yes. I have examined the bill, but I doubt whether that will be praticable or economical.

Mr. DOOLITTLE. Will the gentleman explain why it will not work out?

Mr. MANN. I do not think you can maintain a testing station successfully at each of the establishments under the corps that you can provide there and be sure of your serum, whereas you can take samples of serum provided by the Government inspector at each of the establishments and properly test it at a test station, so that you would know whether you had a good serum or not. I will not say that all of them do, but most of them probably honestly attempt to test their serum themselves. They are not always successful about it.

Mr. DOOLITTLE. If the gentleman will yield further, it is contemplated, as I understand it, in the bill which the chairman of the committee has said has been reported to the House, to establish one of these stations at each of these plants.

Mr. MANN. Oh, but the gentleman would readily see that you would not be able to establish a hundred test stations throughout the country at different places and get proper attention. The expense would be too exorbitant.

Mr. DOOLITTLE. They could certainly examine——

Mr. MANN. You could call it a test station.

Mr. HAUGEN. The Government maintains inspection at more than 900 packing houses. They have inspectors in all of these places, and why could they not have inspection at these 86 manufactories of serum?

Mr. MANN. But the testing of hog-cholera serum or other serums of that kind is a very different thing from the examination of meat to see whether it is contaminated or diseased or the examination of animals on the hoof.

Now, Mr. Chairman, I do not know just what is intended to be accomplished by what is called the "demonstration" work for which this appropriation is largely provided. I suppose the purpose is partly to excite the curiosity of the hog raiser and then to show to him what he can do by the use of the serum. It never will be very effective.

Mr. CULLOP. Will the gentleman yield?

The CHAIRMAN. The time of the gentleman has expired.

Mr. MANN. I will take time later on the bill.

Mr. RUBEY. Mr. Chairman, how much time is there remaining on this?

The CHAIRMAN. Five minutes.

Mr. RUBEY. Does the gentleman from Iowa [Mr. HAUGEN] desire some time?

Mr. HAUGEN. If you have the time to spare.

Mr. RUBEY. There are only five minutes remaining.

Mr. HAUGEN. I will take my share, but I am not particular about it. If you have others, very well.

[Mr. RUBEY addressed the committee. See Appendix.]

The CHAIRMAN. The time of the gentleman from Missouri has expired. All time on the amendment has expired. The question is on the amendment offered by the gentleman from Kansas [Mr. HELVERING].

The question was taken, and the amendment was rejected.

Mr. HAUGEN. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from Iowa [Mr. HAUGEN].

The Clerk read as follows:

Page 15, line 10, strike out the words "That of said sum not," and all of lines 11, 12, and 13, and insert in lieu thereof the following: "$150,000 of the sum appropriated shall be set aside and used for the purchase and production of antihog-cholera serum, to be sold and distributed at its approximate cost."

Mr. LEVER. Mr. Chairman, I reserve a point of order on that.

Mr. HAUGEN. Will the gentleman withhold it for a moment?

Mr. LEVER. Yes.

Mr. HAUGEN. Mr. Chairman, the object of this amendment is to give the department $175,000, the amount asked for by the department, for the inspection of these 86 plants, or whatever the number may be, $35,000 for research work, and that $150,000 of the $360,000 shall be set aside for the production and distribution of the serum at its cost.

The question of the efficiency of the serum has been raised. Now, I have no quarrel with the department. I have not raised the question. The only difference between the gentleman from Indiana [Mr. Moss] and myself is that the gentleman from Indiana insists that the $150,000 shall be used for demonstration work, the employment of veterinarians, traveling over this country lecturing and demonstrating the efficiency of this particular article. I contend, as he does, that the most important element of all is the potency of the serum.

Mr. MOSS of Indiana. Mr. Chairman, will the gentleman yield?

Mr. HAUGEN. I am perfectly willing to trust the department, and I hope that the gentleman from Indiana will concede that it is safe to leave it to the department to manufacture and distribute its own product.

Mr. MOSS of Indiana. Mr. Chairman, will the gentleman yield there?

Mr. HAUGEN. Yes.

Mr. MOSS of Indiana. The gentleman would not contend that it is any more important that the department shall furnish pure serum for the farmers than that the farmers shall be able to get the same quality of serum from any source that is possible?

Mr. HAUGEN. Oh, I provide for the inspection exactly as is suggested by the department.

Now, the gentleman must deal with the facts. We have the inspection service. We have the 86 manufacturers distributing it. We know that the serum produced by them has been distributing the foot-and-mouth disease. The gentleman will give the department credit for integrity and he will give the department credit for doing its best in its efforts to protect the people. Yet we have this contaminated serum being distributed throughout the country. My purpose is to lodge the responsibility with the department. If the serum manufactured has any claim or any virtue whatever, let the department be given an opportunity to manufacture it and demonstrate its efficiency.

Mr. MOSS of Indiana. Mr. Chairman, will the gentleman yield there again?

Mr. HAUGEN. Yes.

Mr. MOSS of Indiana. I think it very important to limit those words that the gentleman is just using. Is it not a fact that the department claims that with the so-called test serum it will be an impossibility for contaminated serum to be distributed and to spread the foot-and-mouth disease?

Mr. HAUGEN. I dislike to take issue with the department, but——

Mr. MOSS of Indiana. Is not that what the department claims?

Mr. HAUGEN. Oh, they make many claims. We know these excellent gentlemen. I have no quarrel with them. They are most excellent gentlemen, but they allow their enthusiasm to carry them away from the facts. The gentleman from Indiana has referred to the marvelous results attained.

Mr. MOSS of Indiana. Mr. Chairman, will the gentleman permit one other question?

Mr. HAUGEN. Yes.

Mr. MOSS of Indiana. If the gentleman does not care to answer the question, all right.

Mr. HAUGEN. I will answer if I can.

Mr. MOSS of Indiana. Does not the gentleman think it would be impossible to distribute serum that has the germs of foot-and-mouth disease in it if there is no foot-and-mouth disease in the United States?

Mr. HAUGEN. Oh, we have no assurance that it will not again appear.

Mr. MOSS of Indiana. Have we not the assurance of the department that it has been exterminated throughout the United States?

Mr. HAUGEN. Yes; but no assurance that it may not again appear. The gentleman has referred to the marvelous results to date, and the gentleman from Nebraska [Mr. SLOAN] has also done so. I am perfectly willing to give the gentlemen credit for having accomplished everything that is good in the Agricultural bill; I am perfectly willing that the gentlemen shall have the credit of it; both are among the most industrious, intelligent, and useful Members of this House, but the gentleman from Nebraska allows himself to depart from the facts. He referred to the ranking member of the committee on the minority side as opposing it. If he referred to the gentleman from Iowa, he stated what is not the fact. The gentleman was kind enough to give the conferees credit for bringing in a report appropriating $75,000 when the amount called for in his bill had been decreased to $45,000 in the committee, at the suggestion of the chairman of the committee. I had the honor to serve as a conferee. It is possible I might take a little credit for the $75,000, but I am perfectly willing that the gentleman shall have the credit.

But we appropriated $75,000, and what happened? A lot of ambitious politicians throughout the country grasped at the opportunity. Bills came in for $1,000,000; others for greater amounts. They worked overtime. Appropriations were made, money was spent, and yet we have the condemned serums.

The CHAIRMAN. The time of the gentleman has expired.

Mr. McLAUGHLIN. Would the gentleman like more time?

Mr. HAUGEN. Yes; I have not got started yet.

Mr. McLAUGHLIN. I ask unanimous consent that the gentleman from Iowa have five minutes more.

The CHAIRMAN. The gentleman from Michigan asks unanimous consent that the gentleman from Iowa have five minutes additional. Is there objection?

There was no objection.

Mr. HAUGEN. The gentleman from Nebraska [Mr. SLOAN] has referred to the marvelous results. Evidently the gentleman is satisfied to decide all these questions on ex parte evidence. It has not been my custom to do that. As I say, I have no quarrel with the department, but now that the matter has been brought up, for the gentleman's information I will read a letter from a gentleman whom he knows, whose statement he will not question. I will read this so that it may go into the RECORD, that the country and the Congress may know exactly what information we are supplied with. Here is the letter:

APRIL 29, 1914.

Hon. G. N. HAUGEN, *Washington, D. C.*

DEAR CONGRESSMAN HAUGEN: I noticed in the hearings before the Agriculture Committee on hog-cholera work that there was some discrepancy in the figures furnished concerning the losses of hogs in Dallas County, Iowa. I believe the Government people were using figures showing that there was a loss of 9,180 head and that you used figures sent out—the bankers' estimate—showing that there was a loss of 15,967 head. As you are perhaps aware, every assessor in Iowa this year was asked to gather data in every township concerning the hog-cholera losses. I have just received the figures from Dallas County as compiled by the county auditor, and they show that the farmers in Dallas County during the year 1913 lost 16,124 hogs from cholera.

Gentlemen, here is the discrepancy—9,180 loss claimed by the department, while the actual loss was 16,124 hogs from cholera.

Mr. SLOAN. In 1913?

Mr. HAUGEN. Yes; in 1913. The letter is dated April 29, 1914. That was the time when the experiment was carried on in Dallas County, Iowa. It has been carried on since, I trust with better results than in that year.

Mr. SLOAN. Will the gentleman yield for a moment?

Mr. HAUGEN. Certainly.

Mr. SLOAN. The gentleman calls attention to 1913. Does not the gentleman know that not a dollar of that appropriation became available until the 1st of July, 1913?

Mr. HAUGEN. Yes; and that hog cholera generally makes its appearance in August and September. If the gentleman will read the appropriation bills, if he will take the time to inform himself, he will know that these appropriations have been made year after year. We have carried lump-sum appropriations, of which every dollar was available for this very work. The demonstrations have been going on in Iowa as they have in Nebraska and all over this country, usually in 17 counties, 2 of them in the State of Oklahoma, I know not how many in Indiana, I know not how many in Nebraska. I know there is one in a district in Iowa that annually goes Democratic.

Mr. MOSS of Indiana. The gentleman is well informed. He seems to leave the impression on the House that this hog-cholera demonstration has been carried on for a great many years by appropriations. Now, will he state definitely and affirmatively whether there was any money spent in this demonstration work that we are speaking of prior to the 1st day of July, 1913?

Mr. HAUGEN. I know that the appropriations have been made and I have confidence in the department to believe that it has and will expend the money along the lines which it believes itself will bring the best results.

Mr. MOSS of Indiana. Before the gentleman prints his remarks will he verify the figures, and state in the RECORD exactly how much was spent in the years he has been going over, so as to give us the correct figures?

Mr. HAUGEN. Oh, Mr. Chairman, if the department has overlooked the importance of this line of work, I am not responsible for the department. We appropriate, and in this bill or other bills much is left to the discretion of the department. We will appropriate this year nearly $30,000,000; much of it will be left to the discretion of the department as to how the money appropriated shall be expended, and properly so.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HAUGEN. Mr. Chairman, I would like another minute.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. HAUGEN. The gentleman has referred to the general interest. I recall in one of my counties meetings were held in the schoolhouses for the purpose of discussing the use of this serum, and finally a meeting was called at the county seat. Farmers were invited to attend; according to press reports none appeared. The merchants' association of another county sent letters to farmers in the county inviting them to attend the meeting; the press reports stated that not a single one came.

It is proposed now to appropriate $360,000, as I have said; much of it to give joy rides, to give lectures from the platform. Very well. These are most excellent gentlemen. I would like to accommodate them; but in view of the statement

made by the chairman, as to the average earnings of the farmers, I confess that I can not quite see my way clear to add to the burdens of these people, with each member of their families now receiving on an average of only $30.87. It does not seem fair now to call on them to pay their share of the $150,000 for demonstration. I believe the money can be used to better advantage by providing the farmer with a potent serum.

Mr. Chairman, the issue raised here is, Shall $360,000 be appropriated, shall $150,000 of it be made available for a laboratory in the Department of Agriculture, making it possible to distribute a potent serum, or shall we do as we have been doing in the past—buy and give away serum to a few at the expense of others?

The CHAIRMAN. The time of the gentleman has expired.

Mr. McLAUGHLIN rose.

Mr. LEVER. Does the gentleman from Michigan desire some time?

Mr. McLAUGHLIN. Yes.

Mr. LEVER. Does the gentleman from Illinois [Mr. MANN] desire some time on this amendment?

Mr. MANN. I desire some time; yes. I do not know how much. Most of the gentlemen who have spoken have had 10 minutes each, and they never got to the subject I want to talk about.

Mr. SLOAN. I desire some time.

Mr. LEVER. I wonder if we can not agree on a time for closing debate on this?

Mr. MANN. I hope the gentleman will not ask for that just now. This is a live subject with us.

Mr. LEVER. I know it is, but there are lots of live subjects in this bill. The one following this is a very live subject.

Mr. MANN. I will again remind the gentleman that hogs are just as important to the Northwest as cotton is to the South.

Mr. LEVER. That is very true, and hogs are important to the South also.

Mr. MANN. I noticed that in the river and harbor bill.

Mr. LEVER. We have got hog cholera in South Carolina. Let us see if we can not agree on 25 minutes. I think the gentleman from Illinois can get all the time he wants.

Mr. MANN. I assure the gentleman that I will get all the time I want, because I do not take very much time on the agricultural bill. We want some time on this item, and if the gentleman will not give it to me, I will get it in some other way.

Mr. LEVER. There are only two requests on that side. The gentleman can have 15 minutes out of the 25. That will give him plenty of time.

Mr. MANN. Perhaps I may not want that much time. My observation is that if one attempts to say anything about one of these subjects on the floor, then the committee take up most of the time.

Mr. LEVER. That is usually true.

Mr. MANN. I am not complaining about that, but I can see no reason for limiting the time.

Mr. LEVER. We have got to close the debate sometime.

Mr. MANN. Mr. Chairman, I am not in favor of the amendment offered by the gentleman from Iowa [Mr. HAUGEN]. I do not believe the Government ought at this time to commence to give away free hog-cholera serum.

Mr. HAUGEN. There is no such proposition.

Mr. MANN. Or even to manufacture and sell it at cost, which amounts to the same thing as far as the theory of it is concerned. We make quite an appropriation now for hog-cholera demonstration. The gentleman from Indiana [Mr. Moss] and the gentleman from Nebraska [Mr. SLOAN] take to themselves great credit for this, and I think they are entitled to it. I have no doubt each of them has a hog-cholera demonstrator at work in his district, but the most of the Members of the House do not have hog-cholera demonstrators at work in their districts, and you can not provide money enough to put a hog-cholera demonstrator in every place in the United States.

Mr. MOSS of Indiana. We try to make it apparent that we get beneficial results from it just the same.

Mr. MANN. Oh, everybody who reads can form his opinion as to whether the use of hog-cholera serum is effective or not. That has passed the point of demonstration. Those who do not believe it will not believe it. That is the case with hog-cholera serum. If you are willing to believe it there is information enough now. But these demonstrators go into a small area, and there prove to a very limited number that it is effective. Now, if the farmers were willing they could get that information themselves.

The demonstrator is necessarily limited to a small area, and a small number of farmers, because large numbers could not see the demonstration. The Secretary of Agriculture makes a fair statement of the proposition in his annual report, and I suppose he will stick to that. I do not know, because it is impossible for me under this administration to tell how long the President or any of his executive officers will stick to any proposition which they name in their message or reports. But the Secretary of Agriculture, in his annual report, says:

> Experiments for the purpose of determining the best method to control or eradicate hog cholera demonstrate that by employing certain systems involving the use of hog-cholera serum, losses can be reduced to a minimum and the swine industry greatly benefited. The work also shows, however, that success over a large territory would require the employment of an immense force of men and the expenditure of enormous sums. It seems that, at the present time, a country-wide campaign for the eradication of the disease would be ill advised.

I do not suppose the Secretary has retracted that statement, but whether he has or not the statement is true. It is only a few who are getting the benefit of this expenditure. The gentleman from Indiana has somebody in his district doing the work at Government expense; the gentleman from Nebraska has somebody in his district doing the work at Government expense. I am glad of it; they are doing good work; but the most of the counties in the United States do not have anybody in their community doing this demonstration work. It is not experimental work, it is not to learn anything that is being done. It is to teach the farmers by demonstration that which they could learn by reading if they would believe it.

[The time of Mr. MANN having expired his time was extended five minutes.]

Mr. MANN. How far we ought to go with that I do not undertake to say. I am not opposed to the appropriation; on the contrary, I voted for the amendment to increase the appropriation because the appropriation is an experiment, if the demonstration work is not.

This is the fact, you could have the most dreadful disease known to the human kind and tell everybody here that if you will take a certain serum once in three months you will never have that disease. That may be true about cholera, and probably is, but who is taking the serum? Nobody. Why? Nobody is expecting the cholera. Hog cholera does not come continuously, it is sporadic. A man raising hogs goes along and in the course of time he loses his hogs by hog cholera. He quits raising hogs for a while, and then he gets back to raising hogs again and for a while he is very successful until the hog cholera again comes along. He is not looking for it, if he thought it would come he would give the serum in advance and ward it off. But he waits until it has done most of the damage before he applies the serum, and then it is too late to do much good.

That will always probably be the case. Meanwhile we have learned that if we will only follow our learning it can be avoided.

It may be that we will do some good, and now the farmers have found that even if they apply the serum it is not good. Much of it was not good until we passed a law for governmental inspection. Much of it is not good now although it is inspected by the Government. The Secretary of Agriculture proposed that we have an inspection plant where all the serum could be scientifically tested under proper conditions by the Government. I had supposed when I read the bill that it was intended by the appropriation to cover that because the money is nearly enough to do it. But the committee say that is not the purpose, that we have provided $175,000 with a view to having a test made at each manufacturing plant right there where it is made. Now, it may be that the Secretary of Agriculture has changed his mind on this. I do not know, but here is his annual report in which he said:

> Tests, however, are a necessary and most important part of any system of control. They are now made by the commercial establishments themselves on animals procured by them and at all times under their care. It is impracticable for the Government to make them within privately owned and operated plants. Furthermore, so long as the plants conduct the tests, it is manifest that the Government can not select and know the complete history of the animals. In the preparation of the serum, the inspectors can see that the steps necessary to produce a good article are carried out. In this particular the inspection is adequate and effective. It appears, therefore, that the weak point at present is the inspection of the tests, and the department believes that these should be under Government control.

And he recommends the establishment of a governmental inspection plant. He says that it is impracticable for the Government to make these tests within privately owned and operated plants. I do not know. That is the weak point in the system. You can not expect that the farmers, although they have brought home to them the knowledge that the serum may prevent hog cholera, will constantly apply it unless they know that the serum will not communicate some other disease.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. SLOAN. Mr. Chairman, the gentleman from Iowa [Mr. HAUGEN], the ranking member of the committee, my really good and genial friend, demonstrates the great truth in his life and

living that, however sound one may be on practically every proposition, there is usually a flaw. There is usually a "fly in the ointment" somewhere. The only evidence of unsoundness I have ever discovered in him in the five years I have known the gentleman is on the hog-cholera question.

I want to say in answer to his charge that I was claiming credit for hog-cholera campaigns was that I have not made any such claim. I merely stated the facts necessary to meet the statements made by the gentleman from Iowa. He stated in substance that for about 15 years appropriations had been made and money expended by this Government for the purpose of exterminating hog cholera, based upon the serum process. In order to state the facts, it was necessary to give the full history of the appropriations made by this Congress. I stated then that it was in the earlier part of 1913 that the first dollar was appropriated by this Congress for the specific use of a serum in the eradication of hog cholera. I call the gentleman's attention to the fact that if he desires to go to the archives of his committee he will find a letter from the former distinguished Secretary of Agriculture, Mr. Wilson, from his own State insisting on action being taken in this matter just a short time before the appropriation was ingrafted on the Agricultural bill.

Mr. HAUGEN. Mr. Chairman, will the gentleman yield?

Mr. SLOAN. Yes.

Mr. HAUGEN. The gentleman now adds the word "specific." I call his attention to the fact that money has been appropriated in lump sums and that that money was available for the hog-cholera proposition. How was this serum discovered, how could it have been discovered, if it were not appropriated for?

Mr. SLOAN. I was talking about the demonstration, not the discovery of the serum, and I made myself clear on the floor as to the specific appropriation and the general appropriation. I want to call the gentleman's attention to this fact, that the letter he read showed a large loss from cholera in 1913. Not a dollar of that appropriation as made in 1913 was available until July 1, 1913.

Mr. HAUGEN. The experiment was going on.

Mr. SLOAN. No experiment until after July, 1913. In fact, they did not begin the demonstration until sometime after July 1, 1913. As a matter of fact, it took at least 60 days after July 1 before a start could be made. As my colleague, Mr. REAVIS of Nebraska, suggests it could not get well under way because the serum was not available. I have just conferred with the Member from Iowa [Mr. DOWELL] in whose district the county of Dallas is, and where these demonstrations have been going on in 1913, 1914, and 1915. His statement is that hog cholera has been practically eradicated from Dallas County, Iowa, as it has been from the district in Nebraska within the area. The large value of these demonstrations is not in the fact of favoring a community as suggested by the gentleman from Illinois [Mr. MANN], or favoring a particular Congressman who may have a county that has been selected as an area. I said in my other talk to this committee on this subject that if that were the only reason I would not stand here and ask the appropriation of a dollar, because it would not be fair. The value comes in the demonstration that is accomplished, and, further, that which will come, first, from the continuation of a demonstration to show the best methods of eradicating; and, second, from these centers there will radiate throughout the State and from the various areas throughout the country the means, knowledge, and information that will contribute to the eradication of hog cholera from the country at large.

Mr. ANDERSON. Mr. Chairman, the amendment the gentleman from Iowa [Mr. HAUGEN] proposes is the expenditure of $150,000 for the erection of a plant for the manufacture of hog-cholera serum. If the Government proposes to manufacture hog-cholera serum, the amount proposed by the gentleman from Iowa is wholly inadequate. The testimony before the committee is to the effect that the erection of a plant large enough to produce the hog-cholera serum used in this country would cost anywhere from three to five million dollars. The amount proposed by the gentleman from Iowa would be a mere drop in the bucket, and instead of encouraging the use of hog-cholera serum it would discourage it, for every man who wanted to use the serum would naturally wait until he could get the serum from the Government, which he could purchase at cost, and which there would be probably ground to believe would be potent and uncontaminated.

Mr. HAUGEN. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON. Yes.

Mr. HAUGEN. Dr. Melvin, Chief of the Bureau of Animal Industry, suggested $100,000, and my amendment provides for $150,000. It is up to Dr. Melvin and the gentleman from Minnesota to settle the matter between themselves.

Mr. ANDERSON. The gentleman from Iowa himself elicited from Dr. Melvin, who has charge of this work in the bureau, the very information which I have given the committee. I read from the hearings:

Mr. HAUGEN. Do I understand you to contend that it would take $3,000,000 to construct a suitable plant?
Dr. MELVIN. No; I only gave my figures as a rough estimate.
Mr. HAUGEN. Would you estimate it at $2,000,000, $3,000,000, or $5,000,000?
Dr. MELVIN. I think it would be nearer $3,000,000; but possibly it would go to $4,000,000.

I think from the testimony before the committee as to the amount of hog-cholera serum used and the amount that probably will be used in the future the estimate of Dr. Melvin was too low rather than too high.

Mr. HAUGEN. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON. Yes.

Mr. HAUGEN. I think the gentleman means to be fair, but the gentleman knows that when Dr. Melvin appeared before the committee he was opposed to this proposition. If the gentleman will look over the hearings to which I refer, he will find that Dr. Melvin recommended the appropriation of $100,000 for a laboratory in the department and that later it was turned down by the department. The gentleman knows, and I am not surprised he has acquiesced to the wishes of his superior.

Mr. ANDERSON. I understood Dr. Melvin did recommend and the Secretary recommended the expenditure of something like $100,000 for the establishment of a testing station, but so far as I know there never has been before the committee any testimony to the effect that $100,000 or any such sum would serve to erect a plant for the manufacture of serum in any such quantities as would be required. Now, it is not fair for the Government to produce only a very small part of the serum used in the country, because the proposition then becomes a special privilege, which you can not grant to all. If the Government is going into this business, the only fair way to do is to erect a plant which is capable of taking care of the entire consumption of hog-cholera serum, and the amendment of the gentleman from Iowa absolutely fails in that respect. Now, there are several theories about handling the hog-cholera proposition. One is the method proposed by the gentleman from Iowa, for the manufacture by the Government of hog-cholera serum. The other plan, which is incorporated in the bill and which has been reported by the committee, is a proposition to give the Government complete supervision over the manufacture of hog-cholera serum, and also the testing of the serum, and to give the Government such control of the animals and materials used in the testing of the serum as will insure its potency when it is put on the market. In my judgment, that is the most economical plan that can be adopted.

The CHAIRMAN. The time of the gentleman has expired.

Mr. McLAUGHLIN. Mr. Chairman, matters of this kind and this particular matter has been considered by the committee, and the expenditure of money for the erection of a factory by the Government and its operation by the Government is not thought by the committee to be wise. As I remember, the estimate of $100,000 was for the erection and operation of a laboratory or testing plant, not for a factory in which all the serum needed for use in the country might be made. If a factory for that purpose were erected it would cost millions of dollars and would cost millions also for operation.

It is true there has been trouble about the inspection of privately owned factories. A special committee of the Committee on Agriculture has been working on a bill. The gentleman from Missouri [Mr. RUBEY], a member of the Committee on Agriculture, was chairman of the subcommittee, and under his very able direction a bill has been prepared, and I am not sure but it has been reported in the House and is now on the calendar, providing, among other things, for more authority to the officials of the Bureau of Agriculture, the Bureau of Animal Industry, in the work of investigating private factories; and it is to be hoped that if the bill becomes a law the officials will have authority enough to do this work as it ought to be done, and that we can look for pure, potent serum from private factories. Now, it would be an immense undertaking for the Federal Government to enter upon the work of making all the serum. Twenty-one States of the Union are now operating their own factories and turning out considerable serum, and there are, as I remember the figures, 86 private concerns, large and small, throughout the country.

Just a word as to the expense of operating these factories and as to what the gentleman from Illinois [Mr. MANN] said as he read from the report of the Secretary of Agriculture about the difficulty of inspecting the privately owned factories. There is difficulty, because in making the inspection of serum it is necessary to have at least nine hogs on which to make an inspection of each and every batch of serum turned out by a factory. There is difficulty under the present way of doing business for the Government to be sure that these hogs upon

which the serum is tested have not been previously treated or doctored in some way by persons interested in the factory where the tests are being made. It is hoped that the bill which the subcommittee of which the gentleman from Missouri [Mr. RUBEY] is chairman is to report will provide for such inspection and give such authority to the officials of the department making the inspection that those difficulties will be removed, and that the inspection can be made in such a way that the officials will be satisfied that they have not been interfered with, and that the hogs provided for their use by the factories have not been doctored.

Now, just a word as to the expense of the Government erecting and carrying on a laboratory for testing serum. Besides the money necessary to erect and equip a building, one can readily see that unless all private factories go out of business thy will continue as at present, and each one from time to time must send its product to the Federal laboratory for inspection.

The CHAIRMAN. The time of the gentleman has expired.

Mr. McLAUGHLIN. May I proceed for five minutes, or such part of it as may be necessary to complete the statement I wish to make?

The CHAIRMAN. The gentleman from Michigan asks unanimous consent to proceed for five minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. McLAUGHLIN. And for the inspection of each batch from each factory it will be necessary for the Federal Government at its laboratory to supply itself with nine hogs. It is difficult to make a calculation or to estimate the expense, but a suggestion as to the kind and amount of work to be done gives you some idea of the immense expense to the Government involved in carrying on a laboratory on that scale in that way. It is infinitely cheaper and much better to have inspection by officials of the bureau and tests made by them at factories in which the serum is made, if, of course, inspection and testing can be done thoroughly and in such a way and under such conditions as will secure satisfactory results.

It seems to me it is not feasible for the Government to undertake to make all the serum, nor is it feasible for the Government itself to do the work of making inspection of all the serum in its own laboratory. The only feasible way, in my judgment, is to have proper and efficient inspection of each private factory, and I believe that that work can be carried on right and that it will not cost nearly as much money as it would for the Federal Government to do the work in its own shop.

Now, just a word more as to this work that is being done in the counties. It is not experimental work. It is demonstration work. It is carried on for the purpose of bringing skilled and scientific gentlemen from the Bureau of Animal Industry into close touch with the officials of the States, as, for instance, in our State, the officials of the Sanitary State Live Stock Commission, so that the State officials may see the work done and learn for practical purposes all that the officials of the department know; and, speaking broadly, all that it will be necessary for those State officials to know in order to enable them to take up the work and continue it throughout the State with the assistance of the county farm agents.

Now, this is great work, of course. The Federal Government is interested in it. There is no disposition whatever to limit the amount of money. We have always been pleased to accede to every reasonable demand the officials of the Bureau of Animal Industry have made.

There is some criticism here of the chairman [Mr. LEVER] and his disposition toward appropriations of this kind. All censure of that kind is undeserved. He has shown great familiarity with the entire subject and has directed the work of the committee with unusual ability. No one could have shown more interest than has the chairman of this committee, no one could have been more friendly to the work, no one could have been more courteous to those appearing before the committee and to the members of the committee, when this matter was under consideration, than he. [Applause.] The committee has recommended every dollar asked for by experienced and scientific men of the department—all they believe they can use to advantage. There is no disposition whatever to restrict the work. There is a serious doubt as to the advisability of the Government engaging in the business of manufacturing serum. I doubt the advisability of it, and I shall not support the amendment offered by the gentleman from Iowa [Mr. HAUGEN]. As a principle I do not believe in the Government engaging in work that private interests can carry on, at least until it is shown that private interests are unable properly to do it. In this particular case I believe private interests can properly carry on the work, and that under proper Federal inspection the work will be satisfactorily done.

The CHAIRMAN. The time of the gentleman has expired.

Mr. LEVER. Mr. Chairman——

Mr. TOWNER. Mr. Chairman, I would like to have recognition for five minutes.

Mr. LEVER. Mr. Chairman, I do not believe anyone has been more patient, but, of course, I can not object to the gentleman having five minutes. I ask unanimous consent that all debate on this paragraph and amendments thereto close in five minutes.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that all debate on this paragraph and amendments thereto close in five minutes. Is there objection? [After a pause.] The Chair hears none. The gentleman from Iowa [Mr. TOWNER] is recognized.

Mr. TOWNER. Mr. Chairman, this is, as has been several times said, a very great question. It is a very great problem, and there is no one on the floor of this House—and a great many of us have given a great deal of attention to the matter—that feels that we ought to assume a dogmatic attitude in regard to it.

Primarily the House should consider the question as to whether or not it would be best for the Government to attempt to assume the entire and exclusive duty of furnishing this serum to the people of the country directly, or whether they ought to assist in accomplishing the result desired by encouragement of the States and other influences.

Now, the Government has always hesitated, and I am not sure but they have acted wisely, about incurring the tremendous expense that would be necessary to be incurred if they should assume the duty of furnishing virus directly to the people. And yet we all know that until there can be a greater securement of purity and uniformity in the production of the serum there will be continual loss and a measure of failure in the work that is sought to be accomplished. We all know, I think—those of us who have given the question consideration—that it will take tremendous expense on the part of the Government of two or three or even four millions of dollars, for the purpose of undertaking in a systematic and complete way to meet the demands.

We have thought we could not do that, but let me suggest to members of the committee that when you expend only $35,000 for "pure research work," as it is called here, we are not meeting, as I think, the requirements of the situation. Pure research work can not mean the ascertainment of what a pure serum is. It should mean, and it must mean if it is to be practical in its operation, more a question of methods, more a question of reaching the standard that is already pretty generally understood as being established. If that be true, it occurs to me that the amendment offered by the gentleman from Iowa [Mr. HAUGEN], who is the ranking member of this committee, will more effectually put it within the power of the Government to see that there is an adequate amount of money expended not only in research work but in standardizing, in furnishing to the various States and these various laboratories the results of their research and while, perhaps, not absolute inspection, demonstration work of such a character that might be called purely scientific in its nature. I am quite sure that $150,000 expended in this way, which would not mean the endeavor to disseminate all the serum that would be required throughout the United States, but would enable the Government to cooperate with every institution that was authorized to handle the serum for individual use, might be used in a very efficacious and helpful manner.

Mr. LEVER. Mr. Chairman, I do not think there is any doubt that the amendment of the gentleman from Iowa [Mr. HAUGEN] is subject to a point of order, but in order to get the judgment of the committee on this subject, which is very important, I am going to withdraw my reservation of the point of order and ask for a vote.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Iowa [Mr. HAUGEN].

The question was taken, and the amendment was rejected.

Mr. MANN. Mr. Chairman, I move to amend, on page 15, line 3, by striking out the words "not less than."

The CHAIRMAN. The gentleman from Illinois offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 15, line 3, strike out the words "not less than."

Mr. MANN. Mr. Chairman, the reason why I offer the amendment is that this same language is used in another place. It provides that of the sum appropriated not less than $175,000 shall be available for a certain expenditure. If it means anything at all, which I doubt, it means that if the department should expend less than $175,000 it would not be a legal expenditure.

Mr. RUBEY. I think the gentleman is correct.

Mr. MANN. This was in the estimates.

Mr. HAWLEY. Mr. Chairman, will the gentleman yield?

Mr. MANN. Certainly.

Mr. HAWLEY. If the gentleman would strike out those words, would it not be necessary to put in the word "of"?

Mr. MANN. It would be, "Of the said sum, $175,000 would be available." It is in the right place now.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Illinois [Mr. MANN].

The amendment was agreed to.

Mr. MANN. Mr. Chairman, in lines 10 and 11, I move to strike out the words "not less than."

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from Illinois.

The Clerk read as follows:

Amend, lines 10 and 11, by striking out the words "not less than."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Meat inspection, Bureau of Animal Industry: For additional expenses in carrying out the provisions of the meat-inspection act of June 30, 1906 (34 Stat. L., p. 674), there is hereby appropriated for the fiscal year ending June 30, 1917, the sum of $344,500.

Mr. MANN. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Illinois moves to strike out the last word.

Mr. MANN. I notice this provision is reduced from $375,000 to $344,500. Is this sufficient, in the opinion of the department?

Mr. LEVER. This is the estimate of the department and is sufficient, in their judgment. There is no difference between the provision in this bill and the current law. The difference is only apparent. It is due to the transfer of places from the lump-sum to the statutory roll, but the employees are doing the same kind of work. The sum of $30,000 is involved in the transfer.

Mr. HELGESEN. Mr. Chairman, I move to strike out the last two words.

The CHAIRMAN. The gentleman from North Dakota moves to strike out the last two words.

Mr. HELGESEN. Mr. Chairman, as I went to lunch to-day I happened to sit by one of the veterinarians employed in the meat-inspection work, and I happened to ask him how many hogs each man was supposed to inspect per hour, and he said 250. I asked him what kind of an inspection he could give in that way; I asked him, "What do you do?" He said they had to cut into the glands of the hogs in order to assure themselves that the hogs did not have tuberculosis, and then they have various other processes to go through with; and yet every man is supposed, when those hogs pass by in a continual stream all day, to inspect four hogs a minute. I was wondering what kind of protection the American people were getting for the money expended in this service.

I said to this man, "How many beef carcasses are you expected to inspect per hour?" He said 25. In the case of a beef they had four glands to cut into, cutting the skin off the jaws of the animal in order to find the disease they were looking for, and to examine their vital organs. Yet they had only half a minute in which to do it.

Now, Mr. Chairman, I have no objection to the expenditure of $344,000, or ten times that amount, if it will give the American people the protection they need in order to know that we are getting eatables that are healthy and free from disease; but the effectiveness of the inspection is and has always been a doubtful question with me.

Mr. McLAUGHLIN. Mr. Chairman, will the gentleman yield there?

Mr. HELGESEN. Yes.

Mr. McLAUGHLIN. All this inspection is not done by one man. The animals first pass under the eye of one inspector, and then pass before another, and another, and another—a long line of them; each one has only that limited time, but altogether there is a great deal of time, and, as I understand it, sufficient time. Is not that true?

Mr. HELGESEN. No. This man said that that was not true. He said, as to those four hogs per minute, if the man who was inspecting them found anything that was suspicious, he would hang a tag on them, and they would go to another man for further examination, but if he passed them in the first instance they were passed for good. Now, if that is true, the inspection does not amount to anything worth while.

Mr. DOOLITTLE. Mr. Chairman, will the gentleman yield there?

Mr. HELGESEN. Yes.

Mr. DOOLITTLE. Did this inspector say that they did not have time to make a proper inspection?

Mr. HELGESEN. He said they did not have time enough to make it certain that they were doing the work right. He said:

We are compelled to handle so many hogs an hour in order to hold our jobs, and we do the best we can; and, judging by the amount of meat we condemn in a year, it is shown that we are doing as good service as we can.

But he said they ought to have more help.

Mr. DOOLITTLE. Did he say how much more time they ought to have?

Mr. HELGESEN. No. He did not go into details about it.

Mr. NORTON. Mr. Chairman, will my colleague yield?

Mr. HELGESEN. Yes.

Mr. NORTON. The gentleman says he was talking with this gentleman this afternoon?

Mr. HELGESEN. Yes.

Mr. NORTON. He was on a vacation, I think?

Mr. HELGESEN. No; he was not on a vacation.

Mr. NORTON. Was he looking for larger salaries or more assistants?

Mr. McLAUGHLIN. Even an inspector has to eat sometimes, you know.

Mr. HELGESEN. He did not bring up the question. I brought it up myself, because I wanted to get some information from a man who was on the job and who ought to know what he is talking about.

Mr. NORTON. Is this man employed in the city?

Mr. HELGESEN. No.

Mr. NORTON. Where is he employed?

Mr. HELGESEN. In Chicago or New York, I think.

Mr. NORTON. He stated that the inspectors were too few in number, did he?

Mr. HELGESEN. Yes. I asked him if they did not need more help, and he said, "Certainly; but we are doing the best we can with the amount of help we have."

Mr. NORTON. And he said that he examined how many hogs?

Mr. HELGESEN. Two hundred and fifty per hour.

Mr. NORTON. That is four every minute?

Mr. HELGESEN. Yes. I will leave it to you to tell whether any man can inspect four hogs a minute and tell what their condition is.

Mr. ADAIR. Will the gentleman yield?

Mr. HELGESEN. Yes.

Mr. ADAIR. Was the gentleman ever in a packing house to see this inspection going on?

Mr. HELGESEN. No.

Mr. ADAIR. I have been.

Mr. MANN. The gentleman knows that a health officer inspects immigrants a good deal faster than that when they are coming into port.

The CHAIRMAN. The time of the gentleman has expired.

Mr. ADAIR. I ask unanimous consent that the gentleman may have two minutes more.

The CHAIRMAN. The gentleman from Indiana asks unanimous consent that the time of the gentleman from North Dakota may be extended two minutes. Is there objection?

There was no objection.

Mr. ADAIR. I only want to suggest to the gentleman that I have been in some of these packing houses and I have stood for quite a while watching these men inspect hogs and cattle. I never saw such rapidity of inspection as the gentleman mentions. I have stood not only for one minute, but for three or four minutes, watching a man inspect one animal, and he did not leave one hog or one steer during that time.

Mr. HELGESEN. What does the gentleman mean by saying he did not leave one hog or one steer?

Mr. ADAIR. I mean that the inspection of one animal was not completed within the time that I stood there. I watched a man inspecting a beef for more than five minutes.

Mr. HELGESEN. Oh, well, by the thousands of animals that go through, the gentleman will see that is not possible.

Mr. ADAIR. I am only telling you what I saw.

Mr. LA FOLLETTE. That was over in Indiana. They do not work so swiftly over there.

Mr. McLAUGHLIN. Mr. Chairman, I move to strike out the last word. I asked the gentleman from North Dakota [Mr. HELGESEN] if each animal does not pass under the eyes of several inspectors, and if I understood him he answered that it does not. Now, that is not my information. A short time ago we had hearings on what is known as the Lobeck bill, to provide promotion and increases of salaries for men engaged in the meat-inspection work, and I gathered from testimony given before the committee that there are several inspectors, many of them engaged in the same kind of work, and that each animal passes before and is inspected by several of them.

Mr. HAWLEY. Each man does a certain portion of the inspection.

Mr. McLAUGHLIN. And we were told particularly that the work of each one of these inspectors is checked up. The work that each one does is looked over and reviewed by several others, each one making his mark on a card or indicating in some way that that animal has passed before him and has been inspected, and if an error is found it is traceable back to the man who made it. Now, that being the case, it is hardly possible, as the gentleman from North Dakota says, that one man is required to inspect four hogs in every minute of the hours that he works and that there is no relief and no assistance and no further precaution taken to secure correct inspection. It seems to me that the gentleman from North Dakota did not get all the facts, or if they were given to him that he has not drawn the right conclusion.

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn, and the Clerk will read.

The Clerk read as follows:

Salaries, Bureau of Plant Industry: One physiologist and pathologist, who shall be chief of bureau, $5,000; one chief clerk, $3,000; one executive assistant in seed distribution, $2,500; one officer in charge of publications, $2,250; one landscape gardener, $1,800; one officer in charge of records, $2,250; one superintendent of seed weighing and mailing, $2,000; two esecutive clerks, at $1,980 each; one assistant superintendent of seed warehouse, $1,400; one seed inspector, $1,000; one seed warehouseman, $1,400; one seed warehouseman, $1,020; one seed warehouseman, $1,000; one seed warehouseman, $840; 6 clerks, class 4; 12 clerks, class 3; 3 clerks, at $1,500 each; 20 clerks, class 2; 47 clerks, class 1; one clerk or draftsman, $1,200; one clerk, $1,080; 8 clerks, at $1,020 each; 23 clerks, at $1,000 each; 45 clerks, at $900 each; 1 clerk or draftsman, $900; 19 clerks, at $840 each; 2 clerks, at $720 each, 1 laborer, $780; 41 messengers or laborers, at $720 each; 11 messengers, messenger boys, or laborers, at $660 each; 26 messengers, messenger boys, or laborers, at $600 each; one artist, $1,620; one clerk or artist, $1,400; two clerks or artists, at $1,200 each; one photographer, $1,200; one photographer, $840; one laboratory aid, $1,440; one laboratory aid, $1,380; three laboratory aids or clerks, at $1,200 each; one laboratory aid, clerk, or skilled laborer, $1,080; two laboratory aids, clerks, or skilled laborers, at $1,020 each; three laboratory aids, at $960 each; one laboratory aid, $900; five laboratory aids, at $840 each; six laboratory aids, at $720 each; one laboratory apprentice, $720; one map tracer, $600; two gardeners, at $1,440 each; four gardeners, at $1,200 each; eight gardeners, at $1,100 each; 15 gardeners, at $900 each; 19 gardeners, at $780 each; one skilled laborer, at $960; two skilled laborers, at $900 each; three skilled laborers, at $840 each; one assistant in technology, $1,400; one assistant in technology, $1,380; one mechanician, $1,080; one mechanical assistant, $1,200; one blacksmith, $900; one carpenter, $900; one painter, $900; one teamster, $840; one teamster, $600; 21 laborers, at $540 each; 24 laborers, messengers, or messenger boys, at $480 each; two laborers or charwomen, at $480 each; two laborers or messenger boys, at $420 each; 20 charwomen, at $240 each; 11 messenger boys, at $360 each; four messenger boys, at $300 each; in all, $418,240.

Mr. MANN. Mr. Chairman, I move to strike out the last word. What is the object of making an appropriation for one laboratory aid, clerk, or skilled laborer? Do they not know what they want?

Mr. LEVER. What item is that?

Mr. MANN. There are a number of items just like it in this paragraph. Here is an item, "One clerk or artist." Here is another item, "two clerks or artists." Here is another item, "three laboratory aids or clerks." Then here is another item, "one laboratory aid, clerk, or skilled laborer." Another item is "two laboratory aids, clerks, or skilled laborers," and so forth.

Mr. HAWLEY. If the gentleman will yield, the explanation made to the committee was that in this way they could be sure that they could use the individual assigned for this work for any one of these three things, that there was not work enough to employ the individual at one of these duties all the time for the entire year, so that they were compelled to use the person in three employments. In that way they could keep them profitably employed during the entire year.

Mr. MANN. Does the gentleman think that it is advisable to employ a man with the idea that he can be a laboratory aid, and also a clerk, and also a skilled laborer?

Mr. HAWLEY. The man or woman employed would be competent to do work in either of the three places.

Mr. MANN. Oh, no; probably incompetent in either place.

Mr. HAWLEY. We were presuming that they were competent for the work in either of the three places.

Mr. MANN. Here are three places—laboratory aid, clerk, or skilled laborer. I am of the opinion that the average, or for that matter any skilled laborer, does not make the best clerk, or any clerk make the best skilled laborer, and that neither one makes a very good laboratory aid.

Mr. TOWNER. Will the gentleman allow me to ask him a question?

Mr. MANN. Certainly.

Mr. TOWNER. I notice here we have the classification "one artist." What is meant by that? What kind of an artist is that?

Mr. HAWLEY. They make drawings of plants, or when they put them under the microscope and examine them and find them diseased, they make drawings of the cross sections of the plants, showing the appearance of the diseased plant.

Mr. TOWNER. The next item is "one clerk or artist." I would not suppose they would use a clerk for artistic purposes or an artist for clerical purposes.

Mr. HAWLEY. If the person employed is a competent artist and can do clerical work at times, when not needed for making drawings or descriptions of plants, they can keep that person employed during the entire year. His duties as an artist probably would not take his entire time.

Mr. TOWNER. It would seem as if those two employments were not entirely compatible.

Mr. MANN. If the gentleman from Iowa will notice, it is not merely one clerk or artist. The following item is two clerks or artists. The explanation that they do not have work enough to keep them employed during the year might apply to one, but could not apply to three.

Mr. HAWLEY. It might apply.

Mr. MANN. Oh, it could not apply to all three.

Mr. HAWLEY. If the gentleman will yield, there might be certain times in the year——

Mr. MANN. There might be, but there are not.

Mr. HAWLEY. Well, we will take it the other way. There are certain times in the year when they need the work of the artist, and there are other seasons when they need the work of the clerk. I am stating the explanation made to the committee.

Mr. MANN. All this kind of office work piles up.

The CHAIRMAN. Without objection, the pro forma amendment is withdrawn.

The Clerk read as follows:

For conducting such investigations of the nature and means of communication of the disease of citrus trees known as citrus canker, and by applying such methods of eradication or control of the disease as in the judgment of the Secretary of Agriculture may be necessary, $250,000; and the Secretary of Agriculture is authorized to pay such expenses and employ such persons and means, in the city of Washington and elsewhere, and to cooperate with such authorities of the States concerned, organizations of growers, or individuals as he may deem necessary to accomplish such purposes: *Provided*, That no part of the money herein appropriated shall be used to pay the cost or value of trees or other property injured or destroyed.

Mr. MANN. Mr. Chairman, I move to strike out the last word. It looks to me as though the committee had not followed quite the same course in this item as in the next one, although I may be mistaken about it.

Mr. LEVER. Mr. Chairman, there is so much noise in the Hall that I did not hear the gentleman. I have only one good ear.

Mr. MANN. If my distinguished and beloved friend from South Carolina only hears with one ear, I congratulate myself that I have usually been able to get close to that ear. This item which is for the citrus canker has this proviso:

Provided, That no part of the money herein appropriated shall be used to pay the cost or value of trees or other property injured or destroyed.

That is very plain, but the next item, which is in reference to the chestnut-bark disease and the white-pine blister, as well as other tree diseases, provides not only for the investigation but for applying methods of reduction or control already discovered. Now, the principal method of reduction being to destroy the tree, that would apparently make the appropriation, which is increased by $30,000, available for the destruction of chestnut and other trees which are affected by these diseases. Is that the case?

Mr. LEVER. The gentleman understands, in reference to the white-pine-blister rust, that the only trees destroyed at all are trees which are hosts for the insect that causes the disease, such as currants and gooseberries, and the method of destruction of the trees would be entirely different.

Mr. MANN. Of course, you kill one tree one way and one tree another way. Some prefer to cut them down and some prefer to put fire around them. This is for the destruction and not for advice. Is not that correct?

Mr. LEVER. Let me make this statement: Some years ago, as the gentleman will remember, we had an outbreak of chestnut blight and appropriated a considerable sum of money for a while in an effort to eradicate it. Last year when the bill came in the committee frankly confessed that there was no possibility of eradicating chestnut blight in this country, and that the only way to handle it was to provide resisting chestnut trees.

Mr. MANN. And that is a long process, and they will not know whether it is effective until our great-great-great-great-grandchildren appear on the scene.

Mr. LEVER. This year attention was called to the fact that a new disease had broken out in New England and the Middle

West, called the white-pin-blister rust, which threatened the white-pine industry in this country, and the testimony before the committee was to the effect that there was a host to these diseases in the gooseberry and currant, and by the destruction of the gooseberry and the currant the disease could be entirely eradicated. It was the understanding of the committee, and in this item we drew the inference from what had taken place with reference to the chestnut blight a year or two years ago, that none of the money in this item should be used for payment for trees destroyed. Although I am frank to say, so far as I am concerned, I would have no hesitation in accepting a proviso to that item, but I am sure there would be no disposition on the part of the department to use the money to pay for trees destroyed.

Mr. MANN. I have no objection to paying for these things if you are going to destroy them. How do you differentiate between destroying currant and gooseberry bushes which are of value to the markets and destroying other trees which help to spread the disease?

Mr. ANDERSON. I am sure the gentleman knows that the currants and gooseberries referred to by the gentleman from South Carolina are bushes that grow wild in the forest and have no relation to the ordinary common varieties of garden currant and gooseberry bushes; that is, so far as this item is concerned.

Mr. MANN. That depends. The Missouri currant grows wild all over the West—that is, the sweet black currant and gooseberries grow wild—but the tame gooseberry and the tame currant do the same thing. The country where this white pine grows has more tame gooseberries and tame currants than they have wild. The wild gooseberries are in the West, while the tame ones are in the East, where the white pine grows.

Mr. LEVER. We had a disease which affects the apple trees—the host of that disease was the cedar tree—and we are providing an appropriation for that.

Mr. MANN. There are a great many diseases of plants, and they have plant hosts. The common barberry is the host of one of the principal diseases the name of which I have forgotten, and yet we are not trying to destroy them all.

Mr. LEVER. I will say, further, that when the subject of citrus canker was first brought before the Committee on Agriculture there was the suggestion either in the RECORD or by one of the Members personally that payment ought to be made for the destruction of these orange trees on the same principle that you pay for destroying cattle with the foot-and-mouth disease or horses with dourine. But the amount involved was so big that it staggered some of us, and we thought that if we could go in and wipe out this disease the owners and the States involved ought to be willing to bear a part of that burden, as they are now bearing a part of the burden. That is the theory on which the committee acted. We were afraid to open the door, and therefore we kept it closed and sealed. I may say, further, that the representatives of the citrus growers made no objection to that proposition.

Mr. HAWLEY. Mr. Chairman, will the gentleman yield?

Mr. MANN. I yield.

Mr. HAWLEY. I do not need to call the attention of the gentleman from Illinois [Mr. MANN] to the fact that the citrus canker is so far as known a virulent and incurable disease, and if it attacks a tree there is no use of trying to cure the tree. When they are dealing with it they do not even touch the trees that have the disease, because the disease will adhere to the fingers, and if they touch another tree of the citrus variety will spread the disease to that tree. The only way is to go into an orchard and burn the tree as it stands, consuming it beneath the bark with burning gas. There was strong pressure brought by a number of those who are interested in the growing of citrus trees, that if we intended to destroy the trees where the citrus canker was found in an orchard we ought to pay them for that destruction; that we ought not to come in in order to save one man's orchard and destroy the orchard of another without paying for it. Then out of an excess of caution—for, as the chairman said the estimated value of the orchards as made before the committee was very great—we inserted this proviso, it being a new item in the Agricultural bill.

Mr. MANN. We put it in the deficiency bill in the House on the motion of the gentleman from Michigan [Mr. MCLAUGHLIN].

Mr. HAWLEY. Yes; but this is the first Agricultural appropriation bill that has carried that item.

Mr. MANN. That is true.

Mr. HAWLEY. And in order to relieve the department of the pressure that would be brought upon it in case it insisted upon the destruction of trees, as they will have to do if they ever get any control of this disease, because eradication is the only method of controlling it, out of an excess of caution this proviso was inserted to make it clear that the Government was not to pay for trees destroyed.

Mr. CALDWELL. I understand that this is the situation, that in the case of citrus canker the tree that is attacked will naturally die in any event, whereas in the other case of the parasite that appears in the gooseberry bush it is not, and if you destroy the bush to get rid of the parasite you are actually destroying a plant that would not die by reason of this attack.

Mr. MANN. Neither of the gentlemen probably is very familiar with orange trees. I used to raise orange trees myself, though I do not any more. I know something about the business. No one has ever suggested that you pay for the trees which have the disease. If you did pay for them, it would not cost anything, because they are not worth anything. When the tree gets the disease it is valueless, but here is a disease, say, in a locality which is likely to be spread by the birds. The question is whether you can stamp out the disease by killing all of the trees that are susceptible to it within a certain range of that orchard which is affected. It is perfectly evident to anyone with common sense that a man who has an orange grove a little ways off from one that is diseased, whose orange grove is sound, is not going to kill his trees in order to stamp out the disease. It is of no value to him to stamp out the disease if when it is stamped out all of his trees are dead, and it may be of some benefit to him to take the chance that the disease will not come to his grove. Yet, if they do not stamp out the citrus canker in some way, it is liable to spread all over the United States, wherever they grow citrus fruit; and if it does, it will be too late to accomplish any good purpose.

Mr. BRUMBAUGH. Mr. Chairman, will the gentleman yield for a moment? I want to ask the chairman of the committee a question.

Mr. MANN. Very well, I will yield for that purpose.

Mr. BRUMBAUGH. I would like to ask the chairman whether they have provided the relative part of this expense that the State is to pay?

Mr. LEVER. We have not provided it in this item. The State of Florida has already expended $195,000 in this work. The growers themselves, I understand, have spent about $100,000 in the work. The Federal Government has expended $35,000, and we passed a deficiency appropriation bill some time ago appropriating $300,000. I understand that about $100,000 of that deficiency appropriation will be still available at the beginning of this fiscal year, so that we shall have during the next fiscal year about $350,000 of Government money.

Mr. MANN. Mr. Chairman, I do not know whether I am biased in any way by the fact that I have some small interest in Florida, having relatives there, but I doubt it. I think possibly I am biased by the fact that I have some knowledge about the business.

The CHAIRMAN. The time of the gentleman from Illinois has again expired.

Mr. MANN. Mr. Chairman, I ask unanimous consent to proceed for five minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. MANN. While the citrus-canker disease and its destruction is not on all fours with the foot-and-mouth disease, it is somewhat similar. The foot-and-mouth disease could be spread by cattle moving from one State to another, although very often that was not the way in which it was spread. It was often spread by birds or animals that were not cattle at all or human beings, or by serums, or by clothing or something else being sent from one State to another, in some places by passing down a running stream from one place to another. The canker disease can be spread by the shipment of trees from one State to another, but probably will not be spread in that way. It may be spread by birds or animals or human beings or by other methods. The foot-and-mouth disease itself was not very fatal to cattle, so far as killing them off was concerned, but if the foot-and-mouth disease had been allowed to spread all over the United States you never could have stamped it out, and it would have been a loss to the country of millions or perhaps hundreds of millions of dollars a year.

If the citrus canker, which is now confined to a very few localities, and which entered the United States by importation, is allowed to spread all over the South and then out to California, we will be in a position that gentlemen do not appreciate. The Mediterranean or fruit fly is now in the island of Hawaii. They used to raise all kinds of fruits over there—it is a great place for fruits—and ship them to the United States. There are only two kinds of fruits now that you can bring here from Hawaii, and those are bananas and pineapples, and they have to be carefully inspected and go through a process before they can be brought in. You can not pick out in the Hawaiian Islands

to-day any kind of fruit but what you will find a lot of worms in it and there is no way of stamping it out. All the money in the United States Treasury possibly could not do it because these wild fruits out there that grow everywhere in the mountains have these worms in them.

Mr. SMITH of Michigan. Will the gentleman yield?

Mr. MANN. I will.

Mr. SMITH of Michigan. What the gentleman says about the citrus disease applies also, does it not, to the San Jose scale?

Mr. MANN. Oh, not at all. It is entirely different. It is easy enough to get rid of the San Jose scale, but it takes a little time. But if this citrus-canker disease ever gets around in the South you never can stop it. I would rather appropriate a little money now to kill it out than to appropriate hundreds of thousands of dollars in the next 10 or 20 years in a vain effort—and it would be a vain effort—to stamp it out after it got well started.

Mr. SPARKMAN. Mr. Chairman, I fully agree with the gentleman from Illinois [Mr. MANN] in the criticism he has just made against the proviso that no part of the appropriation shall be used for the destruction of trees. I did not favor the insertion of that provision either in this bill or in the deficiency bill which passed earlier in the session. I do not think there ought to be any such limitation placed upon the expenditure of the money appropriated. A part of the plan for the eradication of citrus canker often involves the destruction not only of infected trees, but others not apparently infected at the time, as it is not easy at all times, or at any time, to tell just how far the disease has spread when you undertake to apply the remedy, which is fire. You at first discover it upon a tree, or maybe upon a dozen or more trees. But before its discovery it may have been carried by human agency, by birds, or animals to the other groves in the immediate vicinity, where it may not be discernable. But whether such is the case or not, prudence would dictate the destruction of near-by trees even in neighboring groves.

Now, in this emergency you go to the owner of the apparently healthy tree and propose its destruction. He says, "Why, the tree is uninfected, or the canker is not in my grove; or if so, it is not discernible, and I object to its destruction. I am willing to take the chance." Now, such an objection comes with a great deal of force under such conditions, and yet if the owner were paid something for the suspected trees the difficulties in the way of the experts would vanish. But under this provision no compensation can be given, which, I fear, will hamper very materially the efforts of the Department of Agriculture in the eradication of this greatest of orange-tree pests.

Another objection to this provision is that the amount of money appropriated is, in my judgment, too small. I think it should have been at least as much again, and yet I do not propose to offer an amendment to the bill. I do not desire to do that for two or three reasons. In the first place, the committee have given careful consideration to this item and are thoroughly in sympathy with the efforts of the Department of Agriculture to stamp out the disease, and I realize that they do not desire, in making an appropriation, to go beyond what the Secretary of Agriculture advises. He has recommended $250,000 and they are following his recommendation. Hence, I for one do not care at this time to offer any amendment increasing the amount, although I believe it entirely too small.

I am willing to accept for the present the amount inserted, with the hope and belief that whatever is needed will be furnished later. We do not know just what progress is being made in Florida and other States where the disease prevails toward its destruction. The experts who are undertaking the expenditure of the money are very hopeful of the ultimate eradication of the pest, and I feel confident they will succeed; but I am fearful we will have to have a great deal more money. Not only Congress, but likely the State of Florida and the other States—there are five or six of them in which this disease has made its appearance—will have to furnish considerable sums before it is finally destroyed.

Mr. BRUMBAUGH. Why does not the gentleman make a motion to strike out the proviso? From what the gentleman from Illinois [Mr. MANN] said, I should think the proviso ought to be stricken out.

Mr. SPARKMAN. As I said a moment ago, I do not desire to interfere with the work of the committee. They have, no doubt, done what they think is right, and I do not care to embarrass them. There was a similar provision in the item inserted in one of the deficiency bills the early part of the year, and which, passing the House, became a law, and the committee is simply following the law. Hence I do not care to do anything to embarrass the committee, though I should prefer that the provision be stricken out, because, as I have said, if it remains there I fear it will hamper the department in its work.

Now, the State of Florida and the people of that State have already contributed quite liberally toward the eradication of citrus canker. Not only has the State furnished a considerable sum of money for that purpose, but individuals, first and last, have contributed sums aggregating a much larger amount, while many growers have given over to destruction large numbers of apparently uninfected and healthy trees to make certain that the work of eradication in a given locality was complete. Such contributions already far exceed the amount already appropriated by Congress, even including the sum carried in this bill.

This not only shows that the people of Florida are doing their share, but that they are willing to aid the Government by making any reasonable sacrifice toward the destruction of this the most infectious and deadliest of orange-tree pests—a disease which, if not effectually eradicated, will destroy the citrus industry throughout the country.

This thought, Mr. Chairman, suggests another: That no effort should be spared to check this disease. We do not have any too much knowledge of citrus canker, but enough is, I think, known to make it certain that no half-way measures in the war upon it will suffice. Both in the interest of economy and of the orange industry itself, we should leave nothing untried that will insure speedy and complete success. A few hundreds of thousands of dollars or even a million or two now may save millions to the Government and many more millions to the industry we are trying to protect and preserve.

And, Mr. Chairman, it is well worthy of protection. So, too, are the growers worthy of the aid they are receiving and all they may receive. There are only a few States of the Union where citrus fruits can be grown. These are far to the southward, mostly on the Gulf or the Pacific, Florida and California furnishing the chief output. If this pest is permitted to destroy the groves there, which it is likely to do if not checked, we will have to rely on foreign countries to supply our demands, which they can not begin to do, even though they should escape the disease, which is not probable. So that with our own industry destroyed we would either have an inadequate source of supply or none at all from abroad to take its place.

But there is no need for the total loss of our domestic supply if we make the proper effort to stamp out the disease, for it has been demonstrated that it can and, I feel confident, will be done. It will cost more if we do not take hold of it in the right manner, but it will be done in any event.

The outlook, however, for the industry in other countries is not so hopeful, for if the pest could get into our country, as it has, over the safeguards we furnish, how much more likely is it to find its way into other citrus-growing countries where no safeguards against its entrance are afforded, and then, meeting inadequate means of defense, completes its work of destruction there. Such a condition, not beyond the range of probability in the opinion of expert observers, would make this country the only source of supply for this hemisphere and the greater part of the eastern, if not for the whole world.

Now, it is the duty of the Government to aid in this work, because the people of no one State can effectually deal with the disease. It can be transported in so many ways inside and across State lines, is so insidious in its progress from place to place, so easily carried from State to State that only the Federal authority, with power in such matters to reach across boundaries and go into all the States, can successfully cope with it. It is already in several of the citrus-growing States, and it might be totally eradicated in one of them, as in Florida for instance, but unless it were destroyed in all the others the industry would not be safe.

Now, the growers, as I said, are deserving of aid. While under normal conditions the citrus industry is a profitable one, it is not so under all conditions. The producer has his ups and downs, his fat years and his lean years. The high cost of distribution, inadequate transportation facilities at times, overproduction at others, cut into the profits of the grower, but the consumer, the great American public, is always served, even though it be at the expense of the producer. Hence, Mr. Chairman, the public have an interest in this fight, and Congress is clearly within the purview of its duties in making adequate provision for the protection of this great industry, one of the most important in the country.

I do not desire that Congress should appropriate any more money than is needed to do the necessary work, but, as I said, I fear the amount carried in this bill is not sufficient. I believe it should have been larger, yet if it is found to be inadequate, as I fear it will, we can, later on in the session, have it increased, which I have no doubt Congress will do if it should be found necessary.

Mr. LEVER. Mr. Chairman, I ask unanimous consent that all debate on this paragraph and all amendments thereto close in 15 minutes.

Mr. BRUMBAUGH. I shall want about three minutes.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida? [After a pause.] The Chair hears none.

Mr. LEVER. Mr. Chairman, I make it 20 minutes.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that all debate on this paragraph and all amendments thereto close in 20 minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. LEVER. Mr. Chairman, I would like to have two minutes of that time myself.

Mr. BRUMBAUGH. Mr. Chairman, I would like to ask the chairman a question. Is it the gentleman's idea that the action of this provision would limit the States themselves from any action that they might care to take in the matter of the extermination of this disease?

Mr. LEVER. Not at all. This will be a great encouragement for them to do this same work.

Mr. BRUMBAUGH. That is my understanding—that there is no attempt in any way to prevent the States from going the limit.

Mr. LEVER. Not at all. As I said a moment ago in answer to the gentleman's question, Florida herself, although a very small State, has already expended $195,000, and the fruit growers of that State have expended $100,000. And the fruit growers of other citrus-fruit States have spent money for the same purpose.

Mr. BRUMBAUGH. Any State could order by legislative enactment the destruction?

Mr. LEVER. No doubt.

Mr. SMITH of Michigan. For information, as it is very important in Michigan, that being a very large fruit-growing State, I would like to inquire whether or not there is any proviso in the bill for the control of the San Jose scale?

Mr. LEVER. Not by name; but there is a general paragraph in the bill which carries money for diseases of fruit trees.

Mr. SMITH of Michigan. I was hardly satisfied with the answer I received from our minority leader when he said it was easy enough to control the San Jose scale. We know that it is spread similar to the way he said that the citrus canker spreads—by birds, by the wind, by being carried and communicated—and it is destroying a great many of the orchards there. And I would like to inquire of the chairman, who has made a great investigation along this line, whether or not he considers this a serious condition in relation to our fruit-growing industry?

Mr. LEVER. I have not made any investigation of that particular territory, but I appreciate the destructiveness of the San Jose scale. The difference between that, however, and the citrus canker is that a spray has been discovered by which the San Jose scale can be checked; but there is no spray which will check the spread of the citrus canker. Nothing has been found to be of any value except burning.

Mr. SMITH of Michigan. Is it the understanding of the gentleman upon investigation that has been made that it can be eradicated and can be controlled without chopping out or destroying the orchards, which they are doing?

Mr. LEVER. Yes; that is my understanding.

Mr. HAWLEY. Permit me to say that we had that problem in the State of Oregon, where we raise a great many apples and other fruits. We have a law which provides that if a man will not spray and care for his trees the county authorities can remove them.

Mr. SMITH of Michigan. I would like to ask the gentleman if you have controlled it in that way and gotten rid of it?

Mr. HAWLEY. They are getting rid of it. It is a very minor disease out there now.

Mr. BRUMBAUGH. In the case of destroying trees, does the county pay for the trees?

Mr. HAWLEY. Not only does the county not pay for the trees, but they make the man who will not keep his orchards clean pay for them.

Mr. LEVER. It is a penal provision.

Mr. HAYES. Does not the gentleman think that $250,000 is a small sum to stamp out this canker?

Mr. LEVER. The committee considered that very carefully, and after the assistant chief of this bureau, Mr. Kellerman, the gentleman in charge of this work, had made a thorough examination of the territory involved, we had him before the committee, and his statement to the committee was to the effect that after very careful consideration of all the factors involved the department felt that $250,000 would be sufficient for them to carry on the work in the coming fiscal year, especially in view of the fact that they estimate they will have out of the $300,000 deficiency appropriation at the end of this fiscal year $100,000, and in addition to that they hope, with some degree of certainty, to get probably $50,000 or $100,000 from individuals and the States involved, which would give them a reasonably large sum of money.

The CHAIRMAN. The time of the gentleman has expired.

Mr. LEVER. I will take my other two minutes if I have them, because I think the gentleman wants information.

Mr. HAYES. Has there been any further information given to the committee than when I was present, wherein he said, if I remember, that they would be glad of $250,000, but could use twice as much if they could have it?

Mr. LEVER. I presume the gentleman from California refers to the first hearing on this subject, in December.

Mr. HAYES. That was probably the one where I was present.

Mr. LEVER. We had a later hearing, ten days or two weeks before the committee reported this bill, after Dr. Kellerman had made an extended visit through this section and had returned with full information of the situation. There has been a later hearing than that to which the gentleman refers.

Mr. HAYES. The disease is not yet prevalent in California, and so I know nothing personally about it, but it seems to me it would be a mistake to deal with it piecemeal. It ought to be stamped out without delay, because it threatens the citrus industry absolutely, and if this is not ample let us give $500,000, and place it at the disposal of the Department of Agriculture to use such sum as they think it necessary to finally and completely stamp it out.

Does not the gentleman agree with me that that would be best?

Mr. LEVER. No; I do not. There are two reasons for not thinking so. First of all, the department feels, and has indicated both in the statement made before the committee and in a letter addressed to the chairman of the committee, that $250,000, supplemented by the other funds to which I referred a moment ago, will give the department as much money as it can expend wisely and economically in the handling of this situation. I have always been afraid that in appropriating a large lump fund we are liable to fall not only into habits of large extravagance but also into habits of doing the work in a slipshod way. The committee and the department feel that this amount of money will do the work, and do it effectively, and do it economically. It is not going to clean up the disease by any means, but, in our judgment, it is as much as we can spend wisely in the next fiscal year.

The CHAIRMAN. The time of the gentleman has expired.

Mr. McLAUGHLIN. Mr. Chairman, the gentleman from California [Mr. HAYES] is misinformed as to the testimony before the committee. The official of the department, Dr. Kellerman, to whom the gentleman from South Carolina [Mr. LEVER] has referred, stated that $250,000 is all that can be economically used. The disposition of the committee was to allow just as much as was necessary, just as much as can properly be used, and after a good deal of time and careful thought the amount of $250,000 was arrived at.

Now, as to the proviso that no part of the money should be used to pay for trees injured or destroyed, the association of Florida more directly interested in this matter had a representative or attorney, I believe, present. I am not sure about his name, but I think it was Gillett. He appeared, and he drafted the provision himself, leaving a copy of his draft at the office of each member of the committee. The draft prepared by Mr. Gillett himself contained this proviso, "That no part of the money shall be used to pay for trees injured or destroyed," or words to that effect, so that now, after further consideration of it, and seeing the willingness of Congress to appropriate money sufficient to carry on the work, gentlemen of that part of the country who first were inclined to ask for money to pay for trees destroyed are not now asking for money for that purpose.

There was an effort on the part of some to place this citrus-canker trouble on an even footing with the foot-and-mouth disease. If it were so placed, and if money were used as it was used in taking care of the foot-and-mouth trouble, the work would not be carried on as the distinguished gentleman from Illinois [Mr. MANN] says—that trees already affected or destroyed would not be paid for, because they are of no value. That may be true; they are of no value; but where this serious disease of foot and mouth attacked the cattle, the animals are so affected that they are of no value whatever and for the protection of everybody they ought to be killed, still the Federal Government provides money to pay a part of their value, or,

rather, what would be their value if they were not affected; so if we were to place this citrus canker on a footing exactly with the foot-and-mouth disease, we would be paying for trees already affected, and which, just as the gentleman from Illinois says, are worthless. We would be asked to pay, and find it necessary to pay, the value the trees were supposed to have before the disease struck them.

Now, in my judgment, it is not wise at this time, right off the reel, to provide hundreds of thousands of dollars to pay for trees destroyed, those already affected, those that are exposed, those that are in the neighborhood and the destruction of which seems necessary in order to prevent the spread of the disease. It seems to me that the department, cooperating with the States, ought to be given a fair chance, ought to be given all the money it can use, to see if it can not find a remedy, find some way to check the spread of the disease and perhaps eradicate it, without involving the immense expenditure of money that will be necessary if we embark on the proposition of paying for all trees destroyed.

Mr. HAYES. Mr. Chairman, may I ask the gentleman a question?

The CHAIRMAN. The time of the gentleman from Michigan has expired.

Mr. McLAUGHLIN. If my time is extended, I shall be glad to yield to the gentleman.

Mr. HAYES. Mr. Chairman, I ask unanimous consent that the gentleman may proceed for two minutes more.

The CHAIRMAN. The committee has fixed a limited time for debate on this paragraph.

Mr. LEVER. Mr. Chairman, I have three minutes, and I will yield to the gentleman one minute.

The CHAIRMAN. The gentleman from Michigan [Mr. McLAUGHLIN] is recognized for one minute more.

Mr. HAYES. Mr. Chairman, I wanted to ask the gentleman a question. I gathered from the discussion here that it is not the policy to attempt to stamp out the disease in the next fiscal year.

Mr. McLAUGHLIN. The plan is to do everything possible.

Mr. HAYES. I want to ask the gentleman if he thinks his committee will cooperate with us who are interested directly in this citrus canker disease—will cooperate with us, if necessary, in the next fiscal year to secure a deficiency in order that the work may be properly carried forward?

Mr. McLAUGHLIN. If those to whom we look for information ask for the money and say it can be efficiently and economically used, I shall certainly support a proposition looking to such an appropriation.

The CHAIRMAN. The time of the gentleman from Michigan has again expired.

Mr. HAWLEY. Mr. Chairman, there are two principal ways in which this disease might be dealt with. The first is by the destruction of all the trees that are affected. But this disease has no host plant. It lives on the citrus trees only. We have adopted a different plan, a strict supervision and examination of the orchards. Young men can be trained to readily detect the disease when it appears on any tree—on the branches or leaves—and as soon as it has appeared on a tree to destroy the tree and to eliminate every diseased tree from the orchard.

That will leave the grower, then, to have the advantage of the product of his other trees in the orchard, and to eliminate the ones that are affected. That is the policy adopted by the committee in the bill. We hope ultimately to eradicate the disease by this method, and do just as little damage as possible to the growers who are dependent on this industry for their livelihood.

There is one other observation I would like to add, and that is this: If we undertake to destroy all the trees in the orchards affected it would cost a very great deal of money, and if no compensation were paid to the growers there would be a very great deal of opposition on their part to the destruction of their trees, because many of them are dependent solely upon the product of those trees for their livelihood. By the adoption of this plan we get the cooperation of the States and of the growers with the department. The States and the growers will contribute money, so that the amount that can be used will be greater than is indicated in the bill and the amount left over from the last deficiency bill, that will be unexpended at the end of the fiscal year.

The CHAIRMAN. The time of the gentleman from Oregon has expired. The pro forma amendment will be withdrawn, and the Clerk will read.

The Clerk read as follows:

For the investigation of diseases of forest and ornamental trees and shrubs, including a study of the nature and habits of the parasitic fungi causing the chestnut-tree bark disease, the white-pine blister rust, and other epidemic tree diseases, for the purpose of discovering new methods of control and applying methods of eradication or control already discovered, $87,175.

Mr. CLINE. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Indiana moves to strike out the last word.

Mr. CLINE. I would like to inquire of the chairman of the committee whether the phrase or clause "other epidemic tree diseases" is intended to cover other investigations, like that of the San Jose scale? That is in line 13.

Mr. LEVER. I will say to the gentleman from Indiana that this item applies only to diseases of forest and ornamental trees, and not to diseases that attack fruit trees. That is carried in another item further on in the bill.

Mr. CLINE. I just wanted to make that clear.

The CHAIRMAN. The Clerk will read.

Mr. TREADWAY. Mr. Chairman, I move to strike out the last two words. I should like to make inquiry relative to the chestnut-tree blight disease and the white-pine blister rust. These are both diseases which are very prevalent in Massachusetts and New England; and I would like to inquire how much larger this appropriation is than has been the customary one for these diseases in years past? I understand there is an added item, is there not?

Mr. LEVER. There is a $30,000 increase in this item, to be devoted entirely, however, to the work in eradicating the white-pine blister rust.

Mr. TREADWAY. Will any portion of this amount be used for eradication of the chestnut-tree blight?

Mr. LEVER. The appropriation for the chestnut-tree blight is carried in the rest of the paragraph, such portion as the department desires to use, but none for the eradication of chestnut blight—only for the study of the disease and, if possible, the development of a strain of chestnut trees in this country that will resist the disease.

Mr. TREADWAY. As I understand it, the work of the department is not really field work—it is more pathological?

Mr. LEVER. As affecting the chestnut blight that is true, but as affecting the white-pine blister rust it will be largely field work—in eradication.

Mr. TREADWAY. In what section?

Mr. LEVER. In the New England and Middle Atlantic States principally.

Mr. TREADWAY. One more question, if I may ask the chairman of the committee.

Mr. LEVER. Certainly.

Mr. TREADWAY. Is the work which the department is endeavoring to follow up, in the eradication of this disease, carried on in conjunction with the State officials—the forestry departments of the various States?

Mr. LEVER. I am not sure about that, but I am strongly of the opinion that it is carried on in cooperation with the State authorities.

Mr. TREADWAY. I know that in my own State of Massachusetts a great deal of interest has been taken in this subject by the forestry department, but I was not aware whether or not there was any cooperation between the Federal Government and the States.

Mr. LEVER. I may say to the gentleman from Massachusetts that the departments of forestry of the various States, particularly in New England, have shown a great deal of interest in this white-pine blister problem and have sent resolutions to the Committee on Agriculture and communications to the chairman of the committee asking that this be allowed, and there has been a deficiency appropriation allowed by another committee, and this committee has allowed a supplementary estimate of $30,000.

Mr. TREADWAY. I am sure that there is very great interest in the work, both of the Federal Government and of the State departments, because both diseases, as I know from my own knowledge, have spread very materially in the western portion of the New England States, and we hope that the cooperation between the Federal Government and the actual field work by the various forestry departments will result in much good in the timber sections.

Mr. LEVER. We join in that hope.

Mr. McLAUGHLIN. As the gentleman from Massachusetts [Mr. TREADWAY] is evidently interested in the chestnut-blight proposition, I will say to him that after several years of field work, and scientific investigation also, the conclusion has been reached that the only way to deal with the chestnut-blight disease is to destroy the affected trees. It becomes a matter of expending money and putting forth physical effort to destroy and remove the trees, and the Committee on Agriculture thinks this scientific department ought not to be asked to do and ought not be permitted to do that kind of work, but that it is up to the

States themselves to take charge of the work after the investigation had been made and the remedy, as far as it may be called a remedy, is well known and it simply involves the expenditure of money and the physical work of cutting down the trees. That is something of the history of the field work relating to the chestnut blight. That is the reason the appropriation is not larger than it is; and while I am not as familiar with it perhaps as I ought to be, my understanding of the appropriation is that no part of this money is intended for field work, for the reasons I have given. The money that is to be devoted to the chestnut-blight disease is for investigational work, to try to find out the cause and some scientific way, if possible, of eradicating it.

Mr. LEVER. The gentleman is correct about that. That is the understanding of the committee.

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn, and the Clerk will read.

The Clerk read as follows:

For the investigation and improvement of cereals and methods of cereal production, and the study of cereal diseases, and for the investigation of the cultivation and breeding of flax for seed purposes, including a study of flax diseases, and for the investigation and improvement of broom corn and methods of broom-corn production, $157,005: *Provided*, That not less than $40,000 shall be set aside for the study of corn improvement and methods of corn production: *Provided also*, That not less than $10,000 shall be set aside for the investigation of the diseases of wheat known as black rust and stripe rust.

Mr. McFADDEN. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Pennsylvania offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. McFADDEN: On page 21, line 10, after the word "production," add a comma and the following: "and the manufacture of alcohol for commercial uses as a by-product therefrom."

Mr. LEVER. Mr. Chairman, I reserve a point of order on that amendment.

Mr. McFADDEN. Mr. Chairman, the reason I introduced this amendment is that I find on investigation at the Agricultural Department that their knowledge of this special phase of the production of alcohol—from corn, which is one of the best known grains for that purpose—is very limited. It seems to me this is a subject on which our people ought to be informed at this time, because of the growing increase in the demand for gasoline and the increase in price of the same. If alcohol can be produced as a by-product from corn, it will be of vital importance to the farmers of this country. It is for that purpose I offer this amendment.

Such experimental work as has been done has been along the line of utilizing waste products of the farm, while in a situation like the present the investigations should be conducted with the by-product in view and the use of the by-product as a feeding proposition for dairying. The protein feeds are becoming more scarce each year, and as the farmer is becoming convinced that a well-balanced ration is the most desirable, the tremendous possibilities of industrial alcohol are at once apparent.

One of the farmer's greatest needs in this connection is to know just how to proceed, and how much waste there is in the feeding quality of the operation; in other words, how much would be consumed in the operation of eliminating the alcohol from the corn.

Such records as we have prove that the mash after the alcohol has been removed is a better balanced ration for dairy cows than that previously used.

If it is found a profitable operation after investigation, it would seem to me that plants could be established in conjunction with creameries now operating in country districts, and the farmers could take the mash for prompt feeding, and many economies could thus be effected in the joint operations of those plants, and central refining and denaturing plants could be established at convenient places nearby. The farmers would thus be furnished a cheap power, light, and heat basis and the country generally receive much relief by the use of a commercial denatured alcohol.

I beg to submit herewith a letter, under date of March 23, 1916, from the Department of Agriculture bearing on this subject:

DEPARTMENT OF AGRICULTURE,
Washington, March 23, 1916.

Hon. LOUIS T. McFADDEN,
House of Representatives.

DEAR MR. McFADDEN: Receipt is acknowledged of your letter of March 15. In reply the following data on the yield of alcohol from corn, the cost of extracting alcohol, and the value and analysis of the dairy feed obtainable from the residue are submitted for your information. They have been compiled from several sources as stated below. You will realize that of necessity the costs will vary under different economic conditions. The data given, however, may be considered as a working basis upon which those interested may form an opinion as to the probability of manufacturing alcohol in plants of the capacities described, making due allowance for the variation in cost of raw materials, equipment, labor, and other conditions. A plant of larger capacity than the ones described would undoubtedly produce alcohol at somewhat lower costs.

YIELD OF ALCOHOL FROM CORN.

Approximately 2.75 gallons of 180 proof alcohol can be made from a bushel of well-dried corn.

COST OF EXTRACTING ALCOHOL FROM CORN IN PLANT OF AMERICAN MANUFACTURE, PRODUCING ALCOHOL OF 180 PROOF, AT RATE OF 104 GALLONS PER DAY.

COST OF RAW MATERIAL.

The grains used daily will weigh about 2,198 pounds and will consist of 88 per cent corn, 10 per cent malt, and 2 per cent rye, or 34.54 bushels of corn, 6.47 bushels of malt, and 0.8 bushel of rye. The cost of this material will be 28.82 cents with corn, rye and malt at 65, 85, and 88 cents per bushel, respectively, or 27.7 cents for each gallon of the 104 gallons of alcohol produced.

INVESTMENT COSTS.

The cost of machinery and other equipment for milling, fermenting, and distilling, consisting of steam boiler, steam engine, high-pressure cooker, necessary pumps, vats, shafting, and still	$10,000
Cost of building	5,000
Cost of press and drier for the press cake	1,500
Cost of single-effect vacuum evaporator, complete with condenser and pump, for the liquid slops	2,000
Total investment costs	18,500

Fixed charges consist of interest on the investment at 6 per cent, and depreciation at 12 per cent, and amount to $3,330 per annum.

For a 200-day year these charges amount to $16.65 per day, or to $0.16 per gallon of 180 proof alcohol.

DAILY OPERATING COSTS.

2 tons of coal, at $3	$6
1 foreman, at $3, and 3 laborers, at $2	9
Incidentals, including oil, barrels, and drayage	6
Total operating expenses	21

or 20.2 cents per gallon of alcohol.

SUMMARY.

Cost per gallon of alcohol of 180 proof.

Raw material	$0.277
Investment	.160
Operating cost	.202
Total	.639

There will be produced about 967 pounds of dried distillery grains worth at least $30 per ton, or $14.51, or $0.14 per gallon of alcohol produced. This should be subtracted from the above cost, making the net cost per gallon $0.499.

The data given above are taken from the information which the department secured some years ago in its experimental work on the manufacture of alcohol and from other sources.

COST OF EXTRACTING ALCOHOL FROM CORN IN PLANT OF GERMAN MAKE PRODUCING ALCOHOL AT RATE OF 419 GALLONS OF 180 PROOF PER DAY.

RAW MATERIAL.

Cost the same as in the above estimate, namely, $0.277.

INVESTMENT COSTS.

The first cost of the equipment, including packing for shipment is $8,760.

To this must be added duty of 20 per cent, making the total cost of equipment purchased abroad	$10,512
Freight and erection costs	1,000
Cost of building	5,000
Cost of press and drier for distillery grains	2,600
Double-effect vacuum evaporator, completed with condenser and pump	3,100
Total cost of plant	22,212
Interest at 6 per cent and depreciation at 12 per cent, or $20 per day, for 200-day year	3,998

This amounts to an investment cost of $0.048 per gallon.

OPERATING EXPENSES.

4 tons coal daily, at $3	$12
1 foreman at $3 and 6 laborers at $2	15
Incidentals, including oil, barrels, and drayage	24
Total operating expenses	51

or $0.122 per gallon of alcohol produced.

SUMMARY.

Cost per gallon of alcohol of 180 proof.

Raw material	$0.277
Investment	.048
Operating costs	.122
Total	.447
Less value of distillery grains	.14
Making net cost	.307

The composition of distillery grains is shown on page 37 of Farmers' Bulletin 22, a copy of which accompanies this letter.

The data given above have been obtained from various sources, as follows:

The yield of alcohol from corn is given by Maercker-Delbruck, Handbuch der Spiritus Fabrikation, ninth edition, page 681. The yield given is that obtained under good working conditions, using high pressure in cooking.

The proportions of grains used are substantially those given by Mr. W. E. Lummus in hearings before the House Committee on Ways and Means, February to March, 1906, third edition, pages 196 and 413. The value of corn has been taken as $0.65 per bushel, which an expert of the Bureau of Plant Industry states is a fair value at the present time for the grades of corn available for alcohol manufacture.

The cost of the smaller plant is the present value of the equipment purchased by the department in 1908 plus cost of installation. The cost of the press and drier are estimates from trade catalogues describ-

ing machinery manufactured in this country. The cost of the single-effect vacuum evaporator is also an estimate and is not a definite quotation from a manufacturer. Such equipment is made in this country by a large number of firms.

In the daily operating costs the figures given by Mr. W. E. Lummus have been used as a basis, but the costs given are necessarily approximations only. This applies to the coal consumption and incidentals. The labor cost is the same as given in Farmers' Bulletin 410 for operating a plant of this size, working on potatoes, with an additional laborer to attend to the drying of the grains.

The cost of the equipment of the German plant for making alcohol was obtained by the Bureau of Plant Industry several years ago, and plans showing installation and detailed estimates of first costs are available at the department. Freight and erection costs, cost of building, and cost of press and drier for distillery grains are necessarily estimates only. A substantial building is required to house the machinery, and the $5,000 cost is not regarded as at all excessive.

The cost of a double-effect vacuum evaporator was obtained in connection with another subject from an American manufacturer. The cost of coal, incidentals, and labor are but estimates, using, however, to some extent the data given by Mr. Lummus, already referred to.

The yield of distillery grain is taken from Maercker-Delbruck, page 956.

As stated in the opening paragraph of this letter, you will realize that these costs, particularly the operating costs, will necessarily vary under different conditions and can not be stated very definitely.

Very truly, yours,

D. F. HOUSTON, *Secretary.*

Mr. LEVER. Mr. Chairman, does the gentleman from Pennsylvania desire to be heard on the point of order?

Mr. McFADDEN. No.

The CHAIRMAN. The point of order is sustained.

Mr. LEVER. I offer an amendment to the paragraph in conformity with a suggestion made by the gentleman from Illinois [Mr. MANN] as to another part of the bill.

The CHAIRMAN. The gentleman from South Carolina offers an amendment, which the Clerk will report.

The Clerk read as follows:

On page 21, line 9, strike out the words "not less than."

The amendment was agreed to.

Mr. LEVER. In line 11, on the same page, I move to strike out the words "not less than" after the word "that."

The CHAIRMAN. The gentleman from South Carolina offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 21, line 11, after the word "that," strike out the words "not less than."

The amendment was agreed to.

The Clerk read as follows:

For the investigation and improvement of methods of crop production under subhumid, semiarid, or dry-land conditions, $160,000: *Provided*, That the limitation in this act as to the cost of farm buildings shall not apply to this paragraph: *Provided further*, That no part of this appropriation shall be used in the free distribution, or propagation for free distribution, of cuttings, seedlings, or trees of willow, box elder, ash, Caragana, or other common varieties of fruit, ornamental, or shelter-belt trees in the northern Great Plains area, except for experimental or demonstration purposes.

Mr. MANN. Mr. Chairman, I reserve a point of order on the paragraph. What farm buildings do they construct under this item?

Mr. LEVER. Mr. Chairman, I will say to the gentleman that the Government has 26 stations in this subhumid and semiarid dry-land country, and they have little field stations from which they make their investigations. A station costs from $8,000 to $10,000.

Mr. HAWLEY. They also have a building for the man in charge of the station.

Mr. MANN. They do not ordinarily cost more than $1,500, do they? What buildings do they have that cost over $1,500?

Mr. McLAUGHLIN. It was recommended that some dairy work be undertaken at two of these stations, and for that experimental work it was proposed that a farm shed, and so on, be constructed, and one estimate includes $4,000 for a barn. I will say to the gentleman from Illinois, without violating any committee secrets, that I did not think that was a wise provision.

Mr. ANDERSON. That was in a new item where they wanted an appropriation of $87,000, which the committee disallowed.

Mr. McLAUGHLIN. It was an experimental purpose, and it did not seem to me wise to put up a $4,000 barn on a doubtful proposition to make an experiment. The recollection of the gentleman from Minnesota is better than mine. I had in mind another provision. I may say that my understanding of that kind of work is that it is largely experimental, and that expensive buildings are not needed. I doubt very much the wisdom of doing away with this provision of law which limits the cost of farm buildings to $1,500.

Mr. LEVER. If the gentleman from Illinois will permit me, I hold in my hand a report covering the cost of all of these buildings. It is voluminous, but I will read a few of them:

Ardmore, S. Dak. (field station): Frame barn, 30 by 50 feet; housing horses, storage of forage and farm machinery, $1,500 Frame shed, 36 by 80 feet, with concrete floor; storage of farm machinery, $1,950. Frame house, 22.6 by 38 feet, residence of station superintendent, $1,750. Frame shed, 10 by 17 feet, storage of wood and coal, $200.

Dalhart, Tex. (field station): Concrete house, 28 by 50 feet, two stories, administrative headquarters and laboratory rooms for carrying on experiments, $2,061.39. Concrete bunk house, 20 by 34 feet, one story; sleeping quarters for station employees, $1,000.

Lawton, Okla.: Frame house, pebble dashed, 29.6 by 47 feet, two stories, residence of station superintendent, $3,167. Frame barn and implement shed, 36 by 80 feet, with frame "L," 35.6 by 30 feet, housing station animals and storage of machinery and forage, $3,467. Frame house, pebble dashed, 28 by 50 feet, two stories, administrative headquarters and laboratory rooms for carrying on experiments, $2,460.

Mr. MANN. Mr. Chairman, I withdraw the point of order, and I move to strike out the last word. You put in a provision here that they shall not distribute any trees or cuttings.

Mr. LEVER. I will ask the gentleman from Minnesota to explain that item to the gentleman.

Mr. ANDERSON. Mr. Chairman, I will say that about two years ago the station at Mandan engaged in the propagation of the ordinary belt shelter trees like box elder, willows, caragana, and so forth, and at that time they sent out to the newspapers circulars that they would furnish farmers a sufficient number of shelter belt trees to plant half an acre. In this way the Government came in direct competition with the nurserymen who were selling trees in this section, and that is the purpose of this amendment, to stop the distribution of shelter belt trees.

Mr. NORTON. Mr. Chairman, I do not believe that this last proviso should be retained in the bill. I should move as an amendment to strike out the proviso were it not for the fact that I am led to believe that an agreement has been reached between the Department of Agriculture and certain members of the Committee on Agriculture to the effect that this provision will be reasonably satisfactory to all concerned. The only reason the proviso has been placed in the bill is because the nurserymen of the Northwest, more particularly those in Minnesota, have strenuously objected to the distribution of trees and shrubs that has been made and that is contemplated to be made by the Northern Great Plain Experimental Station at Mandan, N. Dak. The nurserymen complain that on account of the cuttings, seedlings, and shrubs furnished free by the experimental station to farmers in the Northern Great Plains area in North and South Dakota, Montana, and Wyoming, the volume of their business has been decreased and their business has been greatly injured. Dr. Taylor, of the Department of Agriculture, takes direct issue on this complaint and maintains that the work being carried out by the Northern Great Plains Experimental Station will increase rather than lessen the demand for the purchase of trees and shrubs by farmers and others in that section of the country. It has not been attempted in the past by the experimental station at Mandan, to supply cuttings, seedlings, and shrubs to all farmers in the Northern Great Plains area who might make application for the same. It has been their plan and purpose to distribute for demonstration and experimental purposes to a few farmers in each locality cuttings, seedlings, and shrubs in quantity sufficient to plant a shelter belt of two or three acres. It is further planned to send out experienced horticulturists from the station to demonstrate the best way to care for these trees and shrubs, and to encourage farmers in the cultivation, care, and growing of trees, shrubs, and small fruits. This has not been done to a large extent in the last few years, but those in charge of the experimental station plan in the future to give more emphasis to this feature of the work.

I can say from my own personal observation that they are doing a good work at this station. They are creating a commendable and much-needed interest on the part of the farmers in the growing of trees and the setting out of shelter belts on their farms all through the Northern Great Plains area.

Mr. MANN. Mr. Chairman, will the gentleman yield?

Mr. NORTON. Certainly.

Mr. MANN. What is this caragana tree? I am familiar with the caragana species.

Mr. NORTON. That is an item that was inserted in the bill at the request of the gentleman from Minnesota [Mr. ANDERSON], and I am most confident he can give the gentleman from Illinois all of the desired information concerning that particular tree.

Mr. ANDERSON. Mr. Chairman, I will say to the gentleman I never attempt to give the gentleman from Illinois [Mr. MANN] any information.

Mr. MANN. I hope the gentleman will not attempt to do it without doing it. Whatever he does it is not ever merely an attempt. I would not have asked the question, but he used the word a short time ago, and it is written in the bill also.

Mr. ANDERSON. I am unable to give the gentleman any description which will enable the gentleman to identify it. All I know about it is that this is one of the ordinary varieties of shelter-belt trees or shrubs which the department has been distributing in this section and which is a very ordinary common variety.

The Clerk read as follows:

For investigations in connection with western irrigation agriculture, the utilization of lands reclaimed under the reclamation act, and other areas in the arid and semiarid regions, $75,380.

Mr. FORDNEY. Mr. Chairman, I move to strike out the last word. I want to ask the gentleman if there is not another department that is doing the work provided for in this paragraph? Is there not a special fund set aside from receipts for the sale of lands in each of the States for irrigation purposes and for the investigation of irrigation plants to be erected by the Interior Department?

Mr. HAWLEY. Mr. Chairman, will the gentleman yield?

Mr. FORDNEY. Yes.

Mr. HAWLEY. There is a bureau in the Department of the Interior known as the Reclamation Service, which constructs irrigation plants, including canals and ditches for the irrigation of arid lands. This is an entirely different procedure. After the irrigation districts have been developed and farmers go on the lands this work begins then in cooperation with the farmer to study the problems on the projects, of growing crops, of drainage, and of every other factor in the farmer's work that arises in an irrigated section. It is an entirely different branch of work.

Mr. LEVER. This is purely agricultural.

Mr. FORDNEY. I withdraw the pro forma amendment.

The Clerk read as follows:

To cultivate and care for the gardens and grounds of the Department of Agriculture in the city of Washington, including the keep and lighting of the grounds and the construction, surfacing, and repairing of roadways and walks; and to erect, manage, and maintain conservatories, greenhouses, and plant and fruit propagating houses on the grounds of the Department of Agriculture in the city of Washington, $11,690.

Mr. MANN. Mr. Chairman, I move to strike out the last word. Is that what this appropriation has been used for heretofore—simply the grounds down here?

Mr. LEVER. This appropriation has been used for that purpose heretofore, but some question as to the erection of greenhouses arose with the comptroller, and it is for the purpose of making the authority of the department certain as to the erection of permanent greenhouses, as contrasted with temporary greenhouses, that this change in language was adopted.

Mr. MANN. There is no change that would affect that is there?

Mr. LEVER. We have dropped the word "experimental," and we have inserted the word "erect," which the department feels gives them authority to meet the ruling of the comptroller.

The Clerk read as follows:

For horticultural investigations, including the study of producing, handling, and shipping truck and related crops, including potatoes, and the study of landscape and vegetable gardening, floriculture, and related subjects, $56,080.

Mr. COX. Mr. Chairman, I move to strike out the last word. I do not like to take up the time of the committee, but I desire to have some information if I can get it. The central part of southern Indiana is fast becoming a great apple-producing section. Several years ago a few men went into it on a rather light scale, but in the last 10 years a number of men have gone in and have planted thousands upon thousands of acres of apple orchards. Last summer what was known through that section of the country and what I learned later was characterized by the Agricultural Department as fire blight began to sweep through that section of the country until it almost ruined thousands and thousands of acres of orchards. I have a little orchard myself of 10 acres, and it almost desolated it. I learned the only remedy for it was to prune it and cut off every infected limb. I got that information from an extensive fruit grower in my section, who said he got his authority from the Agricultural Department. I found it did not do any good. I would like to know whether or not the department has any remedy or has discovered anything that will stop that fire blight. It is extraordinarily bad in our section of the country. In addition to apples it started on pear trees, and the owners of the orchards finally cut down the pear trees and burned them, because they came to the conclusion that the disease, whatever it was, was being bred on the pear and spread from there to the apple.

Mr. LEVER. I will say to the gentleman that as to the blight in apples I do not recall any statement being made to the committee, but I do know that some statement was made in reference to the pear blight, and as far as I have been able to ascertain there is no remedy for pear blight except the destruction of the diseased part of the tree.

Mr. HAWLEY. The gentleman spoke of fire blight.

Mr. LEVER. I understood from what the gentleman said it was the same kind of disease.

Mr. COX. Mr. Chairman, I got the impression that this fire blight struck the orchards in New England and particularly in New York in 1910, and that they were then investigating it, but had not discovered a remedy for it. If the department has anything on earth for that section of the country and can inform us of it, it will be doing southern Indiana a very great service.

Mr. LA FOLLETTE. Mr. Chairman, the disease the gentleman speaks of, which is known as fire blight, is not a new disease. It has been in the United States for the last hundred years. It attacks seed-bearing deciduous fruit trees to a greater or less degree. It also attacks the common thorn tree, and attacking trees of that character makes it almost impossible to eradicate the disease. The information given the gentleman from Indiana was correct as to the remedy. The only way to eradicate the disease is with the knife. The only way that it can be handled is by careful pruning, and the reason that method is not nearly always successful is either from lack of knowledge or from carelessness in following out the directions for pruning. The disease is of the same nature as the citrus canker disease, spoken of a while ago, only not as virulent probably as the citrus canker. Unless you get clear below the disease you fail, the disease being bacteriological and works in the sap, and you can not reach and spray against it, only the knife will do the work. If you do not get below the diseased wood and the knife becomes infected, the next cut you make may infect a tree.

The CHAIRMAN. The time of the gentleman has expired.

Mr. COX. Mr. Chairman, I ask that I may have five minutes more.

The CHAIRMAN. Is there objection to the request of the gentleman from Indiana? [After a pause.] The Chair hears none. To whom does the gentleman yield?

Mr. COX. I yield to the gentleman from South Carolina [Mr. FINLEY].

Mr. FINLEY. Does the gentleman find that pear trees suffer to the same extent or not?

Mr. COX. I think the pear trees of central and southern Indiana suffer.

Mr. FINLEY. I will say to the gentleman I have found every variety on my own premises died with the exception of one variety, and that is a late variety, a very hardy one, I believe called the Keifer.

Mr. COX. Now, in response to the statement made by the gentleman from Washington, this may be an old disease in some sections of the United States, but it is not an old disease in my section of the State. Last summer was the first time it ever made its appearance upon the apple trees in that section of the country. I did my best and followed out the advice I had by using a pruning hook and supervised the pruning myself, and the man who did the pruning put on a pair of rubber gloves. I had a pail of water thoroughly disinfected. The cut was made far down below the infected part, and if I entertained any question that the pruning hook did not go beyond the infected part it was thoroughly disinfected, and yet it did no good. The result was it practically ruined my orchard, but that is neither here nor there; but there are tens of thousands of acres of growing orchards through my section of the country which this disease literally ruined last year, and all pursued the same method. I have searched the agricultural bulletins on this subject and I have not found any bulletin that has been issued by the Bureau of Horticulture treating of this particular disease or advising people how to get rid of it.

Mr. LEVER. Mr. Chairman, I confess I never heard of the disease before, but I will say to the gentleman from Indiana, if he will permit, that on page 18 of this bill, which we have already passed, we have a paragraph for $63,615 for the investigation of the diseases of orchard and other fruits, and I trust the gentleman will have this matter brought to the attention of the department, although I presume he already has done so.

Mr. COX. I have not; I will say that; but I will say that I raise the point at this particular time so that the Bureau of Plant Industry would see what we have said upon this subject in the CONGRESSIONAL RECORD and give some attention to it later, and perhaps it will cause the department to look into this matter because it is a serious matter for men to have thousands of growing orchards simply swept off when they can not do anything to stop it.

Mr. LEVER. I am satisfied, however, the gentleman from Indiana will find that if this disease is at all of long standing in this country, or even of rather recent standing, the department has already discovered it and is doing some work upon the subject. Whether they have found a remedy that works successfully I do not know.

Mr. COX. I now yield to the gentleman from Ohio [Mr. FESS].

Mr. FESS. Is the disease to which the gentleman refers a form of blight?

Mr. COX. Fire blight, it is called.

Mr. FESS. Of the pear tree?
Mr. COX. No; of the apple.
Mr. FESS. And it struck the pear trees, too.
Mr. COX. It struck the pear trees in our section of the country some years ago but never touched the apple trees until last summer.
Mr. LEVER. A good deal of study has been given to the pear blight. Is there any difference between the ordinary apple blight and the pear blight?
Mr. LA FOLLETTE. Mr. Chairman, I move to strike out the last two words. I think if the gentleman from Indiana will take this up with the department he will learn that they had cognizance of this disease for many years and they have issued bulletins on the disease, and that it has been treated of in the Agricultural Yearbooks for many years past, at times. It is a disease, as I have said before, that has been in the United States for more than 100 years, yet it was only within the last 10 years the origin of the disease was simultaneously discovered by the Nebraska State experiment station and by Cornell University. It is a bacterial disease and works in the sap of the tree.
Mr. COX. Do you have it out in your great fruit belt?
Mr. LA FOLLETTE. I should say we did.
Mr. COX. What do you do to get rid of it?
Mr. LA FOLLETTE. We use the knife.
Mr. COX. Does that cure it?
Mr. LA FOLLETTE. It will not cure it always. I will say we have had the same experience the gentleman has had. We have cut orchards, and still would lose the trees in spite of it; but I will say this that for 14 years I ran a large orchard, and when the disease first struck my part of the country some of my neighbors became disheartened and grubbed out their trees, but I fought it and used the knife continuously, and, while with a few varieties I lost practically all, on the whole I shipped four or five thousand boxes of good pears each year.
Mr. COX. Did it hit your apple trees?
Mr. LA FOLLETTE. It hit our apple trees, our pear trees, and it hits all seed-bearing deciduous fruit trees, and even the thorn trees. It does not attack stone fruits, such as peach trees, cherry trees, and so forth.
Mr. COX. Is it the same kind of a blight that works on the pear that works on the apple?
Mr. LA FOLLETTE. The same thing—the fire blight. There is a leaf blight that makes the leaf of the pear tree turn brown, but the latter disease is a very innocuous one as compared with the fire blight.
Mr. FESS. What is the San Jose blight?
Mr. LA FOLLETTE. That is not a blight at all. It is a louse that fastens on the bark of the tree and becomes covered by a scale. There is an exudation from it, and after a short time it becomes fastened to the tree.
If my time has not expired, I will say to the gentleman that the San Jose scale will fasten on the bark of the tree; it breeds very rapidly, and in a short time the bark of the tree will look as though you had taken a pepper box and sprinkled black pepper thickly over the tree. It is an easy disease to fight compared with fire blight, because by using the proper ingredients of sulphur, salt, and lime anyone who will exert intelligence and is not afraid of work can eradicate it. I shipped 100 cars of fruit a year on an average for 14 years, and I fought the San Jose scale all those 14 years. As I said a while ago, I also shipped thousands of boxes of pears every year, but I had to continuously keep, at the proper season, men in the orchard trimming and keeping the disease down. And if you take it in time and do not let your orchard become thoroughly infested, you can eradicate it much quicker than you can if you once let it get a good hold. After that it is almost impossible to stamp out the disease.
Mr. OVERMYER. Will the gentleman yield?
Mr. LA FOLLETTE. I will.
Mr. OVERMYER. This fire blight is also known as "twig blight" in some sections of the country, is it not?
Mr. LA FOLLETTE. It might be known as that.
Mr. OVERMYER. They had that in Ohio, and it was known as "twig blight," and it may be that it was the same trouble.
Mr. LA FOLLETTE. I will say to the gentleman that I have no doubt but that it was the same. As I have traveled from Washington City to the Pacific coast for the last two years I have noticed in the orchards, from the Atlantic to the Pacific, thousands of trees infested with fire blight. It is not always so virulent sometimes. Thousands of twigs will be inoculated, and it will probably get in 6 inches on the limb, and then die for some cause. It fails to work against the sap in that tree.
The CHAIRMAN. The time of the gentleman has expired.
Mr. COX. Mr. Chairman, I ask unanimous consent that the gentleman may have five minutes more.
The CHAIRMAN. The gentleman from Indiana asks unanimous consent that the gentleman from Washington have five minutes more. Is there objection?
There was no objection.
Mr. COX. Does this disease occur every year, or is it sporadic?
Mr. LA FOLLETTE. I do not think it occurs every year in all localities, but I think you will find it is working in some parts of the country every year. If not, I think it would finally die out.
Mr. COX. What is the gentleman's experience as to when it once gets into an orchard. Does it permanently stay there?
Mr. LA FOLLETTE. I think you can eradicate it from that orchard. But the trouble is always this: One man fights it and another man does not fight it. Consequently, you eradicate it from your orchard this year, and everybody in your neighborhood may eradicate it, but it is carried by birds, on their feet, maybe 10 miles, from some orchard which the owner neglected, and the trees of your orchard will become infected again. For that reason it is only by eternal vigilance you can keep down the fire blight or any other disease. I ran an orchard for 14 years, and you can not do it successfully unless you are watchful all the time.
Mr. COX. I think you are right about that. I am getting disgusted as a fruit grower.
The Clerk read as follows:

For the purchase, propagation, testing, and distribution of new and rare seeds; for the investigation and improvement of grasses, alfalfa, clover, and other forage crops, including the investigation of the utilization of cacti and other dry-land plants; and to conduct investigations to determine the most effective methods of eradicating weeds, $140,920: *Provided*, That of this amount not to exceed $60,000 may be used for the purchase and distribution of such new and rare seeds: *Provided further*, That $5,000 of this amount shall be used for a reconnaissance survey of the noxious-weed situation in the spring-wheat areas of the United States.

Mr. MANN. Mr. Chairman, I reserve a point of order on that paragraph.
The CHAIRMAN. The gentleman from Illinois reserves a point of order on the paragraph.
Mr. MANN. I see the committee has very much enlarged the scope of the work to be done by the $60,000 item which was inserted a few years ago in the bill to try drought-resistant seeds in the arid regions. They have left all that out and they now provide for "new and rare seeds." I believe that item, the same thing, is covered in another place in the bill, is it not?
Mr. LEVER. I think this is the only place.
Mr. MANN. There has always been a provision for the distribution of new and rare seeds.
Mr. LEVER. This is the history of the item for new and rare seeds. That, until about two or three years ago, was carried in the item for the purchase and distribution of valuable seed, and it was then transferred here.
Mr. MANN. I understand that. This item carries an appropriation of $140,920, which is a considerable increase over the existing appropriation. That appropriation itself is for the distribution, and so forth, of new and rare seeds.
Mr. LEVER. Yes.
Mr. MANN. And then we inserted under that paragraph a proviso for $60,000, which might be used for the distribution of drought-resistant seeds throughout the arid regions. You cut that part out and repeat here the language, "That of this amount not to exceed $60,000 may be used for the purchase and distribution of such new and rare seeds." What is the balance of it used for?
Mr. LEVER. Mr. Chairman, if the gentleman will permit, I will say that in the last bill, as the bill passed this House, this paragraph for new and rare seeds carried $39,000 in this proviso as recommended by the department.
Mr. MANN. In this paragraph, this item?
Mr. LEVER. In this paragraph.
Mr. MANN. It is not in the proviso.
Mr. LEVER. It was in the proviso; $39,000 in the proviso; but the proviso did not confine it to the dry-land country at all. Then when the bill reached the Senate—I am speaking somewhat from memory——
Mr. MANN. My recollection is very much along the same line.
Mr. LEVER. I say that because the gentleman from Minnesota [Mr. ANDERSON] has a copy of the act before him.
Mr. ANDERSON. I have the estimates.
Mr. LEVER. When the bill reached the Senate, the Senate inserted a provision restricting this amount to the distribution of drought-resistant field seeds and increased the appropriation from $39,000 to $100,000. In conference the amount was reduced to $60,000. It was not the intention on the part of the

conferees, certainly not on the part of the conferees for the House, that the distribution of these new and rare seeds should be confined to any one section of the country, so that when the department made its estimates this year the language submitted broadened the scope of the distribution so that those seeds might be distributed to all sections of the country. That is the explanation of this item for "the distribution of new and rare seeds."

Mr. MANN. Under the existing law it is provided that $60,000 of this item "may be used for the purchase and distribution of drought-resistant field seeds throughout the Great Plains area."

Mr. LEVER. This appropriation, I will say to the gentleman, is not all used by any means for the purchase and distribution of new and rare seeds. If the gentleman will observe, he will notice the paragraph says further, "For the investigation and improvement of grasses, alfalfa, clover, and other forage crops, including the investigation of the utilization of cacti and other dry-land plants; and to conduct investigations to determine the most effective methods of eradicating weeds," and so forth. The truth about the matter is that in setting aside this amount in the proviso, $60,000, which the conferees allowed, we very much infringed and encroached upon the work that the department was doing along investigational lines. It is to cure that mistake that we are increasing the appropriation, and by changing the language here we are also broadening the scope of the distribution of new and rare seeds that we introduce into this country.

Mr. MANN. It is true, of course, that all of the work carried on by this paragraph is not confined to the distribution of seeds.

Mr. LEVER. That is very true.

Mr. MANN. It does other work. Last year we made an appropriation of $119,920 in the paragraph. Then, on the insistence of gentlemen representing the Great Plains area, including the gentleman from Wyoming [Mr. MONDELL] and other gentlemen who made the fight in the House, the law provided that the $60,000 of the $119,920 should be used for the distribution of drought-resistant field seeds in this region. You cut that all out. Of course, in the first place, the department might have used all the money for that purpose if they had wanted to do so, because the general authority to distribute new and rare seeds would have allowed them to use it where they pleased.

Mr. LEVER. That is true.

Mr. MANN. It is very true that the $60,000 probably cut off part of their other work.

Mr. LEVER. It did.

Mr. MANN. But you have increased the appropriation sufficiently to cover that now.

Mr. LEVER. Yes.

The CHAIRMAN. The time of the gentleman has expired.

Mr. LEVER. I ask unanimous consent that the time of the gentleman from Illinois be extended five minutes.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that the time of the gentleman from Illinois be extended five minutes. Is there objection?

There was no objection.

Mr. LEVER. I may say further to the gentleman from Illinois, as I refresh my memory, that the statement was made before the committee that the department this year was enabled to get its new and rare seeds at a bargain. I do not recall just exactly what the bargain was, but that statement was made, and I think the figure stated was that it was enabled to get as much seed for $46,000 as under normal present conditions it can ordinarily get for $65,000.

Mr. MANN. Of course, they were not required to use $60,000 this year for this purpose. It was only to call their attention that it was not to exceed $60,000.

Mr. LEVER. That is true.

Mr. MANN. The intention of Congress, as enacted into law, was that the department should give special attention to the subject of drought-resisting field seeds in the Northwest. If we change the law the department will probably think that they will keep on doing that, but they will not do it long.

Mr. LEVER. I do not think it is the intention of the department under this proviso, and I will say frankly to the gentleman that it is not the intention of the committee, that the distribution of these new and rare seeds shall be confined to any one section of the country. The expression "new and rare seeds" includes seeds which are not new to all of this country, but which are new to certain sections of the country.

Mr. MANN. Nobody wants it confined to any one section of the country.

Mr. LEVER. But under the law that might be the effect.

Mr. MANN. Oh, no; the old law did not confine them to any one section of the country. The old law only called their attention to it. I can read the language.

Mr. LEVER. I wish to see it myself.

Mr. MANN. The language of the law was, first, so much money for the distribution of new and rare seeds.

Mr. LEVER. Yes.

Mr. MANN. Then, with the proviso:

> Of this amount not to exceed $60,000 may be used for the purchase and distribution of drought-resisting field seeds throughout the Great Plains area or other dry-land sections of the United States.

That is the language of the law.

Mr. LEVER. Now, the point I make to the gentleman from Illinois is this, that I believe almost any head of a department might construe that language in accordance with the supposed intention of Congress, and so might confine this $60,000 to distribution in the area of country specified in the act.

Mr. MANN. I doubt whether they spent $60,000 in the distribution of that class of seeds.

Mr. LEVER. Possibly not.

Mr. MANN. I do not think they were required to do it, and I do not think they did, but I think they ought to give special attention to that subject. We have been distributing—properly distributing, and I am glad of it—large quantities of cotton seed for many years. I do not get a quota of any of those seeds myself.

Mr. LEVER. That comes under this item.

Mr. MANN. I know it does now. The people there wanted to try drought-resisting field seeds, and they wanted the department specially to help them. I think the department ought to give special attention to that subject. Of course, they may continue to do it.

Mr. LEVER. My own thought, as a matter of fact, is that the department will do what I think the department ought to do; that it will as nearly as possible send these seeds to such sections of the country as give promise of growing them to advantage.

Mr. MANN. In my judgment, if this provision is to stay in the bill at all, it ought to be stricken out, I was going to say. That would be an Irish bull worthy of anyone. The first proviso has no place in this bill. You first appropriate $140,920 for the purchase, propagation, testing, and distribution of new and rare seeds, and for other purposes. I do not think you want to limit the seed distribution to $60,000, and you do not limit it to that. You may limit it to that by saying not exceeding $60,000. Last year the $60,000 was called to the attention of the department for drought-resisting field seed.

[The time of Mr. MANN having expired, his time was extended five minutes.]

Mr. MANN. That covered the cotton seed, the ordinary alfalfa seed, the soy bean, and the cowpea that was sent all over different places in the United States.

Mr. COX. And the Soudan grass seed.

Mr. MANN. Yes; and grass seeds not confined to the Northwest. I do not know how much they expended for that purpose, but I dare say it amounted to more than $60,000. I understood the gentleman to say that they spent $46,000 for drought-resisting field seed, and I am sure they spent more than $14,000 for the other seeds. Here you make an appropriation of $140,000 and then limit the amount they can expend for seed to $60,000. I do not think you want to do that.

Mr. LEVER. I disagree with the gentleman; it is a matter of judgment, and not of fact.

Mr. MANN. In the main it is a matter of fact—what they have done with it.

Mr. LEVER. As a matter of judgment the committee, as the gentleman knows, has for a good many years undertaken, as far as possible, to segregate the various lump-sum appropriations in this bill, and this, while not an entire segregation, is in a measure a segregation of the items. The Committee on Agriculture feels that $60,000 is a sufficient sum for this purpose.

Mr. MANN. Here is what the Committee on Agriculture found—an item that purported to appropriate $60,000 for the purchase of drought-resisting field seed. They said we will change that, cut out the limitation, and make it new and rare seed; but in changing that you limit the other appropriation, which was for the purpose of purchasing new and rare field seed. There is no earthly object in carrying in two places in the paragraph the provision for the purchase and distribution of new and rare seed. You have it in once as a limitation and once as a general authorization. I am sure the committee was not careful and considerate of the matter or they would not have put it in twice.

Mr. LEVER. The gentleman's interpretation of the committee's action is hardly accurate. We put the authorization in for the seed and then we put the limitation on the amount that might be used.

Mr. MANN. You have a limitation that was already on and cut out the provision that the limitation was for—drought-resistant field seeds.

Mr. LEVER. We broaden the limitation.

Mr. MANN. That is all you did. You first make an appropriation of $140,000, and then you say only $60,000 can be used for certain purposes. That you have a right to do, but I do not think that was what was in the committee's mind. I think what was in the committee's mind was to permit that money to be expended for seed without confining it to the arid regions. I think that you will find that considerably more than $60,000 is now being expended for this purpose. I do not believe that you wanted to cut it down. I believe the distribution of this field seed throughout the country has been of inestimable benefit to farmers throughout the country. I have no doubt that the distribution of cotton seed has been of great benefit to farmers in the South.

Mr. LEVER. It has, undoubtedly.

Mr. BLACK. Mr. Chairman, I want to add my testimony to what the gentleman from Illinois has said—that it has been of inestimable benefit, especially in the boll-weevil district, where it has enabled us to raise a crop of cotton notwithstanding the boll weevil.

The Clerk read as follows:

For general administrative expenses connected with the above-mentioned lines of investigation, including the office of the chief of bureau, the assistant chief of bureau, the chief clerk, the officers in charge of publications, records, supplies, and property, and for miscellaneous expenses incident thereto, $31,020.

Mr. RUBEY. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. PARK. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD on the subject of the production of table sirup and the utilization of cane by-products.

The CHAIRMAN. Is there objection to the request of the gentleman from Georgia?

There was no objection.

The Clerk read as follows:

Purchase and distribution of valuable seeds: For purchase, propagation, testing, and congressional distribution of valuable seeds, bulbs, trees, shrubs, vines, cuttings, and plants; all necessary office fixtures and supplies, fuel, transportation, paper, twine, gum, postal cards, gas, electric current, rent outside of the District of Columbia, official traveling expenses, and all necessary material and repairs for putting up and distributing the same; for repairs and the employment of local and special agents, clerks, assistants, and other labor required, in the city of Washington and elsewhere, $252,540. And the Secretary of Agriculture is hereby directed to expend the said sum, as nearly as practicable, in the purchase, testing, and distribution of such valuable seeds, bulbs, shrubs, vines, cuttings, and plants, the best he can obtain at public or private sale, and such as shall be suitable for the respective localities to which the same are to be apportioned, and in which same are to be distributed as hereinafter stated, and such seeds so purchased shall include a variety of vegetable and flower seeds suitable for planting and culture in the various sections of the United States: *Provided*, That the Secretary of Agriculture, after due advertisement and on competitive bids, is authorized to award the contract for the supplying of printed packets and envelopes and the packeting, assembling, and mailing of the seeds, bulbs, shrubs, vines, cuttings, and plants, or any part thereof, for a period of not more than five years nor less than one year, if by such action he can best protect the interests of the United States. An equal proportion of five-sixths of all seeds, bulbs, shrubs, vines, cuttings, and plants, shall, upon their request, after due notification by the Secretary of Agriculture that the allotment to their respective districts is ready for distribution, be supplied to Senators, Representatives, and Delegates in Congress for distribution among their constituents, or mailed by the department upon the receipt of their addressed franks, in packages of such weight as the Secretary of Agriculture and the Postmaster General may jointly determine: *Provided, however*, That upon each envelope or wrapper containing packages of seeds the contents thereof shall be plainly indicated, and the Secretary shall not distribute to any Senator, Representative, or Delegate seeds entirely unfit for the climate and locality he represents, but shall distribute the same so that each Member may have seeds of equal value, as near as may be, and the best adapted to the locality he represents: *Provided, also*, That the seeds allotted to Senators and Representatives for distribution in the districts embraced within the twenty-fifth and thirty-fourth parallels of latitude shall be ready for delivery not later than the 10th day of January: *Provided, also*, That any portion of the allotments to Senators, Representatives, and Delegates in Congress remaining uncalled for on the 1st day of April shall be distributed by the Secretary of Agriculture, giving preference to those persons whose names and addresses have been furnished by Senators and Representatives in Congress and who have not before during the same season been supplied by the department: *And provided, also*, That the Secretary shall report, as provided in this act, the place, quantity, and price of seeds purchased, and the date of purchase; but nothing in this paragraph shall be construed to prevent the Secretary of Agriculture from sending seeds to those who apply for the same. And the amount herein appropriated shall not be diverted or used for any other purpose but for the purchase, testing, propagation, and distribution of valuable seeds, bulbs, mulberry and other rare and valuable trees, shrubs, vines, cuttings, and plants.

Mr. SIMS. Mr. Chairman, I want to make an inquiry of the chairman or some member of the committee who may be able to give the information, and to relate a little of my own experience with reference to seed distribution for the present year. I naturally supposed that the department officials who look after these things would know about the kind of seed that was best for distribution in Tennessee. Do the best I could, I have not been able to get a list of all the farmers in my State who may want seed. Many write for seed whose names are not on my list. In order to immediately send out single packages thus asked for I had 500 packages of vegetable seeds sent to my office and the same number of flower seeds for the same purpose, and out of the 500 packages of vegetable seed there was not a single bean seed, not a single English pea seed, not a single tomato seed, not a single cucumber seed, not a single watermelon seed, not a single muskmelon or cantaloupe seed, and without any of these seed they were an absolute disappointment to the people who received them, and they wrote back and complained of them. They were not what the people wanted in my district. They did not meet the demand and only created trouble. I want to know if there is any way by which this bill may provide that a Member of the House may designate to the department before these seeds are put up the character of seed that his constituents desire in their locality. I do not expect to have all kinds of seed in each package, but when it comes to getting 500 packages at one time and not a single seed in it that anybody in my district wants, it is not only a disappointment but an irritation.

I wanted to ask the gentleman in charge of this bill if anyone knows how we may be able to get for our constituents what they want? They pay the taxes, whether they want to or not, and they ought to be accommodated as far as it is possible to do so, by getting the variety of seeds that they want and need.

Mr. LEVER. Mr. Chairman, I would suggest to the gentleman that we could easily amend this bill so as to provide that Members in advance should designate the kind and character of seed they wish to send to their districts the year following, but I have a slight notion that it would be a pretty hard job to carry that out on the part of the department, because the designations would be so varied from the different districts.

Mr. SIMS. We get about 25,000 packages to a congressional district. Every district in west Tennessee is practically the same, and nearly all in middle Tennessee are practically the same. The gentleman knows, if he knows anything about the average demands of a farmer, that there is nothing that the farmer wants or that the farmer's wife or the farmer's family wants or needs more than a splendid variety of bush and pole bean seed, English-pea seeds, cucumber and melon seeds. The new and rare varieties that my people want are those that they can make the best use of. Besides, many families can beans, corn, and tomatoes for use during the year. Besides for family use, there is a large amount of canning done in my district for sale, by canning factories; and they want something that they can use for themselves or that they can sell to the factories, and to get package after package, hundreds of them, without a single seed in them that they want is simply a vexation and a disappointment.

The CHAIRMAN. The time of the gentleman from Tennessee has expired.

Mr. SIMS. Mr. Chairman, I ask unanimous consent to proceed for two minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. SIMS. I have no charge to make that this was intentional on the part of the department officials, but when I wrote my letter I asked for the varieties of seeds most commonly used in the section of the country in which my district is located. I wanted bean seed, common every-day bean seed, that the farmers' families would rather have than all of the new and rare varieties of seeds known to the department. I do hope our Agricultural Department may be a little more practical in putting up seeds hereafter, and by so doing a real service to the country will result.

Mr. MANN. Mr. Chairman, the gentleman from Tennessee [Mr. SIMS] has been here as long as I have been here, and during that time he ought to have learned the ropes a little better. In putting up these seeds the department does it by machinery. If a man sends over 500 franks, he will probably get 500 of the same kind of seed in each of the 500 packages, because ordinarily they do not split it up in a 500 allotment. If you send over a large number of frank slips at one time, it is divided up so that there is an assortment; but all you have to do if you want packages sent to your office carrying bean seed or corn or something else is, when you send your frank slips over to the department, to ask them in putting up your seed so that they shall include certain kinds of seed. Now, my secretary learned that long ago. Anyone can do it, and they will do it.

Mr. SIMS. If the gentleman will permit me, I made out two lots of franks and addressed seed labels, one for 7,000

and one for 10,000. In both instances I wrote exactly what kind of packages were wanted.

Mr. MANN. You sent over 500 frank slips, and said nothing about what you wanted?

Mr. SIMS. No; the gentleman is mistaken——

Mr. MANN. They have a large number of different kinds of seeds, and put five packages of various sorts in each one of the mailable packages with the different lists they have and say nothing about it. They do not stop with 500 and divide up a number of different lists and ought not to do so. But a gentleman can easily indicate when he wants seed sent to his office if he wants a certain kind of seed included in his list, and they will do it, because they have that list and can fill it.

Mr. SIMS. But from many of those to whom the 18,000 or 20,000 packages were sent I am getting letters saying that they do not get what they wanted.

Mr. MANN. Oh, well—very likely; no one ever gets what he wants.

Mr. SIMS. I mean of standard common varieties of which we have spoken.

Mr. MANN. They can not send half a dozen different varieties of beans—lima, bush, and pole beans. All they can send is one kind at the best, in most of the packages. In most packages they include one large package of seed, and the large package of seed has either beans, peas, or corn. They do not include the large packages in any frankable packages. In the main, the others probably are onions, lettuce, radishes, or something of that sort. They send me too many——

Mr. SIMS. If I lived in Chicago, I might be the same way.

Mr. MANN. Cantaloupes, muskmelons, watermelons, that I did not specify I wanted, yet I think it is a very good thing on the whole if the constituents of the gentleman from Tennessee are introduced to some new kind of vegetables. They have had pole beans down there long enough. [Laughter.]

Mr. SIMS. They do not seem to think so.

Mr. MANN. They have had peas enough.

Mr. SIMS. They have not had the seed they wanted.

Mr. MANN. They ought to get acquainted with some new kinds and understand their names and learn how good they are.

Mr. SIMS. My people want beans rather than new variety names.

Mr. WALSH. Mr. Chairman, I move to strike out the paragraph.

Mr. LEVER. Mr. Chairman, before the gentleman proceeds, I ask unanimous consent that all debate on this paragraph and all amendments thereto close in 10 minutes.

Mr. MANN. Mr. Chairman, I would like to suggest to the gentleman that this is Saturday afternoon.

Mr. LEVER. Just look at the brethren rise!

Mr. MANN. The gentleman can not expect to pass this paragraph in reference to seeds to-day, and the gentleman might as well—we certainly could not get through with it until we hear from the gentleman from Mississippi.

Mr. LEVER. I was reserving 5 minutes of time for the gentleman from Mississippi [Mr. CANDLER].

Mr. MANN. Mr. Chairman, it is 10 minutes to 5——

Mr. LEVER. I was hoping to pass this item, and then I would move to rise.

Mr. MANN. But this is Saturday evening.

Mr. LEVER. The gentleman is not nearly as tired as I am.

Mr. MANN. I do not think the gentleman can accomplish anything by going ahead to-night, not a minute, and I hope the gentleman will move to rise.

Mr. CANDLER of Mississippi. This is a very important item—one of the most important provisions in the whole bill.

Mr. LEVER. May I suggest this to the gentleman from Illinois and see how it strikes him: Let us agree upon the amount of time to be consumed so that when we meet again the time will be fixed. I do not think we ought to consume an hour or two hours on a proposition which we have debated here year in and year out and we know exactly——

Mr. MANN. But think how much comfort some gentlemen get out of it.

Mr. LEVER. There is something in that, and I am a very charitable man, as the gentleman knows.

Mr. MANN. I do not think gentlemen ought to be shut off on this item. I think we have been making pretty good progress on this bill.

Mr. LEVER. I think we have, too, but I think that 30 minutes' debate on this paragraph ought to be sufficient.

Mr. MANN. Make it an hour and 30 minutes.

Mr. LEVER. What would the gentleman say to an hour? I really want to close the debate.

Mr. MANN. Make it an hour and 30 minutes.

Mr. LEVER. That is too long.

Mr. MANN. We used two or three hours before.

Mr. LEVER. I think the gentleman will agree to an hour's debate on this.

Mr. MANN. All right.

Mr. LEVER. I ask unanimous consent that all debate on this paragraph and amendments thereto close in one hour.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that all debate on this paragraph and amendments thereto close in one hour. Is there objection?

Mr. BARKLEY. Reserving the right to object, Mr. Chairman, would the gentleman take care of me for five minutes in that time?

Mr. LEVER. I will not have the control of the time. The Chair will have control of it.

Mr. FOSTER. Reserving the right to object, this is an old question, that has been discussed, to my knowledge, for 10 years.

Mr. MANN. The gentleman has been here for 10 years, but lots of us have not.

Mr. FOSTER. What is the use of discussing an old proposition like this? To take an hour's time to discuss this proposition again seems to me ridiculous.

Mr. LEVER. I agree thoroughly with the gentleman from Illinois.

Mr. SIMS. There are 140 Members of this House that have never opened their mouths on this.

Mr. FOSTER. The new Members are intelligent.

Mr. MANN. It might develop that they are more intelligent than the old Members.

Mr. FOSTER. Then it is a case of the old Members trying to instruct new Members. They might need some instruction themselves.

The CHAIRMAN. Is there objection?

Mr. SIMS. I object.

Mr. LEVER. The gentleman from Illinois [Mr. FOSTER] and I agree upon this proposition.

Mr. SIMS. But I saw them debate here eight hours on the sugar repeal bill. So do not talk about speeding up on something everybody is interested in. Then, on the sugar bill, the gentlemen did not confine themselves to the subject, either.

Mr. LEVER. The people down in the gentleman's district would rather that Congress passed the bill and permitted them to get the seeds than to hear the gentleman talk on this subject.

Mr. SIMS. There were eight hours' debate on the sugar repeal bill, and it was not all confined to the subject, either.

Mr. LEVER. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. HAMLIN, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 12717, the Agricultural appropriation bill, and had come to no resolution thereon.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. THOMAS, indefinitely, on account of sickness.

To Mr. MOON, for 15 days, on account of important business.

The SPEAKER laid before the House the following communication:

HOUSE OF REPRESENTATIVES,
Washington, D. C., April 15, 1916.

To the SPEAKER OF THE HOUSE OF REPRESENTATIVES.

DEAR MR. SPEAKER: Please extend my leave of absence through next week, as the doctor says it will be better for me not to leave home until I am more improved than at present.

Thanking you, I am,
Sincerely, yours,
E. J. HILL.

The SPEAKER. Without objection, the request will be granted.

There was no objection.

SIR FRANCIS DRAKE CELEBRATION.

Mr. NOLAN. Mr. Speaker——

The SPEAKER. For what purpose does the gentleman from California rise?

Mr. NOLAN. I desire to ask the Speaker to lay before the House Senate concurrent resolution 20, on the Speaker's table, a similar resolution reported from the Committee on Industrial Arts and Expositions being now on the House Calendar.

The SPEAKER. The Chair lays before the House Senate concurrent resolution 20, which the Clerk will report.

The Clerk read as follows:

Senate concurrent resolution 20.

Resolved by the Senate (the House of Representatives concurring), That the President of the United States is hereby authorized and requested to appoint a representative of this Government to appear at the

celebration of the landing of Sir Francis Drake on the shores of Marin County, Cal., on the dates of May 19, 20, and 21, 1916: *Provided*, That the expenses of such representative shall be paid by those in charge of the celebration, and that no expense whatever shall be required of the Federal Government.

Mr. MANN. Mr. Speaker, this is a concurrent resolution, and a similar concurrent resolution was reported in the House. It proposes to authorize the President to do something, which, it is true, is not to be at the expense of the Government, but a concurrent resolution is invariably and necessarily confined to those things which the House and Senate can do themselves, and they can not by a concurrent resolution confer any authority upon the President. Therefore, I move to amend the resolution by striking out the resolving clause and inserting:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled.

And striking out the words "Concurrent resolution" and inserting the words "Joint resolution."

The SPEAKER. The gentleman from Illinois offers an amendment, which the Clerk will report.

The Clerk read as follows:

Strike out the word "Concurrent" and insert in lieu thereof the word "Joint." And amend the resolving clause by making it read:
"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled."

The SPEAKER. The question is on agreeing to the amendment.

The amendment was agreed to.

The joint resolution as amended was passed.

Mr. MANN. Mr. Speaker, I move that the title be amended to conform to the text.

The title was amended so as to read: "Joint resolution (S. J. Res. 121) authorizing the appointment of a representative of the United States Government to appear at the celebration of the landing of Sir Francis Drake on the coast of California."

By unanimous consent, House concurrent resolution 21 was laid on the table.

On motion of Mr. NOLAN, a motion to reconsider the vote by which the Senate joint resolution was passed was laid on the table.

HOUR OF DAILY MEETING.

Mr. KITCHIN. Mr. Speaker, I ask unanimous consent that hereafter until otherwise ordered the House meet at 11 o'clock a. m.—that is, that the daily meeting of the House be at 11 o'clock a. m. instead of 12 o'clock noon.

The SPEAKER. The gentleman from North Carolina [Mr. KITCHIN] asks unanimous consent that hereafter until further ordered the House meet at 11 o'clock a. m. instead of 12 o'clock m.

Mr. MANN. Reserving the right to object, does not the gentleman think we are doing pretty well about that now? Why should we do it by unanimous consent? I do not think we ought to meet at 11 o'clock every morning.

Mr. KITCHIN. I think we are doing pretty well, but I think we ought to meet at 11 o'clock. Let us go through with the business and go home as soon as possible.

Mr. MANN. I am willing to get through with the business and go home as soon as possible, but I doubt if that will expedite it.

Mr. ADAMSON. I suppose the gentleman does not include Calendar Wednesday?

Mr. MANN. It would probably result in a point of no quorum being made.

Mr. KITCHIN. I will except Calendar Wednesday from my request.

Mr. MANN. Why not except this coming Monday, too?

Mr. KITCHIN. Yes; I will except this coming Monday.

Mr. MANN. We consent every night. Why not let it go that way. We may not want to meet at 11 o'clock every day. There is no objection meeting at 11 o'clock for the consideration of these bills that are up, and there will not be.

Mr. KITCHIN. I think we ought to meet at 11 o'clock, except on Calendar Wednesday.

Mr. MANN. And I, too, think we ought to meet at 11 o'clock, and we have been doing it all along; but there might be something that would arise that would lead us to desire otherwise.

Mr. KITCHIN. I modify my request, Mr. Speaker, and make it 11 o'clock, except as to Calendar Wednesday and next Monday.

Mr. FERRIS. Let us have a full day on the unanimous-consent day.

Mr. KITCHIN. There are a great many things on the Unanimous Consent Calendar that we would like to dispose of.

Mr. FERRIS. The Unanimous Consent Calendar is very much congested. Let us have a full day on that day.

The SPEAKER. The Chair is prepared to put the request when the gentleman has decided upon its form.

Mr. KITCHIN. I except next Monday and Calendar Wednesdays.

The SPEAKER. The gentleman from North Carolina asks unanimous consent that hereafter, until further orders, the House shall meet at 11 o'clock a. m. except on next Monday and on Calendar Wednesdays. Is there objection?

Mr. MANN. I object.

The SPEAKER. The gentleman from Illinois objects.

ENROLLED BILL SIGNED.

The SPEAKER announced his signature to enrolled bill of the following title:

S. 5229. An act granting the consent of Congress to the county commissioners of Warren County, Pa., to construct a bridge across the Allegheny River, in the borough of Warren, county of Warren, in the State of Pennsylvania.

ADJOURNMENT.

Mr. KITCHIN. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 4 minutes p. m.) the House adjourned until to-morrow, Sunday, April 16, 1916, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, a letter from the Acting Secretary of the Treasury, transmitting copy of a communication from the Secretary of War submitting a supplemental estimate of appropriation for the Frankford Arsenal, Philadelphia, Pa. (H. Doc. No. 1029), was taken from the Speaker's table, referred to the Committee on Appropriations, and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. COADY, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (H. R. 14340) to furnish all seagoing vessels in the Lighthouse Service and all other seagoing vessels of the Department of Commerce with radio equipment and auxiliary power for the operation thereof, reported the same without amendment, accompanied by a report (No. 551), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

He also, from the same committee, to which was referred the bill (H. R. 14338) to authorize aids to navigation and for other works in the Lighthouse Service, and for other purposes, reported the same without amendment, accompanied by a report (No. 552), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

A bill (H. R. 1553) granting a pension to Henry F. Baldwin; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 8381) granting a pension to Eva E. Schildgen; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 9093) granting a pension to Walter L. Jewell; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 14574) granting an increase of pension to James J. Scally; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills and resolutions were introduced and severally referred as follows:

By Mr. CHIPERFIELD: A bill (H. R. 14663) to acquire a site for a public building at Lewistown, Ill.; to the Committee on Public Buildings and Grounds.

By Mr. HICKS: A bill (H. R. 14664) to provide for the establishment of aids to navigation to mark the channel of Shelter Island Sound, off Sag Harbor, N. Y.; to the Committee on Interstate and Foreign Commerce.

By Mr. BELL: A bill (H. R. 14665) to construct a national highway from Gainesville, Ga., to Hightower Gap; to the Committee on Military Affairs.

By Mr. MORRISON: A bill (H. R. 14666) providing for the registration of designs; to the Committee on Patents.

By Mr. ALEXANDER: A bill (H. R. 14667) to amend an act to regulate navigation on the Great Lakes and their connecting and tributary waters by allowing certain fog signals to be used by vessels at anchor; to the Committee on the Merchant Marine and Fisheries.

By Mr. DYER: A bill (H. R. 14668) to prohibit exhibition or use of films or pictorial representations calculated to reflect on any race or nationality; to the Committee on Interstate and Foreign Commerce.

By Mr. KEATING: A bill (H. R. 14669) authorizing the acceptance by the United States Government from Pueblo Post, No. 8, Grand Army of the Republic, of a monument located on the grounds of the Federal building in Pueblo, Colo.; to the Committee on Public Buildings and Grounds.

By Mr. CARLIN: A bill (H. R. 14670) for the relief of street railway crossing policemen, and for other purposes; to the Committee on the District of Columbia.

By Mr. ALEXANDER: A bill (H. R. 14671) to provide for the training of officers for the merchant marine; to the Committee on the Merchant Marine and Fisheries.

By Mr. DYER: Resolution (H. Res. 202) to investigate the increased cost of paper; to the Committee on Rules.

By Mr. KITCHIN: Resolution (H. Res. 203) providing for the daily sessions of the House of Representatives and suspending certain standing rules thereof; to the Committee on Rules.

By Mr. RODENBERG: Joint resolution (H. J. Res. 202) laying an embargo on arms, ammunition, and war supplies; to the committee on Foreign Affairs.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills were introduced and severally referred as follows:

By Mr. ASHBROOK: A bill (H. R. 14672) granting a pension to Mary Ladd; to the Committee on Invalid Pensions.

By Mr. BARNHART: A bill (H. R. 14673) granting an increase of pension to Frank A. Boyd; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14674) granting a pension to Mary Biddle; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14675) granting a pension to Hiram Baer; to the Committee on Invalid Pensions.

By Mr. BORLAND: A bill (H. R. 14676) granting increase of pension to Frank Thomas; to the Committee on Invalid Pensions.

By Mr. BRUMBAUGH: A bill (H. R. 14677) granting a pension to Mary A. Heinz; to the Committee on Invalid Pensions.

By Mr. CARLIN (by request): A bill (H. R. 14678) for the adjudication and determination of the claims arising under the joint resolution of July 14, 1870, authorizing the Postmaster General to continue in use in the Postal Service Marcus P. Norton's combined post-marking and stamp-canceling hand-stamp patents, or otherwise; to the Committee on Claims.

By Mr. CARTER of Oklahoma: A bill (H. R. 14679) for the relief of Jacob B. Moore; to the Committee on Indian Affairs.

By Mr. COOPER of Ohio: A bill (H. R. 14680) granting an increase of pension to Isaac Hodgkins; to the Committee on Invalid Pensions.

By Mr. CRAMTON: A bill (H. R. 14681) granting a pension to Edward Evans; to the Committee on Pensions.

By Mr. DIXON: A bill (H. R. 14682) granting an increase of pension to Charles F. McPherson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14683) granting an increase of pension to Omer E. Huffman; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14684) granting an increase of pension to John A. Jones; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14685) granting an increase of pension to Louisa V. Wortman; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14686) granting an increase of pension to Elias White; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14687) granting an increase of pension to John T. Bell; to the Committee on Invalid Pensions.

By Mr. DOREMUS: A bill (H. R. 14688) granting a pension to Daniel O'Brien; to the Committee on Invalid Pensions.

By Mr. FESS: A bill (H. R. 14689) granting an increase of pension to Catharine Elliott; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14690) granting an increase of pension to Emanual L. Price; to the Committee on Invalid Pensions.

By Mr. FOCHT: A bill (H. R. 14691) granting an increase of pension to Robert J. Bingaman; to the Committee on Invalid Pensions.

By Mr. FULLER: A bill (H. R. 14692) granting an increase of pension to Darius Emmons; to the Committee on Invalid Pensions.

By Mr. GALLAGHER: A bill (H. R. 14693) granting a pension to Ellen A. Cardenas; to the Committee on Pensions.

By Mr. GARD: A bill (H. R. 14694) granting a pension to Louis A. Rowe; to the Committee on Pensions.

By Mr. HASKELL: A bill (H. R. 14695) for the relief of Mrs. H. O'Neill; to the Committee on Claims.

By Mr. HULL of Tennessee: A bill (H. R. 14696) to correct, on the lineal list of officers of Cavalry, the position of David Livingston Roscoe, now a first lieutenant of Cavalry in the Army of the United States; to the Committee on Military Affairs.

By Mr. JOHNSON of Washington: A bill (H. R. 14697) authorizing the President to appoint Clifford W. Sands a second lieutenant in the United States Army; to the Committee on Military Affairs.

By Mr. KEATING: A bill (H. R. 14698) providing for the reimbursement of Manuel A. Sanchez on account of certain expenditures in connection with the last illness of his father, a veteran of the Civil War; to the Committee on War Claims.

Also, a bill (H. R. 14699) granting a pension to Isabel Sandoval; to the Committee on Invalid Pensions.

By Mr. KETTNER: A bill (H. R. 14700) granting an increase of pension to James O'Brien; to the Committee on Invalid Pensions.

By Mr. LESHER: A bill (H. R. 14701) granting an increase of pension to Irvin T. Patton; to the Committee on Invalid Pensions.

By Mr. MILLER of Pennsylvania: A bill (H. R. 14702) granting a pension to Caroline Wheeler; to the Committee on Invalid Pensions.

By Mr. MORRISON: A bill (H. R. 14703) granting an increase of pension to Sarah A. Prewitt; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14704) granting an increase of pension to Sarah E. McIntosh; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14705) granting a pension to Sarah A. Brown; to the Committee on Pensions.

Also, a bill (H. R. 14706) granting an increase of pension to David A. Stonebraker; to the Committee on Invalid Pensions.

By Mr. MOSS of Indiana: A bill (H. R. 14707) for the relief of Thornton Jackson; to the Committee on Military Affairs.

By Mr. OAKEY: A bill (H. R. 14708) granting an increase of pension to Leverett W. Stone; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14709) granting a pension to Sarah E. Strickland; to the Committee on Pensions.

By Mr. OLDFIELD: A bill (H. R. 14710) granting an increase of pension to Lee Brand; to the Committee on Invalid Pensions.

By Mr. OVERMYER: A bill (H. R. 14711) granting a pension to Amanda E. Walker; to the Committee on Invalid Pensions.

By Mr. RAUCH: A bill (H. R. 14712) granting an increase of pension to James Hall; to the Committee on Invalid Pensions.
